In the epidermal cells of species of Ficus . . . small crystals of carbonate of lime are deposited; to these the name *cystoliths* has been applied. *Encyc. Brit.*, IV. 89.

cystolithiasis (sis″tō-li-thī'ą-sis), *n.* [NL., < Gr. *κύστις*, bladder, + *λίθος*, stone, + *-iasis*.] In *pathol.*, the presence of a stone in the urinary bladder.

cystolithic (sis-tō-lith'ik), *a.* [< Gr. *κύστις*, a bladder, + *λίθος*, a stone (see *cystolith* and *cystolithiasis*), + *-ic*.] In *med.*, relating to stone in the bladder.

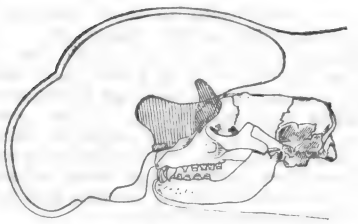
cystoma (sis-tō'mą), *n.*; pl. *cystomata* (-ma-tą). [NL., < *cystis*, a cyst, + *-oma*.] A tumor containing cysts.

cystomorphous (sis-tō-môr'fus), *a.* [< Gr. *κύστις*, bladder (see *cyst*), + *μορφή*, form, + *-ous*.] Cyst-like; cystiform; cystoid.

cystoparalysis (sis″tō-pa-ral'i-sis), *n.* [NL., also less prop. *cystidoparalysis*; < Gr. *κύστις* (*κυστι-*, *κυστε-*, not **κυστιδ-*), bladder, + *παράλυσις*, paralysis.] In *pathol.*, paralysis of the bladder.

Cystophora (sis-tof'ō-rą), *n.* [NL., < Gr. *κύστις*, bladder, + *-φόρος*, < *φέρειν* = E. *bear*[1].] The typical genus of the subfamily *Cystophorinæ*, containing only the hooded or bladder-nosed seal of the northern seas, *Cystophora cristata*.

Cystophorinæ (sis″tō-fō-rī'nē), *n. pl.* [NL., < *Cystophora* + *-inæ*.] A subfamily of *Phocidæ*, or ordinary earless seals, containing the bottle-nosed, bladder-nosed, and elephant seals. They have an inflatable proboscis-like cyst on the snout, accompanied by modifications of the nasal and intermaxillary bones, and 4 incisors in each half of the upper and 2 in each half of the lower jaw. The group consists of the genera *Cystophora* and *Macrorhinus*, containing respectively the arctic bladder-nosed and the antarctic bottle-nosed seals. See also cut under *seal*.



Hood of Hooded Seal (*Cystophora cristata*), showing relation of the inflatable proboscis to the skull. (From "Science.")

cystoplast (sis'tō-plast), *n.* A nucleated cell having an envelop.

cystoplastic (sis-tō-plas'tik), *a.* [< *cystoplasty* + *-ic*.] Pertaining to or of the nature of cystoplasty.

cystoplasty (sis'tō-plas-ti), *n.* [< Gr. *κύστις*, bladder, + *πλαστός*, verbal adj. of *πλάσσειν*, form.] A surgical operation for repair of the bladder, as the operation for vesico-vaginal fistula.

cystoplegia (sis-tō-plē'ji-ą), *n.* [NL., also improp. *cystidoplegia*; < Gr. *κύστις*, bladder, + *πληγή*, a blow, stroke, < *πλήσσειν*, strike. Cf. *cystoparalysis*.] In *pathol.*, paralysis of the bladder.

cystoplegic (sis-tō-plē'jik), *a.* [< *cystoplegia* + *-ic*.] Pertaining to or resembling cystoplegia.

cystoplexia (sis-tō-plek'si-ą), *n.* [NL., < Gr. *κύστις*, bladder, + *πλῆξις*, a blow, stroke, < *πλήσσειν*, strike.] Same as *cystoplegia*.

Cystopteris (sis-top'tẹ-ris), *n.* [NL. (so called from its bladder-like indusium), < Gr. *κύστις*, bladder, + *πτερίς*, a fern.] A name given by Bernhardi in 1806 to *Filix*, a genus of ferns having the sori borne on the back of the leaf on the middle of a vein and covered with a membranaceous indusium attached only by the base; the bladder-ferns. They are found in cool, damp localities. There are 5 species, of which *Filix fragilis* (the brittle fern) is found from within the arctic circle to Chile, South Africa, and Tasmania. See also cut under *bladder-fern*.

Segment of a Frond of *Cystopteris*, bearing a sorus on the back of a vein; partly reflexed indusium attached to the side of the sorus toward the base of the segment. (From Le Maout and Decaisne's "Traité général de Botanique.")

cystoptosis (sis-top-tō'sis), *n.* [NL., < Gr. *κύστις*, bladder, + *πτῶσις*, a falling, < *πίπτειν*, fall.] In *pathol.*, prolapse of the mucous membrane of the bladder into the urethra.

Cystopus (sis-tō'pus), *n.* [NL. (Leveillé, 1847), < Gr. *κύστις*, bladder, + *πούς*, foot.] A name incorrectly applied to *Albugo*, a genus of parasitic fungi, of the family *Peronosporaceæ*. The conidia are produced in chains on very short conidiophores, forming compact sori upon the supporting leaf. *C. candidus* is injurious to the cabbage, radish, and other cruciferous plants.

cystorrhea, cystorrhœa (sis-tō-rē'ą), *n.* [NL.] Same as *cystirrhea*.

cystose (sis'tōs), *a.* [< *cyst* + *-ose*.] Containing cysts; full of cysts; cystic; bladdery; vesicular.

cystospastic (sis-tō-spas'tik), *a.* [< Gr. *κύστις*, bladder, + *σπαστικός*, < **σπαστός*, verbal adj. of *σπᾶν*, draw back, > *σπασμός*, spasm: see *spasm*.] In *pathol.*, pertaining to spasm of the bladder.

cystotænia (sis-tō-tē'ni-ą), *n.* [NL., < Gr. *κύστις*, bladder, + *ταινία*, a tapeworm: see *tænia*.] 1. A tapeworm: so called from the formation of the cysts characteristic of its larval state.—2. [*cap.*] Same as *Tænia*.

cystotome (sis'tō-tōm), *n.* [= F. *cystotome* = Pg. *cystotomo*, < Gr. *κύστις*, bladder, + *τομός*, cutting, < *τέμνειν*, cut. Cf. *cystitome*.] A surgical instrument for cutting the bladder. Sometimes improperly called a *lithotome*.

cystotomy (sis-tot'ō-mi), *n.* [= F. *cystotomie* = Sp. *cistotomía* = Pg. *cystotomia* = It. *cistotomia*, < NL. *cystotomia*, < Gr. *κύστις*, bladder, + *τομή*, cutting, < *τέμνειν*, cut. Cf. *cystotome*.] In *surg.*, the operation of opening encysted tumors for the discharge of morbid matter; specifically, the operation of cutting into the urinary bladder for the extraction of a stone or for any other purpose.

cystous (sis'tus), *a.* [< *cyst* + *-ous*.] Cystic. *Dunglison*.

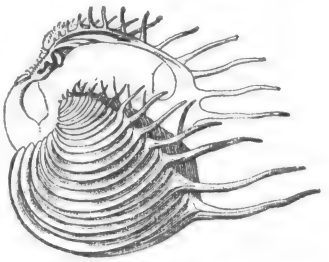
cystula (sis'tụ-lą), *n.*; pl. *cystulæ* (-lē). [NL., dim. of *cystis*, a cyst: see *cyst*.] In *bot.*, a round apothecium in lichens closed at first. Also applied to the little open cups on the upper surface of the fronds in plants of the genus *Marchantia*.

cyte (sīt), *n.* [< Gr. *κύτος*, a hollow, a cavity, as the hold of a vessel, < *κύειν*, conceive, orig. contain; cf. *cyst*, *cyme*.] In *biol.*, a cell; a cytode; especially, a nucleated cell, of whatever character, regarded as the fundamental formelement of all tissues. The word alone is rare, but common in composition, as *leucocyte*, and regularly in the histology of sponges, as *choanocyte*, *collencyte*, *desmacyte*, *myocyte*, etc.

cyternet, *n.* An obsolete spelling of *cithern*.

Cythere (si-thē'rē), *n.* [NL., < L. *Cythere*, *Cytherea*, < Gr. *Κυθέρεια*, Aphrodite (Venus): see *Cytherean*.] The typical genus of marine ostracodes of the family *Cythereidæ*. *Müller*, 1785.

Cytherea (sith-e-rē'ą), *n.* [NL., after L. *Cytherea*, a name of Venus: see *Cytherean*.] A genus of siphonate bivalve mollusks, of the family *Veneridæ*, founded by Lamarck in 1806. It is distinguished from *Venus* by an anterior left lateral tooth. There are numerous species, mostly of the warmer seas.



Cytherea dione.

Cytherean (sith-e-rē'an), *a.* [< L. *Cytherēus*, pertaining to *Cytherēa*, Venus, < Gr. *Κυθέρεια*, Aphrodite: so named from *Κύθηρα*, L. *Cythera*, now *Cerigo*, an island south of Greece, near the coast of which Aphrodite was fabled to have risen from the sea, and where she was specially worshiped.] 1. In *myth.*, pertaining to the goddess Aphrodite (Venus).—2. In *astron.*, pertaining to the planet Venus.

Not only is the apparent movement of Venus across the sun extremely slow, . . . but three distinct atmospheres—the solar, terrestrial, and *cytherean*—combine to deform outlines and mask the geometrical relations which it is desired to connect with a strict count of time.

A. M. Clerke, Astron. in 19th Cent., p. 284.

Cythereidæ, Cytheridæ (sith-e-rē'i-dē, sither'i-dē), *n. pl.* [NL., < *Cythere* + *-idæ*.] A family of marine ostracoid entomostracous crustaceans, typified by the genus *Cythere*. They are characterized by the absence of a heart; by having the anterior antennæ setose and bent at the base, and the posterior antennæ largely developed and hooked; by legs in three pairs; by a furcate abdomen; and by small and lobate forks. There are several genera besides *Cythere*.

A Species of *Cythere*.

a, antennule; *b*, antenna; *c*, mandible; *d*, first maxilla; *e*, *e*, *e*, second maxilla and two thoracic members; *f*, caudal end; *o*, eye.

cytheromania (sith-e-rō-mā'ni-ą), *n.* [NL., < Gr. *Κυθέρεια*, Aphrodite (see *Cytherean*), + *μανία*, madness.] Nymphomania. *Dunglison*.

Cytinaceæ (sit-i-nā'sẹ-ē), *n. pl.* [NL., < *Cytinus* + *-aceæ*.] The name given by Lindley in 1836 to the family *Rafflesiaceæ*, named by Dumortier in 1829. It includes the East Indian genus *Rafflesia*, remarkable for its gigantic flowers. See *Rafflesiaceæ*.

Cytinus (sit'i-nus), *n.* [NL. (from the form and color of the plant), < Gr. *κύτινος*, the calyx of the pomegranate, < *κύτος*, a hollow.] A name given by Linnæus, in 1764, to Adanson's *Hypocistis*, a genus of parasitic plants of the family *Rafflesiaceæ*. It contains two species, one South African, the other an inhabitant of the Mediterranean region.

Hypocistis Hypocistis.

cytioblast (sit'i-ō-blast), *n.* [< Gr. **κυτίον*, assumed dim. of *κύτος*, a hollow (cell), + *βλαστός*, a germ.] The protoplasmic nucleus of a cell: used with reference to certain fresh-water algæ. Also *cytoblast*.

A central *cytioblast* wrapped up in generally radiating protoplasm. *H. C. Wood*, Fresh-Water Algæ, p. 159.

cytioderm (sit'i-ō-dėrm), *n.* [< Gr. **κυτίον*, assumed dim. of *κύτος*, a hollow (cell), + *δέρμα*, skin.] In *bot.*, a cell-wall: used chiefly with reference to diatoms and desmids.

cytioplasm (sit'i-ō-plazm), *n.* [< Gr. **κυτίον*, assumed dim. of *κύτος*, a hollow (a cell), + *πλάσμα*, anything formed or molded.] In *biol.*, same as *protoplasm*: used chiefly with reference to diatoms and desmids. Also *cytoplasm*.

cytisin (sit'i-sin), *n.* [< *Cytisus* + *-in*[2].] A bitter principle ($C_{11}H_{14}N_2O$) detected in the seeds of *Laburnum Laburnum* (*Cytisus Labur-*

num of Linnæus) and other plants. It is of a nauseous taste, emetic, and poisonous.

Cytisus (sit'i-sus), *n.* [NL., < L. *cytisus*, a shrubby kind of clover, prob. *Medicago arborea* (Linnæus).] A genus of hardy leguminous papilionaceous shrubs, natives almost exclusively of the countries bordering on the Mediterranean. The leaves are usually composed of three leaflets, but some species are leafless. The large flowers are yellow, purple, or white. One species, *C. scoparius* (broom), is an extremely common shrub on uncultivated grounds, heaths, etc., of most parts of Great Britain. Some exotic species are common garden- and shrubbery-plants, as *C. purpureus*, an elegant procumbent shrub used in rock-work, *C. alpinus*, etc. See *broom*[1].

Broom (*Cytisus scoparius*).

a, flowering branch; *b*, flowers, natural size. (From Le Maout and Decaisne's "Traité général de Botanique.")

cytitis (si-tī'tis), *n.* [NL., < Gr. *κύτος*, skin (see *cutis*), + *-itis*.] Same as *dermatitis*.

cytoblast (sī'tō-blast), *n.* [< Gr. *κύτος*, a hollow, a cavity (a cell), + *βλαστός*, a sprout, germ.] 1. Same as *cytioblast*.—2. One of the amœbiform cells or cell-elements of the cytoblastema of sponges; a cytode of a sponge.

cytoblastema (sī″tō-blas-tē'mä), *n.* [NL., < Gr. *κύτος*, a hollow (a cell), + *βλάστημα*, a sprout, germ.] 1. The protoplasm or viscid fluid in which animal and vegetable cells are produced. Hence—2. The blastema or germinal or formative material of a cytode; protoplasmic cell-substance: specifically used of the frothy protoplasm of *Actinophrys* (*H. J. Clark*, 1865).

cytoblastematous, cytoblastemic (sī″tō-blas-tem'a-tus, -ik), *a.* Same as *cytoblastemous*.

cytoblastemous (sī″tō-blas-tē'mus), *a.* [< *cytoblastema* + *-ous*.] Of or pertaining to cytoblastema.

cytococcus (sī-tō-kok'us), *n.* [NL., < Gr. *κύτος*, a hollow (a cell), + *κόκκος*, a berry.] The kernel of a parent cell; the nucleus of a cytula. A cytococcus differs from the nucleus of an ordinary cell in that it is supposed to include in itself some of the substance of the spermatozoa by which the female ovum is fecundated and made to become a cytula. Also *cytulococcus*. *Haeckel.*

cytode (sī'tōd), *n.* [< Gr. as if **κυτώδης*, contr. of **κυτοειδής*, like a hollow, < *κύτος*, a hollow (a cell), + *εἶδος*, form, shape.] In *biol.*: (*a*) The name given by Haeckel to protoplasmic bodies without nuclei, the ancestors of nucleated cells, and the fertilized but undeveloped eggs of modern animals. Modern research has failed to show the existence of cytodes.

The building stones of the bodies of higher animals are never represented by *cytodes*, but always by cells.
Frey, Histol. and Histochem. (trans.), p. 64.

(*b*) A cell in general.

The primary form of every animal is a nucleated protoplasmic body, *cytode*, or cell, in the most general acceptation of the latter term. *Huxley*, Anat. Invert., p. 583.

cytogenesis (sī-tō-jen'e-sis), *n.* [< Gr. *κύτος*, a hollow (a cell), + *γένεσις*, generation.] Cell-formation; the genesis or development of cells in animal and vegetable organisms: originally used in vegetable physiology. Also *cystogenesis*, *cytogeny*.

cytogenetic (sī″tō-jē-net'ik), *a.* [< *cytogenesis*, after *genetic*.] Generating or developing cells; cytogenous; relating to cytogenesis.

cytogenous (sī-toj'e-nus), *a.* [< Gr. *κύτος*, a hollow (a cell), + *-γενης*, producing: see *-genous*.] Producing cells; cytogenetic: specifically applied by Kölliker to retiform, reticular, areolar, or ordinary cellular tissue, but properly predicable only of cells themselves, as all other organic structures arise from cells.

cytogeny (sī-toj'e-ni), *n.* Same as *cytogenesis*.

cytoid (sī'toid), *a.* [< *cyte* + *-oid*.] Cell-like: a term applied by Henle to corpuscles, as of lymph, chyle, etc., which seem to resemble each other essentially in their chemical and microscopical characters. *Dunglison.*

Cytophora (sī-tof'ō-rä), *n. pl.* [NL., < Gr. *κύτος*, a hollow (a cell), + *-φόρος*, < *φέρειν* = E. *bear*[1].] A class of protozoans: same as *Radiolaria*.

cytoplasm (sī'tō-plazm), *n.* [< Gr. *κύτος*, a hollow (a cell), + *πλάσμα*, anything formed. Cf. *cytioplasm*.] The fine granular, translucent, and more or less viscid living substance of the cell outside of the nucleus and within which the latter is embedded.

cytoplasmic (sī-tō-plaz'mik), *a.* [< *cytoplasm* + *-ic*.] Pertaining to cytoplasm.

Strasburger refers these phenomena to the necessity of securing for the differentiating reproductive nucleus a definite *cytoplasmic* medium. *Micros. Science*, XXVI. 601.

cytopyge (sī-tō-pī'jē), *n.*; pl. *cytopygæ*. [NL., < Gr. *κύτος*, a hollow (a cell), + *πυγή*, the rump.] The so-called excretory or anal aperture of unicellular animals. *Haeckel.*

cytostome (sī'tō-stōm), *n.* [< Gr. *κύτος*, a hollow (a cell), + *στόμα*, mouth.] The mouth of a single-celled animal; the oral aperture or orifice of ingestion of unicellular organisms.

cytostomous (sī-tos'tō-mus), *a.* [< *cytostome* + *-ous*.] Pertaining to a cytostome.

cytotheca (sī-tō-thē'kä), *n.*; pl. *cytothecæ* (-sē). [NL., < Gr. *κύτος*, a hollow (thorax), + *θήκη*, case.] Same as *thoracotheca*.

Cytozoa (sī-tō-zō'ä), *n. pl.* [NL., < Gr. *κύτος*, a hollow (a cell), + *ζῷον*, animal.] Same as *Sporozoa* or *Gregarinida*. See the extract.

With few (if any) exceptions, the falciform young [gregarine or sporozoon] . . . penetrates a cell of some tissue of its host and there undergoes the first stages of its growth (hence called *Cytozoa*). *Encyc. Brit.*, XIX. 852.

cyttid (sit'id), *n.* A fish of the family *Cyttidæ*.

Cyttidæ (sit'i-dē), *n. pl.* [NL., < *Cyttus* + *-idæ*.] In Günther's classification of fishes, a family of *Acanthopterygii cotto-scombriformes*, with no bony stay for the preoperculum, an elevated body, two indistinct divisions of the dorsal fin, and an increased number of vertebræ: synonymous with *Zeidæ*.

Cyttina (si-tī'nä), *n. pl.* [NL., < *Cyttus* + *-ina*[2].] In Günther's classification of fishes, the third group of *Scombridæ*. It is characterized by a distinct division of the dorsal fin into two, the spinous being less developed than the soft part, an elevated body, and very small or rudimentary scales. The group was later raised to the rank of a family, *Cyttidæ*.

cyttoid (sit'oid), *n.* [< *Cyttus* + *-oid*.] A fish of the family *Cyttidæ*.

Cyttus (sit'us), *n.* [NL. (Günther, 1860), < Gr. *κυττός*, an unknown fish referred to by Athenæus in the Deipnosophistæ.] A genus of scombroid fishes, giving name to the family *Cyttidæ*.

cytula (sit'ū-lä), *n.*; pl. *cytulæ* (-lē). [NL., dim. of Gr. *κύτος*, a hollow, a cavity (a cell).] In *biol.*, a fertilized egg-cell; an impregnated ovum; the parent cell of any organism. It is the ovum of the female, which is fecundated by becoming united with the substance of one spermatozoön, or more, of the male.

The parent-cell (*cytula*), which was formerly regarded as merely the fertilized egg-cell, differs very essentially, therefore, both in point of form (morphologically), and in point of composition (chemically), and lastly also in point of vital qualities (physiologically). Its origin is partly paternal, partly maternal; and we need not, therefore, be surprised when we see that the child which developes from this parent-cell inherits individual qualities from both parents. *Haeckel*, Evol. of Man (trans.), I. 182.

cytulococcus (sit″ū-lō-kok'us), *n.* [NL., < *cytula*, q. v., + Gr. *κόκκος*, berry. Cf. *cytococcus*.] Same as *cytococcus*. *Haeckel.*

cytuloplasm (sit'ū-lō-plazm), *n.* [< NL. *cytula*, q. v., + Gr. *πλάσμα*, anything formed, < *πλάσσειν*, form, mold.] The protoplasmic substance of a cytula or fecundated ovule, resulting from the mingling of spermoplasm with ovoplasm.

cyvar (kē'vär), *n.* [W. *cyfar*, lit. joint plowing, < *cyf*, *cy*, together (= L. *com-*, *co-*), + *aru*, plow; cf. *ar*, plowed land.] A Welsh measure of land, from one half to two thirds of an acre.

cyvelin (kē've-lin), *n.* [W. *cyfelin*, a cubit, half a yard, < *cyf*, *cy*, together, + *elin*, elbow: see *ell*, *elbow*.] A Welsh measure of cloth, equal to 9 feet.

Cyzicene (siz'i-sēn), *a.* [< L. *Cyzicenus*, < *Cyzicus*, *Cyzicum*, < Gr. *Κύζικος*.] Pertaining to the ancient Greek city of Cyzicus in Mysia, Asia Minor.

czar, tsar (zär, tsär), *n.* [Also written sometimes *tzar*; prop., according to the Russ. form, *tsar*, but in E. first and still more usually *czar*; = D. *czaar* = Dan. Sw. *czar* = Sp. *czar*, *zar* = Pg. *czar*, *tzar* = It. *czar*, after F. *czar*, also *tsar*, *tzar*, through G. *tzar*, also *zar*, through OPol. *czar*, < Russ. *tsar*, more exactly *tsarĭ* or *tsare* (the first letter being *tse*, the 23d letter of the Russ. alphabet, pron. ts, and the last being *erĭ* (mute final *i* or *e*), the 29th), = Pol. *car* (pron. tsar), formerly spelled *czar*, = Bohem. Serv. Bulg. *car* (*tsar*), the name and title of the Emperor of Russia, also applied to the Sultan of Turkey; in fuller form Russ. *tsĭsarĭ*, *tsesarĭ* = Pol. *cesarz* = Bohem. *cisarzh* = Serv. *cesar* = Croatian *cesar* = Slov. *césar* = OBulg. *tsésarĭ*, emperor, Cæsar; derived, prob. through the OHG. *keisar* (MHG. *keiser*, G. *kaiser*: see *kaiser*, *Cæsar*), from L. *Cæsar*, emperor, orig. the cognomen of Caius Julius Cæsar: see *Cæsar*, and cf. *kaiser*, with which *czar*, *tsar* is ult. identical.] 1. An emperor; a king; specifically, the common title of the Emperor of Russia. In old Russian annals the Mongol princes of Russia from the twelfth century are called czars; the first independent Russian prince to assume the title was Ivan IV., the Terrible, who in 1547 was crowned Czar of Moscow. The title *czar*, though historically equivalent, like its original *Cæsar*, to *emperor*, was not recognized as involving imperial rank at the time of its assumption by Ivan; and Peter the Great's assumption of such rank under the title of *imperator*, in addition to that of *czar*, was long contested by other powers.

2. An article of dress, apparently a cravat, in use in the early part of the eighteenth century: probably named in compliment to Peter the Great, who visited England in 1698.

czardas (zär'das; Hung. pron. chär'dosh), *n.* [Hung.] A Hungarian national dance.

czarevitch, tsarevitch (zär'-, tsär'e-vich), *n.* [= F. *czarowitz*, *tsarévitch* = G. *tzarewitsch*, < Russ. *tsarevichŭ* (the last two letters being *che* (*ch*), the 24th, and *erŭ* (silent *e*) the 27th, of the Russ. alphabet), prince, < *tsarĭ*, emperor: see *czar*, *tsar*. Another Russ. form is *tsesarevichŭ*, > G. *Cäsarewitsch*, F. *Césarévitch*, E. *Cesarevitch* or *Cesarewitch*.] A Russian prince (imperial): formerly applied to any son of the Emperor of Russia, now specifically to the eldest son. Also *czarewitch*, *tsarewitch*, *czarowitch*, *czarowitz*, and (in another form) *cesarevitch*, *cesarewitch*.

czarevna, tsarevna (zä-, tsä-rev'nä), *n.* [Russ. *tsarevna*, princess (imperial), < *tsarĭ*, emperor: see *czar*, *tsar*. Another Russ. form is *tsesarevna*, > G. *Cäsarewna*, F. *Césarevna*, E. *Cesarevna*.] A Russian princess (imperial): formerly applied to any daughter of the czar, now only to the wife of the czarevitch.

czarina, tsarina (zä-, tsä-rē'nä), *n.* [= F. *czarine*, *tzarine* = Sp. *czarina*, *zarina* = Pg. *czarina*, *tzarina* = It. *czarina* = G. *czarin*, *zarin*; < *czar*, *tsar*, + fem. term., F. *-ine*, etc., G. *-in*. The Russ. term is *tsaritsa*: see *czaritza*.] An empress of Russia; the wife of the Czar of Russia, or a Russian empress regnant. Also *czaritza*, *tsaritsa*, *tzaritsa*.

czarish† (zä'rish), *a.* [< *czar* + *-ish*[1].] Pertaining to the Czar of Russia.

His *czarish* majesty despatched an express to General Goltz with an account of these particulars.
Tatler, No. 55.

czaritza, tsaritsa (zä-, tsä-rit'zä), *n.* [Also *tzaritza*, < Russ. *tsaritsa*, empress, < *tsarĭ*, emperor: see *czar*, *tsar*.] Same as *czarina*.

czarowitch, czarowitz, *n.* See *czarevitch*.

Czech (chek; more accurately, cheċh), *n.* [Also written *Csech*, *Tsech*, *Tschech* (prop., according to the orig., **Chekh*), < Bohem. (Czech) *Chekh* (the first letter being *ch* (also written *č*), pron. ch, and the last *kh*, pron. ċh) = Russ. *Chekhŭ* = Slov. *Cheh* = Upper Sorbian *Chekn*, Lower Sorbian *Tsekh* (> Hung. *Csch*), a Czech.] 1. A member of the most westerly branch of the great Slavic family of races, the term including the Bohemians, or Czechs proper, the Moravians, and the Slovaks. They number nearly 7,000,000, and live chiefly in Bohemia, Moravia, and northern Hungary.—2. The language of the Czechs, usually called *Bohemian*. It is closely allied to the Polish. See *Bohemian*, *n.*, 5.

Czechic (chek'ik), *a.* and *n.* [< *Czech* + *-ic*.]

I. *a.* Of or belonging to the Czechs.

To reunite . . . Bohemia, Moravia, and Austrian Silesia into one *Czechic* realm. *The Nation*, XXXVI. 546.

II. *n.* Same as *Czech*, 2.

SUP.

SUPPLEMENT

THE CENTURY DICTIONARY SUPPLEMENT

A[1], **2** (*a*). In *music*, the A next above middle C has (at French pitch) 435 vibrations per second. In mediæval music, the final of the Æolian and hypoæolian modes. (*g*) In *chem.*, the symbol for argon.—**3.** Also an abbreviation of *ampere* and of ★*A-level* (which see).

AA., A A. [Prop. *āa*, which stands for *ana*, Gr. *ἀνά*, used in sense of 'throughout,' that is, 'of each one.'] In recipes, an abbreviation equivalent, when used after the names of several ingredients, to 'of each one take.'

Å, å (â). A Swedish letter representing an original long *a* (ä), now sounded as English long open *o* in *form* or *a* in *fall*.

a-a (ä′ä), *n.* [Hawaiian.] A form of cooled lava-stream of which the surface consists of jagged and irregular blocks. The blocks represent the chilled and solidified crust of a molten mass, and were formed during a pause. When the onward movement was resumed the frozen cakes were piled one upon another. Contrasted with *pahoehoe*, which refers to smooth or fluted surfaces. Both words are of Hawaiian origin, but are occasionally used in English writings on volcanoes. *C. E. Dutton*, Ann. Rep. Director U. S. Geol. Survey 1884, p. 95.

Aachenian (ä-kē′ni-an), *a.* and *n.* [G. *Aachen* (F. *Aix-la-Chapelle*) + *-ian.*] In *stratigraphy*, noting formations underlying the Chalk in Belgium: now known as ★*Bernissartian* (which see).

A. A. G. An abbreviation of *Assistant Adjutant-General*.

aal, *n.* See ★*al*[1].

Aalenian (ä-lē′ni-an), *a.* and *n.* [G. *Aalen* in Würtemberg.] In *stratigraphy*, noting European subdivision of the Lower Oölite beds of the Jurassic.

aalii (ä′ä-lē′ē), *n.* [Hawaiian; < *aa* (= Maori *aka*, etc.), roots, + *lii* (= Maori *riki*), small.] In Hawaii, a small tree, *Dodonæa viscosa*, 12 to 25 feet high. It is one of the commonest trees of that region and is found on all the islands. It also occurs in tropical America, New Zealand, and Australia, and on probably all of the volcanic island groups of Polynesia. It is valued for its hard-grained, dark wood. Called *apiri* in Tahiti.

aannerödite, *n.* See ★*annerödite*.

aback[1], *adv.* **All aback** (*naut.*), said of sails when they are all flattened against the masts by the wind acting on them from in front.—**All aback forward** (*naut.*), said of the square sails on the foremast when the wind coming from ahead has laid the sails against the mast.—**Flat aback** (*naut.*), said of sails when the wind is nearly at a right angle to them, so that they are neither bellied forward nor pressed against the mast, but just fluttering or lifting.

Abacola (a-bak′ō-lä), *n.* [NL.: origin not obvious.] The typical genus of the family *Abacolidæ*. *Edwards*, 1891.

Abacolidæ (ab-a-kol′i-dē), *n. pl.* [NL., < *Abacŏla* + *-idæ.*] A family of parasitic copepod crustaceans found in holothurians. They have simple mouth-parts adapted for piercing, and 5-jointed antennæ. The typical genus is *Abacola*.

abadejo (ä-bä-dā′hō), *n.* [Sp., a codfish, poorjack, = Pg. *abadejo*, *badejo*: origin uncertain.] A Cuban name for the scamp *Mycteroperca falcata*, a large species of grouper.

abandond, *p.a.* A simplified spelling of *abandoned*.

abarticular (ab-är-tik′ū-lär), *a.* [*ab-* + *articular.*] Not affecting the joints; not articular. —**Abarticular gout.** See ★*gout* 1.

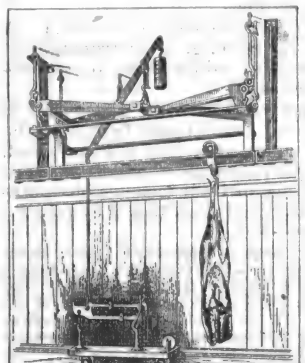
abasia (a-bā′si-ä), *n.* [NL., < Gr. **ἀβασία* (cf. *ἄβατος*, not trodden), < *ἀ-* priv. + *βάσις*, stepping: see *basis*.] In *med.*, inability to walk, through defect of muscular action, not necessarily paralysis or incoördination.

abasic (a-bā′sik), *a.* [*abasia* + *-ic.*] Of, pertaining to, or affected with abasia.

abask (a-bask′), *adv.* [< *a*[3] + *bask*, *v.*] Basking; bathed in sunlight or genial warmth. *J. M. Neale*.

abastard† (a-bas′tard), *v.t.* [OF. *abastardir*, to stigmatize as bastard or degenerate.] To bastardize; render spurious or corrupt; debase. *Donne*, Pseudo-Martyr, p. 226. *N. E. D.*

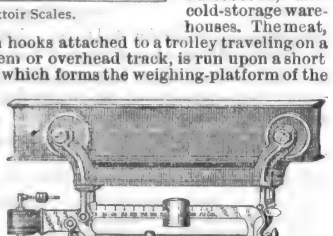
abaton (ab′a-ton), *n.*; pl. *abata* (-tä). [NL., < Gr. *ἄβατον*, prop. neut. of *ἄβατος*, not to be trodden, < *ἀ-* priv. + *βατός* < *βαίνειν*, go, walk, step.] A place sacred from common entry; a shrine. Same as *adytum*.



Abattoir Scales.

abat-son (a-bä′soṅ), *n.* [F., < *abattre*, throw down (see *abate*), + *son*, sound.] A device for throwing downward sound, as that of a bell.

Abattoir scales, scales adapted to the rapid weighing of dressed meat in markets, abattoirs, and cold-storage warehouses. The meat, suspended from hooks attached to a trolley traveling on a telpherage system or overhead track, is run upon a short section of track which forms the weighing-platform of the scales. The lever system may be above the track, with the weighing-section suspended from the levers, and the weighing-beam may be below at a convenient distance from the floor. A single trolley with its load may be weighed, or as many as the weighing-section of track will hold may be weighed together. Another form of scale employs a trolley for weighing materials in transit, with a scale-beam attached directly to the trolley and traveling with it. This is called a *trolley-scale*.



Trolley-scale.

abaxile, *a.* **2.** In *bot.*, turned away from the axis: said of lateral organs.

abbadia (a-bä-dē′ä), *n.* [It.: see *abbacy.*] An abbey or, in Italian architecture, more often an abbey church. Also *badia*.

abbasi, *n.* **3.** A current, subsidiary coin of Afghanistan, equivalent to 2 sanars or $10\frac{82}{100}$ cents.

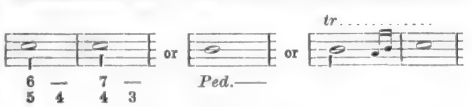
Abbe-Fizeau dilatometer. See ★*dilatometer*.

Abbe's focimeter, marine nephoscope. See ★*focimeter*, ★*nephoscope*.

Abbreviated numbers. See ★*number*.

abbreviation, *n.*, **4.** Other marks of abbreviation are: (1) One indicating that a rest is to extend for several measures, and consisting either of a general character in the staff with a figure above, or simply of a figure in the staff denoting the intended number of measures, thus:

(2) Various horizontal dashes, lines, rows of dots, etc., indicating that the force of some preceding character is to continue as far as the dashes, lines, or dots extend, thus:



abciss (ab′sis), *n.* Same as ★*complement*, 8.

abcoulomb (ab′kö-lom″), *n.* [*ab*(*solute*) + *coulomb.*] A name proposed for the c. g. s. electromagnetic unit of electrical quantity; 10 coulombs. Also *abscoulomb*.

Abdominal brain, the solar plexus (which see, under *plexus*).—**Abdominal ganglion,** the semilunar ganglion (which see, under *ganglion*).—**Abdominal gestation,** gestation occurring outside of the uterus.—**Abdominal mat,** a padded framework, with a stretcher for the feet, used in gymnasiums for exercising the abdominal muscles.—**Abdominal phthisis,** tuberculosis of the peritoneum, mesenteric glands, or mucous coat of the intestine.—**Abdominal pregnancy.** Same as ★*abdominal gestation*.—**Abdominal stalk,** in *embryol.*, the tube of mesoblast which envelops the stem of the allantois in the young human and mammalian embryo.—**Abdominal sweetbread,** the pancreas. See *sweetbread*.

abdominalian (ab-dom-i-nā′li-an), *a.* [*Abdominales* + *-ian.*] Pertaining to or having the characteristics of the *Abdominales*.

abdominothoracic (ab-dom″i-nō-thō-ras′ik), *a.* Relating to both the abdomen and the thorax.

abdominovesical (ab-dom″i-nō-ves′i-kal), *a.* Relating to the abdominal wall and to the urinary bladder.—**Abdominovesical pouch,** the concave surface of the peritoneum where it is deflected from the anterior abdominal wall to the distended bladder.

Abducens muscle, the external rectus muscle of the eyeball.—**Abducens nucleus,** the center in the medulla oblongata from which the abducens nerve seems to take its origin.

abduction, *n.* **3.** In the logical system of C. S. Peirce, reasoning from consequent to antecedent; the acceptance on probation (or more absolutely) of a hypothesis to explain observed facts; the deriving of a suggestion from observation.—**Formal abduction,** a logical process which has the form of abduction but does not involve any positive assertion, and is not, therefore, like positive abduction, subject to error. Such is the process of adopting a new word and that of forming an abstraction.

Abelicea (ab-e-lis′ē-ä). *n.* [NL. (Rafinesque, 1836), < Gr. *ἀπελίκεα*, the name of the Cretan species.] A genus of dicotyledonous plants of the family *Ulmaceæ*. See *Zelkova*.

Abe Lincoln bug. See ★*bug*[2].

aberglaube (ä′ber-glou″bē), *n.* [G. *aberglaube*, for **oberglaube*, *überglaube*, D. *overgeloof*, 'over-belief.' The first element simulates *aber*, but.] Belief beyond what is justified by experience and knowledge. See the extract.

> Our word 'superstition' had by its derivation this same meaning, but it has come to be used in a merely bad sense, and to mean a childish and craven religiosity. With the German word it is not so; therefore Goethe can say with propriety and truth: '*Aberglaube* is the poetry of life.' . . . Extra-belief, that which we hope, augur, imagine, is the poetry of life.
>
> *M. Arnold*, Lit. and Dogma, p. 87.

Aberrant duct of the liver, a bile-duct unconnected with the other portions of the biliary apparatus.

aberrate, *v. i.* 2. In *optics*, to refract, as a lens, in such a manner that rays varying in wavelength or passing through different zones will have different foci. See *aberration*, 4. *Dolland.* [Rare.]

Aberration constant. See *constant of aberration*, under *constant*.—**Lateral aberration**, in the theory of lenses, the product of the spherical aberration and the relative aperture of the lens; the radius of the circle formed by rays passing through the edge of a lens and falling upon a screen placed at the focal point.—**Lateral spherical aberration.** Same as *circle of aberration*.—**Longitudinal aberration**, in the theory of lenses, the distance between the points in which rays passing through the central zone and the edges of the lens, respectively, cut the axis; spherical aberration.—**Negative spherical aberration**, in *optics*, spherical aberration in a divergent lens, where the focal length of the outer zones is greater than that of the center of the lens.—**Positive spherical aberration**, in *optics*, spherical aberration of a convergent lens, where the focal length of the outer zones is less than that of the center of the lens.

Aberrational ellipse. See ★*ellipse*.

aberrometer (ab-e-rom′e-tėr), *n.* [Irreg. < L. *aberrare*, aberrate, + Gr. *μέτρον*, measure.] An instrument for measuring deviations or errors in delicate experiments or observations. *G. E. Davis*, Pract. Microscopy, p. 183.

abevacuation, *n.* 2. Evacuation through an abnormal channel.

abfarad (ab′far″ad), *n.* [*ab*(*solute*) + *farad*.] A name proposed for the c. g. s. unit of electrical capacity; 1×10^{-9} farads or 1×10^{-15} microfarads.

abhenry (ab′hen″ri), *n.* [*ab*(*solute*) + *henry*.] A name proposed for the c. g. s. electromagnetic unit of inductance; 1×10^{-9} henrys.

Abhidharma (ab-i-dėr′mä), *n.* [Skt. *abhidharma*, < *abhi*, near, to, + *dharma*, order, rule, precept.] The Buddhistic philosophy.

abia (ä′biä), *n.* A Polish silver coin of the value of one shilling sterling or twenty-five cents.

abidal (a-bī′dal), *n.* [*abide*[1], *v. i.*, + *-al*.] Abiding-place; abode. *N. E. D.*

abidi (ä-bi-dē′), *n.* [E. Ind.] The silver half-rupee of Mysore.

Abieteæ (ab-i-ē′tē-ē), *n. pl.* [NL. (Spach, 1842), < L. *Abies* (*Abiet-*) + *-eæ*.] Same as *Abietineæ*.

abilious (a-bil′yus), *a.* Indicating or marked by an absence of bile, as in the stools.

ability, *n.*—**General ability**, in *polit. econ.*, "those faculties and that general knowledge and intelligence which are in varying degrees the common property of all the higher grades of industry." *Alfred Marshall*, Principles of Economics, I. 266.—**Gracious ability**, the semi-Pelagian and Arminian teaching that though man by the fall lost the ability to keep the moral law, yet God by his grace restores it to all men.—**Natural ability**, a term used in New England theology in distinction to moral ability; i. e., man since the fall has all the natural powers needed to obey God's law, but he is morally unable so to do since his will is opposed to righteousness.—**Plenary ability**, the Pelagian doctrine that responsibility is measured by ability, so that every man has full power at all times to obey God's law.—**Specialized ability**, "that manual dexterity and that acquaintance with particular materials and processes, which are required for the special purposes of individual trades." *Alfred Marshall*, Principles of Economics, I. 266.

abilo (ä-bē′lō), *n.* [Tagalog name?] A name in the Philippines of *Garuga floribunda*, a tree belonging to the *Balsameaceæ*, with pinnate leaves crowded at the ends of the branches and with fruit in the form of small, fleshy drupes. It is fragrant and yields a gum which is soluble in water, but only slightly so in alcohol.

abiochemistry (ab″i-ō-kem′is-tri), *n.* [Gr. *ἀ-* priv. + *βίος*, life, + E. *chemistry*.] Inorganic chemistry as contrasted with the chemistry of vital processes.

abiogenetical (ab-i-ō-jē-net′i-kal), *a.* Same as *abiogenetic*.

abiology (ab-i-ol′ō-ji), *n.* [Gr. *ἀ-* priv. + *βίος*, life, + *-λογία*, < *λέγειν*, speak: cf. *biology*.] The scientific study of things that are not alive; all science except biology. *Haeckel* (trans.), Planktonic Studies, p. 578.

abion (ab′i-on), *n.* [Gr. *ἄβιον*, neut. of *ἄβιος*, taken in the literal sense 'without (physical) life,' < *ἀ-* priv. + *βίος*, life.] Lifeless things considered collectively, as distinguished from living things. *Haeckel* (trans.), Planktonic Studies, p. 578.

abiophysiology (ab″i-ō-fiz-i-ol′ō-ji), *n.* [Gr. *ἄβιος*, without life, + *φυσιολογία*, physiology.] The study of the inorganic or purely physical and chemical phenomena in living organisms as distinguished from the biological phenomena proper.

abiosis (ab-i-ō′sis), *n.* [Gr. *ἀ-* priv. + *βίωσις*, way of life.] Absence of vital force.

abiotic (ab-i-ot′ik), *a.* [Gr. *ἀ-* priv. + *βιωτικός*, pertaining to life.] Noting those sciences which deal with inorganic nature, as contrasted with the biological sciences. *Haeckel* (trans.), Wonders of Life, p. 27. [Rare.]

abiotrophy (ab-i-ot′rō-fi), *n.* [Gr. *ἀ-* priv. + *βίος*, life, + *-τροφία*, < *τρέφειν*, nourish.] Degeneration due to congenital deficiency of vital force.

abirritation, *n.* 2. Asthenia.

Abispa (a-bis′pä), *n.* [NL. (Mitchell, 1838), < Sp. *abispa*, now usually *avispa*, < L. *vespa*, a wasp.] A peculiar genus of Australian solitary wasps comprising several species. A single female constructs a nest with a funnel-shaped entrance, so large that it appears to be the nest of a colony of social wasps.

abjoint (ab-joint′), *v. t.* [*ab-* + *joint*.] In *mycol.*, to separate by a septum, as in the case of the spores of some fungi. *Plow*, Brit. Ured. and Ustil. Gloss., p. 305.

abjunction (ab-jungk′shon), *n.* [NL. **abjunctio*(*n-*), < L. *abjungere*, disjoin, separate: see *abjunctive*.] In *mycol.*, the separation of spores by means of a septum.

ablastic (a-blas′tik), *a.* Same as *ablastous*.

ablastozoa (a-blas″tō-zō′ä), *n. pl.* [NL., < Gr. *ἀ-* priv. + *βλαστός*, germ, + *ζῷον*, animal.] Animals without germ-layers; *Protozoa*. *Eimer*, Organic Evolution, p. 70.

ablation, *n.*, 4. (*b*) The washing away by rains of the lighter particles yielded by the decay and weather-waste of rocky ledges, whereby the heavier and more resistant minerals are left behind in a state of residual concentration, sometimes affording a body of ore.

able, *a.*—**To spell able**, to be able; to have all the ability or strength needed (for some particular purpose). [Colloq.]

ablepharia (ab-le-fā′ri-ä), *n.* [NL., < Gr. *ἀβλέφαρος*, without eyelids: see *ablepharon*.] Same as ★*ablepharon*.

ablepharon (a-blef′a-ron), *n.* [Gr. *ἀβλέφαρος*, without eyelids, < *ἀ-* priv. + *βλέφαρον*, eyelid.] Absence, through disease or congenital defect, of one or both eyelids.

abmho (ab′mō), *n.* [*ab*(*solute*) + *mho*.] A name proposed for the c. g. s. electromagnetic unit of conductance, admittance, or susceptance; 1×10^{9} mhos.

abmodality (ab-mō-dal′i-ti), *n.* [**abmodal* + *-ity*.] Exception to or deviation from a statistical normal or mode when this is considered, for statistical purposes, as a fixed standard which living beings or their measurable qualities may approach or from which they may recede. See *mode*[1], 4.

Statistical Biology seeks to determine the exact status of species as regards variation, expressed in modes, *abmodalities* and abnormalities; the direction, rate, and causes of variation in species; the suppression of old modes, the rise of new ones, and the shifting of modes; and the inheritance and permanency of these characters and changes. With such data, accurately determined for a number of species for a period of years, it will be possible to test the validity and broad application of some of the fundamental theories upon which modern Biology is built. *Biometrika*, April, 1903, p. 313.

abmortal (ab-môr′tal), *a.* [*ab-* + *mortal*.] In *med.*, situated or directed away from the injured or dead part: applied to the course of the electrical current in an injured muscle.

abneural (ab-nū′ral), *a.* [*ab-* + *neural*.] Relating to or situated on the side of the body farthest from the neural axis.

abnormative (ab-nôr′ma-tiv), *a.* [*ab-* + *normative*.] Not normative. Applied by Cross, Iddings, Pirsson, and Washington (1902), in their quantitative classification of igneous rocks, to the minerals other than those which go to make up the norm or standard mineral composition by which a rock is classified. When the actual mineral composition of a rock differs from its theoretical or standard composition, the rock is said to have an *abnormative* mode. See *quantitative classification of igneous rocks*, under ★*rock*.

abnumerable (ab-nū′me-ra-bl), *a.* Not numerable; either having (as a collection) or being a multitude greater than that of all the integer numbers taken collectively. The multitude of all the quantities whose values (like that of π) can be expressed to indefinitely close approximation by means of indefinitely extended decimals is the *first abnumerable multitude*. There is a second, third, etc. (up to any finite ordinal number), abnumerable multitude; and there is no highest abnumerable multitude, any more than there is a highest enumerable multitude. There is no multitude greater than all abnumerable multitudes, since beyond them the individual members of the collection lose their separate identity and merge into one another in true continuity. The multitude of all the numbers considered in the calculus and theory of functions is the first abnumerable multitude, and of higher multitudes mathematicians as yet know little more than that they are logically and mathematically possible. Also *abnumeral*.

abnumeral (ab-nū′me-ral), *a.* [*ab-* + *numeral*.] Same as ★*abnumerable*.

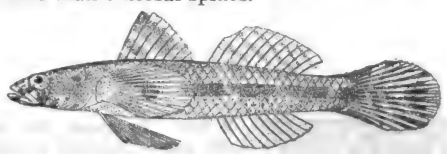
aboard[1], *adv.*—**To haul the starboard tacks aboard** (*naut.*), to bring the weather clues of the courses (lower square sails) inboard and down to the tack-irons in the deck by means of the tack-tackles.—**To have the starboard** (or **port**) **tacks aboard** (*naut.*), to be on the starboard (or port) tack, as the tacks are always boarded on the weather side of the ship.

abobra (ä-bō′brä), *n.* [Pg. *abobora*, *abobra*, gourd.] A greenhouse tendril-climbing herb, a member of the family *Cucurbitaceæ*, from Brazil, grown both for its much-divided foliage and its scarlet, gourd-like fruit.

aboideau (a-boi-dō′), *v. t.* [*aboideau*, *n.*] To improve (a tidal river or stream) and prevent the tidal overflow of its marshes and tidal meadows by placing tide-gates at its mouth.

At first sight it might seem wise to *aboideau* all rivers at their mouths. *Bot. Gazette*, Sept., 1903, p. 180.

aboma, *n.* 2. [*cap.*] [NL., < Sp.] A genus of gobies found in Mexico and Japan, having more than 6 dorsal spines.



Darter Goby (*Aboma Etheostoma*).
(From Bull. 47 U. S. Nat. Museum.)

abondance (a-boṅ-dänṡ′), *n.* [F.: see *abundance*.] In *solo whist*, the naming of the trump suit and winning of 9 tricks without the assistance of a partner.—**Abondance déclarée.** Same as ★*abondance in trumps*.—**Abondance in trumps**, in *solo whist*, the winning of 9 tricks with the trump that is turned up, without the assistance of a partner.

Aboral pore, an opening or pore at the end of the body farthest from the mouth-opening, as in a few *Anthozoa*.

aboriginalism (ab-ō-rij′i-nal-izm), *n.* The recognition of the rights of aboriginal races.

abort, *v. t.* To render abortive; check or arrest the development of: as, to *abort* a fever.

abortient, *a.* and *n.* In *pathol.*, same as *abortifacient*.

abortion, *n.*—**Missed abortion**, expulsion of a fetus sometime after its death.

abortive, *a.* 8. Preventing full development; arresting the course of, as of a disease: as, *abortive* treatment.

Aboth (ä′bōt), *n. pl.* [Heb., pl. of *'āb*, father.] 'The Fathers,' otherwise *Pirke aboth*, 'Chapters of the Fathers': a treatise in the Mishnah consisting of maxims and aphorisms of ancient 'fathers' or rabbis: analogous to the Book of Proverbs in the Old Testament.

aboulic, *a.* See ★*abulic*.

abrachiocephalus (a-brā″ki-ō-sef′a-lus), *n.*; pl. *abrachiocephali* (-lī). [NL., < Gr. *ἀ-* priv. + *βραχίων* (L. *brachium*), arm, + *κεφαλή*, head.] A monster without head and arms.

abrader (ab-rā′dėr), *n.* [*abrade*, *v. t.*, + *-er*[1].] Any tool or machine used for abrading; a file, emery-wheel, grinding-, sandpapering-, or depolishing-machine.

Abraham†, *a.* See *Abram*.

Abrahamitic (ā″bra-ham-it′ik), *a.* Same as *Abrahamitical*.

Abram†, Abraham†, *a.* Corrupted forms of *auburn*.

abranchial (a-brang′ki-al), *a.* [Gr. *ἀ-* priv. + *βράγχια*, gills, + *-al*.] Having no branchiæ or gills, as certain worms, for example the earthworm, in which respiration is carried on by the moist skin.

abranchialism (a-brang′ki-al-izm), *n.* [*abranchial* + *-ism*.] The condition of being abranchial, or without gills, as the *Firoloida* among mollusks. *Encyc. Brit.*, XXX. 796.

Abranchiata, *n. pl.* 2. A group of macrurous crustaceans having the gills rudimentary or absent. It includes the *Mysidæ*, or opossum-shrimps.

abrastol (a-bras′tol), *n.* [Gr. *ἀ-* priv. + *βρασ-*, < *βράζειν*, boil, ferment, + *-ol*.] A technical name given to the calcium salt of β-naphtholsulphonic acid, $(C_{10}H_6(OH)SO_3)_2Ca + 3H_2O$. It is used as a preservative in wines.

abrest, *prep. phr.* A simplified spelling of *abreast*.

abrotine (ab′rō-tin), *n.* [*abrot*(*anum*) + *-ine*[2].] A crystalline alkaloid, $C_{21}H_{22}ON_2$, found in *Artemisia Abrotanum*. Its solutions give a blue fluorescence.

absampere (abs′am-pār″), *n.* [*abs*(*olute*) + *ampere*.] A name proposed for the c. g. s. electromagnetic unit of current; 10 amperes.

absarokite (ab-sä′rō-kīt), *n.* [*Absarok*(*a*) (see def.) + *-ite*[2].] In *petrog.*, a name applied by

Iddings (1895) to a group of igneous rocks occurring in the Absaroka mountains in the eastern part of the Yellowstone Park. Absarokite is usually porphyritic in texture, containing phenocrysts of augite and olivin in a ground-mass of orthoclase, leucite, augite, olivin, and magnetite. The ground-mass may be glassy and the texture aphanitic or phanerocrystalline. It occurs in dikes and flows. Absarokite is the basaltic end of a series containing, in addition, shoshonite and banakite.

abscess, *n.*— **Acute abscess,** an abscess occurring as the result of acute inflammation.— **Cold abscess,** a collection of pus not associated with the ordinary signs of inflammation. It is usually located at some distance from the original point of suppuration, the matter burrowing along lines of fascia or within the sheath of a muscle: in this case also called *gravitation abscess.*— **Dubois's abscesses,** multiple areas of necrosis occurring in the thymus gland in young children with congenital syphilis.— **Gravitation abscess,** a form of *cold* ★*abscess.*— **Sterile abscess,** an abscess containing no microörganisms.— **Stitch abscess,** formation of pus after closure of a wound at the points where the sutures are inserted.

absciss (ab-sis′), *n.* [See *abscissa.*] A part cut off; specifically, in *conic sections,* an abscissa (which see). Also *abscisse.*

abscission, *n.* 7. In *bot.,* the separation of spores from a sporophore on the disappearance of the connecting layer.

absciss-layer (ab-sis′lā″ėr), *n.* In *bot.,* a layer or plane along which separation takes place, as in the fall of leaves.

abscoulomb (abs′kö-lom″), *n.* Same as ★*ab-coulomb.*

absentee, *n.* 3. An escaped or runaway convict: a euphemistic term formerly in use in Australia.

absohm (abs′ōm), *n.* [*abs*(*olute*) + *ohm.*] A name proposed for the c. g. s. electromagnetic unit of resistance: 1×10^{-9} ohms.

Absolute differential limen or **absolute threshold of difference,** in *psychol.,* the just noticeable difference of sensory stimulus stated absolutely, that is, without regard to the original stimulus of which it is an increment. — **Absolute forest land,** land fit only for forest growth. Also called *absolute forest soil.*— **Absolute form factor.** See ★*form factor.*— **Absolute geometry, scale.** See ★*geometry,* ★*scale.*— **Absolute sensibility** or **absolute sensitivity,** in *psychol.,* Fechner's term for sensitivity as measured by the inverse magnitude of the stimuli applied to the sense-organ.

absolv, *v. t.* A simplified spelling of *absolve.*

absorbd, *p. a.* A simplified spelling of *absorbed.*

Absorbent screen, in *optics,* a screen which absorbs certain or all of the rays of light falling upon it. Thus ruby glass is an absorbent screen cutting off all but the red rays of the visible spectrum.

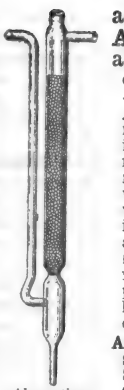
absorber, *n.* 2. In a hot-air engine, a part which absorbs heat from the air at one time and gives it out at another; a regenerator.

absorptiometric (ab-sôrp″shi-ō-met′rik), *a.* [L. *absorptio*(*n*), absorption, + Gr. *μέτρον,* measure.] Measuring or determining the amount of absorption, as of a gas in a given quantity of a liquid or of radiation in an opaque medium. — **Absorptiometric equilibrium,** the relation between the amounts of two or more gases absorbed by the same portion of a liquid with which they are simultaneously in contact.

absorption, *n.* 1. (*e*) In *elect.,* the property of the solid dielectric of an electrostatic condenser by which it takes up a part of the charge and retains a part of the absorbed charge, after discharge, as residual charge.

2. In Herbart's pedagogic system, the gradual process of the apprehension of the manifold: a translation of the German *vertiefung.* Otherwise called *concentration* and *self-estrangement.* — **Acoustic absorption,** the absorption of sound-waves either by a body which does not perfectly transmit or reflect such waves or by a body whose frequency of vibration corresponds to that of the waves, so that it is thrown into sympathetic oscillation by resonance.— **Atmospheric absorption,** the loss of sunlight in passing through the atmosphere. It increases in proportion to the distance of the sun from the zenith, and also in proportion to the shortness of waves of heat or light. Besides the general absorption there is also a so-called "selective absorption" (see *selective*), in accordance with which each component of the earth's atmosphere absorbs with special intensity certain specific wave-lengths, thus causing dark lines in the optical spectrum, inert bands in the photographic spectrum, and cold bands in the bolographic spectrum. Absorption is to be distinguished from *selective reflection.*— **Coefficient of absorption,** a physical constant used to express the specific absorbing power of a substance. Specifically— (*a*) In the absorption of gases, the volume of a gas which one volume of a liquid will dissolve. (*b*) In *optics,* the constant K in the equation $\frac{A_0}{A_1} = \frac{1}{e^{-2\pi K}}$, where A_0 is the amplitude of an incident ray, A_1 its amplitude after penetrating to a depth of one wave-length in the absorbing medium, and e the base of natural logarithms.— **Disjunctive absorption,** in *med.,* a process by which a slough is separated from healthy tissue, a thin layer of the latter in immediate contact with the necrosed portion being absorbed.— **Fluorescence absorption,** the increased absorption of light by a substance which occurs when the latter is rendered fluorescent.— **Selective absorption.** See *selective.*

absorption-tube (ab-sôrp′shon-tūb), *n.* An instrument for the absorption of gases, consisting of a vertical tube filled with glass beads which are wet with the absorbing material. It has been modified by various experimenters.



Absorption-tube.

abstat-. [*ab*(*solute*) + (*electro*)*stat-*(*ic*).] In *elect.,* a prefix which it has been proposed to place before the practical electrical units such as the ohm, ampere, volt, and coulomb, to designate the corresponding absolute electrostatic units.

abstatampere (ab′stat-am-pār″), *n.* [See *abstat-.*] A name proposed for the absolute electrostatic unit of current; about 3.3×10^{-10} amperes.

abstatcoulomb (ab′stat-kö-lom″), *n.* [See *abstat-.*] A name proposed for the absolute electrostatic unit of electrical quantity; about 3.3×10^{-10} coulombs.

abstatfarad (ab′stat-far′ad), *n.* [See *abstat-.*] A name proposed for the electrostatic absolute unit of electrical capacity; about 1.1×10^{-6} microfarads.

abstathenry (ab′stat-hen″ri), *n.* [See *abstat-.*] A name proposed for the absolute electrostatic unit of inductance; about 9×10^{11} henrys.

abstatohm (ab′stat-ōm), *n.* [See *abstat-.*] A name proposed for the absolute electrostatic unit of resistance; about 9×10^{11} ohms.

Abstemii (ab-stē′mi-ī), *n. pl.* A sect of the early church, so called from their use of water instead of wine in the eucharist. They also abstained from all use of wine, and from meat and marriage, regarding these things as intrinsically impure. They were followers of Tatian.

abstinence, *n.* 4. The act of abstaining from the use of, or from the doing of, something; specifically, in *economics,* voluntary abstention from the consumption of anything which one has the power of consuming or using, with the purpose of increasing one's resources or accumulating wealth for future enjoyment.

abstract, *v. i.*— **To abstract from.** (*b*) To separate itself from; occupy a plane or position apart; pursue an independent course.

> Physics, which is wholly the science of the senses, *abstracts from* religion, *from* morality, and *from* every kind of knowledge as far as the latter is independent of sense. I say "*abstracts from*"; I do not say "rejects," or "repudiates," or "denies." Physical science merely attends to its own business.
>
> *W. S. Lilly,* On Right and Wrong, p. 262.

abstract-concrete (ab″strakt-kon′krēt), *a.* Relating both to the abstract and to the concrete; in the Spencerian philosophy, noting those sciences which study abstractly concrete phenomena (physics and chemistry).

> Molar physics, molecular physics, and chemistry, dealing with abstract laws of motion and force that are gained from experience of concrete phenomena, and appealing at every step to the concrete processes of observation and experiment, may be distinguished as *abstract-concrete* sciences. *J. Fiske,* Cosmic Philos., II. 44.

abstraction, *n.* 6. In *geol.,* the tapping of the head waters of one stream by another the erosive action of which is more rapid.

Abstractional demonstration, a demonstration which treats characters, relations, operations, and the like as themselves objects having characters, relations, operations, etc.

abub (ä-böb′), *n.* [Syr. **abūb*?] An ancient Syrian musical instrument, probably a Pan's-pipes.

abulic (a-bö′lik), *a.* Relating to or suffering from abulia. Also *aboulic.*

abundance, *n.* 3. In *card-playing,* same as ★*abondance.*

aburahaye (ä″bö-rä-hä′ye), *n.* [Jap., < *abura,* oil, fat, + *haye,* said to mean 'minnow.'] A Japanese name of a fish of the family *Cyprinidæ, Sarcocheilichthys variegatus,* found in the waters of Japan. Also known as *higai.*

abusefulness (ab-ūs′fûl-nes), *n.* Capability of being abused or put to a wrong use. *Ruskin,* Unto this Last, p. 124.

Abutilon, *n.* 2. [*l. c.*] A plant of this genus, generally of a cultivated species. See *velvet-leaf,* 3, and *American jute,* under *jute*[2].

abutment, *n.* 2. (*c*) In a rotary engine, a part provided to cut off the steam pressure from the back or exhaust side of the piston.

abuttal, *n.* 2. The fact of abutting or of lying contiguous: as, the *abuttal* of the land on a highway.

abuv, *adv.* and *prep.* A simplified spelling of *above.*

abuze, *v. t.* A simplified spelling of *abuse.*

Abysmal clay. Same as ★*abyssal clay.*

abyssal, *a.* 3. In *petrol.,* applied by Brögger and others to deep-seated or plutonic igneous rocks. — **Abyssal benthos.** See ★*benthos* and ★*hypobenthos.*— **Abyssal clay,** fine clay now being deposited on the sea-floor in depths exceeding 600–700 fathoms. This material is generally red, purple, chocolate, or brown in color, is made up of impalpable particles free from organic remains, and is regarded by Murray as constituted of fine volcanic materials which have been decomposed in sea-water and have accumulated with excessive slowness during immense periods of time. Intermingled with the clay are particles of metallic iron and concretions of manganese oxid. Some geologists regard it as doubtful whether rocks representing such profound oceanic deposits are present in existing continental masses; others find parallel conditions suggested in some of the barren and highly colored Silurian and Cambrian slates.

Abyssinian church, gold. See ★*church,* ★*gold.*— **Abyssinian languages,** the languages of Abyssinia, some Semitic and others Hamitic. The Semitic class includes: (*a*) Amharic, derived from the ancient Sabean or Himyaritic, introduced from Yemen in southern Arabia, and closely related to Geëz or Ethiopic. (See next.) It has been the official language of Abyssinia since about the year 1300 (when the capital of Ethiopia was removed to Shoa), gradually superseding the ancient Geëz, but adopting its syllabic alphabet (with some modifications and many additions) and a large number of its words. It is the popular language; its literature is comparatively modern and slight. (*b*) Ethiopic, called by its users the *Ge'ez,* usually written *Geëz,* the language of the Aga'azi, 'emigrants' from southern Arabia who had settled in Tigré (now a province of Abyssinia) about 335 A. D. Superseded by Amharic as the official language of the country about the year 1300, it has continued to be the liturgic language of the Abyssinian Church, somewhat as Latin in the Roman Catholic Church. Originally written, like the other Semitic languages, from right to left, the direction was early changed, under Greek influence, to the European order (from left to right). The alphabet consists of peculiar characters of Himyaritic origin. There is considerable literature, including an ancient translation of the Bible. The two principal modern representatives of Geëz are the dialects known as (1) *Tigré* (*Tigrē, Tigraï,* native *Tigraï*), spoken by nomadic tribes in the extreme north, and (2) *Tigriña,* a more corrupt form largely mixed with Amharic words, as spoken in the old province of Tigré. The Hamitic family is represented in Abyssinia by *Agau* (*Agou*), spoken by a large number of Abyssinians and Tigré people, by Galla, and by many others.

A. C. (3) In *elect.,* an abbreviation for *alternating current.* (4) An abbreviation of *Analytical Chemist.*

ac_0, ac_1, ac_2, ac_3, etc. Points of flexure in the heating curves of iron and steel. The point ac_1 on heating is the same as ar_1 on cooling, etc.

acacanthrax (ak-a-kan′thraks), *n.* [NL., < Gr. *ἀκακος,* not bad (*ἀ-* priv. + *κακός,* bad), + *ἄνθραξ,* carbuncle: see *anthrax.*] Non-specific anthrax; carbuncle.

acacetin (a-kā′se-tin), *n.* [*acacia* + *-et-* + *in*[2].] A compound, $C_{16}H_{12}O_5$, found in the leaves of *Robinia Pseudacacia.* It is probably the monomethyl ether of ★apigenin (which see).

acacia, *n.*— **Parasol acacia,** a variety of the common locust or false acacia. It forms a compact spherical head and, though not producing flowers, is much cultivated in central and northern Europe for decoration and shade.

academic, *n.* 3. A member of an academy or learned society; an academist or academician. *Swinburne,* Essays and Studies, p. 372. *N. E. D.*

academicalism (ak″a-dem′i-kal-izm), *n.* [*academical, a.,* + *-ism.*] Adherence to academic rules or methods; conventionalism; formalism. *Athenæum* (quoted in N. and Q., 8th ser., IV. 363).

academicism, *n.* 2. A tendency toward Platonic opinions.

academize (a-kad′em-īz), *v. t.*; pret. and pp. *academized,* ppr. *academizing.* [*academy* + *-ize.*] To form into an academy, or subject to the rules of an academy. *Daily Telegraph,* May 4, 1868. *N. E. D.*

Academy of music. (*a*) A local musical society or corporation, founded either for the support of musical education or for research connected with musical science. (*b*) An operatic company or choral club organized for the study and rendering of musical works. (*c*) A building devoted to the rendering of musical works. The most famous of the many Italian academies is that of Bologna, founded in 1482. The French Academy, which is a royal subvention for the performance of opera, really dates from the privilege granted in 1669. The earlier operas of Handel were largely written for an operatic association called the Royal Academy.

Acadian. **I.** *a.*— **Acadian hairstreak.** See ★*hairstreak.*— **Acadian owl.** See ★*owl*[1].

II. *n.* 2. In *geol.,* the middle division or stage of the Cambrian system of eastern North America, named from its typical development in Nova Scotia and New Brunswick, but extending into Newfoundland, Cape Breton, and eastern Massachusetts, and perhaps farther south in the Appalachian region. Paleontologically it is known as the *Paradoxides horizon,* con-

trasting with the *Olenellus horizon*, or Georgian stage, below, and with the *Dicellocephalus horizon*, or Saratogian stage, above. Its rocks are chiefly slates and shales.

Acajou oil, a fat oil obtained from the acajou or cashew-nut, *Anacardium occidentale*, used for food and in cooking in Brazil and the West Indies.

Acalephæ, *n. pl.* 2. A class of *Cœlenterata*, including medusæ of considerable size, with gastral filaments, endodermal gonads, and lobed umbrella-edge, and without true velum: contrasted with *Hydromedusæ* and *Actinozoa*. Same as *Acraspeda*.

acalyptrate (ak-ą-lip'trāt), *a.* [*a*-18 + *calyptrate*.] In *bot.*, not furnished with a calyptra; in *entom.*, of or belonging to the *Acalyptratæ*.

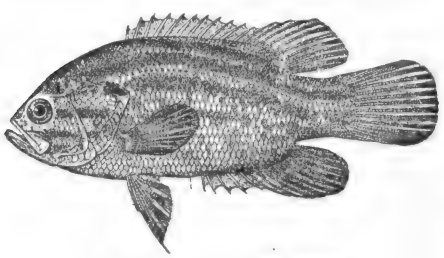
acamp (ą-kamp'), *adv.* [*a*3 + *camp*.] To the camp; campward. *J. Barlow*, Columbiad, vi. 637.

a candelliere. 2. Said of a style of decoration frequently found on the majolica of Urbino, Castel Durante, and other manufactures, consisting of animal grotesques arranged symmetrically around the border or on either side of a central design.

acanth (ą-kanth'), *n.* [*acanthus*.] Same as *acanthus*, 2.

acanthad (ą-kan'thad), *n.* [NL., ⟨ *Acanthus* + *-ad*.] A plant of the *Acanthus* family.

Acantharchus (ak-an-thär'kus), *n.* [NL., ⟨ Gr. *ἄκανθα*, a thorn, + *ἀρχός*, rectum.] A



Mud-sunfish (*Acantharchus pomotis*).
(From Bull. 47 U. S. Nat. Museum.)

genus of sunfishes of the family *Centrarchidæ*, including the mud-sunfish, *A. pomotis*.

Acantharia, *n. pl.* 2. One of the four suborders into which Haeckel divides the *Radiolaria*: characterized by having the capsule-membrane uniformly perforated and the skeleton composed of acanthine spicules.

Acanthephyra (ak-an-thef'i-rą), *n.* [NL.] The typical genus of the family *Acanthephyridæ*. *Milne-Edwards*, 1881.

Acanthephyridæ (a-kan-the-fī'ri-dē), *n. pl.* [NL., ⟨ *Acanthephyra* + *-idæ*.] A family of macrurous podophthalmous crustaceans mainly inhabiting the deep sea. They have the body laterally compressed, the first antennæ with 2 long flagella, and the first two pairs of trunk-legs slender and subequal. The typical genus is *Acanthephyra*. Also *Miersiidæ*.

Acantherpestes (a-kan-thėr-pes'tēz), *n.* [Gr. *ἄκανθα*, spine, + *ἑρπηστής*, a reptile.] A genus of Carboniferous myriapods, some of the members of which attained a length of a foot. They were armed with branching spines and appear to have had lateral branchial pores; hence they are regarded by Scudder as amphibious.

acanthin, acanthine (a-kan'thin), *n.* [Gr. *ἄκανθα*, thorn, + *-in*2, *-ine*2.] An organic substance, allied to horn or chitin, which enters into the composition of the spicules in the nonsilicious *Radiolaria*.

acanthine, *a.* 3. In *ichth.*, spine-like; bearing spines.

acanthinic (ak-an-thin'ik), *a.* Composed of or containing ⋆acanthin (which see).

acanthinous (a-kan'thi-nus), *a.* [*acanthin* + *-ous*.] Consisting of or resembling acanthin.

acanthion (a-kan'thi-on), *n.* [NL., ⟨ Gr. *ἀκάνθιον*, dim. of *ἄκανθα*, a spine.] In *craniom.*, the extreme point of the nasal spine. *Von Török*.

Acanthistius (ak-an-this'ti-us), *n.* [NL., ⟨ Gr. *ἄκανθα*, spine, + *ἱστίον*, dim. of *ἱστόν*, a web.] A genus of serranoid fishes allied to *Plectropoma*: found in South America and elsewhere.

Acanthobatis (ak-an-thob'ą-tis), *n.* [Gr. *ἄκανθα*, spine, + *βατίς*, skate, roach.] A genus of fossil rays or skates from the Miocene Tertiary of France and Würtemberg.

Acanthoceras (ak-an-thos'e-ras), *n.* [Gr. *ἄκανθα*, spine, + *κέρας*, horn.] The typical genus of the family *Acanthoceratidæ*.

Acanthoceratidæ (ak-an-thos-e-rat'i-dē), *n. pl.* [NL., ⟨ *Acanthoceras* + *-idæ*.] A family of tetrabranchiate cephalopods or ammonites which have evolute or loosely coiled whorls bearing more or less continuous transverse ribs. The species are from the Cretaceous system.

Acanthochætodon (a-kan-thō-kē'tō-don), *n.* [NL., ⟨ Gr. *ἄκανθα*, spine, + *χαίτη*, hair (bristle), + *ὀδούς*, tooth (see *Chætodon*).] A genus of chætodontids, the butterfly-fishes of the East Indies.

Acanthocladia (a-kan-thō-klā'di-ą), *n.* [Gr. *ἄκανθα*, spine. + *κλάδος*, a branch.] The typical genus of the family *Acanthocladiidæ*.

Acanthocladiidæ (a-kan″thō-kla-dī'i-dē), *n. pl.* A family of cryptostomatous *Bryozoa*, represented by genera which occur in geologic formations from the Silurian to the Permian.

Acanthocottus (a-kan-thō-kot'us), *n.* [NL., ⟨ Gr. *ἄκανθα*, spine, + *κόττος*, a river-fish (the bullhead?): see *Cottus*.] A genus of sea-sculpins. Earlier called *Myoxocephalus*.

Acanthocybium (a-kan-thō-sī'bi-um), *n.* [NL., ⟨ Gr. *ἄκανθα*, spine, + *κύβιον*, salted flesh of a sort of tunny.] A genus of mackerels, family *Scombridæ*, of the tropics, remarkable for the elongate form and serrate teeth. The peto or wahoo of the West Indies, *A. petus* or *A. solandri*, belongs to this genus.

acanthocyst (a-kan'thō-sist), *n.* [Gr. *ἄκανθα*, thorn, + *κύστις*, bladder.] In the *Nemertini*, a sac or an enormous cell containing one or more calcareous stylets.

Acanthodei, *n. pl.* 2. In Agassiz's classification, an order of selachians or sharks having the endoskeleton and parts of the skull calcified; pterygoquadrate articulated with the cranium and sometimes bearing teeth; fins, except the caudal, with stout anterior spines; and shagreen scales quadrate and compactly arranged. The members of this order are all fossil and belong wholly to the Paleozoic formations. Two families are distinguished, the *Acanthodidæ* and the *Diplacanthidæ*.

acanthodian (ak-an-thō'di-an), *a.* and *n.* [*Acanthodes*.] **I.** *a.* Belonging to or having the characters of the genus *Acanthodes* or the order *Acanthodei*.

II. *n.* A fossil fish of the genus *Acanthodes*.

Acantholabrus (a-kan-thō-lā'brus), *n.* [NL., ⟨ Gr. *ἄκανθα*, spine, + L. *labrum*, lip (see *Labrus*).] A genus of labroid fishes of the north of Europe, having an increased number of anal spines. The species is *A. exoletus*.

acanthology (ak-an-thol'ō-ji), *n.* [Gr. *ἄκανθα*, thorn, spine, + *-λογία*, ⟨ *λέγειν*, speak.] The study of the structure and functions of spines, especially of those of sea-urchins.

Acanthomeridæ (a-kan″thō-mer'i-dē), *n. pl.* [NL., ⟨ *Acanthomera*, a genus (⟨ Gr. *ἄκανθα*, a thorn, spine, + *μέρος*, a part (or *μηρός*, thigh?)), + *-idæ*.] A family of dipterous insects confined to America and containing only two genera, *Acanthomera* and *Rhaphiorhynchus*. They are allied to the gadflies of the family *Tabanidæ*. The family contains the largest *Diptera* known, some of them reaching a length of two inches.

acanthometran (a-kan-thō-met'rąn), *a.* and *n.* **I.** *a.* Pertaining or relating to the genus *Acanthometra*.

II. *n.* A member of the genus *Acanthometra*.

acanthometridan (a-kan-thō-met'ri-dan), *a.* and *n.* **I.** *a.* Pertaining to or resembling the *Acanthometridæ*.

II. *n.* A member of the family *Acanthometridæ*.

Acanthonida (ak-an-thon'i-dą), *n. pl.* [NL., ⟨ Gr. *ἄκανθα*, thorn, + *-on-* + *-ida*.] An order or a family of acantharian radiolarians having 20 spines arranged according to Müller's law (4 equatorial, 8 tropical, and 8 polar). As an order it includes the families *Astrolonchidæ*, *Quadrilonchidæ*, and *Amphilonchidæ*.

Acanthonidæ (ak-an-thon'i-dē), *n. pl.* Same as ⋆*Acanthonida*.

acanthophore (a-kan'thō-fōr), *n.* [Gr. *ἄκανθα*, thorn, + *-φορος*, ⟨ *φέρειν*, bear.] A somewhat conical granular mass which bears the median stylet in the bottom of the eversible portion of the proboscis in certain *Metanemertini*.

acanthophract (a-kan'thō-frakt), *n.* One of the *Acanthophractæ*.

acanthopodous (ak-an-thop'ō-dus), *a.* [Gr. *ἄκανθα*, spine, + *πούς* (*ποδ-*), foot, + *-ous*.] 1. In *bot.*, bearing spines on the petiole or peduncle.—2. Same as *acanthopod*.

acanthopore (a-kan'thō-pōr), *n.* [Gr. *ἄκανθα*, spine, + *πόρος*, pore.] In the extinct tabulate corals of the family *Chætitidæ*, one of a set of pores which emerge on the surface in small tubercles. Contrasted with ⋆*autopore* and ⋆*mesopore*.

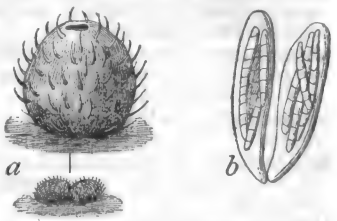
acanthopous (a-kan'thō-pus), *a.* [Gr. *ἄκανθα*, a spine, + *ὤψ* (*ὠπ-*), eye.] Having spines on or about the eye.

Acanthosoma (a-kan-thō-sō'mą), *n.* [NL. (Curtis, 1824), ⟨ Gr. *ἄκανθα*, spine, + *σῶμα*, body.] An interesting genus of pentatomid bugs common to the old and new worlds. *A. griseum* of Europe is remarkable for the solicitude shown by the female for her young. She not only protects the eggs, but cares for the young for a considerable period after hatching.

acanthosphenote (a-kan-thō-sfē'nōt), *a.* [Gr. *ἄκανθα*, spine, + **σφηνωτός*, ⟨ *σφηνοῦν*, *v.*, ⟨ *σφήν*, a wedge.] A term applied by Mackintosh to the spines of *Echinoidea*, which are shown by transverse section to consist of a number of wedge-shaped portions radiating from a central axis and separated by bands of porous tissue.

acanthosphere (a-kan'thō-sfēr), *n.* [Gr. *ἄκανθα*, thorn, + *σφαῖρα*, sphere.] One of the peculiar spiny bodies contained in the cells of *Nitella*: the *Stachelkügeln* of the Germans.

Acanthostigma (a-kan-thō-stig'mą), *n.* [NL. (De Notaris, 1863), named in allusion to the spine-like bristles of the perithecium, ⟨ Gr. *ἄκανθα*, thorn, + *στίγμα*, mark, dot, spot.] A genus of pyrenomycetous fungi having small superficial perithecia beset with short, stiff bristles. The spores are mostly fusiform and hyaline with several septa. The species are mostly saprophytic. *A. parasiticum* is said to cause a disease of the silver fir, *Abies Picea*, in Europe.



Acanthostigma perpusillum.
a, two perithecia (below), one enlarged (above); *b*, two spore-cases cut longitudinally to show the fusiform septate spores.

Acanthostracion (a-kan-thō-strā'si-on), *n.* [NL., ⟨ Gr. *ἄκανθα*, spine, + *ὀστράκιον*, dim. of *ὄστρακον*, a shell.] A generic name applied to the three-angled box-fishes with horn-like spines above the eyes.

Acanthotelson (a-kan-thō-tel'sọn), *n.* [Gr. *ἄκανθα*, spine, + *τέλσον*, limit: see *telson*.] A genus of extinct amphipod *Crustacea* from the Carboniferous rocks.

acanthozoöid (a-kan-thō-zō'oid), *n.* [Gr. *ἄκανθα*, thorn, + *zoöid*.] The narrow hook-bearing posterior end of the proscolex of certain *Cestoidea*, as *Dipylidium caninum*. See ⋆*cystozoöid*.

a cappella. 2. In *music*, noting a species of time which employs four minims or half-notes in each measure.

acapulco (ä-kä-pùl'kō), *n.* [*Acapulco*, a Mexican seaport.] A name in the Philippine Islands and Guam of *Herpetica alata*, an introduced plant of Mexican origin, the leaves of which are used as a remedy for ringworm and other parasitic skin-diseases. See *ringworm-shrub*.

acara (ä-kä-rä'), *n.* [Tupi *acará*.] A name applied to different cichloid fishes found in South America. From the common name the genus *Acara* was named.

acari (ak'ą-rī), *n. pl.* [Plural of *acarus*.] The order *Acarina* as a whole, or any number of species or individuals of the order. See *Acarus* and *Acarina*.

acariasis, *n.*—**Poultry acariasis**, any infection of poultry by mites (*Acarina*), as the cutaneous infection with the chicken-tick (*Dermanyssus gallinæ*) or the chicken-mites (*Sarcoptes mutans*, *S. lævis gallinæ*), the subcutaneous infection with the cystic fowl-mite (*Laminosioptes cysticola*), or the infection of the air-passages with the internal chicken-mite (*Cytodites nudus*).—**Psoroptic acariasis**, a highly contagious cutaneous infection of certain domesticated animals with mites (*Acarina*) belonging to the genus *Psoroptes*. The best-known forms are the common sheep-scab, and cattle-mange or cattle-scab, sometimes called *Texas itch*. Similar infections occur on the horse, ass, mule, goat, and rabbit.—**Sarcoptic acariasis**, a highly contagious cutaneous infection with mites (*Acarina*) belonging to the genus *Sarcoptes*. The most common form is the itch or scabies of man, caused by the itch-mite (*Sarcoptes scabiei*), which burrows irregular galleries in the epidermis. *Norwegian itch* is a specially severe variety of the disease. Varieties of sarcoptic acariasis or sarcoptic mange also affect the horse, cattle, goat, camel, llama, hog, rabbit, ferret, dog, wolf, lion, wombat cat, pigeon, and poultry.

acariform (a-kar'i-fôrm), *a.* [NL., ⟨ Gr. *ἀκαρι*, acarus, mite, + L. *forma*, form.] Same as *acaroid*.

acarine (ak'ą-rin), *a.* and *n.* [NL. **acarinus*, ⟨ *acarus*, acarus.] **I.** *a.* Like an acarian; of or relating to the order *Acarina*.

II. *n.* A member of the order *Acarina* or of the genus *Acarus*.—**Acarine diseases,** diseases such as mange or the itch.

acarocecidium (ak″a-rō-sē-sid′i-um), *n.*; pl. *acarocecidia* (-ä). A plant-gall made by mites: practically the same as ★*phytoptocecidium*.

The analogy of these organs to the *acaro-cecidia* (that is to say, to galls caused by certain acarids) of laurels and various other plants is striking.

Smithsonian Report, 1896, p. 452.

acarodomatia, *n.* Plural of ★*acarodomatium*.

acarodomatium (ak″a-rō-dō-mā′shi-um), *n.*; pl. *acarodomatia* (-shi-ä). [NL., < *Acarus* + Gr. *δωμάτιον*, dim. of *δῶμα*, a house: see *dome*.] A shelter formed on certain tropical plants for the protection of mites (acari) when they are of service to the host.

acarologist (ak-a-rol′ō-jist), *n.* [*acarolog-y* + *-ist*.] One who is versed in the study of the *Acarina*, or mites and ticks.

If that be so, then it appears to me that Dr. Oudemans has proved conclusively that the sense in which *acarologists* use the genus *Oribata* is correct.

Annals and Mag. Nat. Hist., April, 1902, p. 311.

acarology (ak-a-rol′ō-ji), *n.* [NL. *acarus* + Gr. *-λογία*: see *-ology*.] The scientific study of mites.

acatalepsy, *n.* **3.** A weak understanding; mental deficiency.

acatamathesia (a-kat″a-ma-thē′si-ä), *n.* [NL., < Gr. *ἀ-* priv. + *καταμάθησις*, thoroughknowledge, < *καταμανθάνειν*, learn thoroughly, < *κατά*, intens., + *μανθάνειν*, know well.] Inability to comprehend ordinary conversation, accompanied by a blunting of the perceptions. *Baldwin*, Dict. of Philos. and Psychol.

acatastasia (a-kat-a-stā′si-ä), *n.* [NL., < Gr. *ἀκαταστασία*, instability, < *ἀ-* priv. + *κατάστασις*, stability: see *catastasis*.] In *med.*, irregularity in the symptoms or course of a disease.

acatastasis (ak-a-tas′ta-sis), *n.* [See ★*acatastasia*.] **1.** An unsettling, as of the mind. *E. Hooker*.—**2.** In *med.*, same as ★*acatastasia*. *Syd. Soc. Lex.*

acatastatic (a-kat-a-stat′ik), *a.* Unsettled; indeterminate; irregular.

acategorical (a-kat-ē-gor′i-kal), *a.* [*a-*, not, + *categorical*.] Illogical; loose; inexact: as, *acategorical* arguments. [Rare.] *N. E. D.*

acatharsia, *n.* (*c*) Amenorrhea.

acatholic (a-kath′ō-lik), *a.* [*a-*[18] + *catholic*.] Un-Catholic; not Catholic; hence, sectarian. *Encyc. Brit.*, XXX. 525.

A. C. C. In *elect.*, an abbreviation of *Anodic Closure Contraction*.

accelerant (ak-sel′e-rant), *a.* and *n.* [L. *accelerans*, ppr. of *accelerare*, hasten: see *accelerate*.]

I. *a.* That accelerates; accelerating.

II. *n.* That which quickens; specifically, one of the nerves stimulation of which causes increased rapidity of the heart's action.

accelerate, *v. t.* **3.** To assign a date earlier than the true or real one; give an earlier date to; antedate. *Milman*, Hist. Latin Christianity, I. 72.

acceleration, *n.* (*e*) In *biol.*, the supposed acquisition of new characters by adults, and their inheritance by descendants at earlier and earlier stages of their life; ★tachygenesis (which see).—**Angular acceleration,** the time-rate of angular velocity. It is measured numerically as radians per second per second.—**Equation of acceleration.** The acceleration of a body is equal to the force acting on it divided by its mass. The acceleration of a moving body at any instant is the rate at which its velocity is changing at that instant: $a = \frac{dv}{dt} = \frac{d^2s}{dt^2}$.—**Equatorial acceleration of the sun,** the diminution of the rotation period for points on the sun's equator as compared with the period at points in higher latitudes. Between the equator and latitude 40° the difference is about two days.—**Linear acceleration,** rate of change of linear velocity: usually expressed in centimeters per second per second.—**Parallelogram of accelerations,** a vector diagram for the resolution or composition of accelerations, similar in construction and principle to the parallelogram of forces. See *force*[1].—**Secular acceleration,** in *astron.*, a slow increase in the mean orbital motion of a heavenly body. In the case of the moon it amounts to about 8 seconds in a century. See *acceleration*.—**Triangle of accelerations,** a vector diagram for the resolution and composition of accelerations, similar to the triangle of velocities or of forces. See ★*polygon of vectors*.—**Unit of acceleration,** the acceleration which produces unit change of velocity in unit time: usually one centimeter per second per second.—**Unit of angular acceleration,** the acceleration which produces unit change in the angular velocity of a body in unit time: usually a radian in a second.

accelerative, *a.* **2.** In *philol.*, indicating a notion of acceleration: applied to certain verb-forms in some agglutinative languages. See the extract.

The highly agglutinating character of this language [the *Kuki-Lushai* of North Kachar Hills and parts of Nagaland] is evident from the numerous conjugations given by Mr. Soppitt, for some of which he has no names, but which may be called *Acceleratives*, Retardatives, Complementatives, and so on. *Keane*, Man Past and Present, p. 185.

Accelerative force, in *physics*, a force which produces positive acceleration and consequently increases the velocity of a moving body: opposed to *retarding force*, the acceleration due to which is negative.

accelerator, *n.* (*e*) A device in a motor-car by which the operator may render inoperative the speed-governor of the motor. If the governor is of the centrifugal type, as the speed increases the balls or weights fly outward against the action of a spring. The accelerator increases the tension of the spring or draws the balls inward directly, so that the governor ceases to act to close the throttle or regulate speed as the motor increases its number of revolutions above the limit set by the normal tension of the springs.

accelerator-pedal (ak-sel′e-rā-tor-ped″al), *n.* A pedal used to actuate the rods of the accelerator mechanism in many forms of motor-car. See ★*accelerator* (*e*).

accelerograph (ak-sel′e-rō-graf), *n.* An apparatus designed for measuring the succession of pressures developed in a powder-chamber by the combustion of a charge. The powder may be exploded in an inclosed vessel or be placed in the bore of a gun and act on a projectile.

accelerometer (ak-sel-e-rom′e-tėr), *n.* **1.** An instrument for measuring the force required to start a train and keep it going and the centrifugal force when the train rounds a curve. The instrument consists of two glass vessels connected by a tube, one containing a liquid such as mercury and the other red alcohol. *Amer. Inventor*, July 15, 1904, p. 312.

2. An apparatus for showing by direct registry the law of the movement, in the function of time, of a piston subjected to the action of powder gases.

accensor, *n.* **2.** In the early Christian church, the one who lighted and extinguished the candles on or about the altar. This office is now performed by an altar-boy.

accent, *n.*, **8.** Musical accent in general is said to be *transferred*, or *false*, when for esthetic reasons it is placed in some unusual place, contrary to the simple rhythm: thus in a syncopated passage (see *syncopation*, 2) the accents are systematically transferred. In *violin-playing*, an accent is called *dead* when the bow is held firmly against the strings after beginning an emphatic tone, so as to choke the sound.

10. In *decorative art*, an added relieving or contrastive touch or tint: as, deep blue or crimson, with *accents* of gold.—**Logical accent.** (*a*) The accent or stress placed by the voice on the root-syllable of a word, as in Anglo-Saxon and other Teutonic languages: as, for example, Anglo-Saxon *gif′an*, to give, *forgif′ennes*, forgiveness, etc. (*b*) The special stress or emphasis laid on a particular word in a sentence: as, for example, on 'us' in the line, "Better for *us*, perhaps, it might appear" (*Pope*, Essay on Man, I. 169). *Latham*, English, II. 45.—**Primary accent.** (*a*) The principal accent or stress in a word of several syllables. In English, as a rule, it falls on a root-syllable, as in shep′herdess, unnat′ural, impos′sible; or on the first syllable: but the fact depends upon the history of the word in question, and cannot be reduced to one or two rules. (*b*) A character, usually (′), used to mark such an accented syllable.—**Rhythmical accent,** accent depending on rhythm as associated with quantity or pitch.—**Secondary accent.** (*a*) A second or minor accent or stress heard in the pronunciation of some words with two or more syllables, preceding or following that bearing the primary accent. (*b*) A character, usually (″), used to mark such an accent. The term often includes minor accents of the third (tertiary) or weaker grades, as in in‴con″tro-ver′ti-ble, hy″per-cat‴a-lec′tic, in‴″com″pre-hen‴si-bil′i-ty, etc.—**Tonic accent,** syllabic stress.

accentualist (ak-sen′tū-al-ist), *n.* [*accentual* + *-ist*.] One who holds to a particular theory of accent.

acceptance, *n.* **4.** Acceptableness; the quality of being acceptable. *Browning*, Ring and Book, ii. 835.—**Acceptance of persons,** favoritism; partiality.—**Proposal and acceptance.** See ★*proposal*.

acceptive, *a.* **2.** Fitting; appropriate. *Mrs. Browning*, Loved Once.

access, *n.* **8.** In the *Rom. Cath. Ch.*, same as *accession*, 6.

accession (ak-sesh′on), *v. t.* To enter in the accession-book of a library. See ★*accession-book*.

accession-book (ak-sesh′on-bůk), *n.* A blank-book in which the titles of the books or volumes received by a library are entered in the order of their receipt, with all the necessary details regarding them, such as date of entry, accession-number, class-number, author, name of publisher, place and date of publication, size, number of pages, etc. *J. C. Dana*, Library Primer, p. 77.

accession-number (ak-sesh′on-num′bėr), *n.* The number given to a volume when it is entered in the accession-book of a library, showing the order of its receipt.

accessorius, *a.*—**Lateralis accessorius,** the accessory lateral line; in fishes, one or more series of mucous tubes in addition to the usual series called the *lateral line*.

accessory. **I.** *a.* **3.** In the logical system of Lotze, adding (as thought) to the coherence of the matter of thought a notion of the ground of its coherence. See the extract.

That peculiarity of thought which will govern the whole of our subsequent exposition lies in the production of those *accessory* and justificatory notions which condition the form of our apprehension.

Lotze (trans.), Logic, Introd., §7.

4. In *geol.*, noting those minerals which are present in relatively small quantities in a rock and are not mentioned in its definition, such as zircon, apatite, and magnetite in granite: contrasted with *essential*.—**Accessory germ-plasm.** See ★*germ-plasm*.—**Accessory idioplasm.** See ★*idioplasm*.—**Accessory parts** or **voices,** in *music*, parts or voices which supply an accompaniment to those which are principal or essential.—**Accessory signs,** in *pathol.*, customary or constantly attendant signs.

II. *n.* **4.** In *organ-building*, same as *accessory* ★*stop*.

Accident yield. See ★*yield*.

Accidental variations. See ★*variation*.

accidentalism, *n.* **4.** In *philos.*, the opinion that events are sometimes modified without adequate cause: a use of the word proposed by J. M. Baldwin.

accipenserin, *n.* See ★*acipenserin*.

acclimatable (a-klī′mā-ta-bl), *a.* Acclimatizable. [Rare.] *N. E. D.*

Acclimation fever. See ★*fever*[1].

acclimatize, *v.* **II.** *intrans.* To become climatically accustomed or habituated to a new locality or to new conditions.

accolent (ak′ō-lent), *a.* and *n.* [L. *accolens* (*-ent-*), ppr. of *accolere*, dwell by, < *ad*, to, + *colere*, till, dwell: see *cult*.] Dwelling near by; one who dwells near by.

The close resemblance between the skulls of the ancient Cibolans and those of the *accolents* of the Gila-Salado has been commented on by others. *J. W. Fewkes*, in Smithsonian Report, 1896, p. 519.

accommodation, *n.* **5.** In *biol.*, a change which is brought about in a living being by its own activity and is not transmitted to its descendants, as contrasted with a variation regarded as a congenital change which is not the effect of the activity of the organism and is transmitted to descendants; an acquired character.—**6.** In *genetic psychology*, the reverse of habit. It implies modification of function or type, and finds expression in selective thought, interest, etc. *Baldwin*, Handbook of Psychol., p. 49.

7. In *theol.*, the theory that God in his revelation so modifies its teaching that it meets the needs of man, who is limited in knowledge and holiness. So God's law is accommodated to the hardness of man's heart, and his truth to ignorance.—**8.** A public coach with seats inside for twelve persons, and with an entrance on each side. The body was hung on leather thoroughbraces after the manner of the post-chaise. It was first used in New York on Broadway between Wall and Bleecker streets. Its successors were the sociable and the omnibus.—**Absolute accommodation,** that of one eye acting independently of its fellow.—**Accommodation phosphenes.** See ★*phosphene*.—**Limits of accommodation,** in *physiol.* and *psychological optics*, the nearest and farthest points at which an object can be seen single: also termed *range of accommodation*.—**Line of accommodation,** in *psychological optics*, the portion of the line of sight for points in which the same degree of accommodation is sufficient.—**Range of accommodation.** See *limits of* ★*accommodation*.—**Relative accommodation,** that effected by the two eyes acting together.

accompaniment, *n.* (*a*) An accompaniment is said to be *obbligato* when it so far differs from that which is accompanied that it is necessary for the intended effect, but *ad libitum* when it so nearly coincides with that which is accompanied that it may or may not be used, at will. The form of an accompaniment is specifically described by terms such as *arpeggio*, *figured*, *pulsatile*, *harmonic*, *contrapuntal*, *running*, etc., and its character is indicated by naming the instrument or other apparatus by which it is provided: as, a piano *accompaniment*, a chorus *accompaniment*, etc.—**Accompaniment figure,** in *music*, a small pattern of notes which is used again and again, with but slight modifications, so as to form a continuous background or framework for a solo or other principal melody. The so-called *Alberti bass* is one variety of accompaniment figure; but the term is extended to cover much more elaborate melodic figures which are repeated in accompaniments.

accordatura (a-kôr-dä-tö′rä), *n.* [It., < *accordare*, accord, *v.*] The normal series of tones to which the strings of a stringed instrument, such as the violin, are tuned: any deviation from this series is called *scordatura*. Sometimes written *accord*.

according, *adv.*—**According to Gunter,** reckoned, determined, ascertained, or laid down in accordance with, or by means of, the rule, scales, tables, or instruments devised by Edmund Gunter (1581–1626), a noted English mathematician; hence, exact or exactly; accurate or accurately.

accordion, *n.* **II.** *a.* Resembling in its folds

the bellows of an accordion: as, an *accordion* camera (one that is extensible), *accordion* skirts, etc.

accordment (a-kôrd'ment), *n.* [*accord, v.*, + *-ment.*] Accord; agreement; reconcilement. *N. E. D.*

account, *n.*—**Bureau of accounts.** See ★*bureau.*—**Joint account,** an account, as in a bank or in some particular course of business dealings, in which two or more persons are conjointly interested, as distinguished from an account in which only one person, firm, or corporation is interested.—**To square accounts,** to ascertain, and to pay or receive, the balance due in any particular course of business dealings; settle up by paying or receiving the balance due.

accountant, *n.*—**Chartered accountant,** a certified public accountant. [British.]

The fiftieth anniversary of the incorporation of *chartered accountants* in Scotland. *Athenæum,* Dec. 19, 1903.

accounter (a-koun'tėr), *n.* [*account, v.*, + *-er.*] 1. One who counts or reckons; an accountant; a 'teller.'—3. One who keeps or renders, or is required to render, an account, as a steward of his stewardship.

accounting (a-koun'ting), *n.* [*account, v.*, + *-ing.*] 1†. Reckoning; computation; counting.—2. An examination, reckoning, rendering, or balancing of accounts so as to arrive at the true state of any transaction or course of transactions: as, the court ordered an *accounting;* the parties came to an *accounting.*—3. The art or science of keeping accounts; the principles or methods of account-keeping; accountancy: as, manufacturing *accounting;* mercantile *accounting. Amer. Accountant's Manual,* I. 183.

accountment (a-kount'ment), *n.* [*account, v.*, + *-ment.*] Accounting; responsibility. [Rare.]

accouplement, *n.* 3. In *arch.*, the act of placing two pillars, columns, or pilasters close together, so as to form a pair, in contrast with similar pieces which are spaced more widely. Accouplement is rare in classical buildings as we know them, but is common in modern work.

Accra rubber. See ★*rubber.*

accrete, *a.* 2. In *biol.*, grown together: said of parts normally separate but naturally grafted. See *accretion,* 2.

accretion, *n.* 5. In *forestry,* increase in diameter or height: distinguished from *increment,* increase in volume.—6. In *petrol.*, a term proposed by Johnston-Lavis for a mass formed in solution by deposition about a nucleus, as in oölite, or upon the walls of a cavity. It stands in contrast to *concretion,* which is defined by the author named as a mechanical agglomeration about a nucleus.—**Accretion borer.** See ★*borer.*—**Accretion cutting.** Same as ★*accretion thinning.*—**Accretion thinning,** in *forestry,* a thinning made specifically to increase the rate of growth in diameter of the trees which are left standing.

accultural (a-kul'tū-ral), *a.* [L. *ac-* for *ad-* + *cultura,* culture, + *-al.*] Obtained by acculturation, or by the adoption of foreign cultural elements.

The invention is at first individual, but when an invention is accepted and used by others it is *accultural,* and the invention of the individual may be added to the invention of others, so that it may be the invention of many men.
J. W. Powell, in Rep. Bur. Am. Ethnology, 1897–98, p. xxi.

acculturation (a-kul-tū-rā'shon), *n.* [L. *ac-* for *ad-* + *cultura,* culture, + *-ation.*] The process of adopting and assimilating foreign cultural elements.

The process of culture in all the five departments is by invention and *acculturation.*
J. W. Powell, in Rep. Bur. Am. Ethnology, 1897–98, p. xxi.

acculture (a-kul'tūr), *n.* [See *accultural.*] The cultural elements acquired by contact with foreign forms of culture. *G. S. Hall,* Adolescence, II. 726.

acculturize (a-kul'tūr-īz), *v. t.*; pret. and pp. *acculturized,* ppr. *acculturizing.* [*acculture* + *-ize.*] To make the culture of a people similar to that of another; to bring about assimilation of culture.

The arts and industries of the partially *acculturized* Papago Indians. *Smithsonian Report,* 1895, p. 44.

accumbent, *a.* 3. In *entom.*, lying closely, as the scales on a butterfly's antenna.

accumpaniment, *n.* A simplified spelling of *accompaniment.*

accumpany, *v. t.* A simplified spelling of *accompany.*

accumulator, *n.* 3. (*c*) In the pressure accumulator the displacement plunger is forced into the hydraulic cylinder by a piston which fits a second cylinder and on whose acting face a pressure of steam or air is maintained from a steam-boiler or from a compressed-air pump or reservoir of large capacity. The name *accumulator* is also given to a storage battery, in electrical engineering, since the battery may be charged and discharged at different rates, and in the chemical reaction caused by the charging current an electrical energy is accumulated which is discharged when the circuit is completed through the line. The energy may also be accumulated or stored in the form of heat in steam or other heat-transferring medium. In what has been called the *regenerative accumulator,* for example, steam from the exhaust-pipe of an intermittent non-condensing engine, such as a hammer, a hoisting-engine, or a rolling-mill, is received in a sheet-steel cylinder containing cast-iron plates. The metal mass acts to condense and reëvaporate this exhaust steam, and to accumulate the varying energy of the exhaust, so as to deliver a constant flow of low-pressure steam to some other form of steam-motor, preferably a condensing steam-turbine.

Ace in the pot, a dice game in which each player gets rid of a counter for every ace thrown.

a.-c.-e. mixture. See ★*mixture.*

aceconitic (as-e-kō-nit'ik), *a.* [*ace(tic)* + *(a)conitic?*] Noting an acid, $C_6H_6O_6$, which is formed by the action of sodium on the ethyl ester of bromacetic acid. It is isomeric with aconitic acid.

acedia (ä″sā-dē'ä), *n.* [Cuban use of Sp. *acedia,* a flounder.] A Cuban name for a species of tongue-fish or sole, *Symphurus plagusia.*

acediamine (as-e-dī-am'in), *n.* [Appar. *ace(tic)* + *di-*[2] + *amine.*] A substance $CH_3C(NH)NH_2$. Also *acetamidine.*

acefalous, *a.* A simplified spelling of *acephalous.*

aceitillo (ä-sā″i-tēl'yō), *n.* [Porto Rico Sp., dim of Sp. *aceite,* oil.] In Porto Rico, a small tree, *Simarouba Tulæ,* the wood of which is strong, durable, and well suited to all kinds of coarse carpenter-work.

ace-line (ās'līn), *n.* In *hand-ball* and similar sports, a line used in marking the courts.

acenaphthene (as-e-naf'thēn), *n.* [*ace(tic)* + *naphthene.*] A hydrocarbon, $C_{12}H_{10}$, obtained from coal-tar and also prepared artificially by heating *a*-ethylnaphthalene.

acenaphthylene (as-e-naf'thi-lēn), *n.* [*ace(tic)* + *naphthylene.*] A hydrocarbon, $C_{12}H_8$, formed when the vapor of acenaphthene is passed over red-hot lead oxid.

Acentrogobius (a-sen-trō-gō'bi-us), *n.* [NL., < Gr. *ἀκεντρος,* without sting, spine, or spur, + L. *gobius,* goby.] A genus of Asiatic river gobies, little different from *Ctenogobius.*

Acentropus (a-sen'trō-pus), *n.* [NL. (Westwood, 1835), < Gr. *ἀ-* priv. + *κέντρον,* spine, + *πούς,* foot.] An anomalous genus of pyralid moths of the subfamily *Schœnobiinæ,* which contains the most completely aquatic forms of the order *Lepidoptera.* The larvæ live below the surface of the water on the leaves of aquatic plants, but have no air-gills. Their method of respiration is unknown.

acentrous (a-sen'trus), *a.* [Gr. *ἀ-* priv. + *κέντρον,* center.] Without a center; specifically, noting a condition of the vertebral column found in some batrachians and fishes, in which bony neural arches are associated with a persistent notochord which shows no trace of segmentation: said also of cells in which a centrosome or centrosphere cannot be detected.

acephal, *n.* 2†. An animal or living being supposed to be headless; one of the *Acephali. Topsell,* Four-footed Beasts. *N. E. D.*

II. *a.* Headless; without a head or leader.

acephalate (a-sef'a-lāt), *a.* [As *acephal(ous)* + *-ate*[1].] Acephalous; specifically, of or pertaining to the *Acephala.*

acephalic (a-se-fal'ik), *a.* [*acephal-ous* + *-ic.*] Same as *acephalous;* headless.

Its evolution has been *acephalic,* diffuse, or headless. *L. H. Bailey,* Survival of the Unlike, p. 16.

Acephalina (a-sef″a-lī'nä), *n. pl.* [NL., as *acephal(ous)* + *-ina*[2].] A group of *Eugregarinæ,* or a suborder of *Gregarinida,* in which the body is non-septate and there is no epimerite at any stage. They are chiefly cœlomic parasites. *Monocystis* is an example. Same as *Monocystidea.*

acephaline (a-sef'a-lin), *a.* [NL. *acephalinus* (neut. pl. *Acephalina*), < Gr. *ἀκέφαλος,* headless: see *acephalous.*] Resembling the *Acephalina,* or having no epimerite, as certain *Gregarinida.*

A small sporozoite penetrates into a blood corpuscle and there grows, assuming all the characters of a small *acephaline* Gregarine. *Encyc. Brit.,* XXXII. 814.

acephalism (a-sef'a-lizm), *n.* The opinions and practices of the acephalists, or those who acknowledged no ecclesiastical superior. See *Acephali.*

acephalocyst, *n.* 2. A sterile echinococcus cyst.

acephalophorous (a-sef-a-lof'ō-rus), *a.* [Gr. *ἀ-* priv. + *κεφαλή,* head, + *-φορος,* < *φέρειν,* bear.] Not bearing a distinct head; resembling the *Acephalophora.*

aceraceous (as-e-rā'shius), *a.* [NL. *Aceraceæ* + *-ous.*] In *bot.*, having the characters of or belonging to the *Aceraceæ* or maple family.

Acerata (a-ser'a-tä), *n. pl.* [Gr. *ἀκέρατος,* without horns, < *ἀ-* priv. + *κέρας,* horn.] In Kingsley's classification of the *Arthropoda,* a division given rank as a class and coequal with the *Crustacea.* It is defined as including branchiate arthropods in which the branchial folds act either as gills or as lungs. The body has a well-defined cephalothorax and abdomen, six segments and their appendages appertaining to the former, and the segments more or less fused; a caudal spine or telson; and no antennæ. The *Acerata* are divided into two groups, the *Merostomata,* of which *Limulus* is the only existing representative, and the *Arachnida,* or spiders, mites, and scorpions.

acerate[2] (as'ė-rāt), *a.* [L. *aceratus,* mingled with chaff (taken here as 'like chaff,' that is, 'sharp-pointed,' appar. associated with *acus* (*acu-*), a needle), < *acus* (*acer-*), chaff.] Needle-shaped or rod-shaped: specifically applied to monaxon spicules found in calcareous sponges; in *bot.*, same as *acerose* (*b*).

a cerquate (ä cher-kwä'te). [It. dial. (Perugian): *a,* with; *cerquate,* pl., < *cerqua* = Sardinian *kerku* (= It. *querce, quercia*), < L. *quercus,* oak: see *Quercus.*] Said of decoration consisting of conventionalized oak leaves and acorns, usually painted in deep yellow on a blue ground. Such decoration is frequently found on Italian majolica wares, particularly those of Urbino.

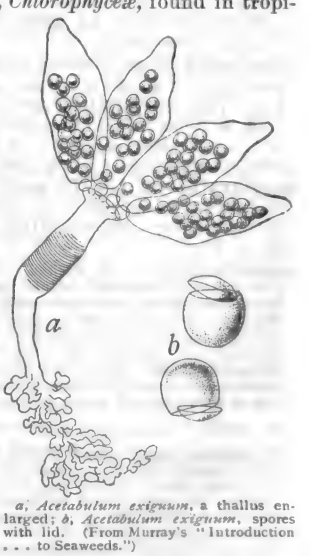
Acervularia (a-sėr-vū-lā'ri-ä), *n.* [NL., < L. *acervulus,* a little heap, + *-aria.*] A genus of extinct tetracorals of the family *Cyathophyllidæ,* abundant in the Silurian and Devonian formations. They grow in bushy colonies, and have stout septa, tabulæ in the central area, and the peripheral zone filled with vesicular tissue.

acervulus, *n.* 2. The fruiting pustule of certain fungi, as *Glœosporium* and related genera, consisting of small dense masses of conidiophores and conidia formed beneath the epidermis of the host, which bursts and permits the escape of the conidia when they mature.

Acetabularia (as-e-tab-ū-lā'ri-ä), *n.* [NL., < L. *acetabulum,* cup, + *-aria.*] See ★*acetabulum,* 5.

acetabulate (as-e-tab'ū-lāt), *a.* Cup-shaped, as the sucker of certain trematodes.

acetabulum, *n.* 5. [*cap.*] A genus of calcareous green algæ, *Chlorophyceæ,* found in tropical or subtropical waters: characterized by an erect axis surmounted by a solid cap which consists of numerous radiating chambers. Also *Acetabularia. Tournefort,* 1719.



a, Acetabulum exiguum, a thallus enlarged; *b, Acetabulum exiguum,* spores with lid. (From Murray's "Introduction . . . to Seaweeds.")

acetabulous (as-e-tab'ū-lus), *a.* In *bot.*, same as *acetabuliform,* 1.

acetacetic (as-et-a-sē'tik), *a.* See ★*aceto-acetic.*

acetaldehyde (as-et-al'dē-hīd), *n.* [*acet(ic)* + *aldehyde.*] The aldehyde CH_3CHO, formed by the oxidation of common or ethyl alcohol. It boils at 21° C., and has a disagreeable penetrating odor.

acetamidine (as-et-am'i-din), *n.* Same as ★*acediamine.*

Acetaminoacetic acid. Same as ★*aceturic acid.*

acetaminol (as-et-am'i-nōl), *n.* [*acet(ic)* + *am(monia)* + *-in*[2] + *-ol.*] A trade-name for π-acetaminobenzoyleugenol, $NH(C_2H_3O)C_6H_4CO_2.C_6H_3(OCH_3)C_3H_5$. It is a crystalline substance having antiseptic properties.

acetanilide (as-et-an'i-lid), *n.* [*acet-yl* + *anilide.*] A substance, $C_6H_5NH.C_2H_3O$, formed by heating aniline and glacial acetic acid for several hours, or by the action of acetyl chlorid or acetic anhydrid on aniline. *Fownes.*

acetenyl (a-set′ē-nil), *n.* [*acet(ic)* + *-ene* + *-yl.*] A term used in composition, indicating that a compound contains the group CH:C, derived from acetylene (C_2H_2), as acetenylbenzene, $C_6H_5C{:}CH$. It has also been erroneously used to designate the group $CH_2{:}CH$, styrene ($C_6H_5CH{:}CH_2$) having also been called *acetenylbenzene.*

acetenylbenzene. See ★*acetenyl.*

acethemin, acethæmin (as-et-hē′min), *n.* [*acet(ic)* + Gr. *αἷμα*, blood.] The term applied to a preparation, $C_{34}H_{33}O_4N_4ClFe$, of hemin said to contain an acetyl group, CH_3CO. It is derived from the coloring matter of the blood.

Acetin blue. See ★*blue.*

acetize (as′e-tīz), *v. i.*; pret. and pp. *acetized*, ppr. *acetizing.* To undergo acetous fermentation; become sour. *R. F. Burton.*

acetoacetate (as″e-tō-as′e-tāt), *n.* [*acetoacet(ic)* + *-ate*[1].] A salt of acetoacetic acid.

acetoacetic (as″e-tō-a-sē′tik), *a.* Noting an acid, $CH_3COCH_2CO_2H$, scarcely known in the free state because of its instability. It is found in the urine of persons suffering from diabetes and sometimes in that of those suffering from fevers. See ★*diacetic acid.*—**Acetoacetic ester,** an ester of acetoacetic acid, especially the ethyl ester, $CH_3COCH_2CO_2C_2H_5$. It is a colorless liquid with a pleasant odor, and boils at 180° C. It is of very unusual importance, both because its conduct is typical of a large class of similar compounds and because it can be used for the synthesis of a great variety of compounds.

acetochlorhydrose (as″e-tō-klōr-hī′drōs), *n.* [*acet(ic)* + *chlor(in)* + *hydr(ogen)* + *-ose.*] A bitter dextrorotatory compound, $C_6H_7(C_2H_3O)_4O_5Cl$, formed by the action of acetyl chlorid on δ-glucose.

acetol (as′e-tōl), *n.* [*acet(ic)* + *-ol.*] A compound, CH_3COCH_2OH, having the official name 1-*hydroxypropanone.* It is a liquid which boils with decomposition at 147° C. Variously designated as *acetylcarbinol, pyroracemic alcohol, hydroxyacetone,* and *acetone alcohol.*

acetolatum (a-set-ō-lā′tum), *n.* [*acetum*, vinegar.] An aromatic liquid preparation obtained by distilling vinegar containing an essential oil.

Acetone alcohol. Same as ★*acetol.*—**Acetone chloroform,** a compound of acetone and chloroform, $(CH_3)_2C(OH)CCl_3+1\frac{1}{2}H_2O$. It is crystalline and has an odor resembling that of camphor.

Acetonic acid, *a*-hydroxyisobutyric acid, $(CH_3)_2C(OH)CO_2H$, a crystalline acid prepared from acetone. It melts at 79° C.

acetonine (a-set′ō-nin), *n.* [*acetone* + *-ine*[2].] A very unstable base, $C_9H_{18}N_2$, whose thiocarbonate is formed by the action of carbon bisulphid and ammonia on acetone.

acetonitrile (as″e-tō-nī′tril), *n.* [*acetone* + *nitrile.*] Methyl cyanide, CH_3CN, the nitrile of acetic acid. It is a liquid which boils at 81.6° C.

acetonuria (as″e-tō-nū′ri-ä), *n.* [NL., ⟨ *acetone* + Gr. *οὖρον*, urine.] The elimination of acetone in the urine: seen notably in diabetes and in febrile diseases.

acetonyl (a-set′ō-nil), *n.* [*acetone* + *-yl.*] A term used in composition, indicating that a compound contains the group CH_3COCH_2-, derived from acetone, as acetonylacetone, $CH_3COCH_2CH_2COCH_3$. It is also used for compounds containing the group $(CH_3)_2C-$, as acetonylurea, $(CH_3)_2C{<}^{NH}_{CO.NH}{>}CO$.

acetonylacetonate (a-set″ō-nil-a-set′ō-nāt), *n.* [*acetonylacetone* + *-ate*[1].] A salt formed from acetonylacetone. See ★*acetonyl.*

acetophenine (as″e-tō-fē′nin), *n.* [*acetophen(yl)* + *-ine*[2].] A weak base, $C_{23}H_{17}N$, formed by the action of ammonia and phosphorus pentoxid on acetophenone. It crystallizes in needles which melt at 135° C.

acetophenone (as″e-tō-fē′nōn), *n.* [*acet(ic)* + *phen(yl)* + *-one.*] A compound, $C_6H_5COCH_3$, formed by the distillation of a mixture of calcium acetate and benzoate. It melts at 20.5° and boils at 202° C. It is used as a hypnotic and in the preparation of a great variety of compounds. Also ★*ethylonphen,* ★*phenylmethylketone,* and *hypnone.*

acetopyrin, acetopyrine (as″e-tō-pī′rin), *n.* Same as ★*acopyrin.*

aceto-soluble (as″e-tō-sol′ū-bl), *a.* Soluble in acetic acid: as, *aceto-soluble* albumin, a form of serum albumin described by Patein as occurring in the urine.

acetoxime (as-e-tok′sim), *n.* [*acet(ic)* + *oxime.*] The oxime ($(CH_3)_2C{:}NOH$) of acetone. It is a volatile solid which melts at 60° and boils at 134.8° C.

acetoxyl (as-e-tok′sil), *n.* [*acet(ic)* + *ox(ygen)* + *-yl.*] **1.** Kolbe's name for acetyl.—**2.** A name for the group $CH_2(OH)CO$: as, *acetoxylglycolic acid,* $CH_2(OH)CO.CH(OH)CO_2H$.—**3.** A name for the group $-O.C_2H_3O$: as, *acetoxylbutyric ester,* $CH_3CH_2CH(O.C_2H_3O)CO_2C_2H_5$. [Commonly used as a prefix.]

acetozone (a-set′ō-zōn), *n.* [*acet(ic)* + *ozone.*] A trade-name for ★*benzoylacetylperoxid* (which see).

acetract (as′e-trakt), *n.* [L. *ace(tum)*, vinegar, + E. *(ex)tract.*] A solid extract of a drug made with a menstruum containing acetic acid. *Buck,* Med. Handbook, I. 65.

acetum, *n.* **2.** A pharmaceutical preparation usually made by percolating a drug with dilute acetic acid.

aceturic (as-e-tū′rik), *a.* [*acet-ic* + *uric.*] Noting an acid, the acetyl derivative ($C_2H_3O.NHCH_2CO_2H$) of glycocoll or glycin. It melts at 206° C. Also called *acetylglycin* and *acetaminoacetic acid.*

acetylacetonate (as″e-til-a-set′ō-nāt), *n.* [*acetylacetone* + *-ate*[1].] A salt formed from *acetylacetone.*

acetylacetone (as″e-til-as′e-tōn), *n.* [*acet(ic)* + *-yl* + *acetone.*] A compound, $CH_3COCH_2COCH_3$, formed by the action of sodium on a mixture of acetone and ethyl acetate. It is a liquid which boils at 137° C. It forms salts which are probably derived from the tautomeric form, $CH_3COCH{:}C(OH)CH_3$.

acetylate (a-set′i-lāt), *v. t.*; pret. and pp. *acetylated,* ppr. *acetylating.* [*acetyl* + *-ate*[1].] To introduce the acetyl group into; especially, to prepare an acetyl derivative of an organic compound containing a hydroxyl- or amino-group.

acetylation (a-set-i-lā′shon), *n.* [*acetyl* + *-ation.*] The treatment of organic substances with acetic anhydrid in order to determine the presence and amount of alcoholic hydroxyl. Same as *acetylization.*—**Acetylation test,** the application of this process to glycerol and fatty substances as a part of their chemical examination.

acetylcarbinol (as″e-til-kär′bi-nōl), *n.* Same as ★*acetol.*

acetylene, *n.* This gas, C_2H_2, prepared by the action of water on calcium carbide, is now largely used as an illuminant and to increase the illuminating value of coal-gas and water-gas of poor quality.

acetylglycin (as″e-til-glī′sin), *n.* Same as ★*aceturic acid.*

acetylide (a-set′i-lid), *n.* [*acetyl* + *-ide*[1].] A compound formed by the replacement of one or both of the hydrogen atoms of acetylene by a metal. *Cuprous acetylide* (Cu_2C_2) and *silver acetylide* (Ag_2C_2) are highly explosive, while the acetylides of alkali and alkaline earth-metals are not explosive.

Achæmenian, *a.* **II.** *n.* A Persian of the time of Achæmenes or the Achæmenidæ; also, the Persian language of that period (recorded in cuneiform inscriptions).

achascophytum (a-kas-kof′i-tum), *n.*; pl. *achascophyta* (-tä). [NL., ⟨ Gr. *ἀ-* priv. + *χάσκειν*, to open, dehisce, + *φυτόν*, a plant.] In *bot.*, a plant having an indehiscent fruit.

Achatinellidæ (a-kat-i-nel′i-dē), *n. pl.* [NL., ⟨ *Achatinella* + *-idæ.*] A family of stylommatophorous, pulmonate *Gasteropoda.* They have a small bulimoid shell, indifferently dextral or sinistral, and a radula of two types, one having the teeth in very oblique rows, central, laterals, and marginals all of the same type, base narrow, head rather broad, with numerous small denticles (as in *Achatinella* proper, *Auriculella,* and *Tornatellina*), the other having the central tooth small and narrow, laterals bicuspid, and marginals as in *Helix* (*Amastra* and *Carelia*).

achenocarp, *n.* Same as *achænocarp.*

Achernian (a-kėr′ni-an), *a.* and *n.* [*Achernar,* the name of a star, + *-ian.*] **I.** *a.* Noting stars similar to Achernar, in the spectrum of which hydrogen, helium, asterium, oxygen, nitrogen, and carbon are predominant: supposed by Lockyer to be cooling.

II. *n.* An Achernian star.

Acheson graphite, process. See ★*graphite,* ★*process.*

Acheulian (ä-shė′li-an), *a.* Of or pertaining to Saint-Acheul, in the Somme valley, northern France.—**Acheulian deposits,** in *geol.* and *archæol.*, paleolithic deposits containing carefully worked flint implements of more recent date than the rude flints found in the Chelléan beds: so named by Mortillet from the occurrence of such relics at Saint-Acheul.

achiev, *v. t.* A simplified spelling of *achieve.*

achilia (a-kī′li-ä), *n.* [NL., ⟨ **achilus*, lipless: see *achilous.*] Congenital absence of one or both lips.

achill (a-chil′), *adv.* [*a*[3] + *chill.*] Chilled; chilly.

Had . . . the warm breeze grown *achill?*
Morris, Earthly Paradise, III. iv. 39

Achilles (a-kil′ēz), *n.* An argument, otherwise called 'Achilles and the Tortoise,' which was proposed by Zeno of Elea to prove that motion is impossible. Suppose that Achilles runs parallel to the tortoise, which is moving slowly in the same direction and is at the start some distance ahead of Achilles. The argument is that Achilles never will overtake the tortoise, because in order to do so he must first move to the point at which the tortoise started, and when he arrives there the tortoise will again be a certain distance ahead and the same condition of things will be repeated. Hence Achilles will not overtake the tortoise until he has completed or ended a series of advances which has no completion or end. The argument is absurd from both the logical and the mathematical point of view.

achilletin (ak-i-lē′tin), *n.* [*achill(ein)* + *-et* + *-in*[2].] A compound, $C_{11}H_{17}O_4N$, formed by the action of dilute sulphuric acid on achillein. It is a dark-brown powder and is not bitter.

achillodynia (a-kil-ō-din′i-ä), *n.* [*Achill(es* tendon) + Gr. *ὀδύνη*, pain.] Pain in the heel.

Achirinæ (ak-i-rī′nē), *n. pl.* [NL., ⟨ *Achirus* + *-inæ.*] A subfamily of soles, typified by the genus *Achirus.*

achlorhydria (a-klōr-hī′dri-ä), *n.* [NL., ⟨ Gr. *ἀ-* priv. + *chlorhydric* + *-ia.*] Absence of hydrochloric acid from the gastric juice.

achocon (ä-chō-kōn′), *n.* [Per. Sp., ⟨ a native name.] A name in Peru of a large tree of the violet family, *Leonia glycycarpa.* It bears a rough yellow edible fruit the size of a peach, filled with a soft sweet pulp of the same color, and is held in much esteem by the Peruvians.

acholic (a-kol′ik), *a.* [Gr. *ἀ-* priv. + *χολή*, bile: see *cholic.*] Marked by the absence of bile; free from bile. *Lancet,* May 30, 1903, p. 1,498.

achondrite (a-kon′drīt), *n.* [*a*-[18] + *chondrite.*] A meteoric stone, or aërolite, containing little or no iron and essentially free from chondrules. See ★*meteorite.*

achondroplasia (a-kon-drō-plā′si-ä), *n.* [NL., ⟨ Gr. *ἀ-* priv. + *χόνδρος*, cartilage, + *πλάσις*, molding, conformation.] An anomaly of development marked by deficient cartilaginous growth resulting in a form of dwarfism. The subject of this affection is very short and "stocky," with large head and well-developed muscles.

achondroplastic (a-kon-drō-plas′tik), *a.* [*achondro(plasia)* + *plastic.*] Relating to or affected with achondroplasia.

achordal (a-kôr′dal), *a.* [Gr. *ἀ-* priv. + *χορδή*, a cord.] **1.** Not connected with or developed from the notochord.—**2.** Having no spinal cord.

achordate (a-kôr′dāt), *a.* and *n.* [NL. **achordatus*, ⟨ Gr. *ἀ-* priv. + *χορδή*, chord.] **I.** *a.* Having no notochord; invertebrate; belonging to the *Achordata.*

II. *n.* One of the *Achordata.*

achoresis (ak-ō-rē′sis), *n.* [NL. *achorēsis*, ⟨ Gr. *ἀ-* priv. + *χωρεῖν*, make room, contain.] A condition of diminished capacity of any one of the hollow viscera, as the bladder.

Achorutes (ak-ō-rū′tēz), *n.* [NL. (Templeton, 1835), ⟨ Gr. *ἀ-* priv. + *χορευτής*, a dancer, jumper, ⟨ *χορεύειν*, dance.] A genus of collembolan insects of the family *Poduridæ.* It is remarkable for the fact that certain of its species, as *A. nivicola* of the United States and *A. murorum* of Europe, occur frequently in great numbers on the surface of snow. They are sometimes called *snow-fleas.*

achrematite (a-krē′ma-tīt), *n.* [Gr. *ἀχρήματος*, without money, ⟨ *ἀ-* priv. + *χρῆμα*, money: because it does not (as alleged) contain silver.] A mineral of doubtful character found at the mines of Guanaceré, Mexico. It consists of the arseniate and molybdate of lead.

Achroma unguium, in *pathol.*, the presence of white spots on the nails.

achromat (ak′rō-mat), *n.* [G. *achromat*, ⟨ Gr. *ἀχρώματος*, colorless: see *achromatic.*] In *optics*, a lens or system of lenses corrected for chromatic aberration.—**New achromat,** an achromat constructed on modern principles (the theory being far advanced beyond those which determined the construction of the old achromats) and made of the new Jena glass, which renders it possible to give the achromat a flat field.—**Old achromat,** an achromat made of old-fashioned crown- and flint-glass, and necessarily having a field which is not flat.

achromatic, *a.* **2.** In *biol.*: (*a*) Colorless; hyaline. (*b*) Difficult to stain: a term applied to the portion of the cell-nucleus which exhibits little or no tendency to stain in carmine, hæmatoxylin, or certain aniline dyes used in histologic and cytologic technic.—**Achromatic figure,** in *cytol.*, the non-staining as opposed to the staining portion of the karyokinetic figure. See *achromatin.*—**Achromatic mass,** in *cytol.*, any non-staining portion of the karyokinetic figure, such as the

substance which accumulates about the poles of the achromatic spindle.—**Achromatic ★mirror ★objective, ★ocular, ★refractivity, ★stereoscope.** See the nouns.—**Achromatic spindle,** the protoplasmic threads between the poles of the spindle in karyokinesis, which do not stain.

achromatistous (ā-krō″mą-tis′tus), *a.* Of the nature of or characterized by achromatosis; deficient in coloring matter. *Syd. Soc. Lex.*

achromatizable (a-krō′mą-tī-zą-bl), *a.* Capable of being corrected for chromatic aberration. Also spelled *achromatisable.*

achromatolysis (a-krō-mą-tol′i-sis), *n.* [Gr. *ἀχρώματος*, not colored, + *λύσις*, dissolution.] In *cytol.*, the breaking down or dissolution of the achromatic substance of the cell: opposed to *chromatolysis.*

achromic (a-krō′mik), *a.* [Gr. *ἀ-* priv. + *χρῶμα*, color.] Devoid of color; colorless. When starch is inverted by diastatic ferments a point is reached where the solution no longer gives a blue color with iodine; this is termed the *achromic* point of the starch solution.

achromin (a-krō′min), *n.* The achromatin or linin of the nucleus of the cell, as contrasted with the chromatin.

The most common division of the caryoplasm in the cells of the animal and plant body is into two chemically different substances, which are usually called chromatin (or nuclein) and *achromin* (or linin).
Haeckel (trans.), Wonders of Life, p. 140.

achronism (ak′rō-nizm), *n.* [Gr. *ἀ-* priv. + *χρόνος*, time, + *-ism.*] Lack or deficiency of time; absence of time (in which to accomplish anything). [Rare.] *N. E. D.*

achroöglycogen (ak-rō-ō-glī′kō-jen), *n.* [Gr. *ἄχροος*, colorless, + *glycogen.*] A colloid carbohydrate which results from snail-mucin on prolonged boiling with dilute acids or alkalis. On decomposition it is said to yield glucose.

achylia (a-kī′li-ą), *n.* [NL., < *achylus*, without chyle: see *achylous.*] Absence of chyle.—**Achylia gastrica,** a disease marked by deficient secretion or absence of the gastric juice.

achymous (a-kī′mus), *a.* [NL. **achymus*, < Gr. *ἀ-* priv. + *χυμός*, juice: see *chyme.*] Having no chyme.

achyrophytum (ak-i-rof′i-tum), *n.*; pl. *achyrophyta* (-tą). [NL., < Gr. *ἄχυρον*, chaff, glume, + *φυτόν*, a plant.] In *bot.*, a glumaceous plant, as grasses, sedges, etc.

acicula, *n.* 5. In *bot.*: (*a*) The bristle-like prolongation of the rachilla of a grass-spike. (*b*) A tooth-like process in the hymenium of certain fungi.

Aciculina (a-sik-ū-lī′ną), *n. pl.* [NL., < L. *acicula*, a needle, + *-ina.*] A suborder of monaxonidan *Demospongiæ* of the order *Hadromerina*, having diactine megascleres. It includes the families *Epallacidæ*, *Stylocordylidæ*, and *Tethyidæ*. Also *Aciculinæ.*

aciculite (a-sik′ū-līt), *n.* [L. *acicula*, a needle, + *-ite*2.] Same as *aikinite.*

aciculus, *n.* 2. Same as *aciculum.*

acid, *a.* and *n.* **I.** *a.*—**Acid alizarin blue, brown, green.** See ★*blue*, ★*brown*, ★*green.*—**Acid color.** See ★*color.* For specific acid colors see ★*acid-blue, acid-green,* ★*acid-red,* etc.—**Acid dyestuff.** Same as *acid* ★*color.*—**Acid intoxication.** Same as ★*acidosis.*—**Acid leather.** See ★*leather.*—**Acid mordant color.** Same as *mordant acid* ★*color.*—**Acid or acidic oxid.** See ★*oxid.*—**Acid soap.** See ★*soap.*—**Acid steel.** See ★*steel.*—**Acid tar,** impure sulphuric acid which has been used in refining petroleum. Also known as *sludge acid.*—**Acid test, tide.** See ★*test*1, ★*tide*1.

II. *n.*—**Schaeffer's acid,** the commercial name of one of the seven isomeric monosulphonic acids of β-naphthol. It is an important raw material in the color industry.—**Scheele's acid,** a 5 per cent. solution of absolute hydrocyanic acid in water.

Acidanthera (as″i-dan-thē′rą), *n.* [NL., appar. < L. *acidus*, sour, acid, + Gr. *ἀνθηρός*, flowering (or NL. *anthēra*, anther.)] A genus of about 20 African and Australian plants of the family *Iridaceæ*, intermediate between *Gladiolus* and *Ixia.* They are grown indoors in pots, or in the open in summer. The best-known species is *A. bicolor*, with creamy white, chocolate-blotched flowers in a simple, lax spike.

Acidaspis (as-i-das′pis), *n.* [NL., < L. *acidus*, sharp, + *aspis* (Gr. *ἀσπίς*), shield.] A genus of trilobites in which the shield bears numerous spines: characteristic of the Silurian and Devonian formations.

acid-black (as″id-blak′), *n.* One of the naphthol blacks.—**Anthracene acid-black,** a mordant acid coal-tar color. In an acid bath it dyes unmordanted wool a black which becomes much faster when after-chromed.—**Azo acid-black,** the name assigned to a mixture of various dyestuffs. It is largely used on account of its good distributing power and the handsome shade, resembling logwood-black, which it produces.

acid-blue (as″id-blō′), *n.* Same as *cyanol* ★*blue.*—**Azo acid-blue,** an acid dyestuff of the monoazo type, similar to Victoria ★violet.—**Biebrich acid-blue,** an acid coal-tar color of unpublished constitution, which dyes wool blue in an acid bath.—**Fast acid-blue,** a coal-tar color prepared by the action of paraphenetidine upon fluorescein chlorid and the sulphonation of the product. It dyes wool and silk violet-blue in an acid bath. Also called *violamine 3B.*

acid-brown (as″id-broun′), *n.* An acid coal-tar color of the diazo type, which dyes wool and silk brown in an acid bath.—**Azo acid-brown,** an acid coal-tar color of unpublished constitution, which dyes wool very level shades of brown in an acid bath.

acid-carmoisin (as″id-kär′mō-i-sin), *n.* One of the fast reds. See *fast red,* under *red*1.

acid-cell (as′id-sel), *n.* One of the cells at the cardiac extremity of the stomach which secrete the acid constituent of the gastric juice.

acid-cerise (as″id-se-rēz′), *n.* An impure acid-magenta.

acid-egg (as′id-eg), *n.* A form of pumping apparatus for handling liquors which would act chemically upon the moving parts of an ordinary piston- or plunger-pump. Chambers which have an elongated spheroidal or egg shape receive the liquor at a low pressure, and, when they are filled, either air or steam under pressure is admitted to them, displacing the liquor through connecting pipes to the desired point.

The pumping of the acids up to the top of the towers is now always performed by means of compressed air, either in theoid "*acid-eggs*," or more economically in "pulsometers."
Encyc. Brit., XXV. 44.

acid-fast (as′id-fast), *a.* A literal translation of the German "säurfest": applied to a class of bacteria which, when once stained with basic aniline dyes, tenaciously hold the dye on subsequent exposure to acids or alcohol. The most notable representative of this group is the tubercle bacillus, and its recognition in the tissues, the sputum, etc., is essentially based upon this "acid-fastness."

acid-fuchsin (as″id-fök′sin), *n.* Same as *acid-magenta.*—**Fast acid-fuchsin.** Same as *fast* ★*acid-magenta.*

acid-gland (as′id-gland), *n.* 1. One of certain glands found in the pedipalp *Arachnida*, secreting an acid liquid.

In connection with the *acid-glands* he describes a convoluted mass of tubules twisting about on each side of the central or right gland, and succeeded in tracing two of these tubules, apparently opening into the left sac.
Proc. Zool. Soc. London, 1902, II. 171.

2. In *entom.*, one of the glands, found in the honey-bee and other stinging *Hymenoptera*, which secrete an acid liquid. There are also glands which secrete an alkaline fluid; and the poison of the insect is effective only when both fluids are mixed. *A. S. Packard*, Text-book of Entom., p. 358.

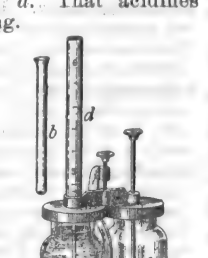
3. One of the glands of the stomach secreting the acid portion of the gastric juice.

acid-green, *n.* 2. An acid dyestuff, a sulphonated triphenylmethane derivative, which dyes wool and silk green in an acid bath.

Acidic oxid. See *acid* ★*oxid.*

acidifiant (a-sid′i-fī-ant), *a.* That acidifies or renders acid; acidifying.

acidimeter, *n.*—**Twichell's acidimeter,** a form of acidimeter shown in the accompanying cut.



Twichell's Acidimeter.
a, jar filled with water; *b*, measure for acid; *c*, sodium acid carbonate to be added to acid under test; *d*, graduated tube indicating the strength of the acid tested.

acidimetric (as″i-di-met′rik), *a.* Of or pertaining to the acidimeter or to acidimetry; acidimetrical.

acidite (as′i-dīt), *n.* [*acid* + *-ite.*] A term proposed by Von Cotta (1864) for all igneous rocks which are rich in the acid radical silica, as opposed to those which are poor in it, which he called *basites.*

acidity, *n.*—**Coefficient of acidity,** in *petrog.*, a ratio derived from the chemical analysis of a rock by dividing the number of atoms of oxygen contained in the various oxid bases by the number of atoms of oxygen belonging to the acid radical silica. This ratio is characteristic of certain groups of igneous rocks.

acidize (as′id-īz), *v. t.*; pret. and pp. *acidized*, ppr. *acidizing.* [*acid* + *-ize.*] To treat with an acid; render acid.—**Acidizing process,** the trade-name of a method of vulcanizing india-rubber by treating it with a solution of calcium or sodium hypochlorite, with or without the addition of an acid.

acid-magenta, *n.*—**Azo acid-magenta,** an acid color of unpublished constitution, which dyes wool a color resembling that produced by magenta.—**Fast acid-magenta,** an acid coal-tar color of the monoazo type. It is prepared by combining diazotized aniline with amido-naphthol-disulphonic acid, and dyes wool and silk a bluish red in an acid bath. Also called *fast acid-fuchsin.*

acid-maroon (as″id-mą-rön′), *n.* A crude acid-magenta.

acid-mauve (as″id-mōv′), *n.* An acid coal-tar color made by sulphonating mauvaniline.

acidophil, acidophile (a-sid′ō-fil), *a.* [NL. *acidum*, an acid, + Gr. *φίλος*, loving.] Capable of being dyed with acid stains: said of cells or parts of cells.

acidophilic (as″i-dō-fil′ik), *a.* Same as ★*acidophil.*

Special attention has been called by Rosin (24), to the micro-chemical differentiation of the constituents of the cell body, the Nissl bodies reacting to the basic dyes, while the ground substance is *acidophilic* in character.
F. R. Bailey, in Jour. Exper. Med., Oct. 1, 1901, p. 555.

acidophilous (as-i-dof′i-lus), *a.* [NL. *acidum*, acid, + *φίλειν*, love.] Same as *acidophil.*

acid-orange (as″id-or′ąnj), *n.* Same as *orange II* (which see, under *orange*1).

acidosis (as-i-dō′sis), *n.* [NL. *acidum*, an acid, + *-osis.*] Poisoning by certain acids, such as uric acid or the fatty acids, formed within the body under various morbid conditions, such as cancer, diabetes, or fever. Also called *acid intoxication.*

acid-ponceau (as″id-pon-sō′), *n.* An acid coal-tar color of the monoazo type. It is prepared by combining diazotized β-naphthylamine-sulphonic acid with β-naphthol, and dyes wool and silk scarlet in an acid bath. Also called *fast acid-ponceau, acid-scarlet* or *fast acid-scarlet,* and *ponceau S.*

acid-red (as″id-red′), *n.* An acid coal-tar color which dyes wool red in an acid bath. Also called *fast acid-red.*

acid-rosamine (as″id-rōz-am′in), *n.* An acid coal-tar color of the xanthene type, which dyes wool and silk a bluish red. Also called *violamine G.*

acid-roseine, acid-rubine (as″id-rō′zē-in, -rö′bin), *n.* Same as *acid-magenta.*

acid-scarlet (as″id-skär′let), *n.* Same as ★*acid-ponceau.* Also called *fast acid-scarlet.*

acidulation (a-sid-ū-lā′shon), *n.* The act or process of rendering (something) acid, or of imparting an acid or subacid quality to it.

Acidulous water, a natural mineral water containing a notable amount of free carbonic acid.

acid-violet (as″id-vī′ō-let), *n.* A name of two coal-tar colors (*fast acid-violet 4RR* and *B*) of the xanthene type, of similar composition. They dye wool and silk reddish violet in an acid bath. Also known as *violamine R* and *violamine B.*—**Fast acid-violet 10 B,** an acid coal-tar color of the triphenyl-methane-carbinol type. It dyes wool violet in an acid bath.

acidyl (as′i-dil), *n.* [*acid* + *-yl.*] Same as ★*acyl* (the preferable form).

Acinetaria (as″i-nē-tā′ri-ą). *n. pl.* [NL.] Same as *Acinetæ.*

acinetarian (as-i-nē-tā′ri-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Acinetaria.*

II. *n.* One of the *Acinetaria.*

acinetic (as-i-net′ik), *a.* [Gr. *ἀ-* priv. + *κινητός*, moved, movable: see *kinetic.*] That prevents motion; that deprives of, or causes the loss of, voluntary motion.

acinotubular (as″i-nō-tū′bū-lär), *a.* [NL. *acinus*, acinus, + L. *tubulus*, tubule.] Possessing both acini and tubules: said of certain glands.

Acinous cancer. See ★*cancer.*

acipenserin (as-i-pen′sę-rin), *n.* [*Acipenser* (see def.) + *-in*2.] A protamin found in the testicles of a fish, *Acipenser stellatus.*

Aciprion (a-sip′ri-on), *n.* [NL., < (?) Gr. *ἀκίς*, a point, + *πρίων*, a saw.] A genus of true lizards or *Lacertilia* of Miocene age.

acknowledgeable (ak-nol′ej-ą-bl), *a.* [*acknowledge* + *-able.*] That can be acknowledged, admitted, or recognized; recognizable; noticeable.

acknowledgedly (ak-nol′ejd-li), *adv.* [*acknowledged* + *-ly.*] Admittedly; confessedly.

acleistous. See ★*aclistous.*

acli (ä′kli), *n.* [Tagalog and Pampanga *acli.*] A name in the Philippine Islands of *Xylia xylocarpa*, a valuable timber-tree. The wood is strong and durable and does not take fire easily. It is used in boat-building and for posts and beams of houses. The bark is saponaceous. See *pyengadu.* Also *acle.*

aclistous, acleistous (a-klī′stus), *a.* [Gr. *ἀκλειστος*, not closed, not fastened, < *ἀ-* priv. + *κλειστός*, closed: see *clistocarp*, etc.] Not closed: used in crystallography to designate certain open forms of hemimorphic type; also, certain crystalline groups characterized by these forms. See ★*form*, 2, and ★*symmetry*, 6.

aclythrophytum (ak-li-throf′i-tum), *n.*; pl. *aclythrophyta* (-tą). [NL., < Gr. *ἀ-* priv. + *κλει-*

θρον, a bar, + φυτόν, a plant.] In *bot.*, a plant with naked or apparently naked seeds; that is, one destitute of a pericarp.

acmatic (ak-mat'ik), *a.* [Irreg. < *acme* + *-atic*[2].] The normal adj. is *acmic*.] Of or pertaining to an acme. [Rare.] *Hyatt*, Biol. Lect., p. 141.

acmic (ak'mik), *a.* [*acm(e)* + *-ic*.] Of or pertaining to an acme, specifically to the acme of a genetic series of organisms, or the period when it is richest in genera and species. [Rare.] *Amer. Jour. Sci.*, Oct., 1903, p. 300.

acmite-trachyte (ak″mīt-trak'īt), *n.* See ★*trachyte*.

acmonoid (ak'mō-noid), *a.* [Gr. ἄκμων, an anvil, + εἶδος, form.] In *anthrop.*, noting a type of cranium high, long, with straight sides, a slight swelling of the parietal protuberances situated very far back, and the occipital resembling a quadrangular pyramid leaning slightly on its cranial base. *G. Sergi*, Var. of the Human Species, p. 42.

Acne agminata, a form of acne in which the lesions are grouped together, forming patches of various sizes.—**Acne indurata**, a form of acne in which the papules are hard and shot-like, deep-seated, and inflamed, but do not always go on to suppuration.—**Acne necrotica**, a form of acne, affecting chiefly the forehead, in which the papules break down, leaving depressed scars like pockmarks.—**Tar acne**, a papular eruption of the skin caused by the external application of tar in susceptible persons.

acneform (ak'nē-fôrm), *a.* [Irreg. < NL. *acne*, acne, + *forma*, form.] Resembling acne in appearance.

acnemia (ak-nē'mi-ä), *n.* [NL., < Gr. ἀκνημος, without the calf of the leg, < *a-* priv. + κνήμη, calf of the leg.] Absence or imperfect formation of the legs.

acocantherin (ak-ō-kan'the-rin), *n.* [*Acocantherа* (see def.) + *-in*[2].] A poisonous glucoside, $C_{32}H_{50}O_{12}$, obtained from an African arrow-poison which is prepared from *Acocantherа Abyssinica*. In physiological action it resembles the glucosides of *Digitalis*.

Acœla, *n. pl.* 2. A suborder of *Rhabdocœlida* in which the cavity of the enteron is obliterated by the concrescence of its walls, the mouth leading through a simple pharynx directly into the digestive syncetium. It contains the families *Porporidæ* and *Aphanostomidæ*.

Acœlomata, *n. pl.* 2. The cœlenterates and sponges considered collectively as animals without a true cœloma, or body-cavity, as distinct from the enteron or digestive cavity. Many zoölogists regard the *Metazoa* as consisting of two great primary groups: the *Acœlomata*, or sponges and cœlenterates, and the *Cœlomata*, or all the remaining *Metazoa*.

The cavities of the *Acœlomata*, except certain ectodermal pits, are in all cases continuations of the primary central cavity lined by endoderm, and no cavities exist lined by mesoderm comparable to a cœlom.
A. E. Shipley, Zoöl. of Invertebrates, p. 36.

acoin (ak'ō-in), *n.* 1. A trade-name for hydrochlorid of diparanisylmonophenetylguanidin, a local anesthetic introduced in 1899.—2. A general name given to a series of derivatives of guanidin similar to the above.

acolous (ak'ō-lus), *a.* [Gr. ἀκωλος, limbless, < *a-* priv. + κῶλον, limb, member.] In *teratol.*, without limbs.

acomia (a-kō'mi-ä), *n.* [NL., < Gr. ἀκομος, without hair, < *a-* priv. + κόμη, hair: see *coma*[1].] Same as *alopecia*.

aconate (ak'ō-nāt), *n.* [*acon(ic)* + *-ate*[1].] A salt derived from aconic acid.

acone (ā'kōn), *a.* [*a-*[18] + *cone*.] In *entom.*, lacking the cone or crystalline lens. In insects having acone eyes the cone or refracting body is represented only by the four primitive cone-cells. Distinguished from ★*eucone* and ★*pseudocone*.

Acone eyes, where the cone or refracting body is wanting, but is represented by the four primitive cone-cells.
A. S. Packard, Text-book of Entom., p. 252.

aconic (a-kon'ik), *a.* [*acon(ite)* + *-ic*.] Derived from aconite: distinguished in chemistry from *aconitic*.—**Aconic acid**, an acid formed by boiling iotadibrompyrotartaric acid with water or with a solution of sodium carbonate. It is easily soluble in water and melts at 164° C.

aconital (ak'ō-nī″tal), *a.* [*aconite* + *-al*.] Characteristic of aconite: as, *aconital* bitterness.

aconite, *n.* 2. An extract or tincture of this plant, used as a poison and as a medicine.

acoprosis (ak″o-prō'sis), *n.* [*acopr(ous)* + *-osis*.] Absence of fecal matter from the intestine.

acoprous (a-kop'rus), *a.* [Gr. ἀκοπρος, with no or little excrement, < *a-* priv. + κόπρος, excrement.] Without fecal matter in the bowels; characterized by acoprosis.

acopyrin, acopyrine (ak-ō-pī'rin), *n.* [*ac(etyl)* + (*anti*)*pyrine*.] The acetyl salicylate of antipyrin, $C_6H_4(OC_2H_3O)CO_2H.C_{11}H_{12}ON_2$. It is used as a remedy for headache.

acoria (a-kō'ri-ä), *n.* [NL., < Gr. ἀκορία, < ἄκορος, equiv. to ἀκόρεστος, insatiate, < *a-* priv. + κορεννύναι, sate, satiate, satisfy.] Excessive appetite.

acorin (ak'ō-rin), *n.* [*acor(us)* + *-in*[2].] A name given to a substance, formerly supposed to be a glucoside, obtained from *Acorus Calamus*. It is of uncertain composition and probably a mixture.

acormus (a-kôr'mus), *n.* [Gr. *a-* priv. + κορμός, trunk.] In *teratol.*, a monster with a head and an undeveloped napiform body, without extremities.

acorn-gall (ā'kôrn-gâl″), *n.* See *gall*[3] and *knopper*.

acosmic (a-koz'mik), *a.* [*a-*[18] + *cosmic*.] Sundered; disordered; confused; inharmonious.

Some who have . . . felt utterly lost in this charmed circle of agnosticism . . . despair of building up again the world they have lost out of its *acosmic* elements.
G. S. Hall, Adolescence, II. 537.

acospore (ak'ō-spōr), *n.* [Gr. ἀκή, point, + σπορά, seed.] In *phytogeog.*, a plant (mostly of the grasses) whose fruit is provided with awns to assist dissemination.

Acotylea (a-kot-i-lē'ä), *n. pl.* [NL., < Gr. *a-* priv. + κοτύλη, cup, socket.] A group of polyclade *Turbellaria* without suckers and with the mouth in the middle of the body or behind it. It includes the families *Planoceridæ*, *Leptoplanidæ*, and *Cestoplanidæ*.

acoulation (a-kō-lā'shon), *n.* [Irreg. < Gr. ἀκού(ειν), hear, + L. *latio*(*n*-), bearing.] The telephonic transmission or reproduction of sounds, with increase of intensity, by means of a combination of microphone and telephone. Also spelled *akoulation*.

acoupa (a-kō'pä), *n.* [Pg.] A kind of weakfish, *Cynoscion acoupa*.

acousma (ą-kös'mä), *n.*; pl. *acousmata* (-tä). [Gr. ἀκουσμα, a thing heard, < ἀκούειν, hear.] 1. *pl.* Things heard or received on authority and without further inquiry or explanation, as among the *acousmatici* or probationary disciples of Pythagoras.—2. A form of auditory hallucination. *Baldwin*, Dict. of Philos. and Psychol.

Acoustic absorption. See ★*absorption*.—**Acoustic agraphia.** See ★*agraphia*.—**Acoustic disk**, an instrument for demonstrating the principles of Savart's wheel, the siren, and Newton's disk.—**Acoustic organ.** Same as *organ of Corti*.—**Acoustic orifice**, in *entom.*, an orifice for the admission of air to the acoustic apparatus, as the orifice caudad of the prothorax in the *Locustidæ*.—**Acoustic penetration**, the carrying power of articulate sound measured by the distance in meters at which, under defined and standard conditions, it is still audible.—**Acoustic resonance.** See *resonance*, 2.—**Acoustic shadow.** See ★*shadow*.—**Acoustic striæ.** Same as *striæ acusticæ* (which see, under *stria*).—**Acoustic tetanus**, muscular contraction induced experimentally by the application of a faradic current, the number of interruptions being measured by the pitch of the sound caused by the vibrations.—**Acoustic tubes**, a set of tubes designed to illustrate the effect of different length and size on pitch.

acousticolateral (ą-kös″ti-kō-lat'ę-ral), *a.* Having the organs of hearing arranged laterally.

acoustometer (a-kös-tom'e-tėr), *n.* [*acoust(ic)* + Gr. μέτρον, a measure.] An instrument for determining the acoustic properties of a room or other inclosure.

acquaint†, *n.* An acquaintance. *Chaucer*.

acquiescence, *n.* 3. Originally, but now rarely, contentment; satisfaction. In the ethics of Spinoza, acquiescence in one's very self is an ignoble self-satisfaction; but acquiescence of the soul in the knowledge of God is the highest result of virtue.

Acquired character. See ★*character*.

acquisitiveness, *n.* 3. In *psychol.*: (*a*) The proprietary or collecting instinct. *W. James*, Princ. of Psychol., II. 422, 679. (*b*) The capacity for learning or for intellectual acquisition.

Acquittal in law, a judicial act which, in discharging one person from the accusation of a crime, operates to discharge all others who may be accused as accessories in the commission of the same crime: distinguished from *acquittal in fact*.

acracy (ak'rā-si), *n.* [Gr. *a-* priv. + *-κρατία*, < κρατεῖν, to rule.] The extremest form of physiocracy, which reduces all government to the action of so-called natural laws and amounts to anarchism. *L. F. Ward*, Psychic Factors of Civilization, p. 319.

Acræides (a-krē'i-dēz), *n. pl.* [NL. (perhaps erroneously transferred, as if NL., from a F. form **acréides*) for *Acræidæ*, < *Acræa* + *-idæ*.] A group of butterflies corresponding to the *Acræinæ*. *Acræides* is the form used by most English entomologists.

acramphibryous (ak-ram-fib'ri-us), *a.* [Gr. ἄκρος, at the end, + ἀμφί, on both sides, + βρύον, a flower or blossom. + *-ous*.] In *bot.*, producing lateral as well as apical buds. *Jackson*, Glossary.

Acrasiales (a-krā-si-ā'lēz), *n. pl.* [NL., < Gr. ἀκρασία, bad mixture, + *-ales*.] The lowest of the three orders of *Myxomycetes*, consisting of two small families of imperfectly known amœboid organisms, some of which are found in old manure.

acre-foot (ā'kėr-fůt″), *n.* A unit of volume of water used in irrigation, equivalent to one acre covered one foot in depth, or 43,560 cubic feet. Water flowing at the rate of one cubic foot a second for 24 hours will cover an acre to a depth of 1.98 feet. In common usage, a cubic foot per second, or second-foot, for 24 hours equals 2 acre-feet.

acreophagist, akreophagist (ak-rē-of'ą-jist), *n.* [*acreophag-y* + *-ist*.] One who habitually abstains from eating meat; a vegetarian.

acreophagy, akreophagy (ak-rē-of'ą-ji), *n.* [Gr. *a-* priv. + κρεοφαγία, eating of flesh, < κρεοφάγος, flesh-eating: see *creophagous*.] A habitual abstention from meat-eating.

acrepid (a-krep'id), *a.* [Gr. *a-* priv. + κρηπίς, a boot, a foundation.] Having no crepis or foundation-spicule: specifically applied, in sponge-spicules, to desmas in which the crepis is atrophied.

acribia (ak-ri-bī'ä), *n.* [NL. *acribīa*, < Gr. ἀκρίβεια, < ἀκριβής, accurate, precise.] Literal accuracy; exactness; precision.

acriby (ak'ri-bi), *n.* Same as ★*acribia*.

acridic (a-krid'ik), *a.* [*acrid(ine)* + *-ic*.] Derived from acridine.—**Acridic acid**, an acid, $C_{11}H_7O_4N$, formed by the oxidation of acridine. It crystallizes in needles and decomposes at 120°–130° C. Also called 2, 3-*quinolinedicarboxylic acid*.

Acridiides (ak″ri-dī'i-dēz), *n. pl.* [NL., irreg. (as if from a F. pl.?) for *Acrididæ*, < *Acridium* + *-idæ*.] In the classification of Brunner von Wattenwyl, the ninth tribe of grasshoppers, of the family *Acrididæ*, typified by the genus *Acridium*.

acridine (ak'ri-din), *n.* [*acrid* (?) + *-ine*[2].] An organic compound derived from anthracene by replacing one of its CH-groups with a nitrogen atom, its empirical formula being $C_{14}H_9N$. It is important in the color industry.—**Acridine color.** See ★*color*.—**Acridine orange, red**, etc. See ★*orange*[1], ★*red*[1], etc.

acridinic (ak-ri-din'ik), *a.* [*acridine* + *-ic*.] Derived from acridine.—**Acridinic acid.** Same as ★*acridic acid*.

acridioid (a-krid'i-oid), *a.* Having the characteristics or appearance of grasshoppers or locusts of the family *Acrididæ*.

acridone (ak'ri-dōn), *n.* [*acrid(ine)* + *-one*.] A compound, $C_6H_4 \langle \begin{matrix} CO \\ NH \end{matrix} \rangle C_6H_4$, formed by the oxidation of acridine. It melts at 354° C.

acridyl (ak'ri-dil), *n.* [*acrid(ine)* + *-yl*.] The radical or group $C_{13}H_8N$, derived from ★acridine (which see).

acrinyl (ak-rī'nil), *n.* In *chem.*, a hypothetical radical, $C_6H_4.OH.CH_2$, of which the sulphocyanide ($C_6H_4.OH.CH_2.NCS$) is the yellow, pungent, vesicating fixed oil formed by the action of the enzyme myrosin upon the glucoside sinalbin contained in white mustard seed, *Brassica alba*.

acrite[2] (ak'rīt), *n.* [L. *acris*, sharp, + *-ite*[2].] The inactive mannite formed by the reduction of acrose or of inactive mannose.

acroæsthesia (ak″rō-es-thē'si-ä), *n.* [Gr. ἄκρον, a terminal point, an extremity, + αἴσθησις, perception, sensation. The second sense is not justified by the meaning of the Gr. ἄκρον.] 1. Pain in the hands or feet.—2. Excessive sensibility; hyperæsthesia.

acroasphyxia (ak″rō-as-fik'si-ä), *n.* [NL., < Gr. ἄκρος, at the end, + ἀσφυξία, asphyxia.] Arrest of the circulation of the blood in the distal portion of the extremities.

acroblast (ak'rō-blast), *n.* [Gr. ἄκρον, apex, + βλαστός, germ.] In *embryol.*, that portion of the embryonic germ-layers in vertebrates which gives rise to the blood and connective tissue; the mesenchyme.

acroblastesis (ak-rō-blas-tē'sis), *n.* [NL., < Gr. ἄκρον, apex, + βλαστός, bud, germ, spore.] In *bot.*, a condition in lichens in which the germ-tube proceeds from the end of a spore.

acroblastic (ak-rō-blas′tik), *a.* In *bot.*, arising from a terminal bud: applied to branches of the inflorescence. *Celakovsky.*

acrocarp (ak′rō-kärp), *n.* [*acrocarp(ous).*] An acrocarpous plant: applied mainly to the *Acrocarpi.*

acrocephalous (ak-rō-sef′ą-lus), *a.* Same as *acrocephalic.*

acroceroid (ak-ros′ę-roid), *a.* Having the characteristics or appearance of a moth of the family *Acroceridæ.*

acr, acrocoracoid; *prc*, precoracoid; *pnf*, pneumatic foramina; *f*, foramen for nerve.

Acrochilus (ak-rō-kī′lus), *n.* [NL., < Gr. *ἄκρον*, the farthest point, + *χείλος*, lip.] A genus of chubs found in the Columbia river, noted for the bony sheath to the jaws: hence called *hardmouth* or *chisel-mouth jack.*

acrocoracoid (ak-rō-kor′ą-koid), *n.* [Gr. *ἄκρος*, at the end, + *coracoid.*] In *ornith.*, a process or projection from the distal end and internal face of the coracoid, to which the clavicle is usually attached.

acrodontism (ak′rō-don″tizm), *n.* [*acrodont* + *-ism.*] The property of being acrodont, or of having teeth ankylosed to the cutting edge of the jaws. [Rare.]

acrodrome (ak′rō-drōm), *a.* Same as ★*acrodromous.*

acrodromous (a-krod′rō-mus), *a.* [Gr. *ἄκρον*, point, + *-δρομος*, < *δραμεῖν*, run.] In *bot.*, running to a point: said of a nervation in which the nerves all terminate in or point to the apex of the leaf. See *nervation* (*a*) (4) and fig. 4.

Acrodus (ak′rō-dus), *n.* [NL., < Gr. *ἄκρος*, at the end, + *ὀδούς*, tooth.] A genus of cestraciont sharks known chiefly by the pavement-teeth. They occur in the Jurassic and Cretaceous formations.

acrogamous (a-krog′ą-mus), *a.* [Gr. *ἄκρος*, at the end, + *γάμος*, marriage.] In *bot.*, producing the ovules at the summit of the embryo-sac: the usual condition in angiosperms. *Van Tieghem.*

acrogamy (a-krog′ą-mi), *n.* [*acrogam-ous* + *-y*³.] The state of being acrogamous.

acrogonidium (ak″rō-gō-nid′i-um), *n.*; pl. *acrogonidia* (-ą). [Gr. *ἄκρος*, at the end, + *gonidium.*] A gonidium formed at the terminal end of a fertile hypha.

Acrogynæ (a-kroj′i-nē), *n. pl.* [NL., < Gr. *ἄκρον*, apex, + *γυνή*, female.] In *bot.*, a suborder of cryptogamic plants of the order *Jungermanniales*, class *Hepaticæ*, in which the archegonia are formed from or near the apical cell. See ★*Anacrogynæ.*

acrogynous (a-kroj′i-nus), *a.* [As *Acrogynæ* + *-ous.*] In *bot.*, having the archegonia formed from or near the apical cell, as in the *Acrogynæ.*

Acrolepis (ak-rol′ē-pis), *n.* [NL., < Gr. *ἄκρος*, at the end, + *λεπίς*, scale.] A genus of ganoid fishes from the Carboniferous and Permian rocks.

acrologue (ak′rō-log), *n.* [Gr. *ἄκρος*, at the beginning or end, + *λόγος*, word.] An acrologic name, that is, a letter-name beginning with that letter; an alphabetic name formed on or exhibiting the principle of acrology, as the Hebrew aleph beginning with *a*, beth with *b*, etc. See the extract.

> The alphabetic names, considered as pictorial *acrologues*, may therefore in some cases receive an easier explanation from the Hieratic characters than from the Semitic letters as we have them.
>
> *Isaac Taylor*, The Alphabet, I. 169.

acromegalia (ak″rō-me-gā′li-ą), *n.* Same as ★*acromegaly.*

acromegalic (ak″rō-me-gal′ik), *a.* and *n.* [As *acromegaly* + *-ic.*] **I.** *a.* Of the nature of or relating to acromegaly.

II. *n.* A victim of the complaint known as acromegaly.

acromegaly (ak-rō-meg′ą-li), *n.* [Gr. *ἄκρον*, extremity, + ‡*μεγαλία*, < *μέγας* (*μεγαλ-*), great.] A disease characterized by hypertrophy of the bones and soft tissues of the face and extremities. It is thought to be due, possibly, to a morbid change in the internal secretion of the pituitary body, since this structure is also enlarged. Most of the so-called 'giants' owe their size to this disorder. Also called *Marie's disease.*

acromerostich (ak-rō-mer′ō-stik), *n.* [Gr. *ἄκρος*, at the beginning or end, + *μέρος*, part, + *στίχος*, line.] A short poem or stanza containing several acrostics, as in the accompanying example, in which the name 'Jesus' occurs four times:

> I nter cuncta micans I gniti sidera cœl I,
> E xpellit tenebras E toto Phœbus ut orb E;
> S ic cæcas removet IESUS caliginis umbra S
> V ivificansque simul, V ero præcordia mot U
> S olem Justitiæ se S e probat esse beati S.
>
> *N. and Q.*, Feb. 26, 1887.

acromion, *n.* **2.** In *ichth.*, same as *supraclavicle;* a shoulder-girdle bone above the clavicle.

acromiosternal (a-krō″mi-ō-stėr′nąl), *a.* Relating to the acromion process and the sternum.

acronus (ak′rō-nus), *n.*; pl. *acroni* (-nī). [NL., < Gr. *ἄκρον*, apex, summit.] In *bot.*, a terminal ovary; that is, one without a basal disk. *Necker.*

Acronycta (ak-rō-nik′tą), *n.* [NL. (Ochsenheimer, 1816, as *Acronicta;* Treitschke, 1825, as *Acronycta*), Gr. *ἀκρόνυκτος*, of nightfall: see *acronycteous.*] A prominent and very large genus of noctuid moths, synonymous with *Apatela* (Hübner, 1810).

acroparæsthesia (ak″rō-par-es-thē′si-ą), *n.* [Gr. *ἄκρον*, extremity, + *παρά*, beside, + *αἴσθησις*, perception, sensation (see *paræsthesia*). See remark under ★*acroæsthesia.*] **1.** Paræsthesia of the hands or feet.—**2.** Excessive paræsthesia, or perversion of normal sensation.

acroparalysis (ak″rō-pą-ral′i-sis), *n.* [Gr. *ἄκρον*, extremity, + *παράλυσις*, paralysis.] Paralysis which affects the extremities only.

acropathy (a-krop′a-thi), *n.* [Gr. *ἄκρον*, extremity, + *πάθος*, disease.] Disease of the hands or feet.

Acrophalli (ak-rō-fal′ī), *n. pl.* [NL., < Gr. *ἄκρος*, at the extremity, + *φαλλος*, phallus.] A group of nemathelminths in which the cloacal aperture is at almost the extreme end of the body on the ventral side.

acrophobia (ak-rō-fō′bi-ą), *n.* [Gr. *ἄκρον*, topmost point, + *φοβεῖν*, fear.] Morbid fear of great heights.

acrophonic (ak-rō-fon′ik), *a.* [Gr. *ἄκρον*, extremity, + *φωνή*, sound.] Same as *acrophonetic.*

acropolitan (ak-rō-pol′i-tąn), *a.* Of or pertaining to the acropolis or citadel of an ancient Grecian city, especially that of Athens.

acrorhagus (ak-rō-rā′gus), *n.*; pl. *acrorhagi* (-jī). [NL., prop. **acrorrhagus*, < Gr. *ἄκρος*, at the end, + *ῥαξ* (*ῥαγ-*), a grape, a berry.] One of the marginal tubercles on the peristome of *Actinia* bearing nematocysts or stinging-cells.

acroscopic (ak-rō-skop′ik), *a.* [Gr. *ἄκρον*, apex, + *σκοπεῖν*, see, + *-ic.*] In *bot.*, looking toward (that is, on the side toward) the apex.

acrose (ak′rōs), *n.* [L. *acris*, sharp, + *-ose.*] A sugar which has been shown to be identical with *i*-fructose. It has been prepared synthetically in several ways, especially by the action of a dilute solution of sodium hydroxid on glycerol aldehyde. It is of special interest as being the first sugar containing six carbon atoms to be prepared synthetically. It was also used for the synthesis of *d*-glucose.

acrosome (ak′rō-sōm), *n.* [Gr. *ἄκρον*, apex, + *σῶμα*, body.] In *cytol.*, the body which forms the extreme anterior portion of the spermatozoön. *Von Lenhossek*, 1897. In the spermatozoa of some animals the acrosome is spur- or hook-shaped and is thus adapted for boring its way into the egg.

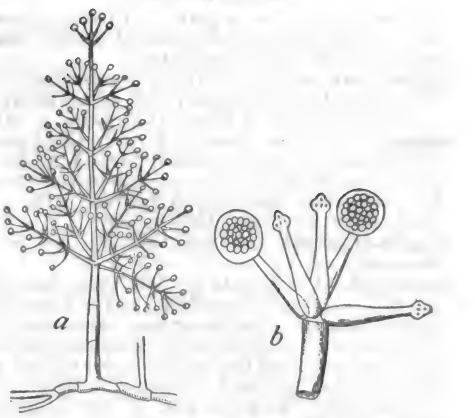
Acrospeira (ak-rō-spī′rą), *n.* [NL. (Berkeley and Broome, 1857), < Gr. *ἄκρον*, tip, + *σπεῖρα*, coil.] A monotypic genus of hyphomycetous fungi having erect branched sporophores spirally bent at the tips, and bearing simple spherical, black, rough spores. *A. mirabilis* sometimes destroys the ripe fruit of Spanish chestnuts (*Castanea*).

acrosperm (ak′rō-spėrm), *n.* [Gr. *ἄκρον*, tip, + *σπέρμα*, seed.] In *bot.*, an angiosperm of the group or class which are supposed by Treub to have been originally fertilized through the chalaza instead of the micropyle—the *Acrospermæ*. Compare ★*pleurosperm.*

Diagram of a Flagellate Spermatozoön.

a, apical body, or acrosome; *b*, nucleus; *c*, end-knob; *d*, middle piece; *e*, envelop of the tail; *f*, axial filament; *g*, end-piece.

Acrostalagmus (ak″rō-sta-lag′mus), *n.* [NL. (Corda, 1838), referring to the drop-like conidia at the tips of the conidiophores, < Gr. *ἄκρον*, tip, + *σταλαγμός*, a drop.] A genus of hyphomycetous fungi having erect verticillate-branched conidiophores and simple conidia collected in globular masses at their



Acrostalagmus cinnabarinus.

a, a branching conidiophore, enlarged; *b*, one of the branchlets, showing the globular masses of conidia, greatly magnified.

tips. *A. cinnabarinus* is a common species occurring on decaying vegetable matter.

Acrosticheæ (a-kros-tik′ē-ē), *n. pl.* [NL., < *Acrostichum* + *-eæ.*] A tribe of polypodiaceous ferns, typified by the genus *Acrostichum.* It comprises genera of varying habit and venation but readily associated by similarity in fructification, the naked sporangia overspreading at least a portion of the under surface of the wholly or partially metamorphosed fertile frond.

acrostichoid (a-kros′ti-koid), *a.* Pertaining to the fern genus *Acrostichum*, or to the tribe *Acrostichеæ.*

Acrostichum (a-kros′ti-kum), *n.* [NL., so called in allusion to the 'acrostic' appearance of the spores: see *acrostic.*] A genus of tropical ferns, largely American. The species are diverse, and are sometimes referred to other genera. In general they are long-leaved, rather coarse species, with mostly simple or pinnate fronds. No less than twenty species have been advertised in American horticultural catalogues. They are treated as greenhouse plants.

Acrotidæ (a-krot′i-dē), *n. pl.* [*Acrotus* + *-idæ.*] A family of deep-sea fishes remotely allied to the mackerels: notable for the very soft, rag-like body and the absence of spines and ventral fins.

Acrotinæ (ak-rō-tī′nē), *n. pl.* [*Acrotus* + *-inæ.*] The subfamily of ragfishes, of the family *Icosteidæ*, typified by *Acrotus willoughbyi.*

acrotonous (a-krot′ō-nus), *a.* [< Gr. *ἄκρον*, apex, + *τόνος*, cord.] In *bot.*, extending to the apex: applied to the tissue of the pollen-sac of orchids when prolonged to the upper end of the anther.

Acrotreta (ak-rō-trē′tą), *n.* [NL., < Gr. *ἄκρος*, at the top, + *τρητός*, bored through, perforated.] A genus of extinct brachiopods with a flat dorsal valve and a subconical ventral valve perforated at the top: from the Cambrian and Silurian beds of Europe and America.

Acrotretidæ (ak-rō-trē′ti-dē), *n. pl.* [NL., < *Acrotreta* + *-idæ.*] A family of inarticulate brachiopods of early Paleozoic age, embracing the genera *Acrotreta*, *Conotreta*, *Acrothele*, and *Linnarssonia.*

Acrotus (ak′rō-tus), *n.* [NL., given as from Gr. "*ἀκροτος*, without oars (ventral fins)"; but there is no such form. Cf. Gr. *ἀκροτος*, without noise, < *ἀ-* priv. + *κρότος*, a rattling, a clapping.] A genus of deep-sea fishes represented by *A. willoughbyi.* This species, once taken on the coast of Washington, is usually placed in the family *Acrotidæ*, next to *Icosteidæ.*

act, *n.*—**Ballot Act.** Same as *Reform Bill* (which see, in Cyclopedia of Names).—**Carey Act,** an act of Congress donating one million acres of desert land to each State containing such land, upon condition that the land donated be reclaimed by irrigation at the expense of the State.—**Desert Act.** Same as *Carey* ★*Act.*—**Hatch Act,** an act of the United States Congress in 1887 which gave to each State and Territory $15,000 a year for the establishment of an agricultural experiment station (see ★*agricultural*), to be a department of the land-grant college (see *Morrill* ★*Act*), except where a separate station already existed. The fund is maintained by an annual appropriation.—**Morrill Act.** (*a*) An act of the United States Congress in 1862 which provided for the maintenance of at least one college in each State, the chief object of which should be instruction in the branches of learning related to agriculture and the mechanic arts, though other scientific and classical studies were not excluded and instruction in military tactics was included. For this purpose a grant was made of 30,000 acres of public land for each senator and representative, the proceeds of sale to be invested as an endowment. (*b*) A second act (1890) which provided for an annual appropriation, to be increased in ten years from $15,000 to a permanent sum of $25,000 from the proceeds of the sale of public land, for the more complete endowment of these institutions. This income could be applied only to instruction (with facilities) in agriculture, the mechanic arts, the English

language, and other branches directly related to industrial life.—**Scalp Act**, in the United States, a statute which provides for the payment by a State of a bounty or reward for the destruction of certain animals deemed to be injurious to agriculture. It is usually provided that the reward shall be paid upon the production of the heads or scalps of the animals destroyed.—**Sherman Act**, an act of Congress of July 14, 1890, directing the secretary of the treasury to purchase monthly 4,500,000 ounces of fine silver bullion, or so much thereof as might be offered, at the market rate, not to exceed $1 for 371¼ grains of fine silver. It was repealed in 1893.

Actiad (ak'ti-ad), *n.* [Gr. Ἀκτία, the Actian games, + *-ad*[1]. Cf. *Olympiad.*] The space of four Actian years; the four years intervening between one celebration of the Actian games and the next. See *Actian.*

actinally (ak'ti-nal-i), *adv.* Toward, or having reference to, the actinal or oral side of an echinoderm; orally.

Actinaria (ak-ti-nā'ri-ä), *n. pl.* [NL., neut. pl. of **actinarius*, < Gr. ἀκτίς (ἀκτιν-), a ray.] The flesh-corals, a suborder of *Anthozoa*, usually with 6 (or a multiple of 6) simple tentacles and no skeleton. It includes *Actinia, Adamsia, Cerianthus*, and other genera.

actine (ak'tin), *n.* A ray of a monaxon or rod-like megasclere of a sponge.

actinellidan (ak-ti-nel'i-dan), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Actinellida.*

II. *n.* One of the *Actinellida.*

acting, *p. a.* 2. Performing, or used in performing, stage-plays.—**Acting edition** (of a play), one which contains full stage-directions for the information of the players.

II. *n.* The profession of an actor or player.

actinian (ak-tin'i-an), *a.* and *n.* [*Actinia* + *-an.*] **I.** *a.* Pertaining to or resembling an actinia.

II. *n.* An animal of the family *Actiniidæ* or of the order *Actiniidea.*

actiniarian (ak-tin-i-ā'ri-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Actiniaria.*

II. *n.* One of the *Actiniaria.*

Actinic ★focus, ★light, ★photometer. See the nouns.—**Actinic plane** a plane of maximum actinic activity in a system of standing light-waves. According to Wiener, such planes pass through the loops of the system, and at right angles to the path of the waves.—**Actinic ★ray, ★spectrum.** See the nouns.

actinicism (ak-tin'i-sizm), *n.* [*actinic* + *-ism.*] Same as *actinism.*

actinicity (ak-ti-nis'i-ti), *n.* Chemical or photographic activity; a property of rays of the spectrum by which chemical reactions are produced or promoted. Same as *actinism.*

Actinidia (ak-ti-nid'i-ä), *n.* [NL., < Gr. ἀκτίς (ἀκτιν-), a ray, + dim. *-ιδιον.*] A genus of twining shrubs, of about eight species, natives of eastern Asia and members of the family *Ternstræmiaceæ.* About half of the species are in cultivation for covering arbors and porches, *A. arguta* being the most common species. The leaves are large and ovate, and are more or less toothed or serrate; the flowers are small and whitish. The species are hardy and useful climbers.

Actiniidea (ak-tin-i-id'ē-ä), *n. pl.* [NL., irreg. < *Actinia* + *-id-ea.*] An order of zoantharian *Anthozoa* consisting of colonial or solitary *Zoantharia cryptoparamera*, with or without a skeleton The mesenteries are arranged in cycles (each cycle usually consisting of 12 couples of equal size), and the tentacles equal the mesenteries in number. It contains the *Actiniidæ, Corallimorphidæ, Ilyanthidæ, Liponemidæ, Amphianthidæ, Dendractidæ*, and *Thalassianthidæ.*

actinine (ak'ti-nin), *a.* [*Actinia* + *-ine*[1].] Actinian.

actinioid (ak-tin'i-oid), *a.* [*Actinia* + *-oid.*] Resembling a sea-anemone or actinian.

Actiniomorpha (ak-tin″i-ō-môr'fä), *n. pl.* [NL., < *Actinia* + Gr. μορφή, form.] A subclass of *Anthozoa* including *Actinaria, Antipatharia*, and *Madreporaria.*

actinism, *n.* 3. In *bot.*, the chemical action of sunlight on plants.

Actinistia (ak-ti-nis'ti-ä), *n. pl.* [NL., < Gr. ἀκτίς, a ray, + ἱστίον, a web (?).] A suborder of extinct ganoid fishes ranging from the Carboniferous to the Jurassic. They are characterized among other things by having the interspinous bones of each dorsal and anal fin fused into a single piece.

actinium, *n.* 1. This supposed chemical element, of a metallic character, was announced by Phipson in 1881 as obtained from a commercial white pigment consisting mainly of oxid and sulphid of zinc with sulphate of barium. It was described as forming a white sulphid which became brown and finally black under the action of the sun's rays, the blackening being prevented by screening the surface with a plate of glass, and removed when the darkened surface was exposed to air in the absence of light.

2. A radioactive substance found by Debierne to exist in the residues remaining from pitchblende after the extraction of the uranium: a new radio-element closely related in its chemical behavior to lanthanum, from which it has not as yet been found possible to separate it completely. It has not been obtained in a state of sufficient purity to give any characteristic spectrum and is identified and recognized entirely by its radioactive properties. Actinium itself has not been found to emit a radiation but undergoes disintegration with the formation of a series of radioactive products known as radioactinium, actinium-X, actinium emanation, actinium A, actinium B, and actinium C. Of these, the first, second, third, and fifth emit alpha-rays, the fourth beta-rays, and the sixth beta- and gamma-rays (see ★*obscure rays*). These products are present in all ordinary actinium preparations. The occurrence of actinium indicates that it is a disintegration product of uranium, although its genetic relationship to ionium and radium has not yet been established. Actinium is identical with the *emanium* of Giesel. See ★*emanation.*

M. and Mme. Curie, with the collaboration of MM. Bemont and Debierne, succeeded in establishing the existence of three new radio-active substances in pitchblende: radium associated with the barium in the mineral, and closely resembling it in its chemical properties; polonium associated with the bismuth, and *actinium* with the thorium. *J. J. Thomson*, Elect. and Matter, p. 141.

Actinium rays, Becquerel rays emitted by the disintegration products of actinium. See *obscure* ★*rays.*

actinoblast (ak-tin'ō-blast), *n.* [Gr. ἀκτίς (ἀκτιν-), ray, + βλαστός, germ.] In sponges, the mother-cell, in which is formed each ray of a radiate spicule; a scleroblast.

actinobranch (ak-tin'ō-brank), *n.* [NL. *actinobranchia*, < Gr. ἀκτίς (ἀκτιν-), ray, + *branchia*, gill.] One of the gill-like vascular organs found in certain anthozoans.

actinobranchia (ak″ti-nō-brang'ki-ä), *n.*; pl. *actinobranchiæ* (-ē). [NL.] Same as ★*actinobranch.*

actinocarp (ak-tin'ō-kärp), *n.* [Gr. ἀκτίς (ἀκτιν-), ray, + καρπός, fruit (carpel).] A plant having the carpels or placentas radiating from the central axis of the fruit.

actinocarpic (ak″ti-nō-kär'pik), *a.* In *bot.*, of the nature of an actinocarp.

Actinocephalidæ (ak″ti-nō-se-fal'i-dē), *n. pl.* [NL., < *Actinocephalus* + *-idæ.*] A family of cephaline *Gregarinida.* The sporonts are always solitary; epimerite symmetric, simple or with appendages; cysts dehiscing by simple rupture; spores navicular, biconic, or cylindric, with conic extremities. They are mostly parasites in the alimentary canal of carnivorous arthropods. The family contains *Actinocephalus, Anthorhynchus, Stictospora, Schneideria*, and other genera.

Actinocephalus (ak″ti-nō-sef'a-lus), *n.* [NL., < Gr. ἀκτίς (ἀκτιν-), ray, + κεφαλή, head.] The typical genus of the family *Actinocephalidæ. Stein*, 1848.

Actinoceras (ak-ti-nos'ē-ras), *n.* [NL., < Gr. ἀκτίς (ἀκτιν-), ray, + κέρας, horn.] A genus of nautiloid cephalopods typical of the family *Actinoceratidæ.*

actinoceratid (ak″ti-nō-ser'a-tid), *a.* and *n.* **I.** *a.* Pertaining to the *Actinoceratidæ.*

II. *n.* One of the *Actinoceratidæ.*

Actinoceratidæ (ak″ti-nō-se-rat'i-dē), *n. pl.* [NL., < *Actinoceras* + *-idæ.*] A family of longicone nautiloid cephalopods. They have the siphuncle more or less filled with calcareous deposits which may radiate into and even fill the chambers of the shell. The family includes several important genera, namely, *Actinoceras, Hormoceras*, and *Tretoceras*, chiefly of Silurian age.

actinocrinid (ak″ti-nō-krin'id), *a.* and *n.* **I.** *a.* Pertaining or related to the *Actinocrinidæ.*

II. *n.* An encrinite of the family *Actinocrinidæ.*

Actinocrinidæ, *n. pl.* 2. In Wachsmuth's classification, the third family of the camerate crinoids. They have a monocyclic base, three radial plates in the cup, fixed brachials large and interradials numerous, arms stout, usually biserial and simple, with long pinnules, and food-grooves subtegminal. The family is a large one and is sometimes divided into *Actinocrinidæ* and *Batocrinidæ.* It is represented by numerous genera and species of Paleozoic age occurring in the formations from the Lower Silurian to the Carboniferous.

actinogram (ak-tin'ō-gram), *n.* [Gr. ἀκτίς (ἀκτιν-), ray, + γράμμα, what is written.] 1. A record of the chemical activity of light made by means of the actinograph.—2. An impression made on a sensitized photographic plate by the Röntgen or Becquerel rays.

actinograph, *n.*—**Hurter and Driffield's actinograph,** a slide-and-roller calculating-machine for determining photographic exposures. A cylinder, carrying a chart which shows geographically the intensity of daylight for every hour of each day of the year, is fitted in a light box. The slide next this cylinder is furnished with two scales, one marked for lens-apertures and the other set out for exposures. Next to this is a small pointer slide which is adjusted to a fixed plate-speed scale and indicates the exposure for each of six selected typical meteorological conditions. The instrument is plotted for any desired latitude.

actinographic (ak″ti-nō-graf'ik), *a.* Of or pertaining to actinography or the actinograph; obtained by means of the actinograph.

actinography (ak″ti-nog'ra-fi), *n.* [As *actinograph* + *-y*[3].] The registration of actinic power by means of the actinograph.

Actinoidea (ak-ti-noi'dē-ä), *n. pl.* [NL., < Gr. ἀκτίς (ἀκτιν-), ray, + εἶδος, form.] Same as *Crinoidea.*

actinolite, *n.* 2. A trade-name of an apparatus by which the ultra-violet rays may be employed in the treatment of cutaneous diseases.

actinologist (ak-ti-nol'ō-jist), *n.* [*actinology* + *-ist.*] One who is versed in the study of the *Actinozoa*, or the sea-anemones, corals, and related forms.

actinologue (ak-tin'ō-log), *n.* [Gr. ἀκτίς (ἀκτιν-), ray, + λόγος, analogy, proportion (?).] In a radiate animal, as a sea-anemone or an echinoderm, any organ or other part of an actinomere which corresponds to another in a different actinomere.

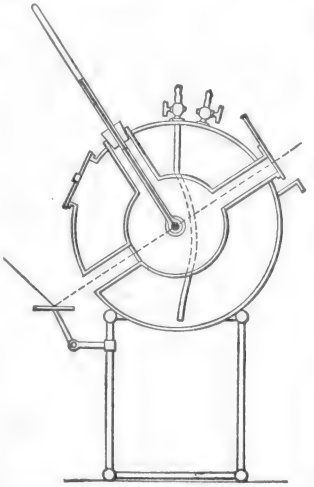
actinology, *n.* 2. The study of the *Actinozoa:* as, the *actinology* of the South Atlantic.

actinolyte (ak-tin'ō-līt), *n.* [Gr. ἀκτίς, ray, + λυτός, < λύειν, dissolve, separate.] 1. A chemical compound analyzable into its components by light.—2. Any substance in which light effects a marked sensible change.

actinolytic (ak″ti-nō-lit'ik), *a.* Pertaining to or of the nature of an actinolyte.

Actinomeris (ak″ti-nom'e-ris), *n.* [NL., < Gr. ἀκτίς (ἀκτιν-), a ray, + μέρος, a part.] A small genus of North American *Compositæ*, of which one or two are sometimes grown in gardens. The cultivated species are perennials, to be treated after the manner of perennial sunflowers.

actinometer, *n. Chemical actinometers* measure the energy of radiation by its chemical effects. Bunsen measured the amount of hydrochloric acid made by sunshine from a mixture of hydrogen and chlorin; Marchand measured the amount of carbonic-acid gas liberated from a solution of perchlorid of iron and oxalic acid by the use of his antiphotypimeter. *Photographic actinometers* measure the intensity of the shade produced on a sensitized plate by an exposure during one unit of time. *Vapor actinometers* measure the volume of liquid (water, alcohol, or ether) evaporated in a unit of time. *Thermal actinometers* measure the heating effect of radiation by many different devices: sometimes called *pyrheliometers.* De Saussure used the simple hot box; Sir John Herschel, a large thermometer-bulb filled with a blue liquid; Pouillet, a measured volume of water inclosed in a blackened cylinder, the temperature of the water being given by a thermometer within it; Crova and Violle, a black-bulb thermometer within a large spherical inclosure kept at uniform temperature; Arago, as modified by Davy, a pair of bright- and black-bulb thermometers each inclosed in a plane-glass spherical envelop from which the air has been exhausted: when exposed to the sunshine the black bulb attains a higher temperature than the bright bulb, and the difference between the two is an index of the amount of heat which penetrates the glass envelop. The complete theory of this action was published by Ferrel in 1885. Langley used a fine wire coated with lamp-black, the intensity of an electric current flowing through the wire being shown by a delicate galvanometer and varying with the temperature of the wire. Hutchins, following Melloni and Tyndall, employed a delicate thermo-electric junction together with a galvanometer; Chwolson, a pair of plates one of which is exposed to the sunshine while the other is in the shade, the difference of temperature being shown by the intensity of a thermo-electric current; and Angström, in his electrically compensated actinometer, two thin strips alternately exposed and shaded, the difference of temperature being measured by the intensity of the electric current needed to bring them both to the same temperature.—**Absolute actinometer,** an apparatus for determining in absolute units the total quantity of heat received at any place during any time by radiation, as distinguished from the relative measurements made with an ordinary actinometer.—**Draper's actinometer,** an actinometer which measures the action of light by the weight of carbon dioxid



Violle's Actinometer (cross-section). (See p. 12.)

disengaged by it from a solution of ferric oxalate. It was devised by Professor Henry Draper.—**Richardson's actinometer,** an instrument for measuring and recording the intensity of the chemically active rays of the sun by means of the expansion of dry chlorin gas.—**Roscoe's actinometer,** an actinometer devised by Sir Henry Roscoe for measuring the action of light by the use of paper sensitized with silver chlorid. The paper, fixed round a drum moved by clockwork, is periodically exposed behind a hole in a thin sheet of brass fastened over the drum.—**Stanley's actinometer,** an actinometer for measuring the actinicity of light by the length of time required to bring a piece of sensitized paper to a standard tint.—**Violle's actinometer,** a black-bulb thermometer placed at the center of a spherical metallic inclosure which is kept at a known constant temperature by the flow of water within its double walls. A small aperture allows sunshine to fall upon the thermometer-bulb, whose rate of warming is observed.

Actinometric degrees, the calculated quantity of radiant energy received by an actinometer in any given interval of time as expressed on any arbitrary scale.

actinomyces, *n.* 2. [*cap.*] [NL. (Harz, 1877).] A genus of fungi of doubtful relationship. The type is *A. bovis*, the ray-fungus. See *actinomyces*, 1.

actinomycotic (ak″ti-nō-mī-kot′ik), *a.* [**actinomycosis* (*-ot-*) + *-ic.*] Resembling, related to, or caused by the ray-fungus or actinomyces. *Jour. Exper. Med.*, V. 179.

Actinomyxidia (ak″ti-nō-mik-sid′i-ạ), *n. pl.* [NL., < Gr. *ἀκτίς* (*ἀκτιν-*), ray, + *μύξα*, slime + *-idia.*] A group of peculiar parasites found in fresh-water oligochætes. They are regarded by some as being intermediate between *Myxosporidia* and *Mesozoa*, while others consider them as belonging to the former group. *Stolc*, 1899.

Actinonema (ak″ti-nō-nē′mạ), *n.* [NL. (Persoon, 1822), < Gr. *ἀκτίς*, ray, + *νῆμα*, thread.] A genus of *Fungi Imperfecti* characterized by pycnidia produced upon a superficial layer of radiating mycelium. The spores are hyaline and mostly two-celled. *A. rosæ* is a common species which attacks leaves of roses. See ★*leaf-blotch.*

actinophore, *n.*—**Epaxial actinophores,** in *ichth.*, nodules of bone or cartilage between the dorsal rays and the interneural spines.—**Hypaxial actinophores,** in *ichth.*, nodules of bone or cartilage between the anal rays and the interhemal spines.

Actinopoda (ak-ti-nop′ō-dạ), *n. pl.* [NL., < Gr. *ἀκτίς* (*ἀκτιν-*), ray, + *πούς* (*ποδ-*), foot.] An order of *Holothurioidea.* The tentacles and podia are supplied by the five radial canals of the water-vascular system springing from the circular canal. The order includes the families *Holothuriidæ*, *Cucumariidæ*, *Molpadiidæ*, *Elpidiidæ*, and *Pelagothuriidæ.*

Actinopteria (ak″ti-nop-tē′ri-ạ), *n.* [NL., < Gr. *ἀκτίς* (*ἀκτιν-*), ray, + *πτερόν* (*πτερά*), feather (wing).] A genus of Paleozoic aviculoid shells. They have a well-defined auricle and wing and radial surface-plications which cover the latter. Abundant in the Devonian formations of America and Europe.

Actinopterygia (ak-ti-nop-te-rij′i-ạ), *n. pl.* [NL., < Gr. *ἀκτίς* (*ἀκτιν-*), a ray, + *πτερύγιον*, a fin.] A great group of fishes including all of the living bony fishes except the *Dipnoi* or lung-fishes and, usually, the *Crassopterygii* or fringe-finned ganoids. The term *Teleostomi* is more commonly used and usually embraces all of the living bony fishes.

actinosome (ak′ti-nō-sōm), *n.* Same as *actinosoma.*

actinostome, *n.* 2. The pentagonal area in the center of the oral surface of an echinoderm which is occupied by the peristome and mouth.

actinostomial (ak″ti-nō-stō′mi-ạl), *a.* [NL. **actinostomialis*, < *actinostomium*, actinostome.] Pertaining or relating to the actinostome: as, the *actinostomial* ring in *Asteroidea.*

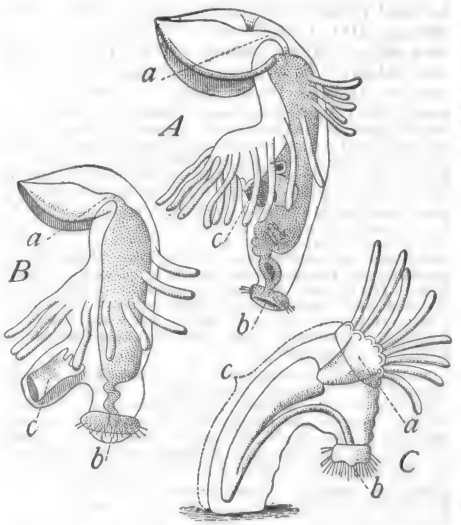
actinostomous (ak-ti-nos′tō-mus), *a.* [Gr. *ἀκτίς*, ray, + *στόμα*, mouth.] In *bot.*, radiating round the mouth: applied specially to the radiate structure round the ostioles of certain lichens.

Actinostroma (ak-ti-nō-strō′mạ), *n.* [NL., < Gr. *ἀκτίς*, ray, + *στρῶμα*, bed.] A genus of hydrocoralline hydrozoans. They grew in spreading masses and exhibited, in vertical section, a series of radial pillars extending more or less continuously through successive layers. An abundant reef-building organism in the Devonian.

actinotherapeutic (ak″ti-nō-ther-ạ-pū′tik), *a.* Pertaining to the therapeutic use of certain rays of light, especially in the treatment of cutaneous diseases.

actinotherapy (ak″ti-nō-ther′ạ-pi), *n.* [Gr. *ἀκτίς* (*ἀκτιν-*), ray, + *θεραπεία*, cure.] Same as ★*radiotherapy.*

actinotrocha (ak″ti-nō-trō′kạ), *n.* [NL., < Gr. *ἀκτίς* (*ἀκτιν-*), a ray, + *τροχός* (?), a wheel, a ring.] The peculiar larval form of *Phoronis*, an aberrant genus of marine worms of doubtful affinities, being sometimes classed with the



Three stages in the Metamorphosis of the Actinotrocha into *Phoronis*. *A*, Actinotrocha larva with the invagination (*c*), which will form the trunk of the *Phoronis* larva, beginning to appear. *B*, stage with the invagination partly extruded. *C*, stage when the extrusion is complete and the alimentary canal has passed into it. (*C* is after Metschnikoff.) *a*, mouth; *b*, anus; *c*, invagination which ultimately forms the greater part of the body of the adult. (From "Cambridge Natural History.")

Gephyrea, sometimes with the *Molluscoidea*, and sometimes with the *Hemichordata.*

action, *n.*, **11** (*b*). In the pianoforte the action is said to be *heavy* or *light*, *hard* or *easy*, according to the amount of resistance to the finger; *deep* or *shallow*, according as the dip of the keys is great or small; *repeating* if the mechanism permits repetition of the stroke without allowing the keys to rise to their original position, etc.; and the word is also extended to the pedal mechanism. In the organ (besides the above usages) the action is called an *electric*, *pneumatic*, or *tracker action*, according as the mechanism connecting the keys with the valves varies in construction; and the word is also extended to the stop mechanism. Furthermore, in the organ the action is said to be *extended* when the keyboards are placed at some distance from the case in which are the pipes.

13. In *psychol.*, bodily movement, in so far as it is directly preceded, accompanied, or followed by consciousness. Some psychologists distinguish this as the *external voluntary* action from an *internal voluntary* action, in which the effect of the initial volition is itself a mental process, a change in the train of ideas which does not manifest itself by any sort of external symptom. Others use the phrase *action of the mind* loosely as the equivalent of *mental function* or *mental activity.*

A voluntary *action* consists, in the first place, of a feeling, in which the tendency of the will is manifested; secondly, of a change in ideational content which may be accompanied by an external effect mediated by the organs of movement; and thirdly, of the general idea of the dependence of this change upon the whole trend of consciousness.

W. Wundt (trans.), Human and Animal Psychol., p. 233.

14. In *mech.*, the sum of the average momenta of the elements of a moving system, each multiplied by the distance through which it moves.—**Action consciousness.** See ★*consciousness.*—**Action ex contractu,** a civil action in which the rights of the parties are subject to the law of contracts as distinguished from the law of torts.—**Action ex delicto,** a civil action in which the rights of the parties are subject to the law of torts as distinguished from the law of contracts.—**Action theory,** a psychophysical theory which correlates the attributes of sensation with definite phases of the passage from excitation to discharge in the cerebral cortex: its quality and intensity with locality and strength of excitation; its value and vividness with locality and strength of discharge. *H. Münsterberg*, Harvard Psychol. Stud., I. iv.—**Automatic action,** in *psychol.*, a term used, with various shades of meaning, to denote action which, originally voluntary, has become more or less mechanical.—**Continuous action,** in *mech.*, action in the same direction, without a reversal. The action of a circular saw or band-saw or a dynamo is continuous; that of an engine-piston is alternating.—**Directive action,** action which tends to cause a body possessed of polarity, as a magnet or a crystal, to take some certain position in the field of force in which it lies. See the extract.

If the attraction with parallel axes exceeds that with crossed axes there must be a *directive action* resisting the turn from the crossed to the parallel positions.

J. H. Poynting, Smithsonian Rep. 1901, pp. 209, 210.

Dynamic action, in *sociol.*, an action in which the end is sought mediately: opposed to *static action*, in which the end is sought immediately.—**Funicular action.** See ★*funicular.*—**Impulsive action,** in *psychol.*, a simple voluntary action determined by a single motive. *W. Wundt* (trans.), Human and Animal Psychol., p. 232.—**Instinctive action,** in *psychol.*, action founded on a congenital, instinctive basis, but consciously motived by acquired experience. *Morgan*, Habit and Instinct, p. 136.—**Joint action,** a civil action in which several parties, having the same or similar rights in the subject-matter of the suit, are joined as plaintiffs or defendants.—**Law of mass action,** in *phys. chem.*, the statement that when any substance in solution enters into a chemical reaction the amount of the reaction in the unit of time is proportional to the active mass of the substance, that

is, to the number of gram-molecules of the substance contained in one liter of the solution.—**Law of reciprocal action.** See ★*law.*—**Local action.** (*b*) In an electric battery, the development of electrical energy by chemical action on the elements of the battery even when the outer circuit is open. Such local internal circuits weaken the effective or useful current. (*c*) In dynamo-electric machines, wasteful internal circuits in the pole-pieces or cores; eddy, parasitic, or Foucault currents.—**Multiplicity of actions,** a term used in equity jurisprudence wherein a court of chancery has jurisdiction to compel the consolidation of several suits where the issue in all can be determined in a single action. A suit in such a court may be brought to prevent a 'multiplicity of actions.'—**Psychomotor action,** in *psychol.*, action which occurs as the direct response to a perception or idea. The term includes *ideomotor* and *sensorimotor action.*—**Selective action** in *psychol.*, action which results from the clash in consciousness of two or more impulses. *E. B. Titchener*, Outline of Psychol., p. 266.—**Static action.** See *dynamic* ★*action.*—**Volitional action,** in *psychol.*, a term used, with various shades of meaning, to denote action which involves the exercise of active attention.

action-extension (ak′shon-eks-ten″shon), *n.* In *pianoforte-making*, a wooden rod which transfers the motion of the key-tail to the whip. Its length varies with the size and arrangement of the action. Analogous to *sticker* in organ-building. See cut under *pianoforte.*

action-rail (ak′shon-rāl), *n.* In *pianoforte-making*, a bar or rail extending across the action from side to side, to which are pivoted the movable parts of all the hammers and dampers. See cut under *pianoforte.*

activ, *a.* A simplified spelling of *active.*

activate, *v. t.* 2. To render active; specifically: (*a*) In *physics*, to make radioactive by exposure to the influence of a radioactive substance; to ionize. See ★*radioactivity.* (*b*) In *physiol. chem.*, to convert into an active form: said of the action of certain organic secretions on inactive ferments or other physiological substances.

activated (ak′ti-vā″ted), *p. a.* In *physics* and *physiol. chem.*, in a state or condition of acquired activity.

They find that underground air is not like *activated* air, but rather resembles radium and thorium compounds, which, while neutral themselves, are capable of ionizing gases by means of the free ions they emit.

Elec. World and Engineer, Jan. 10, 1903, p. 86.

activation (ak-ti-vā′shon), *n.* The act of rendering active or the state of being activated; specifically: (*a*) In *physics*, the process or method of producing radioactivity in a body by exposure to the influence of a radioactive substance or otherwise; the state or condition of being radioactive; ionization. (*b*) In *physiol. chem.*, the activating of inert organic secretions, or the condition of being thus activated.

activator (ak′ti-vā-tọr), *n.* In *physics* and *physiol. chem.*, a substance that arouses another substance to its own proper activity.

active, *a.* **9.** In *psychol.*, representative of a type of character whose dominant characteristic is a natural and constantly renewed tendency to action.—**Active ★congestion, ★mass, ★pressure, ★principle.** See the nouns.—**Active deposit,** in *radioactivity*, a substance deposited by the emanation from a radioactive material, as radium or thorium, and itself capable of producing excited activity in neighboring bodies.—**Active material** (of a storage-cell), in *elect.*, the substance or substances which change chemically during charge and discharge.—**Active verb,** a verb which expresses action. It may be (*a*) *active transitive*, in which the action passes from the subject or agent to an object: as, the sun *gives* light; or it may be (*b*) *active intransitive*, in which the action is confined to the subject: as, the sun *shines.*—**Active voice** in *gram.*, that form or aspect of a verb in which the subject of the verb is represented as acting. See *active*, 8.

activital (ak-tiv′i-tạl), *a.* [*activity* + *-al.*] Relating to action as opposed to thought. *J. W. Powell.*

Full knowledge of aboriginal character may be gained only through study of both the *activital* habits and the intellectual systems of the aborigines; for in every stage of human development, action and thought are concomitant and complementary.

Rep. Bur. Am. Ethnol., 1897-98, p. 825.

activity, *n.* **6.** In *psychol.*, a self-determination of mental process, experienced or inferred, especially characteristic of the conative consciousness. The term has been variously and loosely used in modern psychology. In those systems which are still dominated by philosophical influences it denotes a primary and irreducible experience of self-causation or free initiative. To the psychologist who looks upon mind as a system of organic functions activity is given with the direction of the course of consciousness, knowingly or unknowingly, upon a determinate end: a particular mental process is the first term of a definite series, the remaining members of which it evokes in their order, while the series reaches its natural conclusion when the end is attained. In this sense, however, mental activity becomes practically synonymous with mental function itself, since the limiting cases of anoëtic sentience and involuntary movement are still self-determined in just so far as consciousness is in-

volved in them. Lastly, there are psychologists who, investigating mind as a stream of mental processes, predicate of it neither activity nor passivity, but hold that the antithesis of active and passive has no more place within psychology than the antithesis of subjective and objective. However, they still employ the terms, in obedience to traditional usage, as descriptive names of mental states or mental complexes; they speak, for example, of 'active' attention, meaning attention that is equivocally conditioned; and of a 'feeling of activity' which accompanies the state of active attention. Such a terminology, however harmless in intention, can only add to the existing confusion.

actol (ak'tol), *n.* [*act* + *-ol.*] A trade-name for silver lactate, $C_3H_5O_3Ag$, a substance used as a soluble antiseptic. It must be kept from the sunlight.

Actuality theory, in *psychol.*, the theory that psychology deals with the immediate and underived reality of experience, while the natural sciences, as abstracting from the knowing subject, deal only with mediate experience: opposed to the *theory of substantiality* or of *mind-substance*. *W. Wundt* (trans.), Outlines of Psychol., p. 314.

actuarian (ak-tū-ā'ri-an), *a.* Same as *actuarial*.

acuate, *a.* 2. Having an elongate smooth form pointed at one end; needle-shaped: applied to sponge-spicules.

II. *n.* An acuate monactinellid sponge-spicule.

aculeolus (ak-ū-lē'ō-lus), *n.*; pl. *aculeoli* (-lī). [NL. (L. as a doubtful reading), dim. of *aculeus*: see *aculeus*.] In *bot.*, a minute aculeus or prickle.

acuminate, *a.* (*c*) In *ichth.*, drawn out in a long point: said of the fins.

acupunctuate (ak-ū-pungk'tū-āt), *v. t.*; pret. and pp. *acupunctuated*, ppr. *acupunctuating*. [L. *acus*, needle, + *punctuare*, prick: see *punctuate*.] To prick with a needle; acupuncture.

acupunctuation (ak″ū-pungk-tū-ā'shon), *n.* Same as *acupuncturation*.

acuta (a-kū'tä), *n.* [NL.: see *acute*, *a.*] In *organ-building*, an unusually shrill mixture-stop.

Acutalis (ak-ū-tā'lis), *n.* [NL. (Fairmaire, 1846), < L. *acutus*, pointed.] A genus of tree-hoppers of the homopterous family *Membracidæ*. *A. dorsalis* is found in considerable numbers on grape-vines in the northern United States in July. It is known as the *black-backed tree-hopper*.

acuteness, *n.* (*c*) In *musical acoustics*, relative elevation of pitch in a sound or tone, produced by greater frequency of vibration: opposed to *gravity*. The higher the pitch, the greater is the acuteness.

acutilingual (a-kū-ti-ling'gwal), *a.* [L. *acutus*, sharp, + *lingua*, tongue.] Having a sharp-pointed tongue.

acutiplantar (a-kū-ti-plan'tär), *a.* [L. *acutus*, sharp, + *planta*, sole.] In *ornith.*, having the tarsus sharply ridged on its posterior face. *Ridgway*, Birds of North and Middle America, I. 24.

acutish (a-kū'tish), *a.* [*acute* + *-ish*[1].] Rather acute; specifically, in *bot.*, barely acute or verging toward an acute form.

acutorsion (ak-ū-tôr'shon), *n.* [L. *acus*, needle, + *torsio*(*n-*), twisting.] In *surg.*, an operation for arresting hemorrhage from a wounded artery by passing a needle beneath the vessel, twisting it, and passing it out over the vessel.

acutospinous (a-kū-tō-spī'nus), *a.* [L. *acutus*, sharp, + *spina*, spine.] Having sharp spines.

acyanoblepsia (a-sī″a-nō-blep'si-ä), *n.* Same as *acyanoblepsy*.

acyclic, *a.* 2. In *dynam.*, not having the property of whirling or moving in circles.

The system now behaves, as regards the co-ordinates $q_1, q_2, \ldots q_m$, exactly like the *acyclic* type there contemplated. *Encyc. Brit.*, XXVII. 570.

3. Irregular in course; not occurring with normal periodicity.—4. In *chem.*, containing no cycle or ring: said of organic compounds which contain no ring of atoms.—**Acyclic surface**, a surface such that any closed curve upon it can contract to a point without leaving the surface.

acyesis (a-si-ē'sis), *n.* [NL., < Gr. *ἀ-* priv. + *κύησις*, conception, < *κυεῖν*, conceive.] 1. Inability to conceive; barrenness.—2. The condition of non-pregnancy.

acyl (as'il), *n.* [*ac*(*id*) + *-yl.*] A name introduced by Liebermann to designate an acid radical such as acetyl, C_2H_3O.

acylate (as'i-lāt), *v. t.*; pret. and pp. *acylated*, ppr. *acylating*. [*acyl* + *-ate*[1].] To introduce an acyl-group into; especially, to prepare an acyl derivative of an organic compound containing a hydroxyl- or amino-group.

acyrology (a-si-rol'ō-ji), *n.* [L. *acyrologia*, < Gr. *ἀκυρολογία*, < **ἀκυρολόγος*, adj., < *ἀκυρολογεῖν*, speak incorrectly, < *ἄκυρος*, unauthorized, improper (< *ἀ-* priv. + *κῦρος*, authority), + *λόγος*, speech.] Faulty diction. [Rare.]

Acystosporea (a-sis″tō-spō'rē-ä), *n. pl.* [NL., < Gr. *ἀ-* priv. + *κύστις*, bladder, + *σπόρος*, seed (see *spore*).] A suborder of *Sporozoa*, of the order *Hæmosporidia*. It contains those forms in which the trophozoite is an amœboid hemamœba or is of simple body form and is typically endoglobular throughout the schizogonous cycle. An alternation of hosts occurs in many cases, schizogony taking place usually in a warm-blooded vertebrate host, while sporogony occurs in an invertebrate host, usually an arthropod. Compare *Hæmosporea*.

Acystosporidia (a-sis″tō-spō-rid'i-ä), *n. pl.* [NL., as *Acystospor-ea* + *-id-ia*.] A group of protozoan cell-parasites infesting certain vertebrates. They are found mainly in red blood-corpuscles, but also in the kidney, liver, and intestinal epithelium. In blood they cause hypertrophy of the corpuscles and diminution of the hemoglobin. They are associated with malaria in man and with Texas fever in cattle. See *Hæmamœbidæ* and *Gymnosporidia*.

ad, *v.* A simplified spelling of *add*.

Ada (ā'dä), *n.* [NL., appar. from the feminine name *Ada*.] A genus containing two species of epiphytal orchids native to northern South America, sometimes grown in choice collections under the same conditions as *Odontoglossum*.

adactylia (a-dak-til'i-ä), *n.* [NL., < Gr. *ἀ-* priv. + *δάκτυλος*, finger or toe: see *dactyl*.] In *teratol.*, a congenital lack of some or all of the fingers or toes.

adactylism (a-dak'til-izm), *n.* Same as *adactylia*.

adagio, *adv.* and *a.* Special varieties of movement or style are indicated by adding other terms, as: *adagio assai* or *molto*, very slow; *adagio non troppo*, slow, but not too much so; *adagio cantabile* or *sostenuto*, slow, with a flowing or sustained movement; *adagio patetico*, slow and with pathos; *adagio pesante*, slow, with heavy accents; *adagio religioso*, slow and in the church style; etc.

adalid (ad-a-lēd'), *n.* [Sp., a chief or commander, < Ar. *al-dalīl*, < *al*, the, + *dalīl*, leader, guide.] A leader or guide. *Miss Yonge*, Christians and Moors in Spain, p. 206.

Adam, *n.*—**Adam and Eve.** (*b*) A colloquial name for *Sempervivum tectorum*, the houseleek.—**Adam's apple.** (*d*) A name given to the crape jasmine or East Indian rosebay, *Tabernæmontana coronaria*. See *crape jasmine*, under *jasmine*.—**Adam's fig.** See *fig*[2].

Adamantine layer or substance, the enamel of the teeth.

adamantoblast (ad-a-man'tō-blast), *n.* [Gr. *ἀδάμας*, adamant, + *βλαστός*, germ.] In *embryol.*, one of the cells which produce the enamel of the teeth. Same as *ameloblast*.

adamellite (ad-a-mel'īt), *n.* [(Monte) *Adamello*, in the middle Alps, + *-ite*[2].] In *petrog.*, a name proposed by Cathrein (1890) as a substitute for *tonalite*, and described as a granular igneous rock of the group intermediate between granite and diorite, containing orthoclase and plagioclase feldspars with hornblende and biotite. Brögger uses the term for highly quartzose monzonites.

Adam Kadmon (ad'am kad'mōn). [Heb. *'ādām ḳadmōn*, *'ādām ha-ḳadmōni*, 'the first man.'] In cabalistic doctrine, the primordial man, the image of God, emanating from the Ensoph, the Infinite, and representing the Eser Sephiroth, the ten attributes of the deity. See *Sephiroth* and *Nachash Hakadmoni*.

Adamkiewicz's reaction. See *reaction*.

Adams-Stokes disease. Same as *Stokes-Adams disease*.

adanal (ad-ā'nal), *a.* [L. *ad*, to, + *anus*, anus.] Extending to the anus: as, the *adanal* plate, in *Arachnida*, a plate-like sclerite reaching to the anus.

adangle (a-dang'g'l), *adv.* [*a*[3] + *dangle*.] Hanging loosely; in a dangling position or condition; dangling. *Browning*, Men and Women, i. 37. *N. E. D.*

Adapisoricidæ (ad″a-pi-sō-ris'i-dē), *n. pl.* [NL., < *Adapisorex* (< *Adapis*, a genus of monkeys, + *Sorex*, a genus of insectivores) + *-idæ*.] A family of extinct insectivorous mammals related to the moles, but more highly specialized. The type genus, *Adapisorex*, about the size of a hedgehog, is from the Lower Eocene of Reims, France.

adapoid (ad'a-poid), *a.* [*Adap-is* + *-oid*.] Related to the *Adapidæ*.

adapt, *v. t.* 4. Same as *immunize*.

Bordet heated for half an hour to 56° C. some of the lytic serum secured by *adapting* the guinea-pig through subcutaneous injections to the red blood cells of the rabbit. He found that it had completely lost its new lytic power. *Med. Record*, Feb. 14, 1903, p. 246.

adaptation, *n.* 4. Same as *immunization*.—

Adaptation product. See *adaptation-product*.—**Constitutional adaptation** constitutional impregnation. See *impregnation*.—**Functional adaptation,** in *biol.*, the adjustment of an organism by its own activity to changed conditions, considered as a cause of change in its structure. The notion of functional adaptation as prior to and the cause of structure rests upon the belief that an organism can do things for which it has no adaptive machinery. *H. E. Crampton*, Biometrika, March-July, 1904, p. 114.—**Law of adaptation,** in *sociol.*, the assumption that social groups acting upon one another universally adapt themselves to a certain end, namely, further social development.—**Ontogenetic adaptation,** an adaptive change which is produced in an organism by its own activity and is not transmitted to descendants, as contrasted with a change which is congenital and is transmitted to descendants; a useful acquired character. *H. F. Osborn*, Science, Oct. 15, 1897.—**Visual adaptation,** the adjustment of the eye, by the pupilary mechanism and by retinal changes, to a change in the color or brightness of its surroundings. The eye may become adapted either to a change of the total field of vision (*general adaptation*) or to local and partial changes within a given field (*local adaptation*). Adaptation itself may be partial or complete.

adaptationist (ad-ap-tā'shon-ist), *n.* One who believes that social phenomena must be explained as adaptations to environment and accounted for by collective causes rather than by individual efforts.

adaptation-product (ad-ap-tā'shon-prod″ukt), *n.* A substance produced in the body of an animal of one species by immunization with cells or cellular products derived from the body of an animal of an alien species. Also called *reaction-substance*. It has a specific effect upon the body used in immunization which, generally speaking, is antagonistic to the immunizing substance. In this relation also called *antibody* or *antisubstance*. Examples are the various antitoxins, cytotoxins, agglutinins, and precipitins. See *immunity*.

adapted (a-dap'ted), *p. a.* Specifically, resulting from immunization: as, an *adapted* serum.

adapter, *n.* 6. In *photog.*, an attachment to a camera by means of which plates of sizes other than those for which the camera is designed may be used.

adaxial (ad-ak'si-al), *a.* [L. *ad*, to, + *axial*.] In *bot.*, in a plane facing the axis. See the extract.

The ovaries [in Casuarina] are flattened laterally, in contrast to the *adaxial* flattening of the wings in Pinus. *Bot. Gazette*, XXXVI. 104.

A. D. B. An abbreviation of *Artium Domesticarum Baccalaurea*, Bachelor of Domestic Arts, a degree conferred by some institutions upon women.

A. D. C. 1. An abbreviation of *Aide-de-camp*.—2. An abbreviation of *Anodic Duration Contraction*: used in electrotherapy.

add, *v. t.*—**Added part or voice,** in *music*, a part or voice supplementary to the principal melody or to the essential harmony. Thus in polyphonic writing a counterpoint may be called the *added part* or *voice*, in distinction from the cantus; or when a solo part is combined with a chorus it may be called the *added part* or *voice*.

addental (a-den'tal), *n.* [*ad-* + *dental*.] In *ichth.*, one of the bones of the upper jaw, joined to the premaxillary in front: synonymous with *maxillary*.

adder[1], *n.*—**Banded adder,** *Bungarus fasciatus* of southern Asia.—**Berg adder,** *Clotho* (or *Vipera*) *atropos* of South Africa.—**Blowing-adder,** a harmless hog-nosed snake of North America belonging to the genus *Heterodon*.—**Horned adder,** *Clotho cornuta* of North Africa: not to be confounded with the horned viper, *Cerastes cornuta*, also of North Africa, but more abundant and more deadly.

adder's-tongue, *n.* 2. A name sometimes given to the hart's-tongue, *Phyllitis Scolopendrium*. See *Scolopendrium*.—3. Any of the eastern species of *Erythronium* or dog-tooth violet. The white adder's-tongue is *E. albidum*.—**Adder's-tongue family,** the *Ophioglossaceæ*, including *Ophioglossum*, the adder's-tongue fern.

Addie's process. See *process*.

addigital (a-dij'i-tal), *a.* and *n.* [*ad-* + *digital*.] I. *a.* In *ornith.*, attached to a digit (the third).—**Addigital remex,** the primary attached to the first phalanx of the third digit of a bird's wing.

II. *n.* Same as *addigital remex*.

addiment (ad'i-ment), *n.* [NL. **addimentum*, < L. *addere*, add.] A thing added; an additament; a complement; specifically, same as *complement*, 8. See *alexin*.

Dr. Longcope gives a study of the bacteriolytic action of human blood in disease, and Dr. Walker surveys the various factors in bacteriolytic action, from which he deduces the fact that the complement or *addiment* is a product of disintegration of leucocytes. *Nature*, Feb. 19, 1903, p. 373.

adding-machine, *n.* Its different forms depend either on the totalizing principle, on the principle of a train of gears whose ratio is 10 to 1, or on both. In a convenient form the figures are arranged like the keys of a type-writer in vertical rows from 1 to 9. By depressing the key for the proper figure in the row of units, tens,

hundreds, etc., the result of the addition appears in figures. Such machines are much used in banks, offices, and factories.

addition, *n.*—**Algebraic addition,** addition in which the signs (+ and —) of the quantities to be added are considered. The result is the difference between the sums of the positive and of the negative quantities, with the sign of the greater.—**Relative addition,** such a combination of two relative terms as will produce a third term expressing the relation in which any relate, A, of the first term added would stand to any correlate, C, of the second term added if, and only if, every object in the universe, say X, were either such that A was in the first relation to X, or such that X was in the second relation to C. For example, in the universe of whole numbers, the number 4 stands to the number 2 in the relation which results from the relative addition of "is prime to" to "is a multiple of," since 4 is prime to every number unless to a multiple of 2. This operation was introduced into logical algebra in 1882 by C. S. Peirce, and has generally been employed, although Whitehead and others hold it to be of little utility.

addition-compound (a-dish′ọn-kom″pound), *n.* Same as ★*addition-product.*

addition-product (a-dish′ọn-prod″ukt), *n.* In *chem.*, a compound formed by the direct addition of one element or compound to another. It is contrasted with *substitution-product*, in which one element or group is substituted for another. Also called *addition-compound.*

Addititious force, in *astron.*, the radial component of a disturbing force when it increases the attraction of a satellite toward its primary, especially of the moon toward the earth: opposed to *ablatitious force,* which diminishes the attraction. The force is *addititious* when the satellite is in quadrature with the disturbing body (usually the sun), *ablatitious* when in syzygy.

addograph (ad′ọ-gråf), *n.* [L. *addere*, add, + Gr. *γράφειν*, write.] An adding-machine with a device for recording results on a type-writer.

address, *n.*—**Forms of address.** See ★*form.*

addressing-machine, *n.* These machines are of several kinds: (*a*) A small apparatus, operated by hand, for cutting from a prepared paper ribbon of printed addresses one address at a time and pasting it on the wrapper. (*b*) A machine for stenciling addresses, etc., on wrappers or cards. The stencils, made on parchment and reinforced by a cardboard frame, are prepared by a perforating-device attached to a type-writer. When ready, the stencils are placed in alphabetical order in the hopper of a special form of stenciling-press and automatically fed to the inking-roller and then passed to the press, which forces enough ink through the stencil to make a clear impression on the wrapper. The stencils are then relieved of surplus ink and delivered to another hopper, which retains them in regular order ready for use again. The machine stencils the addresses on a continuous roll of paper, and cuts off, counts, and delivers the wrappers in the same order as that of the stencils. (*c*) A press for printing addresses, etc., from embossed type. The addresses are embossed in a special form of power type-writer on ribbons of type-metal, and are then, in a special machine, cut apart and fitted with locking hinges, and made up by hand into chains or ribbons. A ribbon on a spool is placed in a power printing-press and automatically fed to the inking-rollers and to the press; each addressed type-plate is printed in turn, and the chain is rewound on another spool. The addresses are printed on a continuous roll, cut, and counted in regular order. A smaller machine of this type is fed by hand and operated by foot-power.

addressograph (ạ-dres′ọ-gråf), *n.* [*address* + Gr. *γράφειν*, write.] A special form of foot-power addressing-machine employing endless chains of embossed metal type or chains of movable rubber type. See ★*addressing-machine.*

ade (ād), *n.* [Detached from *lemonade, limeade, orangeade.*] A drink of the lemonade or orangeade class. [Colloq.]

They make a superior *ade* which rivals lemon or lime *ade.* *Science*, Feb. 13, 1903, p. 263.

Adelaide ruby, sovereign. See ★*ruby,* ★*sovereign.*

Adelea (ad-ẹ̄-lē′ạ̈), *n.* [NL. (A. Schneider, 1875), appar. (irreg.) ‹ Gr. *ἀδηλος*, not manifest, unseen.] A genus of *Coccidia*, of the family *Polysporocystidæ*, having the dizoic spores spherical or compressed and the sporocysts smooth. The various species are parasitic in myriapods and insects.

adelite (ad′ẹ̄-līt), *n.* [Gr. *ἀδηλος*, not manifest, + *-ite*[2]. The allusion is to the indistinct crystallization.] A basic arseniate of calcium and magnesium, of a grayish color, occurring in embedded grains and rarely in monoclinic crystals: found in Sweden.

adeloceratous (ad″ẹ̄-lọ-ser′ạ-tus), *a.* Same as ★*adelocerous.*

adelocerous (ad-ẹ̄-los′ẹ̄-rus), *a.* Having concealed antennæ. Same as *cryptocerous.*

Adelochorda (ad″ẹ̄-lō-kôr′dạ̈), *n. pl.* [NL., ‹ Gr. *ἀδηλος*, not evident, + *χορδή*, chord.] A subphylum and class of *Chordata* including the genera *Balanoglossus, Rhabdopleura,* and *Cephalodiscus.* The distinctive features of the group are the presence of the presumed rudimentary representative of a notochord and of the gill-slits. The group is not homogeneous, and the affinities of its members to *Chordata* are denied by some zoölogists.

adelomorphic (ad″ẹ̄-lō-môr′fik), *a.* [Gr. *ἀδηλος*, not manifest, + *μορφή*, form.] A term applied to the so-called chief or central cells of the gastric mucosa, which supposedly furnish the pepsin and chymosin. *W. D. Halliburton,* Chemical Physiology and Pathology, p. 633.

Adelops (ad′ẹ̄-lops), *n.* [NL. (Telkampf, 1844), ‹ Gr. *ἀδηλος*, not evident, + *ὠψ*, eye.] A genus of beetles of the family *Silphidæ.* They inhabit caves, where their larvæ feed upon the dung of bats and other cave-inhabiting animals. About 30 species are known, mainly from European caves. *Adelops hirtus* lives in the Mammoth Cave of Kentucky.

Adelosiphonia (ad″ẹ̄-lō-sī-fō′ni-ạ̈), *n. pl.* [NL., ‹ Gr. *ἀδηλος*, not evident, + *σίφων*, pipe.] A group or section of anomalodesmaceous pelecypod mollusks, or *Acephala.* They constitute a subdivision of the superfamily *Anatinacea* and comprise those mollusks which have short siphons and a well-defined lithodesma. The genus *Pandora* is an example.

adelphiarchal (ạ-del′fi-är-kạl), *a.* [Irreg. ‹ Gr. *ἀδελφός*, brother, + *ἀρχός*, ruler, + *-al.*] Relating to a form of government exercised by the men assembled in council, the members of the council being considered as brothers. See the extract.

In this way the women sitting in clan council constituted the primary legislative body, while their brothers sitting in tribal council formed a senate or final legislative body whose decisions were binding on the executives of clans and tribes; so that the social organization may be classed as *adelphiarchal* (like that of the Seri Indians described in earlier reports) in principle, though largely patriarchal in detail. *Smithsonian Rep.*, 1901, p. 77.

adelphic (ạ-del′fik), *a.* [Gr. *ἀδελφικός*, brotherly or sisterly, ‹ *ἀδελφός*, brother, *ἀδελφή*, sister.] In *math.*, pertaining to the connectivity of a surface.—**Adelphic order,** in *math.*, the connectivity.

adelphogamy (a-del-fog′ạ-mi), *n.* [Gr. *ἀδελφός*, brother, + *γάμος*, marriage.] That form of polyandry in which a number of brothers have a wife in common. *J. W. Powell.*

Among other privileges bestowed on the bride during the probationary period are those of receiving the most intimate attentions from the clanfellows of the groom; and these are noteworthy as suggestions of a vestigial polyandry or *adelphogamy.*

Rep. Bur. Am. Ethnol., 1895–96, p. 281.

adelphotaxy (ạ-del′fō-tak-si), *n.* [Gr. *ἀδελφός*, brother, + *τάξις*, disposition, order.] In *biol.*, the movement of certain motile cells in relation to each other: a term proposed by Hartog in 1888.

adempted (a-demp′ted), *p. a.* Same as *adeemed.* See *adeem.*

adenase (ad′e-nās), *n.* An autolytic ferment found in certain glands which transforms adenin into hypoxanthin.

adendric (a-den′drik), *a.* [*a-*[18] + *dendron* + *-ic.*] Same as ★*adendritic.*

adendritic (a-den-drit′ik), *a.* [*a-*[18] + *dendritic.*] In *neurol.*, having no dendrites: said of nerve-cells which have only the neuraxon or axis-cylinder process.

adenin (ad′e-nin), *n.* [Gr. *ἀδήν*, gland, + *-in*[2].] One of the purin or xanthin bases, $C_5H_5N_5$. It has been obtained from the lymph glands, spleen, thymus gland, kidneys, etc.

adenocheirus (ad″e-nō-kī′rus), *n.*; pl. *adenocheiri* (-rī). [NL., ‹ Gr. *ἀδήν*, gland, + *χείρ*, hand.] In *Turbellaria*, one of the outgrowths from the atrial walls in the genus *Artioposthia* which serve as accessory copulatory organs. See ★*adenodactylus.*

adenochondrosarcoma (ad″e-nō-kon″drọ̄-sär-kō′mạ̈), *n.*; pl. *adenochondrosarcomata* (-ma-tạ̈). A mixed tumor containing the elements of adenoma, chondroma, and sarcoma.

adenocyst (ad′e-nō-sist), *n.* Same as ★*adenocystoma.*

adenocystic (ad″e-nō-sis′tik), *a.* Same as ★*adenocystomatous.*

adenocystoma (ad″e-nō-sis-tō′mạ̈), *n.*; pl. *adenocystomata* (-ma-tạ̈). [NL., ‹ Gr. *ἀδήν*, gland, + *κύστις*, bladder (see *cyst*), + *-oma.*] An adenoma containing cystic cavities.

adenocystomatous (ad″e-nō-sis-tō′ma-tus), *a.* Relating to or of the nature of adenocystoma.

adenodactylus (ad″e-nō-dak′ti-lus), *n.*; pl. *adenodactyli* (-lī). [NL., ‹ Gr. *ἀδήν*, gland, + *δάκτυλος*, finger.] In *Turbellaria*, one of the outgrowths from the atrial walls in the genus *Artioposthia* which serve as accessory copulatory organs. See ★*adenocheirus.*

adenofibroma (ad″e-nō-fī-brō′mạ̈), *n.*; pl. *adenofibromata* (-ma-tạ̈). A glandular tumor consisting largely of an overgrowth of fibrous tissue.

adenoid, *a.*—**Adenoid disease,** pseudoleucocythemia.—**Adenoid tumor.** Same as *adenoma.*—**Adenoid vegetations,** masses of lymphoid tissue, similar in structure

to the tonsils, situated at the posterior wall of the upper end of the pharynx. When hypertrophied, as they often are in children, these vegetations may obstruct the passage of air through the posterior nares and so necessitate mouth-breathing. Also called *pharyngeal tonsil* and *Luschka's tonsil.*

II. *n.* An adenoid growth; specifically, an adenoid vegetation.

adenolipoma (ad″e-nō-li-pō′mạ̈), *n.*; pl. *adenolipomata* (-ma-tạ̈). [NL., ‹ Gr. *ἀδήν*, gland, + *λίπος*, animal fat, + *-oma.*] A glandular tumor consisting largely of fatty substance.

adenolymphoma (ad″e-nō-lim-fō′mạ̈), *n.*; pl. *adenolymphomata* (-ma-tạ̈). [NL., ‹ Gr. *ἀδήν*, gland, + L. *lympha*, lymph, + *-oma.*] Same as *lymphadenoma.*

Adenoma destruens. [L., destructive adenoma.] An adenoma, usually of the stomach, intestines, or uterus, which has taken on malignant characteristics. Also called *adenocarcinoma.*

adenomalacia (ad″e-nō-ma-lā′si-ạ̈), *n.* [NL., ‹ Gr. *ἀδήν*, gland, + *μαλακία*, softness, ‹ *μαλακός*, soft.] Pathological softening of glands.

adenomatome (ad-e-nom′ạ-tōm), *n.* [Gr. *ἀδήν*, gland, + *-τομος*, ‹ *ταμεῖν*, cut.] An instrument employed in the removal of adenoid growths.

adenomyxoma (ad″e-nō-mik-sō′mạ̈), *n.*; pl. *adenomyxomata* (-ma-tạ̈). [NL., ‹ Gr. *ἀδήν*, gland, + *μύξα*, mucus, + *-oma.*] A tumor composed of glandular and mucous tissue.

adenomyxosarcoma (ad″e-nō-mik″sō-sär-kō′mạ̈), *n.*; pl. *adenomyxosarcomata* (-ma-tạ̈). [NL., ‹ Gr. *ἀδήν*, gland, + *μύξα*, mucus, + *σάρξ* (*σαρκ-*), flesh, + *-oma.*] A tumor composed of glandular, mucous, and sarcomatous elements.

adenopetaly (ad″e-nō-pet′ạ-li), *n.* [Gr. *ἀδήν*, a gland (nectary), + *πέταλον*, leaf (petal).] The transformation of nectaries into petals. *Morren.*

adenophlegmon (ad″e-nō-fleg′mon), *n.* [Gr. *ἀδήν*, gland, + *φλεγμονή*, inflammation.] Acute inflammation of a gland.

adenopodous (ad-e-nop′ọ̄-dus), *a.* [Gr. *ἀδήν*, gland, + *πούς* (*ποδ-*), foot, + *-ous.*] In *bot.*, having the petiole or peduncle glandular.

adenoscirrhus (ad″e-nō-sir′us), *n.*; pl. *adenoscirrhi* (-rī). [NL., ‹ Gr. *ἀδήν*, gland, + *scirrhus.*] A hard cancer which involves a gland.

adenosclerosis (ad″e-nō-sklẹ̄-rō′sis), *n.* [NL., ‹ Gr. *ἀδήν*, gland, + *σκλήρωσις*, a hardening: see *sclerosis.*] Induration of a gland.

adenostemonous (ad″e-nō-stē′mọ̄-nus), *a.* [Gr. *ἀδήν*, gland, + *στήμων*, taken for 'stamen,' + *-ous.*] In *bot.*, having glandular stamens.

adenyl (ad′e-nil), *n.* [*aden(in)* + *-yl.*] The group $C_5H_4N_4$, formerly assumed to be present in adenin and hypoxanthin. This name is no longer used, but these and related compounds are spoken of as derivatives of ★*purin* (which see).

adenylic (ad-e-nil′ik), *a.* [*adenyl* + *-ic.*] Relating to adenyl.—**Adenylic acid,** a nucleinic acid obtained from the thymus gland. On decomposition it yields guanine, adenin, cytosin, and thyminic acid.

Adeps lanæ, purified fat of sheep's wool, containing not over 30 per cent. of water.

adermia (a-dėr′mi-ạ̈), *n.* [NL., ‹ Gr. *ἀδερμος*, without skin, ‹ *ἀ-* priv. + *δέρμα*, skin.] Partial or complete congenital absence of the skin.

adessive (ad-es′iv), *n.* [L. *ad*, at, + *esse*, be, + *-ive.* Cf. *abessive.*] In *gram.*, a syntactic case expressing position at some spot or locality. *A. S. Gatschet,* Grammar of the Klamath Language, p. 486.

Adetopneusia (ad″e-top-nū′si-ạ̈), *n. pl.* [NL., ‹ (?) Gr. *ἀδετος*, unbound, loose, + *πνεῦσις*, a blowing, ‹ *πνεῖν*, blow, breathe.] An order of *Stelleroidea*, the *Cryptozonia.*

adetopneustic (ad″e-top-nū′stik), *a.* [Gr. *ἀδετος*, unbound, loose, + *πνευστικός*, ‹ *πνεῖν*, breathe.] Bearing papulæ or dermal branchiæ beyond the abactinal surface.

ad eund. An abbreviation of the Latin *ad eundem gradum*, to the same degree.

adevism (ā′dā-vizm), *n.* [Skt. *ādeva*, hostile to the gods, ‹ *ā-* priv. + *deva*, a god (see *deva*), + *-ism.*] Hindu 'atheism' in the sense of a denial of the old 'devas': a proposed term distinguished from *atheism.*

ad fin. An abbreviation of *ad finem* (which see).

adgustal (ad-gus′tal), *n.* [L. *ad*, to, + *gustus*, taste (suggesting 'palate'), + *-al.*] In *ichth.*, a name given by Geoffroy to the pterygoid bone which forms part of the palatoquadrate arch.

adha (ād′hā), *n.* [Nepalese *ādhā*, half.] A silver coin of Nepal equal to half a muhr or one fourth of a rupee.

adharma (ạ-där′mạ̈), *n.* [Skt.] Unrighteousness; injustice: personified in Hindu mythology as the destroyer of all things.

adheat (ad-hēt'), *v. t.* [*ad-* + *heat.*] To superheat (a quantity of steam) by adding to it a quantity of very highly superheated steam.

adherence, *n.* **6.** In the *theory of aggregates*, the aggregate of all those points of a point-aggregate which are not limiting points (that is, limits of endless series of points): called the *adherence of the point-aggregate;* the aggregate of all the remaining points is called its *coherence*.

adhesion, *n.* **10.** An expression of, or the act by which one expresses, acquiescence in, adherence to, and support of some statement, declaration, or proposal; assent; concurrence.

Up to June 30, 1,787 *adhesions* to the congress had been received. *Science*, July 29, 1904, p. 157.

Adhesion weight, the weight which is producing friction; specifically, the weight on the driving-wheels of a locomotive.—**Primary adhesion, secondary adhesion.** Same as ★*union by first intention* and ★*union by second intention.*—**Traction of adhesion.** Same as *friction of rolling* (which see, under *friction*).

adhesional (ad-hē'zhọn-ạl), *a.* [*adhesion* + *-al.*] Of the nature of or depending upon adhesion: applied specifically to the action of locomotives when the smooth driving-wheel, running on a plane rail, is prevented, through the weight of the engine, from slipping on the rail by its adhesion thereto. When the power of the cylinder applied to turn the wheel exceeds this effect of adhesion, and friction of motion ensues by the slipping of the wheel on the rail, the tractive power becomes less. When the grades become too steep for adhesional traction because the cylinder-diameter necessary to overcome the resistance will cause the wheels to slip, the tractive effort must be exerted through toothed gears meshing into a rack or toothed rail, while the weight may be still carried on smooth rails by ordinary wheels.

adhesion-rail (ad-hē'zhọn-rāl), *n.* In *railroading*, a traction-rail as distinguished from a guard-rail or a third rail; the ordinary rail of a track. Sometimes called *service-rail* and *stock-rail*.

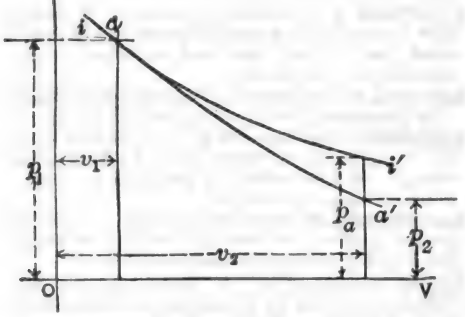
adhesiv, *a.* A simplified spelling of *adhesive*.

Adhesive papilla. See ★*papilla*.

adhvaryu (ad-vär'yö), *n.* [Skt. *adhvaryú*, < *adhvará*, religious ceremony.] A Brahman priest who assists in reciting the prayers of the Yajur-Veda and performs manual labor at sacrifices.

adiabat (ad'i-ạ-bat), *n.* [Gr. *ἀδιάβατος*, not to be passed over: see *adiabatic*.] An adiabatic curve or line.

Adiabatic compression, compression exerted or occurring under conditions in which heat neither leaves nor enters the substance compressed.—**Adiabatic diagram,** a graphic method of representing by adiabats the changes as to temperature, pressure, and condition experienced by a unit mass of gas by virtue of any possible adiabatic change. The adiabatic diagrams for moist air by Hertz (1884) and Neuhoff (1903), and Clapeyron's indicator-curve of the steam-engine, are familiar examples.



Adiabatic Diagram, the curve *a a'* showing a lower pressure at the end of expansion than given for the isothermal diagram *i i'* illustrates the typical relations of pressure and volume. Horizontal abscissas proportional to volumes (V, *v*); vertical ordinates proportional to pressures (P, *p*); *O*, origin.

adiagnostic (a-dī-ag-nos'tik), *a.* [*a-*18 + *diagnostic.*] Not diagnostic; specifically, in *petrog.*, a term, proposed by Zirkel (1893), applied to the phanerocrystalline texture of rocks when the mineral particles, though recognizable, are not specifically determinable without special test: opposed to ★*eudiagnostic*.

Adianthidæ (ad-i-an'thi-dē), *n. pl.* [NL., < *Adianthus*, a genus (for * *Adiantus*, < Gr. *ἀδιαντος*, unwetted: see *Adiantum*), + *-idæ*.] A family of extinct ungulate mammals of the suborder *Liopterna*, found in the Eocene of Patagonia.

adiantiform (ad-i-an'ti-fôrm), *a.* [NL. *Adiantum*, genus of ferns, + L. *forma*, form.] In *bot.*, having the form or character of *Adiantum* or maidenhair. *Encyc. Brit.*, XXXI. 417.

adiaphanous (ad-i-af'ạ-nus), *a.* [*a-*18 + *diaphanous.*] Not transparent; opaque.

adiaphon (ad'i-ạ-fŏn), *n.* [G., < *adiaphonon.*] A form of pianoforte (patented in 1882) in which the sound is produced from tuning-forks instead of from strings: essentially similar to the older adiaphonon.

adiaphonon (ad-i-af'ō-non), *n.* [G., < Gr. *ἀ-* priv. + *διάφωνος*, dissonant: see *diaphony.*] A form of pianoforte, invented by Schuster in 1819, in which the sound is produced from steel bars instead of from strings.

adiaphoretic (ad''i-af-ō-ret'ik), *a.* and *n.* [*a-*18 + *diaphoretic.*] **I.** *a.* Relating to, produced by, or causing diminution or suppression of perspiration.

II. *n.* An agent which diminishes or suppresses perspiration.

adiathermancy (a-dī-ạ-thėr'mạn-si), *n.* [*a-*18 + *diathermancy.*] The character of being adiathermanous; the property by virtue of which a substance absorbs the invisible heat-rays of the spectrum: opposed to *diathermancy*.

adiathermanic (a-dī-ạ-thėr'man-ik), *a.* [*a-*18+ *diathermanic.*] Same as *adiathermic*.

adiathetic (a-dī-ạ-thet'ik), *a.* [*a-*18+ *diathetic.*] In *pathol.*, occurring without reference to a preëxisting constitutional tendency or diathesis.

Adibuddha (ä-di-bö'dä), *n.* [Modern Skt., < Skt. *ādi*, the beginning, + *Buddha*, Buddha.] The first Buddha.

adillah (ä-dil'ä), *n.* A money of Malwa, equal to half a pice.

Adimeridæ (ad''i-mer'i-dē), *n. pl.* [NL., < *Adimerus* + *-idæ*.] A family of clavicorn beetles. In these beetles the tarsi appear to have but two joints, a broad first and a long terminal one, but they have in fact two minute joints between, hidden by the broad basal joint. This structure is unique among the *Coleoptera* and is found only in the American genus *Adimerus*.

Adimerus (a-dim'ẹ-rus), *n.* [NL. (Sharp, 1894), < Gr. *ἀ-* priv. + *διμερής*, two-parted, two-jointed.] The typical and sole genus of beetles of the family *Adimeridæ*, consisting of several Central and South American species.

Adinia (a-din'i-ạ), *n.* [NL., a coined name.] A genus of killifishes of the family *Pœciliidæ*, found in the Rio Grande region.

adipogenic (ad''i-pō-jen'ik), *a.* [L. *adeps* (*adip-*), fat, + Gr. *-γενής*, -producing.] Having the property of producing or of storing fat: as, the *adipogenic* function of the digestive gland in invertebrates. *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 47.

adipogenous (ad-i-poj'ẹ-nus), *a.* [L. *adeps* (*adip-*), fat, + Gr. *-γενής*, -producing.] Fat-producing; productive of adipose.

adipohepatic (ad''i-pō-hē-pat'ik), *a.* [L. *adeps* (*adip-*), fat, + Gr. *ἡπατικός*, of the liver: see *hepatic.*] Same as ★*adipogenic*. *Jour. Roy. Micros. Soc.*, June, 1904, p. 303.

adipolytic (ad''i-pō-lit'ik), *a.* [L. *adeps* (*adip-*), fat, + Gr. *λυτός*, < *λύειν*, dissolve.] See ★*lipolytic*.

adipomatous (ad-i-pom'ạ-tus), *a.* [*adipoma*(*t-*) + *-ous.*] Same as *lipomatous*.

Adipose degeneration. See ★*degeneration.*—**Adipose lobe,** a small appendage springing from the base of the ventral fin of some fishes, as the salmon and the trout. Usually known as an *auxiliary scale*.

Adiposis dolorosa, a disease of the nervous system marked by the formation of irregular masses of fat beneath the skin, especially that of the arms and legs, which are the seat of considerable pain. Also called *Dercum's disease*.

Adiposorex (ad''i-pō-sō'reks), *n.* [L. *adeps* (*adip-*), fat, + *sorex*, a shrew-mole.] A genus of small shrew-moles from the Lower Eocene.

Adiscota (ad-is-kō'tä), *n. pl.* [NL., < Gr. *ἀ-* priv. + *δίσκος*, disk, + *-ota* (see *-ote*).] A group of dipterous insects. It was based by Weismann upon developmental characters, and includes those forms in which the parts of the fly's head are developed in close relation to those of the larva.

aditus (ad'i-tus), *n.*; pl. *aditus*. [NL., < L. *aditus*, approach: see *adit.*] An approach; an adit. Specifically: (*a*) In sponges, same as *prosodus*. (*b*) In *anat.*, an opening leading into a cavity.—**Aditus ad antrum,** the communication between the tympanum and the mastoid cells.—**Aditus ad infundibulum,** the opening between the infundibulum and the third ventricle of the brain.—**Aditus laryngis,** the superior opening of the larynx, or rima glottidis.

adj. An abbreviation of *Adjudged*, *Adjourned*.

adjectiv, *a.*, *n.*, and *v. t.* A simplified spelling of *adjective*.

Adjectival phrase, a phrase that is or may be used with the force of an adjective: as, a *much to be desired* result; a *never to be forgotten* occasion.

adjective, *n.*—**Participial adjective,** a participle used in an adjective relation, as in the phrases a *running* stream, a *cultivated* field, a *practised* hand, *molten* iron.—**Proper adjective,** an adjective derived from a proper name, as *American* from *America*, *Calvinistic* from *Calvin*, *Newtonian* from *Newton*.

adjectivism (ad'jek-tiv-izm), *n.* Tendency to an excessive use of adjectives. *G. S. Hall*, Adolescence, II. 467.

adjectivity (ad-jek-tiv'i-ti), *n.* [*adjective* + *-ity.*] Tendency to a free use of adjectives. *Athenæum*, April 14, 1894, p. 469.

Adjoint curve. Same as *adjunct* ★*curve*.

adjudicative (a-jö'di-kā-tiv), *a.* That adjudicates or adjudges; that embodies the award, decision, or decree in an adjudication or adjudgment: as, the *adjudicative* part of a sentence. [Rare.] *N. E. D.*

Adjunct curve. See ★*curve*.

adjunction, *n.* **4.** In *math.*, the process of obtaining the domain $\Omega(a)$ from the domain Ω by adding to it the number a which does not already belong to it, and adding also all numbers arising from a finite number of additions, subtractions, multiplications, and divisions involving a and all numbers in the domain Ω. See the extract.

By the *adjunction* of i to the domain of rational numbers $\Omega_{(1)}$ we obtain the domain of complex numbers $\Omega_{(1, i)}$. *F. Cajori*, Theory of Equations, p. 135.

adjurn, *v.* A simplified spelling of *adjourn*.

Adjusted drainage. See ★*drainage*.

adjuster, *n.* **2.** In *hardware*, any appliance used to regulate the movement of a blind, sash, hitching-strap, shaft, or other moving object in a wagon, house, etc.: as, a casement-*adjuster*, a pole-*adjuster*, a window-stop *adjuster*.—**3.** In *insurance*, an officer of an insurance company whose duty is to determine the amount to be paid under a policy of insurance when a partial loss has been sustained.

In Great Britain they are for the most part members of the Average *Adjusters'* Association, a body which has done and is doing much careful work with a view to making and keeping the practice uniform and in accord with right principles. *Encyc. Brit.*, XXVI. 32.

adjustment, *n.* **6.** In an exacter sense than 2, the operation of modifying the relations between a set of things or other objects so as to make these relations conform to some requirement, especially so as to bring them into conformity with relations between elements of a plan or purpose. Thus the adjustment of a transit instrument consists, first, in turning it round a vertical axis until its axis of rotation (in using it) is nearly enough in the plane of the prime vertical; second, in raising or lowering one end of the latter axis until it is nearly enough in the plane of the horizon; and, third, in shifting the wires until the collimation is near enough to zero. **7.** Specifically, the modification of a set of statements so as to bring them into harmony with one another and with some proposition treated as absolutely true. Thus in geodesy, after an extensive triangulation is complete it will be found that the observed values of the angles do not exactly agree with the principles of geometry and the assumed figure of the earth, which would give rise to much inconvenience. Accordingly by an elaborate series of modifications skilful computers modify the values so that the sum of the squares of all the changes shall be the least possible required to bring the values into agreement with the requirements; and this operation is termed the *adjustment of the triangulation*. Owing to the fact that the rules are derived from the calculus of probabilities, and that the adjusted values are the most probable that can be assigned, it might be supposed that the purpose was merely to ascertain the most probable values; but the superiority of the adjusted values in that respect is very small and the major consideration is consistency.

8. In *biol.*, a change which is brought about in a living being by its own activity and is not transmitted to descendants, as contrasted with a change which is congenital and hereditary; an acquired character. *J. M. Baldwin*, Development and Evolution, p. 142.—**Methods of adjustment,** in *psychophys.*, a group of methods employed for the determination of the relation between stimulus and sensation. The term is used in two senses: (*a*) for methods in which the observer himself varies a given stimulus until it appears equal to a second, constant stimulus, for example, Fechner's method of average error (see ★*method*); (*b*) for methods in which a variable stimulus is adjusted, whether by experimenter or observer, to the required relation to a constant stimulus, for example, Wundt's method of minimal changes (see ★*method*).—**Processes of adjustment,** in *physiog.*, changes in the courses of streams by means of which they come to sustain definite and stable relations to the rock-

structures beneath.—**Topographic adjustment.** See the extract.

> A tributary is in *topographic adjustment* when its gradient is harmonious with its main.
> *Chamberlin and Salisbury*, Geol., I. 154.

Adjutant's call, in *mil. music*, a signal on the drum directing the band to pass to the right of the line.

adlea (ăd-lā′ä), *n.* A billon coin of Tripoli, issued in 1827, plated with gold and forced into currency at the value of one dollar.

adlerglas (ăd′lêr-glȧs), *n.* [G., 'eagle-glass.'] A large drinking-glass having on it enameled paintings of the double-headed eagle of the Holy Roman Empire and armorial bearings of 56 principalities and towns: common in Germany in the seventeenth and eighteenth centuries. See ★*wiederkom.*

adlumidine (ad-lö′mi-din), *n.* [*Adlumia* (see def.) + *-ine*².] An alkaloid, $C_{39}H_{29}O_9N$, found in *Adlumia fungosa*. It melts at 234° C.

adlumine (ad-lö′min), *n.* [*Adlumia* + *-ine*².] A dextrorotatory alkaloid, $C_{39}H_{39}O_{12}N$, found in *Adlumia fungosa*.

A. D. M. An abbreviation of Latin *Artium Domesticarum Magister*, Master of the Domestic Arts.

Adm. An abbreviation of *admiral*.

admedial (ad-mē′di-ȧl), *a.* [*ad-* + *medial.*] Same as *admedian*.

admezure, *v. t.* A simplified spelling of *admeasure*.

administration, *n.*—**All-the-Talents Administration,** an ironical name given to the British ministry of 1806-07, in allusion to the distinguished ability of its members.—**Limited administration,** administration of a personal estate in which the powers of the administrator are granted for a special purpose and are strictly defined and confined to the matters set forth in special or limited letters of administration.

Administrative county. See ★*county*¹.

admiralty, *n.* **1.** (*b*) The members of this body are officially designated as the Commissioners for Executing the Office of Lord High Admiral of the United Kingdom of Great Britain and Ireland. The commissioners include *Civil Lords*, *Naval* or *Sea Lords*, and *Secretaries*. The *First Lord of the Admiralty* is a civilian and the responsible political head of the organization. Absolute power within the Admiralty, subject only to the King and Parliament, is vested in him. The *Sea Lords*, four in number, are naval officers, usually admirals. The *First Sea Lord* makes preparation for war and advises on all large questions of naval policy. He is responsible for the efficiency of the fleet and the distribution of ships. He controls the Intelligence, Hydrographical, and Naval Ordnance departments. The *Second Sea Lord* is responsible for all questions relating to the personnel of the navy, including manning of the fleet and appointment of officers. The *Third Sea Lord and Controller* has charge of the matériel of the fleet and has under him the *Director of Naval Construction* and the *Engineer-in-Chief*. He is also responsible for the administration of the Royal Dockyards. The *Fourth* or *Junior Sea Lord* deals with transport, coaling, victualing, and stores, and with questions relating to pay, medals, uniforms, prisons, collisions, etc. The *Civil Lord* deals with public works, the civil staff, etc. The *Parliamentary and Financial Secretary* has charge of finances, accounts, and expenditures. The *Permanent Secretary* signs in the name of the Admiralty, and has charge of the general secretariat, correspondence, etc.—**Admiralty coefficient.** See ★*coefficient*.

admission, *n.* 8. Specifically, in *engin.*: (*a*) Entrance of motor fluid (as steam, air, or water) into a cylinder for the purpose of driving a piston. (*b*) The portion of a full traverse of a piston during which the motor fluid is allowed to enter the cylinder. (*c*) The point in the traverse at which such entrance of motor fluid begins.

admission-line (ad-mish′ọn-līn). *n.* That line of an indicator-diagram which is made by the pencil of the indicator while steam is being admitted to the cylinder.

admission-port (ad-mish′ọn-pōrt), *n.* The steam-port or -passage through which the entering steam gains access to an engine-cylinder. In engines of ordinary construction, each port is alternately supply and exhaust, though it is usual to apply the latter term only to the port which exhausts directly into the atmosphere. (*Lockwood.*) In Corliss engines the admission- and exhaust-ports are separate.

admission-valve (ad-mish′on-valv), *n.* The valve which controls the admission of steam, gas, air, or water to a motor- or compression-cylinder.

admittance, *n.* 6. The reciprocal of the impedance in an alternating-current circuit or the ratio of alternating current divided by the electromotive force consumed by the current. See *impedance*. The components of admittance are the ★*conductance* and the ★*susceptance* (which see).

admotive (ad-mō′tiv), *a.* [*ad-* + *motive.*] Characterized by motion toward: as, *admotive* germination. *Syd. Soc. Lex.*

adnasal (ad-nā′zȧl), *n.* [L. *ad*, to, + *nasus*, nose: see *nasal.*] In *ichth.*, a name given by Geoffroy to the premaxillary bone.

adnatum (ad-nā′tum), *n.*; pl. *adnata* (-tä). [NL.: see *adnate.*] In *horticulture*, a small or secondary bulb which forms from the old bulb and eventually supplants it; a clove.

adnephrin (ad-nef′rin), *n.* Same as ★*adrenalin*.

adnexa (ad-nek′sä), *n. pl.* [L., neut. pl. of *adnexus*, pp. of *adnectere, annectere*: see *annex.*] Connected or associated things; specifically, in *anat.*, appendages or structures accessory to a main organ.—**Adnexa oculi,** the lids, muscles, and other parts in relation with the globe of the eye.—**Adnexa uteri,** the Fallopian tubes and ovaries.

adnexal (ad-nek′sal), *a.* Relating to adnexa, especially to the uterine adnexa.

adnominally (ad-nom′i-nal-i), *adv.* [*adnominal* + *-ly*².] As an adnoun or adjective: as, a verb used *adnominally*.

Adobe concrete, a building material prepared by mixing broken stone with adobe clay before it is dried or fired.—**Adobe mortar,** adobe mud prepared specially to serve as mortar in laying adobe brick.

adoccipital (ad-ok-sip′i-tal), *a.* Noting one of the fissures of the brain near the occipital in the caudal portion of the precuneus.

adolescence, *n.*—**Topographic adolescence,** in *phys. geog.*, a stage in the development of relief which is marked by well-established river-drainage.

adolescent, *a.* **2.** In *phys. geog.*, noting that stage of land-sculpture, between youth and maturity, in which some rapids still remain even in the larger streams.—**Adolescent river.** See ★*river*.

adolescential (ad-ō-le-sen′shal), *a.* Of or pertaining to the period of adolescence.

adon (a-don′), *n.* A device which consists essentially of a high-power telephoto combination so set as to transmit parallel rays. When used in front of an ordinary lens in a 'fixed-focus' camera it gives an enlarged image without disturbing the focal adjustment. The elements of the adon are, however, adjustable so that it can be used with varying effect when the camera permits of focusing. Used by itself it acts as a high-power telephotographic lens.

adonidin (a-don′i-din), *n.* [*Adonis* (*-id-*) (see def.) + *-in*².] A glucoside of uncertain composition obtained from *Adonis vernalis:* said to resemble digitalis in its physiological action.

adonin (ad′ō-nin), *n.* [*Adonis* (see def.) + *-in*².] A very bitter non-crystalline glucoside, $C_{24}H_{40}O_9$, found in *Adonis Amurensis*.

adonite (ad′ō-nīt), *n.* [*Adonis* (see def.) + *-ite*².] An optically inactive pentite, $C_5H_7(OH)_5$, found in *Adonis vernalis* and also formed by the reduction of ribose. It melts at 102° C.

adonitol (a-don′i-tōl), *n.* [As *adonite* + *-ol.*] Same as ★*adonite*.

adoperate (ad-op′e-rāt), *v. t.*; pret. and pp. *adoperated*, ppr. *adoperating*. [ML. *adoperari*, < L. *ad*, to, + *operari*, work: see *operate.*] To bring into use or operation; apply; use. *Sir J. Hayward*, Eromena, p. 88. *N. E. D.*

adoperation (ad-op-e-rā′shon), *n.* Application; use, as of means to an end. *Peacock*, Melincourt, II. 56. *N. E. D.*

adopter, *n.* **2.** An apparatus for the rapid leveling of a compass, consisting of a spindle, ball, and ball-socket.

adorbital (ad-ôr′bi-tal), *n.* [L. *ad*, to, + *orbita*, orbit: see *orbit.*] In *ichth.*, the preorbital bone.

Adoxaceæ (ad-ok-sā′sē-ē), *n. pl.* [NL. (Fritsch, 1891), < *Adoxa* + *-aceæ.*] A family of dicotyledonous, sympetalous plants of the order *Rubiales*. It contains only the genus *Adoxa*, and is characterized chiefly by the split or 2-parted stamens inserted on the tube of the corolla.

adoxaceous (ad-ok-sā′shius), *a.* [NL. *Adoxace-æ* + *-ous.*] In *bot.*, having the characters of or belonging to the family *Adoxaceæ*.

ad placitum (ad plas′i-tum). [ML., NL.] At pleasure: in *music*, noting a free part in a contrapuntal work which is not bound by the strict rules of imitation; especially, in a canon, noting a voice-part that does not follow the subject exactly.

adradial, *a.* **2.** Pertaining to an adradius: as, the *adradial* organs of an echinoderm.

adradius (ad-rā′di-us), *n.*; pl. *adradii* (-ī). [NL., < L. *ad*, to, + *radius*, ray.] One of the eight radii which lie between the perradii and the interradii in animals which exhibit radial symmetry. Compare *perradius* and *interradius*.

adrenal, *n.*—**Accessory adrenals.** See *Marchand's* ★*adrenals*.—**Marchand's adrenals,** islets of adrenal tissue found in other parts. Also called *accessory adrenals* and *adrenal rests*.

II. *a.* Situated near or in contact with the kidney; specifically, noting the adrenal or suprarenal glands.—**Adrenal extract,** a medicinal preparation made from the suprarenal glands and believed to be the internal secretion of these bodies. It increases blood-pressure and constricts the vessels, and is employed to arrest hemorrhage and to diminish mucous secretion. See ★*adrenalin*.—**Adrenal gland.** Same as *adrenal, n.*—**Adrenal rests.** See *Marchand's* ★*adrenals*.

adrenalin (ad-ren′a-lin), *n.* [*adrenal* + *-in*².] The active principle of the adrenal glands, first isolated by a Japanese chemist, Takamine. Its probable formula is $C_{10}H_{13}NO_3.\frac{1}{2}H_2O$. It is practically identical with Abel's epinephrin, and is a powerful heart-stimulant and hemostatic. See ★*adrenal extract*.

adrenalone (ad-ren′a-lōn), *n.* [*adrenal* + *-one.*] A ketone, $(HO)_2C_6H_3COCH_2NHCH_3$, prepared by the oxidation of a derivative of adrenalin.

Adrianist (ā′dri-an-ist), *n.* Same as *Adrianite*, 2.

Adriatic, *a.* **2.** In *anthrop.*, of or pertaining to the racial type represented by Albanians and Serbo-Croatians, characterized by tall stature, elongated face, and short head. *Deniker*, Races of Man, p. 285.

adsmith (ad′smith), *n.* One whose business is the writing of advertisements: as, the art of the *adsmith*. *W. D. Howells*, Lit. and Life, p. 265. [Humorous slang.]

adsmithing (ad′smith-ing), *n.* The trade of an 'adsmith.' [Humorous slang.]

adsorb (ad-sôrb′), *v. t.* [L. *ad*, to, + *sorbere*, suck in. Cf. *absorb.*] To gather (a gas or liquid) on the surface in a condensed layer. Thus solids, such as glass, gather gases and liquids with which they are in contact.

adsorption, *n.* **2.** The mechanical imbibition of fluids or gases.

adsorptive (ad-sôrp′tiv), *a.* [*adsorb* (*-sorp-*) + *-tive.* Cf. *absorptive.*] Capable of or characterized by adsorption.

adsternal (ad-stėr′nal), *a.* [L. *ad*, to, + *sternum*, sternum.] Situated near or in relation with the sternum.

a due (ä dö′e). [It.] By twos: in *music*, employed when two voices or instruments use the same staff, to indicate that the two are to proceed in unison: opposed to *divisi*.

adularescence (ad-ū-la-res′ens), *n.* [*adular*(*ia*) + *-escence.*] The chatoyancy of the adularia variety of feldspar; the moon-like sheen of the moonstone, best visible when the stone is cut with a convex dome.

adult, *n.* **2.** Specifically: (*a*) In *civil law*, a male infant who has attained the age of fourteen, or a female infant who has attained the age of twelve. (*b*) In *common law*, one of the full age of twenty-one. *Bouvier*, Law Dict.

adulterin, *a.* and *n.* A simplified spelling of *adulterine*.

adulterism (a-dul′tėr-izm), *n.* A name or word that has been corruptly altered. [Rare.] *N.E. D.*

adulthood (a-dult′hud), *n.* [*adult, a.*, + *-hood.*] The state of being adult or completely developed: as, in full vigor and *adulthood*. *Cowden Clarke*. *N. E. D.*

adumbra (ad-um′brä), *n.*; pl. *adumbræ* (-brē). The penumbra, in an eclipse of the moon.

adumbrella (ad-um-brel′ä), *n.* [NL., < L. *ad*, to, + *umbrella*, a little shade.] The upper surface of the velum in jelly-fishes: distinguished from *exumbrella*.

aduncirostrate (a-dun-si-ros′trāt), *a.* [L. *aduncus*, hooked, + *rostrum*, beak, + *-ate*¹.] Having a hooked beak, as birds of prey.

adurol (ad-ū′rol), *n.* A trade-name for two compounds used as photographic developers. *Adurol "Schering"* is bromhydroquinone, $C_6H_3Br(OH)_2$; *adurol "Hanff"* is chlorhydroquinone.

adv. An abbreviation of *advocate*.

advaita (ăd-vī′tä), *n.* [Skt. *advaita*, non-duality, unity, < *a-* priv. + *dvaitá*, duality, < *dri-*, two.] The pantheistic doctrine of the Vedanta school of Hindu philosophy, taught especially in Shankara's commentary on the upanishads. The doctrine is that *átman*, self, is *Brahman*, the Absolute.

advance, *n.* **13.** The angular interval in excess of 90° which the center-line of an engine-eccentric makes with the center-line of the engine-crank. It is given to enable a valve with lap, which will work the steam expansively, to begin admission of steam at or before the dead-point of the piston-traverse. See *angular advance of an eccentric*, under *angular*.

14. In *fencing*, a quick move of the right foot a few inches forward, followed instantly by

the left foot, but so that the fencer keeps his equilibrium and is ready for parry, or the forward lunge of the right foot.

advance-growth (ad-vans'grōth″), *n.* In *forestry*, young trees which spring up in accidental openings in the forest or under the forest cover, before reproduction cuttings are begun. See *volunteer* ★*growth*.

advancement, *n.* **6.** In *surg.*, an operation for strabismus, consisting in dividing the tendon of the healthy muscle, bringing the end forward, and fastening it to the eyeball forward of its former point of insertion.

advancing (ad-vän'sing), *n.* The act of taking or of giving an advanced position; advancement; promotion; furtherance. [Obsolete or rare.]

Advent Sunday, the first Sunday in Advent, or that nearest St. Andrew's day (Nov. 30).

adventitial (ad-ven-tish'al), *a.* Same as *adventitious*. *Jour. Exper. Med.*, VI. 69.

adventitious, *a.* **4.** In *phytogeog.*, naturalized from a distant formation: opposed to ★*vicine*. A term proposed by Pound and Clements. Compare *adventitious*, 2.

adventurism (ad-ven'tūr-izm), *n.* The ways, habits, and schemes of the adventurer or adventuress; the practices, pretenses, or experiences of those who live by their wits.

adventuresum, *a.* A simplified spelling of *adventuresome*.

adverb, *n.*—**Flat adverb,** a substantive or an adjective placed in an adverbial position (so called by *J. Earle*, Philol. Eng. Tongue, § 430): as, *forest* wild; to look *bad*; to walk *slow*; "with foreheads *villainous* low," *Shak.*, Tempest, iv. 1. 274. Some adverbs of this type are, however, reduced forms of Middle English or Anglo-Saxon adverbs with an adverbial suffix (*-e*), from the adjective with which they have later become identical in form. —**Flectional adverb,** an adverb formed of a case of a formerly inflected noun, as *mornings, evenings, needs, darkling, upward* (genitives), *whilom, seldom* (datives): as, he is usually at home *evenings*; "he must *needs* go through Samaria," John iv. 4; "the wakeful bird sings *darkling*," *Milton*, P. L., iii. 38, 39.—**Phrasal adverb,** an adverb consisting of a phrase or clause; an adverbial clause: as, *of course, of a truth, at random, in an instant, little by little*.—**Relative adverb,** an adverb which is derived from a relative pronoun, relates to an antecedent, and usually introduces an adverbial clause, as *when, where, whence*: as, at the place *where* the accident occurred; at a time *when* he was not expected.

adverbial, *a.*—**Adverbial clause,** in *gram.*, a clause or phrase which serves as an adverb: as, he met with an accident *on his way home*.

II. *n.* An adverbial word or clause, as *truly, exceedingly, of course, to-day, as soon as he arrives*.

adverbiation (ad-vėr-bi-ā'shon), *n.* [NL. **adverbiatio(n-)*, < L. *adverbium*, adverb.] An extended phrasal adverb. See the quotation.

> Room must be given to the term Adverb to let it take in all that appertains to the description of the condition and circumstances attendant upon the verbal predication of the sentence. . . . I would propose that for such extended phraseological adverbs we adopt the title of *Adverbiation*. *J. Earle*, Philol. Eng. Tongue, p. 431.

adverbism (ad'vėrb-izm), *n.* Tendency to an excessive use of adverbs. *G. S. Hall*, Adolescence, II. 467.

advertisemental (ad-vėr-tīz-men'tal), *a.* [*advertisement* + *-al*.] Relating or pertaining to advertising or to advertisement. [Rare.]

advisal (ad-vī'zal), *n.* [*advise* + *-al*.] Advice; counsel. *J. S. Blackie*, Æschylus, I. 197. [Rare.]

advize, *v.* A simplified spelling of *advise*.

advolution (ad-vō-lū'shon), *n.* [L. *ad*, to, + *volvere*, roll: formed on type of *evolution*.] An onward rolling or unfolding; progressive development; the theory of evolution considered with regard to its trend or ultimate developments. See the extract.

> Why should Evolution stop with the Organic? It is surely obvious that the complement of Evolution is *Advolution*, and the inquiry, Whence has all this system of things come, is, after all, of minor importance compared with the question, Whither does all this tend?
> *H. Drummond*, Nat. Law in Spiritual World, p. 401.

adynamandry (a-din-a-man'dri), *n.* [Gr. *ἀδύναμος*, without power, + *ἀνήρ* (*ἀνδρ-*), man (male).] In *bot.*, self-sterility; incapability of self-fertilization. *Delpino*.

adynamical (a-dī-nam'i-kal), *a.* Not dynamical.

> The properties of electric and magnetic force are explicable upon dynamical principles; so far there is no known necessity for seeking for *adynamical* properties in ether.
> *Jour. Inst. Electric Engineers* (Brit.), 1889–1900, p. 396.

adz-block (adz'blok), *n.* A solid oblong block of iron or steel, square in section, which carries the cutters or plane-irons of a wood-planing machine. *Lockwood*.

Adzuki bean. See ★*bean*[1].

Æacid (ē'a-sid), *n.* [L. *Æacides*, < Gr. *Αἰακίδης*, < *Αἰακος*, Æacus.] A son or descendant of Æacus (who was a son of Zeus and Ægina, and after death a judge in the lower world), especially: (*a*) Peleus; (*b*) Achilles; (*c*) Telamon; (*d*) Ajax.—**Æacid shield,** the shield of the Telamonian Ajax, which was represented on the coins of ancient Salamis in Greece. It assumed a peculiar form resembling types found in the Dipylon and Mycenæan periods.

Æacid Shield on Coins of Salamis. (From "Journal of Hellenic Studies," by permission of the Council.)

aeae (ä-ā-ä'ā), *n.* [Hawaiian = Maori *akeake*, the name of a small tree (see ★*ake*).] A name in Hawaii of *Lycium Sandwicense*, an erect shrub from two to three feet high, with stiff, smooth branches. It grows along the sea-coast, and bears a red berry which is edible but not very palatable. Also called *ohelo-kai*.

æcial (ē'shial), *a.* [< Gr. *αἰκία*, an injurious effect.] Same as *æcidial*. *J. C. Arthur*.

Æcidial form, stage. Same as *æcidiostage*.

æciospore (ē'si-ō-spōr), *n.* [Gr. *αἰκία*, an injurious effect, + *σπορά*, a spore.] Same as *æcidiospore*. *J. C. Arthur*.

æcium (ē'shium), *n.* [NL., < Gr. *αἰκία*, an injurious effect.] A term proposed by J. C. Arthur for the æcidial stage of the rust fungi, *Uredinales*. Same as *æcidiostage*.

Aëdes (ā-ē'dēz), *n.* [NL. (Meigen, 1818), < Gr. *ἀηδής*, unpleasant, odious, < *ἀ-* priv. + *ἡδύς*, pleasant.] A genus of small mosquitos of the dipterous family *Culicidæ*. They have the palpi in both sexes less than half as long as the proboscis (2-jointed in the male and 4-jointed in the female), and have no bluish scales on the upper side of the thorax and no bristles below the scutellum. Several species are known. *Aëdes fuscus* inhabits the northern United States.

ægagropila, *n.* **2.** [*cap.*] *pl.* Marine algæ which form more or less spherical masses and are freely driven from place to place.

ægagropilous (ē-ga-grop'i-lus), *a.* [Gr. *αἰγαγρος*, the wild goat, + L. *pila*, a ball, + *-ous*.] Noting the dense tufted condition assumed by certain algæ, particularly the cladophoras. *Athenæum*, IV. 363.

ægialosaur (ē-ji-al'ō-sâr), *n.* A reptile of the genus *Ægialosaurus*.

ægicrania (ē-ji-krā'ni-ą), *n. pl.* [NL., < Gr. *αἰξ* (*αἰγ-*), goat, + *κρανίον*, skull.] In *Rom. antiq.*, the heads of goats or rams used in the sculptured decoration of altars: suggested by the custom of hanging up the heads of victims.

Ægicrania.—Altar in the Vatican, Rome.

Æginidæ, *n. pl.* **2.** A family of *Narcomedusæ*, having a circular canal communicating with the stomach by double peronial canals, with internemal gastral pouches, and without otoporpæ. It contains the genera *Ægina*, *Ægineta*, *Æginopsis*, and others.

Æglina (ē-glī'nä), *n.* [NL., < Gr. *Αἴγλη*, a nymph, + *-ina*[1].] A genus of asaphid trilobites. They are remarkable for their immense compound eyes, which give them a strikingly larval aspect: found in the Lower Silurian of Europe.

Ægocera (ē-gos'e-rä), *n.* [NL. (Latreille, 1809), < *αἰξ* (*αἰγ-*), goat, + *κέρας*, horn.] An interesting genus of East Indian moths of the family *Agaristidæ*. The male of *A. tripartita* makes a peculiar clicking noise while flying; it is produced by a special structure on the front wing, which is rubbed against the spines of the front feet.

Ægoceratidæ (ē-gō-se-rat'i-dē), *n. pl.* [NL., < ★*Ægoceras*, < Gr. *αἰξ* (*αἰγός*), goat, + *κέρας* (*κέρατος*), horn, + *-idæ*.] A family of ammonoid cephalopods or ammonites. They have smooth, discoidal shells with broad umbilicus and highly specialized complicated septal sutures. The species occur in the Triassic formation.

Ælurodon (ē-lū'rō-don), *n.* [Gr. *αἴλουρος*, a cat or a weasel, + *ὀδούς* (*-οντος*), a tooth.] A genus of *Canidæ* of the North American Miocene, with affiliations with the bears.

ælurophobia (ē-lū-rō-fō'bi-ą), *n.* [Gr. *αἴλουρος*, cat, + *-φοβία*, < *φοβεῖν*, fear.] A morbid dislike or fear of cats.

aëneofuscous (ā-ē″nē-ō-fus'kus), *a.* [L. *aëneus*, of brass, + *fuscus*, fuscous.] In *entom.*, of the color of dirty brass.

aëneolithic (ā-ē″nē-ō-lith'ik), *a.* [L. *aëneus*, brazen, + Gr. *λίθος*, stone.] Pertaining to the period in which both metal and stone implements were used: a term introduced by Italian archæologists.

aëneous (ą-ē'nē-us), *a.* [L. *aëneus*, of brass.] In *entom.*, having brassy or metallic reflections.

ænigmatite (ē-nig'ma-tīt), *n.* [Cf. *enigma*.] A rare triclinic member of the amphibole group. It occurs in black prismatic crystals in the sodalite-syenite of southern Greenland and similarly elsewhere. It is a titano-silicate of ferrous iron and sodium.

Æolian, *n.* **2.** Same as *Æolic*.

Æolic digamma, the digamma (which see).

æolidoid (ē-ol'i-doid), *a.* [*æolid* + *-oid*.] Having the form or characters of the *Æolididæ*.

æolina, *n.* **2.** An organ-stop of a thin, delicate tone.

æolipile, *n.* **2.** A form of blast-lamp for use in chemical laboratories, in which an alcohol flame is deflected by a stream of alcohol vapor escaping from a jet, this vapor being produced from liquid alcohol in a little boiler over the original flame.

æolodicon (ē-ō-lod'i-kon), *n.* [Gr. *Αἰολος*, Æolus, + *ᾠδή*, song, + *-icon*, as in *harmonicon*.] A musical instrument, played from a keyboard, the tone of which was produced in one variety by the blows of hammers upon steel springs, and in another from free reeds, as in the harmonium. Neither form attained artistic importance.

æolodion (ē-ō-lō'di-on), *n.* [Gr. *Αἰολος*, Æolus, + Gr. *ᾠδή*, song, + *-ion*, as in *melodion*.] Same as ★*æolodicon*.

æolomelodicon (ē″ō-lō-me-lod'i-kon), *n.* [Gr. *Αἰολος*, Æolus, + *μελῳδός*, musical (see *melodion*), + *-icon*, as in *harmonicon*.] A musical instrument of the pipe-organ class, invented by Hoffmann of Warsaw about 1825. Its chief peculiarity was that metal tubes were placed in front of the mouths of the pipes, to impart to them special qualities imitating various instruments and to strengthen the tone. The use of these resonators was under the control of the player. Also called *choraleon*.

æolopantalon (ē″ō-lō-pan'ta-lon), *n.* [Gr. *Αἰολος*, Æolus; second element uncertain.] An æolomelodicon having a pianoforte attachment which could be used with or without the organ tones.

æolophon (ē'ō-lo-fōn), *n.* [Appar. G., < *Æolus* + Gr. *-φωνος*, < *φωνή*, sound.] A form of seraphine.

æolotropism (ē-ō-lot'rō-pizm), *n.* The state or condition of æolotropy.

æonial, *a.* See ★*eonial*.

æonologe (ē'on-ō-lōj), *n.* [Gr. *αἰών*, an age, + *-λόγιον*, < *λέγειν*, tell: formed on type of *horologe*.] An imagined clock that measures time by eons or ages. See the quotation. [Rare.]

> The horologe of earth . . . is no measure for the *æonologe* of heaven.
> *F. W. Farrar*, Early Days of Christianity, p. 511.

æqualis (ē-kwā'lis), *n.* [L., equal.] In *gram.*, the case which expresses similarity (like, similar to). Also called *similative*. *Barnum*, Essen. of Innuit, p. 17.

Æquidens (ē'kwi-denz), *n.* [NL., < L. *æquus*, equal, + *dens*, tooth.] A genus or subgenus of South American *Cichlidæ*: they resemble the sunfishes of the north.

aërage (ā'ė-rāj), *n.* [F. *aérage*, < L. *aer*, < Gr. *ἀήρ*, air.] Airing; ventilation.

aërate, *v. t.*—**Aërating plants**, epiphytes.—**Aërating roots**, roots which rise out of the water or mud, provided with a loose corky tissue with large cellular interspaces adapted to aëration, as the "knees" of the bald cypress.

aërenchyma (ā-ē-reng'ki-mä), *n.* [NL., < Gr. *ἀήρ*, air, + *ἔγχυμα*, infusion.] A tissue consisting of thin-walled cells with large, intercellular spaces, adapted to aëration. It occurs in the stems of certain marsh plants. *Schenk.*

aërialist (ā-ē'ri-al-ist), *n.* [*aërial* + *-ist.*] An aërial navigator; one skilled in aëronautics. [Rare.]

aërobia, *n. pl.*—**Facultative aërobia**, bacteria, normally anaërobic, which have acquired the capacity of living and growing in the presence of oxygen.

aërobic (ā-ē-rō'bik), *a.* Same as *aërobian.*—**Facultatively aërobic**, having the ability to live either in the absence or in the presence of oxygen.

aërobiont (ā-ē-rō-bī'ont), *n.* Same as *aërobe.*

aërobioscope (ā″ē-rō-bī'ō-skōp), *n.* An apparatus for collecting bacteria from the air.

aërobium (ā-ē-rō'bi-um), *n.* Singular of *aërobia* (which see).

aëro-club (ā'ē-rō-klub″), *n.* [Gr. *ἀήρ*, air, + E. *club.*] A club or association devoted to the promotion and practice of aëronautics or aviation.

aërocondenser (ā″ē-rō-kon-den'sėr), *n.* [Gr. *ἀήρ*, air, + E. *condenser.*] A form of surface-condenser for changing the vapor of water, or any other vapor, back into a liquid by the withdrawal of heat by means of a rapid circulation of air. It is much used as a means of cooling and condensing in motor-vehicles. The vapor to be condensed is contained in a chamber through which pass a great number of tubes, the air being made to move at speed through the latter.

aëroconiscope (ā″ē-rō-kon'i-skōp), *n.* [Gr. *ἀήρ*, air, + *κόνις*, dust, + *σκοπεῖν*, view.] An apparatus for collecting dust for examination.

aëro-craft (ā'ē-rō-kraft), *n.* See ★*air-craft.*

aërocurve (ā'ē-rō-kėrv), *n.* [Gr. *ἀήρ*, air, + L. *curvus*, curve.] A curved surface intended for the support, in the air, of a gliding- or a flying-machine. See ★*aëroplane*, 1.

One of the most difficult questions connected with the problem of aërial navigation is the longitudinal stability of a machine supported on aëro-planes and *aëro-curves.*
Rep. Brit. Ass. Advancement of Sci., 1902, p. 524.

aërodrome (ā'ē-rō-drōm), *n.* [Gr. *ἀήρ*, air, + *-δρομος*, < *δραμεῖν*, run.] 1. A flying-machine supported by aëroplanes and having a motor and a rudder for navigating the air; specifically, a machine of this kind invented and named by S. P. Langley.—2. A course for testing or practising with aëroplanes or other flying-machines.—3. A ★hangar (which see).

aërodromic (ā″ē-rō-drom'ik), *a.* [*aërodrome* + *-ic.*] Of or pertaining to aërodromes or flying-machines. *A. G. Bell*, in Smithsonian Rep., 1896, p. 6.

aërodromics (ā″ē-rō-drom'iks), *n.* [As *aërodrome* + *-ic.*] The art of navigating the atmosphere by means of engines and balloons, but especially by means of aëroplanes or aërocurves driven by machinery. *S. P. Langley.*

aërodyne (ā'ē-rō-dīn), *n.* [Gr. *ἀήρ*, air, + *δύναμις*, power.] See the extract.

I use the word "*aërodyne*" in preference to "flying-machine," to denote an aëroplane-supported machine, driven by mechanical power through the air.
W. R. Turnbull, in Phys. Rev., March, 1907, p. 286.

aërofoil (ā'ē-rō-foil), *n.* [Gr. *ἀήρ*, air, + E. *foil*[1] ?] An aëroplane (the lifting surface). *R. W. A. Brewer*, The Art of Aviation, p. 224.

aërogram (ā'ē-rō-gram), *n.* [Gr. *ἀήρ*, air, + *γράμμα*, a writing.] A message transmitted through the air, especially one transmitted by wireless telegraphy. *L. de Forest*, in N. Y. Com. Advertiser, Jan. 31, 1903.

aërograph (ā'ē-rō-grȧf), *v.* [Gr. *ἀήρ*, air, + *γράφειν*, write.] **I.** *trans.* To transmit or send through the air by wireless telegraphy: as, to *aërograph* the state of the money-market to London or Paris. *N. Y. Com. Advertiser*, Jan. 31, 1903.

II. *intrans.* To communicate by means of wireless telegraphy; use wireless telegraphy.

aërohydropathy (ā″ē-rō-hī-drop'ȧ-thi), *n.* [Gr. *ἀήρ*, air, + E. *hydropathy.*] Combined water- and air-cure.

aërohypsometer (ā″ē-rō-hip-som'e-tėr), *n.* [Gr. *ἀήρ*, air, + E. *hypsometer.*] A simple form of air-barometer devised by G. Govi of Turin in 1867 for measuring small differences of altitude by measuring the expansion under varying pressures of a short column of air whose temperature is constant or is known. Also *aërypsometer.*

aëroides (ā-ē-roi'dēz), *n.* A pale sky-blue variety of beryl.

aëroklinoscope, aërokoniscope, *n.* See *aëroclinoscope*, ★*aëroconiscope.*

aëromechanics (ā″ē-rō-mē-kan'iks), *n.* [Gr. *ἀήρ*, air, + E. *mechanics.*] The mechanics of the atmosphere or, in general, of gases; the science of the action of forces on gases; pneumatics.

aëromotor (ā'ē-rō-mō″tor), *n.* [L. *aer*, air, + *motor*, motor.] 1. A light motor suitable for use in airships and aëroplanes.—2. A form of windmill using metallic vanes or sails.

aëronat (ā'ē-rō-nat), *n.* [*aëro-* + L. *nat(are)*, swim, float.] See the extract.

Aëronat is a dirigible, motor-driven balloon, or air-ship.
Sci. Amer. Sup., Feb. 20, 1909.

aëronef (ā'ē-rō-nef), *n.* [F. **aéronef*, < L. *aer*, air, + F. *nef*, < L. *navis*, ship.] An airship; specifically, one heavier than air.

aërophagia (ā″ē-rō-fā'ji-ȧ), *n.* [NL., < Gr. *ἀήρ*, air, + *-φαγία*, < *φαγεῖν*, eat.] The swallowing of air sometimes observed in hysteria.

aërophilous (ā-ē-rof'i-lus), *a.* [Gr. *ἀήρ*, air, + *φίλος*, loving.] Air-loving: applied to bacteria and other organisms which require air for their development. See *aërobian.*

aërophobic (ā″ē-rō-fō'bik), *a.* Of or pertaining to aërophobia; afraid of air; having a morbid dread of currents of air.

aërophone, *n.* 2. An instrument having the functions of both an ear-trumpet and a speaking-trumpet.

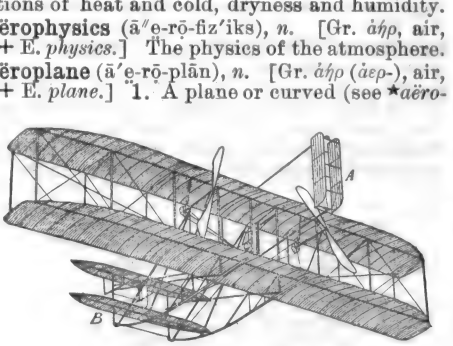
aërophore, *n.* 2. An instrument for filling with air the lungs of a still-born child.—3. In textile spinning-rooms, a device used to diffuse moisture throughout the air. An excess of moisture is required both to make shrinkage-effect uniform and to counteract the electrifying action of the rapidly moving belts and other elements of the machines.

aërophorus (ā-ē-rof'ō-rus), *a.* [Gr. *ἀήρ*, air, + *-φορος*, < *φέρειν*, bear.] Containing or conveying air: same as *aëriferous.*

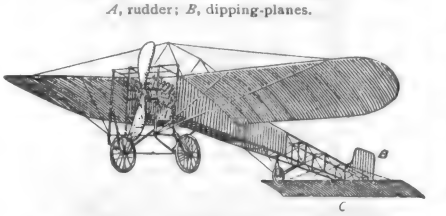
aërophysical (ā″ē-rō-fiz'i-kal), *a.* [Gr. *ἀήρ*, air, + *φυσικός*, physical.] Of or pertaining to aërophysics or the physics of the atmosphere; specifically, relating to the atmospheric conditions of heat and cold, dryness and humidity.

aërophysics (ā″ē-rō-fiz'iks), *n.* [Gr. *ἀήρ*, air, + E. *physics.*] The physics of the atmosphere.

aëroplane (ā'ē-rō-plān), *n.* [Gr. *ἀήρ* (*ἀερ-*), air, + E. *plane.*] 1. A plane or curved (see ★*aëro-curve*) surface, used to sustain a flying-machine or a gliding-machine in the air, or in aërodynamical experiments. As the machine moves through the air, the aëroplane (commonly a light framework covered with a fabric), set at a small angle above the horizontal, tends to support it by its lifting-power. Flying-machines in which aëroplanes are so used are also called 'aëroplanes' (see def. 2): those in which support in the air has been sought by the movement ('flapping') of such surfaces in imitation of the action of the wings of birds are called 'ornithopters.'



Wright Brothers' Aëroplane (biplane).
A, rudder; *B*, dipping-planes.



Bleriot's Aëroplane (monoplane).
A, engine; *B*, rudder; *C*, dipping-plane.

2. A flying-machine driven by an engine and supported by the pressure of the air upon the under side of plane or curved surfaces known as 'aëroplanes' or 'aërocurves.' (See def. 1.) Various attempts to attain flight, in "heavier-than-air" machines, by means of the lifting-power of aëroplanes (surfaces) were made during the second half of the nineteenth century. Models of flying-machines of this type, more or less successful, were constructed by Stringfellow in 1847 and 1868 and by Moy in 1874 and Tatin in 1879. But the most important advances toward the solution of the problem were made in the aërodynamical investigations of S. P. Langley and Sir Hiram Maxim, and in the experiments of O. Lilienthal, O. Chanute, and others with gliding-machines. Langley perfected a model of an aëroplane (his "aërodrome") propelled by a steam-engine (burning naphtha), which in November, 1896, flew about three quarters of a mile. Experiments with gliding-machines were begun by Orville and Wilbur Wright in 1900, and on December 17, 1903, an aëroplane constructed by them and propelled by a gasolene motor rose from the ground and made a flight of 260 meters in 59 seconds—the first instance of successful mechanical flight by man. From that time the development of the aeroplane by the Wrights and others (Voisin, Farman, Curtiss, Bleriot, Latham, etc.) has been rapid and extraordinary results have been attained. The machines in successful use are of two general types: **'biplanes'** (Wright, Curtiss, Voisin, Farman, etc.) having two aëroplanes (surfaces) placed one above the other, and **'monoplanes'** (Antoinette, Bleriot, etc.) having one aëroplane (surface) or two laterally disposed. On Dec. 31, 1903, Wilbur Wright made, in France, a flight of 2 hours and 20 minutes, a period surpassed on August 7, 1909, by Sommer (2 hrs. 27¼ min.) and on Aug. 27, 1909, at Rheims, by Farman (3 hrs. 4 min. 56⅘ sec.; 111.848 miles; his flight was continued (unofficially) for about seven miles more). On July 27, 1909, Orville Wright, at Fort Myer, made a cross-country flight of ten miles, with a passenger, at the rate of over 42 miles an hour. A record for speed was made by Curtiss, in a biplane, at Rheims on August 28, 1909, when he made 12.42 miles in 15 min. 50⅘ sec. On July 25, 1909, Bleriot crossed the English Channel from Calais to Dover in a monoplane, in about 40 minutes. G. Legagneux, in France, Sept. 17, 1912, attained a height of 5,450 meters (17,880+ ft.). On Dec. 24, 1911, at Pau, France, Armand Gobé flew 740 kilometers (459.81 miles) in 8h. 16m.

aëroplanist (ā'ē-rō-plān″ist), *n.* One who operates an aëroplane.

aëropleustic (ā″ē-rō-plös'tik), *a.* [Gr. *ἀήρ*, air, + *πλευστικός*, adj., < *πλεῖν*, sail.] Of or pertaining to aërial navigation. *N. E. D.* [Rare.]

aërorthometer (ā″ēr-ôr-thom'e-tėr), *n.* [Gr. *ἀήρ*, air, + *ὀρθός*, straight, + *μέτρον*, measure.] An instrument in which an air-thermometer and a barometer are combined.

aërosphere, *n.* 2. The spherical mass of any gas surrounding a molecule or atom and temporarily constituting a unit with it.

aërostat, *n.* 3. In *entom.*, a tracheal dilatation forming an air-sac, as in the abdomen of the honey-bee and certain other insects.

aërotaxis (ā″ē-rō-tak'sis), *n.* [Gr. *ἀήρ*, air, + *τάξις*, disposition, order.] The movement of cells or organisms in relation to a source or supply of air.

aërotechnics (ā″ē-rō-tek'niks), *n.* [Gr. *ἀήρ*, air, + E. *technics.*] The art of aviation. *Nature*, May 26, 1910, p. 397.

aërotherapy (ā″ē-rō-ther'ȧ-pi), *n.* Same as *aërotherapeutics.*

aërotropism, *n.* 2. In general, the bending or growth of organisms in relation to a source or supply of air.

aërypsometer, *n.* Same as ★*aërohypsometer.*

æschrolalia (es″krō-lā'li-ȧ), *n.* [NL., < *αἰσχρός*, shameful, + *λαλία*, < *λαλεῖν*, talk.] Indecency of speech in the insane.

Æsculaceæ (es-kū-lā'sē-ē), *n. pl.* [NL. (Lindley, 1841), < *Æsculus* + *-aceæ.*] A family of dicotyledonous choripetalous plants of the order *Sapindales*, typified by the genus *Æsculus.* See *Hippocastanaceæ.*

æsculetic, *a.* See ★*esculetic.*

æsculotannic, *a.* See ★*esculotannic.*

Æsopic (ē-sō'pik), *a.* [L. *Æsopicus*, < Gr. *Αἰσωπικός*, < *Αἴσωπος*, Æsop.] Same as *Æsopian.* *Jour. Hel. Studies*, XIII. 300.

æsthacyte, *n.* See *esthacyte.*

æsthesia, *n.* 2. In *bot.*, the capacity of an organ to respond to physical stimuli. *Czapek.*

æsthesin (es-thē'sin), *n.* [Gr. *αἰσθησις*, feeling, + *-in*[2].] A compound, $C_{35}H_{69}O_3N$, formed by the hydrolysis of phrenosin.

æsthesiomania, *n.* See ★*esthesiomania.*

æsthetal (es-thē'tal), *a.* [Gr. *αἰσθητός*, perceptible (see *esthete, esthetic*), + *-al*[1].] Sensory.

I propose to call the sensory cells, or sense-centres, *aesthetal* cells. *Haeckel* (trans.), Wonders of Life, p. 14.

æstivo-autumnal, *a.* See ★*estivo-autumnal.*

æthochroi (ē-thok'rō-ī), *n. pl.* [NL., < Gr. *αἰθός*, burnt (see *Ethiop*), + *χρόα*, color.] Races of black color; the negroes of Africa, the Melanesians, Papuans, and Australians. Also *ethochroi.*

æthokirrin (ē-thō-kir'in), *n.* [Gr. *αἰθος*, fire (see *ether*), + *κιρρός*, tawny, yellow.] The yellow coloring matter of *Linaria Linaria*, the common toad-flax.

ætiatic (ē-ti-at'ik), *a.* [Also *aitiatic*, < Gr. *αἰτιατικός*, < *αἰτία*, cause: see *ætiology* and *accusative.*] Causal, as when a quality is supposed to exist in an object which is suggested by its name; accusative.

As to the whiteness of the dog, it will be noticed that this is only insisted upon in the passage of Hesychius, and is evidently due to an *aitiatic* exposition of the termination.

Cecil Smith, Jour. Hellenic Studies, XIII. 117.

Ætiological myth, a myth accounting for the origin of a phenomenon.

Aëtobatinæ (ā″e-tō-bat'i-nē), *n. pl.* [*Aëtobatus* + *-inæ.*] A subfamily of sting-rays typified by the genus *Aëtobatus.*

Aëtobatis (ā-e-tob'a-tis), *n.* [NL., < Gr. *ἀετός*, eagle, + *βατίς*, a ray (fish).] A later variant of ★*Aëtobatus.*

Aëtobatus (ā-e-tob'a-tus), *n.* [NL., < Gr. *ἀετός*, eagle, + *βάτος*, a ray (fish).] A genus of sting-rays of the family *Myliobatidæ. A. narinari* is the common species and is widely diffused. It is brown, with many large yellow spots.

aëtosaur (ā'e-tō-sâr), *n.* A reptile belonging to the genus *Aëtosaurus.*

aëtosaurian (ā″e-tō-sâ'ri-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of *Aëtosaurus.*

II. *n.* Same as ★*aëtosaur.*

afaint (a-fānt'), *adv.* [a^3 + *faint.*] In a fainting state or on the point of fainting.

affect[2], *n.* **3.** In *psychol.*: (*a*) The felt or affective component of a motive to action; the incentive, as opposed to the inducement, to act. See the extract.

Affects . . . are the feeling antecedents of involuntary movements; as motives, including *affects* [and ends], are the inner antecedents of acts of will.

J. M. Baldwin, Handbook of Psychol., II. 314.

(*b*) Emotion.—**4.** In Spinoza's philosophy, a modification at once of the psychic and the physical condition, the former element being called an *idea* and the latter an *affection.*

affection, *n.* **10.** In *recent psychol.*, the elementary feeling-process; the pure or qualitatively simple feeling, in which there is no admixture of sensation. See the extract.

They [the mental elements] are very numerous: . . . but they may all be grouped into two great classes, as sensations and *affections.*

E. B. Titchener, Primer of Psychol., p. 21.

11. In *trigon.*, relation to $\frac{\pi}{2}$. In right-angled spherical triangles, angle A and side *a* are either both greater or both less than $\frac{\pi}{2}$. This is expressed by saying that A and *a* are of the same *affection.*

12. In *law*, the making over, pawning, or mortgaging of a thing to assure the payment of a sum of money or the discharge of some other duty or service. *Bouvier*, Law Dict.

affective, *a.* **3.** In *psychol.*, relating to, characterized by, or consisting of affection: as, the *affective* side of the mental life; *affective* experience.—**Affective curve**, in *psychol.*, a graphic expression of the correlation of some attribute (intensity, quality) of affection with some attribute of stimulus or sensation. *E. B. Titchener*, Exper. Psychol., I. i. 106.—**Affective memory**, the revival, in affective terms, of past affective experience. *Ribot*, Psychol. of Emotions, p. 153.—**Affective process**, in *psychol.*: (*a*) An affection. (*b*) A mental complex of which affection is characteristic or in which it is dominant.—**Affective tone**, in *psychol.*, affection considered with reference to the sensory or intellectual processes which it accompanies; sometimes, affection considered as an attribute of sensation.

affectivity (a-fek-tiv'i-ti), *n.* [*affective* + *-ity.*] The mental faculty concerned in the emotions, affections, and sentiments; the affective power of the mind.

The frequency of delusions in their multiform characters of degenerative characteristics, of the loss of *affectivity*, of heredity, more particularly in the children of inebriate, imbecile, idiotic, or epileptic parents, and above all, the peculiar character of inspiration, show that genius is a degenerative psychosis of the epileptoid group. *C. Lombroso* (trans.), Man of Genius, p. 359.

affectomotor (a-fek″tō-mō'tor), *a.* In *psychol.*, combining emotional disturbance with muscular activity: for example, the joyousness and unusual activity of the phase of exaltation in circular insanity constitute an *affectomotor* state.

affiliate (a-fil'i-āt), *a.* and *n.* **I.** *a.* Occupying the position of or recognized as an adopted son; affiliated. *Browning*, Ring and Book, x. 392.

II. *n.* An affiliated person or institution, etc. *Tourgée*, Fool's Errand, p. 126. *N.E.D.*

affinity, *n.* **9.** In *projective geom.*, a perspective of which the center is at an infinite distance. *Möbius.*—**Affinity constants**, in *phys. chem.*, numerical constants by means of which the relative strength of acids or of bases can be expressed, or with which the partition of a base between two acids or of an acid between two bases can be computed.—**Clang affinity** or **relationship.** See ★*clang.*—**Predisposing affinity**, in *early chem.*, a term employed to signify the cause of a chemical change produced by a substance having an affinity or attraction, not for a second substance itself, but for something producible as a result of the change. Thus, using the language of the time, it was said that soda, by its affinity for phosphoric acid, enables phosphorus to decompose carbonic acid (which without the soda it would not do) and form phosphoric acid. This idea has long been discarded.

Affirmance day general, in the English Court of Exchequer, a day appointed by the judges of the common pleas and barons of the exchequer, to be held a few days after the beginning of every term, for the general affirmance or reversal of judgments. *Bouvier*, Law Dict.

Affirmative pregnant. See ★*pregnant.*

affix, *n.* **4.** In *math.*, the complex number $x + iy$ is denoted by a single letter, z; the point P, (x, y), is then called the *affix* of the value z; the number z is also spoken of as the *affix* of the point P.

affixment (a-fiks'ment), *n.* [*affix* + *-ment.*] Same as *attachment.*

affixt, *pp.* A simplified spelling of *affixed.*

afflictionless (a-flik'shon-les), *a.* [*affliction* + *-less.*] Free from affliction or trouble. *T. Hardy*, Far from the Madding Crowd. *N. E. D.*

affrettando (ä-fret-tän'dō), *a.* [It., 'hurrying,' ppr. of *affrettare*, hurry.] In *music*, hastening the pace: virtually the same as *accelerando* or *stringendo.*

affrettato (ä-fret-tä'tō), *a.* [It., 'hurried.'] Same as ★*affrettando.*

affrettoso (ä-fret-tō'sō), *a.* [It., 'with hurry.'] Same as ★*affrettando.*

affricate (af'ri-kāt), *n.* [= G. *affrikata*, < NL. ★*affricata*, < L. *ad*, to, + *fricare*, rub: see *fricative.*] In *phonology*, an intimate combination of a stop with a spirant or fricative of the same position, as German *pf* (originally *p*) in *pfennig, pfeffer*, etc., or German *z* or *tz* (originally *t*) in *zinn*, tin, *katze*, cat, etc.

affricate (af'ri-kāt), *v. t.*; pret. and pp. *affricated*, ppr. *affricating.* [*affricate, a.*] In *phonology*, to utter as an affricate. *Scripture*, Exper. Phonetics, p. 307.

affricative (a-frik'a-tiv), *n.* Same as *affricate. Sayce*, Introd. Sci. Lang., I. 270.

affrightfully (a-frīt'fůl-i), *adv.* [*affrightful* + *-ly.*] In a manner to affrighten, terrify, or alarm; terrifyingly: as, to dream *affrightfully.* [Rare.]

affrunt, *v. t.* and *n.* A simplified spelling of *affront.*

afikomen (af-i-kō'men), *n.* [Heb., prob. < Gr. *ἐπίκωμον*, understood as 'an after-meal dessert or pastime,' neuter of *ἐπίκωμος*, of or for a festival, < *ἐπί*, for, + *κῶμος*, a festival: see *Comus.* Others refer it to Gr. *ἐπικόμιον*, a festal song.] A piece broken off from the middle one of the three thin cakes of unleavened bread, called respectively 'Cohen,' 'Levi,' and 'Israel' (thus representing the whole Jewish nation), used by the Jews at the seder service on Passover eve. It is broken off at the beginning of the service, and hidden by the head of the family, who presides at the seder table, until the conclusion of the meal. After the two whole cakes and the unhidden part of the broken cake have been partaken of, with all the proper ceremonies, the afikomen is eaten. See ★*seder.*

a fiori (ä fi-ō'ri). [It.] With flowers: said of a style of pottery decoration which consists of intertwined flowers and birds, characteristic of certain Italian majolica.

aflicker (a-flik'ėr), *adv.* [a^3 + *flicker.*] In a flickering state or condition; flickering. *Browning*, Aristoph. Apol., p. 225.

aflower (a-flou'ėr), *adv.* [a^3 + *flower.*] In flower; abloom; flowering. *Swinburne*, Erechtheus, l. 1147. *N. E. D.*

aflush[1] (a-flush'), *adv.* [a^3 + *flush*[1].] In a flushed or blushing state; aglow; ablush.

aflush[2] (a-flush'), *adv.* [a^3 + *flush*[7].] On a level; in the same plane: as, *aflush* with the sea. *Swinburne*, Studies in Song, p. 169. *N.E.D.*

aflutter (a-flut'ėr), *adv.* [a^3 + *flutter.*] In a flutter or commotion; agitated; fluttering. *Browning*, Men and Women, ii. 147.

a foglie (ä fōl'ye). [It.] With leaves: said of a style of decorative treatment in which leaves of trees form the principal motive, seen frequently on the majolica of Genoa, Venice, and other Italian pottery-centers.—**A foglie da dozzina.** [It., 'with leaves of the dozen,' that is, 'in ordinary or common style.'] Said of a coarse style of decoration found on certain inferior majolica wares (particularly those of Venice), consisting of painted foliage.

A-frame (ā'frām), *n.* The A-shaped support for the cylinder-beam and cross-head guides of a vertical engine; the housing.

African breadfruit. See ★*breadfruit.*—**African Coast fever, African fever.** See ★*fever*[1].—**African green.** See ★*green*[1].

Africanistics (af″ri-kan-is'tiks), *n.* That department of philology concerned with the study of the languages of Africa.

Africanoid (af'ri-kan-oid), *a.* [*African* + *-oid.*] In *anthrop.*, resembling African types of man. *W. Z. Ripley*, Races of Europe, p. 397.

Afro-American (af″rō-a-mer'i-kan), *a.* and *n.* [L. *Afer* (pl. *Afri*), an African, + E. *American.*] **I.** *a.* Of, pertaining to, or composed of persons of African descent born in America (specifically in the United States): as, an *Afro-American* church; *Afro-American* citizens.

II. *n.* A native of America (specifically of the United States) who is of African descent.

Afro-European (af″rō-ū-rō-pē'an), *a.* [L. *Afer* (pl. *Afri*), an African, + E. *European.*] African and European; European with African relations.

Afrogæa (af-rō-jē'ä), *n.* [NL., < L. *Afer* (*Afr-*), African, + Gr. *γαία*, earth.] In *zoögeog.*, a (proposed) division or realm comprising the part of Africa that lies south of the equator. Correlated with *Arctogæa.* See *Afrogæan.*

Afrogæic (af-rō-jē'ik), *a.* Same as *Afrogæan.*

afrown (a-froun'), *adv.* [a^3 + *frown.*] In a frown; frowning: as, "with brows *afrown*," *Joaquin Miller.* *N. E. D.*

afrunt, *prep. phr.* as *adv.* and *prep.* A simplified spelling of *afront.*

a frutti (ä frōt'ti). [It.] With fruits: said of a characteristic style of majolica decoration consisting of foliage and fruits.

aft[1], *a.* and *adv.*—**To haul aft a head-sheet** (*naut.*), to pull on the rope secured to the clue of a staysail, jib, or flying jib, so as to flatten the sail in a fore-and-aft direction.—**To haul aft the main-sheet** (*naut.*), to pull on the tackle or purchase secured to the after part of the main-boom, so as to bring that spar more fore-and-aft, or in line with the keel.—**Fore-and-aft rig.** See *fore-and-aft sails*, under *fore-and-aft.*—**To have the starboard sheets aft**, an expression, sometimes employed on a fore-and-aft vessel to signify that she is on the port tack, and vice versa.

after, *prep.* **10.** In *mineral.*, derived from; having the form of: said of pseudomorphs, which retain only the form of the original mineral: as, malachite pseudomorph *after* cuprite; cassiterite pseudomorph *after* feldspar. See *pseudomorph.*—**After one's own heart**, that comes up to one's ideas or liking; entirely worthy of one's admiration and approval: as, he is a man *after my own heart.*

after-burning (åf'tėr-bėr″ning), *n.* In *gas-engines*, combustion or burning of the gases after the explosion has taken place which should have made all the gas unite at once with the oxygen present.

after-chrome (åf'tėr-krōm), *v. t.*; pret. and pp. *after-chromed*, ppr. *after-chroming.* To treat (textiles, after they are dyed or printed) with a solution of some chromium compound, in order to fix, or render more fast, the colors already on the cloth. Sometimes the chromium compound acts as a mordanting principle and brings about the deposition of a chromium mordant which combines with the dyestuff; in other cases the potassium bichromate commonly used acts as an oxidizing agent.

after-color (åf'tėr-kul″or), *n.* A colored after-image. See *after-image.*

after-cooler (åf'tėr-kö″lėr), *n.* A chamber in which air or a gas is cooled after it has been compressed. See *compressor.*

after-cure (åf'tėr-kūr), *n.* A course of treatment pursued after convalescence is established in order to insure the permanency of the cure.

after-darken (åf'tėr-där″kn), *v. t.* In *textile-coloring*, to deepen (a color) by subsequent dyeing or by oxidation with a chemical solution.

after-dinner (åf'tėr-din″ėr), *n.* and *a.* [*after* + *dinner.*] **I.**† *n.* The portion of the day which follows dinner or the dinner-hour.

II. *a.* Following dinner; postprandial: as, *after-dinner* coffee; an *after-dinner* nap; an *after-dinner* anecdote or speech.

aftergrowth, *n.* **2.** In *forestry*, young trees which spring up as the result of reproduction-cuttings.

after-heat (åf'tėr-hēt), *n.* The autumnal or after-summer warm weather which usually prevails in the northern United States during the period known as 'Indian summer.' *Monthly Weather Rev.*, Jan., 1902.

after-image, *n.* **2.** In *psychol.*, any phase of sensation which persists after the withdrawal of the exciting stimulus: as, a visual *after-image;* an auditory *after-image;* an *after-image* of pressure.

after-impression (åf′tėr-im-presh″ọn), *n.* A sensation which persists after the stimulus that originally caused it is withdrawn.

after-leech (af′tėr-lēch), *n.* The roping on the after edge of a fore-and-aft sail. The roping on the forward edge is called by American seamen the *luff* and by English seamen the *forward leech.* See *leech*[3].

after-mast (af′tėr-mȧst), *n.* The mast nearest to the stern of the ship. On a one- or two-masted vessel it is the mainmast; on a three-masted vessel, the mizzenmast; on a four-masted vessel, the jigger-mast; on a five-masted vessel, the spanker-mast; on a six-masted vessel, the driver-mast; and on a seven-masted vessel the pusher-mast. The last three names have been recently coined by the captains of many-masted vessels as a convenience when giving orders concerning the rigging and sails belonging to the masts in question.

after-milk (åf′tėr-milk), *n.* Strippings.

afternoony (åf-tėr-nön′i), *n.* Like a (summer) afternoon; languid; enervating; inclining to a siesta, as if in the heat of the day.

There is something idle and *afternoony* about the air which whittles away one's resolution. *Huxley*, Life, II. 96.

after-nose (åf′tėr-nōz), *n.* In *entom.*, a triangular piece below the antennæ and above the nasus. *Stand. Dict.*

after-sensation (åf′tėr-sen-sā″shọn), *n.* In *psychol.*: (*a*) An after-image. (*b*) A secondary or consequent sensation: as, the *after-sensation* of pain which follows the sensation of pressure when the skin is lightly tapped with a needle.

after-shock (åf′tėr-shok), *n.* A shock following a primary shock; a succeeding shock.

The periodicity of the *aftershocks* of the great Indian earthquake of June 12, 1897, is treated by Mr. R. D. Oldham in vol. xxxv. of the Memoirs of the Geological Survey of India. *Nature*, April 14, 1904, p. 571.

after-sound (åf′tėr-sound), *n.* A subjective sensation of sound which remains after the sound itself has ceased.

after-stain (åf′tėr-stān), *n.* A stain or dye employed after another stain, for the purpose of still further differentiating details of cell or tissue structure.

after-stain (åf′tėr-stān), *v. t.* [*after* + *stain.*] To treat with an after-stain.

after-strain (åf′tėr-strān), *n.* In *elasticity*, a strain which develops gradually after the application of the stress to which it is due and which persists after the stress has ceased. Also called *elastic fatigue.*

after-stretch (åf′tėr-strech), *n.* In *wool-manuf.*, the elongation of the roving on the spinning-mule after the delivery-rolls have stopped.

after-taste (åf′tėr-tāst), *n.* A gustatory sensation which persists after the stimulus that originally excited it has ceased to act.

after-vision (åf′tėr-vizh″ọn), *n.* An impression of an object that remains in the retina after the object itself is removed from sight.

after-world (åf′tėr-wėrld), *n.* The people of succeeding generations; future ages.

The language . . . in which Shakespeare and Milton have garnered for the *after-world* the rich treasures of their mind. *Trench*, Eng. Past and Present, ii.

after-wort (åf′tėr-wėrt), *n.* In brewing, the second run of wort.

afu (ä-fö′), *a.* and *n.* [Perhaps from the Polynesian *tapu, tabu:* see *taboo.*] Same as *taboo.* [Torres Strait.] *Geog. Jour.* (R. G. S.), XVI. 420.

afunction (a-fungk′shọn), *n.* [*a*-[18] + *function.*] In *pathol.*, loss of function or functionating power. *Alien. and Neurol.*, Aug., 1904.

afyllous, *a.* A simplified spelling of *aphyllous.*

Afzelia (af-zē′li-ȧ), *n.* [NL. (Gmelin, 1791), named in honor of Adam *Afzelius*, a Swedish naturalist.] A genus of scrophulariaceous plants improperly called *Seymeria* by many authors. See *Seymeria.*

A. G. An abbreviation of *Attorney-General.*

agada[2] (ä′gä-dä), *n.* [Abyssinian?] An Egyptian or Abyssinian pipe sounded by means of a reed mouthpiece somewhat like that of a clarinet.

agalactous, *a.* 2. Not nursed, as a hand-fed infant.—3. Serving to check the secretion of milk; lactifugal.

agalenoid (ag-a-lē′noid), *a.* [NL., *Agalena* + *-oid.*] Of, belonging to, or resembling the spiders of the family *Agalenidæ.*

agalite (ag′ȧ-līt), *n.* [Appar. < Gr. *ἀγη*, wonder, + *λίθος*, stone.] A fibrous variety of talc, pseudomorphous in origin, from St. Lawrence County, New York: used in the manufacture of paper. Sometimes written *agalith.*

agalith (ag′ȧ-lith), *n.* Same as ★*agalite.*

agamobium (ag-a-mō′bi-um), *n.*; pl. *agamobia* (-ȧ). [NL., < Gr. *ἀ*- priv. + *γάμος*, marriage, + *βίος*, life.] The asexual generation of a hydroid jellyfish, as contrasted with the sexual generation or gamobium.

agamogenetical (ag″ȧ-mō-jẹ̄-net′i-kạl), *a.* Same as *agamogenetic.*

agamospore (ag′ȧ-mō-spōr), *n.* [Gr. *ἀγαμος*, without marriage, + *σπορά*, seed (spore).] A spore produced asexually.

Agaon (a-gā′on), *n.* [NL. (Dalman, 1818), said to be < Gr. *ἀγάων*, ppr. of *ἀγάειν*, var. of *ἀγασθαι*, adore.] A remarkable genus of hymenopterous insects of the superfamily *Chalcidoidea*, giving name to the family *Agaonidæ.* It contains the single species *A. paradoxum*, which lives in figs in Sierra Leone.

Agaonidæ (ag-ā-on′i-dē), *n. pl.* [NL., < *Agaon* + *-idæ.*] An extraordinary family of chalcidoid hymenopterous insects. It comprises species of small size, distributed in 2 subfamilies and 12 genera, all living in figs and accomplishing the fertilization of the flowers of this fruit. Other genera containing true parasites have been hitherto placed in this family, but are now separated into other distinctly parasitic groups. See ★*Blastophaga.*

Agapetidæ (ag-ȧ-pet′i-dē), *n. pl.* [NL., < *Agapetes* + *-idæ.*] A family of butterflies containing the forms known in the United States as *meadow-browns* and their allies. Prominent American genera are *Cercyonis, Erebia, Cœnonympha*, and *Œneis.*

agar[1] (ä′gär), *n.* [Hind. *agar*, < Skt. *aguru:* see *agallochum.*] The aloes-wood or calambac, *Aquilaria Agallocha.* In India it is used for making jewel-cases, rosaries, and ornaments of various kinds. The chips are sold in bazaars and are burned in Hindu temples. See *agallochum* and *eaglewood.* Also *aggur.*

agar[2] (ä′gär), *n.* Same as *agar-agar.*—**Glucose agar.** See ★*agar-agar*, 2.—**Hydrocele agar,** a culture medium suggested for the growth of the gonococcus, in which hydrocele fluid is used as the nutrient medium, the agar being added to solidify the medium.—**Litmus lactose agar,** a culture medium used in bacteriological work. It is ordinary agar containing ½ per cent. of lactose, with enough litmus tincture added to give the solution a light-blue color.—**Peptone agar,** a bacteriological culture medium; it contains a certain amount of peptone. Also called *nutrient agar.*—**Slant agar,** agar that has been solidified so as to present a slanting surface: used in bacteriological work. *Science*, March 14, 1902, p. 406.

agar-agar, *n.* 2. A gelatinous product from certain seaweeds often combined with various nutrient substances to form a solid medium for the artificial cultivation of bacteria and other organisms.

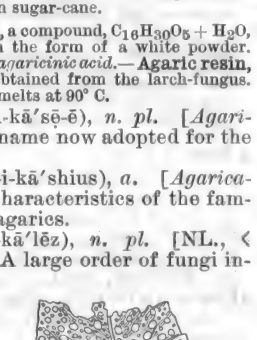
agaric. I. *n.*—**Deadly agaric,** *Amanita phalloides*, a very poisonous fungus.—**Ivory agaric,** the mushroom, *Hygrophorus eburneus.*—**Maned agaric.** Same as ★*horsetail-agaric.*—**Royal agaric,** a large and elegant edible mushroom, *Amanita cæsarea.* It has a bright orange-colored pileus, an annulus, and a large, thick, leathery volva. It is sometimes confused with the poisonous fly-agaric, *Amanita muscaria.*—**Sugar-cane agaric,** *Schizophyllum commune*, which is reported to be sometimes parasitic on sugar-cane.

II. *a.*—**Agaric acid,** a compound, $C_{16}H_{30}O_5 + H_2O$, obtained from agaric in the form of a white powder. Also called *agaricic* and *agaricinic acid.*—**Agaric resin,** a red amorphous solid obtained from the larch-fungus. It is slightly bitter, and melts at 90° C.

Agaricaceæ (a-gar-i-kā′sē-ē), *n. pl.* [*Agaricus* + *-aceæ.*] The name now adopted for the family *Agaricini.*

agaricaceous (a-gar-i-kā′shius), *a.* [*Agaricaceæ.*] Having the characteristics of the family *Agaricaceæ*, the agarics.

Agaricales (a-gar-i-kā′lēz), *n. pl.* [NL., < *Agaricus* + *-ales.*] A large order of fungi including the greater part of the *Hymenomycetes*, as the families *Thelephoraceæ, Clavariaceæ, Hydnaceæ, Polyporaceæ*, and *Agaricaceæ.*



Agarum Turneri: expanded blade of a frond.

agaricic (ag-ȧ-ris′-ik), *a.* [*agaric* + *-ic.*] Same as *agaric*

agaricinic (a-gar-i-sin′ik), *a.* [*agaricin* + *-ic.*] Related to agaricin.—**Agaricinic acid.** Same as ★*agaric acid.*

Agarum (ag′a-rum), *n.* [NL. (Postels and Ruprecht, 1840), < Malay *āgar-āgar:* see *agar-agar.*] A genus of brown algæ

(*Phæophyceæ*) inhabiting the Arctic and colder waters of the Atlantic and Pacific oceans. The frond consists of a stipe attached by a branching holdfast, and a broadly expanded blade which is perforated with numerous holes. Popularly called *sea-colander.*

agasp (ȧ-gȧsp′), *adv.* [*a*[3] + *gasp.*] In a gasping state or condition; panting; eager. *Coleridge*, Own Times, II. 395. *N. E. D.*

Agassizocrinidæ (ag-a-siz-ō-krin′i-dē), *n. pl.* [*Agassizocrinus* + *-idæ.*] A family of fistulate *Crinoidea* characterized by the elongate dorsal cup composed of thick solid plates, and by the absence of a column. It is believed that in early stages these forms were attached by a stem, but that they subsequently became free-swimming. They have been found only in the Kaskaskia limestone of the Lower Carboniferous formation in the United States.

Agassizocrinus (ag-a-siz-ō-krī′nus), *n.* [NL., < *Agassiz* + Gr. *κρίνον*, lily.] The typical genus of the family *Agassizocrinidæ.*

agast, *p.* or *a.* A simplified spelling of *aghast.*

agate[2], *n.* 6. *Naut.*, the jewel cup in the center of the compass-card, which rests upon the upright pivot in the center of the compass-bowl.—**Eye-agate,** a variety of agate having the layers in concentric circles.—**Iceland agate,** a fine variety of obsidian (volcanic glass) found in Iceland.

agate-ware (ag′ȧt-wār), *n.* 1. Pottery mottled and veined in imitation of agate.—2. A variety of enameled iron or steel household ware.

Agathaumas (ag-a-thâ′mas), *n.* [NL., irreg. < (?) Gr. *ἄγαν*, much, + *θαυμασία*, wonder.] A genus of dinosaurian reptiles from the Laramie beds of the Rocky Mountains.

agathin (ag′ȧ-thin), *n.* [Gr. *ἀγαθός*, good, + *-in*[2].] A trade-name for the *a*-methylphenylhydrazone of salicylic aldehyde, $C_6H_5CH_3NN:CHC_6H_4OH$. It crystallizes in white needles which melt at 71° C. It has been used as a remedy for rheumatism.

agathodæmon, *n.* 2. In *astrol.*, the eleventh house of the heavens.

agathology (ag-a-thol′ọ-ji), *n.* [Gr. *ἀγαθός*, good, + *-λογία*, < *λέγειν*, speak.] The ethical doctrine of the *summum bonum*, or that which is good apart from any ulterior reason.

agatoid (ag′ȧ-toid), *a.* Resembling an agate in structure or appearance.

Agau (ä′gou), *n.* See ★*Abyssinian languages*(*b*).

agave, *n.* 2. [*l. c.*] A plant of this genus.—**Soap agave,** a name applied to several species of *Agave*, the roots or other portions of which, called *amole* by the Mexicans, are used in place of soap for washing. The principal soap-producing species is *Agave Lechegüilla* of northern Mexico. See *amole.*

agavose (a-gā′vōz), *n.* [*Agave* + *-ose.*] A sugar, $C_{12}H_{22}O_{11}$, obtained from the stalks of *Agave Americana.*

A. G. C. In *astron.*, an abbreviation of *Argentine General Catalogue* (of stars).

Age class. See ★*class.*—**Age coating,** the carbonaceous layer or deposit which gradually accumulates upon the interior surface of incandescent-lamp bulbs in consequence of the disintegration of the filament.—**Age of the tide.** Same as *retard of the tide* (which see, under *retard*).—**Copper age,** in *prehistoric archæol.*, the period during which copper was used for the manufacture of implements. In some parts of the world the stone age was followed by a copper age, while in other regions the stone age was followed by the bronze age.—**Flint age.** Same as *stone age.* See *archæological ages*, under *age.*—**Heroic age,** the age of heroes and demigods.—**Lacustrine age,** in *archæol.*, the period of lake-dwellings; especially, the period of lake-dwellings in central Europe.—**Topographic old age,** the stage which is produced by long-continued subjection of a region to the processes of erosion in its present relation to base-level.

age[1], *v. t.* 2. To expose (mordanted or dyed cloth) to the air in order to fix the mordant or dye in insoluble form.

age[2] (ä′hā), *n.* [Mex. (?). Cf. ★*axin.*] The fat obtained from the *Coccus axin* of Mexico. Also called *axin.*

aged, *p.a.* 4. In *geol.*, approaching peneplanation: said of the topography of a greatly denuded region.—5. Of a horse, arrived at the age when the 'pit' or 'mark' on the front teeth has been obliterated by the gradual wearing away of the crown. This change usually occurs in the eighth or ninth year; but under racing rules a 'running' horse (as distinct from a trotting horse) is said to be aged when he is more than seven years old.

age-distribution (āj′dis-tri-bū″shọn), *n.* In *social statistics*, the number of occurrences, conditions, or relations (as births, marriages, or deaths) in a given population in each year or in each five- or ten-year period of life: as, 50 deaths annually in each 1,000 children under five years; 10 deaths annually in each 1,000 males 25 to 30 years of age.

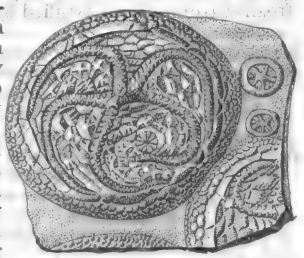
age-fraternity (āj′frā-tėr″ni-ti), *n.* A fraternity of individuals of the same or similar age. This is a form of social organization found frequently among primitive tribes, boys, youths, young men, men

in their prime, and old men being organized each in a society by themselves. Societies of women of similar character are rarer than those of men.

On superficial examination various tribes appear to be organized according to identical principles, but fuller knowledge generally reveals differences among the similarities. From this it was concluded that such terms as gens, band, *age-fraternity* and dance-society have no stable or exact meaning and hence little descriptive value, detailed information being the great desideratum.

Science, May 31, 1901, p. 864.

Agelacrinites (āj″e-lak-ri-nī′tēz), *n.* [NL., ⟨ Gr. *ἀγέλη*, herd, + *κρίνον*, lily, + *-ites*.] A name introduced by Vanuxem in 1842 for a Devonian cystidian found in the Hamilton rocks of New York, but also represented by species in both Silurian and Carboniferous rocks: typical of the family *Agelacrinitidæ*. Also improperly written *Agelacrinus*.



Agelacrinites hamiltonensis.
A group of individuals attached to a shell.

Agelacrinitidæ (aj″e-lak-ri-nit′i-dē), *n. pl.* [NL., ⟨ *Agelacrinites* + *-idæ*.] A family of extinct cystid echinoderms, discoid in form, sometimes with a short stem, but usually attached to other objects by the entire abactinal surface. In typical species the ambulacral arms are long and curved and the spaces between are filled with irregular and often scaly plates.

Agelacrinus (aj-e-lak′ri-nus), *n.* See ★*Agelacrinites*.

agelong (āj′long), *a.* [*age* + *long*.] Long as an age; that lasts or has lasted for an age; unending: as, *agelong* strife.

agency, *n.*—**Commercial agency.** See *mercantile* ★*agency*.—**Mercantile agency,** an institution or company formed for the purpose of obtaining, by careful inquiry and investigation, and supplying in confidence to subscribers for their own special use, accurate information regarding the character, personal responsibility, and commercial and financial standing of individuals, firms, and corporations engaged in mercantile, financial, or industrial enterprises, either throughout the country or, in the case of the larger associations, throughout the world. Full revised lists and reports giving the 'commercial rating' of each of these individuals, firms, and corporations are issued quarterly in book form, but special reports with regard to particular cases are made to subscribers on request. Also sometimes called *commercial agency* and *credit bureau*.

agent, *n.*—**Fixing agent,** in *textile-coloring*, any substance used to fix a mordant or render fast and permanent colors which would otherwise be more or less fugitive.—**Insurance agent.** See ★*insurance*.—**Reducing agent,** in *chem.*, a substance capable of removing the electronegative constituent from a compound, setting free the electropositive constituent, as a metal from one of its oxids.

agentialis (ā-jen-ti-ā′lis), *a.* [NL.: see *agential*.] In *gram.*, noting the case which expresses the subject of a sentence and sometimes the owner of an object. Also called *subjective*. *Barnum*, Innuit Lang., p. 12.

agentive (ā-jen′tiv), *a.* [*agent* + *-ive*.] In *gram.*, noting the case which expresses the subject of the transitive verb in languages in which its form differs from that expressing the subject of the intransitive verb. This case is found in many American languages, for instance, in Eskimo. Also called *subjective*. *Amer. Anthropologist*, Jan.–March, 1903, p. 26.

ager[2] (ā′jėr), *n.* [*age*, *v. t.* + *-er*[1].] One who or that which ages; specifically, a chamber in which mordanted or dyed cloth is submitted to the process of aging. A *steam-ager* is such a chamber to which both air and steam are admitted.

agger, *n.*—**Agger nasi,** a projection at the anterior extremity of the middle turbinate bone, being a vestige of the nasal turbinate bone in certain of the lower animals.

agglomerant (a-glom′e-rant), *n.* [*agglomer(ate)* + *-ant*.] That which causes agglomeration; a material which may be added to a mixture in order to cause the particles of the latter, when in a fine state of division or in small lumps, to adhere together and form larger lumps or agglomerations. This is necessary in some systems of treating ores, and in making artificial briquets from pulverized fuel. Lime mixed with water to form a paste is a suitable agglomerant in the first case, and tar or pitch in the second.

agglomerative, *a.* 2. In *sociol.*, tending to combine small social groups into larger organizations.

agglutinability (a-glö″ti-na-bil′i-ti), *n.* [*agglutinable* (*-bil-*) + *-ity*.] Susceptibility to agglutination, in any sense. *Jour. Exper. Med.*, V. 361.

agglutinable (a-glö′ti-na-bl), *a.* Capable of agglutination.—**Agglutinable substance,** a substance present in bacteria and red blood-corpuscles to the union with which, on the part of the agglutinins, the specific agglutination is due.

agglutinant, *n.* 2. In *bacteriol.*, same as ★*agglutinating substance*.

agglutinate, *v. t.* 2. In *bacteriol.*, to cause the coalescence or clumping of (bacteria or red blood-corpuscles).

If the blood *agglutinates* a paratyphoid bacillus in high dilution, and fails to *agglutinate* the typhoid bacillus or *agglutinates* it only in very low dilutions.

Med. Record, Feb. 14, 1903, p. 267.

agglutinating, *p. a.*—**Agglutinating substance,** in *bacteriol.*, the substance which causes agglutination. Also called ★*agglutinin* (which see).

agglutination, *n.* 3. In Wundt's psychology, the simplest type of apperceptive connection of ideas: a connection in which one is still clearly conscious of the constituent ideas, while the total idea aroused by their conjunction is nevertheless unitary: for example, watch-tower, steamboat.—4. In *bacteriol.*, the clumping or coalescence of red blood-corpuscles or bacteria brought about by the action of special agglutinating substances (agglutinins).

Careful observation of this phenomenon has shown that, in many cases, a state of coalescence of the corpuscles to which the name '*agglutination*' is applied, precedes that of solution; and, further, that while these changes are often associated, yet one may occur in the absence of the other. *Science*, July 3, 1903, p. 4.

Agglutination test, a test based upon the principle that specific agglutinins appear in the blood-serum of infected animals or patients which will cause the agglutination of the specific bacteria concerned in the infection. In this manner it is sometimes possible not only to identify bacteria, but also to determine whether or not infection with a given organism exists. Diagnosis by such means is spoken of as *serum diagnosis*, and constitutes a most important method of recognizing certain infections. In typhoid fever especially the agglutination test, or *Widal reaction*, as it is also termed, is extensively utilized in the diagnosis of the disease. Generally speaking, the examination is carried out by mixing some bacilli of the kind under investigation with some of the diluted blood-serum, when a drop is observed under the microscope, in order to ascertain whether or not the bacilli, which at first are evenly scattered through the field, will gather in clumps, and, if previously motile, will lose their motility. See *serum* ★*diagnosis*.

agglutinative, *a.*—**Agglutinative reaction.** Same as ★*agglutination*, 4.

agglutinator (a-glö′ti-nā-tor), *n.* He who or that which agglutinates; specifically, same as ★*agglutinin*, in contradistinction to ★*agglutinable substance*.

Thus, if ricin, a strong *agglutinator*, is permitted to act upon red corpuscles for periods under thirty minutes, then upon the addition of venom lysis ensues in about the average time and proceeds normally.

Jour. Exper. Med., Mar. 17, 1902, p. 289.

agglutinin (a-glö′ti-nin), *n.* [*agglutin(ate)* + *-in*[2].] An adaptation-product produced by immunization with the corresponding cells (red blood-corpuscles or bacteria), which causes the clumping or coalescence of the cells used in immunization. The agglutinins are receptors of the second order (Ehrlich), being composed of a special zymophoric group and a haptophoric group, which latter effects the union with the cell. The bacillary agglutinins in their action upon motile bacteria cause arrest of motility. See also ★*agglutination test*.—**Flagellar agglutinin,** an agglutinin resulting on immunization with a motile bacillus and supposedly referable to the specific action of the flagellar substance. As the body of the organism gives rise to special somatic agglutinins, the two will coëxist in the serum of an animal immunized with motile bacilli, while the latter only will be found if a nonmotile organism has been used. *Jour. of Med. Research*, Oct., 1904, p. 318.—**Somatic agglutinin,** an agglutinin resulting on immunization, which in contradistinction to the flagellar type is referable to the special immunizing effect of the bodies of the bacilli, and is thus obtained not only with motile but also with non-motile organisms. *Jour. of Med. Research*, Oct., 1904, p. 314.

agglutinogen (a-glö′ti-nō-jen), *n.* A substance present in bacteria, immunization with which gives rise to the production of agglutinins. *Jour. of Med. Research*, Oct., 1904, p. 314.

agglutinogenous (a-glö″ti-noj′e-nus), *a.* [Irreg. ⟨ *agglutin(ation)* + *-genous*, producing.] Producing agglutination or agglutinins.

Nicolle and Trenel find that agglutinative and *agglutinogenous* functions are subject to the greatest variations. *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 78.

agglutinoid (a-glö′tin-oid), *n.* [*agglutin(ate)* + *-oid*.] An agglutinin which has lost its agglutinophoric group, but retains the haptophoric group for the cell. *Lancet*, April 4, 1903, p. 946.

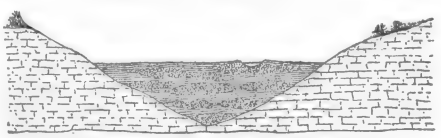
agglutinophore (a-glö′ti-nō-fōr), *n.* [*agglutin(ate)* + Gr. *-φορος*, ⟨ *φέρειν*, bear.] A molecular complex of the agglutinins to which their agglutinating property supposedly is due.

agglutinophoric (a-glö″ti-nō-for′ik), *a.* Noting that molecular group of the agglutinins to which the agglutinating properties are due.

aggradation (ag-rā-dā′shon), *n.* [*aggrade* + *-ation*.] The act or process of aggrading, or the state of being aggraded; in *geol.*, the act of aggrading, as in depositing detritus upon a valley floor, the slope of the depositing stream being maintained at an almost constant value.—**Aggradation plain,** a plain formed by the accumulation of clastic material in arid districts under conditions unfavorable to distant transportation and where overloading of streams is habitual. The alluvial fan and the flood-plain are initial stages.

aggradational (ag-rā-dā′shon-al), *a.* 1. Pertaining to or effected by means of aggradation.—2. Effecting an upbuilding of sediments: contrasted with *degradational* agencies or those which remove material.

aggrade (a-grād′), *v. t.* [L. *ad*, to, + *gradus*, step. Cf. *degrade*.] In *geol.*, to grade up; fill up: the opposite of *degrade* or *wear away*.



Diagrammatic cross-section of an aggraded valley.

A river aggrades its valley when, owing to an increase in the load of detritus or to a decrease of carrying power of its current (as a result of diminution in volume or of tilting of the land), some of its load has to be laid down along its course.

aggraded (a-grā′ded), *p. a.* In *geol.*, more or less filled with detritus by a stream: said of a valley, basin, or bay.

aggregate, *n.* 4. In *logic*, a whole of aggregants which is universally predicable of every one of its aggregants and is not predicable of any individual of which none of its aggregants is predicable. So, likewise, a proposition which would be true under any circumstances whatsoever under which any one of a collection of propositions would be true, but which would under no circumstances be true when none of the propositions of that collection were true, would be the aggregate of those propositions as its aggregants.—**Social aggregate,** any group or class of animate creatures, human beings or animals, dwelling together or working together and leading a social life.—**Theory of aggregates,** in *demography*, the theory of the grouping of population about centers of density; in *sociol.*, the theory of the combination of hordes into tribes, tribes into nations, and nations into federal empires; in *biol.*, the theory that units of structure were once independent organisms.

aggregation, *n.* 6. In *sociol.*, the phenomenon of the physical concentration of population, of animals, and of plants. *Giddings*, Inductive Sociol., p. 40.—**Aggregation theory,** the theory that the passage of matter from an imperceptible to a perceptible condition is necessarily a process of aggregation. It was held by John Fiske.—**Biological aggregation,** a term used by L. F. Ward to express his belief that organisms which are morphologically separable into structural units, such as the *Metazoa* and metamerized animals, have arisen through the aggregation of units which were at one time independent.—**Genetic aggregation,** in *sociol.*, a group of kinsmen who have lived together in one locality from their birth; hence, also, a population perpetuated chiefly by its birth-rate rather than by immigration. *Giddings*.—**Law of aggregation,** the universal tendency of particles and masses of matter to concentrate. See the extract.

The great law of progress in the universe therefore is the *law of aggregation*, and evolution is due to the resistance which this law meets with from the opposite law of dispersion. *L. F. Ward*, Dynamic Sociol., I. 249.

Organic aggregation. Same as *biological* ★*aggregation*.—**Primary aggregation,** the process by which the inorganic universe, as contrasted with living beings and with society, has come to be what it is. *L. F. Ward*.—**Secondary aggregation,** the process by which living beings, as contrasted with the inorganic universe and with society, have come to be what they are. *L. F. Ward*.—**Tertiary aggregation,** in *sociol.*, the aggregation of individuals into social groups or populations, a process which completes the sequence of integrations that constitutes one aspect of universal evolution. The aggregation of atoms in molecules and masses is called *primary aggregation*, that of molecules in living cells and organisms *secondary aggregation*. *L. F. Ward*.

aggregative, *a.* 3. In *sociol.*: (*a*) Tending toward a center of density, as concentration of population. (*b*) Tending to combine small groups into large organizations, as hordes into tribes or small corporations into great corporations and 'trusts.'

Aggressive character. See ★*character*.—**Aggressive coloring,** coloring which serves to hide an animal from its prey.—**Aggressive resemblance.** See ★*resemblance*.

aggri-beads, *n. pl.* See *aggry-beads*.

aggriev, *v.* A simplified spelling of *aggrieve*.

aggur, *n.* See ★*agar*[1].

aghastness (a-gȧst′nes), *n.* The state of being aghast or filled with amazement or horror: as, an expression of *aghastness* in the eyes. [Rare.] *N. E. D.*

Agialid (aj-i-al′id), *n.* [NL. (Adanson, 1763), from an Egyptian name of the African species *agihalid*, used by Alpinus.] A genus of dicotyledonous plants of the family *Zygophyllaceæ*.

agiasterium, *n.* See ★*hagiasterium*.

agil, *a.* A simplified spelling of *agile*.

aging, *n.* 4. In the preparation of logwood for dyeing, the process of exposing the wood (usually in the form of chips) to the air, in order that the hematoxylin it contains may be oxidized or developed into hematein, the actual coloring agent. Also known as *curing* or *maturing*.—5. In *elect.*, the property, exhibited more or less by iron, of showing an increase of hysteresis loss when for a long time exposed to alternating magnetization, especially at a higher temperature.

aging-machine (ā′jing-mą-shēn″), *n.* In *calico-printing*, a machine used in the process of aging or causing the mordant to decompose evenly on and in the fiber.

aging-room (ā′jing-röm), *n.* In *calico-printing*, a room or chamber in which cloth is aged. The cloth is hung and exposed for several days to a temperature of about 80° F. and to a relative humidity of about 82 per cent., for the purpose of fixing the mordant evenly on and in the fiber.

agitatrix (aj-i-tā′triks), *n.*; pl. *agitatrixes* (-ēz) or *agitatrices* (-tri-sēz). [L. *agitatrix*, fem. of *agitator*, agitator.] A female agitator. [Rare.]

Aglaonema (ag″lą-ō-nē′mą), *n.* [NL., < Gr. *ἀγλαός*, shining, + *νῆμα*, thread.] A genus containing about fifteen species of the family *Aroideæ*, two or three species of which are sometimes offered by plant-dealers. They are indoor subjects, in the manner of *Arum*, and are native to Asia and Africa.

Aglaospora (ag-lą-os′pō-rą), *n.* [NL. (De Notaris, 1845), < Gr. *ἀγλαός*, brilliant, + *σπορά*, spore.] A genus of pyrenomycetous fungi having membranous beaked perithecia embedded in a valsoid stroma. The spores are brown and several-septate. *A. profusa* is the type. It occurs in Europe and America, and is said to cause the death of young twigs of the locust, *Robinia Pseudacacia*.

Aglaspis (a-glas′pis), *n.* [NL., < Gr. *ἀγλαός*, beautiful, + *ἀσπίς*, shield.] A genus of Cambrian arthropods described by Hall as a trilobite, but regarded by Clarke as a primitive merostome of the order *Synziphosura*. It has a short trilobed cephalothorax, 6 or 7 flat abdominal segments, and a long caudal spine or telson. It is the only representative of the family *Aglaspidæ*.

Aglaspis Eatoni, Whitf.
Upper Cambrian; Lodi, Wisconsin. (From Zittel's "Paleontology.")

aglint (ą-glint′), *adv.* [a^3 + *glint*.] In momentary glints or peeps; glintingly.

aglitter (ą-glit′ėr), *adv.* [a^3 + *glitter*.] In a glitter; glittering.

Aglossa, *n. pl.* 3. A group of *Mollusca* having no radula and no head: distinguished from *Glossophora*. The group includes only the *Pelecypoda*. Same as *Lipocephala*.

aglossi, *n.* Plural of ★*aglossus*.

aglossia (ą-glos′i-ą), *n.* [NL., < Gr. *ἀγλωσσία*, tonguelessness (used in fig. sense 'ineloquence'), < *ἄγλωσσος*, tongueless, < *ἀ-* priv. + *γλῶσσα*, tongue.] Congenital defect marked by absence of the tongue.

aglossus (a-glos′us), *n.*; pl. *aglossi* (-ī). [NL., < Gr. *ἀγλωσσος*, tongueless: see ★*aglossia*.] In *teratol.*, a monster having no tongue.

Agnatha, *n. pl.* 2. A class of fishes, or fish-like vertebrates, characterized by the absence of jaws and shoulder-girdle. It contains the extinct ostracoderms and the existing lampreys.

agnathic (ag-nath′ik), *a.* Same as *agnathous*.

agnathus (ag′nạ-thus), *n.*; pl. *agnathi* (-thī). [NL.: see *agnathous*.] In *teratol.*, a monster having no lower jaw.

agnification (ag″ni-fi-kā′shọn), *n.* [L. *agnus*, lamb, + *-ficare*, < *facere*, make.] The making or representing of persons as lambs or sheep.

agnosia (ag-nō′si-ą), *n.* [Gr. *ἀ-* priv. + *γνῶσις*, knowledge: see *gnosis*.] Loss of the power to distinguish the nature or uses of any object.

agnosy (ag′nō-si), *n.* [Gr. *ἀγνωσία*, ignorance (cf. *ἄγνωστος*, unknown, unknowing, ignorant: see *agnostic*), < *ἀ-* priv. + *γνῶσις*, knowing: see *gnosis*.] Ignorance; specifically, an ignorance common to all mankind.

agnotozoic (ag-nō-tọ-zō′ik), *a.* and *n.* [Gr. *ἄγνωτος*, unknown, + *ζωή*, life.] **I.** *a.* Not known to contain fossils: applied to the early rocks and period of the earth in which definite evidence of organic life has not been found.

II. *n.* The rocks and period not yet known to contain evidences of life: contrasted with *eozoic* and *paleozoic*, and essentially equivalent, so far as the term has been applied, to the *Huronian* of Logan and the *Algonkian* of Walcott. Not in general use.

agoge (a-gō′jē), *n.* [Gr. *ἀγωγή*, a leading, course, mode, etc.] In *anc. Greek music:* (*a*) Tempo or pace; rhythmical movement; (*b*) Melodic motion upward or downward by successive scale-steps: same as *ductus* in medieval music. The first use is the more proper.

agogic (a-goj′ik), *a.* In *music*, pertaining to or emphasizing slight variations in rhythm for the sake of dynamic expression: as, *agogic* accent.

agogics (a-goj′iks), *n.* In *musical theory*, a term used by Hugo Riemann (from about 1884) for the general principle, in performance, that dynamic variations are, or should be, combined with slight variations in rhythmical regularity if the full expressiveness of a phrase is to be brought out. What is called *tempo rubato* (which see, under *tempo*) belongs to the field of *agogics*.

agoho (ą-gō′hō), *n.* [Bisaya.] A name applied in the Philippines to the Polynesian ironwood, *Casuarina equisetifolia*, a strand tree with very hard, heavy wood of a reddish-brown color, much used by the Pacific islanders for spears. See *swamp-oak*, 2 (*b*), and ★*ironwood*, 2.

agoing (ą-gō′ing), *adv.* [a^3 + *going*.] In motion; in the act of going: used with *set*.

agomphosis (a-gom-fō′sis), *n.* Same as *agomphiasis*.

agonal (ag′ō-nal), *a.* [NL. **agonalis*, < Gr. *ἀγών*, a struggle: see *agony*.] Relating to or occurring during the agony or death-struggle. See the extract.

> The lower part of the ileum was of small calibre, a condition which, if not due solely to *agonal* contraction, might at least favor the production of diverticula in the upper part. *Jour. Exper. Med.*, V. 344.

Agoniada bark. See ★*bark*^{2}.

agoniadin (ą-gō′ni-ą-din), *n.* [*agoniada* + *-in*^{2}.] A glucoside, $C_{10}H_{14}O_6$, found in agoniada or agonia bark (*Plumeria lancifolia*), which is used in Brazil as a remedy for intermittent fevers. It is bitter, and crystallizes in needles which melt at 155° C.

agoniatite (ą-gō′ni-ą-tīt), *n.* and *a.* **I.** *n.* A member of the genus *Agoniatites*.

II. *a.* Containing or relating to *Agoniatites*.—**Agoniatite limestone,** a limestone stratum characterized by an abundance of *Agoniatites expansus*, occurring in the Marcellus shales of New York.

Agoniatites (ą-gō″ni-ą-tī′tēz), *n.* [NL., < Gr. *ἀ-* priv. + NL. *Goniatites*.] A genus of nautiloid ammonoids or goniatites. They are of very primitive form, the septal sutures having no angles except on the ventral edge about the siphuncle. *Agoniatites* is among the earliest forms of these cephalopods to appear. They are of Devonian age.

agonism (ag′ō-nizm), *n.* [Gr. *ἀγωνισμός*, < *ἀγωνίζειν*, contend: see *agonize*.] 1. Struggle or contest for a prize, especially at the ancient Grecian games.—2. The prize itself. [Rare in both uses.]

agonistic, *a.* **II.** *n.* The act of combating or struggling; combat; struggle. *G. S. Hall*, Adolescence, II. 251.

agonizant, *n.* **II.** *a.* Being in the death-agony; moribund.

agonizedly (ag-ō-nī′zed-li), *adv.* As one in agony; in tones of agony or anguish. *Thackeray*, Paris Sketch Book, p. 166. *N. E. D.*

agonizing (ag′ō-nī-zing), *p. a.* [*agonize* + *-ing*^{2}.] 1. That causes or produces agony or anguish; characterized by extreme anguish or painful struggles: as, *agonizing* suspense; "agonizing distress," *Ruskin*, Fors Clavigera, i. 8.—2. Indicative of or expressing agony or anguish: as, an *agonizing* cry.—3. In the last agony; in the throes of death. See the extract.

> An extraordinary Restorative and Cordiall, recovering frequently with it *agonizing* persons.
> *Philos. Trans. Roy. Soc.* (London), I. 249. *N. E. D.*

Agonomalus (ag-ō-nom′ą-lus), *n.* [NL., < *Agonus* + Gr. *ὁμαλός*, even.] A genus of sea-poachers, of the family *Agonidæ*, found in northern Japan. They are often dried in a distorted form and sold as dragon curiosities.

Agonopsis (ag-ō-nop′sis), *n.* [NL., < *Agonus* + *ὄψις*, appearance.] A genus of sea-poachers of the family *Agonidæ*. They are small sea-fishes found off the coast of southern Chile.

Agonostoma (ag-ō-nos′tọ-mą), *n.* See ★*Agonostomus*.

Agonostominæ (ag″ō-nos-tō-mī′nē), *n. pl.* [NL., < *Agonostomus* + *-inæ*.] A subfamily of fresh-water mullets, typified by the genus *Agonostomus*.

Agonostomus (ag-ō-nos′tō-mus), *n.* [NL., < Gr. *ἀγωνος*, without angle, + *στόμα*, mouth.] A genus of fresh-water mullets of the family *Mugilidæ*, found in the swift streams of the East and the West Indies. Also *Agonostoma*.

Agonyclitæ (ag-ō-nik′li-tē), *n. pl.* [NL., < MGr. *ἀγονυκλίται*, < Gr. *ἀ-* priv. + LGr. *γονυκλίνειν* (cf. *γονυκλιτεῖν*), bend the knee, < *γόνυ*, knee, + *κλίνειν*, bend.] A sect who refused to kneel in prayer: condemned by a synod of Jerusalem A.D. 726.

agoraphobe (ag′ō-rą-fōb), *n.* [A back-formation from *agoraphobia*.] One who is subject to agoraphobia.

Agosia (ą-gō′si-ą), *n.* [NL., coined name.] A genus of small minnows found in the brooks of the Rocky Mountain region from British Columbia to Arizona.

agra dolce (ä′grą dōl′che), *n.* [It., 'sour sweet'; *agra*, fem. of *agro*, < L. *acer*, sharp, sour; *dolce*, < L. *dulcis*, sweet.] A well-known Italian sauce used with venison, calf's head, etc. It contains sugar, chocolate, lemon-peel, currants, etc., and vinegar. It is poured over the cooked meat and served hot.

agraffe, *n.* 4. An appliance used in operations for harelip to keep the two surfaces of the wound in apposition.—5. An iron fastening used to hold in place the cork of a bottle containing champagne or other effervescing wine during the final fermentation.

Agrania (ą-grā′ni-ą), *n. pl.* [Gr. *Ἀγράνια*, also *Ἀγριάνια*, a festival in Argos (Hesychius); prob. equiv. to *Ἀγριώνια*, a festival of Dionysus, prob. < *ἄγριος*, rustic, wild: see *agriology*.] A festival of Thebes in ancient Greece. It was celebrated in the night by women, a priest, and an attendant. It consisted in tearing in pieces a figure made out of or covered with ivy, and then, like the Thyiades on Parnassus, running over the mountain to look for Dionysus.

agraph (ag′raf), *n.* [Gr. *ἄγραφος*, unwritten, < *ἀ-* priv. + *γράφειν*, write.] An unwritten word; a word or saying preserved by oral tradition.

agraphia, *n.*—**Acoustic** or **auditory agraphia,** inability to write from dictation.—**Amnemonic agraphia,** loss of ability to write connected sentences.—**Ataxic agraphia,** inability to write resulting from imperfect muscular coördination.—**Literal agraphia,** loss of ability to write the letters of the alphabet.—**Musical agraphia,** loss of ability to write musical notation.—**Optical agraphia,** loss of ability to write from copy, while the power to write from dictation may remain.—**Verbal agraphia,** loss of ability to write words, although the individual letters may be formed perfectly.

Agrauleum (ag-râ-lē′um), *n.* [NL., < NGr. **Ἀγραυλεῖον*, < Gr. *Ἀγραυλος* (see def.).] In *Gr. antiq.*, a modern name for a shrine of Agraulos or Aglauros, daughter of Cecrops, on the northern slope of the Acropolis at Athens. About 60 meters west of the Erechtheum a staircase leads down to it.

Agraulos (ą-grâ′los), *n.* [Gr. *ἀγραυλος*, living in the fields, < *ἀγρός*, field, + *αὐλή*, court, hall.] A genus of Cambrian trilobites having a large cephalon, small eyes, 16 thoracic segments, and very small pygidium. Properly *Agraulus*.

Agr. B. An abbreviation of L. *Agriculturæ Baccalaureus*, Bachelor of Agriculture.

agreement, *n.*—**Frankfort agreement,** a set of rules governing craniometry adopted by the Anthropological Congress at Frankfort in 1882.

agrégé (ä-grā-zhā′), *a.* [F., pp. of *agréger*, < L. *aggregare*, collect, assemble: see *aggregate*, *v.*] Added; supernumerary: as, professor *agrégé*.

agrestian (a-gres′ti-ąn), *a.* and *n.* **I.** *a.* Belonging to the country; rural; rustic: as, the *agrestian* population.

II. *n.* A rustic; a countryman.

agricolite (a-grik′ō-līt), *n.* [From *Georg Agricola*, a Saxon mineralogist, 1490–1555.] A silicate of bismuth, having the same composition as eulytite, but believed to crystallize in the monoclinic system.

Agricultural botany. See ★*botany*. — **Agricultural college,** an institution for education in agricultural science and other branches of knowledge useful to agriculturists; specifically, in the United States, one of a class of such institutions organized and maintained under the provisions of the Morrill Act (see ★*act*), usually accompanied by an agricultural experiment station. — **Agricultural engineering.** See *rural* ★*engineering*. — **Agricultural experiment station,** an establishment for the investigation, by scientifically conducted experiments, of questions directly affecting agricultural practice, relating to varieties of plants and breeds of animals, fertilizers, methods of culture, insect pests, diet of animals, etc. There are now about 800 such stations in 50 different countries. In the United States there is one or more in each State and Territory, mostly organized under the provisions of the Hatch Act (see ★*act*), but partly supported by individual States. The results of investigations are diffused by means of an extensive free literature.

agriculturer (ag-ri-kul'ṭūr-ėr), *n.* One engaged in farming operations; a husbandman. *Coleridge*, Own Times, III. 751. [Rare.] *N.E.D.*

Agriochœridæ (ag″ri-ō-kē'ri-dē), *n. pl.* [NL., *Agriochœrus* + *-idæ*.] A family of extinct artiodactyl mammals, whose members are intermediate in character between the pig and the deer. The type genus, *Agriochœrus*, from the White River Oligocene, has somewhat claw-shaped hoofs, no upper incisors, an open orbit, and complex last premolars.

Agriochœrus (ag″ri-ō-kē'rus), *n.* [NL., < Gr. *ἀγριος*, wild, + *χοῖρος*, a pig.] A genus of imperfectly known ungulate mammals from the Tertiary of North America.

Agriotypidæ (ag″ri-ō-tip'i-dē), *n. pl.* [NL.; < *Agriotypus* + *-idæ*.] A family of hymenopterous parasites of the superfamily *Ichneumonoidea*. It contains the single genus *Agriotypus* and the single species *A. armatus*, whose larva is parasitic on trichopterous larvæ.

Agriotypus (ag-ri-ot'i-pus), *n.* [NL. (Walker, 1832), < Gr. *ἀγριος*, wild, + *τύπος*, type.] A remarkable genus of ichneumonoid parasites typical of the family *Agriotypidæ*. Only a single species, *A. armatus*, inhabiting Europe, is known. It descends under the water to lay its eggs in caddis-fly larvæ. Its larva lives inside the cases of the caddis larvæ, and undergoes a hypermetamorphosis, transforming to pupa in a cocoon attached to the wall of the case of the host. To the cocoon is attached a long string-like process, the function of which is unknown.

Agr. M. An abbreviation of L. *Agriculturæ Magister*, Master of Agriculture.

agromania (ag-rō-mā'ni-ą), *n.* [NL., < Gr. *ἀγρός*, open country, + *μανία*, madness.] A morbid impulse to wander or dwell away from human habitations.

Agromyza (ag-rō-mī'zą), *n.* [NL. (Fallen, 1810), < Gr. *ἀγρός*, field, + *μύζειν*, suck.] A genus of acalyptrate flies, typical of the family *Agromyzidæ*, of wide distribution and containing species which in the larval state damage the stems of grasses and small grains. *A. trifolii* is a leaf-miner which affects the leaves of clover.

Agromyza trifolii, Burgess.
a, larva; *b*, puparium; *c*, fly; *d*, antenna of fly. Much enlarged. (Riley, U. S. D. A.)

Agromyzidæ (ag-rō-miz'i-dē), *n. pl.* [NL., < *Agromyza* + *-idæ*.] A family of acalyptrate *Diptera* comprising a series of small dull-colored flies whose larvæ burrow in the leaves and stems of living plants or (as in the genus *Leucopis*) feed on plant-lice and scale-insects.

agronomy, *n.* 2. Specifically, a group of agricultural subjects, particularly when set off as a department of instruction in agriculture. In this use it has not yet acquired a definite meaning, although it is generally held to be limited, properly, to farm crops and methods of cropping. In this signification it includes all forage, hay, cereals, and other general farm crops, but not fruits and other strictly horticultural crops. With the department of agronomy are often associated the subjects of farm-machinery, rural engineering, and rural architecture. [Recent.]

Agronomy as here used is restricted to the theory and practice of the production of farm crops.
T. F. Hunt, The Cereals in America, p. 2.

Agropyron (ag-rō-pī'ron), *n.* [NL., < Gr. *ἀγρός*, a field, + *πυρός*, wheat.] A genus of about 30 annual and perennial species of grasses in Europe and America. *A. repens* is a very common species in America, and is often a troublesome weed. It is known under many names, as *couch-grass, witch-grass, quitch-grass, quack-grass*, etc. It was introduced from Europe. Under certain conditions, it has merit as a forage-plant.

agrotechny (ag'rō-tek-ni), *n.* [Gr. *ἀγρός*, field, + *τέχνη*, art.] That branch of agricultural science which relates to the conversion of raw farm-products into manufactured commodities as far as it is done on the farm or in immediate connection with it. This includes dairying, the drying and canning of fruits, and sugar-making, but not milling nor the spinning and weaving of cotton, etc.

Agrotechny or agricultural technology (including dairying, sugar-making, etc.). *Science*, Nov. 27, 1903, p. 684.

a grotesche (ä grō-tes'ke). [It.] With grotesques: said of a style of decoration consisting of human figures with foliated limbs, in combination with animals, painted usually in yellow on darker grounds on majolica ware.

agrypnode (a-grip'nōd), *a.* [Gr. *ἀγρυπνώδης*, < *ἀγρυπνος*, seeking sleep, sleepless, < *ἀγρεῖν*, seek, hunt, + *ὕπνος*, sleep.] That prevents sleep: as, *agrypnode* fever. *Syd. Soc. Lex.*

aguacate (ä-gwä-kä'tā), *n.* [Nahuatl, *ahuacatl*: the name became in colonial Sp. perverted to **avocate, avocato, avocado, abogado*, etc., and so to *alligator*(-pear).] The alligator-pear. The tree yields a reddish-brown, soft, and very brittle wood. Also known as the *butter-pear* and *vegetable marrow*.

aguacatillo (ä″gwä-kä-tēl'yō), *n.* [Sp., dim. of *aguacate*, the alligator-pear.] A name in Porto Rico of two trees, *Meliosma obtusifolia* and *M. Herbertii*, belonging to the family *Sabiaceæ*. They yield a soft white wood. Also called *cacao bobo*.

aguaji (ä-gwä-hē'), *n.* [Cuban Sp., from a native name.] A Cuban name for species of large bass-like fishes or groupers, especially for *Mycteroperca bonaci*.

aguavina (ä-gwä-vē'nä), *n.* [Amer. Sp., of unascertained origin.] A serranoid fish, *Diplectrum fasciculare*, found in tropical American waters.

aguayo (ä-gwä'yō), *n.* [Aymará of Bolivia.] A many-colored wrap or rectangular piece of woolen cloth used by the Indian women of Bolivia for carrying their children on the back.

ague, *n.* — **Brass-founders' ague,** symptoms of zinc-poisoning in brass-workers who are exposed to the fumes of this metal. — **Irish ague,** typhus fever. — **Shaking ague,** the worst form of the malarial paroxysm, beginning with a pronounced chill.

aguilarite (ä-gi-lä'rīt), *n.* [From *Aguilar*, a personal name.] A rare sulphoselenide of silver found at Guanajuato, Mexico.

aguil-boquil (ä″gēl-bō'kēl), *n.* [Native name.] The Chilean name for the berries of *Lardizabala biternata*, a climbing plant belonging to the family *Lardizabalaceæ*, with enormously long stems, which, after the application of heat, are used in place of ropes.

aguja (ä-gö'hä), *n.* [Sp., a needle: see *aiguille*.] The Cuban name of the needle-fishes or garfishes of the genus *Tylosurus*, as *T. marinus* and *T. notatus*. In Europe the name is also applied to species of *Belone*, as *B. belone* and *B. acus*. — **Aguja blanca,** the lesser or common spear-fish, *Tetrapturus imperator*. [Cuban.] — **Aguja de casta,** the great spear-fish, *Tetrapturus amplus*, a rare fish weighing sometimes 800 pounds. [Cuban.]

agujon (ä-gö-hōn'), *n.* [Sp., < *aguja*, a needle.] The Cuban name of the great garfishes or houndfishes, as *Tylosurus raphidoma* and other species of large size.

agulha (ä-göl'yä), *n.* [Cuban.] A fish belonging to the family *Characinidæ* found in fresh waters of South America.

agurin (ä'gū-rin), *n.* A trade-name for the mixture of sodium acetate and the sodium salt of theobromine. It is used as a febrifuge.

agush (ą-gush'), *adv.* [a^3 + *gush*.] In a gushing state; gushing. *N. Hawthorne*, Fr. and Ital. Note-books, II. 149. *N. E. D.*

Agynian (a-jin'i-ąn), *n.* [ML. **Agyni*, **Agynii*, in Du Cange *Agynni*, pl.; < Gr. *ἄγυνος*, *ἀγύναιος*, without a wife, < *ἀ-* priv. + *γυνή*, woman, wife.] A member of a sect of the 7th century who condemned all intercourse with women.

ahakea (ä-hä-kā'ä), *n.* [Hawaiian.] A name in Hawaii of several species of rubiaceous trees belonging to the genus *Bobea*. They yield a yellowish wood used by the natives for the rims of canoes, and for making poi-boards, canoe-paddles, etc.

ahed, *prep. phr.* as *adv.* or *a.* A simplified spelling of *ahead*.

ahey (ą-hā'), *interj.* [a-9 + *hey*1.] An exclamation used to attract attention or to express mild surprise; O! Oho! hey! *Smollett*, Peregrine Pickle, II. lxvi.

ahgao (äċh'gä-o), *n.* [Given as the pron. in Guam;= Bisaya *abgao*, Tagalog *alagao*: see ★*alagao*.] The name in Guam of *Premna Gaudichaudii*, a tree with bitter leaves and elder-like flowers, which, like those of allied species in the Philippines, the East Indies, and Madagascar, are used medicinally by the natives. The wood, though often crooked and knotty, is very durable and is proof against the attacks of termites, so that it is used for posts of houses and for bridges. See *headache-tree*.

ahia (ä-hē'ä), *n.* [Tahitian.] In Tahiti, a tree, *Caryophyllus Malaccensis*, occurring on all the larger island groups of Polynesia and in the Malay Archipelago. It is everywhere valued for its fine crimson fruit.

ahinahina (ä-hē″nä-hē'nä), *n.* [Hawaiian, < *a* + *hina* + *hina*, gray, hoary.] In Hawaii, a tall, robust composite plant, *Argyroxiphium Sandwicense*, with rose-purple flowers: named from the lustrous silver-gray down which thickly covers the leaves. Also called *silver-sword*.

ahmedi (ä-me-dē'), *n.* [E. Ind.] A gold coin of Mysore, equal to 16 rupees.

Ahnfeltia (än-fel'ti-ą), *n.* [NL. (Fries, 1835), named in honor of N. O. *Ahnfelt* of Lund, Sweden.] A small genus of red algæ (*Rhodophyceæ*), widely distributed in the colder waters of both hemispheres: characterized by a stiff, wiry frond.

ahuehuetl (ä-wā-wā'tl), *n.* [Also *ahuehuete*; Nahuatl (central Mexico).] The swamp-cypress of Mexico, a tree frequently of very large size. The ahuehuetls in the former viceregal park of Chapultepec, near the city of Mexico, are noted for their size; but the most famous of all is the big tree at Santa Maria del Tule, in the Mexican state of Oaxaca. The circumference of this tree exceeds 130 feet.

ahuhu (ä-hö'hö), *n.* [Hawaiian.] A name in Hawaii of *Cracca purpurea*, a leguminous plant used by the natives for stupefying fish. It possesses a narcotic property affecting the action of the heart. The plant is spread over a great part of tropical Asia and Australia. Also called *auhola*.

ahum (ą-hum'), *adv.* [a^3 + *hum*.] In a hum; humming: as, the air is all *ahum* with the sound of bees.

ahunt (ą-hunt'), *adv.* [a^3 + *hunt*.] On the hunt; hunting. *Browning*, Aristoph. Apol., p. 272.

ahypnia (a-hip'ni-ą), *n.* [NL., erroneously formed from Gr. *ἀ-* priv. + *ὕπνος*, sleep. The proper form would be **anypnia*, < NGr. **ἀνυπνία*, < MGr. *ἀνυπνος*, sleepless, < Gr. *ἀν-* priv. + *ὕπνος*, sleep.] Same as *insomnia*.

Aianteia (ā-yan-tē'yą), *n. pl.* [NL., < Gr. *Αἰάντεια*, neut. pl. of *Αἰάντειος*, adj., < *Αἴας* (*Αἰαντ-*), Ajax.] In *Gr. antiq.*, a festival in honor of Ajax. Three of them were commonly celebrated, one at Opus in Locris in honor of Ajax, son of Oïleus; one at Salamis in honor of Ajax, son of Telamon; and one at Athens in honor of Ajax, son of Telamon. In these festivals a bed was prepared on which was placed an effigy of the hero, as in the Lectisternium at Rome.

aianthous (ā-ī-an'thus), *a.* [Gr. *ἀεί* (Æolic *ἀϝ*), always, + *ἄνθος*, flower.] Ever-blooming, that is, blossoming through a large part of the season. *F. E. Clements*.

aichmophobia (āk-mō-fō'bi-ą), *n.* [NL., more reg. *æchmo-*, < Gr. *αἰχμή*, point of a spear, etc., + *-φοβία*, < *φοβεῖν*, fear.] 1. A morbid fear of touching sharp-pointed objects, such as needles and pins. — 2. A morbid fear of being touched by the finger or any slender object.

aid1, *n.* 6. In the navy, an officer on the staff of an admiral whose duties are similar to those of an aide-de-camp to a general. — **First aid,** immediate attention given to the injured, with the object of arresting hemorrhage, relieving pain, and preserving life until the services of a physician can be obtained.

aidant, *a.* **II.** *n.* A helper or aid; an adjuvant or assistant. *Sir R. Phillimore*, Law Reps.

Aiden, Aidenn (ā'dęn), *n.* A fanciful form of *Eden*. *Poe*, Raven.

A. I. G. An abbreviation of *Adjutant Inspector-General*.

aigialosaur, *n.* See ★*ægialosaur*.

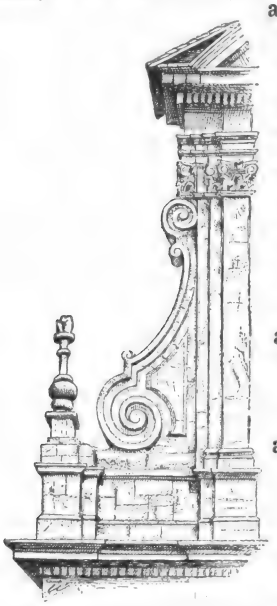
aigues mortes (āg môrt). [F., dead waters.] Stagnant waters left in an abandoned river-channel, as when an ox-bow is cut off from a river. *Geikie*.

ailantery (ā-lan′tėr-i), *n.*; pl. *ailanteries* (-iz). [*ailantus* + *-ery.*] A grove of ailantus-trees.

ailantine, *a.* **II.** *n.* Silk from the silkworm which feeds on the ailantus-tree.

ailantus-worm (ā-lan′tus-wėrm″), *n.* The larva of the bombycid moth, *Philosamia cynthia* Drury, which feeds on the foliage of the ailantus. It is a native of Japan and Java, where its silk is utilized to some extent. It has been introduced for sericicultural purposes into Europe and the United States without practical result, and now occurs commonly in the wild state in the coast cities of the United States.

aile, *n.* A simplified spelling of *aisle.*



Aileron, from façade of Church of Santa Maria in Via, Rome.

aileron, *n.* **2.** In *arch.*, that piece of the end wall, as of nave or transept, which covers the end of the aisle-roof. It resembles a wing of the main or central structure.—**3.** In a flying-machine, a small supplementary surface fitted at an extremity of a main plane; a fin.

aim, *n.*—**Point of aim,** in *archery*, the point at which aim should be taken in order to hit the target.

aimak (ī′mak), *n.* [Mongol.] A group of families, probably originally related by blood, forming the principal political unit among the Mongols. Each aimak is governed by its own chieftain.

aimara (ī-ma-rä′), *n.* [Tupi *aimará.*] A Brazilian name of *Macrodon malabaricus*, a river fish of the family *Erythrinidæ.*

Aimé's nephoscope. See ★*nephoscope.*

aimworthiness (ām′wėr-thi-nes), *n.* Excellence of aim. *Blackmore,* Lorna Doone, liv. *N. E. D.*

ain[2] (īn), *n.* [Ar. *'ain*, the letter *ain*, also an eye, a fountain, essence, = Heb. *'ayin*, the letter, also an eye.] 1. The eighteenth letter of the Arabic alphabet, having a vibratory palatal sound without any equivalent in English.—2. A spring; a fountain. See the extract.

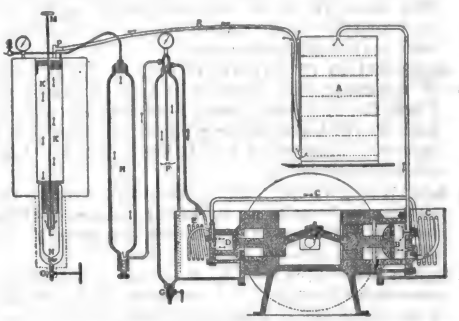
> Most of the . . . artesian wells [in the oases of the Libyan desert], known locally as "*ains*," are ancient.
> *Geog. Jour.* (R. G. S.), XVI. 655.

ainalite (ā′nal-īt), *n.* A variety of cassiterite containing about 9 per cent. of tantalum pentoxid.

Ainu (ī′nö), *n.* See *Aino.*

aipim (ā-i-pēm′), *n.* [Also *aypim, aypi.* A (former) native name (Tupi?).] The name in Brazil of the sweet cassava. See *cassava*, 1, *Manihot*, and *manioc.*

air[1], *n.* **1.** The air constituting the earth's atmosphere, in addition to the principal gases, nitrogen and oxygen, and the other gaseous substances long known to be present, contains in admixture five gases distinguished by their chemical inertness, viz.: helium, neon, argon, krypton, and xenon. All of these appear to be elementary substances. Argon occurs to the extent of nearly 1 per cent. by volume or 1½ per cent. by weight, the others in far smaller proportion. Free hydrogen, as well as methane and perhaps other hydrocarbons, is also probably present. Within recent years apparatus has been constructed for the liquefaction of air on a large scale by compressing it by means of powerful pumps, cooling it in the compressed state, and allowing it to expand again. The only commercial use which has been found for liquid air is as a source of oxygen gas in a fairly pure state, in demand mainly for medicinal purposes.—**Complemental air.** Same as *complementary* ★*air.*—**Complementary air,** the air which can be drawn into the lungs by an effort after the ordinary inspiration is completed.—**Empyreal air** (Scheele) and **vital air** (Condorcet), names given to oxygen soon after it became known in the separate state.—**Hampson's liquid-air apparatus,** an apparatus designed by W. Hampson for the liquefaction of air. It consists of a purifier (A) filled with trays spread with moist slaked lime, and a double-cylinder compression-pump (B and D) worked by a 5-horse-power electric motor, by which the air is compressed in B to 16 atmospheres, and after being cooled in the water-jacketed coil C is again compressed to 160–180 atmospheres in D. Again cooled in the coil E, the air passes to G, where water used for lubricating the pistons separates. The vessel H is filled with caustic potash, which removes the last traces of water and carbon dioxid. The liquefaction takes place in the next apparatus, known as the *liquefier.* It has either two or four copper coils wound coaxially about a spindle and joined at their lower ends to a vertical jet. The coils fill the whole space KK.



Hampson's Liquid-air Apparatus.
(From Travers's "Exper. Study of Gases.")

The jet L can be closed by means of a rod which screws down on the top of it and which can be adjusted to form an annular opening by the milled screw-head M. The coils are inclosed by a cylinder of insulating material, except the lower part and the valve, which are contained in a vacuum vessel, N. The liquid air is run off through the tap O. The air which escapes liquefaction passes upward over the coils and through P and R to A. The actual quantity of the air which is liquefied is 5 per cent. of the quantity which passes through the apparatus. The yield in an apparatus of this size is 1–1.5 liters of liquid air an hour. In a newer form of liquefier the liquid air collects in a metal reservoir placed within the insulation, its quantity being indicated by a glycerol-gage.—**Liquid air.** See *liquefaction of gases*, under *liquefaction.*—**Mephitic air,** a name early in use to signify an irrespirable gas or mixture of gases. It applied chiefly to carbon dioxid as in the choke-damp of coal-mines, but was also used for the mixture of this gas with nitrogen in air in which a candle had ceased to burn or an animal to breathe.—**Supplemental air.** Same as *residual air* (which see, under *air*[1]).

air-bag, *n.* **2.** The presser of a pneumatic molding-machine. It consists of bags inflated with air, by which an elastic and equal pressure is imparted to the sand. *Lockwood,* Dict. Mech. Eng. Terms. Air-bags are also used in cases where a uniformly distributed pressure is desired, as in blue-printing frames.

air-barometer (ār″ba-rom′e-tėr), *n.* An apparatus devised by F. H. King to determine small oscillations in the level of well-water depending on small oscillations of atmospheric pressure. It consists of a large vessel full of air buried deep in the soil in order to keep its temperature constant; some mercury rests at the bottom of the vessel, and into this dips a tube extending vertically above the surface of the ground. The changes of air-pressure force the level of the mercury in the tube to change correspondingly, and these changes are recorded on a revolving drum.

air-beat (ār′bēt), *n.* In *acoustics*, an individual pulse of air such as may be felt mechanically where the waves from a vibrating body are of very low frequency. For frequencies within the auditory range the air-beats cannot be separately distinguished, but blend into a tone.

air-bell (ār′bel), *n.* **1.** In *Auronectæ*, a large roundish gas-secreting organ, probably a modified swimming-bell; an aurophore.—**2.** A small bubble which appears on a photographic plate, sensitized paper, or film.

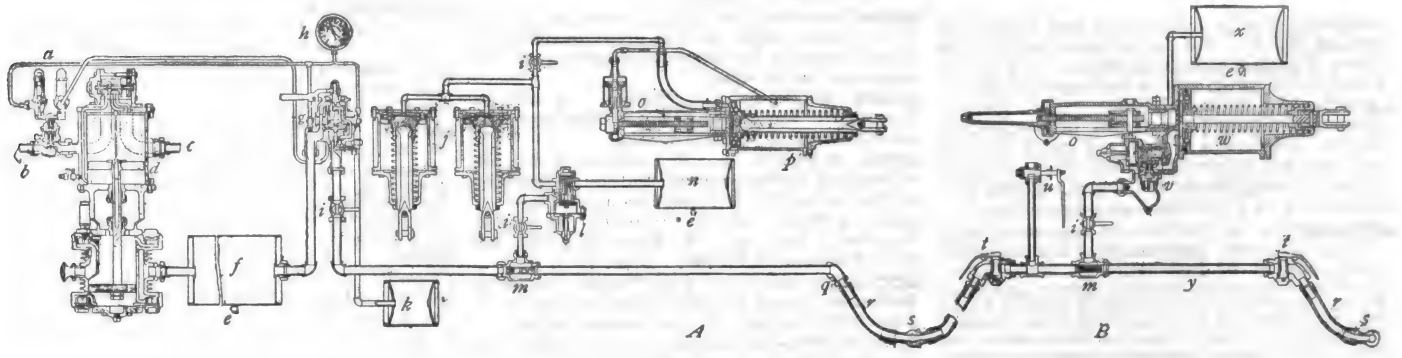
air-belt (ār′belt), *n.* An annular space around the twyer zone of a cupola. The air passes from this space into the twyers instead of going directly from the blast-pipe.

air-billow (ār′bil-ō), *n.* An air-wave which is long and gentle; specifically, a wave produced at the boundary surface between two horizontal layers of air having different velocities and directions: analogous to the waves on the surface of water.

air-bladder, *n.* **3.** See ★*air-float.*—**4.** In *entom.*, one of the numerous bladder-like endings of smaller tracheæ in the bodies of many insects, which, filled with air, greatly reduce the specific gravity of the insect.

air-bound (ār′bound), *a.* Bound or stopped up so that the passage of air is prevented: in *plumbing*, said of a water- or drain-pipe so obstructed.

air-brake, *n.*—**Automatic air-brake,** a form of air-brake which automatically applies the brake-shoes to the wheels with maximum pressure on each car in a train, without the aid or knowledge of the engineer or train-crew, whenever, from any cause, a rupture occurs in the brake-pipe which runs throughout the length of the train—as, for example, when the train breaks in two. Compressed air is supplied from large main reservoirs on the locomotive, through the brake-pipe, to smaller auxiliary reservoirs on each car, and a 'triple valve' forms the connection between the brake-pipe, auxiliary reservoir, and brake-cylinder. Any fall in pressure in the brake-pipe causes the triple valve to connect the brake-cylinder with the auxiliary reservoir and to apply the brakes. When the brake-pipe pressure is reinstated, the triple valve connects the brake-cylinder with the atmosphere and the auxiliary reservoir with the brake-pipe. The automatic brake was invented by George Westinghouse in 1872.—**Quick-action automatic air-brake,** an improved form of air-brake by which the time required to apply the brakes in an emergency on a train of fifty freight-cars was reduced one half. The improvement consisted in enlarging the brake-pipe and changing the triple valve (see ★*valve*) by enlarging the ports and passages, and also by adding a secondary valve portion by which, in emergency application, a part of the brake-pipe pressure is vented into the brake-cylinder, thereby increasing the brake-cylinder pressure and hastening the fall of brake-pipe pressure, thus causing the successive application upon each car throughout the train to occur much more rapidly. In ordinary service applications the operation of the quick-action automatic air-brake does not differ



Quick-action Automatic Air-brake.

A, Engine Equipment: *a*, duplex pump-governor; *b*, from boiler; *c*, exhaust; *d*, nine and one half inch air-pump; *e*, drain-cock; *f*, main reservoir; *g*, engineer's brake-valve; *h*, gage; *i*, cut-out cock; *j*, driver brake-cylinders; *k*, equalizing reservoir; *l*, plain triple; *m*, air-strainer; *n*, truck and driver brake reservoir; *o*, automatic slack-adjuster; *p*, truck brake-cylinder; *q*, angle-fitting; *r*, hose; *s*, hose-coupling. *B*, Car Equipment: *t*, angle-cock; *u*, conductor's valve; *m*, air-strainer; *i*, cut-out cock; *v*, quick-action triple valve; *o*, automatic slack-adjuster; *w*, car brake-cylinder; *e*, drain-cock; *x*, auxiliary reservoir; *y*, train-pipe; *r*, hose; *s*, hose-coupling. The tender equipment (omitted) is similar to the car equipment.

from that of the plain automatic above mentioned. This improved form was invented by George Westinghouse in 1887.— **Straight-air brake,** the original form of air-brake, in which the brake-pipe connects the brake-cylinder on each car to a valve on the locomotive, by means of which the engineer can allow air-pressure to flow from the large reservoirs on the locomotive directly to each brake-cylinder to apply the brakes, or he can connect the brake-pipe with the atmosphere to release the brakes. In this system the brake-pipe is under pressure only during an application of the brakes. This form of brake was first patented in England early in the nineteenth century, and was first applied to railway service in America by George Westinghouse in 1869.

air-cataract (ãr′kat″a-rakt), *n.* A device to check the vibrations or oscillations of a body, and also to cushion or soften the blow of a body brought suddenly to rest. It consists of an air-cylinder having a moving piston or disk attached to the body whose motion is to be checked or damped. The confined air, being allowed to escape only through small openings in the end of the cylinder or through the piston or disk, checks the vibration or the motion of the piston and the body to which it is attached.

air-chamber, *n.* **4.** A septal chamber in the nautilus and other chambered cephalopods like the ammonites, goniatites, and orthoceratites. The name was commonly thus employed in the belief that these spaces, successively abandoned by the animal as the forward growth of the shell continues, were filled with air which facilitated the flotation of the shell when the animal chose to rise to the surface of the sea. It is now regarded as doubtful if gases ever enter these chambers during life. Verrill has pointed out that water has access to the elastic siphuncular tube, "but living, as the animal does, under pressure at considerable depths, the fluid in the chambers is saturated with the gases in solution. When the *Nautilus* is rapidly brought to the surface, some of the gas is liberated in consequence of diminished pressure and must occupy part of the space within the chambers by forcing out some of the fluid. Hence the shell will float until the free gases within the chambers are absorbed or otherwise eliminated." Also termed *camera* and *loculus*.

5. In *bot.*: (*a*) One of the mostly prismatic intercellular spaces occurring in aquatic plants. (*b*) The intercellular area beneath a stoma.

air-channel (ãr′chan″el), *n.* **1.** A channel for the passage of air.— **2.** *pl.* Channels underneath the hearths or in the brickwork of the walls and fire-bridges of reverberatory furnaces, designed to protect the foundations from the intense heat of the furnace as well as to preheat the air entering the furnace.

air-compartment (ãr′kǫm-pärt″ment), *n.* An air-tight subdivision of a shaft or other mine passage for the ventilating current.

air-compressor, *n.* **2.** A combined steam-engine and air-compressing cylinder, or a compressing-cylinder operated by a motor or by belting. A typical form has 4 horizontal cylinders arranged in tandem pairs. One pair is composed of the high-pressure cylinder of the engine and the first air-compressing cylinder; the other pair consists of the larger, low-pressure steam-cylinder and a second and larger cylinder which recompresses the air already compressed in the first cylinder. Each pair has one piston-rod which unites the pistons in each cylinder and extends beyond the steam-cylinder through a connecting-rod to a fly-wheel, the two rods thus being joined and moving together through the fly-wheel. Each air-cylinder is water-jacketed to keep it cool and to absorb and carry away the heat of compression. The air compressed in the first cylinder passes to the second cylinder through a group of pipes inclosed in a large pipe which carries a stream of cold water that absorbs more of the heat of compression from the air, and is again compressed. From the second cylinder the compressed air may pass through a second cooler or be delivered direct to the air-receiver for storage and cooling, ready for use in rock-drills or other air-motors.

air-condenser (ãr′kǫn-den″sėr), *n.* **1.** An electric condenser made by having two thin metal plates separated by a layer of air, one plate being connected to a positive pole and the other to a negative pole from the same circuit. The action of such a condenser is exactly the same as that of a Leyden jar; when there is sufficient potential to overcome the resistance, the condenser discharges.

2. A condenser for steam in which air is used for cooling the condensing surface instead of water: used on some motor-cars.

air-cooled (ãr′kǒld), *p. a.* Cooled by a current of air; having its heat carried off by passing cool air over its surface.

air-craft (ãr′kraft), *n.* Any air-sailing craft. Also *aëro-craft*.

air-cube (ãr′kūb), *n.* The amount of air in a closed space available for respiratory purposes by each person occupying it. It is expressed by the cubic contents of the space divided by the number of persons.

air-cure (ãr′kūr), *n.* Same as *aërotherapeutics*.

air-cushion, *n.*, **4.** Specifically, a volume of air imprisoned behind a movable piston in a chamber which it fits. The air, by its compression, gradually arrests the motion of the piston. Used as a safety appliance at the foot of elevator-shafts to catch and stop the fall of the cage in case of the breaking of the hoisting-rope or other accident.

air-cylinder, *n.* **2.** Any cylinder in which air is used, as in an engine run by compressed air instead of by steam.

air-door (ãr′dōr), *n.* A door for the regulation of currents of air through the workings of a mine. *Coal and Metal Miners' Pocket-book.*

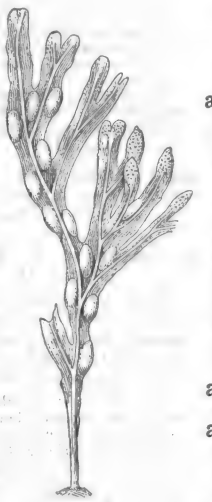
air-drain, *n.* **3.** A pipe or flue built into a fireplace to insure an ample supply of air.

air-duct, *n.* **2.** In *building,* same as ★*air-drain,* 3.— **3.** In the heating and ventilation of buildings, a large pipe, often built of wood or thin metal, used to transmit air, either cold or hot.

air-embolism (ãr′em″bǭ-lizm), *n.* Air-bubbles in a blood-vessel, causing obstruction of the flow of blood.

air-extractor (ãr′eks-trak″tor), *n.* A device for separating air from a liquid.

air-float (ãr′flōt), *n.* A bladder formed in the fronds of certain *Phæophyceæ,* or brown algæ (*Fucus, Ascophyllum, Sargassum,* etc.), which serves to float the plant in the water and possibly assists fertilization. Also *air-bladder* and *air-vesicle*.

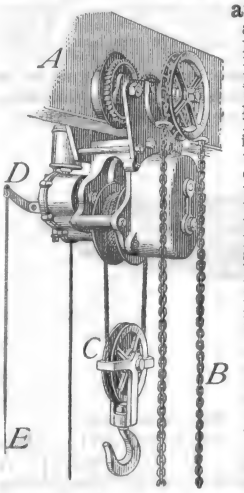


Fucus vesiculosus, showing air-floats. (From Murray's "Introd. . . . to Seaweeds."

air-funnel, *n.* **2.** In *zoöl.,* the lower, gas-secreting portion of the pneumatocyst of physophorous siphonophores.

air-gap (ãr′gap), *n.* In *elect.,* the opening or space between the poles of a magnet or between the armatures and pole-pieces of a dynamo or motor; that portion of a magnetic circuit which contains no iron; the space between the terminals of an electrostatic machine, induction-coil, or discharger.

air-gas, *n.*— **Harcourt air-gas pentane standard,** a mixture of 3 cubic feet of air and 9 cubic inches of liquid pentane, a product of American petroleum distilling at a temperature below 50° C. and having a specific gravity between .6298 and .63, producing 4.05 cubic feet of standard air-gas. This gas is burned at a burner with an orifice of ¼ inch to produce a flame 2½ inches high, with a consumption of gas of .48–.52 cubic feet an hour. The light of this flame is equal to that of a British standard candle. First suggested by A. G. Vernon-Harcourt in 1877.



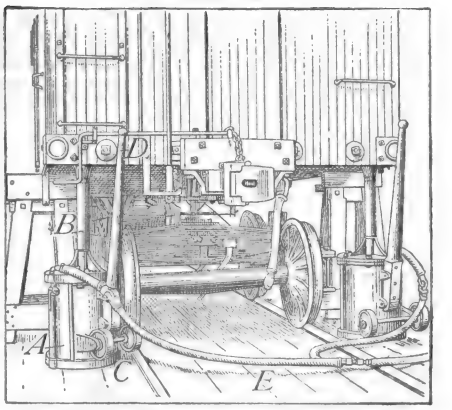
Motor Air-hoist.

A, trolley on flange of I-beam; *B,* chain controlling trolley; *C,* hoisting-block and chain; *D,* motor for hoist; *E,* chain controlling *D*.

air-hoist, *n.*— **Cylinder air-hoist,** an air-hoist employing a long cylinder fitted with a piston and piston-rod, the weight to be lifted being suspended from the lower end of the latter. The compressed air is delivered through hose to the lower end of the cylinder, forcing the piston upward and lifting the weight. To lower the load the air is released and the piston allowed to fall slowly. The load can be held at any point of the hoist and safety appliances prevent the too sudden rise or fall of the piston through loss of load or loss of air-pressure. Cylinder-hoists are hung by a hook in fixed positions or attached to a trolley traveling on an overhead track, to the jib of a crane, or to a traveling-crane. Telescopic cylinders are used where head-room is limited.— **Motor air-hoist,** a chain-hoist operated by an air-motor. It may be suspended in a fixed position or from a trolley traveling on an overhead track or on a traveling-crane.

air-insulated (ãr′in″sū-lā-ted), *p. a.* In *elect.* or *heat,* insulated by means of an intervening layer of air.

air-jack (ãr′jak), *n.* A lifting-jack operated by compressed air. It consists of an upright cylinder with a piston, the piston-rod acting as the lifting-arm of the jack. In one form the cylinder is telescopic. It is



Pair of Air-jacks.

A, cylinder; *B,* piston-rod used to lift the car; *C,* wheels, and *D,* handle, for moving the air-jack; *E,* air-hose from compressor.

usually fitted with wheels for transportation, and is used in railroad car-shops.

air-jacket, *n.* **2.** A space surrounding a steam-cylinder or other vessel within which is circulated hot air or gas, or within which ordinary air is confined without circulation: used to diminish loss of heat by radiation through the walls of the cylinder and to lessen cylinder-condensation of steam back to water. Its function is the same as that of the steam-jacket. Since air is one of the best non-conductors of heat when it is not allowed to circulate, an air-jacket may also be used to keep the cylinders of a refrigerating apparatus from being warmed by the outside air.

3. A closed space, usually annular, about some part of a machine or piece of apparatus, designed to secure uniformity of temperature.

air-jacket (ãr′jak″et), *v. t.* To provide with an air-jacket. See ★*air-jacket, n.*, 2.

air-jig (ãr′jig), *n.* In *mining,* a machine which effects the separation of minerals according to their specific gravity by intermittent rising currents of air which lift the lighter particles of gangue and permit the heavier metallic minerals to settle. The light tailings flow off at the top and the concentrates are discharged from below by some mechanical device. The Paddock-Hooper pneumatic concentrator and the Vrom air-jig are the principal machines of this class.

air-leak (ãr′lēk), *n.* In *electrostatics,* the loss of charge, in the case of an insulated body, due to the discharging action of the surrounding air.

air-level (ãr′lev″el), *n.* A level or airway of former workings made use of in subsequent deeper mining operations for ventilating purposes. *Coal and Metal Miners' Pocket-book.*

air-lift (ãr′lift), *n.* A device for raising water from deep wells by means of compressed air. It comprises an air-compressor and two pipes open at the lower end and placed one within the other in the well. The compressed air passes down the inside pipe to the bottom of the well, where it rises through the larger pipe and through the water which fills the lower part of it, carrying the water upward with it and delivering it at the surface. The system can be so applied to a group of wells as to lift several million gallons a day.

air-liquefier (ãr′lik″wē-fī-ėr), *n.* An apparatus for converting air under pressure into liquid air by the effect of cooling.

airman (ãr′man), *n.* One who navigates the air; an aviator. *N. and Q.,* Oct. 1, 1910, p. 265.

airmanship (ãr′man-ship), *n.* Skill in aviation. *N. and Q.,* Oct. 1, 1910, p. 265.

air-meter, *n.*— **Biram's air-meter,** a modification of the Casella air-meter in which a large light radial fan is kept in rotation by the current of air to be measured. The apparatus is usually graduated so as to show the volume of fresh air that passes through the shaft leading to a mine or a room that needs ventilation.

airol (ãr′ōl), *n.* [Arbitrary word intended as a trade-mark.] A greenish-gray, fine, voluminous, odorless, and tasteless powder. It is absorbent and antiseptic.

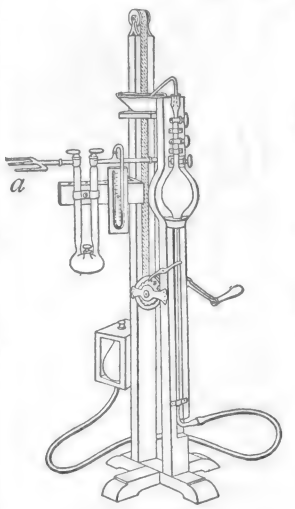
air-plate (ãr′plāt), *n.* A plate perforated to allow the passage of a limited amount of air; a perforated baffle.

air-pressure (ãr′presh″ūr), *n.* The barometric pressure or elastic pressure of the atmosphere. It is expressed in pounds per square inch, or in dynes per square meter, or, more commonly, by the height of the mercurial column of the barometer, and sometimes in units of one standard atmosphere.

air-proof (ãr′pröf), *v. t.* To protect from injurious action of the air or of some of its ingredients, as by a suitable varnish applied to the material to be protected.

air-pump, *n.*— **Duplex air-pump,** a form of air-pump in which two air-pumping cylinders are placed

side by side in pairs, the piston-rod of each being the prolongation of the piston of the steam-cylinders (also in pairs) which drive them; specifically, a form of air-pump for air-brake service in which one of the cylinders is twice the diameter of the other but of the same stroke. Both air-cylinders draw in air from without on the intake stroke, but the larger delivers into the smaller on the completion of the intake stroke of the latter. Hence three volumes of free air are delivered in each double stroke. —**Geissler's mercury air-pump**, an apparatus used for producing a vacuum, consisting essentially of a reservoir which can be filled with or emptied of mercury by raising or lowering another containing mercury and connected with the former by a flexible rubber hose. By the proper adjustment of stop-cocks the air or gas exhausted from a vessel attached at *a* is dried by passing through a U-tube containing a desiccating material, usually phosphorus pentoxid, and is either collected over mercury held in a trough or is driven into the air. A barometer-gage indicates the degree of exhaustion. The raising and lowering of the reservoir holding the mercury are effected either by hand or by the use of a simple mechanical device.—**Toepler's mercury air-pump**, a modified form of the Geissler air-pump, in which a glass valve replaces the controlling stop-cock and a barometer-tube serves to permit the exhausted air to escape.



Geissler's Air-pump.

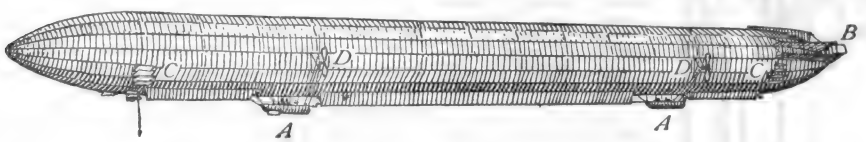
air-regenerator (ãr′rē-jen″ē-rā-tọr), *n.* The regenerator through which atmospheric air passes to be heated on its way to a steel-melting or reheating furnace, a zinc furnace, a coke-oven, etc. It is larger than the corresponding gas-regenerators.

air-register (ãr′rej″is-tėr), *n.* Same as *register*[1], 8.

air-sac, *n.* **3.** In *bot.*, a cavity in a pollen-grain of the genus *Pinus*.

air-separator (ãr′sep″a-rā-tọr), *n.* In *mining*, a machine which effects the separation of minerals according to size or density by air, either by pulsating rising currents (see ★*air-jig*); or by a continuous blast, as in the Edison, Hochstedt, and other dust-separators; or by projecting the particles to be separated by mechanical means into still or moving air, as in the centrifugal separators of the Pape-Henneberg and Clarkson-Stanfield types.

airship (ãr′ship), *n.* A buoyant balloon provided with a motor, propellers, and rudders, so that it can navigate the air under the control of an aëronaut; a dirigible balloon. Such balloons are made in various elongated, more or less cigar-shaped, forms and have successfully traversed long distances under good control. The first notably successful experiments with the dirigible balloon were made by Renard, in France, 1884–85; he attained a velocity of 14 miles an hour and was able (as a rule) to return to his starting-point. In 1900 Count Zeppelin made short voyages over Lake Constance in a dirigible of his own design, which has been remodeled and improved until in 1909 it made voyages of several hundred miles. Other successful experimenters have been Santos-Dumont, whose air-ships (successive models) accomplished notable results in 1900 and 1901, Lebaudy in France, Gross and Parseval in Germany, and Thomas S. Baldwin in the United States.



Airship Zeppelin III.
A, A, engines; *B*, rudder; *C, C*, dipping-planes; *D, D*, propellers.

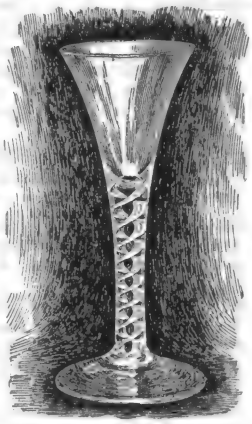
air-stone (ãr′stōn), *n.* [*air*[1] + *stone*.] A meteorite. [Rare.] *N. E. D.*

air-tap (ãr′tap), *n.* A cock or valve fixed in the air-pipe in hot-water apparatus, to allow of the escape of air from the series, which without this means of exit would accumulate therein. The air-tap is placed at the highest point in the series of pipes. Air-taps in pumps and engines are called pet-cocks. *Lockwood*, Dict. Mech. Eng. Terms.

air-tester (ãr′tes-tėr), *n.* An apparatus for testing the quality of air, as in inhabited apartments.

air-trap, *n.* **3.** A small funnel of glass fastened in the inside of a barometer-tube to catch any bubbles of air that would otherwise rise through the mercury into the vacuum-chamber.

air-twist (ãr′twist), *n.* A bubble of air which is sometimes contained in the stem of a vessel of glass, and which, in twisting, becomes a hollow spiral.



Glass Vessel, showing Air-twist.

The secret of the construction of two of the classes — namely, the brilliant, and the combined opaque and *air-twist* — seems to have been lost.
Wynn Penny, English Eighteenth Century Drinking Glasses. Burlington Mag., III. 63.

air-twisted (ãr′-twis″ted), *p. a.* Having an air-twist. See ★*air-twist*.

air-valve, *n.* **3.** In an engine-cylinder, and particularly on the locomotive engine, a valve which is held shut by steam-pressure when the throttle-valve is open, but which opens by a spring to admit atmospheric air when the throttle is closed and the pistons keep on moving from the momentum of the mass of engine and train. In the absence of such a valve the pistons reduce the pressure behind them, after a stroke or two, to a point at which the pressure in the cylinders is much less than that of the atmosphere; and when the exhaust-passage is opened a rush of air back through it will carry into the cylinders the products of combustion from the smoke-box, including cinders and grit, which are injurious to the working-surfaces. Such air-valves are placed on the steam-chest or connect with the steam-passages.

air-vesicle, *n.* **3.** Same as ★*air-float*.

air-washer (ãr′wosh-ėr), *n.* An appliance in which a current of moving air may be cleansed from dust or other particles, and from some polluting gases, by passing through water. The cleansing water may fall in a shower across the moving air by escaping from perforated pipes or through perforated metal screens; or the air may be compelled to escape by pressure under the lower edge of a plate which is immersed an inch or two in the water.

air-wave (ãr′wāv), *n.* A wave in the atmosphere. It may be either a wave of compression and rarefaction, like those of sound; or a tidal effect like the ocean tides; or a wave of progression like that produced by the outburst from Krakatua in 1883. In the case of the Krakatua outburst, the wave moved around the globe several times at an average velocity of 700 miles an hour, and the accompanying sound-wave was heard several hundred miles away.

ais (ä-ēs′), *n.* [Native name.] A name in Ponape, Caroline Islands, of *Parinari laurinum*, a tall tree having oblong leathery leaves.

Aitken's coke-oven. See ★*coke-oven*.

Aizoaceæ (ā″i-zō-ā′sē-ē), *n. pl.* [NL. (Alexander Braun, 1864), ⟨ *Aizoön* + *-aceæ*.] A family of dicotyledonous, archichlamydeous (apetalous or choripetalous) plants, the carpet-weed family, of the order *Chenopodiales*, typified by the genus *Aizoön*. See *Ficoideæ*.

aizoaceous (ā″i-zō-ā′shius), *a.* [NL. *Aizoaceæ* + *-ous*.] Having the characters of or belonging to the family *Aizoaceæ*.

Aizoön (ā-i-zō′on), *n.* [NL. (Linnæus, 1753, adopted from his "Genera Plantarum," 1737), ⟨ Gr. ἀείζωον, an evergreen plant, supposed to be the houseleek, ⟨ ἀεί, ever, + ζωός, living.] **1.** A genus of dicotyledonous plants, type of the family *Aizoaceæ*. They are evergreen spreading herbs or small shrubs, with fleshy, entire leaves, and

axillary, solitary or cymose, yellow flowers. The ten species are natives of the warmer parts of the old world, six being found in South Africa and one in Australia, while the others occur mainly in the Mediterranean region. The most widely distributed species is *A. Canariense*, which occurs in the Canary and Madeira Islands, in the Azores, South Africa, and through southern Asia to India. *A. Hispanicum* is a characteristic plant of southern Italy and Spain, also occurring in northern Africa and extending eastward to Persia.

2. Sometimes used as a specific name for plants of a low and tufted, persistent character, as *Anthemis Aizoön*, *Saxifraga Aizoön*.

aja (ä′yä), *n.* A South-African Dutch form of the East Indian *ayah*, a nurse; a lady's-maid.

ajacol (a-jak′ol), *n.* An oleaginous fluid, congealing to a crystalline mass at low temperatures. It has the same properties as guaiacol. Also called *guaethol* and *thanatol*.

ají (ä-hē′), *n.* [Sp., formerly *axi*; of W. Ind. (Taino) origin.] A red pepper. See *pepper*, *chilli*, and *pimento*.—**Ají dulce**, the sweet pepper, *Capsicum annuum*.—**Ají picante**, the fruits of *Capsicum frutescens* and *C. baccatum*, the pungent red peppers used in the preparation of Cayenne pepper.

ajo (ä′hō), *n.* [Sp., ⟨ L. *allium*, garlic.] **1.** The garlic, *Allium sativum*.—**2.** A very large tree of Peru and Bolivia, *Cordia alliodora*, which when wounded gives forth from its bark and leaves a penetrating odor of garlic. See *garlic*.

ajog (a-jog′), *adv.* [*a*[3] + *jog*.] On a jog; at a leisurely pace. *G. Meredith*, The Egoist, II. 100.

ajonjoli (ä-hōn-hō-lē′), *n.* [Sp., *ajonjolí*, *aljonjolí*.] The sesame, *Sesamum orientale*, the seed of which, also called *benneseed*, yields a bland oil. See *sesame*.

Ajuga (a-jö′gä), *n.* [NL., ⟨ *a-* priv. + L. *jugum*, yoke.] A genus of hardy, herbaceous, European perennials, members of the family *Menthaceæ*, creeping by stolons, and commonly known as ★*bugle-weed*. Some of them are grown as garden plants, in rockeries and borders, although they are not generally known in America. Of the 30 known species, *A. Genevensis*, *A. pyramidalis*, *A. reptans*, and *A. metallica* are most common in gardens.

ajugate (a-jö′gāt), *a.* [*a*-[18] + *jugate*.] Having no jugum.

ajutment (a-jut′ment), *n.* [Irreg. ⟨ *a-* + *jut* + *-ment*, after *abutment*.] A jutting out; a projection. [Rare.]

The *ajutment* of a hill toward the sea.
Marryat, Peter Simple, III. 323. *N. E. D.*

ak (äk), *n.* [Hind. *āk*, ⟨ Skt. *arká*, name of a tree or shrub, lit. ray, or sun.] The red-flowered form of *Calotropis gigantea*. See *madar* and *yercum*. [Northern India.]

aka (ä′kä), *n.* [Maori *aka*, name of the plant, lit. long fibrous roots: see ★*aalii*.] A climbing epiphyte of the myrtle family, *Metrosideros scandens*. It completely envelops the tree on which it grows, which ultimately dies, the wood decaying. The epiphyte remaining forms a hollow cone. [New Zealand.]

akaakaawa (ä″kä-ä″kä-ä′wä), *n.* [Hawaiian, ⟨ *aka-aka* (Maori *kata*), laugh at, + *awa*, fine rain or mist. The plant is found in greatest profusion in humid mountain ravines near the spray of waterfalls.] *Hillebrandia Sandwicensis*, a beautiful plant of the begonia family, bearing clusters of delicate pink-and-white flowers. [Hawaii.]

akaakai (ä-kä″ä-kä′ē), *n.* [Hawaiian.] In Hawaii, a bog-plant, *Scirpus lacustris*, the stems of which are used in making mats and bags.

akahara (ä-kä-hä′rä), *n.* [Jap., ⟨ *aka*, red, + *hara*, belly.] The Japanese name of a large chub of the family *Cyprinidæ*, *Leuciscus baknensis*, found in the waters of Japan. Also known as *ugui*.

akala (ä-kä′lä), *n.* [Hawaiian.] In Hawaii, a native species of raspberry, *Rubus Macræi*. The fruit often attains a diameter of nearly two inches, is of a deep-red color, is very juicy, and, although slightly bitter, is agreeable to the taste. The name is also sometimes given to another raspberry, *Rubus Hawaiensis*, the fruit of which is not so large and is dry and unpalatable.

akanthion, *n.* See ★*acanthion*.

akaroa-tree (ä-kä-rō″ä-trē), *n.* [Maori.] The New Zealand lace-bark or ribbon-tree. See *Plagianthus*.

akaryota (a-kar-i-ō′tä), *n. pl.* [Gr. *ἀ-* priv. + *κάρυον*, nut (nucleus).] In *biol.*, non-nucleated cells, as opposed to nucleated cells or karyota.

akasha (ä-kä′shä), *n.* [Skt. *ākāça*, clear space, ether.] Ether; one of the five gross elements (the others being air, fire, water, and earth) which, according to the Sānkhya system of Indian philosophy, make up the visible world; the subtile fluid which fills and pervades infinity and is supposed to be the peculiar vehicle

of life and sound. Unlike air (*vāyu*), which is always moving and penetrates only where it can find an entrance, akasha is perfectly immovable and exists everywhere.

akcha (åkh'chä), *n.* [Also *akchek, aqcha;* < Turk. *akcha, aqcha,* money, coin, cash, a monetary value, an asper; as adj. rather white, whitish: see *asper*[2].] A very small Turkish silver coin of the value of ½ para.

ake[2] (ā'kā), *n.* [Maori, < *ake,* onward, *ake ake ake,* for ever and ever. The allusion is to the durable qualities of the wood.] **1.** In New Zealand, a small tree, *Dodonæa viscosa,* of the soapberry family, with very hard variegated wood.—**2.** In the Chatham Islands, a small tree, *Shawia Traversii* (*Olearia Traversii* of Hooker), of the aster family.

akea (ä-kē'ä), *n.* Same as ★*akia.*

akeratophorous (a-ker-a-tof'ō-rus), *a.* Same as *aceratophorous.*

akerite (ak'e-rīt), *n.* [Norw. *Aker,* a locality in Norway, + *-ite*[2].] In *petrog.,* a term applied by Brögger (1890) to a syenite containing much plagioclase, with biotite, augite, and some quartz.

akermanite (åk'ėr-man-īt), *n.* [For Richard *Åkerman,* a Swedish mineralogist.] An artificial mineral species closely related to melilite: identified in certain slags.

Akhmimic (äċh-mim'ik), *a.* and *n.* **I.** *a.* Of or pertaining to Akhmim or to its language.

II. *n.* One of the main divisions of Coptic, spoken in the neighborhood of Akhmim.

akhter (äk'tėr), *n.* [E. Ind.] A copper coin of Mysore, equal to one fourth of a paissa or pice.

akhyana (ä-ki-ä'nä), *n.* [Skt. *ākhyāna,* tale (cf. *ākhyā,* name), < *ā-* + *vkhyā,* call, name.] A tale; a story; a legend. *Encyc. Brit.,* XXVI. 431.

akia (ä-kē'ä), *n.* [Hawaiian.] A name in Hawaii of several shrubs belonging to the genus *Capura,* of the family *Daphnaceæ,* particularly of *C. viridiflora* (*Wikstrœmia viridiflora* of Meissner), found also in the Society, Samoan, and Fiji Islands. The bark contains an acrid narcotic principle, and is used by the natives for narcotizing fish in fresh water. The stems yield a strong, flexible bast-fiber. Also spelled *akea.*

akiahala (ä-kē″ä-hä'lä), *n.* [Hawaiian.] In Hawaii, a small shrub, *Hibiscus Youngianus,* with pink flowers.

Akinesia algera. [Gr. *ἀλγηρός,* painful.] Loss of the power of motion as a result of pain.

akinesis (ak-i-nē'sis), *n.* In *biol.,* direct cell-division or the amitotic multiplication of cells.

akinete (ak'i-nēt), *n.* [Gr. *ἀ-* priv. + *κινητός,* movable: see *kinetic.*] The resting-spore of certain algæ formed directly from a vegetative cell by the simple thickening of the wall and without rejuvenescence. Same as *hypnocyst.* See ★*aplanospore.*

akinetic (ak-i-net'ik), *a.* [Gr. *ἀ-* priv. + *κίνησις,* change, movement.] **1.** Same as *akinesic.*—**2.** In *cytol.,* without perceptible internal movements: a term applied to that form of cell-division which is not karyokinetic. Same as ★*amitotic,* ★*karyostenotic,* or *direct* (cell-division).

akkum (ak'kum′), *n.* [Heb. *'akkum,* formed of the initials of a Hebrew phrase of three words meaning a worshiper of the stars and constellations.] A star-worshiper, originally a Chaldean star-worshiper: applied in the Talmud to heathen idolaters; a pagan. Also *akum.*

akolea (ä-kō-lā'ä), *n.* [Native name.] A name in Hawaii of a large fern, *Phegopteris Hillebrandi.*

akoulation, *n.* See ★*acoulation.*

akouphone (ak'ö-fōn), *n.* [Incorrectly formed from Gr. *ἀκούειν,* hear, + *φωνή,* sound.] The trade-name of an appliance for enabling the deaf to hear, constructed on the analogy of the telephone.

akra (äk-rä'), *n.* [Hind. and Hindi *akrā.*] In India, a common name for the vetch or tare, *Vicia sativa.* See *Vicia.*

akreophagist, *n.* Same as ★*acreophagist.*

akreophagy, *n.* Same as ★*acreophagy.*

akrocephalic, *a.* See *acrocephalic.*

akromegaly, *n.* See ★*acromegaly.*

akule (ä-kö'le), *n.* [Hawaiian.] A Hawaiian name of the goggle-eyed scad, *Trachurops crumenophthalmus.* Called *atule* in Samoa.

akum, *n.* See ★*akkum.*

akund (ä'kund), *n.* [Hind., < Hindi *akund,* the tree.] The dried root-bark of *Calotropis gigantea,* extensively used in Indian medicine, especially as a substitute for ipecacuanha in dysentery.

al[1], *n.* The name is applied in India to several species of *Morinda,* especially to *Morinda citrifolia* and *M. tinctoria,* trees belonging to the madder family, which grow spontaneously and are also cultivated for the sake of the dye obtained from the bark of their roots and stem. The smallest roots yield the most valuable dye, the stem the most inferior. The al dye is gradually supplanting the more expensive red obtained from the Indian madder, or chaya root (*Oldenlandia umbellata*), with which the celebrated Madras handkerchiefs and turbans were formerly dyed. *Morinda citrifolia,* the principal al-tree, is widely spread throughout the East Indies, the west coast of Africa, and the islands of the Pacific Ocean, where its fruit is sometimes eaten by the natives. See ★*noni.*

al-[3], A nominal prefix, actually a reduction of *alcohol* in certain arbitrary formations, as *aldehyde* (and its numerous recent derivatives), ★*althionic,* etc. Compare *-al*[2]. Compare *alk-* in words like ★*alkamine,* etc. (where *alk-* represents G. *alkohol*), and *-ol,* representing the last syllable of *alcohol.*

-al[2]. In *bridal, burial,* etc., a nominal suffix, associated with *-al*[1], but actually of different origin, according to the history of each word. See the etymologies of the words cited.

-al[3]. [*al*(*cohol*), *al*(*dehyde*). See ★*al-*[3].] In *chem.,* a termination now recognized as signifying that the body named is an aldehyde, or derived from alcohol. Thus ordinary aldehyde is also called ★*ethanal,* that is, the aldehyde of ethane.

A. L. A. An abbreviation of *American Library Association.*

Ala magna sphenoidei, in *ichth.,* same as *proötic;* a lateral cranial bone just in front of the exoccipital. As used by Hallmann it is a synonym of the alisphenoid of Parker; as used by Erdl it is a synonym of the sphenotic of Parker.—**Ala orbitalis,** in *ichth.,* a term applied by Stannius to the alisphenoid bone.—**Ala parva,** in *ichth.,* same as *opisthotic.*—**Ala parva sphenoidei,** in *ichth.,* the basisphenoid bone.—**Ala temporalis,** in *ichth.,* the proötic bone.

alaalawainui (ä″lä-ä″lä-wä″ē-nö'ē), *n.* [Hawaiian, < *alaala,* soft, flabby, + *wai,* water, + *nui,* be great. The name refers to the succulent nature of the plant.] In Hawaii, a plant of the genus *Peperomia.*

Alabama (al-a-bä'mä), *n.* [NL. (Grote, 1895), < *Alabama,* the State.] A genus of noctuid moths containing one species, *A. argillacea* Huebner. It is notorious as a destroyer of the cotton-plant in the southern United States, where its larva is known as the *leaf-caterpillar* or *chenille.* Formerly known as *Aletia xylina.*—**Alabama china.** See ★*china.*—**Alabama shad.** See ★*shad*[1].

alabandite (al-a-ban'dīt), *n.* See *alabandine.*

alacreatine (al-a-krē'a-tin), *n.* [L. *ala,* wing (?), + *creatine.*] A compound, NH: $C(NH_2)NHCH(CH_3)CO_2H$, a combination of cyanamide with *a*-aminopropionic acid; *a*-guaninopropionic acid.

alacreatinine (al-a-krē-at'i-nin), *n.* [*alacreatine* + *-ine*[2].] The anhydrid, $C_4H_7N_3O$, of alacreatine, formed by heating the latter to 180° C.

alagao (ä-lä-gä'o), *n.* [Tagalog *alagao* (also *sahugo,* < Sp. *saúco*) = Bisaya *abgao,* also *adgao.*] A Philippine tree, *Premna vestita,* of the *Verbena* family. Its bitter leaves and its flowers are used medicinally by the natives. The tree is generally known to Spaniards living in the Philippines by the name of *saúco* (elder), owing to the resemblance of its flowers to those of *Sambucus nigra.* In its medicinal qualities it resembles the allied *Premna Gaudichaudii* of the island of Guam and *P. integrifolia* of the East Indies and Madagascar. See *headache-tree.*

alalonga (ā-lä-long'gä), *n.* [Appar. < L. *ala longa,* 'long wing.'] Same as *long-finned albacore.*

alang (ä'lang), *n.* See ★*alang-alang.*

alang-alang (ä″lang-ä'lang), *n.* [Malay *ālang-ālang.*] A grass, *Imperata arundinacea,* widely spread in the tropics, growing on land which has gone out of cultivation. Also called *alang* and, in the Philippines, *cogon.* [Malay Archipelago.]

alani (ä-lä'nē), *n.* [Hawaiian.] In Hawaii, a timber-tree of the rutaceous genus *Ptelea.* The wood is used in building canoes.

alantic (a-lan'tik), *a.* [G. *alant,* elecampane, + *-ic.*] Obtained from elecampane.—**Alantic acid,** the hydroxyacid $OH.C_{14}H_{20}CO_2H$, corresponding to alantolactone. It crystallizes in needles which melt at 94° C.

alantoic (al-an-tō'ik), *a.* [G. *alant,* elecampane, + *-oic.*] Derived from elecampane.—**Alantoic acid,** a colorless compound, $C_{14}H_{20}(OH)COOH$, found in the drug elecampane.

alantol (a-lan'tōl), *n.* [G. **alantol* (?), < *alant,* elecampane, + *-ol.*] Same as *alant camphor* (which see, under *camphor*).

alantolactone (a-lan″tō-lak'tōn), *n.* [G. *alant,* elecampane, + *lactone.*] Same as *helenin.*

Alar membrane, the elongate triangular membrane lying on the anterior edge of a bird's wing and running from wrist to shoulder-joint; the prepatagium.—**Alar septa,** in the extinct *Tetracoralla,* the two prominent lateral septa or vertical plates in the calyx, one on each side, from which the adjoining septa branch pinnately: contrasted with the *cardinal* and *counter septa.*

Alaria, *n.* **2.** A genus of platypodous gastropod mollusks of the family *Aporrhaidæ.* They have a turreted spire, expanded and spinous outer lip, and long apertural canal. Shells of this genus are very abundant in the Jurassic and Cretaceous rocks.

alarm, *n.*—**Still alarm.** See *still.*[1]

alarm-buoy (a-lärm'boi), *n.* A buoy provided with a bell or a whistle to make its presence known at night or in a fog.

Alaska cedar, dab. See ★*cedar,* ★*dab*[2].

alaskite (a-las'kīt), *n.* **1.** See *alaskaite.*—**2.** In *petrog.,* a name proposed by Spurr (1900) for igneous rocks composed almost wholly of alkalic feldspar and quartz without other essential minerals. It is a group-term embracing many granular and porphyritic rocks which have been called *granite, rhyolite, haplite, elvan, granulite, eurite, granitel,* etc. The distinct lava forms corresponding to alaskite in composition are called *tordrillite* by Spurr.

alastor, *n.* **2.** [*cap.*] A genus of bats from the Upper Eocene phosphorites of France.

Alaunian (a-lâ'ni-an), *a.* and *n.* [L. *Alauni,* Gr. *Ἀλαυνοί,* a people of Noricum.] **I.** *a.* In *geol.,* in the Triassic formation of the Mediterranean province, noting a substage corresponding to the middle division of the Juvavic stage, which lies just below the Rhætic and above the Carinthian stage. The Juvavic appears to correspond to the lower Rhætic of Germany, and the Alaunian, therefore, is correlated with the lower part of that formation.

II. *n.* The Alaunian substage.

albacore, *n.*—**Great albacore,** the tunny or tuna, *Thunnus hynnus.*

albahaca (äl-bä-hä'kä), *n.* [Sp. *albahaca,* basil, < Ar. *al,* the, *ḥabaq,* pennyroyal.] A name applied in Guam, the Philippines, Peru, and Porto Rico to several aromatic plants of the mint family, especially to *Ocimum Basilicum* and *O. sanctum,* which are cultivated for culinary and medicinal purposes. See *Ocimum, toolsi,* and *basil*[1].

Albany slip, zone. See ★*slip,* ★*zone.*

albardin (äl-bär-dēn′), *n.* [Sp., of Ar. origin.] A shoreweed, *Lygeum Spartum,* of southwestern Europe and northern Africa: similar in its use to esparto and sometimes included under that name.

Albata metal. See ★*metal.*

Albatrossia (al-ba-tros'i-ä), *n.* [NL., named for the exploring steamer *Albatross,* U. S. N.] A genus of grenadiers of the family *Macruridæ,* cod-like fishes of the deep seas. *A. pectoralis* is found in Bering Sea.

albecore, *n.* See *albacore.*

Albedo unguium, the lunula of the nails.

albene (al'bēn), *n.* [L. *albus,* white, + *-ene.*] The substance formed by boiling melam with water. It is white and insoluble.

alberello, *n.* Same as *albarello.*

Alberini's process. See ★*process.*

albert (al'bėrt), *n.* [Named, about 1860, from Prince *Albert,* consort of Queen Victoria.] A short watch-chain made with a cross-bar designed to be passed through a buttonhole.

Albert and Albertine ware. See ★*ware*[2].

Albian (al'bi-an), *a.* and *n.* [So named from the department of *Aube* (L. *Albia,* < *albus,* white), France.] **I.** *a.* In *geol.,* noting the lower division of the Upper Cretaceous formation in Belgium and France, equivalent to the Galt and Upper Greensand of England. The deposits consist of argillaceous marls, greensand, and limestone and are highly fossiliferous.

II. *n.* The Albian division.

albinescent (al-bi-nes'ent), *a.* [*albino* + *-escent.*] Showing a tendency to albinism. *Nature,* March 16, 1893.

albinic (al-bin'ik), *a.* [*albin*(*o*) + *-ic.*] Marked by albinism or absence of pigment.

Two of the sons, apparently, married wives who were 'pure dominants,' *i. e.,* who were entirely free from the recessive (*albinic*) character. *Science,* Jan. 9, 1903, p. 75.

albino, *n.* **4.** In Mexico, a person who has one eighth negro and seven eighths Spanish blood; the child of a Morisco woman (who is the daughter of a mulatto mother and a Spanish father) and of a Spaniard.

Albion ware. See ★*ware*[2].

albirupean (al-bi-rō′pē-an), *a.* [L. *albus*, white, + *rupes*, rock.] Containing white rocks. —**Albirupean group**, in *geol.*, a series of sand-beds occurring along Chesapeake Bay and regarded by the Maryland geologists as of Lower Cretaceous age.

Albite law, the law of twinning of albite. See *albite twin*, under *twin*.

albitite (al′bi-tīt), *n.* [*albite* + *-ite*².] In *petrog.*, a name proposed by Turner (1896) for granular igneous rocks consisting essentially of albite. Such rocks occur in dikes in the Sierra Nevada mountains of California.

albitization (al″bi-ti-zā′shon), *n.* [*albite* + *-ize* + *-ation*.] The process of transforming into albite; the alteration of some preëxisting mineral, such as lime-soda-feldspar, into albite. *Geikie*, Text-book of Geol., p. 790.

albiventral (al-bi-ven′tral), *a.* [L. *albus*, white, + *venter*, belly.] Having a white belly or under parts, as is the case with many birds.

albot (al′bō), *n.* [NL., orig. abl., in the phrase *in albo*, of L. *album*: see *album*.] Same as *album*.

Albo-carbon burner, a burner provided with a chamber containing solid naphthalene, which, being volatilized by the heat of the gas-flame, enriches the inflowing gas and thus increases its luminosity.

albocracy (al-bok′ra-si), *n.*; pl. *albocracies* (-siz). [L. *albus*, white, + Gr. *-κρατεία*, ‹ *κρατεῖν*, rule.] Government by white men, that is, by men of European origin. *R. N. Cust*, Linguistic Essays, p. 303. [Rare.] *N. E. D.*

albodactylous (al-bō-dak′ti-lus), *a.* [L. *albus*, white, + Gr. *δάκτυλος*, finger.] Having white wings. [Rare.]

albolene, alboline (al′bō-lēn, -lin), *n.* [L. *albus*, white, + *-ol-* + *-ene* or *-ine*².] An unctuous substance derived from petroleum: used for the same purposes as vaseline.

albo-pruinose (al-bō-prō′i-nōs), *a.* [L. *albus*, white, + *pruina*, frost, + *-ose*.] Covered with a thin white powdery bloom: said of the surface of certain plants, especially the stipes and caps of some pileate fungi.

alboranite (al-bō-ran′īt), *n.* [*Alboran* (see def.) + *-ite*².] In *petrog.*, a name proposed by Becke (1899) for hypersthene-andesite rich in lime, the type occurring in the island of Alboran. Loewinson-Lessing considers alboranite as essentially a hypersthene-basalt without olivin.

Albright (âl′brīt), *n.* One of the 'Albright People,' the name given to the Evangelical Association founded by Jacob Albright. See *Evangelical Association*.

albronze (al′bronz), *n.* [*al*(*uminium*) + *bronze*.] An alloy of aluminium with copper and tin or of aluminium with bronze, used for bearings where lightness of weight and durability are required; aluminium bronze.

Albuginaceæ (al-bū-ji-nā′sē-ē), *n. pl.* [NL., ‹ *Albugo* (*Albugin-*) + *-aceæ*.] A family of phycomycetous fungi typified by the genus ★*Albugo*.

albugo, *n.* 2. [*cap.*] [NL. (S. F. Gray, 1821).] In *mycol.*, a genus of fungi erroneously called *Cystopus* (which see).

albulignosine (al″bū-lig′nō-sin), *n.* [*albu*(*men*) + *ligiose* + *-ine*².] A material obtained by the action on wood of a solution of sodium sulphite boiling under pressure, making the liquid acid, and adding albumen: proposed for use as a sizing and mordanting agent.

albumeant (al-bū′mē-an), *a.* [Irreg. ‹ *album* + *-e-an*.] Of or pertaining to albums, or the pressing invitations of friends or acquaintances to contribute to their albums. *Lamb*, Letters, xvii. 156. [Rare.]

Albumen color. See ★*color*.—**Albumen dyestuff.** Same as *albumen* ★*color*.

albumen-gland (al-bū′men-gland″), *n.* In certain mollusks, as *Helix*, a glandular organ of which the thick viscid secretion probably serves to envelop the eggs.

I dissected one specimen, but was unable to obtain a clear view of either the central nervous system or the reproductive organs. The latter, as usual in this family, were extremely complicated, both the prostate and *albumen-gland* appearing to be extensively ramified.
Proc. Zool. Soc. London, 1903, I. 257.

albumin, *n.* The albumins are highly complex organic bodies which enter prominently into the composition of all animal and vegetable tissues and form the groundwork, so to speak, of every living cell. They are the most important food-stuffs of all classes of animal life, and can be elaborated by the chlorophyl-bearing plants from such simple substances as water, carbon dioxid, and certain nitrates or ammonium salts. All albumins contain carbon, hydrogen, oxygen, nitrogen, and sulphur in definite proportions which vary but little in the different members of the group: one albumin, which is found in the thyroid, also contains iodine. Other elements are not met with in albumins proper, but are encountered in certain compound albumins, in which an albuminous radical is united with other more or less complex groups. Thus hemoglobin contains iron, hemocyanin copper, and the nucleo-albumins and nucleoproteids phosphorus. All albumins also contain variable amounts of mineral salts in firm combination. Their molecular size is very large. For crystallized egg-albumin Hofmeister established the formula $C_{239}H_{386}N_{58}S_2O_{78}$, which corresponds to a molecular weight of 5,378. The protamins and histons apparently have the smallest molecules, while the compound albumins are proportionately heavier: the weight of oxyhemoglobin has thus been determined as 14,800. The greater number of the albumins are amorphous. A few, however, can be obtained in crystalline form, such as egg-albumin, serum-albumin, oxyhemoglobin, and certain vegetable albumins, as edestin, etc. The so-called Bence Jones albumin, which has been met with in the urine in certain pathological conditions (multiple myeloma), also belongs to this order. All true albumins are levorotatory, while certain compound albumins (the nucleoproteids) turn the plane of polarization to the right. Osborne has shown that this property, in the case of the nucleoproteids, is very likely wholly referable to the nucleinic acid complex which they contain. All albumins — owing to the great size of the molecule, no doubt — are incapable of diffusing through animal membrane or vegetable parchment. Some members of the group are soluble in water, others only in dilute saline solution, and still others in dilute acids and alkalis. From their solutions they can be precipitated by mineral acids, the salts of the heavy metals, the so-called alkaloidal reagents (as tannic acid, phosphotungstic acid, iodomercuric iodide, etc.), strong alcohol, and certain neutral salts (sodium chlorid, magnesium sulphate, sodium sulphate, and notably ammonium sulphate). All albumins further give certain color-reactions, of which the biuret reaction (production of a bluish or reddish violet-color on the addition of very dilute copper-sulphate solution in the presence of an excess of strong caustic alkali) is especially characteristic. The true albumins are all coagulated by heat. As a result they lose their individual characteristics and are then said to be denaturized. After this they can be brought into solution only by means which at the same time will produce integral changes in their composition. From study of the various cleavage-products which result from the albumins on hydrolysis by boiling mineral acids and alkalis, by digestion with the proteolytic ferments, etc., a certain insight is now possible into the complex structure of the albuminous molecule. Thus it appears that various α-amido acids (as leucin, tyrosin, asparaginic acid, glutaminic acid), and the diamido acids (ornithin, lysin, etc.), exist in the albuminous complex in the form of Fischer's polypeptides, which have the general structure represented by the formula $NH_2.(CH_2.CO.NH)_n.CH_2.COOH$. These in turn are combined with other groups, such as the sulphur-containing cystin complex, the glucosamin-group, etc., to form still more complex radicals, which are further combined with similar groups to even larger complexes, which last in turn are again united with correspondingly large groups to form the complete molecule. Evidence of the correctness of this supposition is furnished by a study of the products of albuminous digestion. Here we find among the primary products of cleavage three complex bodies which individually differ from one another and which in the intact molecule were manifestly in combination. These are the three primary albumoses, termed *proto-albumose*, *heteroalbumose*, and *glucoalbumose*. The first-mentioned on further decomposition yields diamido acids in small amount, much tyrosin, little leucin, no glycocol, etc.; while the second contains diamido acids in large amount, much leucin, no tyrosin, and the total amount of glycocol of the original substance. Glucoalbumose in turn contains the entire carbohydrate-group and a larger percentage of oxygen, while the amount of nitrogen and carbon is less than in the two other groups. (See also ★*products of digestion*.) The albumins may be divided into 5 classes, namely the *native albumins*, the *nucleo-albumins*, the *proteids*, the *albuminoids*, and the *derived albumins*. Examples of the first group are the serum-albumin and serum-globulin of the blood-plasma, the ovalbumin of white of egg, the lactalbumin of milk, and the myosin and myogen of muscle-plasma. The same group further comprises the glucoalbumins, which are characterized by the special predominance of a carbohydrate-group, and of which the various mucins and mucoids are common representatives; further, the markedly sulphurous ceratins of the skin and related substances (hair, horn, etc.); then the histons and the closely related protamins. These latter represent albumins of simplest structure, and are fairly typical representatives of Fischer's polypeptides. Kossel's salmin thus apparently consists only of an ornithin complex, associated with tyrosin, serin, tryptophan, and α-pyrrolidin-carbonic acid. The second group of albumins is formed by the nucleo-albumins or phosphoglobulins. These are more complex than the members of the first group in having a special phosphorized radical in combination with an albuminous complex. They comprise many important food-stuffs, such as the casein of milk, the vitellins of the yolks of birds' eggs, the ichthulin of fishes' eggs, besides the phytoglobulins or phytovitellins of the leguminous plants. The third class is represented by the proteids, which are complex albumins, containing an albuminous group united with other complex radicals. In the nucleoproteids, which are important constituents of cell-nuclei, we find nucleinic acid, from which the so-called purin or xanthin bases and uric acid are derived. In the hemoglobins we meet with pigment radicals: so in the common coloring matter of the blood, the hemoglobin, with hematin. The albuminoids, which form the fourth group, in contradistinction to those already mentioned, are notably constituents of intercellular structures and thus especially abundant in the skeletal parts of the animal body. To this group belong the collagens or glutins of fibrous tissue and cartilage, the elastin of elastic tissue, the various skeletons found in the supporting structures of the invertebrates, etc. The last class comprises substances which are albuminous derivatives, but still possess albuminous character, such as the coagulated albumins and

the various intermediary digestive products, including the albuminates, albumoses, and peptones.—**Bence Jones albumin**, formerly known as the *Bence Jones albumose*. Shown by Magnus Levy and Simon to be a true albumin. Its presence in the urine seems to be invariably associated with a fatal disease known as multiple myeloma.—**Circulating albumin**, the albumin which exists in the fluids of the body and not in the solid tissues.—**Ferrier's albumin process.** See ★*process*.—**Iodized albumin**, in *photog.*, albumin containing an iodide.—**Martin's albumin negative process.** See ★*process*.—**Mayall's albumin negative process.** See ★*process*.—**Toxic albumin**, a poisonous substance supposedly of albuminous character; for example, the specific poison produced by the diphtheria organism. Also called *toxalbumin*.

albuminate, *n.*—**Weyl's albuminate**, an insoluble modification of a globulin which results from the latter on prolonged exposure to water.

albuminic (al bū min ik), *a.* Pertaining to or derived from albumin: as, *albuminic* acid. According to Schmiedeberg, ferratin is a ferri-albuminic acid.

albuminimeter, *n.*—**Esbach's albuminimeter**, an apparatus for the estimation of albumin in urine. The tube is filled with urine to the mark *u*, and with the reagent (which consists of an aqueous solution of citric acid 2 per cent. and picric acid 1 per cent.) to the mark *r*. After thorough mixing the tube is set aside for twenty-four hours. The volume of the precipitate, as read from the graduations, indicates the parts of albumin per thousand of urine.

Esbach's Albuminimeter. *r*, mark for reagent; *u*, mark for urine; 1–7, grams albumin per thousand.

albuminize, *v. t.*—**Albuminized collodion.** See ★*collodion*.

albuminoid, *n.* The albuminoids represent a class of albumins which, in contradistinction to the albumins proper, are essential components of the intercellular structures and result from the albumins, in the narrower sense of the term, through the activity of cellular elements. As a class they do not contain all the typical radicals of the pure albumins, and for this reason, no doubt, their nutritive value is distinctly less than that of the albumins proper. They are largely found in the supporting tissues of the animal body, namely, the connective tissue, cartilage, and bone. The group comprises collagen (gelatin), elastin, spongin, fibroin, albumoid, etc. Also called *glutinoid*.

albuminometer (al-bū-mi-nom′e-tėr), *n.* Same as *albuminimeter*.

albuminometry (al-bū-mi-nom′e-tri), *n.* The measurement of the amount of albumin in any fluid, such as the urine.

albuminose, *a.* **II.** *n.* Same as ★*albumose*.

albuminuria, *n.*—**Cyclic albuminuria**, a condition in which albumin appears in the urine for a short time at about the same period each day.

albuminuric, *a.* **II.** *n.* One who suffers from albuminuria.

It was found that, classing all *albuminurics* in one group, the percentage of mortality was decidedly increased.
Med. Record, Feb. 14, 1903.

albumoid (al′bū-moid), *n.* [*album*(*en*) + *-oid*.] An albuminoid found in the cartilage of full-grown animals. It is insoluble in all neutral solvents and dissolves in acids and alkalis only with great difficulty.

albumoscope (al-bū′mō-skōp), *n.* [*album*(*ine*) + Gr. *σκοπεῖν*, view.] A glass instrument for detecting and estimating the quantity of albumin in urine. The urine is made to float on the surface of strong nitric acid poured gently into a funnel-tube. The albumin appears at the zone of contact of the two liquids.

Albumoscope.

albumose (al′bū-mōs), *n.* [*albu*-*m*(*en*) + *-ose*. In effect short for ★*albuminose*.] A name of derived albumins (see ★*albumin*) which result from the albumins proper, as also from the albuminoids and the albuminous radicals of the nucleo-albumins and -proteids, through the action of proteolytic ferments, or on decomposition by means of acids or alkalis. Their formation is preceded by the denaturization of the albuminous molecule and, in the case of the use of acids or alkalis, by the formation of acid albumins and alkaline albuminates respectively. During the process of digestion primary albumoses first result, which are subsequently transformed into secondary or deuteroalbumoses, and these in turn into peptones and simpler bodies. In their quantitative composition the albumoses do not differ materially from the original albumins, but their molecular weight is lower. As a result, no doubt they are more readily soluble, and as a class not altogether indiffusible through animal membrane or vegetable parchment. They can be separated from one another by fractional precipitation by means of certain neutral salts, notably ammonium sulphate. The albumoses which are derived from the albumins proper, in contradistinction to those resulting from the albuminoids, are also called *proteoses*. The majority of the commercial peptone preparations are essentially mixtures of albumoses.—**Toxic albumose**, an albumose with toxic properties.

albumosuria (al″bū-mō-sū′ri-ą), *n.* [*albumose*

+ Gr. *οὖρον*, urine.] In *pathol.*, the presence of albumose in the excreted urine.

Alburnus (al-bėr′nus), *n.* [NL.: see *alburn.*] A genus of small minnows, known as *bleaks*, found in the waters of Europe. *A. alburnus* is the common bleak.

albus (äl′bös), *n.* [G., < L. *albus*, white.] A German copper coin equivalent to 12 hellers at Cassel and Cologne.

alcaldía (äl″käl-dē″ä), *n.* [Sp.] 1. The office or jurisdiction of an alcalde.—2. The building where an alcalde transacts the business of his office.

alcapton, alcaptonuria. See ★*alkapton*, ★*alkaptonuria*.

alcassuz (äl-käs-sös′), *n.* [Pg., *alcaçuz.*] In Brazil, the name of the native licorice, *Periandra Mediterranea*, the root of which is used in medicine, like that of the common licorice.

alcelaphine (al-sel′ą-fin), *a.* [NL. *alcelaphinus*, < *Alcelaphus*, a genus of antelopes.] Relating to the antilopine genus *Alcelaphus*, or to this with related genera considered as forming a division of the family *Bovidæ*. *Flower and Lydekker*, Mammals, p. 334.

Alchemilla (al-kē-mil′ä), *n.* [NL.] A genus of hardy perennial herbs of the family *Rosaceæ*, allied to *Sanguisorba*. The flowers are corymbose and inconspicuous. They are suitable for rockeries and front rows of borders, although little grown. There are about 35 species, natives of the Old and New Worlds, most abundant between Mexico and Chile.

Alchornea (al-kôr′nē-ä), *n.* [NL. (Swartz, 1788), named in memory of Stanesby *Alchorne*, an English botanist and chemist who died about 1799.] A genus of dicotyledonous plants belonging to the family *Euphorbiaceæ*. They are trees or shrubs with alternate leaves and small flowers clustered on simple or panicled terminal spikes or racemes. About 50 species are known, widely distributed in the warmer parts of both hemispheres. For *A. ilicifolia*, see *Cœlebogyne*.

Alcidea (al-sid′ē-ä), *n.* [NL., < Gr. *ἀλκη*, elk, + *εἶδος*, resemblance.] A genus of deep-sea sculpins of the family *Cottidæ*. *A. thoburni* is found off the coast of California.

alcogel (al′kō-jel), *n.* [*alco(hol)* + *gel(atin).*] Silicic acid separated in gelatinous condition by means of alcohol.

alcohol, *n.*—**Acetone alcohol.** Same as ★*acetol.*—**Alcohol lamp.** See ★*lamp.*—**Pyroracemic alcohol.** Same as ★*acetol.*—**Tolane alcohol,** the name given to a substance of somewhat uncertain composition, said to be formed by the action of ethyl alcohol on benzoin.—**Whey alcohol,** an alcoholic liquor prepared from milk by fermentation of the lactose or milk-sugar.—**Denatured alcohol.** See ★*denaturization*.

alcoholase (al′kō-hol-ās″), *n.* A ferment of vegetable origin which supposedly causes alcoholic fermentation during anaërobic respiration.

alcoholic, *a.* **II.** *n.* 1. One who indulges to excess in alcoholic beverages, or who is suffering from the systemic effects of alcohol.—2. A remedy the chief therapeutic value of which depends upon the presence of alcohol.

The unadministered *alcoholics* are catalogued by genera on cards and located so that any jar can be found at once. *Smithsonian Report*, 1900, p. 38.

alcoholize, *v. t.*—**Alcoholized paper,** in *photog.*, paper prepared with an alcoholic solution containing milk-sugar, zinc iodide, and zinc bromide. The paper is afterward sensitized with a solution of silver acetonitrate acidified with glacial acetic acid.

alcohol-motor (al′kō-hol-mō″tor), *n.* An internal-combustion motor in which alcohol vapor is burned explosively; an alcohol-engine; an engine which uses alcohol as fuel for its source of heat.

alcornoco (äl-kôr-nō′kō), *n.* Same as *alcornoque*.

alcove, *n.* (*d*) A recess in an escarpment formed by the more rapid retrogressive erosion of one part than of another.—**Alcove system,** a method of arranging books in a library, or of exhibiting specimens in a museum, in which each subject and each class has an alcove or series of alcoves to itself.

Alcyonacea (al″si-ō-nā′sē-ä), *n. pl.* [NL., < *Alcyon(ium)* + *-acea.*] An order or suborder of *Alcyonaria* in which the skeleton consists of loose spicules embedded in a well-developed canaliferous cœnenchyma without axial skeletal rod. The group contains the families *Xeniidæ*, *Alcyonidæ*, and *Nephthyidæ*. Nearly equivalent to *Alcyoniaceæ*.

alcyonacean (al″si-ō-nā′sē-an), *a.* and *n.* **I.** *a.* Of, pertaining to, or resembling the *Alcyonacea*.

II. *n.* One of the *Alcyonacea*.

Alcyonaria, *n. pl.* 2. A subclass of *Anthozoa*, containing the orders *Stolonifera*, *Alcyonacea*, *Pseudaxonia*, *Axifera*, *Stelechotokea*, and *Cœnothecalia*.

aldane (al′dān), *n.* [*ald(ehyde)* + *-ane.*] A name proposed by Riban to designate a compound formed by the condensation of two molecules of an aldehyde with the loss of water.

aldea (äl-dā′ä), *n.* [Pg., < Ar. *al-dai'a*, a farm or village.] A villa or country-seat. *Yule and Burnell.* [East Indies.]

aldeament (al-dē′a-ment), *n.* [Brazilian Pg. *aldeamento*, < Pg. *aldear*, lodge in villages, < *aldéa*, *aldeia*, a village: see ★*aldea.*] In Brazil, a settlement in which natives who have submitted to the government, or to missionary influences, are gathered. See *reduction* (*e*). *F. Boas.*

While the Government and the missions have succeeded with great difficulty with others, as for the Bororo, with their hostile indisposition to link their interests with those of the colonists and to settle in permanent *aldeaments*, the plan to interest them in the cultivation of the soil did not succeed.

Smithsonian Report, 1896, pp. 574, 575.

Aldebaran (äl″de-bä-rän′ or al-deb′a-ran), *n.* [Ar., the follower (i. e. of the Pleiades).] A chrome star of magnitude 1.0; *a* Tauri.

Aldebaranian (äl-de-bä-rä′ni-an), *a.* and *n.* **I.** *a.* Noting stars which have a spectrum similar to that of Aldebaran. They have fluted spectra in which a series of calcium lines, sometimes called *protocalcium*, together with arc lines of iron calcium manganese (*protostrontium*) and hydrogen, are predominant. The flutings are incipient. The blue line of calcium, λ 4227, is strongly marked.

II. *n.* An Aldebaranian star.

aldehydase (al″dē-hī-dās′), *n.* [*aldehyde* + *-ase.*] A ferment which oxidizes an aldehyde to its corresponding acid.

aldehyde, *n.*—**Crotonic aldehyde,** a volatile oil with a disagreeable, penetrating odor, having the formula $CH_3CH{:}CHCHO$, and prepared by the distillation of aldol. It boils at 104° C.—**Formic aldehyde.** See ★*formic*.

aldehydene (al′dē-hī-dēn), *n.* [*aldehyde* + *-ene.*] 1. A name formerly applied to the base formed by heating aldehyde ammonia, now known to be trimethylpyridine.—2. A name given by Ladenburg to the bases formed from aldehydes and hydrochlorids of aromatic orthodiamines.

alder[1], *n.*—**Alder grab.** See ★*grab*[1].—**California alder,** *Alnus rhombifolia.*—**Dwarf alder.** (*a*) The alder-leafed buckthorn, *Rhamnus alnifolia.* (*b*) A shrub of the genus *Fothergilla*, of the southeastern United States.—**Green alder,** *Alnus Alnobetula*, a shrub of the northern part of both hemispheres and of the Alleghanies farther south.—**Hoary alder,** the speckled alder, *Alnus incana.*—**Mountain alder.** (*a*) The green alder, *Alnus Alnobetula.* (*b*) *Alnus rhombifolia*, of the western United States. (*c*) The striped maple, *Acer Pennsylvanicum.* [North Carolina.]—**Narrow-leafed alder,** an arborescent species, *Alnus tenuifolia*, of western North America. The bark furnished the Indians an orange dye.—**Red alder,** a northwestern species, *Alnus Oregona.*—**Seaside alder,** *Alnus maritima*, found in wet ground in Delaware and Maryland, near the coast, and also in Indian Territory.—**Spiked alder,** the white alder, *Clethra alnifolia.*—**Western alder,** the Californian *Alnus rhombifolia* or the more northern red alder, *Alnus Oregona.*

alder-blight (âl′dėr-blīt″), *n.* A plant-louse, *Schizoneura tessellata.* It occurs in great numbers on the under side of the branches of the alder, and secretes large quantities of down-like wax. It also secretes much honeydew, which is attractive to honey-loving insects and to the resting-spores of certain fungi.

alder-fly (âl′dėr-flī″), *n.* A name given by fishermen to a certain neuropterous insect of the family *Sialidæ*, used as, or imitated for use as, bait: so named because it occurs along alder-lined streams in England.

aldermanlike (âl′dėr-man-līk), *a.* Like an alderman; characteristic of an alderman; proper or becoming to an alderman; aldermanly.

Alderney (âl′dėr-ni), *n.* [The name of one of the Channel Islands.] A breed of small-sized cattle originating in Alderney, noted for the abundance and richness of their milk. They are of light build, with small horns, and are generally of a fawn color with blackish legs.

aldime (al′dim), *n.* [*ald(ehyde)* + *-ime.*] A compound, having the general formula RCH:NH, which may be considered as derived from ammonia and an aldehyde by the loss of water. The aldimes are stable only in the form of salts.

aldine[2] (al′din), *n.* [*ald(ehyde)* + *-ine*[2].] A name given to those pyrazines ($C_nH_{2n-4}N_2$) which may be formed by the condensation of two molecules of an *a*-aminoaldehyde.

aldo-alcohol (al′dō-al″kō-hol), *n.* [*ald(ehyde)* + *-o-* + *alcohol.*] An organic compound containing both an aldehyde (CHO) and a hydroxyl (OH) group.

aldohexose (al-dō-hek′sōs), *n.* [*ald(ehyde)* + *-o-* + Gr. *ἕξ*, six, + *-ose.*] A general name given to those sugars which have the composition $C_6H_{12}O_6$ and contain an aldehyde group.

aldol (al′dol), *n.* [*ald(ehyde)* + *-ol.*] A compound, $CH_3CHOHCH_2CHO$, formed by the condensation of acetaldehyde by means of zinc chlorid. The official name is *butanalol-3.*—**Aldol condensation,** a condensation of two or more aldehyde molecules in which an aldehyde alcohol is formed.

aldose (al′dōs), *n.* [*ald(ehyde)* + *-ose.*] A name given to any monosaccharide which is an aldehyde to distinguish it from a ketose, which contains a ketone-group.

aldoxime (al-dok′sim), *n.* [*ald(ehyde)* + *oxime.*] A compound, having the general formula R—CH:NOH, which is formed by the action of hydroxylamine on an aldehyde. Also *aldoxim*.

Aldrich deep. See ★*deep*.

Aldrovandia (al-drō-van′di-ä), *n.* [NL., < *Aldrovandi* (1522–1605), an Italian naturalist.] A genus of deep-sea fishes of the family *Halosauridæ*. Also called *Halosauropsis*.

alecithal (a-les′i-thal), *a.* [Gr. *ἀ-* priv. + *λέκιθος*, the yolk of an egg.] In *embryol.*, provided with very little and uniformly distributed food-yolk: a term applied to certain eggs, such as those of the sponges, sea-urchins, etc.

Alectis (a-lek′tis), *n.* [NL., said to be < Gr. *ἀλέκτωρ*, a cock.] A genus of *Carangidæ* remarkable for its long threadlike fin-rays: hence known as the *cobbler-fish*.

alectorioid (a-lek-tō′ri-oid), *a.* [*alectoria* + *-oid.*] Resembling the thallus of the lichen *Alectoria*.

Alectryonia (a-lek-tri-ō′ni-ä), *n.* [NL., < Gr. *ἀλεκτρυών*, a cock.] A genus of oysters in which the left valve is attached by clasping shelly processes and has strong divaricate folds on the upper surface. The genus is living in existing seas, but was most abundant during Jurassic and Cretaceous times.

ale-haunter (āl′hän-tėr), *n.* [*ale*, 2, + *haunter.*] A frequenter of ale-houses or ale-drinkings. *Heylin.* [Rare.]

alembical (a-lem′bik-al), *a.* [*alembic* + *-al.*] Of or pertaining to, or of the nature of, an alembic.—**Alembical lamp,** a lamp having a capital or head like an alembic, used to arrest the smoke and unconsumed vapors and return them to the oil-reservoir. It was invented by Besnard.

Aleochara (al-ē-ok′a-rä), *n.* [NL. (Gravenhorst, 1802), < Gr. *ἀλεός*, equiv. to *ἀλεεινός*, open to the sun, warm, + *χαίρειν*, rejoice.] A genus of rove-beetles, of the family *Staphylinidæ*, typical of the tribe *Aleocharini*. It has the antennæ 10-jointed, tarsi 5-jointed, head retracted, not narrowed, and the palpi with accessory terminal joint. It is a genus of general distribution, comprising nearly 200 species.

Aleocharini (al″ē-ō-ka-rī′nī), *n. pl.* [NL., < *Aleochara* + *-ini.*] A large tribe of small rove-beetles of the family *Staphylinidæ*. They have the antennæ inserted upon the front, the prothoracic spiracles visible, the front coxæ large, and the fourth joint of the maxillary palpi distinct. The tribe comprises more than 30 North American genera.

Aleposomus (a-lep-ō-sō′mus), *n.* [NL., < Gr. *ἀ-* priv. + *λεπίς*, scale, + *σῶμα*, body.] A genus of deep-sea fishes of the Atlantic, belonging to the family *Alepocephalidæ*.

Aleppo boil, button, evil. See *ulcer.*—**Aleppo gall.** See ★*gall*[3].

alerta (ä-lär′tä), *n.* [Sp. See *alert.*] 1. A call repeated by sentinels at regular intervals to indicate their watchfulness.—2. An alarm by a sentinel, causing the guard to assemble under arms.

Alethopteris (al-ē-thop′te-ris), *n.* [NL. (Sternberg, 1825), < Gr. *ἀληθής*, true, + *πτερίς*, fern.] A genus of fossil plants usually classed with the ferns and made the type of a suborder *Alethopterides*. It is characterized by large bipinnate to tripinnate fronds, the thick pinnules being inserted on the rachis by a broad, decurrent base, sometimes confluent. The fruit is unknown, but the recent discovery of seeds intimately associated with the fronds renders it probable that they were borne by this plant, in which case it will be necessary to remove it from the *Pteridophyta* and place it in the class *Pteridospermæ* of Oliver and Scott. (See ★*Pteridospermæ*.) The genus occurs chiefly in the productive coal-measures of both hemispheres.

alethopteroid (al-ē-thop′te-roid), *a.* [*Alethopteris* + *-oid.*] Resembling or pertaining to the fossil plant genus *Alethopteris*.

alethorama (al-e-thō-rä′mä), *n.* [Gr. *ἀληθής*, true, + *ὅραμα*, what is seen, a sight.] A form of cinematograph devised by Mortier and Chéri-Rousseau in which the film, instead of having the usual interrupted motion, moves continuously, and the screen, instead of being alternately light and dark, is illuminated in a permanent manner by the images. The apparatus consists of a wheel of which the peripheral teeth en-

gage the perforations of the film and carry it in front of a brilliant beam of light from an electric arc. The transparent film permits the light to pass through, and the picture is reflected from a mirror behind to another at one side, then through the first lens of the projection-objective to another mirror or to a reflecting prism, and finally out of the second lens to the screen. The instrument may also be used as a registering apparatus if a special shutter is provided. This is done by placing within the principal drum a smaller one which shall have slits one third as numerous as the compartments of the outer drum and shall revolve three times as fast.

aletophyte (a-lē′tō-fīt), *n.* [Gr. *ἀλήτης*, vagabond + *φυτόν*, plant.] A ruderal plant, or one sporadically introduced. Aletophytes are regarded by Pound and Clements, the authors of the term, as a subclass of mesophytes.

aleurodiform (al-ū-rō′di-fôrm), *a.* In *entom.*, resembling one of the insects of the genus *Aleurodes* or family *Aleurodidæ*. *Jour. Roy. Micros. Soc.*, April, 1904.

aleuronate, aleuronat (a-lū′rō-nāt, -nat), *n.* [Irreg. < Gr. *ἄλευρον*, flour, + *-ate*[1].] Albuminous material of vegetable origin. Aleuronate flour has been used as a substitute for ordinary flour in making diabetic bread. It contains a low percentage of starch.

Our bread was partly carefully dried wheaten biscuits, and partly *aleuronate* bread, which I had caused to be made of wheat flour mixed with about 30 per cent. of *aleuronate* flour (vegetable albumen).

Nansen, Farthest North, II. 126.

aleuroscope (a-lū′rō-skōp), *n.* [Gr. *ἄλευρον*, flour, + *σκοπεῖν*, view.] An instrument, invented by Sellnick, designed, like the aleurometer of Boland, to indicate the fitness of flour for making bread.

aleutite (a-lū′tīt), *n.* [*Aleut(ian)* (islands) + *-ite*[2].] In *petrog.*, a name used by Spurr (1900) for andesites characterized by andesin and labradorite feldspars. The corresponding granular rocks are called *belugite* by Spurr.

A-level (ā′lev-el), *n.* A leveling instrument used for grading earth-work, leveling ditches, etc. It consists of a light wooden frame of three pieces fastened together like the capital letter "A" with a plumb-line suspended from the vertex. To prepare it for use, the two feet are first brought carefully to the same level and the position of the plumb-line is marked on the horizontal crosspiece. In use the two feet may thus be brought level by moving one up or down till the plumb-line coincides with the mark on the crosspiece. The two feet of the inclined pieces are frequently placed at some convenient distance apart, as three yards, ten feet, a rod; and the instrument may then also be used for stepping off horizontal distances as well as leveling.

alexander† (al-eg-zan′dėr), *v. t.* [*Alexander*: see def. and cf. *lynch*, *v.*] To treat with harshness and severity, in the manner of Sir Jerome Alexander, an Irish judge in the seventeenth century who was noted for his harsh and merciless decisions, especially in regard to Presbyterians and other nonconformists; by implication, to hang. [Rare.]

I thank God the robbers in this province are suppressed. I hear not of one these three weeks. Many I have taken and keep in jail against the assizes, where I hope they will be *alexandered*.

Earl of Orrery, Letter to Ormonde, April 18, 1666 (Trans. [Roy. Hist. Soc., II. 124).

alexanders, *n.*—**Golden alexanders**, a yellow-flowered umbelliferous herb of the northeastern United States, *Thaspium trifoliatum aureum*. The name is less properly applied to *Zizia aurea*.—**Purple alexanders,** *Thaspium trifoliatum*, a plant similar to the golden alexanders, but with purple flowers.

alexandra (al-eg-zan′drą), *n.* In *angling*, an artificial fly with silver body and peacock harl.

Alexandra car. See ★*car*[1].

Alexandrian clover. See *Trifolium* and ★*berseem*.

alexia, *n.*—**Motor alexia,** a form of aphasia in which the patient cannot read aloud, though understanding the printed page.—**Optical, sensory,** or **visual alexia,** loss of ability to comprehend the written or printed page.

Alexian (a-lek′si-an), *a.* and *n.* **I.** *a.* Of or pertaining to St. Alexius or Alexis, or to the Alexians.

II. *n.* A member of the religious congregation of Alexian brothers, or Cellites. They are an association of laymen formed about the beginning of the fourteenth century to take charge of the sick and infirm: called *Alexians* from St. Alexius, their patron saint.

alexin (a-lek′sin), *n.* [Irreg. < Gr. *ἀλέξειν*, ward off, protect, + *-in*[2].] A term originally introduced by Buchner to designate certain substances present in normal blood-serum which are capable of destroying various foreign cellular elements, such as bacteria, red blood-corpuscles, etc. In the literature of immunity, this term has been retained to a certain extent, by French writers especially, to designate that component of the serum which renders possible the action of the various specific immune bodies (amboceptors) and which is destroyed by heating to a temperature of about 55° C. or on prolonged standing. In this sense its meaning is the same as that of ★*complement*, 8, a term introduced by Ehrlich and now the one most commonly used. Such complemental action is noted in the case of the hemolysins, the bacteriolysins, and the various cytotoxins. Same as ★*addiment* and ★*cytase*.

alexocyte (a-lek′sō-sīt), *n.* [Gr. *ἀλέξειν*, ward off, protect, + *κύτος*, a hollow (a cell).] A term introduced by Hankin to designate those leucocytes which supposedly furnish alexins.

Alexurus (a-lek-sū′rus), *n.* [NL., < (?) Gr. *ἀλέξειν*, defend, + *οὐρά*, tail.] A genus of gobies found in Mexico. *A. armiger* is found at La Paz.

alezan (al-e-zan′), *n.* [F. and OF. *alezan*, < Sp. *alazan*, of undetermined (Ar.?) origin.] A sorrel horse. [Rare.]

The snow-white steed of Odo; the *alezan* of Fitzosborne. *Bulwer*, Harold. *N. E. D.*

alfa, *n.* A simplified spelling of *alpha*.

alfabet, *n.* A simplified spelling of *alphabet*.

alfalfa, *n.*—**Turkestan alfalfa,** a variety of alfalfa of great value in the arid region of central Asia. This and the oasis alfalfa are likely to be valuable in the dry parts of the western United States, where irrigation is impracticable.—**Oasis alfalfa,** a drought-resisting variety of the common alfalfa, introduced into the western United States from Tunis.

Alfenid metal. See ★*metal*.

alferfemphyric (al″fêr-fem-fir′ik), *a.* [*alfer(ric)* + *fem(ic)* + (*por*) *phyr(it)ic.*] In *petrog.*, noting a porphyry containing phenocrysts of both alferric silicates (hornblende, augite, biotite) and the simpler ferric or ferromagnesian minerals (hypersthene, diopside, olivin): proposed by Cross, Iddings, Pirsson, and Washington (1902) in their quantitative classification of igneous rocks (which see, under ★*rock*).

alferphyric (al-fêr-fir′ik), *a.* [*alfer(ric)* + (*por*)-*phyr(it)ic.*] In *petrog.*, noting a porphyry containing phenocrysts of an aluminous ferromagnesian (alferric) mineral. See *quantitative classification of igneous rocks*, under ★*rock*.

alferric (al-fer′ik), *a.* [*al(uminous)* + *ferr(o-magnesian)* + *-ic.*] Pertaining to, belonging to or having the characteristics of the group of aluminous, ferromagnesian, and calcic silicates, rock-making minerals, such as augite, hornblende, and biotite. See *quantitative classification of igneous rocks*, under ★*rock*.

alfilerilla, *n.*—**Musky alfilerilla,** a weed, *Erodium moschatum*, which invades pasture-grounds from California to Arizona. It has a limited forage value. Also called *ground-needle* and *musky heron's-bill*.

alfonsin (al-fon′sin), *n.* [Pg. *alfonsim*, a fish so named, also a silver coin, < *Alfonso*, a royal name.] Any species of fish of the genus *Beryx*.

alforja† (äl-fôr′hä), *n.* [Sp., perhaps < Ar. *al-khorj*: *al*, the, + *khorj*, store, supply.] A saddle-bag; knapsack; wallet. [Spanish-American.]

alfridary (al′frī-dą-ri), *n.* [NL. *alfridaria*, prob. of Ar. origin; perhaps < Ar. *al*, the, + *fariydah* (*farīda*), a fixed and defined part, < *faraḍa*, he defined, decreed, etc.] In *astrol.*, the planet supposed to rule any given septennial period of human life.

alg (alg), *n.* [= G. *alge*, < L. *alga*: see *alga*.] A seaweed; an alga.

alga, *n.*—**Boring alga,** one of several of the algæ which have the power of penetrating bivalve-shells, corals, etc.

algal, *a.*—**Algal fungus,** any fungus which shows close relations to the algæ and is supposed to be derived from them, as the *Phycomycetes*.

algalia (äl-gä′lē-ą), *n.* [Colonial Sp.< Sp. *algalia*, civet, alluding to the odor of the seeds.] The abelmosk, *Abelmoschus Abelmoschus*, a shrub cultivated for its flowers and seeds, which have a strong odor of musk. See *Abelmoschus*, *abelmosk*, *amber-seed*, and *muskmallow*, 2.

Algansea (al-gan′sē-ą), *n.* [NL.] A genus of large chubs, of the family *Cyprinidæ*, found in Mexico.

algebra, *n.*—**Double algebra.** See ★*double*.—**Universal algebra.** (*a*) That calculus whose general principles are the general definitions which hold for any process of addition and others which hold for any process of multiplication. (*b*) Algebra of multiple units. *Sylvester*.

algebraic, *a.*—**Algebraic addition.** See ★*addition*.—**Algebraic configuration,** the aggregate of rational functions of x and y, where y and x are connected by an algebraic equation.—**Algebraic magnitude.** See ★*magnitude*.—**Algebraic surface.** See *surface*.

algebraization, algebrization (al″je-brā-i-zā′shọn, al″je-bri-zā′shọn), *n.* [*algebraize*, *-brize*, + *-ation.*] Algebraic calculation; reduction of a calculation or problem to algebraic form. *Nature*, LXVII. 203.

algedonic (al-jē- or al-gē-don′ik), *a.* and *n.* [NL. **algedonicus* < Gr. *ἄλγος*, pain + *ἡδονή*, pleasure.] **I.** *a.* In *psychol.* and *esthetics*, relating to the affections of pleasantness and unpleasantness; pertaining to pleasure and pain.

I shall venture occasionally to use the word *algedonic* as an adjective to cover the ground of pain and pleasure.

Marshall, Pain, Pleasure and Æsthetics, p. 9.

II. *n. pl.* In *psychol.* and *esthetics*, the doctrine of affection; the science of pleasure and pain.

It would be well if English usage authorized the employment of the word *algedonics* to signify the science of pain and pleasure.

Marshall, Pain, Pleasure and Æsthetics, p. 9.

Algerian fir. See ★*fir*.

Alger metal. See ★*metal*.

algesia (al-jē′si-ą), *n.* [Gr. *ἄλγησις*, sense of pain, < *ἀλγεῖν*, feel pain. Cf. *analgesia*.] Capacity for pain; pain sensitivity; sensitiveness to pain.

algesimeter, algesimetric (al-jē-sim′e-tėr, al-jē-si-met′rik). See ★*algometer*, ★*algometric*.

algicide (al′ji-sīd), *n.* [NL., < *alga* + L. *-cīda*, < *cædere*, kill.] Any substance, as copper sulphate, which has the property of destroying algæ. *Science*, XX. 805.

Algid fever, a form of pernicious malarial fever marked by severe chills.

algin, algine (al′jin), *n.* [*alga* + *-in*[2], *-ine*[2].] A mucilaginous substance obtained from certain algæ, *Laminaria stenophylla* and *L. digitata*. It slightly resembles gelatin, but differs from that in not coagulating to a jelly and in not being precipitated by tannin, from albumin in not coagulating by heat, and from gum arabic in being precipitated by mineral acids and several organic acids. Insoluble algin is a nitrogenous acid, *alginic acid*. This forms soluble salts with the alkaline metals; those of the heavy metals are for the most part insoluble in water. The solutions of algin are very viscid. It has 14 times the viscidity of starch and 37 times that of gum arabic. It may be used as a thickener and for fixing iron and aluminium mordants in calico-printing, as a waterproof dressing for cloth, and for emulsifying oils and clarifying wines and spirits. It may be obtained in thin transparent sheets, forming a substitute for parchment paper, gutta-percha, or gelatin; and it dries up to a horny substance which may be turned and polished like ivory or the ivory-nut.

alginate (al′ji-nāt), *n.* [*algin(ic)* + *-ate.*] In *chem.*, a salt of alginic acid.

algine, *n.* See ★*algin*.

alginic (al-jin′ik), *a.* [*algin* + *-ic.*] In *chem.*, of or pertaining to algin.—**Alginic acid,** the insoluble form of algin freed from the basic elements with which it produces salts, the *alginates*.

algioglandular (al″ji-ō-glan′ḍū-lär), *a.* [Irreg. < Gr. *ἄλγος* (gen. *ἄλγεος*), pain, + E. *glandular.*] Relating to glandular action as the result of painful stimulation.

algiometabolic (al″ji-ō-met-ą-bol′ik), *a.* [Irreg. < Gr. *ἄλγος*, pain, + E. *metabolic.*] Relating to metabolic changes as the result of painful stimulation.

algiomotor (al″ji-ō-mō′tọr), *a.* [Irreg. < Gr. *ἄλγος*, pain, + E. *motor.*] Relating to a motor effect, as the outcome of painful stimulation.

algiomuscular (al″ji-ō-mus′kū-lär), *a.* [Irreg. < Gr. *ἄλγος*, pain, + E. *muscular.*] Relating to muscular action as the result of painful stimulation.

algiovascular (al″ji-ō-vas′kū-lär), *a.* [Irreg. < Gr. *ἄλγος*, pain, + E. *vascular.*] Relating to vascular changes as the result of painful stimulation.

algivorous (al-jiv′ọ-rus), *a.* [L. *alga*, a seaweed, + *vorare*, eat.] Feeding upon seaweeds: said of some fishes and of the Galápagos lizard, *Amblyrhynchus*.

Algol (al′gol or al-gol′), *n.* [Ar.,'the demon.'] A pale star varying in magnitude from 2.3 to 4.0 in a period of 2.89 days; *β* Persei.—**Algol variable,** a star which remains most of the time constant in brightness, but which at regular intervals suffers a comparatively sudden diminution of its light, due to the interposition of one of the members of a binary pair between the other member and the observer. Often called *eclipse variable*.

algometer (al-gom′e-tėr), *n.* [Gr. *ἄλγος*, pain, + *μέτρον*, measure.] An instrument used in psychophysical determinations of the stimulus limen and differential limen of cutaneous or muscular pain. Also *algesimeter*.

The pressure *algometer* consists essentially of a strong spring, by means of which a rubber disc or point is pressed against the surface to be tested.

Scripture, New Psychol., p. 303.

algometric (al-gọ-met′rik), *a.* In *psychophys.*, pertaining to the use of the algometer or to the measurement of sensitivity to pain. Also *algesimetric*. *G. S. Hall*, Adolescence, II. 4.

algometry (al-gom′e-tri), *n.* [Gr. *ἄλγος*, pain, + *-μετρία*, < *μέτρον*, a measure.] The measurement of sensitivity to pain. Also *algesimetry*.

Algonkian, Algonquian (al-gon′ki-an), *a.* [*Algonk(in)* + *-ian.*] **1.** Same as *Algonkin*.—**2.**

Specifically, in *geol.*, applied to the Precambrian rocks which are either themselves sedimentary or, if igneous, are later than known sediments. — **Algonkian period**, a subdivision of Precambrian time, as used by the United States Geological Survey, immediately preceding the Cambrian. It in turn is preceded by the Archæan in a restricted sense. It is equivalent to the latter part of the *Archæan*, in the broad sense of that term used by many authors: approximately to the *Archæozoic* of J. D. Dana or to the *Agnotozoic* of R. D. Irving. Under the Algonkian are placed all those Precambrian rocks which are sedimentary or, if igneous, are later than recognizable sediments.

algophilist (al-gof'i-list), *n.* [*algophily* + *-ist.*] One who takes a morbid pleasure in the contemplation of mental or physical pain in others or in himself. *Alien. and Neurol.*, May, 1903.

algophily (al-gof'i-li), *n.* [Gr. ἄλγος, pain, + *-φιλία*, ‹ *φιλεῖν*, love.] Love of pain as felt by others (*active algophily*) or as experienced in one's own person (*passive algophily*). *Alien. and Neurol.*, May, 1903.

algorism, *n.* — **Isobaric algorism**, the process of forming the expression for the sum of the products of *m* factors, each being the same function of *m* integers whose sum is *p*.

algraphy (al'gra-fi), *n.* [Irreg. ‹ *al(uminium)* + Gr. *-γραφια*, ‹ *γράφειν*, write.] The art of printing from an aluminium plate to which a design in hardened oily ink has been transferred. The portions of the plate which are not covered by the lines of the design imbibe from a damping-roller water which resists where it is not needed the deposit of oily ink made by a second roller. The lines of the design accept the ink, which can then be neatly transferred to paper by impression. See the extract.

Successful work, especially in colour, has also been produced lately by *algraphy* — a process in which aluminum takes the place of the stone.
Encyc. Brit., XXVIII. 266.

alhambra (al-ham'brä), *n.* A counterpane or bedquilt of coarse texture, woven with colored threads and in Jacquard designs.

al-het (äl-ċhet'), *n.* [Heb. *'al het*, 'for the sin.'] The Jewish 'longer confession of sin': so called from the first two words of that confession. Like most of the prayers in the Jewish festival ritual, called *mahzor*, it is acrostically arranged. Each verse asks forgiveness for a special sin presumed to have been committed by the person confessing. This, like the 'lesser confession,' ★*ashamnu* (which see), is most solemnly chanted by the reader and congregation several times during the services of the day of Atonement.

alicyclic (al-i-sik'lik), *a.* [*ali(phatic)* + Gr. *κύκλος*, a circle, + *-ic* (see *cyclic*).] In *chem.*, a term introduced by Bamberger to designate a compound containing a ring of carbon atoms but at the same time having many of the properties of the aliphatic or open-chain compounds.

alienation, *n.* 2. The state in which a person has completely forgotten his identity and becomes a new person, alien to his former self. This use of the term was proposed when the described mode of dissolution of personality first attracted attention; but the word having already the recognized technical meaning 1 (*d*), this employment of it has been rejected.

alienize (āl'yen-īz), *v. t.*; pret. and pp. *alienized*, ppr. *alienizing*. [*alien* + *-ize.*] To render alien or foreign; form or conceive in accordance with foreign notions or ways. *G. Meredith*, Evan Harrington, p. 32.

alienocola (ā″li-en-ok'ō-lä), *n.*; pl. *alienocolæ* (-lē). [NL., ‹ L. *alienus*, of another, + *-cola*, ‹ *colere*, inhabit.] A parthenogenetic insect which is born upon and inhabits a plant of a different kind from that upon which its parent was born.

In the spring winged females are produced, which migrate to the Larch and give rise parthenogenetically to a wingless generation which hibernates under the bark. These *alienocolæ* in the following spring produce parthenogenetic winged females.
Phillips, Proc. Amer. Philos. Soc., 1903, p. 298.

aliethmoidal (al″i-eth-moi'dal), *a.* [*aliethmoid* + *-al.*] Pertaining to the aliethmoid, or wing of the ethmoid region of the orbitonasal cartilage; relating to that part of the mesethmoid cartilage from which the aliethmoids are developed. *W. K. Parker*, Morphol. of the Skull, p. 226.

alif (ä'lif), *n.* [Pers., ‹ Ar. *'alif* = Heb. *'aleph*: see *alpha.*] The first letter of the Persian (Arabic) alphabet, consisting of a single stroke; hence, a mere letter; a jot.

A hair, they say, divides the false and true;
Yes; and a single *alif* were the clue,
Could you but find it, to the Treasure-house,
And peradventure to The Master, too.
Fitzgerald, trans. Omar Khayyam, Rubaiyat, quat. 1.

aliipoe (ä-lē″ē-pō'ā), *n* [Hawaiian.] The common canna or Indian-shot, *Canna indica.*

alimentive (al-i-men'tiv), *a.* [*aliment* + *-ive.*] Relating or pertaining to food or to the desire to eat and drink.

alimentum (al-i-men'tum), *n.*; pl. *alimenta* (-tä). [L.: see *aliment.*] Aliment; food. *Pop. Sci. Mo.*, LIX. 468.

alinement, *n.* 4. In *archæol.*, megaliths arranged in single, parallel, or converging rows.

alinite (al'i-nit), *n.* [G. *alinit*, a trade-name. From its use and form it may be conjectured to be formed from L. *al(imentum)*, aliment, + *-in*[2] + *-ite*[2].] A preparation in the form of a yellowish powder containing a pure culture of *Bacillus Ellenbachensis a.* It is used for soil-inoculation, and is said to be an aid to cereals in assimilating nitrogen. Also *alinit.*

alinjection (al-in-jek'shon), *n.* [*al(cohol)* + *injection.*] In *histol.*, the injection of alcohol into the tissues for the purpose of hardening them. *B. G. Wilder.*

alintatao (ä-lin-tä'tou), *n.* [Said to be a Tagalog name.] In the Philippine Islands, a tree, *Diospyros pilosanthera*, of the ebony family. It has simple alternate entire leaves, small unisexual flowers, and globose edible fruit, and yields a very hard, dark-colored wood like ebony, which is used in cabinet-making.

alipata (ä-lē-pä'tä), *n.* [Said to be Bisayan, but not found.] In the Philippine Islands, the blinding-tree, *Excæcaria Agallocha.* See *Excæcaria*, *tiger's-milk*, and ★*blinding-tree.*

aliphatic (al-i-fat'ik), *a.* [NL. *aliphaticus*, ‹ Gr. *ἀλειφαρ* (*-ατ-*), an unguent, fat, ‹ *ἀλειφειν*, anoint.] Of or pertaining to fat; fatty; specifically, in *chem.*, designating compounds which have only an open chain of carbon atoms, as distinguished especially from aromatic compounds, which contain a ring of carbon atoms. The natural fats consist chiefly of compounds of this type.

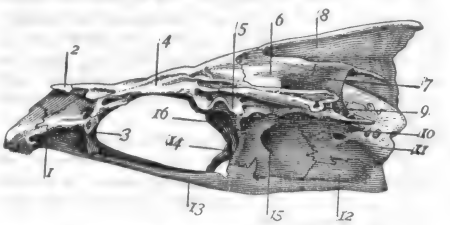
aliquot (al'i-kwot), *v. t.* [*aliquot, a.*] To divide into equal parts which are a multiple or a submultiple of another quantity. An aliquoting mechanism is one which causes one part of a machine to move *n* times while the other part moves once. *Sci. Amer. Sup.*, Nov. 22, 1902.

Aliquot tones, in *acoustics*, harmonics or overtones.

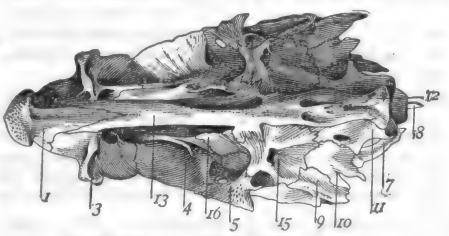
alisier (ä-lē-zi-ā'), *n.* [Creole F., same as F. *alizier*, the bean-tree.] The stag-bush, *Viburnum prunifolium.* [Louisiana.]

alism (al'izm), *n.* [*al-*, part of the Semitic name for 'God' (Heb. *el-*, Ar. *il-*, *ilāh*, *al'lāh*, *Allāh*), + *-ism.*] A title adopted by Francis F. Barham for his religious system, which honors 'divinity' as the all-supreme good, and describes religion as the life of God in the soul of man, a divinity of essential being rather than formal doctrine.

alisphenoid, *n.* 2. In *ichth.*, a small lateral bone of the cranium. It articulates above with the sphenotic and an inner descending wing of the frontal, and behind with the proötic. It usually forms a part of



Roccus lineatus. Lateral View of Cranium.



Roccus lineatus. Inferior View of Cranium.

1, vomer; *2*, ethmoid; *3*, prefrontal; *4*, frontal; *5*, sphenotic; *6*, parietal; *7*, epiotic; *8*, supraoccipital; *9*, pterotic; *10*, opisthotic; *11*, exoccipital; *12*, basioccipital; *13*, parasphenoid; *14*, basisphenoid; *15*, proötic; *16*, alisphenoid.

the lateral border of the anterior opening of the braincase, though sometimes it nearly closes this by bending inward and meeting its opposite fellow in a median suture. The 'alisphenoid' of Owen is the 'proötic' of Parker.

aliturgic (a-li-tėr'jik), *a.* [*a-*[18] + *liturgic.*] Without liturgy: designating a day in the Christian year when the liturgical order is dispensed with. Strictly speaking, this never occurs. The mass of the presanctified on Good Friday, referred to below, is according to the liturgy, though the liturgical order is curtailed in that ceremony.

Meanwhile, both in East and West, the general practice has continued unbroken of reserving the Eucharist, in order that the "mass of the presanctified" might take place on certain "*aliturgic*" days.
Encyc. Brit., XXXII. 220.

aliturgical (a-li-tėr'ji-kạl), *a.* Same as ★*aliturgic.*

alivincular (al″i-ving'kū-lär), *a.* [L. *ala*, wing, + *vinculum*, band, + *-ar*[3].] Noting that form of ligament in the pelecypod mollusks which is like a cord or plug extending between the beaks of the two valves: it may be central or posterior: contrasted with *parivincular.*

alizarate (a-liz'a-rāt), *n.* [*alizar-in* + *-ate*[1].] A salt of alizarin.

alizarin, *n.* Commercial alizarin is sold in the form of a yellow paste containing 20 per cent. of dry substance, and, less frequently, as a dry powder. The dry substance in the paste is seldom pure alizarin, but contains varying amounts of flavopurpurin and anthrapurpurin, both of which have properties similar to alizarin. Natural alizarin derived from madder contains purpurin in addition to the above. The nature of the various commercial alizarins is often designated by suffixed letters or numbers. Thus *alizarin I*, *alizarin P*, and *alizarin V* are nearly pure alizarin and give bluish reds, while *alizarin CA*, *alizarin G*, etc., contain anthrapurpurin or flavopurpurin, or both, and give yellowish reds. — **Alizarin black, blue, Bordeaux, cardinal**, etc. See ★*black*, etc. — **Alizarin saphirol**, an acid dyestuff derived from anthraquinone. It dyes wool a bright and clear blue which is remarkably fast to light. — **Alizarin yellow, violet.** See ★*yellow*, ★*violet*[1].

aljama (äl-hä'mä), *n.* [Sp., ‹ Ar. *al*, the, + Ar. *jamā'a*, a gathering, a congregation.] A self-governing community of Jews or of Moors living in Spain under Spanish rule during the middle ages.

aljofaina (äl″hō-fä'ē-nä), *n.* [Sp., ‹ Ar. *al-ḥofaina*, *al-ḥufaina*, ‹ *al*, the, + *ḥofaina*, *ḥufaina*, ‹ *ḥafna*, a cup, porringer (Monlau).] An earthen jug or basin.

aljonjoli, *n.* Same as ★*ajonjoli.*

Alkahada pottery. See ★*pottery.*

alkali, *n.*, 3. This term, used in the commercial sense, includes the carbonates of sodium and potassium, formerly called *mild alkalis*, and the hydroxids of the same metals, the *caustic alkalis.* The alkali industry is one of great importance, especially the manufacture of soda, both carbonate and caustic. It is carried on mainly by three methods: the Leblanc process, the Solvay or ammonia process, and the electrolytic process. In the last of these, of recent introduction, a solution of common salt is decomposed by an electric current. The Solvay process is not practically applicable to the production of potash; it is at present the principal source of soda.

4. A mineral compound soluble in water under ordinary surface conditions. They are chiefly chlorids, sulphates, carbonates, and bicarbonates of sodium, potassium, magnesium, and calcium. These salts commonly effloresce and form crusts over surfaces in dry seasons. They are derived from the decay of rocks, and are carried in solution from these sources, becoming concentrated enough to be detrimental only in arid or semi-arid regions. There are two well-known types, *black* and *white.* — **Alkali blue-grass, brown, bulrush.** See ★*blue-grass*, etc. — **Alkali flat**, a sterile plain or basin carrying an excess of alkali in its soil: usually the undrained or poorly drained remnant of a former lake in an arid region. — **Alkali manufacture**, in a general sense, the production on the great scale of the alkalis soda and potash, and their carbonates, but more generally used in a restricted sense to mean the manufacture of soda, carbonate and caustic, especially by the Leblanc process, with the accessory products, as bleaching-powder, commonly made on the same premises. — **Alkali soil**, any soil containing an unusual amount of soluble mineral salts or alkali. More than four tenths of one per cent. of such soluble matter is injurious to most vegetation, although smaller amounts, on the contrary, are often advantageous. Soils naturally well drained do not suffer from these constituents, and alkali soils are confined either to poorly drained or to arid regions. — **Alkali spot**, an area underlain by waters which drain from irrigated lands, frequently becoming increasingly saturated with alkali. *Yearbook U. S. Dept. Agr.* 1900, p. 472. — **Alkali waste**, in the Leblanc process for the manufacture of carbonate of soda from common salt, the insoluble residue left after leaching black ash with water. It consists chiefly of calcium sulphid, carbonate, and hydroxid, and is largely utilized for the recovery of the sulphur which it contains. — **Alkali waters**, natural mineral waters so heavily charged with alkalis as to be unfit for ordinary uses. — **Black alkali**, the name given, in some of the western regions of the United States, to sodium carbonate existing in the land, because it produces black spots by its action on the humus of the soil.

Ammonia and sodium carbonate or "*black alkali*," on the other hand, break down any aggregates which have been formed, and thus have the effect of "puddling" the soil, which dries into a hard compact mass.
Yearbook U. S. Dept. of Agr. 1900, p. 209.

Refined alkali. Same as *white* ★*alkali.* — **White alkali**, in the manufacture of carbonate of soda by the Leblanc process, the product obtained by redissolving soda-ash in water, clarifying the liquor, and evaporating to dryness.

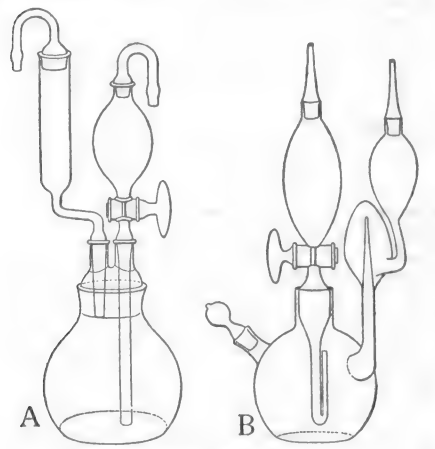
alkalic (al-kal'ik), *a.* [*alkali* + *-ic.*] 1. Same as *alkaline.* *Elect. World and Engin.*, Sept. 3, 1904. — 2. Specifically applied to the minerals of igneous rocks (in the quantitative classification) or to magmas and rocks generally, when specially characterized by their alkali con-

tents: in distinction from *alkaline*, which implies the chemical property of alkalinity.

alkalicalcic (al″kal-i-kal′sik), *a.* [*alkali* + *calcic*.] In *petrog.*, a term used in the quantitative classification of igneous rocks to indicate that certain rocks, the chemical composition of which is known, contain alkalis and lime belonging to the standard salic minerals (feldspars and feldspathoids) in equal or nearly equal amounts. A certain systematic division of the quantitative classification is called the *alkalicalcic rang*. See *quantitative classification of igneous rocks*, under ★*rock*.

alkali-grass, *n.* 2. *Puccinellia airoides* (sometimes called *alkali meadow-grass*) and *P. Lemmoni*, of the northern Rocky Mountain region. *Sporobolus airoides* of the Southwest has been called *alkali finetop*.—3. A species of poison camass, *Zigadenus elegans*, dangerous to stock: so called in the stock-raising regions of Montana, etc.

alkalimeter, *n.* 2. An instrument for the quantitative analysis of carbonated alkali. It consists essentially of a thin glass vessel which can be weighed on a delicate balance and is so constructed that a known weight of sodium carbonate or acid carbonate contained in one division is kept from acid contained in another division during the first weighing. The acid is then run on the carbonate, causing an evolution of carbon-dioxid gas, which, in passing out of the apparatus, bubbles through



A, Mohr's Alkalimeter; *B*, Wibel's Alkalimeter.

concentrated sulphuric acid or passes over calcium chlorid and is thus deprived of moisture. The apparatus is weighed a second time, the loss in weight representing the carbon dioxid evolved and thus indicating the quality of the carbonate. As a precaution, dry air is drawn through the apparatus to displace any residual gas. Special forms have been devised by Bunsen, Fresenius, Schroetter, Mohr, and others.

alkalimirlic (al″kal-i-mėr′lik), *a.* [*alkali* + *mirlic*.] In *petrog.*, a term used in the quantitative classification of igneous rocks to indicate that certain rocks, the chemical composition of which is known, contain alkalis and mirlic constituents belonging to the standard femic minerals in equal or nearly equal amounts. A certain systematic division of the quantitative system is called an *alkalimirlic rang*. See *quantitative classification of igneous rocks*, under ★*rock*.

Alkaline glands. See ★*gland*.—**Alkaline iodide.** See ★*iodide*.—**Alkaline metals**, the metals of which the hydroxids constitute the alkalis, namely, sodium, potassium, and the rarer lithium, rubidium, and cæsium.—**Alkaline tide.** See ★*tide*.—**Alkaline water**, a mineral water occurring in nature with the carbonate of sodium or potassium (generally the former) as an ingredient in sufficient quantity to give a well-marked reaction to test-paper and medicinal activity. The carbonates of calcium and magnesium are also frequently present, dissolved by excess of carbonic acid. The waters of Vichy in France and Ems in Germany are examples.

alkali-weed (al′ka-li-wēd), *n.* The yerba mansa, *Anemopsis Californica*.

alkali-works (al′ka-li-wėrks), *n. pl.* The buildings, machinery, and other appliances used in the conduct of the alkali manufacture.

alkalizer (al′ka-lī-zėr), *n.* A chemical agent which tends to render alkaline.

alkaloid, *n.*—**Animal alkaloid**, a leucomaïne or a ptomaïne. See these words.—**Artificial alkaloid**, synthetic alkaloid.—**Cadaveric** or **putrefactive alkaloid** a ptomaïne.—**Synthetic alkaloid**, an alkaloid formed artificially by chemical processes.

alkamari (äl-kä-mä′rē), *n.* [Aymará of Bolivia.] A bird of prey, *Polyphorus tharus*, of the family *Falconidæ* (though chiefly a scavenger), frequently met with in the highlands of Peru and Bolivia. It stalks about in pairs in cultivated patches and open spaces, and when disturbed it flies only a short distance. Its plumage is dark brown on the back, with an almost white breast. In northern Peruvian (Quichua) it is called *china-linda*.

alkameine (al-kam′ē-in), *n.* [G. **alkameïne*; as *alkam(ine)* + *-e-iné*².] The carboxylic ester of an alkamine or alkine. Also called *alkeine*.

alkamine (al-kam′in), *n.* [G. **alkamin*, < *alk(ohol)*, alcohol, + *amine*.] A name given by Ladenburg to tertiary bases which contain an alcoholic group, as diethylethylol amine, $(C_2H_5)_2NC_2H_4OH$. Also called *alkine*.

alkane (al′kān), *n.* [G. **alkan* (?), < *alk(ohol)*, E. *alcohol*, + *-an*, E. *-ane*.] A hydrocarbon, C_nH_{2n+2}, of the marsh-gas or methane series: official name.

alkannin (al-kan′in), *n.* [*Alkanna* + *-in*².] A coloring matter, $C_{15}H_{14}O_4$, obtained as a dark reddish-brown powder from *Alkanna tinctoria*.

alkapton (al-kap′tōn), *n.* [*alk(ali)* + Gr. *ἅπτειν*, touch.] A term originally introduced to designate a certain urinary constituent which is met with on rare occasions, and which causes the urine to turn reddish brown or black on standing or upon the addition of an alkali. The substance to which this reaction is due has been identified as homogentisinic acid, $C_6H_3(OH)_2$-CH_2.COOH. In one instance uroleucinic acid has been found in the place of homogentisinic acid. Also *alcapton*.

alkaptonic (al-kap-ton′ik), *a.* Of or pertaining to alkapton. Homogentisinic acid and uroleucinic acid are sometimes collectively termed *alkaptonic acids*. See ★*alkapton*.

alkaptonuria (al-kap-tō-nū′ri-ä), *n.* [NL., < *alkapton* + *οὖρον*, urine.] The presence of alkapton in the urine when voided: a rare metabolic anomaly. Also *alcaptonuria*.

alkeine, *n.* Same as ★*alkameine*.

alkene (al′kēn), *n.* [G. **alken*, < *alk(ohol)*, E. *alcohol*, + *-en*, E. *-ene*.] A hydrocarbon, C_nH_{2n}, of the ethylene or ethene series: official name.

alkine (al′kin), *n.* [G. **alkin*, < *alk(ohol)*, E. *alcohol*, + *-in*, E. *-ine*².] 1. A hydrocarbon, C_nH_{2n-2}, of the acetylene or ethine series: official name.—2. Same as ★*alkamine*.

alkoxyl (al-kok′sil), *n.* [G. **alkoxyl*, < *alk(ohol)*, alcohol, + E. *ox(ygen)* + *-yl*.] A general name for an alkyl-group and oxygen, as ethoxyl, C_2H_5O.

alkylate (al′ki-lāt), *v. t.*; pret. and pp. *alkylated*, ppr. *alkylating*. [*alkyl* + *-ate*¹.] To introduce an alkyl in place of a hydrogen atom. *Amer. Chem. Jour.*, April, 1903.

alkylation (al-ki-lā′shon), *n.* [*alkylate* + *-ion*.] The process of introducing an alkyl in place of hydrogen. *Nature*, July, 9, 1903.

alkylene (al′ki-lēn), *n.* [*alkyl* + *-ene*.] Same as ★*alkene* or *olefine*.

alkylidine (al-kil′i-din), *n.* [*alkyl* + *-id* + *-ine*².] The term applied, in organic chemistry, to bivalent hydrocarbon radicals, containing the group >CRR, where R represents hydrogen or any hydrocarbon radical, such as methyl, CH_3. The ethylidine radicals are isomeric with the bivalent ethylene radical, $-CR_2.CR_2-$.

allachæsthesia (al″a-kes-thē′si-ä), *n.* [NL., < Gr. *ἀλλαχῆ*, elsewhere (< *ἄλλος*, other), + *αἴσθησις*, feeling.] The perception of a sensation elsewhere than at the point where the stimulus is applied.

allactite (al′ak-tīt), *n.* [Gr. *ἀλλακτ(ικός)*, adj., < *ἀλλάσσειν*, change, exchange (see *allagite*), + *-ite*².] An arseniate of manganese occurring in small brownish-red prismatic crystals: found in Sweden.

Allagecrinidæ (a-laj-ē-krin′-i-dē), *n. pl.* [NL., < *Allagecrinus* + *-idæ*.] The name given by Etheridge and Carpenter to a family of simple inadunate crinoids. They have a very small calyx, basal plates ankylosed and supporting sometimes two arms, sometimes one. They lived in early Carboniferous seas.

Allagecrinus (al-a-jek′ri-nus), *n.* [NL., irreg. < Gr. *ἀλλαγή*, change, + *κρίνον*, lily.] The typical and only genus of the family *Allagecrinidæ*.

allalinite (al-a-lin′īt), *n.* [*Allalin*, a locality in Switzerland, + *-ite*².] In *petrog.*, a name used by Rosenbusch for saussurite-gabbro in which the secondary smaragdite and saussurite preserve the original texture of the rock in spite of the complete transformation they represent. It is distinguished from flaser-gabbro, in which there has been change in the form of the constituents.

allanic (a-lan′ik), *a.* [*allan(toin)* + *-ic*.] Noting an acid, $C_4H_5N_5O_5 + H_2O$, formed, together with urea and allanturic acid, by the action of nitric acid on allantoin.

allantiasis (al-an-tī′a-sis), *n.* [NL., < Gr. *ἀλλᾶς* (*ἀλλαντ-*) + *-iasis* (noting a disease).] Same as ★*botulism*.

allantoid, *a.* 2. In *bot.*, sausage-shaped: applied especially to the spores of certain pyrenomycetous fungi.

Allantosporæ (al-an-tos′pō-rē), *n. pl.* [NL., < Gr. *ἀλλᾶς* (*ἀλλαντ-*), sausage, + *σπορά*, spore.] A name applied by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi imperfecti*, to include the genera which have unicellular, cylindric, or curved spores.

allantoxaïdin (al-an″tok-sā′i-din), *n.* [*allantoxa(nic)* + *-id*² + *-in*².] A substance, $C_3H_3N_3O_2 + H_2O$, formed from allantoxanic acid by the loss of carbon dioxid. It is a weak acid.

allantoxanic (al-an″tok-san′ik), *a.* [*allant(oin)* + *ox(ygen)* + *-an-* + *-ic*.] Noting an acid, $C_4H_3N_3O_4$, formed by the oxidation of allantoin in an alkaline solution. It exists only in the form of salts.

allapinet, *n.* Another spelling of *alepine*.

alleged (a-lejd′), *p. a.* That is or has been stated to be (what is specified in the following word or clause); merely stated or asserted: much used when one wishes to disclaim responsibility for the statement, or to intimate his disbelief in it: as, an *alleged* fact; an *alleged* interview; an *alleged* illness.

> We cannot be sure that the *alleged* second dispatch was ever sent. *Sir G. Cox*, Gen. Hist. Greece, III. 10.

Alleghanian (al-ē-gā′ni-an), *a.* and *n.* 1. Of or pertaining to the Alleghanies.—2. In *anthrop.*, noting one of the secondary races of man, established by Geoffroy Saint-Hilaire, embracing the 'Red Indian.' Also used substantively.—**Alleghanian area.** See ★*area*.

Allegheny River series. See ★*series*.

allegorism (al′ē-gō-rizm), *n.* 1. Allegory or allegorical writing.—2. Allegorical interpretation, especially of the Scriptures. See the extract.

> *Allegorism*: That explanation of a Scripture passage which is based upon the supposition that its author, whether God or man, intended something 'other' than what is literally expressed. . . . Expositors of this system may be called allegorists; the system itself *allegorism*. *Ginzberg*, Jewish Encyc., I. 403.

allegorist, *n.* 2. One who interprets Scripture allegorically. See ★*allegorism*, 2.

allegoristic (al″ē-gō-ris′tik), *a.* Of or pertaining to an allegorist or writer of allegories: as, the *allegoristic* style; *allegoristic* lessons.

allégresse (al-ā-gres′), *n.* [F., < *allègre*, lively: see *allegro*.] Gaiety; sprightliness; gladsomeness; glee. *Urquhart*.

Allegrippus conglomerate. See ★*conglomerate*.

allegro, *a.* Special varieties of movement or style are indicated by adding other terms: as, *allegro agitato*, quick and with agitation; *allegro assai*, very quick; *allegro con brio* or *con fuoco*, quick and with spirit or intensity; *allegro con moto* or *allegro molto*, with decided quickness; *allegro vivace*, quick and with vivacity; *allegro giusto*, quick, but with steady, even movement; *allegro moderato*, moderately quick; *allegro ma non troppo*, quick, but not excessively so.

alleja (a-lē′jä), *n.* [Anglo-Ind. Also *allejah*, *allacha*, *alacha*, etc., < Hind. **alācha*, *ilācha*, < Turki *alāchah*, *alajah*, *alchah* (Yule).] A silk-and-cotton fabric of central Asia, woven in wavy effects.

allelomorph (a-lel′ō-môrf), *n.* [Gr. *'αλλήλων*, of one another, + *μορφή*, form.] In *biol.*, one of a pair of mutually exclusive qualities exhibited respectively by each of two pure races or varieties of a species, these qualities being of such a nature that one or the other of the pair is exhibited in perfection, to the complete exclusion of the other, by each cross-bred descendant of the two pure races. When the cross-bred offspring, or the descendants of the cross-bred offspring, of two pure races or varieties which differ from each other in respect to some characteristic are like one or the other parent in respect to this characteristic, and not intermediate between them, the characteristic in question, in each parental form, is termed by Bateson an *allelomorph*, or in both parental forms, considered collectively, a pair of *allelomorphs*. Thus, for example, when descendants are reared from a tall (D) and a short (R) variety of the garden-pea, some are tall and some short, but intermediate forms are as rare as they are in the tall and short varieties of pure blood when bred true. In this case tallness and shortness may be considered as a pair of mutually antagonistic or incompatible unit characters, or *allelomorphs*, each of which may replace but not combine with the other in the descendants from a cross between them. According to Mendel and those who accept his theoretical explana-

tion of the results of his experiments, the cross-bred individuals have two sorts of germ-cells in approximately equal numbers, those which are like the germ-cells of one pure parental race (D) and those which are like the germ-cells of the other (R). If descendants are born from cross-breeds through the union of two of the D or tall germ-cells, the shortness (R) of the short variety will not be represented in the fertilized eggs from which they arise, and they will be tall and will have none but tall descendants; while those which arise from fertilized eggs formed by the union of the R or short germ-cells will be short and will have none but short descendants. Those which arise from fertilized eggs formed by the union of a tall (D) and a short (R) germ-cell may be tall or short but not intermediate.

[If] two similar gametes meet, their offspring will be no more likely to show the other *allelomorph* than if no cross had ever taken place.

Bateson and Saunders, Rep. Evol. Com. Roy. Soc. 1902, [I. 159.

allelomorphic (a-lel-ō-môr′fik), *a.* [*allelomorph* + *-ic.*] Concerning or pertaining to an allelomorph; Mendelian.

But besides the strictly *allelomorphic* or Mendelian distribution of characters among the gametes . . . we can imagine three other arrangements.

Bateson and Saunders, Rep. Evol. Com. Roy. Soc. 1902, [I. 127.

Allelomorphic variety, an analytical variety. See ★*variation.*

allelomorphism (a-lel-ō-môr′fizm), *n.* [*allelomorph* (*ic*) + *-ism.*] The presence or the transmission or the inheritance of allelomorphic characters.

It does not appear as yet that simple *allelomorphism* occurs between any two colours, of which neither is xanthic or albino.

Bateson and Saunders, Rep. Evol. Com. Roy. Soc. 1902, [I. 142.

allelotaxis (a-lel-ō-tak′sis), *n.* [Gr. *ἀλλήλων*, of one another, + *τάξις*, arrangement.] In *embryol.*, the origin of an organ from several embryonic sources, such as that of the hypophysis from the entoderm of the pharynx and the ectoderm of the brain. *Von Kupffer.*

allelotropy (a-le-lot′rō-pi), *n.* [Gr. *ἀλλήλων*, of each other, + *-τροπία*, ‹ *τρέπειν*, turn.] The existence in a tautomeric substance of the two isomeric forms in such a condition that either form readily passes over into the other. *Knorr.*

allene (al′ēn), *n.* [L. *all(ium)*, garlic, + *-ene.*] Same as ★*allylene.*

allepigamic (al″ep-i-gam′ik), *a.* [Gr. *ἄλλος*, other, + E. *epigamic.*] In *biol.*, concerning or pertaining to adventitious epigamic characters. *Poulton*, Colours of Animals, p. 338. [Rare.]

allesthesia (al-es-thē′si-ą), *n.* [NL., ‹ Gr. *ἄλλος*, other, + *αἴσθησις*, sensation.] Same as *allochiria.*

all-fives (âl″fīvz′), *n.* A variety of all-fours in which the points are scored as fast as made in the tricks taken in. Ace of trumps counts 4, king 3, queen 2, jack 1, ten 10, and five 5. The game-point is decided by counting these all over again at the end. Sixty-one points make a game.

alliance, *n.*—**Farmers' Alliance**, a coöperative association of farmers, formed in Texas in 1876, for mutual protection and assistance, especially in dealings with middlemen and against the encroachments of capitalists in their wholesale purchases of lands. In later years similar associations were formed in different parts of the United States, and as a result of frequent amalgamations of these the present Farmers' Alliance and Industrial Union came into existence as a political body, coöperating more or less closely with the People's party.—**Grand Alliance.** See *Grand Alliance* in Cyclopedia of Names.—**Presbyterian Alliance.** See ★*Presbyterian.*

allicholy† (al′i-kol-i), *a.* A jocose perversion of the word 'melancholy.' *Shak.*, T. G. of V., iv. 2. 27.

A disconsolate wood-pigeon . . . so *allicholy* as anything. *Walpole*, Letters, I. 8.

alligator, *n.* **6.** A boat used in handling floating logs. It can be moved overland from one body of water to another by its own power, usually applied through a drum and cable. [U. S.]—**Horn alligator**, alligator leather made from the back of the skin, which has the roughest and largest scales, resembling plates of horn.

Alligatorellus (al″i-gā-tō-rel′us), *n.* [NL., ‹ *Alligator* + dim. *-ellus.*] An extinct genus of small crocodilians from the Jurassic lithographic stone of Cérin, France.

Alligatorium (al″i-gā-tō′ri-um), *n.* [NL., ‹ *Alligat(or)* + *-orium.*] An extinct genus of small crocodilians of the family *Atoposauridæ*, from the Jurassic lithographic limestone of France and Bavaria.

alligator-shears (al′i-gā-tor-shērz″), *n. sing.* and *pl.* Shears used for cutting off puddled bars in lengths suitable for piling, and also the crop ends of bars in general. There is a fixed lower jaw, and an upper movable jaw, whose fulcrum is set at the inner end of the cutting portion. Behind the fulcrum the lever is prolonged, and attached to a connecting-rod which receives its oscillatory movement from a crank or eccentric. Also called *crocodile-* or *cropping-shears*. *Lockwood*, Dict. Mech. Eng. Terms.

alligator-snapper (al″i-gā-tor-snap′ėr), *n.* The more common name for the alligator-terrapin, *Macrochelys lacertina*, a species of fresh-water turtle found along the border of the Gulf of Mexico from Florida to Texas. It is the largest fresh-water turtle of North America and possibly of the world, reaching a length of 5 feet and a weight of 150 pounds.

Allionia (al-i-ō′ni-ą), *n.* [NL. (Loefling, 1758), named in honor of Carlo *Allioni* (1725–1804), a professor of botany at Turin.] A genus of dicotyledonous plants of the family *Nyctaginaceæ*. See *Oxybaphus.*

alliteral (a-lit′ę-ral), *a.* [Irreg. ‹ L. *ad*, to, + *litera*, letter: see *literal.*] Characterized by alliteration; alliterational: as, the *alliteral* languages of Africa.

alliterate, *n.* **II.** *a.* Formed by or showing alliteration: as, *alliterate* words.

alliterational (a-lit-ę-rā′shon-al), *a.* Characterized by or abounding in alliteration. *Penny Cyc.*, 1858.

allituric (al-i-tū′rik), *a.* [*all(antoin)* + *-it-* + *uric*(?).] Noting an acid, $C_6H_6O_4N_4$, formed by boiling a solution of alloxantin with hydrochloric acid. It is a yellowish, crystalline powder moderately soluble in hot water.

all-nighter (âl-nī′tėr), *n.* A public hack which plies during the night. [Slang.]

allo-. 2. In *chem.*, a prefix proposed by Michael to designate an unexplained isomerism. Thus fumaric acid would be called *allomaleic* acid. The prefix is used for that isomer which is the less stable of the two compounds considered.

allo-autogamous (al″ō-â-tog′ą-mus), *a.* [Gr. *ἄλλος*, other, + *autogamous.*] In *bot.*, self-fertilizing, but only when cross-fertilization fails.

allo-autogamy (al″ō-â-tog′ą-mi), *n.* [‹ *allo-autogamous* + *-y.*] The character of being allo-autogamous.

allocaffein (al″ō-ka-fē′in), *n.* A compound, $C_8H_9O_5N_3$, formed by decomposing the bromine addition-product of methylcaffein with water. It melts at 196°–198° C.

allocarpy (**al′**ō-kär-pi), *n.* [Gr. *ἄλλος*, other, + *καρπός*, fruit.] The bearing of fruit as a result of cross-fertilization.

allochiral (al-ō-kī′ral), *a.* [Gr. *ἄλλος*, other, + *χείρ*, hand.] Relating or related to the other hand; related as one hand of an individual is to the other hand of the same individual; similar, correspondent, or identical in form, as the right hand is to the left, though on opposite sides of the body and the parts are arranged in reverse order: opposed to ★*homochiral.* See also ★*heterochiral.*

allochirally (al-ō-kī′ral-i), *adv.* In an allochiral manner; as one hand is to the other.

Allochromatic precious stones, precious stones of a variable character, that is, possessing one or more colors in the same crystal or gem.

allocinnamic (al-ō-sin′a-mik), *a.* [Gr. *ἄλλος*, other, + *cinnamic.*] Noting an acid isomeric with ordinary cinnamic acid, but closely related to it in structure. The two acids are supposed to be stereomers.

alloclase (al′ō-klās), *n.* [Gr. *ἄλλος*, other, + *κλάσις*, breaking, ‹ *κλᾶν*, break.] Same as ★*alloclasite.*

alloclasite (a-lō′kla-sīt), *n.* [As *alloclase* + *-ite*^{2}.] A mineral related to arsenopyrite, containing sulphur, arsenic, bismuth, cobalt, and iron: found in Hungary.

allocockick (al-ō-kō′chik), *n.* [N. W. North Amer. Ind.] The name of Indian shell-money used in northern California.

allocryptic (al-ō-krip′tik), *a.* [Gr. *ἄλλος*, other, + *κρυπτός*, hidden.] Concerning or pertaining to the concealment of an organism by objects which are not part of its body.

Allocryptic methods may also be used for aggressive purposes, as the ant-lion larva, almost buried in sand, or the large frog *Ceratophrys*, which covers its back with earth when waiting for its prey.

Encyc. Brit., XXVII. 147.

allocutive (a-lok′ū-tiv), *a.* Speaking with authority and in reprehension, as in a papal allocution.

He had been greatly convinced of the great resources of the vernacular, by hearing an old neighbor, noted for her *allocutive* energy, remark that she had just given the hired man a good tongue-banging. *The Atlantic*, 1884, p. 510.

Allodesma (al-ō-dez′mą), *n.* [NL., ‹ Gr. *ἄλλος*, other, + *δέσμα*, band, ligament.] The typical genus of the family *Allodesmidæ.*

allodesmid (al-ō-dez′mid), *a.* and *n.* **I.** *a.* Having the characters of the *Allodesmidæ.*

II. *n.* A member of the pelecypod family *Allodesmidæ.*

Allodesmidæ (al-ō-dez′mi-dē), *n. pl.* [NL., ‹ *Allodesma* + *-idæ.*] A family of extinct pelecypods of the order *Teleodesmacea* having very primitive characters and regarded by Neumayr as indicating the first stage in the development of the teleodesmacean hinge, as in *Astarte* and *Cardium.* The valves are small and round, the cardinal area is linear, the ligament is parivincular, the hinge has one or two lateral laminæ on each side of the beak, and the cardinal teeth are radially grooved. They are known only from the Silurian rocks.

Allodon (al′ō-don), *n.* [Gr. *ἄλλος*, other, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of extinct monotremes from the Upper Jurassic rocks of North America, having three upper incisors, of which the second is greatly enlarged. More correctly written *Allodus.*

Allodus (al′ō-dus), *n.* See ★*Allodon.*

Allœocœla (al-ē-ō-sē′lą), *n. pl.* See ★*Alloiocœla.*

allœogenesis, *n.* 2. The alternation of sexual and parthenogenetic generations, seen especially in certain parasitic *Trematoda.* Also *alloiogenesis.* *Schwarze.*

allœogenetic (al″ē-ō-je-net′ik), *a.* Pertaining to or produced by *allœogenesis.*

allogenic (al-ō-jen′ik), *a.* [Gr. *ἄλλος*, other, + *-γενής*, -producing.] Of a different origin: in *geol.*, applied to those inclusions in an igneous rock which are obviously older than the inclosing rock, and to the components of a clastic rock which have originated elsewhere: contrasted with ★*authigenic.*

Alloiocœla (a-loi-ō-sē′lą), *n. pl.* [NL., ‹ Gr. *ἀλλοῖος*, of another sort, + *κοίλον*, a hollow.] An order or a suborder of *Turbellaria* having the enteron lobed or an irregularly widened sac. It contains the families *Plagiostomidæ*, *Monotidæ*, and *Bothrioplanidæ.* Also *Allœocœla.*

alloiocœlous (a-loi-ō-sē′lus), *a.* Having the characteristics of or resembling the *Alloiocœla.*

alloiogenesis (al-oi-ō-jen′ę-sis), *n.* See ★*allœogenesis*, 2.

alloisomerism (al″ō-ī-som′e-rizm), *n.* [Gr. *ἄλλος*, other, + *isomerism.*] In *chem.*, a term introduced by Michael to distinguish certain cases of isomerism between different substances of the same percentage composition (as maleic acid and fumaric acid), involving, it is now believed, different geometrical positions of the atoms in space.

alloite (al′ō-īt), *n.* [Irreg. ‹ Gr. *ἄλλος*, other, + *-ite*^{2}.] In *petrog.*, a name proposed by Cordier (1816) for volcanic tuff of white or yellowish color and imperfectly indurated.

allokinetic (al-ō-ki-net′ik), *a.* [Gr. *ἄλλος*, other, + *κινητός*, moved: see *kinetic.*] Moving in response to an external stimulus: opposed to ★*autokinetic.*

allomorph (al′ō-môrf), *n.* [Gr. *ἄλλος*, other, + *μορφή*, form.] In *mineral.*, a paramorph, that is, a pseudomorph formed by molecular change only, the chemical composition remaining the same, as calcite after aragonite.

allomorphic, *a.* 2. In *petrog.*, same as *xenomorphic.*

allopalladium (al″ō-pa-lā′di-um), *n.* A supposed allotropic form of native palladium, crystallizing in hexagonal plates.

allopelagic (al″ō-pē-laj′ik), *a.* [Gr. *ἄλλος*, other, + *πέλαγος*, sea.] Being in different parts of the sea (at different times); moving up and down irregularly in the sea in search of food, for purposes of reproduction, at different stages of development, or in response to any stimulus except light or heat. A pelagic fish that floats as an egg and swims at the surface while young, afterward wandering in deeper water, is allopelagic. The word was introduced by Haeckel for the purpose of contrasting organisms that wander up and down irregularly with those that come to the surface only at night or only in the winter. See ★*bathypelagic*, ★*nyctipelagic*, ★*chimopelagic.*

allophylous (a-lof′i-lus), *a.* Same as *allophylian.*

alloplasmatic (al′ō-plas-mat′ik), *a.* [Gr. *ἄλλος*, other, + *πλάσμα*, anything formed.] Constructed out of cells or by cells, but incapable of growth by cell-multiplication.

allopsychic (al-op-sī′kik), *a.* [Gr. *ἄλλος*, other, + *ψυχή*, soul, mind.] Pertaining to mind or consciousness in its relation to the external world. Also *allopsychical.*

Consciousness is a function of the associative mechanism, and may be considered in its threefold relationship to the outer world, the body, and self,—*allopsychic*, *somatopsychic*, and *autopsychic*.
Buck, Medical Handbook, IV. 27.

allorhythmia (al-ō-rith′mi-ä), *n.* [NL., < Gr. ἄλλος, other, + ῥυθμος, rhythm.] In *pathol.*, a condition in which the rhythm of the pulse varies from time to time. *Lancet*, Aug. 22, 1903.

Allorisma (al-ō-riz′mä), *n.* [NL., appar. < Gr. ἀλλος, other, + ἔρεισμα, support.] A genus of extinct pelecypods of Paleozoic age. They have valves which gape posteriorly, edentulous hinge, and parivincular ligament. The genus embraces species which show the earliest evidence of retractile siphons.

Allosaurus (al-ō-sâ′rus), *n.* [NL., < Gr. ἄλλος, other, + σαῦρος, lizard.] A genus of dinosaurian reptiles described by Marsh from the Upper Jurassic beds of Colorado and closely allied to the better-known *Megalosaurus*. They have very short fore and large hind legs, the latter reaching a length of 5 feet.

allosematic (al″ō-sē-mat′ik), *a.* [Gr. ἄλλος, other, + σῆμα, mark: see *sematic*.] Having or using the sematic colors of another animal, which serve for deceptive protection. It has been suggested that the sea-anemones, which are often found on the shells of hermit-crabs and on the backs of decorative crabs, are illustrations of allosematic protection. *Poulton*, Colours of Animals, p. 338.

Allosomus (al-ō-sō′mus), *n.* [NL., < Gr. ἄλλος, other, + σῶμα, body.] A subgeneric name for the division of the genus *Argyrosomus* which contains the tullibee, *A. tullibee*.

allothigene (al′ō-thi-jēn″), *a.* [Gr. ἄλλοθι, elsewhere, + -γενής, -produced.] Same as ★*allogenic*.

allothigenetic (al″ō-thi-jē-net′ik), *a.* [Gr. ἄλλοθι, elsewhere, + γένεσις, origin: see *genetic*.] In *geol.*, composed of materials which have originated elsewhere: applied to the fragmental, sedimentary rocks, the components of which have been derived from other sources, as contrasted with the igneous rocks, whose minerals have crystallized *in situ*. See ★*allogenic*.

allothigenetically (al″ō-thi-jē-net′i-kal-i), *adv.* In an allothigenetic manner or by means of allothigenetic materials.

allothigenic (al″ō-thi-jen′ik), *a.* [Gr. ἄλλοθι, elsewhere (< ἄλλος, other), + -γενής, -produced.] Same as ★*allothigenetic*.

allothimorphic (al″ō-thi-môr′fik), *a.* [Gr. ἄλλοθι, elsewhere (< ἄλλος, other), + μορφή, form.] In *petrol.*, a term applied to particles derived from older rocks which retain unchanged their original form in the secondary clastic deposits where they now occur.

allothogenic (al″ō-thō-jen′ik), *a.* Same as ★*allothigenic*.

allotriomorphic (a-lot-ri-ō-môr′fik), *a.* [Gr. ἀλλότριος, of another, alien, + μορφή, form.] Same as *xenomorphic*.

allotrophic (al-ō-trof′ik), *a.* [Gr. ἄλλος, other, + τροφή, nourishment.] Of altered nutritive value; rendered less nutritious.

Allotropic silver. See ★*silver*.

allotropism, *n.* The occurrence of more than one form of a chemical element with difference in physical properties is explained, in the light of the atomic theory, as depending on a difference in the number, and possibly in the arrangement, of the atoms which go to make up the molecule. Thus it is believed that in the more common form of oxygen there are two, but in the allotropic ozone three, atoms to the molecule.

allotropist (a-lot′rō-pist), *n.* One who explains the presentation of unusual properties by a chemical element by assuming the existence of that element in an allotropic form; specifically, an advocate of the theory that allotropic modifications of iron have an important effect in producing the hardness of suddenly quenched steel, as distinguished from a ★*carbonist* (which see). *Nature*, May 5, 1904.

alloxuremia (al-ok-sū-rē′mi-ä), *n.* [*alloxur(ic)* + Gr. αἷμα, blood.] A condition resulting from the presence of any of the alloxuric bases in the blood.

alloxuric (a-lok-sū′rik), *a.* [*allox(an)* + *uric*.] Pertaining to or derived from alloxan and uric acid: noting certain bases comprising xanthin, hypoxanthin, episarcin, heteroxanthin, paraxanthin, theophyllin, theobromine, caffein, guanine, epiguanine, adenin, and carnin. They are all nuclear derivatives. Also termed *xanthin bases* or *purin bases*.

alloy, *n.* 1. A metallic alloy possesses the general physical properties of a metal, but is usually intermediate in properties between those of its constituents. Alloys are divided into three classes: (1) Those which form solid solutions in all proportions; (2) those which do not form solid solutions in all proportions, and which form no chemical compounds; and (3) those which form one or more chemical compounds. An alloy of the first class forms a homogeneous fluid when melted, and a homogeneous solid after freezing. Alloys of the second class form a homogeneous fluid when melted, but on solidification the components separate from one another and form microscopic crystals of the different metals intimately associated, but not in chemical combination or solution. A highly magnified section of such an alloy would not show a homogeneous structure, but the individual crystals of the pure components could be distinguished. Alloys of the third class follow the same general laws on solidification as the alloys of the second class, but the crystals which separate do not consist of the pure components, but some of the crystals will be of one or more of the pure components, while other crystals will be formed of chemical compounds of the different components.—**Aluminium alloys.** See ★*aluminium*.—**Eutectic alloy,** an alloy having such a composition that it melts at a lower temperature than an alloy of the same metals having any other composition. See *eutectic*.—**Lipowitz's alloy,** a fusible alloy consisting of 3 parts of cadmium, 8 parts of lead, 4 parts of tin, and 15 parts of bismuth. It melts at 158° F., and is used for castings of delicate objects, as well as for soldering Britannia metal and other white articles which cannot withstand high temperature.—**Prinsep's alloys,** in *pyrom.*, a progressive series of alloys of gold, silver, and platinum employed by James Prinsep for estimating high temperatures, on the principle that the fusing-points of pure metals are fixed. This series consists of 10 alloys of gold and silver, each increased by $\frac{1}{10}$ of gold, and 100 alloys of gold and platinum with a progressive increase of $\frac{1}{100}$ of gold. The temperature of any furnace can readily be determined by introducing these alloys and noting the point where fusion begins. See also phrases under ★*metal* and the words *gold*, *silver*, etc.—**Retz alloy,** an alloy composed of 15 parts of copper, 2.34 of tin, 1.82 of lead, and 1 of antimony. It resists the corrosive action of alkalis and acids.—**Steel alloys.** The number of these alloys is very large, since iron alloys readily with most metals. In the best known, steel is combined with one or more of the following metals: manganese, nickel, chromium, titanium, tungsten, aluminium, vanadium, boron, uranium, copper, tin, and zinc. The term 'steel alloy' is applied only to steels containing influencing quantities of metals other than iron.

allspicy (âl′spī-si), *a.* [*allspice* + *-y*1.] Warm; resembling allspice in warmth. *Hood*, Up the Rhine, p. 217. [Rare.]

All-the-Talents Administration. See ★*administration*.

alluranic (al-ū-ran′ik), *a.* [*all(oxan)* + *ur(ea)* + *-an* + *-ic*.] Noting a weak acid, $C_5H_4N_4O_4$, formed from alloxan and urea.

Alluring glands. See ★*gland*.

Allurus (a-lū′rus), *n.* [NL., < Gr. ἄλλος, another, + οὐρά, tail.] A subgeneric name for a small group of snail-fishes, of the family *Liparididæ*, from the depths of the North Pacific.

alluvial, *a.* 2. A term applied to the most recent or postglacial deposits, which follow the diluvial deposits.—**Alluvial cone.** See ★*cone*.—**Alluvial fan.** Same as *fan*, 3.

II. *n.* Alluvial soil; specifically, in Australia and New Zealand, gold-bearing alluvial soil.

alluviated (a-lū′vi-ā-ted), *p. a.* [*alluvium* + *-ate*2 + *-ed*2.] Pertaining to or characterized by alluvial deposits, such as alluvial fans. *Geog. Jour.* (R. G. S.), IX. 538.

alluviation (a-lū-vi-ā′shon), *n.* [*alluvium* + *-ation*.] The process of accumulating rock-debris along the lower reaches of slopes by rainwash and along the more slowly flowing stream-courses by loss of overload. Alluvial fans or cones, alluvial plains or flood-plains, and slope-waste are the chief products of alluviation. *Chamberlin and Salisbury*, Geol., I. 176.

allwhither (âl′hwiᵺer″), *adv.* In all directions. [Rare.]

The swell . . . crumbled up and ran *allwhither* oilily.
Kipling, Their Lawful Occasions.

allyl, *n.*—**Sulphocarbamide of allyl,** a crystallized compound obtained by the action of an excess of ammonium hydrate on the essential oil of mustard. A few drops of a saturated aqueous solution will reverse the image on a photographic plate and give a direct positive in the camera.

allylene (al′i-lēn), *n.* [*allyl* + *-ene*.] The name given to two isomeric hydrocarbons, methyl acetylene or propine, $CH_3C{:}CH$, and propadiene, $CH_2{:}C{:}CH_2$.

allylin (al′i-lin), *n.* [*allyl* + *-in*2.] A name given to three ethers of glycerol and allyl alcohol known as monoallylin, diallylin, and triallylin. The last is $C_3H_5O_3(C_3H_5)_3$.

alma2 (al′mä), *n.* [Turk.] A Turkish measure of capacity, equal to 1.15 gallons.

almacabala (al″ma-kab′a-lä), *n.* [ML. *almacabala*, < Ar. *al-muqâbalah*, 'the comparison': see etym. of *algebra* and cf. *cabala*.] The mystic explanation of numbers and of relations of numbers.

almacabalic (al-ma-kab′a-lik), *a.* Of or pertaining to almacabala.

almacen (äl-mä-thān′), *n.* [Sp.: see *magazine*.] A warehouse; a magazine or storehouse.

Some sheep were procured, and from an *almacen* distant about a mile inland, other articles.
Geog. Jour. (R. G. S.), XV. 604.

almácigo (äl-mä′thē-gō), *n.* [Sp. mastic.] The West Indian birch, *Terebinthus Simaruba*, one of the commonest and most characteristic trees of Porto Rico. Its wood is soft and of little value. See *cachibou*, and *West Indian birch*, under *birch*. [Porto Rico.]

almagrerite (al-ma-grē′rīt), *n.* [Sp. *Almagrera* (see def.) + *-ite*2.] Anhydrous zinc sulphate, occurring as a natural mineral in the Sierra Almagrera in Spain. Also ★*zincosite*.

almandite (al′man-dīt), *n.* Same as *almandin*.

almasca (al-mas′kä), *n.* A soft gray resin soluble in chloroform, ether, and absolute alcohol: probably derived from *Icica heptaphylla*. *Thorpe*, Dict. Applied Chem., I. 61.

almeidina (al-mā-dē′nä), *n.* [Pg., from the name of the first exporter of the product, João Duarte de *Almeida*.] The commercial name for a rubber adulterant obtained from the latex of *Fockea multiflora* and *Euphorbia rhipsaloides*. It is exported from Angola, and comes into commerce in the form of dry, somewhat brittle balls about as large as the fist and almost white in color.

almendor (äl-mān-dōr′), *n.* [Brazilian.] *Geoffræa superba*, a tree of the bean family common in Brazil and Venezuela. Its fruit is about the size of a walnut, with a greenish-yellow downy rind and a fleshy pulp inclosing a hard, nut-like seed. The fruit is boiled and used as food by the Indians, and the kernel is also eaten. The tree yields a fine, hard wood. In northern Brazil the Indians (Tupi) call it *mari*. [Brazil.]

almendro (al-men′drō), *n.* [Sp. *almendro*, almond-tree: see *almond*.] A name applied in Guam, the Philippines, and Porto Rico to *Terminalia Catappa*, the nuts of which somewhat resemble almonds in shape and flavor. See *Terminalia*2, and *country almonds*, under *almond*.

Almen's solution. See ★*solution*.

Almond black. See ★*black*.—**Dika almonds,** the seeds of a large tree, *Irvingia Gabonensis*, of tropical West Africa. They are rich in mucilage and fat, and when roasted are used for food. See *dika-bread* and *Irvingia*.—**Hard-shell almond,** a type of sweet almond having a nut sometimes as hard as a peach-stone, little valued except as a stock.—**Malabar almond.** Same as *country almond* (which see, under *almond*).—**Paper-shell almond,** a thin-shelled type of sweet almond, of the highest commercial grade. It includes a false variety with a double shell.—**Soft-shell almond,** the ordinary commercial almond exclusive of the paper-shell. There are all gradations of hardness in almond-shells.—**Tropical almond,** a common name for *Terminalia Catappa*. Also *Demerara almond*.

almond-butter (ä′mond-but″er), *n.* Same as *almond-paste*.

almond-meal (ä′mond-mēl), *n.* The cake left from almonds, after the oil has been removed by pressure, coarsely ground.

almond-oil, *n.*—**Artificial bitter-almond oil,** nitrobenzene ($C_6H_5NO_2$), a yellow liquid with a smell like that of bitter almonds, sometimes used in perfumery. Same as *mirbane oil*.

almondy (ä′mon-di), *a.* [*almond* + *-y*1.] Like almonds in taste or fragrance. *Lyell*, Life, ii. 132. *N. E. D.*

alnein (al′nē-in), *n.* [L. *alneus*, adj., < *alnus*, alder, + *-in*2.] A coloring matter extracted from the bark and wood of the alder, birch, and beech. It produces colors varying from yellow to brown-black.

Alnitamian (al-ni-tā′mi-an), *a.* and *n.* **I.** *a.* Noting stars whose spectrum is of the type of that of Alnitam. They are characterized by the predominance of hydrogen lines of the Huggins series (with fainter Pickering lines), strong helium, protosilicon, and a line of unknown origin in the cyan-blue having λ = 4649.2.

II. *n.* An Alnitamian star.

alnoite (al′nō-īt), *n.* [*Alnö*, an island of Sweden, + *-ite*2.] In *petrog.*, a name proposed by Rosenbusch (1887) for an igneous rock having the mineral composition of melilite-basalt, but occurring in dike form. It may also be considered as an olivin-rich biotite-monchiquite.

Alocasia (al-ō-kā′si-ä), *n.* [NL., appar. arbitrarily varied from *Colocasia*.] A genus of stove foliage plants of 20 or more species belonging to the family *Araceæ*, natives of tropical Asia and the Malayan Islands. Closely allied to *Colocasia*. See cut under ★*ape*2, 2.

aloed (al′ōd), *p. a.* 1. Flavored with aloes; mixed with aloes; bitter: as, "death's *aloed* portion," *Fellthan*.—2. Shaded with or formed of aloes: as, "the *aloed* porch," *Browning*, Men and Women, ii. 30.

aloëtic, *a.*— **Aloëtic acid,** tetranitroanthraquinone, $C_{14}H_4O_2(NO_2)_4 + H_2O$ (?). It is prepared by treating aloes with nitric acid and is a tetrabasic acid.

aloft, *adv.*— **Aloft there!** the hail used to call the attention of the men who are aloft in the rigging or on the yards or in the tops.— **Lay aloft!** (*naut.*), an order to the seamen to mount the rigging for the execution of some piece of work in the tops or on the yards.— **Lay down from aloft!** (*naut.*), a command for the seamen to cease work in the upper rigging and to descend to the deck.

alogia (a-lō′ji-ạ), *n.* [NL.: see *alogy.*] In *pathol.*, aphasia due to ideational defect.

aloja (ạ-lō′hạ), *n.* [Sp., a beverage made of water, honey, and spices.] A fermented beverage made from the sweet pods of several leguminous trees. In Argentina those of the algarroba, *Prosopis alba*, and the chañar, *Gourliea decorticans*, are used. See ★*chañar.* [South America.]

Alonsoa (a-lon′sō-ạ), *n.* [NL., from Z. *Alonso*, a Spanish officer.] A genus of very tender tropical, American, annual plants of the family *Scrophulariaceæ.* The cultivated species come mostly from Peru and Mexico. There are 6 distinct species and varieties; some authors, however, differ with regard to the number. These plants are cultivated in the open and very rarely in pots. *A. incisifolia*, *A. Warscewiczii*, *A. myrtifolia*, and *A. linifolia* are the species most commonly used. The seeds are sold by most seedsmen.

Alopecia dynamica, loss of hair due to destruction of the hair-follicles by ulceration, induration, or some other pathological process.— **Alopecia maligna,** a severe and intractable form of alopecia.— **Alopecia neuritica,** loss of hair over the area of distribution of an injured nerve.— **Alopecia neurotica,** loss of hair due to some functional nervous disorder or trophoneurosis.— **Alopecia presenilis,** premature baldness.— **Alopecia toxica,** loss of hair accompanying one of the infectious diseases, such as typhoid fever: supposedly due to the action of the toxins of the disease.— **Alopecia universalis,** the falling of hair from the face and body as well as from the scalp.

alopeke (a-lōp′ē-kē), *n.* [Gr. *ἀλωπεκῆ*, Attic contraction of *ἀλωπεκέη*, a fox-skin, Ionic fem. of *ἀλωπέκειος*, adj., ⟨ *ἀλώπηξ*, a fox.] An ancient Thracian head-dress of fox-skin.

alorcic (a-lôr′sik), *a.* [*al(oes)* + *orc(in)* + *-ic.*] Noting an acid, $C_9H_{10}O_3+H_2O$, formed in small amount by fusing aloes with sodium hydroxid. It crystallizes in needles which, when dry, melt at 115° C.

alorcinic (al-ôr-sin′ik), *a.* [*al(oes)* + *orcin* + *-ic.*] Same as ★*alorcic.*

alouette (al-ö-et′), *n.* [F. *alouette*, a lark, ⟨ OF. *alouete*, dim. of *aloue*, ⟨ L. *alauda*, a lark.] A device for inducing sleep by tiring the eyes by a pencil of light reflected from a series of revolving mirrors.

aloxanthin (al-ok-zan′thin), *n.* A compound formed by oxidizing barbaloin and socaloin. It is probably tetrahydroxymethylanthraquinone, $C_{14}H_3(CH_3)(OH)_4O_2$. It consists of orange-colored needles which melt at 260°–265° C.

Aloysia (al-ọ̄-is′i-ạ), *n.* [NL., from a personal name.] A subgenus of plants, of the large genus *Lippia*, which contains the commonly known lemon verbena (*L. citriodora*). The lemon verbena is easily grown in common greenhouses. In the South it may be grown in the open. It is a low-growing, tender shrub, with long, narrow, pointed leaves, native to South America.

alpargata (al-pär-gä′tä), *n.* [Sp.] In Spanish-speaking countries, a kind of sandal or low shoe with a hemp or rush sole and cloth upper.

alpha, *n.* 4. [*cap.*] The name given by Carl Neumann, the mathematical physicist, to a supposed body to which all motion, especially motion of rotation, is relative. It has been said that Newton originated this idea, but that is incorrect. Newton believed that space is a really existing thing, and he suggested that there might possibly be a body which is really in absolute rest relatively to real space. The conception of the body Alpha, which was originated by Neumann, arose, on the contrary, from a difficulty which the theory of Leibnitz (that space is not an existent thing, but is merely an image embodying certain general laws of the relations between things) meets in the circumstance that, according to the accepted doctrine of Newton's three laws of motion, motion of rotation (as it is ascertained, for example, by Foucault's pendulum experiment) is absolute and not merely relative motion. Neumann, and others who accept Leibnitz's theory of the entire relativity of space, seek to explain rotation by supposing that there is a body Alpha, which is not indeed absolutely at rest, as Newton thought it possible that some body might be (since these persons are of opinion that absolute place and absolute motion are phrases without meaning), but which is the body to which the motion spoken of in the three laws of motion ought to be understood to be relative. Ernst Mach undertakes to show that this body Alpha is really the universe as a whole, which virtually comes to saying that it is the starry heavens as a whole. The objection to this is that it makes objects the most remote from any given body the principal factors which determine the motions of that body. Now, according to that epistemological psychology which makes space an image embodying the laws of the relations of things, this image must be supposed to be so constituted as to make those things which principally affect one another appear to be near one another. According to Tait, there is no need of any body Alpha, since, so far as rotation and rectilinearity of motion are concerned, we have only to assume, as a definition, that rotation is relative to lines of force fixed within a body having no dynamic effects of rotation.— **Alpha paper.** See ★*paper.*— **Alpha rays.** See ★*ray*[1].

Alphabet of thought, a list of simple ideas by the combination of which it was supposed by Raymond Lully, the youthful Leibnitz, and perhaps by Spinoza, that knowledge could be manufactured.— **Blind alphabet.** See ★*braille.*— **Deaf-and-dumb alphabet,** the conventional signs or finger-gestures used by the deaf and dumb in lieu of speech. See *deaf-mute.*— **Missionary alphabet,** a regulated form of the Roman alphabet used by missionaries in writing the unwritten or imperfectly written languages of the peoples among whom they work. About 1830 English and American missionaries adopted a scheme, substantially that put forth by Sir William Jones in 1781, for the transliteration of Asiatic languages, based upon the Roman or Continental values of the vowels. This was extended by conferences of scholars held in 1854 and later. The first definite result was the publication of Lepsius's "Standard Alphabet" (1855, second edition 1863), and of F. Max Müller's "Church Missionary Alphabet," in effect a recension of Lepsius's scheme. This Lepsius-Müller alphabet has been applied to the recording of many hitherto illiterate languages, and, in one form or another, is used by missionaries throughout the world. It promises, in the more scientific form now being worked out in successive recensions by philologists, to become the general phonetic alphabet of the world. See *philological* ★*alphabets.*— **Philological alphabets,** modern phonetic forms of the Roman alphabet as enlarged, regulated, and controlled for philological purposes. Conspicuous philological alphabets are Lepsius's "Standard Alphabet" (1855, second edition, 1863: see above); Ellis's "Palæotype" (1869); Sweet's "Romic" (1877); Murray's scheme of notation in the New English Dictionary (1884); various Continental forms (since about 1875) associated with the names of Sievers, Vietor, Fricke, Storm, Jespersen, and Passy and the International Phonétique Internationale of Paris; and the alphabet recommended by the American Philological Association in 1877 (see below). Most of the phonetic redactions put forth by short-hand promoters (since 1840) are based upon the so-called 'English' values of the vowels, and are in no sense scientific or philological.

ALPHABET OF THE AMERICAN PHILOLOGICAL ASSOCIATION.

VOWELS.

SHORT.

Form.		Name.		Sound as in
I	i	i	(ĭ)	*it* (it)
E	e	e	(ĕ)	*met* (met)
A	a	a	(ă)	*at* (at)
Ɑ	ɑ	ɑ	(ah)	*ask* (ɑsk)
Ɵ	ɵ	ɵ	(ŏ)	*not* (nɵt), *what* (hwɵt)
O	o	o	(oh)	*obey* (obē)
U	u	u	(ŭ)	*but* (but)
U	u	u	(o͞o)	*full* (ful)

LONG.

Form.		Name.		Sound as in
Ī	ī	ī	(ee)	*pique=peak* (pīc)
Ē	ē	ē	(ay)	*they* (dhē), *veil* (vēl)
Ā	ā	ā	(aĭ[r])	*air=ere=heir* (ār)
Ɑ̄	ɑ̄	ɑ̄	(ah)	*arm* (ɑ̄rm), *far* (fɑ̄r)
Ō	ō	ō	(awe)	*nor* (nōr), *wall* (wōl)
Ō	ō	ō	(oh)	*no* (nō), *holy* (hōli)
Ū	ū	ū	(uĭ[r])	*burn* (būrn)
Ū	ū	ū	(oo)	*rule* (rūl), *ooze* (ūz)

DIPHTHONGS.

ɑI ɑi	ɑi	(*eye, I*)	*aisle=isle* (ɑil)
ɑU ɑu	ɑu	(ou)	*out* (ɑut), *our=hour* (ɑur)
ƟI ƟI	ɵi	(oĭ)	*oil* (ɵil), *boy* (bɵi)
IU iu	iu		*feud* (fiud), *few* (fiu)

CONSONANTS.

SURD.

P p	pī	(*pee*)	*pet* (pet)
T t	tī	(*tee*)	*tip* (tip)
CH ch	chī	(*chee*)	*chest* (chest)
C(K) c(k)	cī	(*kee*)	*come* (cūm)
F f	ef	(*eff*)	*fat* (fat)
TH th	ith	(*ith*)	*thin* (thin)
S s	es	(*ess*)	*sown* (sōn)
SH sh	ish	(*ish*)	*she* (shī)
H h	hī	(*hee*)	*he* (hī), *hat* (hat)

SONANT.

B b	bī	(*bee*)	*bet* (bet)
D d	dī	(*dee*)	*dip* (dip)
J j	jē	(*jay*)	*jest* (jest)
G g	gī	(*ghee*)	*gum* (gūm)
V v	vī	(*vee*)	*vat* (vat)
DH dh	dhī	(*thee*)	*thee* (dhī)
Z z	zī	(*zee*)	*zone* (zōn)
ZH zh	zhī	(*zhee*)	*azure* (azhūr)
W w	wū	(*woo*)	*we* (wī), *wit* (wit)
L l	el	(*ell*)	*lo* (lō), *ell* (el)
R r	ār	(*ar*)	*rat* (rat), *are* (ār)
Y y	yī	(*yee*)	*ye* (yī), *year* (yīr)
M m	em	(*em*)	*me* (mī), *my* (mai)
N n	en	(*en*)	*no* (nō)
NG ng	ing	(*ing*)	*sing* (sing)

Phonetic alphabet, an alphabet in which each character represents a definite sound, and which is so used that the pronunciation of each word can, within narrow limits, be known with certainty by any one who knows the alphabet. The Roman alphabet, like its original the Greek, was originally phonetic, and as used in modern times (in Italian, Spanish, Portuguese French, English, German, etc.) is still fairly phonetic. French has deviated most in the consonant system, allowing or requiring the extensive suppression of consonants in utterance, and English most in the vowel system, the whole series of English long vowels having been thrown into hopeless confusion. The most conspicuous instance of a highly phonetic and classified alphabet long in actual use is the Sanskrit, which was reduced to its present order by native grammarians about the second century A. D., on much the same lines as those on which scholars are now endeavoring to establish a classified reconstitution of the Roman alphabet.— **Physiological alphabet,** the elementary sounds of human speech.— **Scientific alphabet,** an alphabet based upon scientific principles; one which embodies phonetic precision and sufficiency. Perhaps the only alphabet fairly entitled to this designation is A. M. Bell's 'visible speech' (1867), which takes account of all distinguishable vocal sounds, including whispering, sneezing, coughing, chuckling, etc., and provides for each sound a symbol whose form is significant and thus in a way makes the intended sound obvious or 'visible' to the reader. In a laxer use, the term has been applied to the philological alphabets based upon the historic Roman alphabet. These are used with a tolerable degree of precision and uniformity, and, compared to the traditional alphabets as conventionally used, are fairly scientific. See *philological* ★ *alphabets.*

alphabetist (al′fạ-bet-ist), *n.* [*alphabet* + *-ist.*] A student or a deviser of alphabets. *S. S. Haldeman*, Analyt. Orthog., ii. 22.

alpha-naphthol (al-fạ-naf′thōl), *n.* A naphthol having the hydroxyl-group in the alpha position.

alpha-naphthylamine (al″fạ-naf″thil-am′in), *n.* Naphthylamine in which the amido-group is in the alpha position.

Alphestes (al-fes′tēz), *n.* [NL., ⟨ Gr. *ἀλφηστής*, a kind of fish.] A genus of sea-bass allied to *Epinephelus*, of the family *Serranidæ.*

alphogen (al′fō-jen), *n.* Same as ★*alphozone.*

alphonse (al-fons′), *n.* [Sp. *Alfonsino.*] A Spanish gold coin of the reign of Alfonso XII., worth 20 pesetas or $3.86.

alphozone (al′fō-zōn), *n.* A white crystalline compound, $C_8H_{10}O_8$, obtained by the action of hydrogen peroxid on succinic anhydride; disuccinic peroxid. It is a powerful germicide. Also called *alphogen.*

alphyl (al′fil), *n.* A name proposed by Bamberger to designate an aromatic radical, as phenyl, C_6H_5. Such radicals are now more often called *aryls*, while aliphatic radicals, as methyl, CH_3, are sometimes called *alphyls*; but the latter are more properly called *alkyls*, and the name *alphyl* has become superfluous.

alphylate (al′fi-lāt), *v. t.*; pret. and pp. *alphylated*, ppr. *alphylating.* [*alphyl* + *-ate*[2].] To introduce an alphyl into (an organic compound). *Amer. Chem. Jour.*, April, 1903.

alpine, *a.* 2. [*cap.*] In *anthrop.*, noting the type of the European race which inhabits the Alps and the regions east and west of the Alps: characterized by a broad, short head, broad face with full chin and heavy nose, medium stature, and prevalently grayish eyes and brown hair. Also called *Celto-Slavic*, *Sarmatian*, *Arvernian*. *Ripley*, Races of Europe, p. 123.— **Alpine blue, diluvium, glacier.** See ★*blue*, etc.— **Alpine hat,** a soft felt hat with a deep dent in the crown and rolled brim: originally a traveling-hat, and used in mountain-climbing, whence the name.— **Alpine granite.** See *protogine.*

Alpinia (al-pin′i-ạ), *n.* [NL. from Prospero *Alpino*, an Italian botanist.] A genus of stove herbs of the family *Zinziberaceæ*, cultivated for both the foliage and the racemes or panicles of flowers. There are about 60 species of this genus found in tropical and subtropical Asia, the islands of the Pacific Ocean, and Australia. The species most commonly cultivated is *A. nutans*, a plant with very beautiful foliage, sometimes known as the *shell-flower.*

alpinin (al′pi-nin), *n.* [(?) *Alpine* + *-in*[2].] A substance prepared from galangal root, since shown to be a mixture of galangin and camperid.

Alsace gray, green, etc. See ★*gray*, ★*green*[1], etc.

Alsatian clover. See ★*clover.*

alsbachite (alz′ba-kīt), *n.* [*Alsbach*, a stream on Mount Melibocus, Odenwald, Baden, + *-ite*[2].] In *petrog.*, the name given by Chelius (1892) to a variety of granite-porphyry poor in ferromagnesian minerals and rich in pink garnet, occurring on the slope of Mount Melibocus.

Alsidium (al-sid′i-um), *n.* [NL. (C. A. Agardh, 1827), said to have been formed (if so, irregularly) ⟨ Gr. *ἁλίς*, saltness, or *ἅλς*, salt, + *-idium.*] A genus of red seaweeds containing the species *A. Helminthochortos*, or Corsican moss, used in medicine.

alsike (al′sik, Sw. äl′si-ke), *n.* [Prop. *Alsike clover*, named from (Sw.) *Alsike* near Upsala in Sweden.] A species of clover (*Trifolium hybridum*) native to Europe, much grown in the United States for forage. It thrives best

in moist land. It is a tall, weak-stemmed branching species, with small whitish heads which become pink. It is sometimes known as *Swedish clover*.

Alsine (al'si-nē), *n.* [NL. (Linnæus, 1753), < Gr. *ἄλσίνη*, a plant of unknown identity, < *ἄλσος*, grove or place grown with trees and grass.] A genus of dicotyledonous plants belonging to the family *Silenaceæ*. See *Stellaria*.

alstonidine (al-stō'ni-din), *n.* [*Alstonia* (see def.) + *-id* + *-ine*².] An alkaloid found in *Pala* (*Alstonia*) *constricta*. It crystallizes in needles which melt at 181° C.

alstonine (al'stō-nin), *n.* [*Alstonia* (see def.) + *-ine*².] An alkaloid, $C_{21}H_{20}N_2O_4+3\frac{1}{2}H_2O$, found in the bark of *Pala* (*Alstonia*) *constricta*. It is amorphous and was formerly called *chlorogenin*.

Alstrœmeria (al-strē-mē'ri-ä), *n.* [NL., from a personal name.] A genus of cool-house and stove plants, members of the family *Amaryllidaceæ*, with tuberous roots, treated as bulbs. The species most common in the United States are natives of Brazil, Peru, Chile, and Mexico. *A. Pelegrina* is best adapted for greenhouse purposes. In all there are about 50 described species, found in the tropical and subtropical regions of South America.

Altamaha grits. See ★*grit*².

altar-book (âl'tär-bůk), *n.* Same as *missal*.

altar-boy (âl'tär-boi), *n.* A boy who serves a priest while he is officiating at the altar.

altar-mound (âl'tär-mound), *n.* A mound of earth erected over an altar of clay on which sacrifices were burned. Altar-mounds have been discovered principally in Ohio.

alteratio (al-te-rā'shi-ō), *n.* [NL.: see *alteration*.] In *mensural music*, the regular doubling of the time-value of a note in certain relations. The rules governing this were complicated and arbitrary.

Altered chord, note, or **triad,** in *music*, a chord, note, or triad affected by an accidental and thus changed in character or significance.

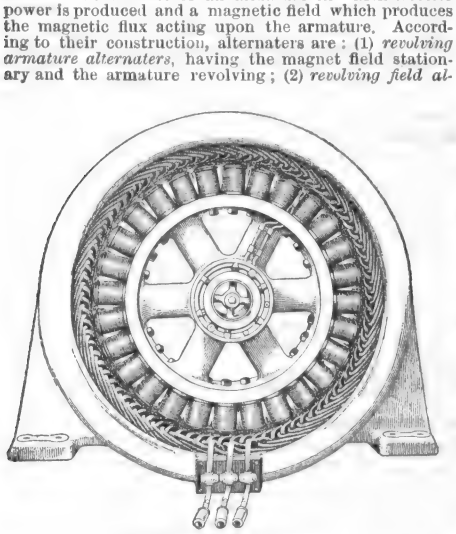
alteregoism (al-tėr-ē'gō-izm), *n.* [L. *alter ego*, 'another I,' + *-ism*.] A narrow altruism amounting merely to sympathy with persons who are in one's own case. *Amer. Jour. Psychol.*, XII. 470.

alteregoistic (al-tėr-ē-gō-ist'ik), *a.* Of or pertaining to alteregoism.

Alternaria (al-tėr-nā'ri-ä), *n.* [NL. (Nees von Esenbeck, 1816), < L. *alternus*, alternate, + *-aria*.] A genus of hyphomycetous fungi doubtfully distinct from *Macrosporium*. The conidia are dark-colored, are both transversely and longitudinally septate, and are borne in chains. *A. Brassicæ* occurs on the cabbage and cauliflower.

alternate *a.* 4. In *elect.*, same as ★*alternating*.

alternater, alternator (al'tėr-nā-tėr, -tọr), *n.* In *elect.*, an alternating-current dynamo or generator. It consists of an armature in which electric power is produced and a magnetic field which produces the magnetic flux acting upon the armature. According to their construction, alternaters are: (1) *revolving armature alternaters*, having the magnet field stationary and the armature revolving; (2) *revolving field alternaters*, having the magnet field revolving and the armature stationary; (3) *inductor alternaters*, having the field coils and armature stationary and the iron core revolving; (4) *induction* or *asynchronous alternaters*, that is, induction motors running as generators above synchronism. See ★*induction generator*.—**Compensated alternater,** an alternater in which the armature reaction is compensated by a compensating ★exciter (which see) and the voltage thereby maintained irrespective of load or character of load, that is, power-factor.—**Inductor alternater,** in *elect.*, an alternating-current generator, in which field and armature windings are stationary, and only a toothed iron structure revolves.



Revolving Field Alternater.

alternating (al'tėr-nā-ting), *p. a.* Specifically, in *elect.*, periodically reversing or changing the direction in such a manner that the total effect in one direction is the same as in the opposite direction. An *alternating current* is a current consisting of a series of half-waves of equal duration and equal intensity but opposite direction. One half-wave is called an *alternation*, two successive half-waves, or a complete wave, a *cycle*. The number of cycles per second is the *frequency*. Commercial frequencies are 25, 60, and 125 cycles per second. Since the alternating current varies from instant to instant, the square-root of the mean square of the instantaneous values is commonly employed and called the *effective value* of the alternating current, since it represents the effect or power of the latter. Under *alternating current, alternating electromotive force*, etc., usually the effective value is understood. If the successive half-waves gradually decrease in intensity, the current is called an *oscillating current*. Oscillating currents usually have frequencies of hundred thousands and millions of cycles per second. They are produced by condenser discharges and are used in wireless telegraphy, etc.—**Alternating group.** See ★*group*¹.—**Alternating motion.** See ★*motion*.—**Alternating symmetry,** in *crystal.* See ★*symmetry*.

alternation, *n.* 5. In *phytogeog.*, the discontinuous occurrence of a plant type due to local variations in the conditions. See the extract.

The term *alternation* is used to designate that phenomenon of vegetation in which a formation recurs at different places in a region, or a species at different points in a formation.

F. E. Clements, Bot. Surv. Neb., VII. 163.

6. In *elect.*, the time of one reversal, or one half-wave of alternating current. One alternation therefore is one half-cycle. The frequency of an alternating current formerly was given in alternations per minute. See ★*alternating*.—**Antithetic alternation of generations,** the alternation between a sexual generation and an asexual generation which is unlike it in form or structure or in both; metagenesis. *Encyc. Brit.*, XXXII. 214.—**Homologous alternation of generations,** the alternation of a sexual generation with an asexual generation similar to it in appearance.

Homologous alternation is illustrated by many Algæ and Fungi where offspring of similar appearance are produced in two different ways, either vegetatively or sexually. *Encyc. Brit.*, XXXII, 214.

alternative I. *a.*—**Alternative inheritance.** See ★*inheritance*.

II. *n.*—**Voltaic alternatives,** suddenly reversed galvanic currents.

alternativity (al-tėr-na-tiv'i-ti), *n.* [*alternative* + *-ity*.] The power of choosing between two alternatives, as between two courses of action; decision of character. By some writers confused with the power of ethical self-control or moral inhibition.

alternativo (äl-tėr-nä-tē'vō), *a.* [It.] In *music*, noting a movement or section which alternates with another or is set in contrast with it.

alternator, *n.* See ★*alternater*.

althionic (al-thi-on'ik), *a.* [*al*(*cohol*) + Gr. *θεῖον*, sulphur, + *-n* + *-ic*.] Derived from alcohol and sulphur.—**Althionic acid,** an old name, no longer used, for ethyl-sulphuric acid.

altho, *conj.* A simplified spelling of *although*.

Alticus (al'ti-kus), *n.* [NL., prop. *Halticus*, < Gr. *ἀλτικός*, good at leaping, < *ἅλλεσθαι*, leap.] A genus of blennies similar to *Salarias*. *A. saliens* lives on lava-rocks about the reefs in the South Seas, lurking out of water and leaping like a lizard when disturbed. It is black in color and about 4 inches in length.

altilik (äl'ti-lik), *n.* [Turk. **altilik*, < *alti*, six, + *-lik*, adj. suffix.] The Turkish six-piaster piece.

altimetric (al-ti-met'rik), *a.* Same as ★*altimetrical*.

He proposed to carry a chain of *altimetric* observations to Kara-koshum and Chaklik.

Geog. Jour., (R. G. S.), XVI. 472.

altimetrical (al-ti-met'ri-kal), *a.* [*altimetry* + *-ic-al*.] Relating or pertaining to altimetry, or the measurement of heights. *Blount*.

altimetrically (al-ti-met'ri-kal-i), *adv.* As regards the measurement of heights.

altinichlic (äl-ti-nik'lik), *n.* [Turk. *altin*, a gold coin.] A Turkish silver coin, the one-piaster piece, which has a legal weight of 18.557 grains and a varying value.

altist (alt'ist), *n.* [*alt*(*o*) + *-ist*.] In *music*, one who sings the alto part.

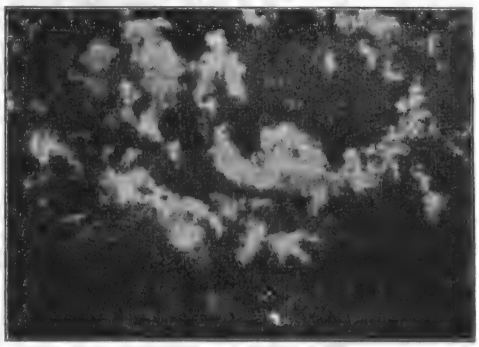
Altitude circle. See ★*circle*.—**Altitude motion,** the motion of an instrument when it turns on a horizontal axis. See *sextant*.—**A. M. altitude,** the sextant sight measured in the morning by the navigator for the purpose of obtaining a base from which to calculate the longitude of the vessel.—**Double altitude,** the angle between an object and its reflection in an artificial horizon (ordinarily a trough of mercury). Such angles are usually measured with a sextant by an observer on land.—**Observed altitude,** the angular height of a heavenly body from the horizon, as measured on the sextant, or other nautical instrument of reflection, or the sextant altitude before corrections for semi-diameter, parallax, dip of the horizon, and refraction are applied.—**P. M. altitude,** the sextant sight measured in the afternoon by the navigator for determining the ship's meridian.

Altitudinal index. See ★*index*.

Altmann's bioblasts or **granules.** See ★*bioblast*.

alto²†, *adv. phr.* See *all, adv.*, 1.

alto-cumulus (al-tō-kū'mū-lus), *n.*; pl. *alto-cumuli* (-lī). [L. *altus*, high, + *cumulus*, heap (see *cumulus*).] A cloud, the highest form of cumulus, appearing in small masses, bright on the sunny and shaded on the opposite side; in the older terminology, a cumulo-cirrus. They are frequently arranged in rank and file, generally disappearing in the sunshine, and are then indicative of dry, pleasant weather. Sometimes this little cloud has a definite structure as a vortex-ring.



Alto-cumulus.
(From a phototype by J. Vincent.)

alto-nimbus (al-tō-nim'bus), *n.*; pl. *alto-nimbi* (-bī). [L. *altus*, high, + *nimbus*, cloud (see *nimbus*).] A cloud from which rain falls after it is completely developed, but which in its first stages is seen to be a dull-colored cloud at the summit of a mass of air flowing in under an advancing cumulus or cumulo-nimbus. Similar clouds of much greater extent are formed when broad sheets of air, blowing from the southwest, approach near a storm-center and begin to form clouds before reaching the rain region.

alto-stratus (al-tō-strā'tus), *n.*; pl. *alto-strati* (-tī). [L. *altus*, high, + NL. *stratus*.] 1. A thin horizontal sheet of clouds, usually disappearing slowly: apparently a lower layer of what under favorable circumstances might have been a cumulus cloud. The outer surface, melting away at sunset, gives rise to beautiful sunset cloud-colors by reflection of light from the sun or the sky beyond the western horizon. —2. A rather high cloud covering the sky as a layer whose lower surface is horizontal. The extreme boundaries of such an alto-stratus cloud thin away into a series of alto-cumuli.

altro-nutrition (al"trō-nū-trish'on), *n.* [Irreg. < L. *alter*, other, + *nutrition*.] Nutrition carried over to another: applied in the quotation to reproduction viewed in its social and ethical consequences.

Reproduction is therefore not only ultra-nutrition, in going beyond the individual, but it is *altro-nutrition*, in carrying the process to and into another. It is, as we shall see, the beginning of altruism.

Ward, Pure Sociol., p. 291.

altrotelic (al-trō-tel'ik), *a.* See the extract.

The few years of schooling is only the very end of a process that, in a sense, has run through eons. The school merely puts on the final touches. . . . Letourneau speaks of spontaneous and organic training. Nature first adjusts the body to the physical environment; then the social adjustment marks a higher stage. Heredity is stored up experience. The second stage or division of education we may call . . . artificial or telic. Art is here teleological control of nature; if it is directed by another it is *altrotelic;* and when it becomes subjective it is autotelic. The telic aspect begins when we enter the social sphere. *G. S. Hall*, Adolescence, II. 447.

altruistic, *a.* 2. Pertaining to that theory of ethics which regards altruism as the highest motive.

aludel, *n.* In modern times it has been applied almost exclusively to the thin earthen condensers used in the collection of mercury at the reduction-works at Almadén, Spain.

aluff (a-luf'), *adv. Naut.*, of sails, in the position when the helm is put down, or alee, so that the vessel is thrown up into the wind and the sails shake or slat.

alum, *n.*—**Alum bath,** a saturated solution of potassium alum. It is used in photography to check the frilling of plates or the blistering of paper.—**Alum schist.** Same as *alum shale*.—**Porous alum,** the trade-name of aluminium sulphate obtained by evaporation of its solution and to which, just before solidification, a small quantity of sodium carbonate is added with stirring of the pasty mass. The evolution of carbon-dioxid gas in bubbles puffs up the material to a spongy condition, which becomes permanent on setting.

alum-cake (al'um-kāk), *n.* The dried mass left after the treatment with strong sulphuric acid of kaolin or fairly pure clay which has

been roasted. It consists essentially of aluminium sulphate, but includes, mixed with it, the silica derived from the clay. Also *alum-clay cake*.

alum-earth, *n.* 2. A loose clay containing iron pyrites from which alum may be made. It often occurs with beds of lignite, and usually contains rather less silica than the more compact alum slate.

alumian (a-lū′mi-an), *n.* [*alumi(um)* + *-an.*] A doubtful aluminium sulphate (perhaps $Al_2S_2O_9$) found in Spain.

Alumina cream, freshly precipitated aluminium hydrate held in suspension in water.

aluminium, *n.* Aluminium melts at 654.5° C., and the tensile strength of bars made of it is about 28,000 pounds a square inch. The commercial production of the metal began about 1888, the process most largely used, as at Pittsburg and Niagara, being that of Hall, in which anhydrous alumina from bauxite is dissolved in a bath of fused cryolite in the presence of carbon and electrolyzed by a current of 6 or 7 volts and 7,000 amperes. The price has been brought down from $15 to 30 cents a pound, and the annual output increased from 3 to many thousand tons per annum. The only moderate strength of the metal, certain difficulties in working it (as, for instance, in soldering), and its chemical alterability under some conditions have tended to limit its applications. Among the more recent uses made of it may be mentioned the etching of designs for theatrical and other posters, substitution for copper in wire for the transmission of electric currents, the manufacture of a silver-like paint from the powder, and the production of a very high temperature by rapid combustion of the powder in admixture with sodium dioxid. See ★*aluminothermics.*—**Aluminium brass,** an alloy of aluminium, zinc, and copper produced either by introducing metallic aluminium into melted brass, or by introducing zinc into melted aluminium bronze. The proportion of aluminium varies from 1 to 5.8 parts, that of copper from 55.8 to 77.5, and that of zinc from 21 to 43. The metal is very ductile and malleable, and its tensile strength is far above that of ordinary brass.—**Aluminium hypochlorite.** A solution of this salt prepared by the interaction of solutions of bleaching-powder and aluminium sulphate has been used in bleaching under the name *Wilson's liquor.* It has been applied chiefly in the preparation of paper stock, but it may also be used as a preservative and disinfectant and in mordanting cloth for dyeing.—**Aluminium processes.** See ★*process.*—**Aluminium pyrolignite,** a trade-name for aluminium acetate, largely used in solution as a mordant in dyeing.—**Aluminium solder.** Very nearly pure zinc has been recommended for soldering articles of aluminium, but the process is still a difficult and unsatisfactory one, chiefly in consequence of the high conducting power and high specific heat of aluminium.—**Aluminium steel.** See ★*steel*[1].—**Aluminium sulphate,** $Al_2(SO_4)_3 18H_2O$, a substance manufactured from bauxite, kaolin, or cryolite, used in making alum, clarifying drinking-water, purifying sewage, preparing size, etc.—**Aluminium zinc,** an alloy of aluminium and zinc. These two metals are combined in various proportions, and the alloy obtained is generally harder than aluminium but very brittle, unless the proportion of zinc is very small. The further addition of copper makes a very stiff metal, well adapted for castings.—**Bromide of aluminium,** a salt prepared by saturating hydrobromic acid with gelatinous aluminium hydrate and then carefully evaporating to dryness. It is used in photography in sensitizing collodion, one grain to the ounce.—**Wolfram aluminium,** an alloy of aluminium and tungsten, used largely for military equipments. The metal rolls, draws, and spins well.

aluminize (a-lū′mi-nīz), *v. t.*; pret. and pp. *aluminized,* ppr. *aluminizing.* [L. *alumen* (*alumin-*) + *-ize.*] To apply alum or a salt of aluminium to (a material, as cloth).

alumino-. A combining form (with *silicate, phosphate,* etc.) of *aluminum, aluminium.* The feldspars are all *aluminosilicates.*

aluminoferric (a-lū″mi-nō-fer′ik), *a.* See the following.—**Aluminoferric cake,** the trade-name for aluminium sulphate when it contains a considerable quantity of ferric sulphate derived from iron occurring as an impurity in bauxite or china clay.

aluminol (a-lū′mi-nōl), *n.* [*alumin(ium)* + *-ol.*] A trade-name for β-naphtholdisulphonate of aluminium, $Al_2(C_{10}H_5OH(SO_3)_2)_3$. It combines the astringency of alum with the antiseptic power of naphthol.

aluminothermic (a-lū″mi-nō-thėr′mik), *a.* Pertaining to or produced by aluminothermy; producing high temperatures by the combustion of finely divided metallic aluminium. *Elect. World and Engin.,* Feb. 13, 1904.

aluminothermics (a-lū″mi-nō-thėr′miks), *n.* [*aluminium* + *thermics.*] A collective name for the processes in which high temperatures are produced by the chemical combination of oxygen and aluminium. It has been known for some time that high temperature could be obtained by the formation of alumina, but the operation was not practically applied previous to the invention of the process patented by Dr. Hans Goldschmidt. This consists in mixing finely powdered aluminium with some pulverized metallic oxid (e. g., Fe_3O_4), and then raising the temperature to the point where reaction takes place through which the aluminium deprives the other metal of its oxygen, forming Al_2O_3. This reaction generates a great quantity of heat and a very high temperature. The process is used for the production of pure metals which it has not before been possible to isolate completely and in a pure form, such as chromium, manganese, etc. Another very important application of the aluminothermic process is to welding. In this thermit (which see) is placed in a specially prepared crucible of refractory material and the reaction is started by means of an igniter. The fluid mass of iron produced is poured into a mold placed around the joint to be welded. This process is especially useful for welding conductor-rails, defective castings, and parts of broken machinery which must be repaired at the places where they are in use. When the aluminothermic process is used for the separation of metals, an important by-product is formed, namely, the melted aluminium oxid or alumina. It is an artificial corundum and has been called *corubin.* Its uniform hardness makes it far superior to natural corundum or emery for grinding and polishing purposes. A great obstacle in the way of the use of aluminothermic processes has been the lack of some means of starting the reaction, which requires a high temperature. Dr. Goldschmidt accomplishes this by using an igniter consisting usually of a readily reducible oxid, such as barium peroxid, mixed with finely powdered aluminium. The reaction of this mixture may be started by means of a match. A pinch of this mixture placed upon the thermit or other aluminothermic mixture will serve to start the reaction. Once started, the main reaction will propagate itself, since the temperature produced is probably above 3000° C., and higher than can be obtained in any other artificial way except by the electric arc.

aluminothermy (a-lū′mi-nō-thėr″mi), *n.* [NL. *aluminum* + Gr. *θέρμη,* heat.] Same as ★*aluminothermics.*

alum-meal (al′um-mēl), *n.* Alum as obtained in small crystals, at its first crystallization, by rapid cooling, with agitation, of a hot solution.

alundum (a-lun′dum), *n.* [L. *al(ius),* other, + *(cor)undum.*] An artificial abrasive made in an electric furnace and used as a substitute for corundum.

alurgite (a-lėr′jīt), *n.* [Gr. *ἁλουργής,* purple (lit. 'wrought in the sea,' with reference to the genuine purple dye from the purple-fish as distinguished from imitations made on land, ⟨ *ἅλς,* sea, + *ἔργον,* work), + *-ite*[2].] A manganese-mica, varying from purple to cochineal red, from St. Marcel, Piedmont.

Alutera (a-lū′te-rä), *n.* [NL.: origin uncertain, perh. ⟨ Gr. *ἀλουτος,* unwashed.] A genus of file-fishes remarkable for their leathery skin and lean body: found in tropical seas. *A. monoceros* is the commonest species.

Alvarius (al-vā′ri-us), *n.* [NL.] A genus of small darters of the family *Percidæ. A. lateralis* is found in northern Mexico.

alveate (al′vē-āt), *a.* [L. *alveatus,* hollowed out like a trough or tray, ⟨ *alveus,* a trough, tray: see *alveus.*] Same as *alveated.*

alvelos (äl′ve-lōs), *n.* The milky resinous juice of *Euphorbia heterodoxa,* indigenous to Brazil: a yellowish-white syrupy substance used in medicine.

alveola (al-vē′ō-lä), *n.*; pl. *alveolæ* (-lē). [NL. fem.: see *alveolus.*] In *bot.*: (*a*) One of the pits in a receptacle after the removal of the flowers, especially in the heads of composite plants. (*b*) A pore in a fungus, as *Polyporus.* (*c*) The depressed perithecium in certain fungi.

alveolar, *a.* 2. In *phonetics,* formed or articulated by bringing the tip of the tongue into contact with the alveolar point of the upper front teeth, as the consonants *t, d, n, l.*—**Alveolar abscess,** a deep-seated gum-boil.—**Alveolar angle,** in *anthrop.,* the angle formed by the lines drawn from the alveolar point to the basion and to the nasion.—**Alveolar hypothesis,** the doctrine or opinion that the reticulated appearances in protoplasm are due to the walls of contiguous vesicles or alveoli, and that this foam-like structure is the universal fundamental structure of protoplasm.—**Alveolar line,** in *craniom.,* the continuation of the lateral margin of the anterior nasal aperture to the anterior nasal spine. *Harrison Allen,* Jour. Acad. Nat. Sci., X. 418.

alveolar-dorsal (al-vē″ō-lär-dôr′sal), *a.* Alveolar and dorsal. *Stud. Yale Psych. Lab.,* X. 105.

Alveolites (al″vē-ō-lī′tēz), *n.* [NL., ⟨ L. *alveolus,* dim. of *alveus,* a cavity, + *-ites,* E. *-ite*[2].] A genus of extinct tabulate corals. They grow in spreading or branching masses composed of contiguous corallites opening obliquely on the surface with semilunar apertures; the septa are represented by rows of spinules and mural pores are present. This coral is very abundant in the Silurian and Devonian.

alveololabial (al-vē″ō-lō-lā′bi-al), *a.* Pertaining to the lips and to the alveolar processes.

alveololingual (al-vē″ō-lō-ling′gwal), *a.* Pertaining to the tongue and to the alveolar processes.

alveolonasal (al-vē″ō-lō-nā′zal), *a.* In *craniom.,* relating to the alveolar point and to the nasion: as, the *alveolonasal* line.

alveolus, *n.* (*b*) In the shells of belemnites or fossil dibranchiate cephalopods, the conical cavity at the anterior end.

Alvine calculi, intestinal concretions which result from the inspissation of portions of the fecal contents.

alvite (al′vīt), *n.* [*Alve* in Norway + *-ite*[2].] A silicate resembling zircon in form, but containing yttrium and probably thorium and other rare elements: found in Norway.

aly (ā′li), *a.* [*ale* + *-y*[1].] Of, pertaining to, like, or characteristic of the use of ale: as, an *aly* tale; an *aly* taste; an *aly* nose.

Alypia (a-lip′i-ä), *n.* [NL. (Huebner, 1825), said to be ⟨ Gr. *ἀλυπία,* freedom from grief.] A genus of agaristid moths containing several species which inhabit the United States. One of them, *A. octomaculata,* occurs abundantly in the larval state upon grape-vines, which it injures by devouring the foliage.

A. M. A. An abbreviation of *American Medical Association.*

ama-ama (ä″mä-ä′mä), *n.* [Hawaiian.] A Hawaiian name of the common mullet, *Mugil cephalus.* It is a food-fish of very superior quality, and is reared in artificial ponds in that region.

amacrine (a-mak′rin), *a.* [Gr. *ἀ-* priv. + *μακρός,* long, + *ἴς* (*ἰν-*), muscle, in pl. fiber.] Not having long fibers: a term applied to anaxone nerve-cells, sometimes called *spongioblasts,* found in the inner molecular layer of the retina of the eye.

amaldar, *n.* 2. In India, an agent or manager; in some districts, a revenue-collector. Also written *amildar.*

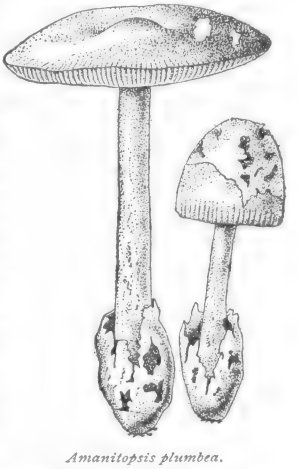
Amalgamated plates. See ★*plate.*

amalgamating-pan (a-mal′ga-mā-ting-pan″), *n.* In *gold- and silver-milling,* a pan-shaped machine with a revolving muller for grinding ores in order to extract the precious metals from the resulting pulp with the aid of mercury. The use of chemicals and heat is sometimes required, especially for silver ores.

amalgamation, *n.*—**Barrel amalgamation,** a process of amalgamation in which the ore to be treated is charged into revolving barrels and there the precious metals are united with mercury. In the United States the barrel-process has been replaced by the pan-process, while in Europe and in South and Central America it is still in use.—**Kröncke's process of amalgamation,** a Chilean amalgamation process, in use since 1862, adapted chiefly for ores from the deeper workings, which carry, besides some native silver and chlorid, much argentite, proustite, pyroargyrite, and polybasite. The active reagent is a hot solution of cuprous chlorid which is prepared separately. The operation is carried on in rotating wooden barrels, and lead or zinc is employed as a means of decomposing the calomel.—**Raw amalgamation,** the amalgamation of silver ore without a preliminary chloridizing roast.—**Roast amalgamation,** amalgamation of silver ore after a preliminary chloridizing roast. See *chloridize.*

amalic (a-mal′ik), *a.* [Formation not obvious.] Noting an acid, $C_{12}H_{14}N_4O_8$, formed by the oxidation of caffein or theobromine; tetramethyl alloxantin.

Amanist (a-mā′nist), *n.* [*Amana,* a group of villages in Iowa (⟨ *Amana,* a mountain mentioned in Cant. iv. 8), + *-ist.*] A member of a German religious community properly known as the "True Inspiration Society." It originated as a religious sect in Germany in the seventeenth century, was much persecuted there and elsewhere on the continent of Europe, removed to the United States in 1842, and became communistic. The community settled first at Ebenezer, near Buffalo, New York, but removed, in 1855 and the following years, to Amana, near Cedar Rapids, Iowa, where it forms a group of seven villages, engaged in agriculture and manufactures, and sharing things in common under the rule of a president and several trustees elected by the people. Its members believe in the plenary inspiration of the Bible, and make it their sole creed, differing little in their beliefs from Lutherans. They have no rite of baptism, do not believe in eternal punishment, and, like the Quakers, disapprove of war and are non-resistants. They disbelieve in ceremonies and in gaiety of all kinds, have no clergy, and no preaching except when God raises up an 'inspired instrument,' but all are devout church-goers. See *inspirationist.*



Amanitopsis plumbea.
(After figure in Engler and Prantl's "Pflanzenfamilien.")

Amanita (am″a-nī′tä), *n.* [NL., ⟨ Gr. *ἀμανῖται,* pl., a sort of fungi.] 1. In *mycol.,* a genus of fungi of the family *Agaricaceæ,* restricted by recent authors to white-spored species having the stem provided with both an annulus, or ring, and a

volva. Over 50 species have been described, a number of which are common and widely distributed throughout temperate regions.—**2.** [*l. c.*] A plant of this genus.—**Fly amanita,** a name frequently applied to *Amanita muscaria,* a poisonous species.—**Orange amanita,** a common name for *A. cæsaria,* a large edible species having an orange-colored pileus.—**Poison amanita,** a name applied to *A. phalloides,* a white species which is extremely poisonous.

Amanitopsis (a-man-i-top′sis), *n.* [NL. (Roze, 1879), ‹ *Amanita* + *ὄψις,* view.] A genus of white-spored agarics having a volva but no annulus. *A. plumbea* is a common and widely distributed species. See cut on preceding page.

amanous (am′ā-nus), *a.* [Gr. *ἀ-* priv. + L. *manus,* a hand.] Without hands or manus: sometimes applied to birds. [Rare.]

amaranth, *n.* **4.** Same as *purple heart.*—**5.** An acid dyestuff, of the monoazo type, which dyes wool and silk a pure bluish red that is moderately fast to light and milling. It is known by various other names, as *azo acid-rubine, Bordeaux S,* and *fast red.*—**Amaranth spirit,** a trade-name for one of the solutions of chlorid of tin used as a mordant in dyeing. These solutions are now much less used than they were before the introduction of the coal-tar dyes.—**Low amaranth,** one of the tumbleweeds, *Amarantus blitoides,* of the prairie States resembling *A. græcizans,* but more spreading. Also *prostrate* or *spreading amaranth.*—**Rough amaranth,** the pigweed, *Amaranthus retroflexus.*—**Spiny amaranth,** a tropical weed, *Amaranthus spinosus,* recently spread in waste places from Virginia to Missouri and southward. It is a stout, bushy species and the stems bear slender spines. Also called *careless-weed* and *red careless-weed.*—**Spreading amaranth.** Same as *low* ★*amaranth.*—**Thorny amaranth.** Same as *spiny* ★*amaranth.*

amarantite (am-a-ran′tīt), *n.* [*amarant,* proper form of *amaranth,* + *-ite*2.] A hydrous ferric sulphate occurring in slender prismatic crystals and bladed masses of an amaranth-red color. Also called *hohmannite.*

amargosa (ä-mär-gō′sä), *n.* [Sp. *amargoso,* bitter.] A name in Guam and the Philippines of the balsam-pear and the balsam-apple (*Momordica Charantia* and *M. Balsamina*), gourd-like plants with palmate leaves and warty, yellow fruit which bursts open when ripe, displaying the seeds surrounded by a red aril.

amaric (a-mar′ik), *a.* [L. *amarus,* bitter, + *-ic.*] Of a bitter nature.—**Amaric acid,** an acid, $C_{23}H_{22}O_3 + H_2O$, formed by boiling benzamarone with alcoholic sodium hydroxid. It is crystalline and easily forms an anhydrid.

amaril (am′a-ril), *n.* [L. *amarus,* bitter + *-il.*] The hypothetical poison of the *Bacillus icteroides,* regarded by some as the cause of yellow fever.

amaroid (am′a-roid), *n.* [L. *amarus,* bitter, + *-oid.*] A name proposed to designate those bitter substances which have a definite composition but do not belong to one of the recognized classes of compounds such as glucosides or alkaloids.

amaroidal (am-a-roi′dal), *a.* [*amaroid* + *-al.*] 1. Somewhat bitter in taste.—**2.** In *pharm.,* resembling a bitter in properties.

Amasonia (am-a-sō′ni-ä), *n.* [NL., named for Thomas Amason, an early American traveler.] A genus of greenhouse shrubs from tropical America, of the family *Verbenaceæ:* sometimes grown for the long, persistent, hairy, yellow flowers. *A. calycina* is the only common species in the United States. There are about six species, but they are not much known in cultivation.

amastia (a-mas′ti-ä), *n.* [NL., ‹ Gr. **ἀμαστία,* ‹ *ἄμαστος,* without breasts, ‹ *ἀ-* priv. + *μαστός,* breast.] Congenital absence of the nipples or of the entire breasts.

amasty (a-mâs′ti), *n.* Same as ★*amastia.*

amaurosis, *n.*—**Intoxication amaurosis,** blindness due to the action of some systemic poison, such as alcohol or tobacco.

Amaurotic family idiocy, a form of idiocy accompanied by constant and irremediable retinal lesions causing blindness. *Lancet,* June 25, 1904.

amaxophobia (am-ak-sō-fō′bi-ä), *n.* [Prop. ★*hamaxophobia,* ‹ Gr. *ἅμαξα,* a wagon, + *-φοβία,* ‹ *φοβεῖν,* fear.] A morbid fear of vehicles.

amazia (a-mā′zi-ä), *n.* [NL., ‹ Gr. *ἀ-* priv. + *μαζός,* breast.] Congenital absence of the mammary glands.

Amazonian group, in *geol.,* a term applied to rocks of Cretaceous age along the Rio Purús, Brazil, and regarded as equivalent in part to the Upper Chalk or Maestrichtian of Europe.

Amazonianism (am-a-zō′ni-an-izm), *n.* The state or condition of Amazons; Amazonian customs and conditions which develop in a certain state of society; particularly, the supposed Amazonian revolution of the women against prevailing hetærism. *McLennan.*

Amazonism (am′a-zon-izm), *n.* The supposed supremacy and rule of women in primitive society: an interpretation of the facts of descent traced in the female line, and the consequent supremacy of the male relatives of the wife over her husband. *Ward,* Pure Sociol., p. 338.

Amazonomachia (am″a-zon-ō-mak′i-ä), *n.* [NL., ‹ Gr. *Ἀμαζών,* Amazon, + *μάχη,* fight.] In *Gr. antiq.,* a battle of Amazons. There were several of these mythic battles: (1) the invasion of Lycia by the Amazons; (2) the invasion of Phrygia by the Amazons; (3) the battle with Hercules, his 9th labor, in which Hippolyta, queen of the Amazons, was slain; (4) the battle with Theseus to liberate Antiope; (5) the battle at the close of the Trojan War, when the Amazons came to the assistance of Priam; (6) the invasion by the Amazons of the island of Leuce at the mouth of the Danube. Since it furnished many interesting arrangements of men, women, and horses in action, the Amazonomachia was a favorite subject with Greek artists. The finest representation of it now in existence is a series of

Amazonomachia, from a Sarcophagus in the Louvre.

bas-reliefs, in the British Museum, which was found in the ruins of the Mausoleum at Halicarnassus. It was often represented in the decoration of vases.

A.M.B. An abbreviation of the Latin *Artium Mechanicarum Baccalaureus,* Bachelor of the Mechanic Arts, a title conferred by some colleges.

ambach, *n.* Same as ★*ambatch.*

ambagiousness (am-bā′jus-nes), *n.* [*ambagious* + *-ness.*] The quality of being ambagious, roundabout, or indirect.

ambatch (am′bach), *n.* [See *ambash.*] The pith-tree of the Nile, *Æschynomene Elaphroxylon,* a thorny shrub or small tree of extraordinarily quick growth: a characteristic plant of the waters of tropical Africa. Its uncommonly light, spongy wood is used for floats and small rafts. See *ambash.*

ambeer, ambier (am′bēr), *n.* [Perhaps due in some way to *amber,* in allusion to its color.] Tobacco-juice. *Joaquin Miller.* [Local, U. S.]

amber2, *n.*—**Drawn amber,** amber which has been dragged out of the sea with nets and rakes.—**Pit amber,** amber mined from pits or diggings. It usually has a friable brown crust. Distinguished from *strand* and *sea amber,* from which this coating has been worn by the action of sea and sand.—**Sea amber,** amber washed up by the sea (from deposits under the sea or on the coast) or dredged from its depths. Also called *sea-stone.*—**Strand amber,** water-worn amber found on a coast or strand.

amber-beds (am′bėr-bedz), *n. pl.* A deposit of glauconitic sands of Lower Oligocene age, developed along the coast of the Baltic Sea near Königsberg, in the lower part of which is a band containing considerable quantities of amber. The sands carry marine fossils, but the amber incloses insects, spiders, and centipeds, together with the fruit, flowers, seeds, and leaves of a large number of land plants.

amberiferous (am-bėr-if′ėr-us), *a.* Amber-bearing or amber-producing.

The west coast of Denmark . . . is included in this *amberiferous* region. *Buck,* Med. Handbook, I. 208.

amberite (am′bė-rīt), *n.* [*amber* + *-ite*2.] One of the modern explosives known as smokeless powders. It contains 40 per cent. of nitroglycerin, 56 per cent. of soluble guncotton, and 4 per cent. of camphor, vaseline, or some equivalent substance.

amber-jack (am′bėr-jak), *n.* A name given to large species of the genus *Seriola,* as *S. lalandi* and *S. dumerili.*

amberous (am′bėr-us), *a.* Amber-colored; like amber.

Its chambers paved with *amberous* lights.
The Century, Aug., 1890, p. 500.

amber-snail (am′bėr-snāl), *n.* A species of *Succinea.*

amber-tree, *n.* **2.** The extinct tree *Pinites succinifer,* which yielded most of the amber of the Baltic region.

ambiance (än-bi-äns′), *n.* [F. (*Nouveau Larousse*), ‹ *ambiant* = E. *ambient.* The E. form would be **ambience.*] Environment: in *art,* the arrangement of accessories and surroundings to support the main effect intended.

ambiciliate (am-bi-sil′i-āt), *a.* [L. *ambi-,* on both sides, + NL. *ciliatus,* ciliate.] In *ichth.,* having the scales on both sides of the body edged with minute teeth. [Rare.]

Ambicolorate fish appear to be always what one may call '*ambiciliate*' also.
Proc. Zool. Soc. London, 1894, p. 439.

ambicolorate (am-bi-kul′ọr-āt), *a.* [L. *ambi-,* on both sides, + *coloratus,* colored.] Having both sides of the body colored: applied specifically to abnormal examples of flatfishes, colored on both sides, which are normally white beneath. *Proc. Zool. Soc. London,* 1894, p. 435.

ambicoloration (am-bi-kul-ọ-rā′shọn), *n.* [L. *ambi-,* on both sides, + *coloration.*] In *zoöl.,* the property or fact of having both sides colored. *Proc. Zool. Soc. London,* 1894, p. 432.

Ambient vein. See ★*vein.*

ambier, *n.* See ★*ambeer.*

ambilation (am-bi-lā′shọn), *n.* [*ambi-* + (*re*)*lation.*] A relation in which every individual object of the universe of discourse stands to every other; a pene-coexistence.

ambisinistrous (am-bi-sin′is-trus), *a.* [L. *ambi-,* on both sides, + *sinister,* left.] Same as *ambilevous.*

ambital (am′bi-tal), *a.* [*ambit* + *-al.*] Of or pertaining to the ambitus or margin of the shell or test, as in echinoderms.

ambitty (am-bit′i), *a.* [Prob. a factory pron. of F. *invitré* (aṅ″vi″trā′), unvitrified, ‹ *in-,* L. *in-,* neg., + *vitré,* ‹ L. *vitrum,* glass.] In *glass-manuf.,* devitrified in the pot during the time it is being worked, as glass.

ambitus, *n.* **6.** In *Gregorian music,* the range or compass of a melody.—**7.** In the flat sea-urchins or echinoids, the peripheral or equatorial area of the test which is not transsected by the ambulacra.

Amblotheriidæ (am-blō-thē′ri-i-dē), *n. pl.* [NL., ‹ *Amblotherium* + *-idæ.*] A family of primitive mammals in which the molars bear a tritubercular blade and a posterior talon: from the Jurassic of North America and Great Britain.

Amblotherium (am-blō-thē′ri-um), *n.* [NL., for **Amblytherium,* ‹ Gr. *ἀμβλύς,* sluggish, + *θηρίον,* wild beast.] The typical genus of the family *Amblotheriidæ:* regarded by some authors as synonymous with *Peraspalax, Phascolestes,* and *Stylodon.*

Amblycephalidæ (am-bli-se-fal′i-dē), *n. pl.* [NL., ‹ *Amblycephalus* + *-idæ.*] A family of harmless tropical snakes found in South America and Asia. The pterygoids, which are widely separated from the quadrates, do not reach beyond the plane of the occipital condyle. On account of the size of the head, the species (about 30 in number) bear some resemblance to venomous snakes.

amblychromatic (am-bli-krō-mat′ik), *a.* [Gr. *ἀμβλύς,* dim, + *χρῶμα,* color.] Feebly staining: applied to certain myelocytes occurring in marrow. Opposed to ★*trachychromatic.*

Amblygobius (am-bli-gō′bi-us), *n.* [NL., ‹ Gr. *ἀμβλύς,* dull, blunt, + L. *gobius,* goby.] A genus of gobies in the East Indies.

amblyopia, *n.* Failing sight, as distinguished from amaurosis or total blindness.

amblyoscope (am′bli-ọ-skōp), *n.* [Gr. *ἀμβλύς,* dim, dull, obtuse, + *σκοπεῖν,* view.] A stereoscope each lateral half of which has independent motion, whereby a fusion of the two images can be effected under any conditions of divergence or convergence of the visual axes. *Lancet,* July 18, 1903.

amblypod (am′bli-pod), *n.* [Gr. *ἀμβλύς,* blunt, + *πούς,* foot.] A member of the order *Amblypoda,* a group comprising a large number of extinct ungulates.

Amblypomacentrus (am″bli-pō-ma-sen′trus), *n.* [NL., ‹ Gr. *ἀμβλύς,* dull, blunt, + *Pomacentrus.*] A name given to a section of the genus *Pomacentrus,* small reef-fishes known as *damsel-fishes* or *demoiselles.*

Amblyrhiza (am-bli-rī′zä), *n.* [NL., ‹ Gr. *ἀμβλύς,* blunt, + *ῥίζα,* root.] An extinct genus of rodents, allied to *Chinchilla,* from the Post-tertiary of the Antilles.

amblystegite (am-blis′tē-jīt), *n.* [Gr. *ἀμβλύς,* blunt, + *στέγη,* roof, chamber, + *-ite*2. The name alludes to the form of the crystals.] A variety of hypersthene from the andesite of the Laacher See in the Eifel, originally described as an independent species.

Amblystomatidæ (am″bli-stō-mat′i-dē), *n. pl.* [NL., ‹ *Amblystoma*(*t-*) + *-idæ.*] Same as *Amblystomidæ.*

amboceptor (am-bō-sep′tor), *n.* [L. *ambo*, both, + (*re*)*ceptor*.] A specific adaptation-product, the result of immunization, which unites the corresponding complement with the receptor of the cell or cellular product for which it has a special affinity. See ★*immunity*. Also *copula*, *desmon*, *fixator*, *immune body*, *intermediary body*, *preparator*.

The excessive or lateral chains, being useless to the cells in which they are produced, are cast off and appear in the body juices as intermediary bodies or 'ceptors,' which, according to their nature, are designated unicceptors (antitoxins, etc.) and *amboceptors* (intermediary bodies). *Science*, July 3, 1903.

Ambocœlia (am-bō-sē′li-ạ), *n.* [NL., < Gr. *ἀμβων*, a raised edge, + *κοιλία*, belly.] A genus of small spire-bearing brachiopods with smooth or spinous valves: abundant in the Devonian and Carboniferous rocks.

Ambonychia (am-bō-nik′i-ạ), *n.* [NL., < Gr. *ἀμβων*, a raised edge, + *ὄνυξ*, talon.] The typical genus of the family *Ambonychiidæ*.

Ambonychiidæ (am-bō-ni-kī′i-dē), *n.* [NL., < *Ambonychia* + *-idæ*.] A family of pelecypod or acephalous mollusks. They have mytiliform shells with no auricle and with the anterior adductor muscle obsolete, no hinge-teeth, ligament external, and byssal gape small. It is highly characteristic of the early Silurian faunæ and has a few Devonian representatives.

Amboyna button or **pimple**. See ★*button*.

ambroid (am′broid), *n.* The trade-name of a substance made from the inferior pieces of amber. See the extract.

The inferior pieces of amber are made into what is called *ambroid*. The pieces are washed and dried, coated on the outside with some chemical, and are then moulded with the aid of heat and pressure.
Scientific American, Sept. 16, 1899.

ambrosia, *n.* **3.** The food of certain wood-boring beetles, consisting of various hyphomycetous fungi found associated with the beetles in their galleries, and said by some authors to be propagated by them, each species of beetle using a particular species of fungus.

Their [ambrosia-beetles'] food consists not of wood, but of a substance to which the name *ambrosia* has been given, and which is a coating formed by certain minute fungi and propagated on the walls of their galleries by the beetles. The action of the fungus produces the characteristic stain in the wood.
Yearbook U. S. Dept. Agr., 1896, p. 421.

ambrosia-beetle (am-brō′zi̯ạ-bē″tl), *n.* Any one of a group of beetles of the family *Scolytidæ*, which burrow in the wood of different trees, and in their burrows cultivate certain fungi known as *ambrosia*. See ★*ambrosia*, 3. Thirty species belonging to 6 genera in the United States are known to have this habit.—**Cosmopolitan ambrosia-beetle**, a scolytid beetle of wide distribution, *Xyleborus saxeseni*.—**Oak ambrosia-beetle**, an American scolytid beetle, *Xyleborus affinis*.

Ambrosiaceæ (am-brō-zi-ā′sē-ē), *n. pl.* [NL. (Reichenbach, 1828), < *Ambrosia* + *-aceæ*.] A family of dicotyledonous, sympetalous plants of the order *Campanulales*, the ragweed family: chiefly distinguished from the *Asteraceæ*, in which it is included by many authors, by having the stamens (usually 5) separate, or the anthers merely connivent, so as not to be truly syngenesious. There are 8 genera and about 55 species, mostly American, coarse weeds, some bearing burs. *Ambrosia*, the ragweed, is the type, and the two other best-known genera are *Iva* and *Xanthium*.

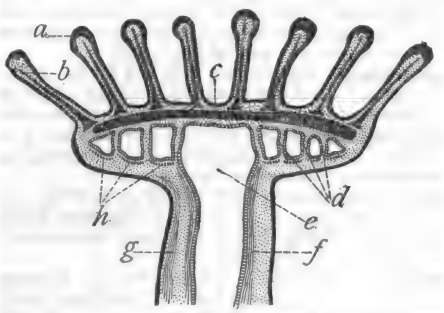
ambrosial, *a.* **2.** Pertaining to the senses of taste and smell: a forced use.

While yet in the animal state man learns to enjoy the *ambrosial* senses in partaking of food and drink and in inhaling the air laden with many particles given off by natural bodies.
J. W. Powell, Amer. Ethnol. Rep., XIX. lix.

Ambrosian, *a.*—**Ambrosian hymn**, any hymn attributed to St. Ambrose (340–397) or his school. The title is generally considered as applying to twelve hymns characterized by their lack of rhythm and their austere simplicity. The 'Te Deum' commonly called 'Ambrosian' is thought now to be a translation of an ancient Greek hymn.

ambrosine (am′brō-sin), *n.* [< *amber* + *rosin*.] A resinous mineral found in the phosphate-beds near Charleston, South Carolina.

ambulacral, *a.* **2.** Situated on the side which bears the ambulacra; hence, in *Stelleroidea* and *Crinoidea*, oral.—**Ambulacral brush**, in spatangoid sea-urchins, a structure consisting of an ordinary tube-foot of which the terminal disk is extraordinarily widened and carries a number of club-shaped or conical solid appendages, each supported by a calcareous rod. The brushes occur near the mouth and anus, and are said to play an important part in the taking in of food by stirring up the sand.—**Ambulacral fields**, the areas or divisions of the surface of an echinoderm which are covered by the ambulacra.—**Ambulacral foot**, one of the hollow adhesive locomotive organs of an echinoderm; a tube-foot or tentacle.—**Ambulacral pore**, one of the openings between adjacent ambulacral ossicles in star-



Longitudinal section through an ambulacral brush of a spatangoid (after Lovén and Hamann). *a*, body epithelium; *b*, supporting-rod; *c*, supporting plate of the terminal disk; *d*, septa; *e*, canal of the water-vascular system; *f*, longitudinal muscles; *g*, nerve; *h*, circular muscle-fibers. Magnified. (Drawn from Lang's "Comparative Anatomy.")

fishes, or through the ambulacral plates in echinoids, for the passage of the canal which connects a tube-foot with its ampulla.

II. *n.* Same as *ambulacral ossicle* or *plate*.

ambulance, *n.*—**Veterinary ambulance**, a substantial, heavy wagon with horizontal bottom and a false removable floor which can be rolled in and out, used for conveying invalid and disabled horses. The sides are high and are fitted with slings, etc.

ambulance-chaser (am′bū-lạns-chā″sėr), *n.* A person, either a lawyer or the agent of a lawyer, who follows up cases of accident in the streets and tries to induce the injured person to bring suit for damages. [Colloq.]

ambulancier (am-bū-lan-sēr′), *n.* [F. *ambulancier*, < *ambulance*, ambulance.] An ambulance surgeon or attendant. [Rare.]

Ambulatoria (am″bū-lā-tō′ri-ạ), *n. pl.* [NL.] A group or suborder of orthopterous insects, corresponding to the *Gressoria* or walkers, and including only the family *Phasmidæ*. See *Gressoria*.

Ambulatory school, in Sweden, a method of education resorted to on account of the sparse population of the country. See the extract.

In so sparsely populated a country the organization of education (which is both free and compulsory) is a special difficulty, which has been partly overcome by *ambulatory schools*, in which the teacher shifts his quarters twice a year or oftener within his district. The local management of education is part of the duties of the clergy, and this system seems to work without friction, though Sweden has her Nonconformists, perhaps because the latter are compelled to contribute to the support of the State Church. *Athenæum*, March 18, 1905, p. 333.

ame (ä′mā), *n.* [Jap. *ame*, a kind of jelly made of flour.] A form of glucose or starch sugar made in Japan by the action of barley malt upon rice paste. It is melted and molded into numerous fanciful shapes for sale.

amebic, *a.* See ★*amœbic*.

amebocyte, *n.* See ★*amœbocyte*.

ameed (ạ-mēd), *v. t.* [*a*-[1] + *meed*.] To reward; recompense. *J. Barlow*, Columbiad, vii. 611.

ameen (ạ-mēn′), *n.* [Ar. *'amīn*, faithful, trustworthy.] A person employed in a confidential capacity; a confidential servant or agent; an assistant; a bailiff, inspector, or intendant. [Anglo-Indian.]

Ameiurus, *n.* An earlier spelling of *Amiurus*.

Amelanchier (am-ẹ-lan′ki-ėr), *n.* [NL. (Medicus, 1789), from *Mespilus Amelanchier*, the Linnean name of the rock-medlar.] A genus of ornamental dicotyledonous shrubs or trees belonging to the family *Malaceæ* and including about 12 species widely distributed in North America, Europe, northern Africa, and eastern and southwestern Asia. They have alternate, simple, entire or serrate leaves, and usually racemose, white flowers with persistent sepals and obovate-oblong or spatulate petals contracted at the base into slender claws. The fruit is small, globose or pyriform, with sweet and juicy flesh. The rock-medlar of central Europe is *Amelanchier Amelanchier*. See *service-berry*, 3.

amelification (ạ-mel″i-fi-kā′shọn), *n.* [*amel* + L. *-ficare*, < *facere*, make.] In *embryol.*, the formation of enamel in the developing tooth.

ameliorant (ạ-mēl′yọ-rạnt), *n.* That which ameliorates, betters, or improves.

amelioration, *n.*—**Latent amelioration**, unperceived progress due to natural causes, for example, increase of population and migration, which makes possible artificial amelioration through conscious effort. *Ward*, Dynamic Sociol., II. 209.

ameloblast (ạ-mel′ō-blạst), *n.* [*amel* + Gr. *βλαστός*, a germ.] In *embryol.*, same as ★*adamantoblast*.

amemasu (ä′mā-mä′sū), *n.* [Jap.] A Japanese name of *Salvelinus kundscha*, a trout common in streams of Kamchatka and occasionally taken in northern Japan.

Amen corner, a place in some Methodist churches, usually at one side of the pulpit, where formerly sat the deacons who led the responsive 'amens' during the service.

amenomania, *n.* See *amœnomania*.

Amentifloræ (a-men-ti-flō′rē), *n. pl.* [NL., < L. *amentum* (see *ament*) + *flos* (*flor-*), a flower (see *flower*).] In *phytogeog.*, the catkin-bearing division of the ecological group *Stigmaticæ*, consisting of *Salix*, *Populus*, and *Betula*.

amentulum (a-men′tū-lum), *n.*; pl. *amentula* (-lä). [NL., dim. of *amentum*, ament.] The male inflorescence of *Sphagnum* compared to a diminutive catkin.

amenyl (am′en-il), *n.* The organic radical, C_5H_9, derived from amylene, C_5H_{10}.

American blight. See ★*blight*.—**American class**, a group of domesticated fowls including those breeds which have originated in the United States. These are the Plymouth Rocks, wyandottes, javas, American dominiques, and Jersey blues.—**American ★cockroach**, **★copper**, **★copper hind-wing**, **★dagger**, **★lappet**, **★locust**, **★pottery**, etc. See the nouns.—**American Protective Association**. See ★*protective*.—**American race**, in *anthrop.*, the primitive race of man inhabiting America. It is closely allied to the Mongol race, and is characterized by straight black hair, strong development of the malar bones and nose, and a skin which ranges from almost white to dark reddish brown in color. While the types of South and Central America are not well known, six fundamental types may be distinguished in North America and northern Mexico: (1) the Arctic type: short, with long and high head, very wide and flat face, and narrow nose, and of light color; (2) the Northwestern type: of moderate stature, with short head, wide face, broad and flat nose, and of darker color; (3) the Mississippi Valley type: tall, with moderately elongated head, wide face, broad and high hooked nose, and of reddish color; (4) the Southeastern type: very tall, with rounded and high head, wide face, and high hooked nose; (5) the Sonoran type: of moderate stature, with long, rather low head, delicate face, and of dark color; (6) the Mexican type: of moderate stature, with short head, moderately heavy face, and of dark color. A number of subtypes of these may be distinguished.—**American saw-fly**. See ★*saw-fly*.—**American scale**, in *numis.*, a measure of one sixteenth of an inch, used for indicating the sizes of coins.

Americana (ạ-mer-i-kā′nạ), *n. pl.* [NL., neut. pl. of *Americanus*, American.] Books and papers relating to America, particularly to its early history, geography, etc.

Americanism, *n.* **5.** A name applied to a series of opinions at variance with the policy and practice of the Roman Catholic Church, supposed for a time to be held by some members of that church, especially in the United States, and condemned by Pope Leo XIII. in 1899 in an apostolical letter addressed to Cardinal Gibbons. The chief points were: that in order to attract those who differ from her the church should shape her teachings more in accord with the spirit of the age; that larger individual independence be allowed; that the church should relax some of her ancient severity and make concessions to new opinions; that points of teaching which are of minor importance be omitted and others toned down; that the monastic orders are out of date and their vows have no moral value; and that there should be a separation between church and state in all countries and under all conditions.

We are unable to give approval to these views which, in this collective sense, are called by some *Americanism*. But if by this name are to be understood certain endowments of mind which belong to the American people, just as other characteristics belong to various other nations, and moreover by it is intended your politic condition and the laws and customs by which you are governed, there is no reason to take exception to the name.
Pope Leo XIII. to Cardinal Gibbons, in Amer. Cath. Quar. Rev., April, 1899.

Americanistic (ạ-mer-i-kạn-is′tik), *a.* Of or pertaining to an Americanist or to his science; carried on by Americanists: as, *Americanistic* research.

Americanitis (ạ-mer-i-kạn-ī′tis), *n.* Overweening national conceit in citizens of the United States, especially when shown or expressed by vulgar brag or noisy braggadocio.

The removal (from athletics, etc.) of the real dishonor so often revealed by the disqualification of men tainted with professionalism, less perfervid *Americanitis* at games and in celebrating victories, less newspaper exploitation, and a better regulation of the rapidly-growing pecuniary side of these spectacles — these yet remain to be accomplished.
G. S. Hall, Adolescence, II. 411.

Amerind (am′ẹ-rind″), *n.* and *a.* [A back-formation from *Amerindian* for *Amer*(*ican*) *Indian*.] Same as ★*Amerindian* (which see).

The tribal fraternities of the *Amerinds*.
An. Rep. Bur. Amer. Ethnol., 1897–98, p. xlviii.

Amerindian (am-ẹ-rin′di-ạn), *a.* and *n.* [*Amer*(*ican*) + *Indian*. Hence, by back-formation, *Amerind*. This word, with the associated forms *Amerind*, *Amerindic*, etc., was originally suggested by Dr. Charles P. G. Scott to Major J. W. Powell as a new but intelligible term

freed from the ambiguous and false associations of *Indian* and *American Indian*, and serving the need of a comprehensive term covering all the aboriginal tribes and languages of North and South America. The word was adopted by Major Powell and other ethnologists at Washington in 1898, and has been much used since. The formation of the word is analogous with that of *Eurasian, Eurasiatic, Eurafrican*, etc., of *aldehyde, albronze, chloroform, dyne, glycol*, etc., of *cosecant, cosine, cotangent*, etc., and of innumerable names of genera in zoölogy and botany.] **I.** *a.* American Indian, in the widest sense; of or pertaining to the aboriginal inhabitants of North and South America (the Amerinds) or their languages; Amerind.

The four worlds of widespread *Amerindian* mythology. *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. 835.

II. *n.* One of the aboriginal inhabitants of North and South America; an 'Indian' (without the ambiguity of that term); a 'red man'; an Amerind.

Amerindic (am-e-rin′dik), *a.* Amerindian in the most general sense, especially as applied to matters of ethnology or philology.

ameristic, *a.* **2.** In *bot.*, destitute of a meristem: applied to the prothalli of certain ferns which, being inadequately nourished, produce antheridia only.

Amerosporæ (am-e-ros′pō-rē), *n. pl.* [NL., < Gr. *ἀ-* priv. + *μέρος*, part, + *σπορά*, seed.] A name applied by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi Imperfecti*, to include the genera which have unicellular globose or short cylindric hyaline or colored spores.

amesial (a-mē′si-al), *a.* [*a-*[18] + *mesial.*] In *biol.*, not median. A median or unpaired organ in a bilateral organism may be said to be *amesial* in origin if it arises by the union of two bilateral rudiments.

ametabole (a-me-tab′ō-lē), *n.* Direct development without metabole or metamorphosis.

amethenic (am-e-then′ik), *a.* Noting an acid, $C_7H_{14}O_2$, formed by the oxidation of diamylene. It is a liquid with weak acid properties.

amethyst, *n.* **4.** A trade-name for certain artificial dyes of the azine class, as tetramethyl safranine and tetra-amyl safranine.—**Burnt amethyst,** amethyst obtained by burning out the color of smoky quartz, which is occasionally combined with the amethystine quartz.

ametœcious (a-me-tē′shius), *a.* [Gr. *ἀ* -priv. + *μετά*, beyond, + *οἶκος*, house. Cf. *metœcious.*] Not changing its host: applied to parasitic plants. Compare *metœcious, heteræcious, heterœcism.*

amfibia, *n. pl.* A simplified spelling of *amphibia.*

amfibian, *a.* and *n.* A simplified spelling of *amphibian.*

amfibious, *a.* A simplified spelling of *amphibious.*

Amharan (am-har′an), *a.* and *n.* Same as ★*Amharic. Geog. Jour.* (R. G. S.), IX. 315.

Amharic, *n.* See ★*Abyssinian languages* (*a*).

amic (am′ik), *a.* [*am(ide)* + *-ic.*] Having the properties of an amide and also of an acid: usually employed in composition: as, *oxamic acid*, $CO_2H.CONH_2$. Same as *amidic.*

A. M. I. C. E. An abbreviation of *Associate Member of the Institute of Civil Engineers.*

Amici's telescope. See ★*telescope.*

amicrobic (a-mi-krō′bik), *a.* [*a-*[18] + *microbic.*] Not related to or caused by microbes: as, an *amicrobic* disease.

Amicruræ (am″i-krö′rē), *n. pl.* [NL., < Gr. *ἀ-* priv. + *μικρός*, small, + *οὐρά*, tail. Cf. *Micruræ.*] A group of *Nemertini*, belonging to the family *Lineidæ*, characterized by the absence of a small filamentous tail: contrasted with *Micruræ.* The group includes the genera *Lineus* and *Euborlasia.*

amidah (a-mē′dä), *n.* [Heb., < *'amad*, stand.] The most solemn prayer in the Jewish liturgy, also known as the *shemonah 'esra* ('eighteen blessings'). It is repeated thrice daily, *sotto voce*, while standing. The prayer is composed of eighteen short prayers and praises which treat principally of resurrection, the restoration of Jerusalem, and the coming of the Messiah. Nothing should disturb the pious worshiper while he is engaged in this prayer.

amide, *n.*—**Amide powder,** an explosive mixture consisting of nearly equal parts of ammonium nitrate and niter, with a small amount of charcoal.

amidize (am′i-dīz), *v. i.*; pret. and pp. *amidized*, ppr. *amidizing.* [*amid(e)* + *-ize*[1].] To treat cotton material (cellulose) with calcium chlorid and ammonia at a temperature of 100° C., in order to increase the affinity of the fiber for basic colors: not widely used.

amidmost (a-mid′mōst), *adv.* and *prep.* [*amid* + *-most.*] In the very middle; in the midst of. *William Morris*, Earthly Paradise, III. iv. 52.

amidoazobenzene (am″i-dō-az-ō-ben′zēn), *n.* [*amide* + *azo-* + *benzene.*] Same as ★*amino-azobenzene* and *aniline* ★*yellow.*

amidoazobenzol (am″i-dō-az-ō-ben′zōl), *n.* An azobenzene, $C_6H_5.N{=}N.C_6H_5$, into which an amido-(NH_2) group has been introduced: $C_6H_5.N{=}N.C_6H_4.NH_2$.

amidol (am′i-dōl), *n.* [*amide* + *-ol.*] A trade-name for the hydrochlorid of diaminophenol, used as a developer in photography. Its formula is $C_6H_3OH(NH_2)_2.2HCl$. The free base is unstable.

amidothiolactic (am″i-dō-thi-ō-lak′tik), *a.* Noting lactic acid which contains a thio (SH) and an amido (NH_2) group. Cysteïn ($C_2H_3(NH_2).(SH).COOH$) is generally regarded as an acid of this order.

amidoxime (am-i-dok′sim), *n.* [*amide* + *oxime.*] The general name for a class of compounds formed by the union of a nitrile with hydroxyl amine. They have the general formula $R{-}C(NH_2){:}NOH$. The amidoximes are usually crystalline but unstable compounds and have both basic and acid properties.

amidoxyl (am-i-dok′sil), *n.* [*amide* + *ox(ygen)* + *-yl.*] The univalent group NHOH, as in isobutyric *amidoxyl* nitrile, $(CH_3)_2C(NHOH)CN$, which is formed by the addition of hydrocyanic acid to acetoxime.

A. M. I. E. E. An abbreviation of *Associate Member of the Institute of Electrical Engineers.*

amigo (ä-mē′gō), *n.* [Sp., < L. *amicus*, a friend.] A friend: used specifically, in the Philippine Islands, for a native who is not hostile to the United States.

Amiichthys (am-i-ik′this), *n.* [NL., < Gr. *ἀμία*, a kind of tunny, + *ἰχθύς*, fish.] A genus of small cardinal fishes, of the family *Apogonidæ*, in Cuba.

amildar, *n.* Same as ★*amaldar.*

amimetic (a-mi-met′ik), *a.* [*a-*[18] + *mimetic.*] Not mimetic: applied to animals, especially insects, which do not mimic or resemble other species in coloration or behavior.

amimia, *n.*—**Amnesic amimia,** loss of appreciation of the significance of gestures.—**Ataxic amimia,** aphasia with inability to make gestures.

amin (am′in), *n.* Same as *amine.*

aminic (a-min′ik), *a.* [*amine* + *-ic.*] Pertaining to an amine or to the amino group: as, *aminic* nitrogen.

amino (am′i-nō), *a.* [Orig. combining form of *amine.*] Containing the group NH_2: as, *amino*acetic acid. The word is also used as a prefix or in compound words with the same meaning. Often written, incorrectly, *amido.*—**Amino explosive,** an explosive containing an amino compound, usually in the form of a nitrate, as the nitrate of aminoacetic acid, $CH_2NH_2CO_2H.HNO_3$.

aminoazobenzene (am″i-nō-az-ō-ben′zēn), *n.* [*amine* + *azo-* + *benzene.*] A yellow crystalline compound, $C_6H_5N{:}NC_6H_4NH_2$, formed by warming diazoaminobenzene with aniline hydrochlorid and aniline. Some of its derivatives are valuable dyes. Also called, less correctly, ★*amidoazobenzene.*

aminoform (a-min′ō-fôrm), *n.* [*amine* + *-form.*] Hexamethylene tetramine. Same as ★*cystogen*, ★*urotropin*, and ★*formin.*

aminoglutaric (am″i-nō-glö-tar′ik), *a.* [*amine* + *glutaric.*] Pertaining to glutamic acid in a relation indicated by the specific prefix.—**Aminoglutaric acid** a colorless, dextrorotatory compound, $HOOCCH(NH_2)CH_2CH_2COOH$, prepared by the action of dilute sulphuric acid on certain constituents of wheat gluten. It crystallizes in trimetric tetrahedra, melts at 202° C., and is also called *α-aminoglutaric acid* or *α-glutamic acid.*

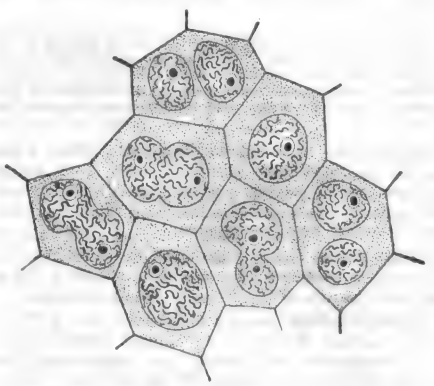
aminolysis (am-i-nol′i-sis), *n.* [*amine* + Gr. *λύσις*, dissolving.] In *chem.*, the decomposition of a substance when involving a taking up of the elements of ammonia.

Amish (am′ish or ä′mish), *a.* and *n.* [Also *Omish*; < **Ammisch*, < *Amman* (see def.), < *amman*, dial. form of *amtmann*, officer: see *amman.*] **I.** *a.* Pertaining to Jacob Amman (see next) or to his followers or their sect.

II. *n.* A sect of the Mennonites which arose in the 17th century in Switzerland, named from its leader, Jacob Amman. He insisted on the strict use of the ban, and went so far as to repudiate the use of buttons and shaving as things of the world. The Amish Church in the United States numbers about 12,000 followers. They are also called *Hookers* from their use of hooks in their clothing.

Amishman (ām′ish-or ä′mish-man), *n.* [*Amish* + *man.*] A member of the Amish sect of the Mennonites. See ★*Amish.*

amitosis (am-i-tō′sis), *n.* [NL., < Gr. *ἀ-* priv. + *μίτος*, thread, + *-osis.*] In *cytol.*, direct cell-division, akinesis or karyostenosis, as opposed to the indirect form of division (mitosis, karyokinesis, which see): so called from the absence of thread-like figures in the nucleus.



Amitosis.
Group of cells with amitotically dividing nuclei; ovarian follicular epithelium of the cockroach. (Wheeler.)

amitotic (am-i-tot′ik), *a.* Exhibiting amitosis; relating to amitosis.

amitotically (am-i-tot′i-kal-i), *adv.* By amitosis or direct division of cells without preliminary karyokinesis. *Encyc. Brit.*, XXXI. 514.

Amitra (am′i-trä), *n.* [NL., < Gr. *ἀμίτρος*, without girdle or head-band, < *ἀ-* priv. + *μίτρα*, a girdle, a head-band: see *miter.*] A genus of deep-sea snail-fishes, of the family *Liparididæ*, lacking ventral fins.

Amitrichthys (am-i-trik′this), *n.* [NL., < Gr. *ἀμίτρος*, without girdle, + *ἰχθύς*, fish.] A subgenus of deep-sea snail-fishes of the family *Liparididæ.*

Amitrinæ (am-i-trī′nē), *n. pl.* [NL., < *Amitra* + *-inæ.*] A subfamily of *Liparididæ*, lacking ventral fins: typified by the genus *Amitra.*

amixia (a-mik′si-ä), *n.* [NL., < Gr. *ἀμιξία*, < *ἄμικτος*, unmingled, < *ἀ-* priv. + *μικτός*, < *μιγνύναι*, mix.] In *biol.*, cessation of interbreeding between races or varieties.

amixis (a-mik′sis), *n.* [NL., < *ἀ-* priv. + *μῖξις*, mingling.] Same as ★*amixia.*

When we reflect that species extinct elsewhere must have survived locally, and add to these those local forms which owe their origin to *amixis*, we cease to be astonished at the enormous number of species of Lepidoptera which we find on the earth at the present day.
Eimer (trans.), Organic Evolution, p. 181.

amly (am′li), *n.* [Origin unknown.] The larva of the hellgrammite-fly, *Corydalis cornuta* (*Corydalus cornutus*). [Rhode Island.]

A. M. M. An abbreviation of *Artium Mechanicarum Magister*, Master of Mechanic Arts: a degree conferred by some institutions.

ammelide (am′e-lid), *n.* [*ammel-in* + *-ide.*] A monamide of cyanuric acid having the formula $(CN)_3(OH)_2NH_2$. It is formed from ammeline by heating the latter with sulphuric acid. Also called *melanurenic acid.*

ammeline (am′e-lin), *n.* [Metathetic form of *melamine.*] The diamide, $(CN)_3OH(NH_2)_2$ of cyanuric acid. It forms microscopic needles which are very difficultly soluble in water. It is a weak base.

ammine (am′in), *n.* See *metal-ammonia compounds*, under ★*ammonia.*

ammiolite (am′i-ō-līt), *n.* [Gr. *ἄμμον*, cinnabar in its sandy state (< *ἄμμος*, sand), + *λίθος*, stone.] A mineral from mines in Chile, earthy in texture and of a red color: supposed to be an impure antimoniate of copper mixed with cinnabar.

ammodyte, *n.* **3.** In *bot.*, a plant growing habitually in sandy places.

ammonal (am′ō-nal), *n.* A high explosive mixture consisting of 3 parts of ammonium nitrate and 1 part of aluminium.

ammonia, *n.* The great value of ammonia as a fertilizer, chiefly in the form of ammonium sulphate, renders the question of its supply on a large scale one of much importance. Until recent years it was obtained mainly from the watery ammoniacal liquor which is a by-product of the manufacture of coal-gas for illuminating purposes.

This source of supply has been seriously threatened by the extension, especially in the United States, of the use of carbureted water-gas, in making which little or no ammonia is obtained. Notable improvements, however, have been made in methods for the recovery of ammonia from the waste gases of coke-ovens, shale-works, and blast-furnaces, and very considerable amounts are now obtained from these previously neglected sources. One of the most interesting results secured with the aid of the high temperature of the modern electric furnace is the synthetical production of ammonia from the nitrogen of atmospheric air and the hydrogen of water. Carbon in the form of coke is mixed with lime and the mixture intensely heated in the presence of atmospheric nitrogen, giving rise to carbon-monoxid gas and calcium cyanamide ($CaCN_2$). The latter, heated with water under pressure, yields calcium carbonate and ammonia ($CaCN_2 + 3H_2O = CaCO_3 + 2NH_3$). It appears that cyanamide itself may serve, when used directly as a fertilizer, to furnish assimilable nitrogen to growing plants.—**Albuminoid ammonia,** the ammonia formed by the decomposition of organic matter when water, sewage, or other substances are distilled with an alkaline solution of potassium permanganate. The determination of albuminoid ammonia is used to secure information as to the amount of nitrogenous organic matter in potable waters or in sewage.—**Ammonia coil,** in *refrigeration,* a special kind of gas-piping bent into a coil and used in conveying and cooling ammonia.—**Ammonia condenser,** a large coil of pipe built up with the proper fittings, used in cooling and condensing hot ammonia gas as it comes from the compressor. Two types are in use. In one, called a *surface condenser,* the gas passes through the coil while cold water flows in a film over the outside surface of the pipes. In the other, called a *pipe condenser,* double pipes, one within the other, are built up as a coil, the ammonia gas traveling through the smaller inside pipe and the cold water flowing in the opposite direction through the larger pipe, cooling the ammonia gas and condensing it to a liquid which, when allowed to expand, may be used in making ice or cooling a cold-storage plant.—**Ammonia fittings,** couplings, elbows, tees, and other pipe-fittings of special shape, size, and weight adapted to pipes used in conveying ammonia as a liquid or a gas. See ★*pipe-fitting.*—**Ammonia-nitrate process.** See ★*process.*—**Ammonia-soda process,** the chief method by which at present carbonate of soda is made from common salt. Its essential feature is the action of ammonia and carbon dioxid upon strong brine under considerable pressure. Invented in practical form by E. Solvay.—**Ammonia type,** in *chem.,* the structure characteristic of the molecule of ammonia and analogous compounds, an atom of nitrogen or some other triad element united to three monad atoms or radicals of electropositive character. Thus trimethylamine, $N(CH_3)_3$, and tri-ethylphosphine, $P(C_2H_5)_3$, are compounds of the ammonia type.—**Aqua ammoniæ** (ammonia gas dissolved in water) is used by textile-colorists for neutralizing acids and when an alkali of milder character than caustic soda or potash is desired, as in the neutralizing of Turkey-red oil. It is also used as a fixing agent for certain metallic mordants.—**Mercuric chlorid and ammonia process.** See ★*process.*—**Metal-ammonia compounds,** in *chem.,* a large and complex series of substances formed by the union of ammonia in different proportions with the salts of certain metals, as platinum, cobalt, and copper, new compound radicals being thus produced. The term *ammine* (not to be confounded with *amine*) has been proposed for these substances.

ammoniater (a-mō′ni-ā-tėr), *n.* [★*ammoniate, v.* (< *ammonia*), + *-er*[1].] A substance which supplies ammonia to a compound fertilizer.

ammonioplatinic (a-mō″ni-ō-pla-tin′ik), *a.* Derived from ammonium and platinum.—**Ammonioplatinic chlorid,** ammonium chloroplatinate $(NH_4)_2PtCl_6$, the double chlorid of platinum and ammonium: a sparingly soluble yellow crystalline precipitate often used as the form in which to determine, in chemical analysis, ammonia or its constituent nitrogen.

ammonite[2] (am′ō-nīt), *n.* [*ammon(ium)* + *-ite*[2].] A name applied to certain explosive materials, patented by Favier, containing ammonium nitrate with other substances, chiefly nitro- or dinitro-naphthalene.

ammoniticone (am-mō-nit′i-kōn), *n.* and *a.* [*Ammonites* + *cone.*] **I.** *n.* A cone-shaped shell coiled in one plane, as in an ammonite; the shell of an ammonite, ceratite, or goniatite.

II. *a.* Having a close-coiled symmetrical shell, as the ammonoid cephalopods.

ammonitiform (am-ō-nit′i-fôrm), *a.* [NL. *ammonites,* ammonite, + L. *forma,* form.] Resembling an ammonite in shape, as the young of certain *Gasteropoda.*

ammonitoid (a-mon′i-toid), *a.* and *n.* [*ammonit(e)* + *-oid.*] **I.** *a.* Related or belonging to the ammonites or *Ammonoidea;* resembling an ammonite. *Zittel* (trans.), Textbook of Paleon., I. 547.

II. *n.* An ammonite (which see) or amomnoid.

ammonium, *n.*—**Ammonium bichromate,** ammonium pyrochromate ($(NH_4)_2Cr_2O_7$). By heating this salt nitrogen gas may be obtained, in accordance with the reaction $(NH_4)_2Cr_2O_7 = Cr_2O_3 + 4H_2O + N_2$.—**Ammonium carbonate,** $(NH_4)_2CO_3$, a commercial salt valuable in wool-scouring and also used in medicine and in common smelling-salts.—**Ammonium chlorid,** sal ammoniac, NH_4Cl. It is usually prepared from ammonium sulphate by heating with common salt, the ammonium chlorid subliming, and is used to some extent in the exciting fluid of the Leclanché galvanic cell, in the production of mordants, etc. It is obtained on a great scale as a by-product of the Solvay or ammonia process for making soda from common salt—in this case used to recover ammonia, which is again applied in a renewal of the process.—**Ammonium chloroplatinate.** See ★*ammonioplatinic chlorid.*—**Ammonium hydrate.** See ★*ammonium hydroxid.*—**Ammonium hydroxid,** in *chem.,* the form in which ammonia is assumed to exist when dissolved in water, $NH_4.HO$, resulting from the action of NH_3 and H_2O upon each other. The solution, the ordinary liquid ammonia of commerce, behaves in many respects like the solution of caustic soda (NaHO) or caustic potash (KHO), but decomposes, on being heated, into gaseous ammonia and water. Recent investigations of the physical properties of the solution make it very doubtful whether the hydroxid has any real existence. Often improperly called *ammonium hydrate.*—**Ammonium magnesium phosphate,** in *chem.,* a slightly soluble crystalline salt ($NH_4MgPO_4.6H_2O$) frequently resorted to in chemical analysis as the form in which to separate magnesium from other substances. It is often met with as a constituent of urinary calculi.—**Ammonium nitrate,** in *chem.,* the salt formed by the union of ammonia and nitric acid ($NH_3 + HNO_3 = NH_4.NO_3$), chiefly noteworthy as the source from which, by cautiously heating it somewhat above its melting-point, nitrogen monoxid or nitrous oxid, the so-called laughing-gas, is prepared for use as a gaseous anesthetic, most commonly by dentists.—**Ammonium persulphate,** a salt ($(NH_4)_2S_2O_8$) sparingly used in the development of photographic pictures.—**Ammonium phosphomolybdate,** in *chem.,* a salt of the composition $(NH_4)_3PO_4 + 12MoO_3$, appearing as a bright-yellow crystalline precipitate insoluble in a nitric-acid solution of ammonium molybdate. It is very commonly used in analytical processes as the form in which to separate the radical of orthophosphoric acid, for the determination of this radical or of the phosphorus it contains, and is of great value in connection with the analysis of fertilizers and of steel.—**Ammonium picrate,** a substance crystallizing in bright-yellow needles, burning on the application of flame, but exploding by shock less easily than other picrates: used in the preparation of Brugère's and Abel's powders.—**Ammonium platinochlorid.** Same as ★*ammonioplatinic chlorid.*—**Ammonium sulphate,** in *chem.,* the salt formed by the union of ammonia and sulphuric acid ($2NH_3 + H_2SO_4 = (NH_4)_2SO_4$). It is prepared on a larger scale than any other ammonium salt, chiefly for use as a fertilizer or an ingredient of mixed fertilizers. See ★*ammonia.*—**Metal-ammonium compounds,** in *chem.,* substances in which a metal may be viewed as replacing part or all of the hydrogen of the radical ammonium: as, dimercurammonium chlorid, $NH_{g2}Cl$, which may be considered as ammonium chlorid, NH_4Cl, with the 4 atoms of monad hydrogen replaced by 2 atoms of dyad mercury.

ammono-acid (a-mō″nō-as′id), *n.* A compound which in solution in liquid ammonia conducts itself in a manner analogous to the conduct of ordinary acids in water: as, acetamide, CH_3CONH_2, which reacts with the ammono-base, KNH_2, giving potassium acetamide, CH_3CONHK, and ammonia.

ammono-base (a-mō′nō-bās″), *n.* A compound which conducts itself in a solution in liquid ammonia as an ordinary base conducts itself in aqueous solution and which contains the group $—NH_2$ in place of the hydroxyl, OH, of an ordinary base: as, potassium amide, KNH_2.

ammono-basic (a-mō-nō-bā′sik), *a.* Designating a compound related to an ammono-salt in a manner analogous to the relation of a basic salt to the salt from which it is derived: that is, an ammono-salt in which a part of the acid groups have been replaced by NH_2 as OH replaces acid groups in the formation of ordinary basic salts.

ammonoid, *n.* **II.** *a.* Pertaining to or having the characteristics of the *Ammonoidea.*

ammonol (am′ō-nōl), *n.* The trade-name of a remedy said to consist of acetanilid, sodium bicarbonate, and ammonium carbonate. It is antipyretic and analgesic.

ammonolysis (am-ō-nol′i-sis), *n.* The decomposition of an ammono-salt in liquid ammonia in a manner analogous to the hydrolysis of salts in water.

ammono-salt (a-mō′nō-sâlt″), *n.* A compound formed together with ammonia by the action of an ammono-acid on an ammono-base in a solution in liquid ammonia.

Ammon's horn. Same as *cornu Ammonis.*

ammotherapy (am-ō-ther′a-pi), *n.* [Gr. ἄμμος, sand, + θεραπεία, medical treatment.] The employment of sand-baths in the treatment of disease.

ammunition-conveyer (am-ū-nish′ọn-kọn-vā″ėr), *n.* In a man-of-war, a mechanical appliance, moved by power, for transporting ammunition horizontally from the magazines to the bottom of the ammunition-hoists.

ammunition-hoist (am-ū-nish′ọn-hoist), *n.* A mechanical contrivance, worked by hand or power, by means of which ammunition is lifted from the magazines or passages in the lower parts of a war-ship and delivered in the vicinity of the guns, or on the decks upon which they are placed.

ammunition-passage (am-ū-nish′ọn-pas″āj), *n.* A passage arranged in the lower parts of a war-ship, beneath the protective deck, through which ammunition is transported from the magazines to the places from which it is sent up through the decks to the guns above.

ammunition-room (am-ū-nish′ọn-röm), *n.* Any compartment on a war-ship in which ammunition is stored for use: usually made water-tight and provided with means for flooding with water in case of fire on board. The term includes magazines, shell-rooms, and fixed-ammunition rooms.

ammunition-scuttle (am-ū-nish′ọn-skut″l), *n.* In a man-of-war, a scuttle in a deck or in the bulkhead of a magazine through which ammunition is passed on its way to the guns. See *scuttle*[2], *n.*, 1.

Amnemonic agraphia. See ★*agraphia.*

amnesia, *n.*—**Auditory amnesia,** word-deafness.

Amnesic amimia. See ★*amimia.*

Amnigenia (am-ni-jē′ni-ä), *n.* [NL., < L. *amnis,* a river, + *-genus,* -born.] A genus of extinct pelecypod mollusks or clams allied to the family *Unionidæ* and believed to be of fresh- or brackish-water habitat. *Amnigenia Catskillensis* is a characteristic fossil in the brackish-water Oneonta sandstones lying at the base of the Catskill formation.

amnio-allantoic (am″ni-ō-al-an-tō′ik), *a.* Concerning or pertaining to the presence of an amnion and an allantois.

amnion, *n.* 5. In echinoderms, the sac in the pluteus larva inclosing the developing echinus.—**True amnion,** the inner of the two embryonic envelops in reptiles, birds, and mammals, as opposed to the outer or false amnion.

amniote (am′ni-ōt), *a.* and *n.* [NL. *amniotus,* < *amnion,* amnion.] **I.** *a.* Possessing an amnion; amniotic.

II. *n.* A member of the *Amniota.*

Amniotic band, a cord-like formation on the inner surface of the amnion, sometimes constricting a limb of the fetus.—**Amniotic cord,** in ruminants, a band of tissue persisting for a time after the closure of the amnion and chorion, and connecting these two structures.—**Amniotic dropsy.** See ★*dropsy.*

amniotitis (am″ni-ō-tī′tis), *n.* [NL., irreg. (after *amniote*) < Gr. ἀμνίον, amnion, + *-itis.*] Inflammation of the amnion.

Amœba coli or **dysenteriæ,** an amœboid organism believed to be causative of one form of dysentery.

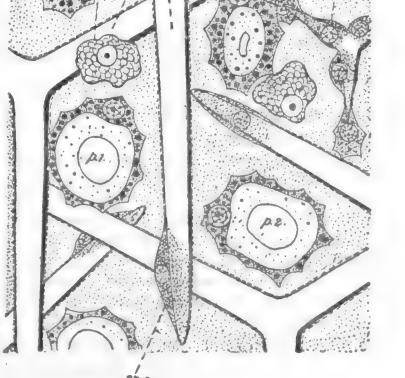
amœbiasis (a-mē-bi-ā′sis), *n.* Morbid condition induced by the presence of amœbæ.

amœbic (a-mē′bik), *a.* [*amœba* + *-ic.*] Of, pertaining to, or characterized by the presence of *amœbæ.* Also *amebic.*—**Amœbic colitis,** inflammation of the large intestine caused by the presence of *Amœba coli* or *dysenteriæ;* amœbic dysentery. *Jour. Exper. Med.,* VI. 167.—**Amœbic dysentery,** a form of dysentery due to the presence of *Amœba coli* or *dysenteriæ* in the intestine. See *dysentery. Jour. Exper. Med.,* VI. 89.

Amœba coli. (Magnified.)

Amœbida (a-mē′bi-dä), *n. pl.* [NL., < *Amœba* + *-ida.*] An order of *Rhizopoda.* They have lobose pseudopodia, are with or without a shell, have one or more nuclei, and usually have a contractile vacuole. It includes the families *Amœbidæ, Arcellidæ,* and *Euglyphidæ.*

amœbocyte (a-mē′bō-sīt), *n.* [NL. *amœba* +



Amœbocytes.

Body wall of *Clathrina coriacea,* Mont., seen from the inside in the region of the oscular rim, showing pores (*p. 1., p. 2.*),—the collar-cells removed to show the underlying parenchyma. *am.c,* amœbocyte; *ap.f.c.,* apical formative cell; *b.f.c.,* basal formative cell; *sp.c.,* spicule cell, or scleroblast. (From Lankester's "Zoölogy.")

Gr. *κύτος*, a hollow (a cell).] An amœboid cell or corpuscle, usually of rounded or lobose shape (frequently packed with granules or sometimes with particles of pigment), found everywhere among the cells and tissues and in the cavities of various invertebrate animals. Such cells are known also, from their vagrant habits, as *wandering cells*. In some organisms, as sponges, they give rise to the genital products, and they are also probably concerned with the functions of nutrition and excretion. Also spelled *amebocyte*.

amœbocytogenous (a-mē″bō-sī-toj′e-nus), *a.* [NL., ⟨ *amœba* + Gr. *κύτος*, a hollow (a cell), + *-γενης*, -producing.] In *pathol.*, relating to or producing amœbocytes.

Amœbogeniæ (a-mē-bō-jen′i-ē), *n. pl.* [NL., ⟨ *amœba* + *-genus*, producing.] A group of *Sporozoa* having amœboid sporozoites: equivalent to *Myxosporidia*.

Amœbosporidia (a-mē″bō-spō-rid′i-ä), *n. pl.* [NL., ⟨ *amœba* + Gr. *σπορά*, seed, + *-idia*.] A group of *Gregarinida* which have a multinucleate amœboid form and increase by direct division or by falciform young coming from spores. They are found in the Malpighian tubules of some beetles. Same as ★*Schizogregarinæ*.

amok (ä′mǒk), *a.* and *n.* [Malay *āmok*, *āmoq*, pron. ä′mǒk or ä′mǒh: see *amuck*.] **I.** *a.* Same as *amuck* (but a form nearer the original). See *amuck*.

II. *n.* An affray in which one or more persons (Malays) run amuck. See the quotation.

An *amok* took place last night, by a Malay, which resulted in the loss of his own life and the wounding of 16 persons.
Straits Times, quoted in Giles's Glossary of Reference.

amok (ä′mǒk), *v. i.* To run amuck (which see).

amora (ä-mō′rä), *n.*; pl. *amoraim* (am-ō-rä′im). [Heb. *'amōra*, expounder, ⟨ Heb. Aram. *'amar*, say, speak.] **1.** An officer who stood beside a public teacher or lecturer and announced in a loud voice, in popular language, what the teacher had just uttered in a low voice in academic language: otherwise called 'translator' or 'interpreter.'—**2.** One of the expounders of the Mishnah, successors of the tannaim. The expositions of these rabbis and the Mishnah constitute the oral law called *Talmud*. The period of the amoraim began after the death of Rabbi Judah ha-Nasi (the Prince Judah), about 200 A. D., and extended to about 500 A. D.

amoral (ā-mor′al), *a.* [*a-*18 + *moral*.] Devoid of moral quality; neither moral nor immoral; non-moral. *R. L. Stevenson*, in Longman's Mag., I. 70. *N. E. D.*

amorfous, *a.* A simplified spelling of *amorphous*.

Amorgan (a-môr′gan), *a.* [L. *Amorgus*, *Amorgos*, ⟨ Gr. *Ἀμοργός*.] Of or pertaining to Amorgos, one of the Cyclades, a group of islands in the Ægean Sea, or to an ancient civilization, preceding that of Mycenæ, shown by numerous remains which have been found by recent excavators. Amorgos is noted as the residence of the Greek poet Simonides (7th century B. C.) and for the production in ancient times of a very fine kind of flax which was woven into garments and dyed red.

The material employed, and the simple form of the vase, seem to show that it belongs to the later prae-Mycenean or *Amorgan* period.
A. J. Evans, in Jour. Hell. Studies, XVII. 350.

Amorgian (a-môr′gi-an), *a.* Same as *Amorgan*.

amorism (am′ō-rizm), *n.* [L. *amor*, love, + *-ism*.] Love-making tendencies or disposition; amatory intrigue; gallantry.

Full of the romance and colour and sparkle of that curious life—half old-world Spanish, half topsy-turvy Oriental in its fatalism and passionate *amorism*—which was to be found in California.
Athenæum, Jan. 17, 1903, p. 77.

amorist, *n.* **2.** One who is given to writing love-sonnets or -songs.

The Angel determines all conceptions of the poet, who is imagined as a mild and amiable *amorist*.
Athenæum, April 1, 1905, p. 390.

amoristic (am-ō-ris′tik), *a.* [*amorist* + *-ic*.] Amatory. *The Academy*, April 9, 1881.

Amorphophallus (a-môr-fō-fal′us), *n.* [NL., ⟨ Gr. *ἀμορφος*, shapeless, + *φαλλος*, phallus.] A giant plant of the family *Araceæ* from the eastern tropics, grown as a curiosity in hothouses. It has immense spathes containing many ill-smelling flowers. The three most commonly cultivated species are *A. Rivieri* (commonly called ★*devil's-tongue*), *A. campanulatus*, and *A. giganteus*. See cut in next column.

amorphophyte (a-môr′fō-fīt), *n.* [Gr. *ἀμορφος*, shapeless, + *φυτόν*, a plant.] A plant with flowers of irregular or anomalous form. *Necker*.

amorphose (a-môr′fōs), *a.* Amorphous. [Rare.]

Amorphophallus campanulatus.
(After figure in Engler and Prantl's "Pflanzenfamilien.")

amorphozoary (a-môr-fō-zō′ā-ri), *n.* [Gr. *ἀμορφος*, formless, + NL. *zoarium*, q. v.] An irregular or shapeless animal growth, as a sponge or a colonial cœlenterate.

amorphus (a-môr′fus), *n.*; pl. *amorphi* (-fī). [NL., ⟨ Gr. *ἀμορφος*, shapeless.] In *teratol.*, a mole or shapeless monster.

amortisseur (ä-môr-ti-sėr′), *n.* [F., ⟨ *amortir*, deaden: see *amortize*.] In *elect.*, an induction motor secondary winding located in the pole-faces of the magnet-field of electric machines to dampen any tendency to oscillation. It usually consists of a 'squirrel cage,' or number of copper bars passing through the field-iron and connected with each other by end-rings.

amortizable (a-môr′ti-za-bl), *a.* That can be or is intended to be amortized or extinguished: as, a debt *amortizable* in ten years.

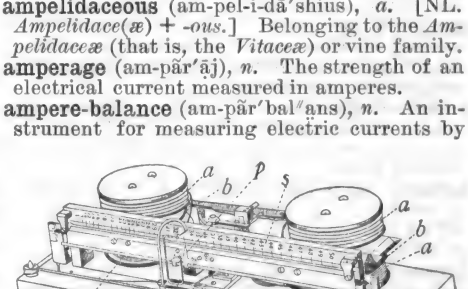
amotion, *n.* **3.** In *law*: (*a*) An unlawful taking of chattels. (*b*) The act of turning out an owner of an estate in land before the termination of his estate. (*c*) In corporations, removal of an official of a corporation before the expiration of the term for which he was appointed.

amoyong (ä-mō′yong), *n.* [Tagalog **amoyong*, Bisaya *amoyon*, ⟨ Tagalog *amoy*, scent.] A name in the Philippines of *Fissistigma fulgens* (*Melodorum fulgens* of Hooker and Thompson), a large woody climber or small tree of the custard-apple family, having tawny-orange colored flowers and pod-like fruit inclosing a number of cinnamon-colored, somewhat aromatic seeds, which are administered medicinally in the Philippines under the name of *grains of paradise*.

ampelidaceous (am-pel-i-dā′shius), *a.* [NL. *Ampelidace(æ)* + *-ous*.] Belonging to the *Ampelidaceæ* (that is, the *Vitaceæ*) or vine family.

amperage (am-pār′āj), *n.* The strength of an electrical current measured in amperes.

ampere-balance (am-pār′bal″ans), *n.* An instrument for measuring electric currents by



Ampere-balance.

a, *a*, fixed coils, between which are moving coils, *b*, *b*, brought to a balance by sliding weight, *w*, on which is index, *p*, indicating on scale, *s*.

means of the attraction between a fixed coil, through which the current flows, and a movable balanced coil which forms a part of the same circuit.

ampere-hour (am-pār′our), *n.* In *elect.*, a unit of quantity, the electricity transferred by a current of one ampere in one hour. It is equal to 3,600 coulombs.

Ampère's frame, rule. See ★*frame*, ★*rule*.

ampere-turns (am-pār′tėrnz″), *n. pl.* A measure of the magnetizing power, or magnetomotive force, of a current of electricity in a conducting-coil, equal to the product of a number of turns in the coil by the current (in amperes) passing through it.

ampharkyochrome (am-fär′ki-ō-krōm), *n.* [Gr. *ἀμφί*, on both sides, + *ἀρκυς*, net, + *χρῶμα*, color.] In *neurol.*, a cell in which the nodal points of the nucleus are connected by deeply staining bands or bridges.

ampheclexis (amf-ek-lek′sis), *n.* [Irreg. ⟨ Gr. *ἀμφί*, on both sides, + *ἐκλεξις*, selection: see *eclectic*.] Sexual selection on the part of both male and female. Compare ★*gyneclexis* and ★*andreclexis*. *Ward*, Pure Sociol., p. 361.

amphiaster, *n.* **3.** [*l. c.*] A sponge-spicule consisting of a straight axis with a whorl of rays near each end.

amphibia, *n. pl.*, **2.** Boulinger divides the *Amphibia* into four orders, *Stegocephalia*, *Apoda*, *Caudata*, and *Ecaudata*, the last three being the same as the *Gymnophiona*, *Urodela*, and *Anura* of other writers, but bearing the names originally applied to them. Recent researches emphasize the distinctness of the *Stegocephalia* and show that they approach reptiles in some structural features. On this account it has been proposed by Seeley to place the two in one class, while Credner would unite the *Stegocephalia* with the *Rhynchocephalia*. The order *Stegocephalia* is variously divided into from 2 to 5 suborders, mainly on characters furnished by the vertebræ.

amphibichnite (am″fi-bik′nīt), *n.* [Irreg. ⟨ Gr. *ἀμφίβιος*, amphibious, + *ἰχνος*, track: see *ichnite*.] A fossil marked by tracks of amphibia.

amphibole, *n.*—**Soda amphibole,** a variety of amphibole, or a species of the amphibole group, characterized by the presence of sodium as a prominent constituent: the species riebeckite, glaucophane, arfvedsonite, and barkevikite belong here.

amphibolic[1], *a.* **2.** Ambiguous; of a doubtful nature.—**Amphibolic fistula,** an opening made in the gall-bladder of an animal for the purpose of obtaining bile for physiological study. The common bile-duct is left intact, so that when the external opening is plugged the bile may flow away through the duct.

amphibolitic (am-fib-ō-lit′ik), *a.* [*amphibolite* + *-ic*.] In *petrog.*, same as *amphibolic*. *Geikie*, Text-book of Geology, p. 804.

amphibolization (am″fi-bōl-i-zā′shǫn), *n.* [*amphibolize* + *-ation*.] In *geol.*, the metamorphic process by which minerals of the amphibole group are produced in rocks by the alteration of other minerals.

amphibrachic (am-fi-brak′ik), *a.* [*amphibrach* + *-ic*.] Of or pertaining to the amphibrach; characterized by amphibrachs. *Scripture*, Elements of Experimental Phonetics, p. 510.

amphicarpium (am-fi-kär′pi-um), *n.*; pl. *amphicarpia* (-ä). [NL., ⟨ Gr. *ἀμφί*, on both sides, + *καρπός*, fruit.] In *bot.*, an archegonium that persists after fertilization as a fruit-envelop.

amphicarpogenous (am-fi-kär-poj′e-nus), *a.* [Gr. *ἀμφί*, on both sides, + *καρπός*, fruit, + *-γενής*, -producing.] In *bot.*, developing the fruit above ground and subsequently burying it, as the peanut.

Amphicerus (am-fis′e-rus), *n.* [NL. (Le Conte, 1861), ⟨ Gr. *ἀμφικερως*, two-horned.] A genus of bostrychid beetles peculiar to North America. *A. bicaudatus* is known in the United States as the apple-twig borer. It frequently injures apple-orchards by boring into the small twigs and causing them to break off. It also injures the canes of the grapes.

Amphichelydia (am″fi-ke-lid′i-ä), *n. pl.* [NL., ⟨ Gr. *ἀμφί*, on both sides, + *χέλυς* (stem *χελυ-*, assumed to be *χελυδ-*), a tortoise.] A name introduced by Lydekker and redefined by Baur as a suborder to include fossil turtles or chelonians having free nasals, a squamosoparietal arch, pelvis not ankylosed to the carapace or plastron, and an intergular shield. At present it embraces only a single family, the *Pleurosternidæ*, containing several generalized forms from the Jurassic, Cretaceous, and Tertiary rocks.

amphicondylous (am-fi-kon′di-lus), *a.* [Gr. *ἀμφί*, on both sides, + *κόνδυλος*, a joint or knob (see *condyle*).] Having two condyles or articular facets, as the skull of mammals and batrachians: contrasted with ★*monocondylous*.

amphicotyledon (am″fi-kot-i-lē′dǫn), *n.* [NL., ⟨ Gr. *ἀμφί*, on both sides, + NL. *cotyledon*.] The cotyledons when united so as to form a cup. *De Vries*.

amphicreatinine (am-fi-krē-at′i-nin), *n.* [*amphi-* + *creatinine*.] A base, $C_8H_{19}N_7O_4$, found in small amount in lean meat. It forms bright-yellow crystals and resembles creatine in its properties.

amphictyonian (am-fik-ti-ō′ni-an), *a.* Same as *amphictyonic.*

Amphicyonidæ (am″fi-si-on′i-dē), *n. pl.* [NL., < *Amphicyon* + *-idæ.*] A family of *Carnivora* in which the characters of the teeth and base of skull are those of the dogs, while the structure of the limbs and the plantigrade feet are like those of the bears: found in the Tertiary rocks of North America, Europe, and Asia.

amphidepula (am-fi-dep′ū-lä), *n.*; pl. *amphidepulæ* (-lē). [*amphi-* + *depula.*] In *embryol.*, a phase of the metadepula stage characteristic of the cyclostomes, ganoids, *Dipnoi*, and *Amphibia* among vertebrates. *Haeckel.*

amphidesmous (am-fi-des′mus), *a.* [Gr. *ἀμφί*, on both sides, + *δεσμός*, a band.] Having a ligament on each side.

amphidetic (am-fi-det′ik), *a.* [Gr. *ἀμφί*, on both sides, + **δετός*, bound, < *δεῖν*, bind.] In the pelecypod mollusks, extending on both sides of the beak: noting a type of ligament.

amphidetically (am-fi-det′i-kal-i), *adv.* In an amphidetic manner; with the ligament on both sides of the beak, as in some mollusks.

Amphidiscophora (am″fi-dis-kof′ō-rä), *n. pl.* [NL., < **amphidiscus*, amphidisk, + Gr. *-φορος*, < *φέρειν*, bear.] An order of lyssacine, hexactinellidan sponges having amphidisks always present in the limiting membranes and no hexasters in the parenchyma. It includes the family *Hyalonematidæ.*

amphidiscophoran (am″fi-dis-kof′ō-ran), *a.* and *n.* **I.** *a.* Pertaining to or having the characteristics of the *Amphidiscophora.*

II. *n.* Any member of the *Amphidiscophora.*

Amphidozotherium (am″fi-dō-zō-thē′ri-um), *n.* [NL., appar. a misprint for **Amphidoxotherium*, < Gr. *ἀμφίδοξος*, uncertain, + *θηρίον*, a wild beast.] A genus of fossil moles from the Tertiary phosphorites of Quercy, France, supposed to be allied to the existing *Urotrichus* of Japan and North America.

amphidromic (am-fi-drom′ik), *a.* [Gr. *ἀμφίδρομος*, running around: see *amphidromia.*] Pertaining to cotidal lines arranged radially about a no-tide point.

amphigean, *a.* **3.** In *bot.*, bearing flowers from a rootstock.

amphigenetic (am″fi-jē-net′ik), *a.* [Gr. *ἀμφί*, on both sides, + *genetic.*] By means of both sexes. Amphigenetic reproduction is sexual reproduction.

Amphigenia (am-fi-jē′ni-ä), *n.* [NL.: see *amphigenous.*] A genus of extinct brachiopods belonging to the family *Pentameridæ.* The shells are of large size, and the ventral valve has a small spondylium or pedicle-pit resting on a very short vertical septum. These shells abounded in Devonian seas.

amphigenic (am-fi-jen′ik), *a.* [Gr. *ἀμφιγενής*, of both kinds, + *-ic.*] In *petrog.*, a term applied to sedimentary rocks which are partly of organic and partly of inorganic origin, such as numerous silicious and calcareous deep-sea deposits. Also *amphogenic.*

amphigenite (am-fij′e-nīt), *n.* [*amphigene* + *-ite*[2].] In *petrog.*, a name sometimes given, especially in France and Italy, to igneous rocks rich in leucite.

amphigonia (am-fi-gō′ni-ä), *n.* [NL.] Same as *amphigony.*

Amphigonic heredity. See ★*heredity.*

amphigonium (am-fi-gō′ni-um), *n.*; pl. *amphigonia* (-ä). [NL., < Gr. *ἀμφί*, on both sides, + *γόνος*, generation.] That stage of the malarial parasite which is passed in the mosquito. *Grassi.* Compare ★*monogonium.*

amphilepsis (am-fi-lep′sis), *n.* [NL., < Gr. *ἀμφί*, on both sides, + *λῆψις*, a taking, < *λαβεῖν*, take.] The transmission to an offspring and to its descendants of characteristics of both parents: contrasted with ★*monolepsis.*

amphimesodichotriæne (am-fi-mes-ō-dī-kō-trī′ēn), *n.* [Gr. *ἀμφί*, at both ends, + *μέσος*, middle, + *δίχα*, in two, + *τρίαινα*, a trident.] In the nomenclature of the spicular elements of sponges, a form of triæne having a thick shaft or rhabd from near the middle of which arise symmetric sets of branches by threes. It is derived from the tetraxial type of spicular structure. Also called *amphiaster.* See ★*amphiaster*, 3, and *sponge-spicule.*

amphimixis (am-fi-mik′sis), *n.* [NL., < Gr. *ἀμφί*, on both sides, + *μῖξις*, a mingling.] In *biol.*, the mingling of the hereditary tendencies of the two parents in sexual reproduction, considered abstractly, as distinct from *amphigony* or the reproductive process.

Although the study of heredity is greatly complicated by *amphimixis*, this mingling of the hereditary tendencies of two parents, and even the process of sexual reproduction which accompanies it, afford us a much deeper insight into the process of heredity than we could ever have obtained in any other way.

Weismann (trans.), Germ-plasm, p. 21.

Amphinesian (am-fi-nē′sian), *a.* and *n.* [Gr. *ἀμφί*, on both sides, + *νῆσος*, island.] **I.** *a.* Of or pertaining to the aborigines of Indonesia, Polynesia, and Micronesia, considered as one racial division of mankind.

II. *n.* A member of the Amphinesian race.

Amphineura, *n. pl.* **2.** A class or order of marine *Mollusca.* They have a bilaterally symmetrical elongated body, with terminal mouth and anus; the shell either lacking or consisting of 8 median pieces; mantle not divided into paired lobes; ctenidia absent or variously arranged; and the odontophore either present or lacking. The class includes the *Chitonidæ, Neomeniidæ*, and *Chætodermatidæ.*

amphineurous (am-fi-nū′rus), *a.* [Gr. *ἀμφί*, on both sides, + *νεῦρον*, sinew, nerve.] Having two lateral and two ventral nerve-cords, as the chitons; having the characteristics of the *Amphineura.*

amphiodont (am′fi-ō-dont), *a.* [Gr. *ἀμφί*, on both sides, + *ὀδούς*, tooth.] In *entom.*, having the dentition of the jaws intermediate between the teleodont and priodont forms: applied to certain stag-beetles of the family *Lucanidæ.*

amphicœcious (am-fi-ē′shus), *a.* [Gr. *ἀμφί*, on both sides, + *οἶκος*, a dwelling.] In *ichth.*, capable of living in either salt or fresh water.

Amphion (am-fī′on), *n.* [NL., < Gr. *Ἀμφίων*, a name in poetic myth.] A generic name introduced by Pander for trilobites characterized by their broad and short cephalon, 15 to 18 thoracic segments, and pygidial ribs extended into spines. These trilobites are of Silurian age.

amphiont (am′fi-ont), *n.* [Gr. *ἀμφί*, on both sides, + *ὄν* (*ὀντ-*), a being.] A zygospore or sporont formed by the union of two individuals: specifically applied to one of the two stages of alternation of generations in the life-history of *Coccidia. Haeckel.* Compare ★*monont.*

amphiox (am′fi-oks), *n.* [Gr. *ἀμφί*, at both ends, + *ὀξύς*, sharp.] In the nomenclature of the spicular elements of sponges, a slender spindle-shaped rod of monaxial type, sharp at both ends.

Amphioxides (am-fi-ok′si-dēz), *n.* [NL., < *Amphioxus* + Gr. *-ιδης* (see *-ides*).] A genus of lancelets, of the family *Branchiostomatidæ*, characterized by the absence of cirri about the mouth. *A. pelagicus*, found in the open sea off Hawaii, is the typical species.

amphipeptone (am-fi-pep′tōn), *n.* [*amphi-* + *peptone.*] In the sense of Kuehne, the end-product of peptic digestion, a hypothetical mixture of anti- and hemi-peptone. Also *amphopeptone.*

amphiplatyan (am-fi-plat′i-an), *a.* [Gr. *ἀμφί*, on both sides, + *πλατύς*, flat, + *-an.*] Of vertebræ, having both of the articular faces of the centra flat or plane. *Owen.*

amphipneustic (am-fip-nūs′tik), *a.* [Gr. *ἀμφί*, on both sides, + *πνευστός*, breathing.] Breathing at both ends: applied to certain dipterous larvæ having spiracles at each end of the body connected by large tracheal trunks. *Cambridge Nat. Hist.*, VI. 450.

amphipositive (am-fi-poz′i-tiv), *a.* In *photog.*, noting a process invented by Sabatier in which the picture is the result of a superposition or entangling of two images, one negative and the other positive. It is based upon the fact that certain substances, when poured in solution upon a negative which is in course of formation, exercise upon it, whatever be the developing agent otherwise employed, a disturbing and substituting action such that the development of the negative is stopped at the moment of contact, and the chemical combination which follows this contact gives rise to a positive. The substances which exercise this power are probably numerous. Lime-water, solutions of ammonia, and silver nitrate possess it in the highest degree. They may be applied after the use of pyro-developer.

Amphiprion (am-fip′ri-on), *n.* [NL., < Gr. *ἀμφί*, on both sides, + *πρίων*, a saw.] A genus of damsel-fishes of the family *Pomacentridæ*: found on the coral reefs of the Pacific, and remarkable for their varied coloration.

amphipyrenin (am-fi-pī-rē′nin), *n.* [Gr. *ἀμφί*, on both sides, + *πυρήν*, stone of a fruit (nucleus), + *-in.*] In *bot.*, a substance, related to pyrenin, forming the nuclear membrane in the cell. *Schwarz*, 1887.

Amphisorex (am-fi-sō′reks), *n.* [NL., < Gr. *ἀμφί*, about, near, + L. *sorex*, a shrew.] A genus representing the *Soricidæ*, or shrews, found fossil in the Quercy phosphorites of Oligocene age.

amphispermous (am-fi-spėr′mus), *a.* [Gr. *ἀμφί*, on both sides, + *σπέρμα*, seed.] In *bot.*, having the seed closely invested by the pericarp without modification of its form, as in an achenium.

Amphisphæria (am-fi-sfē′ri-ä), *n.* [NL. (Cesati and De Notaris, 1863), < Gr. *ἀμφί*, on both sides, + *σφαῖρα*, sphere.] A genus of sphæriaceous fungi having mostly superficial scattered perithecia. The spores are two-celled and dark-colored. The species are numerous and occur chiefly on dead wood.

Amphisphæriaceæ (am″fi-sfē″ri-ā′sē-ē), *n. pl.* [NL., < *Amphisphæria* + *-aceæ.*] A family of pyrenomycetous fungi, typified by the genus *Amphisphæria.*

amphispore (am′fi-spōr), *n.* [Gr. *ἀμφί*, on both sides, + *σπορά*, a spore.] A unicellular spore occurring in certain species of *Puccinia*, resembling a uredospore in its mode of germination, but requiring a period of rest before it will germinate. Amphispores are found in *Puccinia vexans* and *P. Tripsaci.*

Amphistegina (am″fi-stē-jī′nä), *n.* [NL., < Gr. *ἀμφί*, on both sides, + *στέγη*, a roof, + *-ina.*] A genus of calcareous foraminifers, of the family *Nummulitidæ*, having a lenticular test spirally enrolled and chambered: very abundant in the Miocene Tertiary.

Amphistichus (am-fi-stik′us), *n.* [NL., < Gr. *ἀμφί*, on both sides, + *στίχος*, a line.] A genus of surf-fishes, of the family *Embiotocidæ*, found off the coast of California. *A. argenteus* is the common species.

amphistrongyle (am-fi-stron′jīl), *n.* [Gr. *ἀμφί*, at both ends, + *στρογγύλος*, round.] In the nomenclature of the spicular elements of sponges, a short monaxial rod with rounded ends. See *sponge-spicule.*

amphistyly (am-fis′ti-li), *n.* [*amphistyl(ic)* + *-y*[3].] The state or condition of being amphistylic, or of having (as some sharks) the mandibular arch attached to the skull by a ligament and but slightly supported by the hyoid.

amphithecium (am-fi-thē′sium), *n.*; pl. *amphithecia* (-siä). [NL., < Gr. *ἀμφί*, on both sides, + *θήκη*, case.] In *bot.*, the layer of cells at first surrounding the endothecium in the capsule of a moss.

amphiton (am′fi-ton), *n.* [Said to be < Gr. *ἀμφί*, at both ends, + *τόνος*, a rope.] In the nomenclature of the spicular elements of sponges, a monaxial pencil-like rod with abruptly sharpened ends. See *sponge-spicule.*

amphitriæne (am-fi-trī′ēn), *n.* [Gr. *ἀμφί*, at both ends, + *τρίαινα*, a trident.] A name given to a form of skeletal element in the silicious sponges which presents the appearance of a vertical rod bearing a trident at each end: regarded as a modification of the tetraxial type of spicule.

amphitriænic (am″fi-trī-ē′nik), *a.* [*Amphitriæne* + *-ic.*] Of the nature of an amphitriæne.

amphitrichous (am-fi-trī′kus), *a.* [Gr. *ἀμφί*, on both sides, + *θρίξ* (*τριχ-*), hair.] Provided with a flagellum at each extremity.

amphitrider (am-fi-trī′dėr), *n.* [Gr. *ἀμφί*, at both ends, + *τρίδειρος*, three-necked (see *trider*).] In the nomenclature of the spicular elements of sponges, a trider in which the end of the principal axis is developed into a cladome. Analogous to ★*amphitriæne* (which see). See also *sponge-spicule.*

amphitrochal (am-fit′rō-kal), *a.* [*amphitrocha* + *-al.*] Pertaining to or resembling amphitrocha.

amphityle (am′fi-tīl), *n.* [Gr. *ἀμφί*, at both ends, + *τύλος*, a knob.] In the nomenclature of the spicular elements of sponges, a slender, straight, monaxial rod with swollen ends. See *sponge-spicule.*

amphitypy (am′fi-tī-pi), *n.* The character of exhibiting both types. See the extract.

In the arrangement of the reproductive organs one finds the double condition designated sexual *amphitypy*, in which one individual is, as it were, the mirror image of the other. Usually one can be designated as having the normal arrangement, but the relative frequency may be such that neither can be said to be more typical than the other. *Buck*, Handbook of Med. Science, VII. 863.

amphivasal (am-fi-vā′sal), *a.* Of or pertaining to the presence of concentric fibrovascular bundles.

Among the Cyperaceæ it has been found that *amphivasal* bundles occur in practically all the nodes of plants bearing well-developed leaves. *Science*, Jan. 27, 1905, p. 140.

amphogenic (am-fō-jen'ik), *a.* Same as ★*amphigenic*.

amphopeptone (am-fō-pep'tōn), *n.* See ★*amphipeptone*.

amphophil (am'fō-fil), *a.* [Gr. *ἀμφώ*, both, + *φίλος*, loving.] Noting granules, in certain leucocytes, which have an affinity for both acid and basic dyes.

amphophilic (am-fō-fil'ik), *a.* [Gr. *ἀμφώ*, both, + *φιλεῖν*, love.] In *cytol.*, capable of being dyed with both acid and basic stains: said of certain cells or parts of cells.

amphophilous (am-fof'i-lus), *a.* Same as ★*amphophilic*.

amphoriskos (am-fō-ris'kos), *n.* [NL., < Gr. *ἀμφορίσκος*, dim. of *ἀμφορεύς*, amphora.] A type of Greek vase resembling the amphora but much smaller, being about 3 or 4 inches high.

Panathenaic Amphoriskos. (From "Journal of Hellenic Studies," by permission of the Council.)

amphoteric, *a.* 2. In *chem.*, capable, in different reactions, of exhibiting both acid and basic character, as, for example, glycocoll or amidoacetic acid.

amphoterite (am-fot'e-rīt), *n.* [As *amphoter(ic)* + *-ite*².] See ★*meteorite*.

amphoterogenic (am-fō-ter″ō-jen'ik), *a.* [Gr. *ἀμφότερος*, each of two, + *γένος*, kind.] In *petrog.*, a term applied to sedimentary rocks resulting from the mixture of chemical and mechanical deposits, as marl and loess.

amphoterotoky (am-fō-te-rot'ō-ki), *n.* [Gr. *ἀμφότερος*, each or both, + *τόκος*, production.] The production of both males and females from unfertilized eggs; ★heteroparthenogenesis (which see). See also *normal* ★*parthenogenesis*.

amphotoky (am-fot'ō-ki), *n.* [Gr. *ἀμφω*, both, + *τόκος*, production.] Same as ★*amphoterotoky*.

amplexicauline (am-plek-si-kâ'lin), *a.* [*amplexicaul* + *-ine*¹.] In *bot.*, same as *amplexicaul*. *Syd. Soc. Lex.*

Amplexopora (am-plek-sop'ō-rä), *n.* [NL., < L. *amplexus*, embraced, + Gr. *πόρος*, L. *porus*, pore.] The typical genus of the family *Amplexoporidæ*.

Amplexoporidæ (am-plek-sō-por'i-dē), *n. pl.* [NL., < *Amplexopora* + *-idæ*.] A family of cryptostomatous *Bryozoa* which assume a variety of forms having simple zoœcial tubes, no mesopores, and abundant acanthopores. The species occur fossil in the Silurian and Devonian rocks.

Amplexus (am-plek'sus), *n.* [NL., < L. *amplexus*, pp. of *amplecti*, embrace.] A genus of Paleozoic tetracorals of the family *Zaphrentidæ*, having simple subcylindrical coralla with shallow calice, well-marked septal fossula, and septa not reaching to the center.

ampliation, *n.* 2. (*b*) In *French law:* (1) A duplicate of an acquittance or other instrument. (2) A notary's copy of acts passed before him, delivered to the parties. *Bouvier*, Law Dict.—4. In *med.*, dilatation or distention of a canal or cavity.

amplitude, *n.* 4. (*c*) In *function theory*, if $x = \xi + i\eta$, let the polar coördinates of (ξ, η) be ρ, θ, then any one of the angles θ or $\theta + 2n\pi$, where n is any positive or negative integer, may be called the amplitude of x.—6. In *meteor.*, the range or difference between the maximum and minimum values of the temperature, pressure, or other meteorological element within a definite time, such as a day, a month, or a year.—**Chief amplitude,** the vectorial angle θ_0, when $-\pi < \theta_0 \leqq \pi$: abbreviated Am x, while any amplitude is am x.—**Periodic amplitude,** the difference between the maximum and minimum values computed by a Fourier-Bessel series, as distinguished from the non-periodic amplitude, which is the difference between the absolute maximum and minimum values, or the means of all the maxima and minima. Observations made with maximum and minimum thermometers give the non-periodic amplitude; hourly observations can give the periodic amplitude in temperature.

ampulla, *n.* 6. In *Hydrocorallinæ*, a pit formed in the cœnenchyma for the reception of gonophores.

ampullation (am-pul-ā'shon), *n.* An ampullary process or condition.

In Callicthys the *ampullation* of the main canal is described as a remarkable phenomenon hitherto unrecorded in any other animal.

Linnean Zoöl. Soc. Lond., Oct., 1898, p. 184.

amputating-knife (am'pū-tā-ting-nīf″), *n.* A knife with a long narrow blade, used to divide the muscular tissues in the amputation of a limb.

Amputation in continuity, amputation through the segment of a limb and not at a joint.—**Dry amputation,** an amputation performed with a minimum loss of blood.—**Gritti's amputation,** amputation at the knee-joint, the end of the stump being terminated by the patella, which is turned under the femur, and the opposing surfaces of the bones are denuded of cartilage, so that union occurs between them.—**Intermediary amputation,** amputation of a limb during the period of reaction following the shock caused by the injury, but before the occurrence of suppuration in the wound.—**Primary amputation,** amputation of a limb within a very short time after the receipt of the injury necessitating operation—after the shock has subsided, but before the establishment of inflammatory symptoms.—**Secondary amputation,** amputation performed some time after the receipt of the injury, when suppuration in the wound has begun.—**Spontaneous amputation,** separation of the dead portion of a limb in case of gangrene; also, the division of a limb by constricting bands formed during intra-uterine life. *Jour. Exper. Med.*, V. 105.

ampyx, *n.* 3. In the anatomic structure of the Devonian fish *Palæospondylus*, an element of the anterior part of the skull.

So far as it contributes to the floor of the skull it may be described as a transverse bar or fillet, somewhat higher in front than behind, providing a support on each side for the terminal half of the low anterior cranial walls. The thickness of the bar, which for brevity may be called the '*ampyx*,' is considerable and it is extended downwards to the ventral face of the skull where it is seen as a very conspicuous ridge.

W. J. and I. B. J. Sollas, in Philos. Trans. Roy. Soc. [London, ser. B, 196. 276.

Amsler's integrator. See ★*integrator*.

Amstelian (am-stē'li-an), *a.* and *n.* [D. *Amstel*, a river.] **I.** *a.* Of or pertaining to the Amstel, a river in the Netherlands.

II. *n.* In *geol.*, a proposed division of the Pliocene in Holland.

amuguis (ä-mö-gēs'), *n.* [Philippine Sp.] A name in the Philippines of *Koordersiodendron pinnatum*, a valuable timber-tree belonging to the cashew family. It occurs also in Celebes and New Guinea. Its wood, which is also called *palosanto*, is light red sometimes marked with lead-colored spots. It is used in ship-building and for the construction of buildings, but it does not resist the attacks of termites.

amusement, *n.* 4. In *music*, a brief entertaining piece, often one intended to give variety to technical exercises.

amusia (a-mū'si-ä), *n.* [NL., < Gr. *ἀμουσος*, not musical, < *ἀ-* priv. + *μοῦσα*, muse: see *muse*, *music*.] Loss, through disease, of the ability to express musical sounds either vocally or instrumentally, to write musical notation (the power of ordinary writing being retained), or to appreciate musical sounds mentally. See ★*tone-deafness*.

amusingness (a-mū'zing-nes), *n.* Amusive quality or effect; the quality of affording amusement.

amutter, (a-mut'èr), *adv. phr.* [*a-*² + *mutter*.] Muttering; in a muttering state. *Mrs. Browning*, Aurora Leigh, p. 28. *N. E. D.*

Amyaria (am″-i-ā'ri-ä), *n. pl.* [NL., < Gr. *ἀ-* priv. + *μῦς* (*μυ-*), muscle, + *-aria*.] A group of acephalous mollusks having no adductor muscles. It includes the genus *Chlamydoconcha*. *Dall.*

amyarian (am-i-ā'ri-an), *a.* [*Amyaria* + *-an*.] Pertaining to or resembling the *Amyaria;* having no adductor muscles.

Amycteridæ (a-mik-ter'i-dē), *n. pl.* [NL., < *Amycterus* + *-idæ*.] A family of Australian short-beaked rhynchophorous beetles, of which *Amycterus* is the type.

Amycterus (a-mik'te-rus), *n.* [NL. (Schönherr, 1826), < Gr. *ἀμύκτηρ*, without a beak or nose, < *ἀ-* priv. + *μυκτήρ*, beak.] A genus of rhynchophorous beetles of the family *Curculionidæ*, or typical of the *Amycteridæ*, containing several Australian species characterized by an excessively short beak.

amyelinic (a-mī-e-lin'ik), *a.* [Gr. *ἀ-* priv. + *μυελός*, medulla, + *-in* + *-ic*.] In *neurol.*, without a medullary sheath: said of nerve-endings and embryonic nerves in vertebrates.

Amygdalaceæ (a-mig-da-lā'sē-ē), *n. pl.* [NL. (Reichenbach, 1828), < *Amygdalus* + *-aceæ*.] A family of dicotyledonous, choripetalous plants of the order *Rosales*, the almond family, called by De Candolle *Drupaceæ* (which see), and included by many authors in the *Rosaceæ* as a subfamily. It mbraces 7 genera, of which *Amygdalus* (almond, peach) and *Prunus* (plum, cherry) are the only important ones, and about 110 species, mainly of the north temperate zone of both hemispheres, with a few in the tropics. See *Amygdalus*, *Prunus*, and *Rosaceæ*.

amygdalectomy (a-mig-da-lek'tō-mi), *n.* [Gr. *ἀμύγδαλα*, tonsils, + *ἐκτομή*, a cutting out, excision.] Same as *amygdalotomy*.

amygdaliform (am-ig-dal'i-fôrm), *a.* [Gr. *ἀμυγδάλη*, almond, + L. *forma*, form.] Almond-shaped.

Amygdaline fissure. See ★*fissure*.

amygdalolith (a-mig'da-lō-lith), *n.* [Gr. *ἀμυγδάλη*, an almond, + *λίθος*, stone.] A concretion in the substance of a tonsil. *Buck*, Med. Handbook, III. 232.

amygdalotome (a-mig'da-lō-tōm), *n.* [Gr. *ἀμύγδαλα*, tonsils, + *-τομος*, < *ταμεῖν*, cut.] Same as *tonsillotome*.

amygdophenine (a-mig-dō-fē'nin), *n.* [L. *amygd(ala)*, almond, + *phen(yl)* + *-ine*.] Phenylglycolyl phenetidine, $C_6H_4(OC_2H_5)$-$NHCOCH(OH)C_6H_5$. Its acetyl derivative is a febrifuge; it is also antiseptic in its properties.

Amyl acetate, a compound, $C_2H_3O_2.C_5H_{11}$, prepared from fusel-oil or amyl alcohol and acetic acid. It is much used in the manufacture of lacquers, and is also used in a lamp for a primary standard in photometry.—**Amyl-acetate standard,** in *photom.*, a standard of light consisting of the flame of an amyl-acetate lamp. The accepted form is that devised by Von Hefner Alteneck. See ★*light standard*.

Amylaceous bodies. Same as *corpora amylacea* (which see, under *corpus*).

amylan (am'i-lan), *n.* [*amyl* + *-an*.] The name given to two compounds, known as *α-* and *β-amylan*, found in wheat, rye, and oats. In composition and properties they somewhat resemble dextrine.

amylase (am'i-lās), *n.* [*amyl* + *-ase*, as in *diastase*.] A ferment which will convert starch into dextrose: it occurs widely distributed in both the animal and the vegetable world. Same as *diastase* or *amylolytic ferment*.

amylate, *n.* 2. A metallic derivative of amyl alcohol: as, sodium *amylate*, $C_5H_{11}ONa$.

amylobacter (am″i-lō-bak'tèr), *n.* [Gr. *ἀμυλον*, starch, + *βακτήριον*, a little rod.] See ★*amylobacterium*.

amylobacterium (am″i-lō-bak-tē'ri-um), *n.*; pl. *amylobacteria* (-ä). [NL., < Gr. *ἀμυλον*, starch, + *βακτήριον*, a little rod.] A micro-organism which has the power of producing butyric acid from a large number of substances, including lactic, citric, malic, and other acids, as well as of splitting up certain pectic compounds associated with the cell-walls of many tissues.

amylocoagulase (am″i-lō-kō-ag'ū-lās), *n.* [*amyl* + *coagul(ate)* + *-ase*, as in *diastase*.] A ferment which coagulates soluble starch: found in cereals.

amyloid, *a.* and *n.* **I.** *a.* 2. In *pathol.*, noting a degenerative change characteristic of lardaceous disease (which see, under *lardaceous*). *Encyc. Brit.* XXXI. 548.—**Amyloid bodies.** Same as *corpora amylacea* (which see, under *corpus*).—**Amyloid kidney.** See ★*kidney*.

II. *n.* 2. A precipitate obtained from a gelatinous solution of cotton which has been treated with concentrated sulphuric acid. Vegetable parchment is due to the partial transformation of the vegetable fibers into this substance.—3. In *pathol.*, same as *lardacein*.

amyloin (a-mil'ō-in), *n.* [Gr. *ἀμυλον*, fine flour, + *-in*².] A name given by Brown and Morris to a class of substances formed by the action of diastase upon starch. They have the properties of both maltose and dextrine.

amylome (am'i-lōm), *n.* [*amyl* + *-ome* (see *-oma*).] Xylem parenchyma which contains starch.

amyloplastic (am″i-lō-plas'tik), *a.* [Gr. *ἀμυλον*, fine meal (starch), + *πλαστός*, < *πλάσσειν*, form.] Starch-forming.

amyloplastid (a-mil-ō-plas'tid), *n.* [Gr. *ἀμυλον*, starch, + *πλαστός*, formed, + *-id*².] A colorless plastid which produces starch in plant cells.

amylotype (a-mil'ō-tīp), *n.* [Gr. *ἀμυλον*, fine meal, + *τύπος*, type.] In *photog.*, a picture printed by the action of light on paper which has been washed in juice extracted from

plants or from flowers or in an artificial coloring substance. See ★*anthotype.*

Amylum body. Same as ★*amyloplastid.*—**Amylum center.** Same as *pyrenoid.*

Amynodon (a-min′ō-don), *n.* [NL., irreg. < Gr. *ἀμύνειν*, ward off, + *ὀδούς* (*ὀδοντ-*), a tooth.] A genus of rhinoceros-like ungulates from the Eocene of North America.

Amynodontidæ (am″i-nō-don′ti-dē), *n. pl.* [NL. < *Amnodon* (< Gr. *ἀμύνειν*, ward off, + *ὀδούς*, tooth + *-idæ.*] A family of ungulates, related to *Rhinoceros*, from the Tertiary rocks of North America. They have on each ramus of the jaw 3 incisors, 1 canine, 4 premolars, and 3 molars. The manus is regarded as having had 4 digits and the pes 3.

amyotrophia (a″mi-ō-trō′fi-ä), *n.* [NL., < Gr. *a-* priv. + *μῦς*, muscle, + *τροφή*, nourishment, < *τρέφειν*, nourish.] Same as *amyotrophy.*

Amyotrophic paralysis, paralysis resulting from muscular atrophy.

amyrilene (a-mir′i-lēn), *n.* [*amyr* (*in*) + *-il* + *-ene.*] A triterpene $C_{30}H_{48}$, formed by the action of phosphorus pentachlorid on amyrin. A dextro- and levo-rotatory *α*-amyrilene and a dextrorotatory *β*-amyrilene have been described.

Anabæna (an-ą-bē′nä), *n.* [NL. (Bory, 1822), irreg. < Gr. *ἀναβαίνειν*, to go up: see *anabasis.* The name alludes to the habit of the plants in coming to the surface of the water.] One of the blue-green algæ (*Schizophyceæ*), consisting of numerous oval or circular cells united into a filament, with intercalary heterocysts. It is distinguished from *Nostoc* by the absence of an enveloping gelatinous mass which incloses a number of filaments. This genus is responsible for some of the bad odors and tastes frequently noticeable in water during the warmer months.

anabix (an′ą-biks), *n.*; pl. *anabices* (a-nab′i-sēz). [NL., an arbitrary or mistaken formation, based, according to some, on Gr. *ἀναβιοῦν*, revive, but perhaps on *ἀνάβασις*, a going up.] The part of certain cryptogamic plants, as lichens, liverworts, and club-mosses, that perishes below while vegetating above.

anabo (ä-nä-bō′), *n.* [Tagalog?] A name in the Philippine Islands of *Abroma augusta* and allied species, the twigs of which yield a strong, white bast-fiber which is easily separated and is superior to sunn-hemp. The plant is readily cultivated and yields three crops a year. See *devil's-cotton.*

anabolergy (an-ab′ō-lėr-ji), *n.* [Gr. *ἀναβολή*, a striking up (see *anabolism*), + *ἔργον*, work.] Energy expended in anabolism.

anabolistic (an-ab-ō-lis′tik), *a.* [*anabol(ism)* + *-ist* + *-ic.*] Relating to or consisting in anabolism or constructive metabolism. *Phil. Med. Jour.*, Jan. 31, 1903.

anabranch (an′ą-brănch), *n.* [*ana-*, in *anastomosing*, + *branch.*] A branch of a river which reunites with it lower down, thus forming an island known as a branch-island. Called by the aborigines *billabong.* [Australian.]

A curious history is given of the word "*Anabranch,*" which was applied by Colonel Jackson in the R. G. S. *Journal* of 1834 to the branch of a river which reunites lower down with the main stream.

Geog. Jour. (R. G. S.), XI. 319.

anabrosis (an-ą-brō′sis), *n.* [NL., < Gr. *ἀνάβρωσις*, an eating up, < *ἀναβιβρώσκειν*, eat up, < *ἀνά*, up, + *βιβρώσκειν*, eat.] In *med.*, erosion of the surface; ulceration.

anabrotic (an-ą-brot′ik), *a.* [*anabrosis* (*-ot-*) + *-ic.*] In *med.*, relating to or consisting in anabrosis or superficial erosion of the surface.

anacampsis (an-ą-kamp′sis), *n.* [Gr. *ἀνακαμψις*, < *ἀνακάμπτειν*, bend back, < *ἀνά*, back, + *κάμπτειν*, bend.] Reflection as of light or sound; reaction; reciprocation.

anachlorhydria (an-ą-klōr-hī′dri-ä), *n.* Absence of hydrochloric acid in the gastric juice.

anachoresis (an-ą-kō-rē′sis), *n.* [NL., < Gr. *ἀναχώρησις*, withdrawing, retreating, < *ἀναχωρεῖν*, withdraw, < *ἀνά*, back, + *χωρεῖν*, give way.] In *bot.*, retrograde change in an organ or whorl.

anachromatic[1] (an″a-krō-mat′ik), *a.* [Gr. *ἀνά*, up, + *χρῶμα*, color.] Relating to an ascending color scale. *Buck*, Med. Handbook, III. 208.

anachromatic[2] (an-ak-rō-mat′ik), *n.* [*an-*[3] + *achromatic.*] In *photog.*, a corrective for achromatism. *Woodbury*, Dict. of Photog., p. 33.

anachronismatical (an-ak″ron-iz-mat′i-kal), *a.* [Irreg. < *anachronism* + *-at-ic-al.*] Same as *anachronous.* *Barham*, Ingoldsby Legends, p. 182. [Rare.] *N. E. D.*

anacidity (an-a-sid′i-ti), *n.* [Gr. *ἀν-* priv. + E. *acidity.*] Reduced or abolished acidity of the gastric juice or other fluid.

anaclete (an-ą-klēt), *n.* [Gr. *ἀνά*, back, + *καλειν*, call.] One who is called back.

anaclinal (an-ą-klī′nal), *a.* [Gr. *ἀνά*, back, + *κλίνειν*, bend.] In *geol.*, transverse to the dip: said of a valley or a river which descends against the dip.—**Anaclinal valley,** a valley whose axial direction is not in accord with the dip of the underlying rocks.

anacostia (an-ą-kos′ti-ä), *n.* A twill-woven fabric with a worsted warp and a woolen weft.

Anacrogynæ (an-ak-rō-jī′nē), *n. pl.* [NL., < Gr. *ἀν-* priv. + *ἄκρον*, apex, + *γυνή*, female.] In *bot.*, a suborder of cryptogamic plants of the order *Jungermanniales*, class *Hepaticæ*, in which the archegonia are formed at a point below and remote from the apex. It embraces the thalloid genera of the *Jungermanniaceæ*, of simpler type than the ★*Acrogynæ* (which see).

anacrogynous (an-ak-roj′i-nus), *a.* [Gr. *ἀν-* priv. + *ἄκρον*, apex, + *γυνή*, female, + *-ous.*] In *bot.*, having the archegonia formed at a point below and remote from the apex, as in the *Anacrogynæ.*

Anacyrtus (an-ą-sėr′tus), *n.* [NL., < Gr. *ἀνάκυρτος*, curved upward or backward, < *ἀνά*, up, + *κυρτός*, curved.] A genus of South American toothed shiners of the family *Characinidæ.*

anadenia (an-a-dē′ni-ä), *n.* [NL., < Gr. *ἀν-* priv. + *ἀδήν*, a gland.] Insufficiency or absence of glands, especially of the gastric glands.

anadiæne (an-ą-dī′ēn), *n.* [Gr. *ἀνά*, up, back, + **δίαινα*, an assumed form ('two-pronged staff'), from *δι-*, two, parallel to *τρίαινα*, a trident.] In the nomenclature of the spicular elements of sponges, a hexactine spicule having a straight rhabd or shaft and an anchor-shaped head. See *sponge-spicule.*

anadipsia (an-ą-dip′si-ä), *n.* [NL., < Gr. *ἀνα-* intensive + *δίψα*, thirst.] Intense thirst.

anadipsic (an-ą-dip′sik), *a.* Pertaining to or characterized by anadipsia.

anaërobe, *n.*—**Facultative anaërobe,** an organism usually requiring oxygen, which has become capable of living in either the presence or the absence of oxygen.

anaërobia[2] (an-ā-ē-rō′bi-ä), *n.* [NL., abstract noun, fem. sing. of *anaërobius:* see *anaërobious.*] The ability (on the part of bacteria) to live in the absence of free oxygen.—**Facultative anaërobia,** the possibility of living in either the presence or the absence of oxygen.

anaërobic, *a.*—**Facultatively anaërobic,** having acquired the ability to live in either the presence or the absence of oxygen.

anaërobically (an-ā-ē-rob′i-kal-i), *adv.* In an anaërobic manner. *Jour. Exper. Med.*, VI. 67.

anaërobiont (an-ą̄-ėr-ō-bī′ont), *n.* Same as *anaërobe.*

anaërobism (an-ā′ē-rō-bizm), *n.* [*anaërobe* + *-ism.*] That faculty or power of living without oxygen which is possessed by some micro-organisms, particularly certain bacteria.

anaëro-oxydase (an-ā″ē-rō-ok′si-dās), *n.* [Gr. *ἀν-* priv. + *ἀήρ*, air, + *oxydase.*] Same as ★*peroxydase.*

anæsthesia, *n.*—**Crossed anæsthesia,** a condition in which anæsthesia exists on one side of the face and on the opposite side of the body.—**General anæsthesia,** total anæsthesia, with loss of consciousness, induced by the inhalation of an anesthetic gas or vapor, such as chloroform, ether, or nitrous oxid.—**Infiltration anæsthesia,** local anæsthesia induced by the injection into the subcutaneous tissues, in and about the seat of operation, of large quantities of a very weak solution of cocaine or other local anesthetic.—**Local anæsthesia,** anæsthesia of a circumscribed area induced by the injection of a solution of cocaine, of other substance of similar action, or by the application of cold.—**Medullary anæsthesia,** anæsthesia induced by injection beneath the membranes covering the spinal cord of a solution of cocaine or other substance with similar action. The anæsthesia so produced is very wide in its extent, but there is no loss of consciousness, as in general anæsthesia.—**Mixed anæsthesia,** general anæsthesia induced by one agent, as nitrous-oxid gas, and maintained by another, as chloroform or ether.—**Primary anæsthesia,** insensibility to pain occurring soon after the administration of ether is begun. It is of brief duration, but is usually long enough to permit of the extraction of a tooth or for the incision into a boil.—**Spinal anæsthesia.** (*a*) Anæsthesia of a circumscribed portion of the body due to a lesion of the spinal cord. (*b*) Same as *medullary* ★*anæsthesia.*—**Surgical anæsthesia,** local or general anæsthesia induced artificially for the purpose of preventing the pain of a surgical operation.

anæsthesiant, *a.* and *n.* See *anesthesiant.*

anæsthol (an′es-thōl), *n.* A mixture of chloroform, ether, and ethyl chlorid recommended as an anesthetic in place of the mixture of alcohol, chloroform, and ether.

Anagallis (an-ą-gal′is), *n.* [NL., < L. *anagallis*, < Gr. *ἀναγαλλίς*, pimpernel.] An annual, biannual, or perennial herb, cultivated in the open, a member of the family *Primulaceæ* and sometimes called *pimpernel.* Only the annual species are known in America. *A. arvensis* is commonly known as *poor man's weather-glass.* Twelve species are known in the temperate zones of Europe, Africa, east Asia, and South America.

anagap (ä-nä-gäp′), *n.* [Philippine Sp. *anagap*, *anagat*, from a native dialect.] In the Philippine islands, a tree, *Pithecolobium lobatum*, belonging to the mimosa family, having bipinnate leaves with a single pair of leaflets and a large pod deeply lobed along its lower suture into round divisions. The wood is durable, fine-grained, brittle, and of a yellowish-gray color. It is used in construction and for furniture.

anagenesis (an-ą-jen′e-sis), *n.* [Gr. *ἀνά*, up, + *γένεσις*, origin: see *genetic.*] Evolution by means of the acquiring of characters and of increasing complexity and differentiation. *Hyatt.*

anagenetic (an″ą-je-net′ik), *a.* Tending to the advancement or progressive development of organisms. *Hyatt*, Biol. Lect., p. 146. [Rare.]

anagerontic (an″ą-je-ron′tik), *a.* [Gr. *ἀνά*, up, + *γέρων* (*γεροντ-*), an old man: see *gerontic.*] Noting the early portion of the gerontic or senile period in the development of an organism. *Hyatt.*

anaglyph, *n.* **2.** In *photog.*, a kind of picture, invented by Ducos du Hauron, with two images printed nearly in superposition, one in red and the other in greenish blue. On viewing this double image through a pair of eye-glasses, one blue and the other red, the image is seen stereoscopically. On reversing the glasses the opposite effect, or pseudoscopic vision, is the result. Three-color heliochromy has also been applied to the anaglyph. When two slides from a stereoscopic negative, one with a red image and the other with a blue, are projected on a screen together, they appear stereoscopically when viewed through colored glasses.

anaglyphoscope (an-ą-glif′ō-skōp), *n.* [*anaglyph* + Gr. *σκοπεῖν*, view.] In *photog.*, a pair of eye-glasses, one red and the other greenish blue, for viewing anaglyphs so as to produce a stereoscopic effect.

anago (ä-nä′gō), *n.* [Jap. *anago.*] The Japanese name of an eel of the family *Leptocephalidæ*, *Congrellus anago*, found at Nagasaki.

anagyrine (a-naj′i-rin), *n.* [*Anagyris* + *-ine*[2].] An alkaloid, $C_{15}H_{22}N_2O$, found in *Anagyris fœtida.* The free base forms a gummy, amorphous mass. It has a powerful toxic action.

Anakim (an′ą-kim), *n. pl.* [Heb. *'anákîm*, pl. of *'Anák*; etym. unknown: in one view, from *'anak*, neck.] A pre-Canaanite tribe mentioned in the Old Testament, otherwise called 'the Anak' or 'the sons of Anak,' and, as usual in regard to outlying tribes of which little is known, reputed to be giants.

Anal glands. See ★*gland.*—**Anal margin,** the posterior margin of an insect's wing when expanded.—**Anal nerve** or **vein,** the posterior nerve or vein of an insect's wing when expanded.—**Anal spot,** in the *Infusoria*, the spot where the waste-products of digestion are ejected. *Parker and Haswell*, Zoology, I. 81.—**Anal vesicle.** See ★*vesicle.*

analcite-basalt (a-nal′sīt-bą-sâlt″), *n.* See ★*basalt.*

analcitite (a-nal′si-tīt), *n.* [*analcite* + *-ite*[2].] In *petrog.*, a basaltic rock rich in primary analcite and without olivin: proposed by Pirsson, 1896.

analeptic, *a.* **II.** *n.* In *med.*, a remedy which exerts a restorative or invigorating action. *Buck*, Med. Handbook, II. 694.

analgene (an-al′jēn), *n.* [*analg(ic)* + *-ene.*] Ortho-ethoxyanabenzoylaminoquinoline, $C_9H_5N(OC_2H_5)NHCOC_6H_5$. It is a white crystalline powder, insoluble in water, used in the treatment of neuralgia.

analgesin (an-al′gē-sin), *n.* Same as *antipyrin.*

analgic (an-al′jik), *a.* [Gr. *ἀναλγής*, painless, < *ἀν-* priv. + *ἄλγος*, pain.] Same as *analgetic.* *Buck*, Med. Handbook, V. 865.

analog, *n.* A simplified spelling of *analogue.*

Analogous tissues, in *pathol.*, morbid tissues resembling in their structure normal tissues.

analogy, *n.*—**Convergent analogy,** resemblance between organisms or organs which is due to independent modification on similar lines and not to inheritance from a common ancestor.—**Kirkwood's analogy,** in *astron.*, a supposed but now discredited law, announced in 1849, connecting the distances of the planets and their masses with their axial rotations by an equation in form analogous to that which expresses Kepler's harmonic law.

analophic (an-ą-lof′ik), *a.* [Gr. *ἀνά*, up, + *λόφος*, crest.] In *craniom.*, having the incisor crest in the anterior nasal aperture confined to the posterior part of the floor of the nares. *Harrison Allen*, Jour. Acad. Nat. Sci. X. 419.

analphabetic, *a.* 2. Non-alphabetic.—**Analphabetic symbols,** in *phonetics*, symbols or signs which do not denote sounds, but components of sounds, each simple sound being represented by a group of symbols resembling a chemical formula, in much the same way as ltv might be taken to represent 'lip-teeth-voice.'

analphabetism (an-al'fa-bet-izm), *n.* 1. Illiteracy; ignorance even of the alphabet.—2. In *phonetics*, a system of representing the articulations of speech-sounds by means of analphabetic symbols, proposed by Professor I. Otto Jespersen of Copenhagen in 1889. See ★*analphabetic*.

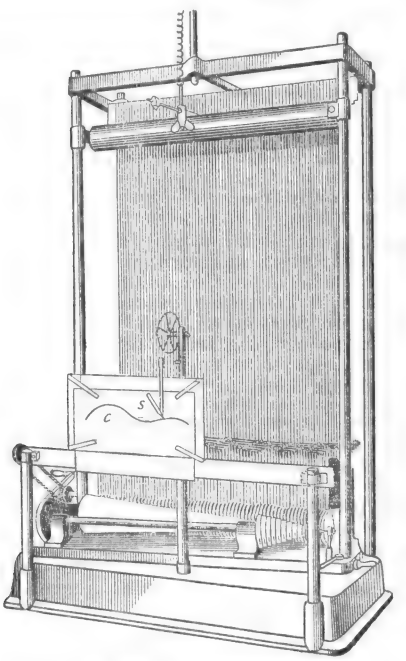
analysis, *n.* 5. In *cricket*, an itemized record of the play of the bowler, intended to show particularly the number of runs scored by him and the number of wickets obtained.—6. In *chem.*, intentionally produced decomposition: often applied to the ascertainment of the composition of a substance, whether the constituents are actually obtained in separate form or not.—**Capillary analysis,** a system of chemical analysis based upon the fact that solutions of different substances are propagated at different velocities by capillary attraction through porous material: used chiefly in the detection of different coloring matters in a mixture.—**Partition analysis,** a calculus founded upon the theory of partitions, an important part of combinatory analysis.—**Polariscopic analysis.** See ★*polariscopic*.—**Spherical harmonic analysis.** See ★*harmonic*.

Analytic proof, algebraical proof; proof depending upon a careful analysis of the problem: opposed to synthetic proof, which appeals to intuition or common-sense and is thus not strictly apodictic.

Analytical reference, an entry in a library catalogue relating to a particular chapter or section of a book, and referring the reader to the heading under which the book itself is entered. Sometimes also called simply an *analytical*.—**Analytical variation, variety.** See ★*variation*, ★*variety*.

analytics, *n. pl.*—**Thermal analytics,** the mathematical or, more specifically, the algebraic analysis of the theory of heat.

analyzer, *n.*—**Harmonic analyzer,** a device for determining the harmonic elements of a periodic curve.



Michelson's Harmonic Analyzer.
c, curve; *s*, stylus.

All periodic curves may be regarded as made up of one or more sine-curves, harmonically related to each other as regards frequency. By means of a machine so constructed as to impart to a stylus a linear oscillatory motion which is the resultant of the various simple harmonic motions which go to make up a given curve, it is possible to trace the curve in question upon a surface moving uniformly under the stylus. On the other hand, if the form of curve is given it is possible to determine by means of a suitable mechanism the amplitude and frequency of the elements of which it is the resultant. A machine of the latter description is called a *harmonic analyzer*. Such machines have been devised by Kelvin, Michelson, and others. That of Kelvin was constructed with special reference to the analysis of the tides. Since the number of harmonic elements in a periodic curve may be indefinitely great, the mechanical analysis is in some cases only approximate. The harmonic analyzer of Michelson, however, which permits of a determination of 80 different elements, gives a very close approximation for most curves.

anamesitic (an-am-e-sit'ik), *a.* [*anamesite* + *-ic.*] In *lithol.*, having the structure or appearance of anamesite. *Smithsonian Rep.*, 1899, p. 233.

anametadromous (an-a-me-tad'rō-mus), *a.* [Gr. *ἀνά*, back, + *μετά*, beyond, + *-δρομος*, ‹ *δραμεῖν*, run.] In *bryol.*, having the nerves of the weaker pinnules anadromous and those of the stronger catadromous.

Anamirta (an-a-mėr'tä), *n.* A genus of climbing plants of the moonseed family (*Menispermaceæ*), a synonym of *Cocculus*. *A. paniculata* (*C. Cocculus*) furnishes cocculus indicus or fish-berries.

anamirtin (an-a-mėr'tin), *n.* A crystalline substance, $C_{19}H_{24}O_{10}$, found in small amount, with picrotoxin, in the seeds of *Cocculus Cocculus*. It is slightly bitter and not poisonous.

anamnesic (an-am-nē'sik), *a.* [*anamnesia* + *-ic.*] Endowed with a good memory; disposed to remember. *G. S. Hall*, Adolescence, I. 345.

anamniote (an-am'ni-ōt), *a.* and *n.* [Gr. *ἀν-* priv. + NL. *amniotus*, amniote.] **I.** *a.* Not amniote; having no amnion in the fetal state; anamniotic.

II. *n.* A member of the *Anamnionata*.

anamonæne (an-a-mon'ēn), *n.* [Gr. *ἀνά*, up, back, + **μόναινα*, assumed form ('one-pronged staff'), from *μόνος*, single, parallel to *τρίαινα*, a trident.] In the nomenclature of the spicular elements of sponges, a triæne which has undergone atrophy of two of its axial arms or cladisks, the third being reflected on the fourth, giving the spicule the form of a gaff-hook. See *sponge-spicule*.

anamorphic (an-a-môr'fik), *a.* Pertaining to or resulting from anamorphism. *Van Hise*, U. S. Geol. Surv., Monograph 47, p. 169.

anamorphism (an-a-môr'fizm), *n.* In *geol.*, that variety of metamorphism which takes place below the zone in which cavities may exist. It results in the production of new minerals under conditions of great pressure. *Van Hise*, U. S. Geol. Surv., Monograph 47, p. 167.—**Zone of anamorphism,** the deep-seated zone of the earth in which anamorphism takes place.

anamorphote (an-a-môr'fōt), *a.* [From the assumed stem of *anamorphosis*.] Causing anamorphosis; distortive.—**Anamorphote lens** in *photog.*, a lens having a cylindric element and therefore distorting the image like a cylindric mirror. *Wall*, Dict. of Photog., p. 32.

ananaplas (ä-nä-nä'pläs), *n.* [Tagalog (?).] A valuable timber-tree, *Albizzia procera*, belonging to the mimosa family. Its heart-wood is hard and durable, of a brown color with alternate lighter and darker bands, and a straight grain. It is used for posts in house-building, and for making rice-pounders and parts of agricultural implements and machinery. The bark is astringent and is used for tanning, and the tree yields a gum soluble in water. [Philippine Is.]

Ananas oil, ethyl or amyl butyrate diluted with alcohol: used to imitate the odor of the pineapple in confectionery, soda-water syrups, and perfumery. Also called *ananas* or *pineapple essence*.—**Essence of ananas,** an artificial flavoring essence possessing the odor of pineapple; ethyl butyrate, $C_3H_7.CO.OC_2H_5$ (which see, under *butyrate*).

Ananchytidæ (an-an-kit'i-dē), *n. pl.* [NL., ‹ *Ananchytes* + *-idæ.*] A family of spatangoid echinoids, most of whose representatives are extinct and belonged to Cretaceous time.

ananeanic (an-a-nē-an'ik), *a.* [Gr. *ἀνά*, up, + *νεανιας*, a youth: see *neanic*.] Noting the early portion of the neanic or youthful period in the development of an organism. *Hyatt*.

ananepiastic (an-a-nē-pi-as'tik), *a.* Noting the earliest expression of the nepiastic substage in the ontogeny of the compound individual or colony, as the bryozoan *Fenestella*. See ★*nepiastic*.

ananepionic (an-a-nē-pi-on'ik), *a.* [NL., ‹ Gr. *ἀνά*, up, + *νήπιος*, infant.] In the terms of auxology or the development of the individual, noting a growth condition approaching the nepionic stage. See ★*nepionic*. Contrasted with ★*paranepionic*, which designates the phase which immediately follows the nepionic. The ananepionic stage is one of immature growth and directly follows the larval phase. The word was introduced by Hyatt with special reference to the stages of growth and decline in the fossil cephalopods.

For about half a volution or less, the shell is smooth, although lines of growth become more pronounced. At more or less regular intervals stronger lines of growth appear (*ananepionic*). In the later portion of the nepionic stage (metanepionic) longitudinal wrinkles or ribs appear which characterize the ambital portion of the whorl, and may be traced upward to the suture between the two whorls. *Amer. Nat.*, Aug. 1903, p. 518.

anangian (an-an'ji-an), *a.* [Gr. *ἀν-* priv. + *ἀγγεῖον*, a vessel.] Having no vascular system: applied to certain polychætous annelids in which the cœlomic fluid, whose corpuscles contain hemoglobin, is carried to the various organs of the body by the action of ciliate cells which cover the peritoneum along certain definite tracts.

anangioid (an-an'ji-oid), *a.* [Gr. *ἀν-* priv. + *ἀγγεῖον*, a vessel, + *-oid.*] Having no retinal blood-vessels.—**Anangioid disk,** the retinal disk when without blood-vessels.

Anangioida (an″an-ji-oi'dä), *n. pl.* [NL.: see *anangioid*.] A collective name for those mammals in which the retina has no blood-vessels. *Philos. Trans. Roy. Soc. Lond.*, ser. B, 194, p. 68.

anangiotic (an-an-ji-ot'ik), *a.* Same as ★*anangioid*.

anangious (an-an'ji-us), *a.* Having no retinal blood-vessels; anangioid.

Although these creatures [*Chiroptera*] are so highly specialised, typical Vespertilionidæ occurred already in the Eocene. . . . The eyes of these nocturnal creatures are very small, *anangious*, and devoid of any traces of higher development, except that they are also without any traces of ancestral vestiges, besides the rather common rudiment of the hyaloid artery.

Philos. Trans. Roy. Soc. Lond., ser. B, 194, p. 68.

anantherum (an″an-thē'rum), *n.*; pl. *anantherа* (-rä). [NL., ‹ Gr. *ἀ-* priv. + NL. *anthera*, anther.] In *bot.*, a filament without an anther; a staminode.

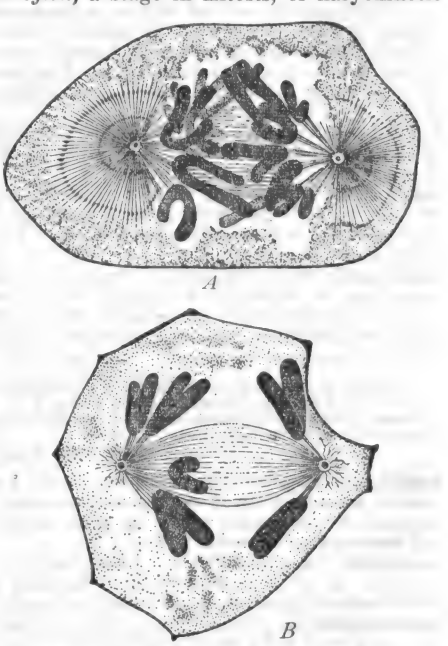
ananym (an'a-nim), *n.* [Erroneously for **anonym*[2], ‹ Gr. *ἀνά*, back, + *ὄνομα*, *ὄνυμα*, name.] A name written backward, as *Noremac* for *Cameron*.

anaoxytriæne (an-a-ok-si-trī'ēn), *n.* [Gr. *ἀνά*, up, back, + *ὀξύς*, sharp, + *τρίαινα*, a trident.] In the nomenclature of the spicular elements in sponges, a form of anatriæne in which the branches are all acute. See ★*anatriæne* and *sponge-spicule*.

anapaite (a-nä'pa-īt), *n.* [Named (by A. Sachs, 1902) ‹ *Anapa* (see def.) + *-ite*[2].] A hydrated phosphate of ferrous iron and calcium occurring in colorless triclinic crystals and also in massive forms: found at Anapa on the Black sea.

anapanapa (ä-nä″pä-nä'pä), *n.* [Hawaiian.] A name in Hawaii of a widely distributed shrub, *Colubrina Asiatica*, the bark of which is used for soap.

anaphase (an'a-fāz), *n.* [NL. *anaphasis*, ‹ Gr. *ἀνά*, back, again, + *φάσις*, appearance, phase.] In *cytol.*, a stage in mitosis, or karyokinetic



A

B

Anaphases of mitosis in cells (spermatocytes) of the salamander. (Drüner.) Magnified.

A. Anaphase; divergence of the daughter-chromosomes, exposing the central spindle as the interzonal fibers; contractile fibers (principal cones of Van Beneden) clearly shown. *B*. Later anaphase (dyaster of Flemming); the central spindle fully exposed to view; mantle fibers attached to the chromosomes. Immediately afterward the cell divides.

cell-division, characterized by the moving apart of the chromosomes destined to enter the two daughter-nuclei. *Strasburger*, 1884.

anaphasis (a-naf'a-sis), *n.* [NL.] Same as ★*anaphase*.

anaphia (a-naf'i-ä), *n.* [Gr. *ἀν-* priv. + *ἀφή*, a touching, ‹ *ἅπτειν*, touch. Cf. Gr. *ἀναφής*, not to be touched.] In *pathol.*, loss of the sense of touch. *Baldwin*, Dict. of Philos. and Psychol., I. 39.

anaphoria (an-a-fō'ri-ä), *n.* [NL., ‹ Gr. **ἀνάφορος*, ‹ *ἀναφέρειν*, carry back: see *anaphora*.] The tendency of the axes of vision in the two eyes to assume too high a plane. *Med. Record*, April 18, 1903.

anaphylactic (an″a-fi-lak′tik), *a.* Of or affected with anaphylaxis.

anaphylactin (an″a-fi-lak′tin), *n.* A hypothetical substance, associated with a protein or contained in serum, upon the action of which the phenomenon of anaphylaxis depends.

anaphylactize (an″a-fi-lak′tīz), *v. t.* [< *anaphylaxis.*] To induce a condition of anaphylaxis in. *Jour. Med. Res.*, Aug., 1910, p. 28.

anaphylaxis (an″a-fi-lak′sis), *n.* [NL., < Gr. *ἀνά*, back, + *-phylaxis.* See *prophylactic.*] The phenomenon of increased susceptibility to the action of a foreign protein, induced by a first injection of the same substance. Thus an injection of serum into an animal may produce no symptoms, but a state of anaphylaxis is thereby established in consequence of which a second injection of the same serum, even in very small amount, may cause death.

anaplasia (an″a-plā′si-ä), *n.* [NL., < Gr. *ἀνάπλασις*, reformation, adjustment, < *ἀναπλάσσειν*, reform, mold anew, < *ἀνά*, again, + *πλάσσειν*, form.] **1.** In *pathol.*, the sum of the morphological, structural, chemical, and other alterations which cells undergo when assuming the characteristics of malignancy.—**2.** Anaplasis.

anaplasis (an-ap′la-sis), *n.* [NL., < Gr. *ἀνάπλασις*, reformation, < *ἀναπλάσσειν*, reform, renew, restore.] In *biol.*, the history or course of an organic type during the period or stage of its rise, as distinguished from the period of its full maintained vigor (*metaplasis*) and the period of its decline or decadence (★*cataplasis*). *Haeckel.*

Anapterygota (an-ap-ter-i-gō′tä), *n. pl.* [NL., appar. < Gr. *ἀνά*, back, again, + *πτερυγωτός*, winged.] A group of insects (including the orders *Mallophaga* and *Siphonaptera* and the suborder *Anoplura*) which contains only wingless forms, which, however, are supposed to have descended from winged ancestors.

anapterygotism (an-ap-ter-i-gō′tizm), *n.* [*Anapterygota* + *-ism.*] In *entom.*, a condition of winglessness attained, usually through a parasitic life, by forms with a winged ancestry.

anapterygotous (an-ap-ter-i-gō′tus), *a.* In *entom.*, wingless, although derived from winged ancestors, as the *Mallophaga, Siphonaptera,* and *Anoplura.*

anaptyxis (an-ap-tik′sis), *n.* [Gr. *ἀνάπτυξις*, an opening, unfolding, < *ἀναπτύσσειν*, unfold, < *ἀνά*, back, + *πτύσσειν*, fold.] In *phonetics*, the involuntary utterance of an auxiliary vowel, especially before *r*, *l*, *m*, and *n*, in certain positions, as in *lucre, able, chasm,* etc.

anaqua (an-ä′kwä), *n.* Same as *anagua.* See *knackaway.*

anarcestean (an-är-ses′tē-an), *a.* [*Anarceste(s)* + *-an.*] **1.** Pertaining to the Devonian cephalopod *Anarcestes.*—**2.** Noting a condition or growth-stage in any goniatite equivalent, in the development of the septa, to the mature condition in *Anarcestes.*

Anarcestes (an-är-ses′tēz), *n.* [NL., said to be formed < Gr. *ἀν-* priv. + *Arcestes*, a genus of ammonites.] A genus of ammonoid cephalopods or goniatites of primitive structure, having very simple septal sutures with single broad lateral lobes. It is of Devonian age.

anarcestian, *a.* Same as ★*anarcestean.*

anarithmoscope (an-a-rith′mō-skōp), *n.* A magic lantern having slides which are changed automatically.

Anarrhichthyinæ (an-a-rik-thi-ī′nē), *n. pl.* [*Anarrhichthys* + *-inæ.*] The subfamily of wolf-fishes typified by the genus *Anarrhichthys.*

Anarrhichthys (an-a-rik′this), *n.* [NL. irreg. < Gr. *ἀναρρ(ιχᾶσθαι)*, clamber up, + *ἰχθύς*, fish.] A genus of wolf-fishes of the family *Anarrhichadidæ.* It is distinguished by the very long and tapering tail, whence the name *wolf-eel. A. ocellatus* is found on the coast of California and reaches a length of 8 feet.

Anarsia (an-är′si-ä), *n.* [NL. (Zeller, 1839), < Gr. *ἀνάρσιος*, unfavorable, hostile, < *ἀν-* priv. + *ἄρσιος*, fitting < **ἄρειν*, fit.] A genus of *Microlepidoptera*, of the family *Gelechiidæ*, containing, among others, the very injurious *A. lineatella*, whose larva bores into the twigs and fruit of the peach in Europe and North America.

anarthropod (an-är′thrō-pod), *a.* and *n.* [As *Anarthropod-a.*] **I.** *a.* Without articulated appendages; having the characters of the *Anarthropoda.*

II. *n.* One of the *Anarthropoda.*

Anaryan (an-är′yan or -ar′ian), *a.* [*an-*5 + *Aryan.*] Non-Aryan; noting a people which speaks a language that does not belong to the Aryan family. *Deniker*, Races of Man, p. 334.

anascope (an′a-skōp), *n.* [Gr. *ἀνά*, up, + *σκοπεῖν*, view.] An optical arrangement which enables one to view the image in a camera right side up. *Woodbury*, Encyc. Dict. of Photog., p. 35.

Anaspida (an-as′pi-dä), *n. pl.* [NL., < Gr. *ἀν-* priv. + *ἀσπίς*, shield.] An ordinal term introduced by Traquair for a group of singular fishes, chiefly from the Upper Silurian rocks of Lanarkshire, without paired fins and having a tubercled skin, a heterocercal tail, and a row of prominent processes along the belly. In some of the species, as *Birkenia elegans*, the branchial openings are a series of small lateral perforations.

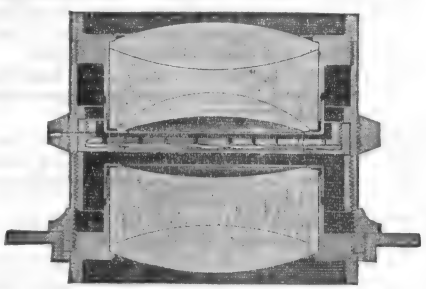
anaspidean (an-as-pid′ē-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Anaspidea.*

II. *n.* One of the *Anaspidea.*

anastasis (an-as′ta-sis), *n.* [NL., < Gr. *ἀνάστασις*, a raising up or rising up, < *ἀνιστάναι*, stand up.] **1.** In *med.*, a condition of increasing health and vigor; convalescence.—**2.** Resurrection.

anastatic, *a.* **2.** In *bot.*, reviving after desiccation, as so-called resurrection-plants.

anastigmat (an-as′tig-mat), *n.* [G. *anastigmat*: see *anastigmatic.*] A system of lenses in which the astigmatic aberration is overcome and a flat field obtained. It is of special use in photography. There are various forms with special tradenames, as *collinears, planars, protars, unars,* etc.—**Convertible anastigmat** (called in German *satzanastigmat*), a combination of two Zeiss anastigmats which for many purposes can be used separately.—**Double anastigmat,** a combination of two triple cemented lenses, each anastigmatically aplanatic. Such a system, invented by Van Hoegh, was put out in 1892 by the Goerz firm.



Double Anastigmat.

Several forms with different trade-names have been since added by the same firm, each with its own special advantages.—**Universal symmetric anastigmat,** a very rapid system of lenses covering a view-angle of 65° and consisting of two triple cemented lenses.

anastigmatic (an-as-tig-mat′ik), *a.* [< *an-*5 + *astigmatic.*] Not astigmatic: applied to a lens.

anastomosis, *n.* **3.** In *surg.*, the establishment of communication between two canals or two portions of the same canal, usually the digestive tract, not previously in continuity.

Anastomotic artery, a term applied to several small arteries, in different portions of the body, which serve to connect two larger vessels.

anastomotica (an-as-tō-mot′i-kä), *n.* See *arteria anastomotica.*—**Anastomotica magna.** (*a*) A branch of the brachial artery supplying the parts about the elbow and anastomosing with other branches of the brachial and of the ulna. (*b*) A branch of the femoral artery supplying the parts about the knee-joint and anastomosing with other articular branches of the femoral and tibial arteries.

Anastrophia (an-a-strō′fi-ä), *n.* [NL., < Gr. *ἀναστροφή*, a twisting about: see *anastrophe.*] A genus of pentameraceous brachiopods from the Silurian and Devonian rocks.

anat. An abbreviation of *anatomy* and *anatomical.*

Anathema cup. See ★*cup.*

anathesis (a-nath′e-sis), *n.* [Gr. *ἀνάθεσις*, a putting off, < *ἀνατιθέναι*, put off, etc.: see *anathema.*] Vowel-mutation; umlaut: a proposed term, scarcely used. See *mutation.*

Anatinacea (a-nat-i-nā′sē-ä), *n. pl.* [NL., < *Anatina* + *-acea.*] A suborder of *Eulamellibranchiata.* It includes the bivalve mollusks which have the external branchial fold directed dorsally, not reflected, sexes united, male and female reproductive glands with separate orifices, mantle edges largely united, byssus generally lacking, two adductor muscles, pallial line variable, and shell usually nacreous within. Among the families included are *Anatinidæ, Pandoridæ, Pholadomyidæ,* and *Clavagellidæ.* Both living and fossil forms are found.

anatinacean (a-nat-i-nā′si-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Anatinacea.*

II. *n.* One of the *Anatinacea.*

anatoid (an′a-toid), *a.* [L. *anas* (*anat-*), a duck, + Gr. *εἶδος*, form.] Resembling a duck; duck-like in form or character.

Anatolian ware. See ★*ware*2.

anatomicobiological (an-a-tom″i-kō-bī-ō-loj′i-kal), *a.* Anatomical with a view to biology; treating of biology as illustrated by anatomy: as, an *anatomicobiological* thesis.

anatomicopathological (an-a-tom″i-kō-path-ō-loj′i-kal), *a.* Relating to pathological anatomy.

anatomobiological (a-nat″ō-mō-bī-ō-loj′i-kal), *a.* Same as ★*anatomicobiological.*

anatomopathological (a-nat″ō-mō-path-ō-loj′i-kal), *a.* Same as ★*anatomicopathological. Smithsonian Rep.* 1890, p. 635.

anatomy, *n.*—**Medical anatomy,** descriptive anatomy of the heart, lungs, and other parts, the diseases of which are not usually amenable to surgical treatment.—**Morbid anatomy.** Same as *pathological anatomy.*—**Plastic anatomy,** surface anatomy in its relation to art.—**Practical anatomy.** Same as *anatomy,* 1.—**Surface anatomy,** the study of the markings and configuration of the surface of the body.

anatrepsis (an-a-trep′sis), *n.* [NL., < Gr. *ἀνά*, back, + *τρέψις*, a turning.] In *embryol.*, that movement of certain insect embryos which brings them back to the ventral surface of the yolk after they have moved away from it. *Wheeler*, 1893.

anatriæne (an-a-trī′ēn), *n.* [Gr. *ἀνά*, up, back, + *τρίαινα*, a trident.] In the nomenclature of the spicular elements of sponges, a straight cylindrical rhabd at the end of which three prongs or cladisks bent backward make a form like that of an anchor with three arms. It belongs to the tetraxial system of spicules. See *sponge-spicule.*

anatriptic (an-a-trip′tik), *a.* [*anatripsis* (*-tript-*) + *-ic.*] Frictional; specifically, in *med.*, of or pertaining to the use of rubbing or friction for remedial purposes.

anauca (ä-nä-ö′kä), *n.* [Native name.] A tree of the bean family, *Erythrina umbrosa*, a native of northeastern South America, which is used as a shade-tree in the cultivation of cacao. Also called ★*bucare* (which see). [Trinidad.]

anautotomic (an-â-tō-tom′ik), *a.* Not self-intersecting.

Anautotomic, unicuspidal, bicuspidal and tricuspidal quartics admit of a subsidiary division depending on the number of points of undulation they possess; and it must be borne in mind that, although it is convenient to use the term point of undulation, it is the tangent at this point and not the point itself which is the actual singularity *Nature*, Nov. 27, 1902, p. 80.

anaxial (an-ak′si-al), *a.* [Gr. *ἀν-* priv. + L. *axis*, axis, + *-al.*] Without a definite axis or axes; of irregular or asymmetrical form.

anaxile (an-ak′sil), *a.* [Gr. *ἀν-* priv. + L. *axis*, axis: see *axile.*] Noting such independent elements or spicules of sponge skeletons as do not show derivation from the uniaxial, tetraxial, or hexactinellid type. Such spicules are spherical, cylindrical, discoid, or stellate.

anaxone (an-ak′sōn), *a.* [Gr. *ἀν-* priv. + *ἄξων*, axis.] In *neurol.*, having no neuraxon or axis-cylinder: said of certain nerve-cells. *Buck*, Med. Handbook, II. 334.

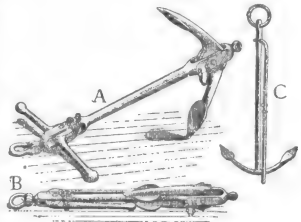
anaxonial (an-ak-sō′ni-al), *a.* [Gr. *ἀν-* priv. + *ἄξων*, axis, + *-ial.*] Having no definite axes of growth. See *anaxonia.*

ancecerite (an-ses′ē-rīt), *n.* [Irreg. < Gr. *ἀγκή*, the bent arm, + *κέρας*, horn, + *-ite*2.] In crustaceans, a curved projection at the base of the peduncle of an antenna.

Ancestral forms, the ancestors of an organism in any remote generation or generations considered collectively.—**Ancestral heredity, inheritance.** See ★*inheritance.*

Anchieta bark. See ★*bark* 2.

anchor1, *n.* **7.** In the tug of war, the man at the end of the line, who is supposed to hold while the rest endeavor to pull.—**8.** Same as *chapelet*, 4.—**Anchor system,** the mnemonic system according to which the ideas to be remembered are rendered readily recoverable by being deliberately associated with other ideas that are, either by familiarity or by their striking character, already easily recoverable. Thus it is an application of the



Folding Anchor.

A, anchor open; *B*, anchor closed; *C* shifting-stock anchor with stock stowed.

anchor system to remember the map of Italy by its similarity to a boot. Also called *peg system.* —**Folding anchor,** a boat's anchor having a stock and flukes which, when not in use, can be folded against the shank for convenience in stowing on board. Several styles are in use.—**Shifting-stock anchor,** a boat's anchor in which the stock is kept in place by a pin and, when not in use, can be laid against the shank for convenience in handling. — **Stockless anchor,** a boat's anchor having pivoted flukes which fall into the holding position without the aid of a stock.

anchorate, *a.* 2. As applied to the spicules of the sponges, having a pronged anchor-shaped arrangement at one or both ends, especially in the monactinellids.

II. *n.* An anchorate spicule.

anchor-ax (ang'kọr-aks) *n.* An anchor-shaped ax of stone, formerly used by the natives of Brazil.

anchor-bar (ang'kọr-bär), *n.* A wooden handspike used for prying the anchor off the bill-board, that is, the resting-place of the fluke.

anchor-beam (ang'kọr-bēm), *n.* A steel or iron beam forming a part of the anchorage of the cables or chains of a suspension-bridge.

anchor-bed (ang'kọr-bed), *n.* In *shipbuilding,* a support or platform on the deck, forward, on which the heavy anchors are secured when not in use. In war-ships these beds are usually recessed below the deck-level to keep the anchors out of the line of fire of the large guns.

anchor-bolt, *n.* 2. A long bolt which serves to hold down a steam-engine or other piece of machinery to the masonry foundation on which it rests. The bolt passes down through the bed- or base-plate and far enough into the foundation to be securely held at its lower end by plates or other holding-devices to anchor it in place. When the nut above the bed-plate is tightened down, the machine is securely fastened to the mass of the foundation.

anchor-bracket (ang'kọr-brak″et), *n.* A bracket or block which carries the fulcrum of a lever; a bracket to which the stationary end of a brake-band is attached.

anchor-crane (ang'kọr-krān), *n.* In *shipbuilding,* a crane mounted on the deck of a ship for handling the anchor from the hawse-pipe to the bill-board or anchor-bed after the anchor is weighed. See cut of ★*battle-ship.*

anchor-dragger (ang'kọr-drag″ėr), *n.* One who makes a business of 'dragging' harbors and other anchoring-places for ships' anchors which have been lost during gales or otherwise. *W. M. Davis,* Elem. Phys. Geog.

anchored, *p. a.* 4. In *billiards,* said of two object-balls which, with the cue-ball near, straddle a short line close to the cushion, because a player can hold them long in that position by playing alternately from side to side. This is possible only in games of balk-line billiards, and since 1893 has been barred among the best players.

anchor-light (ang'kọr-līt), *n.* The light exhibited on anchored vessels between sunset and sunrise.—**Anchor-light law,** that section of the international regulations of July 1, 1897, which provides for lighting anchored vessels in such a manner as to prevent collisions.

anchor-line (ang'kọr-līn), *n.* A line attached to a small buoy and to one fluke of an anchor: used in towing a raft of logs and to free the anchor when fast to rocks or snags. [U. S.]

anchor-money (ang'kọr-mun″i), *n.* An English colonial coinage, so named from its device, first struck for Mauritius in 1820.

anchor-plate, *n.* 3. *Naut.,* the metal resting-place for the fluke of the anchor when the latter is fished. See *fish*[1], 6 (*b*).

anchor-rod (ang'kọr-rod), *n.* The rod or bolt which connects the bed-plate of an engine to an anchor-plate buried in the foundation.

anchor-wing (ang'kọr-wing), *n.* The Australian black-cheeked falcon, *Falco melanogenys:* so named from the fancied resemblance of its outspread wings to the flukes of an anchor.

Anchovia (an-chō'vi-ą), *n.* [NL., < E. *anchovy.*] A genus of anchovies of the family *Engraulididæ,* now usually defined so as to include nearly all the tropical species. It is distinguished from the anchovies of temperate regions (*Engraulis*) by the fewer vertebræ. Also wrongly called *Stolephorus.*

anchovy, *n.*—**Silvery anchovy,** a name of *Anchovia browni.*—**Striped anchovy,** *Anchovia browni,* found on the Atlantic coast of North America.

Ancient house, one which has stood long enough to acquire an easement of support. *Bouvier,* Law Dict.

ancientism (ān'shent-izm), *n.* [*ancient* + *-ism.*] Favor to things ancient; the belief that ancient times were better than the present. *J. W. Powell,* First An. Rep. Bur. Ethnol., p. 33.

ancistroid (an-sis'troid), *a.* [Gr. *ἀγκιστροειδής,* < *ἄγκιστρον,* a fish-hook, + *εἶδος,* form.] Hook-shaped. *Syd. Soc. Lex.*

Ancistrus (an-sis'trus), *n.* [NL., < *ἄγκιστρον,* a fish-hook.] A genus of toothed shiners of the family *Characinidæ,* found in rivers of South America.

ancona (an-kō'nạ), *n.* [ML. *ancona,* an image, a crucifix, prop. **ancon*; cf. L. *ancon,* a console or volute, < Gr. *ἀγκών,* a bend, a jutting angle in a wall, etc.: see *ancon.*] An altar-piece or group of pictures elaborately mounted in an architectural setting.

This altar-piece now hangs on the north wall of the choir of the Collegiata. It is a Gothic *ancona* in which four scenes are represented.
L. Douglas, in Burlington Mag., I. 309.

Ancona ruby. Same as *rubasse.*

ancoume (ăn-kō'mā), *n.* [Kongo name.] In the Kongo region of West Africa, the fragrant yellow resin of *Ancoumea Klaineana,* a tree of the family *Balsameaceæ.*

ancylite (an'si-līt), *n.* [Gr. *ἀγκύλος,* crooked, + *-ite*[2].] A hydrated carbonate of strontium and cerium occurring in from yellow to brown orthorhombic crystals with curved faces: found in southern Greenland.

Ancylocladus (an-si-lok'lạ-dus), *n.* [NL. (Kuntze, 1891; proposed but not established by Wallich in 1832), named in allusion to the contorted tendrils, < Gr. *ἀγκύλος,* crooked, curved, + *κλάδος,* branch.] An apocynaceous genus of plants improperly known as *Willughbeia.* See *Willughbeia.*

Ancylopoda (an-si-lop'ō-dą), *n. pl.* [NL., < Gr. *ἀγκύλος,* crooked, + *πούς* (*ποδ-*), a foot.] An order of extinct ungulate mammals, proposed by Cope for such genera as *Ancylotherium* and *Chalicotherium,* based on fragmentary remains from the early Tertiary deposits.

ancylopodous (an-si-lop'ō-dus), *a.* Relating to or resembling in structure or appearance the *Ancylopoda.*

ancylostome (an-sil'ō-stōm), *n.* [Gr. *ἀγκύλος,* bent, + *στόμα,* mouth.] A blood-sucking parasitic worm of the genus *Uncinaria,* sometimes found in the human intestine.

ancylostomiasis (an-si-los-tō-mī'ą-sis), *n.* [NL., < *Ancylostoma* (see def.) + *-iasis.*] A disease characterized chiefly by a profound anemia, sometimes associated with dirt-eating as cause or effect, due to the presence of one of several species of blood-sucking intestinal parasites of the genus *Ancylostoma.* Also called *dochmiasis, uncinariasis, tunnel-disease, brickmakers'* or *miners' anemia,* and *Egyptian chlorosis.*

Anda-assu oil. See ★*oil.*

andabatarian (an-dab-ą-tā'rī-ąn), *a.* [*andabata* + *-arian.*] Pertaining to or characteristic of an andabata or gladiator who fought blindfolded; hence, misdirected: said of blind, struggling endeavor.

andalusitic (an-dą-lū-sit'ik), *a.* [*andalusite* + *-ic.*] Containing or resembling andalusite.

Andaman bullet-wood. See ★*bullet-wood.*

andante, *a.* Special varieties of movement or style are indicated by adding other terms, as: *andante con moto,* in flowing style, with some quickness; *andante ma non troppo,* in flowing style, but not too slow; *andante cantabile,* with the movement of a song; *andante maestoso,* with a stately movement; *andante pastorale,* in the easy style of a pastoral melody.

Andaquies wax. See *wax*[2].

Anderson process. See ★*process.*

andesite, *n.*—**Trachytic andesite.** See ★*asperite.*

andirine (an-dī'rin), *n.* [*Andira* + *-ine*[2].] Same as ★*surinamine.*

andorite (an'dō-rīt), *n.* [*Andor* (*Andor* von Semsey, a Hungarian) + *-ite*[2].] A sulphid of antimony, lead, and silver occurring in steel-gray orthorhombic crystals with brilliant metallic luster: found in Hungary and Bolivia. Also called *sundtite* and *webnerite.*

Andreæaceæ (an-drē-ē-ā'sē-ē), *n. pl.* [NL., < *Andreæa* + *-aceæ.*] A family of mosses containing the genus *Andreæa* only. For characters see *Andreæa.*

andreæaceous (an-drē-ē-ā'shius), *a.* [*Andreæaceæ* + *-ous.*] Belonging to or having the characters of mosses of the family *Andreæaceæ.*

Andreæales (an-drē-ē-ā'lēz), *n. pl.* [NL., < *Andreæa* + *-ales.*] An order of mosses coextensive with the family *Andreæaceæ.*

andreclexis (an-drek-lek'sis), *n.* [NL., < Gr. *ἀνήρ* (*ἀνδρ-*), man, + *ἔκλεξις,* selection.] Sexual selection through choice exercised by the male. Compare ★*gyneclexis. Ward,* Pure Sociol., p. 361.

andreia (an-drī'ą), *n. pl.* [Gr. *ἀνδρεῖα,* neut. pl. of *ἀνδρεῖος,* adj., of men, < *ἀνήρ* (*ἀνδρ-*), man.] In *Gr. antiq.,* public meals, especially in Crete and Sparta.

andreion (an-drī'on), *n.*; pl. *andreia* (-ą). [Perhaps for Gr. *ἀνδρεών, ἀνδρεῶν,* Attic *ἀνδρών,* m., the men's hall (see *andronitis*); otherwise < Gr. **ἀνδρεῖον,* Cretan *ἀνδρήιον,* a public hall where meals were served: see ★*andreia.*] A hall in which public meals were served.

Whether Labyrinth, Palace, or *Andreion,* it is evident that the prehistoric building, as yet so imperfectly known to us, belongs to the great age of Mycenæ.
Evans, Cretan Pictographs, p. 12.

andrenoid (an'dre-noid), *a.* Having the characteristics or appearance of a bee of the family *Andrenidæ.*

Andreoli process. See ★*process.*

andrewsite (an'drō-zīt), *n.* [Named after Thomas *Andrews* (1813–86).] A hydrated phosphate of iron and copper occurring in bluish-green radiate forms: found in Cornwall.

Andrias (an'dri-ąs), *n.* [NL., < Gr. *ἀνδριάς,* an image of man, < *ἀνήρ* (*ἀνδρ-*), man.] The generic name given by Tschudi to the giant salamander from the Miocene of Œningen, the remains of which when found were regarded as human and were characterized by Scheuchzer as *Homo diluvii testis. Andrias scheuchzeri* attained a length of one meter, and there is a smaller species of the same geologic age.

androcentric (an-drō-sen'trik), *a.* [Gr. *ἀνήρ* (*ἀνδρο-*), a male, + *κέντρον,* center.] Centering around the male; relating to the theory that all animal life normally centers around the male. *Ward,* Pure Sociol., p. 291.

androclinium (an-drō-klin'i-um), *n.*; pl. *androclinia* (-ą). [NL. < Gr. *ἀνήρ* (*ἀνδρ-*), man (male), + *κλίνη,* couch.] See *clinandrium.*

androconia (an-drō-kō'ni-ą), *n. pl.* [NL., < Gr. *ἀνήρ* (*ἀνδρο-*), male, + (?) *κόνις,* dust.] Certain specialized scales occurring in limited areas on the wings of the males of certain *Lepidoptera.* They function as scent-scales and arise from scent-glands situated in folds of the wing. Androconia-like scales have also been found on the wings of a caddis-fly (*Mystaciades punctata*).—**Androconia glands,** groups of formative specialized cells which secrete an odorous fluid.

androcracy (an-drok'rą-si), *n.* [Gr. *ἀνήρ* (*ἀνδρο-*), man, + *κρατεῖν,* govern.] Authority and rule by man; hence, society organized on the basis of male supremacy. Compare *gynecocracy. Ward,* Pure Sociol., p. 341.

androcratic (an-drō-krat'ik), *a.* Pertaining to androcracy or the supremacy of man over woman in social relations, or having the quality of such supremacy. *Ward,* Pure Sociol., p. 399.

androdiœcism (an″drō-dī-ē'sizm), *a.* The character of being androdiœcious.

Androdiœcism signifies that the same species has both male and hermaphrodite plants.
Henslow, Origin of Floral Struct., p. 227.

androgametangium (an″drō-gam-e-tan'ji-um), *n.*; pl. *androgametangia* (-ą). [NL., < Gr. *ἀνήρ* (*ἀνδρ-*), male, + *γαμέτης,* spouse (see *gamete*), + *ἀγγεῖον,* vessel.] Same as *antheridium.*

androgamete (an-drō-gam'ēt), *n.* [Gr. *ἀνήρ* (*ἀνδρ-*), male + *γαμέτης,* spouse (see *gamete*).] In *bot.,* a male sexual cell.

androgenetic (an″drō-jē-net'ik), *a.* [Gr. *ἀνήρ* (*ἀνδρ-*), male, + E. *genetic.*] Productive of males only.—**Androgenetic parthenogenesis,** the production of males alone from unfertilized eggs; arrhenotoky. See ★*homoparthenogenesis.*

androgonidium (an″drō-gō-nid'i-um), *n.*; pl. *androgonidia* (-ą). [NL., < Gr. *ἀνήρ* (*ἀνδρ-*) male, + NL. *gonidium.*] 1. One of the male cells formed in *Volvox* which later subdivides into numerous spermatozoöids. *Cohn.*—2. Same as *androspore.*

androgynic (an″drō-jin'ik), *a.* Having two sexes; androgynous; hermaphroditic. *Syd. Soc. Lex.*

androlepsia (an-drō-lep'si-ą), *n.* [Gr. *ἀνδροληψία,* seizure of men.] In *international law,* the seizure by one nation of the citizens or subjects of another, and the holding of them, to compel the performance of an act by the latter in favor of the former. Also *androlepsy.*

androlepsy (an'drō-lep-si), *n.* Same as ★*androlepsia.*

andrology (an-drol'ō-ji), *n.* [Gr. *ἀνήρ* (*ἀνδρ-*), man, + *-λογια,* < *λέγειν,* speak.] In the terminology of J. W. Powell, the whole theoretical

science of individual man, physiological and psychological.

Man is preëminently the psychic animal, so that human psychology is set over against the other attributes of man, which are grouped under the term somatology; therefore man studied as a human body gives rise to the science of somatology and the science of psychology. To these two sciences as a group I give the name *andrology*, while *andrology* and demology constitute anthropology, which is the customary term; but as the science is coördinate with the greater systems, I shall use the term anthroponomy.

J. W. Powell, in Amer. Anthropologist, Oct.–Dec., 1901, [p. 604.

andromedid (an-drom′e-did), *n.* [Lit. 'descendant of Andromeda'; < *Andromeda* + *-id*[2].] Same as *andromed.*

andromedotoxin (an-drom″e-dō-tok′sin), *n.* [*Andromeda*, a genus of plants, + *toxin.*] Same as ★*asebotoxin*. *Yearbook U. S. Dept. Agr.* 1897, p. 97.

andromonœcism (an″drō-mō-nē′sizm), *n.* [*andromonœc*(*ious*) + *-ism.*] The character or condition of being andromonœcious.

Andromonœcism signifies that the same plant bears both male and hermaphrodite flowers.

Henslow, Origin of Floral Struct., p. 227.

andronia (an-drō′ni-ạ), *n.* [NL., < Gr. *ἀνήρ* (*ἀνδρ-*), man (?).] A name given by Winterl in 1800 to a supposed new earth which was shown by a committee of the French Academy of Sciences to be merely a mixture of well-known substances.

androphobia (an-drō-fō′bi-ạ), *n.* [NL., < Gr. *ἀνήρ* (*ἀνδρ-*), man, + *-φοβία*, < *φοβεῖν*, fear.] Fear of or repugnance to the male sex.

androphore, *n.* 1. (*b*) A stalk supporting an androecium.

androphyl (an′drō-fil), *a.* [Gr. *ἀνήρ* (*ἀνδρ-*), male, + *φύλλον*, leaf.] A male sporophyl; a stamen.

androplasm (an′drō-plazm), *n.* The material that is supposed, by Haeckel and others, to enter into the composition of male cells and to give them their distinctive character, and to be unlike anything that enters into the composition of female cells.

This "sex-sense" of the two gonocytes, or elective affinity of the male *androplasm* and the female *gynoplasm*, is the cause of mutual attraction and union.

Haeckel (trans.), Wonders of Life, p. 245.

androrhopy (an-dror′ō-pi), *n.* [Gr. *ἀνήρ*, male, + *ῥοπή*, downward inclination.] The state or condition of a species in which the males depart more widely than the females from the ancestral condition, as exhibited by the young of both sexes or by allied species.

Androsace (an-dros′ạ-sē), *n.* [NL., < L. *androsaces*, < Gr. *ἀνδρόσακες*, an uncertain plant.] A genus of small tufted perennial plants of the family *Primulaceæ*, commonly called *rock-jasmine*, cultivated in alpine gardens. The only species much known in the United States are *A. lanuginosa*, *A. sarmentosa*, *A. carnea*, and *A. eximea*. There are about 50 species, most of which are found in the mountains of the northern hemisphere.

androsporangium (an-drō-spō-ran′ji-um), *n.*; pl. *androsporangia* (-ạ). [Gr. *ἀνήρ* (*ἀνδρ-*), male, + NL., *sporangium.*] A sporangium containing androspores.

androtauric (an-drō-tâ′rik), *a.* [Gr. *ἀνήρ* (*ἀνδρ-*) man, + *ταῦρος*, bull.] In *Gr. antiq.*, a term applied to mythologic monsters in which the forms of bull and man are combined, as an androcephalous bull or a taurocephalous man.

-ane. 3. A suffix applied to the names of classes in the quantitative classification of igneous rocks. See ★*rock*[1].

anecdoted (an′ek-dō-ted), *p. a.* Made the subject of an anecdote.

It is a story they tell in Rome, where everybody is *anecdoted*. *W. D. Howells*, Ital. Jour., p. 170.

anectobranchiate (ạ-nek-tō-brang′ki-āt), *a.* [Gr. *ἀν-*, priv. + *ἐκτός*, without, + *βράγχια*, gills.] Having no external gills, as the *Melonitoida* among echinoids.

anelectrotonically (an-ē-lek-trō-ton′i-kạl-i), *adv.* In a manner having relation to anelectrotonus.

anemia[1], *n.* — **Brickmakers' or miners' anemia,** anemia due to the presence of *Ancylostoma* in the intestine. — **Polar anemia,** a condition of blood impoverishment to which explorers and others wintering in the polar regions are liable: probably due to lack of fresh food, the inability to take sufficient exercise, and the absence of sunlight. — **Primary anemia,** anemia arising from no discoverable cause. — **Secondary anemia,** anemia due to some manifest cause, such as frequent losses of blood, malaria, cancer, etc. — **Splenic anemia,** a condition in which anemia is associated with enlargement of the spleen, but without enlargement of the lymphatic glands.

Anemia[2] (ạ-nē′mi-ạ), *n.* [NL. (Swartz, 1806), irreg. < Gr. *ἀνείμων*, naked.] A genus of small, simply pinnate or decompound, schizæaceous ferns, characterized by having the ovate, sessile sporangia borne biserially upon the two elongate, rachiform-paniculate, lowermost pinnæ, or, if the genus is accepted in a wide sense, sometimes upon separate fertile fronds. Strictly delimited, the bulk of the species usually referred here will be placed under *Ornithopteris*, a genus technically distinguished from the typical *Anemia* by its free venation. The species are mainly tropical American.

Anemic gangrene. See ★*gangrene.*

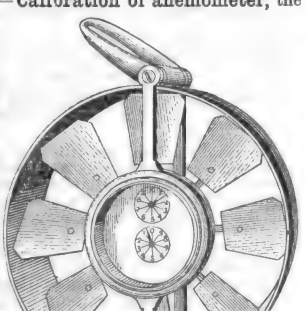
anemobarometer (an″e-mō-bạ-rom′e-tėr), *n.* An instrument consisting of two tubes leading from closed vessels containing barometers up to a free exposure to the wind. One tube opens to the windward so that its barometer indicates the static atmospheric pressure plus the wind-pressure; the other tube opens to the leeward and gives the atmospheric pressure diminished by the wind-pressure or some portion thereof. From a comparison of the two readings one obtains the correct air-pressure and wind-pressure separately. As modified in 1887, only one tube is used, opening into the space between two horizontal planes.

anemochore (a-nem′ō-kōr), *n.* [Gr. *ἄνεμος*, wind, + *χωρεῖν*, spread abroad.] In *phytogeog.*, a plant whose seed is disseminated by the wind, as by means of pappus, etc. *F. E. Clements.*

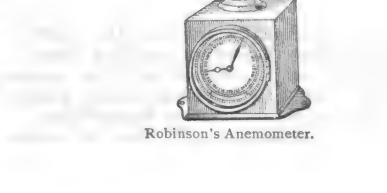
anemochorous (an-e-mok′ō-rus), *a.* [*anemochore* + *-ous.*] Having the character of an anemochore. *F. E. Clements.*

anemogen (a-nem′ō-jen), *n.* [F. *anémogène*; < Gr. *ἄνεμος*, wind, + *-γενής*, -producing.] An apparatus for experimentally producing, measuring, and studying currents of air analogous to the natural currents in the earth's atmosphere.

anemometer, *n.* — **Biram's anemometer,** a special form of wind-gage. — **Calibration of anemometer,** the study of an anemometer by means of the standard whirling apparatus so as to convert its instrumental readings into true wind-velocities or wind-pressures. — **Hagemann's anemometer,** a form of suction-anemometer; a vertical tube whose lower end opens in a manometer and whose upper end is exposed to the free wind and has a small tip and an orifice across which the wind blows. The velocity of the wind is deduced from the suction or rarefaction produced within the tube by the action of the wind. Special modifications of this instrument have been introduced by Abbe and Dines. — **Helicoidal anemometer,** a modification of Woltman's anemometer in which the radial arms are dispensed with and plates bent into helicoidal surfaces, similar to those of the screw-propeller, are used to receive the impulse of the wind. — **Hooke's anemometer,** the pendulum anemometer; a plate of metal hung as a pendulum broadside to the wind, and whose deflection from the vertical can be measured on a scale. First described in 1666. — **Lander's anemometer,** an anemometer (more properly anemograph) in which a delicately counterpoised rubber bellows is inflated by the pressure of the wind and lifts a small conical float suspended in glycerin so as to damp its oscillations. The movement of the float and the direction of the wind are both recorded. — **Reflecting anemometer,** the name originally given to what is better known as *Aimé's nephoscope*. — **Robinson's anemometer,** four hollow hemispheric metallic cups revolving, when exposed to the wind, on a vertical axis, to which they are attached by arms crossing at right angles. The motion is transmitted by an appropriate mechanism to a hand over the dial where the velocity of the wind is indicated.



Biram's Anemometer.



Robinson's Anemometer.

anemophily (an-e-mof′i-li), *n.* [*anemophil*(*ous*) + *-y*[3].] In *bot.*, the fact or character of being anemophilous.

anemophobia (an″e-mō-fō′bi-ạ), *n.* [Gr. *ἄνεμος*, wind, + *-φοβία*, fear.] A morbid fear of high winds. *G. S. Hall*, Adolescence, II. 185.

anemotropic (a-nem-ō-trop′ik), *a.* [Gr. *ἄνεμος*, wind, + *τρόπος*, a turning.] Concerning or pertaining to the attitude or movement of organisms in relation to the direction of the wind.

anemotropism (an-e-mot′rō-pizm), *n.* [*anemotrop*(*ic*) + *-ism.*] The movement of organisms or the attitude of their bodies in relation to the direction of the wind.

This peculiarity . . . is an orientation of the body with respect to the wind. As it appears to be a true tropism I shall call it *anemotropism*.

W. M. Wheeler, Archiv f. Entwicklungsmechanik, 8. 373.

anencephalotrophic (an-en-sef″ạ-lō-trof′ik), *a.* Characterized by anencephalotrophia or atrophy of the brain.

anephebic (an-e-fē′bik), *a.* [Gr. *ἀνά*, up, + *ἔφηβος*, adult: see *ephebic.*] The early portion of the ephebic or adult stage in the development of an organism. *Hyatt.*

aneretic, *a.* See *anæretic.*

anergia (an-ėr′ji-ạ), *n.* [NL., < Gr. *ἀνεργία*, a doubted reading, equiv. to *ἀεργία* (cf. *ἄνεργος*, not done), < *ἀν-* priv. + *ἔργον*, work.] Lack of energy; passivity. Also *anergy.*

anergic (an-ėr′jik), *a.* [*anergia* + *-ic.*] Deficient in energy.

anergy (an-ėr′ji), *n.* [NL. *anergia.*] Same as ★*anergia.*

aneson (a-nē′son), *n.* An aqueous solution of acetone-chloroform.

anesthetic, *a.* — **Anesthetic ether, leprosy.** See *ether*[1], 3 (*b*), *lepra.* — **Schleich's anesthetic mixture,** a mixture of ether, petroleum ether, and chloroform, used by inhalation in the production of general anæsthesia.

anethical (an-eth′i-kạl), *a.* Devoid of ethical quality; neither ethical nor anti-ethical. *Ward*, Pure Sociol., p. 303.

aneuria (a-nū′ri-ạ), *n.* [NL., < Gr. *ἀνευρος*, without sinews (nerves), < *ἀ-* priv. + *νεῦρον*, sinew: see *nerve.*] Lack of nerve force.

aneuric (a-nū′rik), *a.* Lacking in nerve force; neurasthenic.

aneurism, *n.* 2. In *thermom.*, an enlargement of the capillary tube of the thermometer. *Tait*, in Nature, XXV. 90. — **External aneurism,** dilatation of an artery outside of the visceral cavities of the body and therefore accessible to surgical methods of treatment. Also called *surgical aneurism.* — **Gelatin treatment for aneurism,** the administration of gelatin, which has the property of rendering the blood more coagulable and therefore favors clotting within the aneurismal sac. — **Internal aneurism,** dilatation of an artery within one of the cavities of the body and which is therefore not amenable to surgical treatment. Also called ★*medical aneurism.* — **Medical aneurism.** Same as *internal* ★*aneurism.* — **Miliary aneurisms,** minute aneurisms affecting one or more of the small arteries of the brain, rupture of which is a common cause of apoplexy. — **Racemose aneurism,** a condition of dilatation, lengthening, and tortuosity of the blood-vessels (arteries, capillaries, and veins) of a part. — **Surgical aneurism.** Same as *external* ★*aneurism.* — **Valvular aneurism,** a cavity containing blood and sometimes pus, formed between the layers of one of the valves of the heart. — **Worm aneurism,** an aneurism in horses caused by roundworm larvæ belonging to the species *Strongylus vulgaris.*

aneurism-needle (an′ū-rizm-nē″dl), *n.* A curved, blunt-pointed rod with an eye at the point, used for passing a ligature around an artery which it is desired to obliterate in the treatment of aneurism.

angarep (an′gạ-rep), *n.* [Native name in Abyssinia (?). Appar. not in Egyptian Ar.] A light bedstead used by the Arabs, consisting of a simple framework set upon legs and covered with a network of green rawhide which hardens to the tightness of a drum when dry. On this is laid the mat. *Sir S. W. Baker*, Nile Trib. Abyssinia (ed. 1867), p. 113.

angarilla (än-gä-rēl′yä), *n.* [Sp.; in pl. a hand-barrow, panniers, etc.] 1. A litter. — 2. *pl.* In South America, a pair of uncovered boxes made of rawhide, fastened to each end of a pole also covered with hide. The pole is placed across the back of a mule or a donkey, so that the boxes or chests hang on each side of the animal. Children are frequently carried on long journeys in angarillas.

3. A net used for carrying things.

angekok (an′jē-kok), *n.* [Eskimo *angakok.*] Among the Eskimos of Arctic America, a medicine-man; a sorcerer; a shaman.

angel, *n.* 6. In modern *theat. slang*, one who advances money to put a new play on the

boards; a financial backer.—**7.** Same as *angel-fish*.—**Black angel,** a Bahaman name of the chirivita (*Pomacanthus paru*), a West Indian species of *Chætodontidæ*.

angel-cake (ān'jel-kāk), *n.* White sponge-cake.

angeldom (ān'jel-dum), *n.* [*angel* + *-dom*.] The realm of angels.

All the light of *angeldom*.
Mrs. Browning, Drama of Exile, Chorus of Angels, sc. 3.

angel-fish, *n.*—**Yellow angel-fish,** the isabelita, *Holacanthus ciliaris*, a gorgeously colored fish of the West Indies, of the family *Chætodontidæ*. Also called *blue angel-fish*.

angel-food (ān'jel-fōd), *n.* Same as ★*angel-cake*.

angelica, *n.*—**Oil of angelica,** an essence or essential oil obtained from the seeds of plants of the genus *Angelica*.

angelica-root (an-jel'i-kạ̈-röt), *n.* The aromatic root of *Coleopleurum Gmelini* and *Angelica atropurpurea*.

angelicin (an-jel'i-sin), *n.* [*angelica* + *-in*2.] An amaroid, $C_{18}H_{30}O$, obtained from *Coleopleurum Gmelini*. It is crystalline and melts at 126.5°C.

Angelina (an-je-lī'nạ̈), *n.* [NL., < *Angelin*, a Swedish paleontologist.] A genus of trilobites, of which *A. sedgwicki* is an example, having a conic glabella with faint or no lateral furrows, long genal spines, 15 thoracic segments, and a small pygidium. It is of Upper Cambrian age.

angeline (an'je-lin), *n.* Same as ★*surinamine*.

angelito (än-he-lē'tō), *n.* [Sp., 'little angel'; dim. of *angel*, angel.] A stingless honey-bee, belonging to the genus *Melipona*, found in tropical America. It forms its nests in trees, and keeps its honey in cups about the size of pigeons' eggs.

angelography (ān-je-log'ra-fi), *n.* A treatise on angels. [Rare.] *N. E. D.*

Angelonia (an-je-lō'ni-ạ̈), *n.* [NL.] A genus of perennial herbs and sub-shrubs of the family *Scrophulariaceæ*, with handsome, irregular, 2-lipped, axillary flowers, grown as pot-plants in warm glass houses. There are about 24 species in the northern part of South America, Mexico, and the West Indies.

angico (än-jē'kō), *n.* [A European (Sp.?) form, also *angica*, *canjica*, of a supposed native name in Brazil.] The name in Brazil and Paraguay for a tree of the mimosa family, *Stachychrysum rigidum*, which yields an extremely hard, durable, dark-brown wood, and a gum similar to gum arabic. Both the gum and the astringent bark are used medicinally by the natives. See *Piptadenia*.

angiectopia (an″ji-ek-tō'pi-ạ̈), *n.* [NL., < Gr. *ἀγγεῖον*, vessel, + *ἐκτοπος*, out of place.] An abnormal position of one or more of the important blood-vessels.

angiitis, *n.*—**Consecutive angiitis,** inflammation of the vessels caused by extension of the process from neighboring inflamed tissues.

angina, *n.*—**Angina dyspeptica,** a spurious angina pectoris caused by gaseous distention of the stomach.—**Vincent's angina,** a sore throat resembling diphtheria but associated with the presence of a different variety of bacillus.

anginiform (an-jin'i-fôrm), *a.* [L. *angina*, angina, + *forma*, form.] Resembling angina, especially angina pectoris.

angioblast (an'ji-ọ̄-blȧst), *n.* [Gr. *ἀγγεῖον*, vessel, + *βλαστός*, germ.] In *embryol.*, an embryonic cell which takes part in the formation of the blood-vessels and -corpuscles.

angioblastic (an″ji-ọ̄-blas'tik), *a.* **1.** Of or pertaining to angioblasts.—**2.** Forming blood-vessels or -corpuscles.

angiocarpic (an″ji-ọ̄-kär'pik), *a.* Same as *angiocarpous*.

angioceratoma (an″ji-ọ̄-ser-ạ-tō'mạ̈), *n.*; pl. *angioceratomata* (-ma-tạ̈). [NL., < Gr. *ἀγγεῖον*, vessel, + *κέρας* (*κερατ-*), horn, + *-oma*.] An eruption of horny reddish nodules caused by hypertrophy of the epidermis over circumscribed dilatations of the cutaneous capillaries. Also *angiokeratoma*.

angioclast (an'ji-ọ̄-klast), *n.* [Gr. *ἀγγεῖον*, vessel, + *κλαστός*, < *κλᾶν*, break.] An instrument shaped like a forceps, used to compress a bleeding artery. *Buck*, Med. Handbook, IV. 635.

angioda (an-ji-ō'dạ̈), *n. pl.* [NL., < Gr. *ἀγγεῖον*, vessel. The form suggests Gr. *ἀγγειώδης*, like a vessel, hollow, but the sense differs.] A collective name for those mammals in which the retina is provided with blood-vessels.

angiofibroma (an″ji-ọ̄-fī-brō'mạ̈), *n.*; pl. *angiofibromata* (-ma-tạ̈). [NL., < Gr. *ἀγγεῖον*, vessel, + L. *fibra*, fiber, + *-oma*.] A mixed angioma and fibroma.

angioid (an'ji-oid), *a.* [Gr. *ἀγγειοειδής*, *ἀγγειώδης*, < *ἀγγεῖον*, vessel, + *εἶδος*, form.] Resembling a blood-vessel or lymphatic. *Buck*, Med. Handbook, VI. 955.

angiolithic (an-ji-ọ̄-lith'ik), *a.* [Gr. *ἀγγεῖον*, vessel, + *λίθος*, stone.] Noting hardening of the vessels.—**Angiolithic degeneration.** See ★*degeneration*.

Angioma serpiginosum. [See *serpigo*.] An eruption of prominent red dots arranged in ring-shaped figures.—**Cavernous angioma,** a vascular tumor containing large open spaces filled with blood.

angiomatosis (an″ji-ọ̄-ma-tō'sis), *n.* [NL., < *angioma*(*t*) + *-osis*.] A general diseased state of the blood-vessels or lymphatics.

angioneoplasm (an″ji-ọ̄-nē'ọ̄-plazm), *n.* [Gr. *ἀγγεῖον*, vessel, + E. *neoplasm*.] Same as *angioma*.

angioneurectomy (an″ji-ọ̄-nū-rek'tọ̄-mi), *n.* [Gr. *ἀγγεῖον*, vessel, + E. *neurectomy*.] Excision of vessels and nerves; specifically, excision of a portion of the spermatic cord as a means of inducing atrophy of the prostate gland.

Angioneurotic edema, the occurrence of urticarial swellings on the skin and mucous membranes, due to morbid vasomotor action.

angioparalytic (an″ji-ọ̄-par-ạ-lit'ik), *a.* [Gr. *ἀγγεῖον*, vessel, + *παράλυσις*, paralysis, + *-ic*.] Relating to paralysis of the vasomotor nerves, resulting in dilatation of the blood-vessels.

angiopathy (an-ji-op'ạ-thi), *n.* [Gr. *ἀγγεῖον*, vessel, + *πάθος*, disease.] Disease of the lymphatics or blood-vessels.

angiosclerosis (an″ji-ọ̄-sklē-rō'sis), *n.* [NL., < Gr. *ἀγγεῖον*, vessel, + *σκλήρωσις*, hardening.] Fibrous induration of the walls of the vessels, usually of the arteries; arteriosclerosis. *Jour. Exper. Med.*, V. 105.

angiosclerotic (an″ji-ọ̄-sklē-rot'ik), *a.* Pertaining to or characterized by angiosclerosis.—**Angiosclerotic neuritis,** degenerative inflammation of a nerve-trunk associated with angiosclerosis of its nutritive arteries.

The combination of arteritis with intense degeneration and inflammation of the nerves causes the *angiosclerotic neuritis* of Joffroy and Achard, Dutil and Lamy, and Schlesinger; the vasomotor and sensory irritation without the endarteritis causes acroparæsthesia.
Jour. Exper. Med., V. 105.

angiospastic (an″ji-ọ̄-spas'tik), *a.* [Gr. *ἀγγεῖον*, vessel, + *σπαστικός*, < *σπᾶν*, draw.] Relating to stimulation of the vasomotor nerves; causing contraction of the blood-vessels. *Buck*, Med. Handbook, IV. 550.

angiospermic (an″ji-ọ̄-spėr'mik), *a.* [*angiosperm* + *-ic*.] In the sphere of or pertaining to the *Angiospermæ*: as, *angiospermic* evolution; *angiospermic* anatomy.

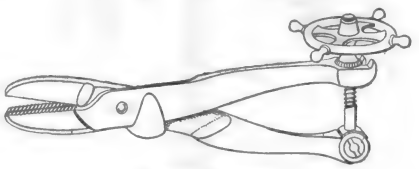
Angiosporea (an″ji-ọ̄-spō'rē-ạ̈), *n. pl.* [NL., < Gr. *ἀγγεῖον*, vessel, + *σπορά*, a seed (spore).] A subtribe of cephaline *Eugregarinæ* having well-developed spores with double sporocysts composed of epispore and endospore. It comprises the families *Gregarinidæ*, *Dactylophoridæ*, *Actinocephalidæ*, *Acanthosporidæ*, and others.

angiostenosis (an″ji-ọ̄-stē-nō'sis), *n.* [NL., < Gr. *ἀγγεῖον*, vessel, + *στένωσις*, narrowing, contraction.] Morbid contraction of the blood-vessels.

angiosthenia (an″ji-ọ̄-sthē'ni-ạ̈), *n.* [Gr. *ἀγγεῖον*, vessel, + *σθένος*, strength.] Arterial tension.

angiotelectasia (an″ji-ọ̄-te-lek-tā'si-ạ̈), *n.* [NL., < Gr. *ἀγγεῖον*, vessel, + *τῆλε*, far, + *ἔκτασις*, extension.] Same as *telangiectasia*.

angiotribe (an'ji-ọ̄-trīb), *n.* [Gr. *ἀγγεῖον*, vessel, + *τρίβειν*, rub, crush.] A strong forceps-like instrument used in surgical operations to



Tuffier's Angiotribe.

arrest hemorrhage by crushing the bleeding vessels with the tissues surrounding them.

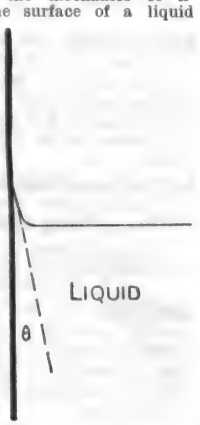
angiotripsy (an'ji-ọ̄-trip″si), *n.* [Gr. *ἀγγεῖον*, vessel, + *τρίψις*, < *τρίβειν*, rub, crush.] The use of the angiotribe in arresting hemorrhage.

Anglaise (ang-glāz'), *n.* [F. fem. of *Anglais*, English.] A country-dance; also, the music for such a dance.

angle3, *n.* **6.** In *projective geom.*, a piece of a flat pencil bounded by two of the straights as sides. See the extract.

A portion of a sheaf of rays bounded by two rays of the sheaf as 'sides' is called a 'complete plane *angle*.' This consists of two 'simple' angles which are vertically opposite to each other.
T. F. Holgate, Geometry of Position by Reye, p. 12.

Angle of contact, (*b*) In the mechanics of liquids, the angle θ which the surface of a liquid in contact with a solid makes with the surface of the latter. The angle of contact may be greater or less than 90°. In the latter case the liquid wets the surface of the solid. In the former case it does not do so.—**Angle of deviation,** the angle which a branch or other organ makes with the axis of the plant to which it belongs.—**Angle of emergence,** in *geol.*, the angle at which the path of an earthquake-wave intersects the horizontal plane at the surface. *Geikie*, Text-book of Geol., p. 366.—**Angle of field,** in *photog.*, width of angle; the angle at which the circular picture of the object to be photographed, projected by the objective upon the ground-glass, appears as seen from the optical center of the lens.—**Angle of heel,** in *naval architecture*, the angle of transverse inclination measured from the vertical when a vessel heels over from any cause.—**Angle of lag.** See ★*lag*1.—**Angle of lead.** See ★*lead*1.—**Angle of Louis or of Ludovici,** a bend in the sternum at the junction of its upper segment with the body, sometimes present in chronic affections of the lungs.—**Angle of mandibles,** in *craniom.*, the angle formed by the lower surface of the lower jaw with the posterior border of the ramus. Also called *goniac angle*.—**Angle of ordination,** in *analyt. geom.*, the angle made by the coördinate axes.—**Angle of parallelism,** the angle made by one of two parallels with a perpendicular to the other. Lobachevski writes it $\Pi(p)$. In his non-Euclidean geometry it is a function of p, the perpendicular.—**Angle of plunge,** in *geol.*, the angle between a dipping stratum and the surface of the ground. It differs from true dip in all cases where the surface is not a horizontal plane, being greater if the ground rises in the direction of dip and less if it descends.—**Angle of projection,** in the theory of lenses, the angle which the exit-pupil of a system subtends at the focus conjugate to the point (object) from which the light enters the system.—**Angle of shear,** the angle through which a plane within a body subjected to a shearing stress (the plane having been originally perpendicular to the direction of the stress) is displaced.—**Angle of slope,** in *geol.*, the angle formed by the intersection of an inclined surface, as of a mountain, with the horizontal plane. Compare *angle of repose*.—**Angle of stability,** in *mech.*, the largest angle at which a body placed upon an inclined plane will remain at rest. Same as *angle of repose* or *angle of friction*.—**Angle of the iris,** the angle at the peripheral portion of the anterior chamber of the eye formed by the cornea in front and the iris behind.—**Angle of the vertical,** in *astron.*, the angle at any place between the direction of gravity and a line drawn to the center of the earth. It is the difference between the astronomic and the geocentric latitudes, the former being always the greater. The angle is at maximum in latitude 45° when it amounts to 11½′. It is zero at the poles and equator.—**Angle of upset,** the angle through which the upper part of a portable balance-crane can swing, from its position parallel to the center line of the truck, before it would upset with the weight of the load.—**Angle of view,** in *photog.*, the central portion of the angle of field, which is distinct and sharp. It is extended by the use of stops.—**Angles of displacement.** See ★*displacement*.—**Axial angle,** the angle between the optic axes of a biaxial crystal.—**Bounding-angle,** in *shipbuilding*, an angle-bar forming the boundary of a bulkhead or flat by means of which it is attached to the other parts of an iron or steel vessel.—**Brocard angle,** the acute angle ω related to A, B, C, the angles of a plane triangle, by the equation cot. ω = cot. A + cot. B + cot. C. It is one of the three equal acute angles formed at the vertices by the sides of a triangle and the straight lines from a Brocard point to the vertices. See *Brocard* ★*point*.—**Brocard angle of a polygon,** that polygon being cyclic, the complement of half the angle subtended by any side of the polygon, the vertex of the angle being at the symmedian point.—**Epigastric angle,** the angle which the ensiform cartilage makes with the body of the sternum.—**Extinction angle.** See ★*extinction*.—**Goniac angle.** Same as ★*angle of mandibles*.—**Inscribed angle,** an angle whose sides are chords from the same point on the circle.—**Internal angle.** Same as *interior angle*. See *angle*3, 1.—**Limiting angle,** in *mech.*, the largest angle with the normal at which a force can be applied to a body resting upon a horizontal surface without producing motion. The limiting angle is independent of the size of the force and depends only upon the coefficient of friction of the quantity of which it affords a measure. It is equal to the angle of repose or angle of friction.—**Maxillary angle,** the angle formed by lines drawn from the most prominent points of the forehead and of the chin to meet at the most projecting point of the upper jaw.—**Nasial angle.** See ★*nasial*.—**Non-reposing angle.** See *reposing* ★*angle*.—**Polyhedral angle,** a solid angle.—**Reposing angle,** in the design of parts of a machine which are to roll one upon another, an angle between the resultant pressure and the plane tangent to the bearing surface such that when a limiting value is exceeded there is no



Angle of Contact.

tendency for the rolling surface to slip without rolling. When the angle is less than this limiting value the roll tends to slip and to become polygonal from wear. This angle may also be measured from the normal instead of from the tangent. It must be determined for any two materials by experiment, since it bears a relation to the so-called *angle of friction* or *angle of repose* in experiments on sliding. An angle beyond the critical value would then be called a *non-reposing angle.*— **Rolandic angle,** the angle formed by the upper edge of the hemisphere of the brain and the fissure of Rolando.— **Somatosplanchnic angle,** the angle formed in the vertebrate embryo by the junction of the somatic and splanchnic layers of mesoblast.— **Supplemental angles,** two angles whose sum equals two right angles.— **Supplementary angles.** Same as *supplemental* ★*angles.*— **Tanchord angle,** an angle between a tangent to a circle and a chord from the point of contact.— **View angle,** in *photog.,* the angle inclosed by a lens.

angle[3] (ang′gl), *v. t.*; pret. and pp. *angled,* ppr. *angling.* [*angle*[3], *n.*] To lead off or deflect (a body or element) from a direction parallel or perpendicular to another body or element to which or from which it is to move: as, to *angle* a rope.

The continuous change in direction experienced by the rope between the head-gear pulley and the drum in coiling on or off (the so-called "*angling*" of the rope) is a source of wear when the depth becomes considerable.
Encyc. Brit., XXVII. 121.

angle-bar, *n.* **3.** In *printing,* an iron bar which turns at a right angle a printed web of paper and mates it with another printed web.

Two general classes of the web press are made. In one, what is called the "*angle-bar*" is utilized to turn the sheets in order to assemble them from the different webs. The other is designated the "straight line," the sheet being run through the press without being diverted from a straight course.
Census Bulletin 216 (June 28, 1902), p. 63.

angle-bearing (ang′gl-bār″ing), *n.* A crank-shaft bearing attached to an engine-bed, the center line of its joint being placed at an angle of about 45° with the bed, the purpose of which is to effect that disposition of the metal best calculated to withstand the resultants of the strains due to the motion of the crank and connecting-rod. *Lockwood,* Dict. Mech. Eng. Terms.

angleberry (ang′gl-ber-i), *n.* [A perversion of *anbury.*] A fleshy excrescence found growing on the feet and other parts of sheep and cattle. Also spelled *anleberry.*

angle-board (ang′gl-bōrd), *n.* A board upon which pattern-makers plane their angles and hollows. It is traversed longitudinally with vee'd grooves of different depths to suit angles of different sizes, in which grooves the stuff is laid while being planed, a transverse strip near the end acting as a stop. *Lockwood,* Dict. Mech. Eng. Terms.

angle-bulb (ang′gl-bulb), *n.* A rolled bar of steel or iron, in the form of an angle with a bulb at the lower end of its long arm, used principally for deck-beams on steel ships.

angle-cutter (ang′gl-kut′ėr), *n.* A heavy machine used for cutting iron or steel angle-bars.

angled, *a.* **2.** A term applied to a billiard-ball which, when resting near the edge of a pocket, is so masked by the cushion that it cannot hit the desired object.

angle-frame (ang′gl-frām), *n.* A type of construction for the frame or skeleton of motor-vehicles in which the members that carry the weight and transfer it to the supporting springs, and thus to the axles, are made of steel angle or channel shapes to give greatest strength and stiffness with least weight of material. Sometimes for additional stiffness these angle- or channel-irons are reinforced with tough wood securely bolted to the steel. *Sci. Amer.,* LXXXVIII. 91.

angle-gage (ang′gl-gāj), *n.* **1.** A gage or standard carefully made to the exact value of the desired angle, used in testing the accuracy of the angles of screw-threads, cutting-tools, or machine-work of any kind.— **2.** Specifically, an instrument for setting the angle or incline of the top comb of a Heilmann cotton-combing machine. *Thornley,* Cotton-combing Machines, p. 166.

angle-hoop (ang′gl-hōp), *n.* A hoop made of angle-iron. Such hoops are sometimes used for stiffening the furnaces in Scotch boilers.

angle-joint (ang′gl-joint), *n.* In *carp.,* a joint between two pieces which are mitered together.

angle-meter, *n.* **2.** An instrument designed to show the variations in angular velocity of the revolving shaft of an engine. *Sci. Amer. Sup.,* Oct. 15, 1904.

angle-mirror (ang′gl-mir″or), *n.* A surveyor's instrument for observing and measuring angles and the positions of distant objects in relation to one another. It consists of two mirrors, one being sometimes adjustable to the other, supported in a metal frame.

angle-plate (ang′gl-plāt), *n.* An angle-chuck.

angle-prism (ang′gl-prizm), *n.* An instrument similar to the angle-mirror, employing prisms instead of mirrors.

angler, *n.* **3.** A general name of the pediculate fishes, from the presence of a modified free dorsal spine, or 'fishing-rod,' above the mouth.— **Marbled angler,** *Pterophryne histrio,* a fish of the family *Antennariidæ,* found in tropical parts of the Atlantic. It is remarkable, as are all of its relatives, for its form, color, and nest-building habits.

Anglesea penny. See ★*penny.*

angle-smith (ang′gl-smith), *n.* A blacksmith skilled in forging angle-bars, beams, and other profiled bars into the various forms in which they are used in shipbuilding.

angle-valve (ang′gl-valv), *n.* A form of lifting- or spindle-valve, in a globular casing, in which the spindle or stem enters the valve in the same axis as one of the openings, and the other outlet is at right angles to the axis of the spindle; much used with steam-radiators and in other places where a right-angled corner is to be turned and a valve is also required. The angle-valve opposes less resistance to the flow of fluid through it than the globe-valve.— **Angle check-valve,** an angle-valve which opens only to steam or water flowing in one direction.— **Angle stop-valve,** an angle-valve which has to be closed by hand to stop the flow in the pipes.

angle-wheel (ang′gl-hwēl), *n.* Any gear in which the teeth, instead of being parallel to the axis, make an angle with it; a helical gear; a twisted gear.

angle-wing (ang′gl-wing), *n.* Any one of several species of nymphalid butterflies whose wings are angular and excised, as species of the genera *Vanessa, Polygonia, Aglais,* and *Eu-vanessa.*

Anglicist (ang′gli-sist), *n.* One who favors or supports some proposition or movement relating to English or the English: specifically applied in history to one of those who favored the proposal to make the English language (and not Arabic or Sanskrit) the vehicle of instruction in those schools and colleges in India that were subsidized by the government during the administration of Lord William Bentinck (1828–35).

In describing the controversy between the "Orientalists" and the "*Anglicists*" [of the Committee of Public Instruction] which evoked Macaulay's famous minute . . . not a word is said [in Boulger's Life of Lord William Bentinck] of the champion Orientalist, Horace Wilson.
Athenæum, Sept. 24, 1892, p. 411.

Anglicity (ang-glis′i-ti), *n.* [NL. **Anglicitas,* < LL. *Anglicus,* Anglic.] Distinctively English quality, style, or character: as, *Anglicity* of speech.

Anglo-African (ang″glō-af′ri-kạn), *a.* and *n.* **I.** *a.* Pertaining to Africans, or persons of African descent, living among English-speaking peoples, as the Africans in the United States. *Keane,* Ethnology, p. 380.

II. *n.* An African living among English-speaking peoples.

Anglo-American pottery. See ★*pottery.*

Anglo-Asian (ang″glō-ā′shian), *a.* and *n.* **I.** *a.* Of or pertaining to England and Asia or to the English in Asia: as, *Anglo-Asian* enterprises.

II. *n.* An Anglo-Asiatic.

Anglo-Asiatic (ang″glō-ā-shi-at′ik), *a.* and *n.* **I.** *a.* **1.** Of or pertaining to both England (that is, Great Britain and Ireland) and Asia.— **2.** Relating to those Asiatics who are British subjects or are under British control, or who have become assimilated to the English in education, culture, etc.

II. *n.* An Asiatic who is under British rule.

Anglo-Australian (ang″glō-âs-trā′li-an), *a.* and *n.* **I.** *a.* Pertaining to Australians of English descent. *Keane,* Ethnology, p. 380.

II. *n.* An Australian of English descent.

Anglo-Chinese (ang″glō-chī-nēs′), *a.* and *n.* **I.** *a.* **1.** Of or pertaining to both England and China or to their inhabitants, etc.: as, *Anglo-Chinese* relations: an *Anglo-Chinese* alliance.— **2.** Established by the English in China or for the Chinese: as, an *Anglo-Chinese* college. —**3.** Written in English and Chinese, or prepared for the use of both English and Chinese readers: as, an *Anglo-Chinese* calendar; an *Anglo-Chinese* dictionary.

II. *n.* A Chinese who is under British rule or who is a British subject: as, the *Anglo-Chinese* of the Straits Settlements.

Anglo-Gallic (ang-glō-gal′ik), *a.* English and French; common to England and France. —**Anglo-Gallic money.** See ★*money.*

angloid (ang′gloid), *n.* [*angle*[2] + *-oid.* The more proper form would be **anguloid.*] A figure determined by three or more rays from the same point, taken in a certain order and such that no three consecutive rays are coplanar.

Anglo-Japanese (ang″glō-jap-ạ-nēs′), *a.* Of or pertaining to both England and Japan: as, an *Anglo-Japanese* alliance or understanding.

Anglomanist (ang′glō-mā-nist), *n.* [Irreg. < *Anglomania* + *-ist.*] An Anglomaniac: as, a rampant *Anglomanist. Macmillan's Mag.,* XLV. 475. [Rare.] *N. E. D.*

Anglophile, Anglophil (ang′glō-fil), *a.* and *n.* [LL. *Angli,* Englishmen, + Gr. *φίλος,* loving.] **I.** *a.* Friendly to England and English institutions; fond of English social life, manners, customs, etc.

When prudence dictated assistance to the Dutch, the Huguenots, or the '*Anglophile*' party in Scotland — the vile but convenient adjective is Mr. Beesly's — that aid was scanty and underhand.
Athenæum, March 26, 1892, p. 400.

II. *n.* One who admires or is friendly to England; a lover or admirer of English institutions, social life, manners, customs, etc.

Anglophone (ang′glō-fōn), *n.* [LGr. Ἀγγλοι, L. *Angli,* the Angles (English), + *φωνή,* sound.] A person who speaks the English language. *Deniker,* Races of Man, p. 508.

Anglo-Venetian (ang″glō-ve-nē′shian), *a.* and *n.* **I.** *a.* Connected with both England and Venice; specifically of Venetian origin but domiciled in England: as, an *Anglo-Venetian* seaman. *Geog. Jour.* (R. G. S.), XIII. 205.

II. *n.* A Venetian domiciled in or engaged in the service of England.

Anglovernacular (ang″glō-vėr-nak′ū-lär), *a.* Of or pertaining to both English and the vernacular: as, an *Anglovernacular* school. *Encyc. Brit.,* XXX. 467. [Rare.]

ango (äng′ō), *n.* [Native name.] In Samoa, a name applied to the turmeric-plant (*Curcuma longa*), the fleshy rhizome of which yields a yellow coloring matter which the natives use in ornamenting their bark cloth and for painting their skin. See *turmeric* and *huldee.*

angosturin (an-gos-tō′rin), *n.* [*Angostura* + *-in*[2].] A compound, with the empirical formula $C_9H_{12}O_5$, found in Angostura bark. It is bitter and is apparently a glucoside.

Angoumian (an-gō′mi-ạn), *a.* and *n.* [F. *Angoumois,* a former name of the district (department of Charente) in which Angoulême is situated.] **I.** *a.* In *geol.,* noting a division or substage of the Cretaceous system as recognized by the French geologists and constituting the upper part of the Turonian: essentially equivalent to the English Middle Chalk of the Upper Cretaceous.

II. *n.* The Angoumian division.

Angoumois grain-moth. See ★*grain-moth.*

Angræcum (an-grē′kum), *n.* [NL.] A genus of epiphytal orchids of tropical Africa, Madagascar, and Japan. There are at least 25 species known, of which the following are most common in cultivation in America: *A. articulatum, citratum, distichum, eburneum, Ellisii, Humboltii, falcatum, Leonis, modestum, pertusum,* and *superbum.* Most of these species need warm-house treatment.

angrite (ang′grīt), *n.* [*Angra* (*Angra* dos Reis in Brazil, locality of a meteorite) + *-ite*[2].] See ★*meteorite.*

angster (äng′stėr), *n.* [Late MHG. (Swiss) *angster.*] An early Swiss copper coin, struck in Zürich, of the value of half a rapen, or seven twelfths of a German pfennig.

Ångström pyrheliometer, unit. See ★*actinometer* and ★*unit.*

Anguillula stercoralis, a parasitic species of worm which has been found in the intestine in certain cases of tropical diarrhea. *Jour. Exper. Med.,* VI. 84.

anguilluloid (ang-gwil′ū-loid), *a.* [*Anguillula* + *-oid.*] Eel-like; resembling the *Anguillula.*

angular, *a.* **5.** In *astrol.,* placed in one of the four angles of a nativity. *Raphael,* Manual of Astrol., p. 154.— **Angular acceleration.** See ★*acceleration* and *unit of angular* ★*acceleration.*— **Angular energy.** See ★*energy.*— **Angular lead.** See ★*lead*[1].— **Angular leaf-spot.** See ★*leaf-spot.*— **Angular momentum.** See ★*momentum.*— **Angular point,** the vertex; the point common to the two rays of an angle. — **Unit of angular velocity,** the velocity which causes a rotating body to turn through a unit angle in unit time; an angular velocity of one radian per second.

II. *n.* In *ichth.,* a small bone on the lower posterior corner of the articulare: same as *angular bone.*

angulare (ang-gū-lā′rē), *n.* [NL. (sc. *os*, bone): see *angular.*] Same as *angular bone* (which see, under *angular*).

angularization (ang″gū-la-ri-zā′shọn), *n.* The act of angularizing or rendering angular; in *decorative art*, the transformation of a curved motive into a rectilinear one by the use of angles. *Haddon*, Evolution in Art, p. 112.

angularize (ang′gū-la-rīz), *v. t.*; pret. and pp. *angularized*, ppr. *angularizing.* [*angular* + *-ize.*] To render angular. *Haddon*, Evolution in Art, p. 112.

Angulatidæ (an-gū-lat′i-dē), *n. pl.* [NL., ⟨ *Angulata*, a group of the ammonites, + *-idæ.*] A family of ammonoid cephalopods or ammonites. They have compressed umbilicate shells with strong continuous ribs crossing the whorls and interrupted on the outer edge by a depressed zone. The septal sutures are highly complicated. Species occur in the Lias formation.

anguliform (ang′gū-li-fôrm″), *a.* [L. *angulus*, angle, + *forma*, form.] Bluntly pointed or bent. *Annals and Mag. Nat. Hist.*, Jan., 1903, p. 114.

angustisellate (an-gus-ti-sel′āt), *a.* [L. *angustus*, narrow, + *sella*, a saddle.] Having a narrow saddle: noting the form of the earliest septal suture in the coiled cephalopod shells and referring to the narrow saddle or forward prolongation of the suture in crossing the outer curve or venter of the shell. Contrasted with *latisellate* and *asellate.* The angustisellate stage characterizes only advanced and late forms of the ammonoids.

anhaline (an′ha-lin), *n.* [*Anhal(onium)* + *-ine*2.] A crystalline alkaloid, $C_{12}H_{15}NO_3$, found in *Anhalonium fissuratum.* It melts at 115° C. It produces, in frogs, a paralysis of the central nervous system.

anhalonidine (an-ha-lon′i-din), *n.* [*Anhalon(ium)* + *-id* + *-ine*2.] An alkaloid, $C_{12}H_{15}NO_3$, found in *Anhalonium Williamsii*, a cactus from which mescal buttons are obtained. It is crystalline and melts at 154° C.

anhalonine (an-hal′ọ-nin), *n.* [*Anhalon(ium)* + *-in*2.] Same as *anhalonidine.*

anhedonia (an-hē-dō′ni-ạ), *n.* [NL., ⟨ Gr. *ἀνήδονος*, giving no pleasure, ⟨ *ἀν-* priv. + *ἡδονή*, pleasure: see *hedonism.*] In *psychol.*, inability to feel pleasure: the opposite of *analgesia.*

One can distinguish many kinds of pathological depression. Sometimes it is mere passive joylessness and dreariness, discouragement, dejection, lack of taste and zest and spring. Professor Ribot has proposed the name *anhedonia* to designate this condition.

W. James, Var. of Religious Exper., p. 145.

anhedral (an-hē′dral), *a.* In *mineral.* and *petrog.*, characterized by the absence of the external form of a crystal, though having its molecular structure.

anhedron (an-hē′drọn), *n.*; pl. *anhedra* (-drạ). [Gr. *ἀν-* priv. + *ἕδρα*, base (side).] A mineral individual, for example, a constituent of a rock having the molecular structure of a crystal but not its external form.

anhistic (an-his′tik), *a.* Same as *anhistous.*

anhydrid, *n.*—**Phosphoric anhydrid,** phosphorus pentoxid, P_2O_5. By union with the elements of water in different proportions it forms meta-, pyro-, and orthophosphoric acids.

anhydrochromic (an-hī-drō-krō′mik), *a.* Noting the acid ($H_2Cr_2O_7$) which corresponds to ordinary red chromate of potash. Also known as *dichromic acid* and *pyrochromic acid.*

Anhydrous steam. See ★*steam.*

aniconic (an-ī-kon′ik), *a.* [Gr. *ἀν-* priv. + *εἰκών*, an image.] Not presenting an image or portraiture: in *Gr. antiq.*, applied to the rudest agalmata, or symbols of a divinity, consisting of a simple pillar or block without human attributes. See *agalma.*

He [Dr. Waldstein] does, however, point out that among the terra-cottas we have representations of the various stages of development of her [Hera's] agalmata: the rudest of all, the *anikonic.* . . . He promises, moreover, to publish . . . a curious pillar which may have been the actual *anikonic* image of the goddess.

Athenæum, July 1, 1893, p. 38.

anidalin (a-nid′a-lin), *n.* Same as ★*aristol.*

anil[2] (ăn-il′), *n.* [*anil(ine)*.] A derivative of aniline containing the group NC_6H_5.

añil (ăn-yēl′), *n.* [Sp. *añil*, lit. indigo: see *aniline.*] A Cuban name of the blue variety of the vaqueta, a bass-like fish of the West Indies, *Hypoplectrus unicolor* (variety *indigo* of Poey).

anilao (ä-nē′lou), *n.* [Philippine name.] A name in the Philippines of *Colona serratifolia*, a shrub belonging to the linden family, the bark of which yields a strong bast fiber.

anilido. [*anil* + *-id-* + *-o*[1].] Noting the group NHC_6H_5, derived from aniline: as, *anilido*-acetic acid, $CH_2NHC_6H_5CO_2H$: also used as an adjective: as, the *anilido*-group.

Aniline ★black, ★green, ★orange, ★process. See the nouns.—**Aniline salt,** a commercial name for the colorless crystalline salt formed by neutralizing aniline with hydrochloric acid. It has the formula $C_6H_5NH_2HCl$, and is known chemically as aniline hydrochlorid. Large quantities are used in the dyeing and printing of aniline black.—**Aniline spirits, yellow.** See *tin* ★*spirits,* ★*yellow.*

anilism (an′i-lizm), *n.* An illness caused by inhaling the vapor of aniline, not uncommon in workers in aniline-black dye-houses. It comes on suddenly, the lips turn purple, and temporary unconsciousness often ensues.

Animal color. See ★*color.*—**Animal kingdom.** According to recent conservative estimates, the animal kingdom consists of about 386,000 species of living animals and about 160,000 described species of fossil animals, or of about 550,000 species in all.—**Animal mechanics.** See ★*mechanics.*—**Animal mound.** See the extract.

The next class is composed of the "*animal mounds*," or mounds in which the ground plan is more or less irregular, and is thought to resemble animals, birds, and even human beings, though it is admitted that this resemblance is often imaginary, and that there is no evidence that the builders of these works intended to copy any such forms. . . . Mounds of this class are common in Wisconsin, and are also found in Ohio and Georgia. They are not burial mounds, though they are not unfrequently grouped with conical mounds that inclose human remains, as they are also with embankments and inclosures,—the grouping being always without any apparent order.

Smithsonian Report, 1891, p. 559.

Animal photography. See ★*photography.*—**Animal pole.** See ★*pole.*

animate, *a.* 4. In *gram.*, referring to living things as indicated by a difference of form in the designating word: said of gender in some languages. See the quotation.

The distinction between *animate* and inanimate gender is still preserved in both Penobscot and Abenaki.

Amer. Anthropologist, Jan.–March, 1902, p. 27.

Animated oat. Same as *animal oat*; see *oat*, 1 (*b*).

animatism (an′i-mā-tizm), *n.* [*animate, a.*, + *-ism.*] That form of animism in which objects and phenomena are vaguely regarded as having personality and will-power, but not as possessing separable souls.

animato (ä-ni-mä′tō), *a.* [It.] In *music*, lively; with animation; usually, somewhat quick and with spirit.

animatograph (an-i-mat′ọ-gråf), *n.* [L. *animatus*, alive (see *animate, a.*), + *γράφειν*, write.] 1. A cinematograph.—2. A special form of photographic camera for taking a series of pictures on films.

anime, *n.*—**Brazilian anime.** Same as *anime*, 3.

animé (an-i-mā′), *a.* [F., ⟨ L. *animatus*, animate: see *animate, a.*] In *her.*, animated, excited; showing a desire to fight: said of an animal and represented by giving the eyes, etc., a tincture different from that of the body.

animetta (an-i-met′ạ), *n.* [It.] A medieval term for the veil or cloth used to cover the chalice or eucharistic cup.

animi, *n.* Same as *anime.*

Animikie (an-im-i-kē′), *n.* [A local name.] A name proposed by T. Sterry Hunt in 1873, and used by the Geological Survey of Canada and by the Natural History Survey of Minnesota, for a group of iron-bearing rocks, slates, schists, and sandstones which form the middle subdivision of the Algonkian as the latter term is used by the United States Geological Survey. In Canada the group is regarded as Cambrian in age, but in the Lake Superior district, especially in Minnesota, where these rocks carry the iron ore of the Mesaba range, they are referred to the Precambrian.

animikite (a-nim′i-kīt), *n.* [Said to be from Ind. *animike*, thunder, + *-ite*2.] An antimonide of silver from Silver Islet, Lake Superior.

animosity, *n.* 3. In Spinoza's philosophy, the desire by which each man endeavors to preserve his own being after the guidance of reason alone; or, as sometimes interpreted, the steadfast and intelligent purpose to promote one's own welfare.

animotheism (an″i-mọ-thē′izm), *n.* [L. *anima*, soul, life (or *animus*, mind?), + *θεός*, God, + *-ism.*] The belief that all things, but especially plants, animals, and the heavenly bodies, are conscious or animate beings, and that they possess supernatural, divine powers. See *animism.* *Ward*, Dynamic Sociol., II. 258.

anis, *n.* A simplified spelling of *anise.*

anisado (ä-ni-sä′dō), *n.* [Sp.: see *anisated.*] A native drink made in the Philippine Islands. It contains the poisonous principle of wood alcohol, and United States soldiers and employees have been forbidden its use. *Army and Navy Journal*, Dec. 7, 1901.

anisamic (an-i-sam′ik), *a.* [*anis(ic)* + *am(ine)* + *-ic.*] Noting an acid, a derivative of trimethyl benzene, found in balsam of Tolu and of Peru.

anisated (an′i-sā-ted), *p. a.* [NL. **anisatus*, ⟨ L. *anisum*, anise.] Mixed or flavored with anise-seed. *Syd. Soc. Lex.*

Anisian (a-niz′i-ạn), *a.* and *n.* A name given by Austrian geologists to a division of the Mediterranean Triassic deposits holding a position at the top of the Lower Trias.

anisidine (a-nis′i-din), *n.* [L. *anisum*, anise, + *-id*[1] + *-ine*2.] The methyl ether of aminophenol, $C_6H_4(NH_2)OCH_3$. The name is applied especially to the ortho compound, which is an oil that boils at 218° C., and to the para compound, a solid which melts at 56° C. and boils at 240° C.—**Anisidine ponceau, scarlet.** See ★*scarlet.*

anisil (an′i-sil), *n.* [L. *anisum*, anise, + *-il.*] The dimethyl ether of paradihydroxybenzil, $CH_3OC_6H_4COCOC_6H_4OCH_3$. It crystallizes in golden-yellow needles which melt at 133° C.

anisilic (an-i-sil′ik), *a.* Noting an acid, $(C_6H_4OH)_2C(OH)CO_2H$, the dimethyl ether of dihydroxydiphenyl glycolic acid. It is formed together with anisic acid when anisil is boiled with alcoholic potash. It crystallizes in needles which melt at 164° C. It is named officially the *dimethyl ether of diphenylolmethanolmethylic acid.*

Anisoceratidæ (a-nī-sō-se-rat′i-dē) *n. pl.* [NL., ⟨ *Anisoceras* (⟨Gr. *ἄνισος*, unequal, + *κέρας* (*κερατ-*), horn), + *-idæ.*] A family of ammonoid cephalopods or ammonites having uncoiled shells terminating in a crook, the volutions bearing tubercles and ribs. The species are found in the Cretaceous formation.

Anisochætodon (a-nī-sō-kē′tọ-don), *n.* [NL., ⟨ Gr. *ἄνισος*, unequal, + *Chætodon.*] A genus of butterfly-fishes of the family *Chætodontidæ.*

anisochela (a-nī-sō-kē′lạ), *n.*; pl. *anisochelæ* (-lē). Same as ★*anisochele.*

anisochele (a-nī′sō-kēl), *n.* [Gr. *ἄνισος*, unequal, + *χηλή*, a crab's claw.] In the nomenclature of the spicular elements of sponges, a C-shaped monaxial rhabd having different arrangements of the processes at the two ends. See *spongespicule.*

anisocnemic (a-nī-sō-nē′mik), *a.* [Gr. *ἀν-* priv. + *isocnemic.*] In anthozoans, a term used to distinguish a unilateral pair composed of two unequal mesenteries: contrasted with *isocnemic.* *Annals and Mag. Nat. Hist.*, Aug., 1902, p. 105.

anisocoria (a-nī-sō-kō′ri-ạ), *n.* [NL., ⟨ Gr. *ἄνισος*, unequal, + *κόρη*, pupil of the eye.] Inequality in size of the pupils of the two eyes.

anisocotyly (a-nī-sō-kot′i-li), *n.* In *bot.*, the unequal development of cotyledons in dicotyledonous plants.

anisocytosis (an-ī-sō-sī-tō′sis), *n.* [NL., ⟨ Gr. *ἄνισος*, unequal, + *κύτος*, a hollow (a cell), + *-osis.*] Inequality in size of the cells of a system, specifically of the red blood-corpuscles.

anisogamous (an-ī-sog′a-mus), *a.* Characterized by anisogamy, or conjugation between sharply differentiated male and female gametes.

anisogamy (an-ī-sog′a-mi), *n.* [Gr. *ἄνισος*, unequal, + *γάμος*, marriage.] In *biol.*, conjugation between dissimilar gametes or reproductive cells.

anisohypercytosis (an″ī-sō-hī″pėr-sī-tō′sis), *n.* [NL., ⟨ Gr. *ἄνισος*, unequal, + *ὑπέρ*, over, + *κύτος*, a hollow (a cell), + *-osis.*] An increase in the number of the leucocytes, with abnormal percentage relations of the neutrophilic cells, as regards the distribution of the different nuclear forms.

anisohypocytosis (an″ī-sō-hī″pō-sī-tō′sis), *n.* [NL., ⟨ Gr. *ἄνισος*, unequal, + *ὑπό*, under, + *κύτος*, a hollow (a cell), + *-osis.*] A decrease in the number of the leucocytes with abnormal relations of the neutrophilic cells, as regards the percentage distribution of the different nuclear forms.

anisoin (an-is′ọ-in), *n.* [L. *anisum*, anise, + *-in*2.] The dimethyl ether of paradihydroxybenzoin, $CH_3OC_6H_4CH_2COC_6H_4OCH_3$. It consists of needles which melt at 110° C.

anisol (an′i-sōl), *n.* [Also *anisole* †; L. *anisum*, anise, + *-ol.*] 1. Methyl phenyl ether, $C_6H_5OCH_3$, formed by distilling anisic acid with barium hydroxid. It is an oil with a pleasant odor and boils at 154° C.—2. A general name of derivatives of methyl phenyl ether.

anisoline (a-nis'ō-lin), *n.* [As *anisol* + *-ine*2.] A basic color of the xanthene group. It is comparatively fast to light. Also called *rhodamine 3 B.*

Anisometric texture, in *petrog.*, the texture of granular rocks when the mineral grains are of various sizes. It is contrasted with the *isometric granular texture*, where the grains are approximately of the same size.

anisometrope (a-nī″sō-met'rōp), *n.* [See *anisometropia.*] One who suffers from anisometropia, or inequality of refraction in the two eyes.

It was thought that *anisometropes* who fixed correctly could not have binocular vision.
Optical Jour., June 2, 1904, p. 975.

Anisomyaria (a-nī-sō-mī-ā'ri-ạ), *n. pl.* [NL., < Gr. *ἄνισος*, unequal, + *μῦς* (*μυ-*) muscle, + *-aria.*] A group of the pelecypod mollusks, or *Acephala*, holding an intermediate position between the *Monomyaria*, or those with but one adductor muscle, and the *Dimyaria*, or those having two, the normal number, fully developed. In the *Anisomyaria* the anterior adductors are much more prominently developed than the posterior. These muscular differences have frequently been used as a basis of classification; but it is now recognized that the terms *Monomyaria* and *Anisomyaria* designate different stages of degeneration in the musculature.

anisomyarian (a-nī-sō-mī-ā'ri-ạn), *a.* and *n.* Pertaining to or having the characters of the *Anisomyaria*. Also used substantively.

anisonormocytosis (a-nī″sō-nôr″mō-sī-tō'sis), *n.* [NL., < Gr. *ἄνισος*, unequal, + L. *norma*, rule, norm, + *κύτος*, a hollow (a cell), + *osis.*] A normal number of the leucocytes with abnormal relations of the neutrophilic cells, as regards the percentage distribution of the different nuclear forms.

anisophylly (a-nī-sof'i-li), *n.* [Gr. *ἄνισος*, unequal, + *φύλλον*, leaf.] Dissimilarity in leaves due to difference of position, as in floating and submersed leaves. *Krasser.*

Anisoplia (a-nī-sop'li-ạ), *n.* [NL. (Megerle, 1825), < Gr. *ἄνισος*, unequal, + *ὅπλα*, arms.] An important genus of lamellicorn beetles of old-world distribution. It includes some serious pests, especially *A. Austriaca*, which occasionally does great damage to the wheat crop of Russia. About 40 species are known.

anisopod (a-nī'sō-pod), *a.* and *n.* [NL. *anisopus* (*-pod-*), < Gr. *ἄνισος*, unequal, + *πούς* (*ποδ-*), foot.] **I.** *a.* Having unequal feet; specifically, having the characters of the *Anisopoda*.

II. *n.* One of the *Anisopoda*.

Anisopoda (a-nī-sop'ō-dạ), *n. pl.* [NL., neut. pl. of *anisopus* (*-pod-*): see ★*anisopod.*] A tribe or suborder of arthrostracous crustaceans having a body more or less resembling that of an amphipod, and the abdomen with two-branched swimming-feet which do not function as gills, or with fin-like feet. It includes the families *Tanaidæ* and *Pranizidæ*.

Anisoptera (a-nī-sop'tẹ-rạ), *n. pl.* [NL., < Gr. *ἄνισος*, unequal, + *πτερόν*, wing.] A suborder of insects of the order *Odonata* or dragon-flies. It includes the families in which the hind wings are slightly larger than the front wings, as distinguished from the *Zygoptera*, in which the wings are of equal size or the hind pair are somewhat the smaller.

anisospore (a-nī'sō-spōr), *n.* [NL. **anisospora*, < Gr. *ἄνισος*, unequal, + *σπορά*, seed (spore).] A form of spore produced among colonial radiolarians by the union of gametes of unlike size, as microspores and macrospores: contrasted with ★*isospore*, 3.

Anisostremus (a-nī-sō-trē'mus), *n.* [NL., < Gr. *ἄνισος*, unequal, + *τρῆμα*, hole.] A genus of grunts of the family *Hæmulonidæ*, having numerous species in tropical America. They are remarkable for their broad bodies and sometimes for bright colors. *A. surinamensis*, the pompon, is the commonest species.

anisotropic, *a.* **3.** Having predetermined axes: opposed to *isotropic.*—**Anisotropic medium,** a medium in which the strain due to a given stress varies with the direction in which the stress is applied; an æolotropic medium.

anisotropical (a-nī-sō-trop'i-kạl), *a.* Same as *anisotropic*; æolotropic.

Mr. A. Broca a short time ago stated that in a powerful field there are produced simultaneously both ordinary cathode rays, around the field according to well-known laws, and another kind of rays following the lines of force. These phenomena have likewise been investigated by Mr. Pellat, who accounted for them on the hypothesis of an *anisotropical* friction the cathode ray particles undergo in the magnetic field.
Sci. Amer. Sup., Aug. 27, 1904, p. 23960.

anisotropically (a-nī-sō-trop'i-kạl-i), *adv.* In an anisotropic manner.

anisotropy, *n.* **2.** In *embryol.*, the condition of having the axes predetermined: applied to certain differentiated animal ova: opposed to *isotropy.*

anito (ä-nē'tō), *n.* [Tagalog; perhaps altered, under Sp. influences, from an orig. **antu*, Malay *antu*, *hantu*, a spirit.] An ancestral spirit worshiped as a protecting household deity by the pagan Malay peoples of the Philippine Islands, and frequently represented by an image of wood or other material which is carefully preserved.

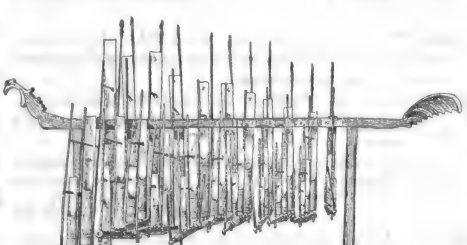
But, before Islam, ancestor worship, as has long been known, was widely prevalent. In almost every locality, every hut has its *Anito* with its special place, its own dwelling; there are *Anito* pictures and images, certain trees and, indeed, certain animals in which some *Anito* resides.
Smithsonian Rep., 1899, p. 522.

ankee (ang'kē), *n.* [Indian name in California.] The barn-yard grass *Echinochloa Crus-galli*, the seeds of which are ground into flour by the Mohave Indians. [Southern California.]

anker, *n.* and *v.* A simplified spelling of *anchor.*

ankle, *n.*—**Cocked ankle,** knuckling or partial dislocation of the fetlock-joint of the horse, an unsoundness predisposing the animal to stumbling and to fracture of the pastern-bone.

anklong (ang'klong), *n.* [Also **anklung* (?), Malay and Jav. *anklung.*] A musical instrument used in Java and other parts of Malaysia, consisting of bamboo tubes so cut that when struck



Anklong.
(After original in the Metropolitan Museum, New York.)

or shaken they give definite tones. Usually the tubes are in pairs tuned at the interval of the fifth.

ankoot (an'köt), *v. i.* [Eskimo, *angakut, angakok, angekok*, a shaman: see *angekok.*] To perform shamanistic ceremonies: a term used by whalers who frequent Hudson and Baffin bays.

ankylite (an'ki-līt), *n.* Same as ★*ancylite.*

ankyloglossia (ang″ki-lō-glos'si-ạ), *n.* See ★*ankyloglossus.*

ankyloglossus (ang″ ki-lō-glos'us), *n.* [Gr. *ἀγκύλος*, bent, + *γλῶσσα*, tongue.] Impeded movements of the tongue due to adhesions to the neighboring parts. Also called *ankyloglossia.*

ankylosed (ang'ki-lōst), *p. a.* [See *ankylose.*] Grown together: said of bones which are primitively separate.

Ankylostoma (ang-ki-los'tọ-mạ), *n.* Same as *Ancylostoma.*

ankylostomiasis, *n.* Same as ★*ancylostomiasis.*

anlage (än'lä″ge) *n.*; pl. *anlagen* (-gen). [G., foundation, < *anlegen*, < *an*, on, + *legen*, lay, found.] In *embryol.*, the first indication of a developing organ in the embryo; a rudiment, in the sense of a simple beginning.

annaline (an'ạ-lin), *n.* [Formation doubtful.] A name sometimes given to an artificially prepared calcium sulphate used by paper-makers.

annalism (an'ạ-lizm), *n.* The writing of annals. *W. Taylor.* [Rare.] *N. E. D.*

Annam ulcer. See ★*ulcer.*

Annealing lamp. See ★*lamp.*

annealing-machine (ạ-nēl'ing-mạ-shēn″), *n.* A heating-furnace consisting of a long box of steel lined with some refractory material, open at each end, and fitted with a number of gas-burners. Within the furnace and extending beyond it at each end is a series of rolls connected by link-belting and turning together, all being supported by bearings inside the furnace or by tables at each end outside the furnace. The bars, rods, strips, and tubes to be annealed are laid on the rolls outside the furnace, carried by their motion into and through the furnace at a speed just sufficient for the annealing, and discharged at the distant end. In another form, for large pipe, a link-belt conveyer is used to carry the pipes through the furnace.

annerödite (a-ner'ė-dīt), *n.* [Also *annerodite, aannerödite, aanerodite; Ånneröd, Åanneröd* (see

def.) + *-ite*2.] A rare niobate of uranium, yttrium, and other elements, near samarskite in composition but related to columbite in form: found at Ånneröd, Norway.

Anneslia (a-nes'li-ạ), *n.* [NL. (Salisbury, 1807), named in honor of George *Annesley* (1769–1844), Viscount Valentia in Ireland and Earl of Mountmorris, who traveled and botanized in India.] A genus of plants belonging to the family *Mimosaceæ*, to which Bentham in 1840 gave the name *Calliandra*. See *Calliandra.*

annexable, annexible (ạ-neks'ạ-bl, i-bl), *a.* That may be annexed or added; attachable. *Cockeram.*

annexive (ạ-nek'siv), *a.* Expressing or serving to express annexion or addition; additive: as, an *annexive* conjunction.

annidalin (ạ-nid'ạ-lin), *n.* See ★*aristol.*

Anniellidæ, *n. pl.* Same as *Aniellidæ.*

annihilability (ạ-nī″hi-la-bil'i-ti), *n.* The capability of being annihilated. *Dr. H. More*, Immortal. of the Soul, p. 228.

annotative (an'ọ-tā-tiv), *a.* Of the nature of annotation: as, *annotative* remarks.

annotine, *n.* **2.** A tree that bears fruit of two years at the same time, the fruit of the past year persisting, while that of the present year is growing.

announcement, *n.* **2.** In *card-playing*, a bid; a meld.

The player [at boston] who makes the highest *announcement* is entitled, if successful, to the contents of the pool, and a certain number of counters from each of the players; but if he be unsuccessful he must pay to the pool and to each of the other players a certain number of counters.
American Hoyle, p. 243.

annual. I. *a.*—**Annual equation.** See ★*equation.*—**Annual range,** in *meteor.*, that portion of the total yearly range which may be supposed to be periodic and the simple and direct result of the annual revolution of the earth in its orbit; that portion of the annual range that is represented by the first term of the harmonic series or Fourier-Bessel series, depending on the simple mean longitude of the earth in its orbit around the sun.—**Annual variation,** in *meteor.*, the departure from the annual mean; the extreme total range during a year; the difference between the absolute maximum and absolute minimum or between their departures from the annual mean. The normal annual variation is the average of the annual variations for many years and is less than the extreme or absolute variation for those years.—**Annual working.** See ★*working.*

II. *n.*, **3.** Plants become annuals because of the limitations of the seasons. Some plants die outright at the approach of cold or dry weather and leave only their seeds to carry the species over to another season; these are the true annuals. Others, truly perennial in their native climates, become annual in short-season climates by being killed by frost; these are *plur-annuals.* Others carry themselves over by means of bulbs; these are *pseud-annuals.*

annualize (an'ū-ạl-īz), *v. i.*; pret. and pp. *annualized*, ppr. *annualizing.* To contribute to an annual publication; write for an annual. See *annual*, 4. [Rare.]

annuity, *n.*—**Consolidated annuities,** certain annuities or annual payments representing interest on various stocks issued by the British government at different times and at different rates, which were consolidated, under an act of 1751, into one fund, commonly known as *consols* (which see).

Annular kiln. See ★*kiln.*—**Annular ligament.** (*c*) A ligament attached at each extremity to a tubercle on the inner surface of the articular process of the atlas, which serves to retain the odontoid process of the axis. (*d*) The ligament which attaches the stapes to the rim of the fenestra ovalis.

Annularia (an-ū-lā'ri-ạ), *n.* [NL. (Sternberg, 1822), < L. *annularis*, annular.] A genus of fossil plants of the family *Calamariaceæ*, having slender, branching, usually striate stems bearing whorls of lanceolate or spatulate leaves with a median nerve, which are fused at their bases into a sheath or annulus. The fruit is a heterosporous spike or strobile. It is not yet certain whether the specimens referred to this genus represent independent herbaceous plants or the smaller ultimate branches of calamitean plants. They are very abundant in the Carboniferous formation and range from the Devonian to the Permian.

Annulosiphonata (an″ū-lō-sī-fọ-nā'tạ), *n. pl.* [L. *annulus*, a ring, + *sipho*, siphon, pipe, + *-ata*2.] In Hyatt's classification, a group of extinct cephalopods, including straight and curved shells, in which the siphuncle is thickened by organic deposits into solid rays extending into the septal chambers. *Actinoceras* and *Huronia* are examples. The species are chiefly from Silurian rocks.

annulus, *n.* **3.** (*d*) In the *Equisetaceæ*, the sheath below the spike formed by the union of the bases of the leaves. (*e*) In diatoms, the rim of silex formed within the frustules of some genera. (*f*) The fleshy rim of the

corolla in milkweeds.—**4.** (*c*) One of the external subdivisions of the body of a leech, resembling a segment of the body of an earthworm. A single annulus, however, does not correspond to an internal segment. From 3 to 5 or even 12 annuli correspond to a segment in different genera.

Anodal diffusion, cataphoresis.

anodic[1], *a.* **2.** Of or pertaining to the anode. —**Anodic rays**, in *elect.*, radiations issuing from the positive terminal or anode of a vacuum-tube.

anodyne, *n.*—**Hoffmann's anodyne**, a mixture of ether, alcohol, and ethereal oil, the last-named constituent containing ethyl sulphate, much used in medicine as a stimulant, antispasmodic, and anodyne.

anodynin (a-nod′i-nin), *n.* Same as *antipyrin*.

anoësis (an-ō-ē′sis), *n.* [NL., ⟨ Gr. *á-* priv. + *νόησις*, understanding.] In *psychol.*, a hypothetic state of consciousness in which there is sentience but no thought; immediate experience without reference to an object. Anoësis is sometimes predicated of primitive organisms, sometimes of the marginal processes of the human consciousness. It is used, more correctly, simply as a limiting conception, the logical zero-point of intellectual function.

> But it is conceivable that they [items or particulars] should be given and no intellectual synthesis ensue; such a consciousness has been happily named anoetic. Whether or no it actually exists is another matter: it is a conceivable limit, and has the theoretical usefulness of limiting conceptions generally. But relative *anoesis* suffices here. *Encyc. Brit.*, XXXII. 63.

anœstrous (an-es′trus), *a.* [Gr. *ἀν-* priv. + *οἶστρος*, vehement desire.] In *zoöl.*, without sexual desire; relating to the completed period of sexual desire in female mammals. —**Anœstrous cycle**, a single completed period of sexual desire not immediately followed by another. This comprises the ★*proœstrum*, ★*œstrus*, and ★*metœstrum*.

anœstrum (an-es′trum), *n.*; pl. *anœstra* (-trä). [NL.: see ★*anœstrous*.] In *zoöl.*, an interval between periods in 'heat' when the female mammal has no sexual desire.

anoëtic, *a.* **2.** In *psychol.*, relating to or characterized by anoësis. *G. F. Stout*, Anal. Psychol., i. 51.

anogenic, *a.* **2.** In *petrol.*, noting igneous rocks which originate by ascension from the earth's interior: synonymous with *eruptive*.

anogenital (an-ō-jen′i-tal), *a.* Relating to the anus and the genital organs; noting the region of the body including these parts.—**Anogenital band**, the rudimentary perineum in the embryo.

anol (an′ōl), *n.* [*an(ise)* + *-ol.*] Parapropenyl phenol, $CH_3CH:CHC_6H_4OH$, usually called *para-anol*. It crystallizes in leaflets which melt at 93°. Its methyl ether, anethol, is found in anise-oil.

Anomala, *n.* **4.** *pl.* A tribe of brachyurous crustaceans containing the families *Dromidæ*, *Homolidæ*, and *Raninidæ*.

Anomalocladina (a-nom″a-lō-kla-dī′nä), *n. pl.* [NL., ⟨ Gr. *ἀνώμαλος*, irregular, + *κλάδος*, twig, + *-ina*[2].] In Zittel's classification, a suborder of tetractinellid lithistid sponges. In this group the skeletal spicules are mostly short rays with inflated heads which are often digitate or branched and united with the processes of adjacent rays.

Anomalocrinidæ (a-nom″a-lō-krin′i-dē), *n. pl.* [NL., ⟨ *Anomalocrinus* (⟨ Gr. *ἀνώμαλος*, irregular, + *κρίνον*, a lily (see *crinoid*), + *-idæ*.] A family of fistulate crinoids having radial plates of very irregular form and arms with pinnules on one side only. It is represented by a single genus, *Anomalocrinus*, from the Silurian of North America.

Anomalocystidæ (a-nom″a-lō-sis′ti-dē), *n. pl.* [NL., ⟨ *Anomalocystites* + *-idæ*.] In Woodward's classification, a family of cystidean echinoderms which have a compressed calyx, the sides of which are dissimilarly plated, generally with two free arms and a short stem. They occur in rocks of Cambrian and Silurian age. Properly, in uncontracted form, *Anomalocystitidæ*.

Anomalocystites (a-nom″a-lō-sis-tī′tēz), *n.* [NL., ⟨ Gr. *ἀνώμαλος*, irregular, + *κύστις*, bladder, + *-ιτης*, *-ite*[2].] The typical genus of the family *Anomalocystidæ*.

Anomalodesmacea (a-nom″a-lō-des-mā′sē-ä), *n. pl.* [NL., ⟨ Gr. *ἀνώμαλος*, irregular, + *δέσμα*, a band, + *-acea*.] In Dall's classification of the *Pelecypoda*, an order comprising burrowing shells with nearly edentulous hinge, the mantle lobes more or less completely united, leaving two siphonal openings, a pedal opening, and sometimes a fourth opening. The valves are generally unequal. The group includes many recent and late fossil forms, and in general expression is archaic, specially in regard to hinge-structure, which reproduces that of the Silurian and Devonian paleoconchs.

anomalodesmacean (a-nom″a-lō-des-mā′sē-an), *a.* and *n.* **I.** *a.* Having the characters of or pertaining to the *Anomalodesmacea*.

II. *a.* A member of the order *Anomalodesmacea*.

anomalodesmaceous (a-nom″a-lō-des-mā′shius), *a.* [Gr. *ἀνώμαλος*, irregular, + *δεσμός* or *δέσμα*, a band, + *-aceous*.] Same as ★*anomalodesmacean*.

Anomalon (a-nom′a-lon), *n.* [NL. (Jurine, 1807), ⟨ Gr. *ἀνώμαλος*, neut. *ἀνώμαλον*, irregular: see *anomalous*.] An important genus of hymenopterous insects of the family *Ichneumonidæ* and typical of the subfamily *Anomalinæ*. It comprises more than 150 species, many of them important enemies of injurious insects. Most of the described species occur in Europe and North America, but the genus is still more widely distributed.

Anomalous dispersion. See ★*dispersion*.—**Anomalous double refraction.** See ★*refraction*.

anomaly, *n.* **4.** In *meteor.*, the amount by which a given observed quantity is greater or less than an assumed ideal or normal value; a departure.

Anomiacea (a-nō-mi-ā′sē-ä), *n. pl.* [NL., ⟨ *Anomia* + *-acea*.] A suborder of bivalve mollusks of the order *Filibranchiata*. It includes forms which have the heart dorsal to the rectum, a single aorta, small foot, and very small anterior adductor. The shell is oyster-shaped, without hinge-teeth, and is attached by a calcified byssus which passes through a lobe in the right valve. It includes the single family *Anomiidæ*.

anomocephalus (an″ō-mō-sef′a-lus), *n.*; pl. *anomocephali* (-lī). [Gr. *ἄνομος*, irregular, + *κεφαλή*, head.] One with an irregularly shaped head.

anomure (an′ō-mūr), *n.* [As NL. *Anomura*.] One of the anomural or irregular-tailed crustaceans; an anomuran.

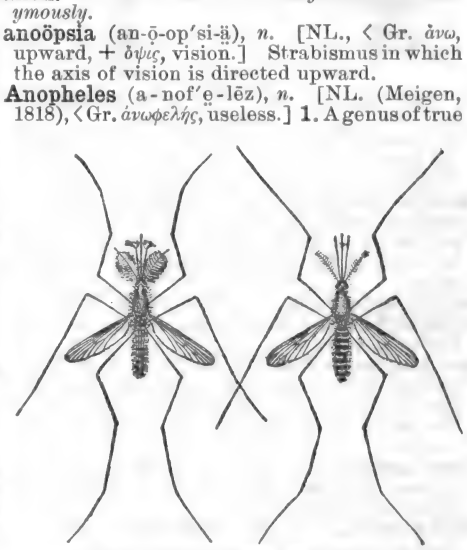
anomy, *n.* **2.** As used by Pearson and others, a breach in the routine of perceptions. See the extract.

> In our ignorance we ought to consider before experience that nature may consist of all routines, all *anomies*, or a mixture of the two in any proportion whatever.
> *K. Pearson*, Gram. of Sci., iv. 15.

anon. An abbreviation of *anonymous* and *anonymously*.

anoöpsia (an-ō-op′si-ä), *n.* [NL., ⟨ Gr. *ἀνω*, upward, + *ὄψις*, vision.] Strabismus in which the axis of vision is directed upward.

Anopheles (a-nof′e-lēz), *n.* [NL. (Meigen, 1818), ⟨ Gr. *ἀνωφελής*, useless.] **1.** A genus of true



Malarial Mosquito (*Anopheles maculipennis*).
Male at left; female at right. Enlarged. (After Howard, U. S. D. A.)

mosquitos (dipterous family *Culicidæ*), distinguished from the typical genus *Culex* by the long palpi of the female. The mosquitos of this genus are the true secondary hosts of the causative organisms of malaria, which undergo their sexual development only in the stomach of an anopheles. From this fact it results that these mosquitos convey the disease from malarial patients to healthy individuals.

2. [*l. c.*] An insect of this genus.

Anophelinæ (a-nof-e-lī′nē), *n. pl.* [NL., ⟨ *Anopheles* + *-inæ*.] A subfamily of mosquitos (family *Culicidæ*), comprising *Anopheles* and its immediate allies. In both sexes the palpi are about as long as the proboscis, and the terminal joint is spatulate or clubbed in the male; in the wings the first submarginal cell is as long as or longer than the second posterior cell.

anopisthographic (an-ō-pis-thō-graf′ik), *a.* [Gr. *ἀν-* priv. + *ὄπισθεν*, at the back, + *γράφειν*, write.] Not written or printed upon at the back; written or printed upon on one side only, as a proof or a broadside.

Anoplagonus (an-ō-plag′ō-nus), *n.* [NL., ⟨ Gr. *ἄνοπλος*, unarmed, + *Agonus*.] A genus of sea-poachers of the family *Agonidæ*, found in the North Pacific.

anoplan (an-op′lan), *a.* and *n.* [*Anopla* + *-an*.] **I.** *a.* Pertaining to or resembling the *Anopla*.

II. *n.* A nemertean worm of the section *Anopla*.

Anoplia (an-op′li-ä), *n. pl.* [NL., ⟨ Gr. *ἄνοπλος*, not armed, ⟨ *ἀν-*, not, + *ὅπλα*, arms.] A tribe of lithistidan *Tetractinellida*, having no ectosomal spicules or microscleres. It contains the families *Azoricidæ* and *Anomocladidæ*, together with extinct forms.

anoplian (an-op′li-an), *a.* and *n.* [*Anoplia* + *-an*.] **I.** *a.* Pertaining to or having the characters of the *Anoplia*.

II. *n.* One of the *Anoplia*.

Anoplogaster (an-op-lō-gas′tėr), *n.* [NL., ⟨ Gr. *ἄνοπλος*, unarmed, + *γαστήρ*, belly.] A genus of beryceoid fishes found in the abysses of the Atlantic.

Anoplophora (an-op-lof′ō-rä), *n.* [NL., ⟨ Gr. *ἄνοπλος*, unarmed, + *-φορος*, ⟨ *φέρειν*, bear.] A genus of naiads from the Triassic formation of Germany.

Anoplotheca (an-op-lō-thē′kä), *n.* [NL., ⟨ Gr. *ἄνοπλος*, unarmed, + *θήκη*, case.] A genus of convexoconcave, spine-bearing brachiopods, having a median dorsal septum and the jugum articulating into a depression in the ventral valve: characteristic of Devonian faunæ.

anoplous (an-op′lus), *a.* Relating or pertaining to the *Anopla*; having the proboscis unarmed, as certain nemertines.

anoplurous (an-ō-plö′rus), *a.* Resembling the insects of the hemipterous suborder *Anoplura*.

Anor group. See ★*group*[1].

anorectal (ā″nō-rek′tal), *a.* [L. *anus*, anus, + NL. *rectum*, rectum.] Relating to both the anus and the rectum. *Therapeutic Gazette*, May 15, 1903, p. 344.

anorectic (an-ō-rek′tik), *a.* [*anorect-ous* + *-ic*.] Same as *anorectous*.

anorganon (an-ôr′ga-non), *n.*; pl. *anorgana* (-nä). [NL., ⟨ Gr. *ἀνόργανον*, neut. of *ἀνόργανος*, without organs, ⟨ *ἀν-* priv. + *ὄργανον*, instrument, organ.] A body without organs, that is, an inorganic body.

anorgic (an-ôr′jik), *n.* [Gr. *ανόργ(ανος)*, without organs (inorganic), + *-ic*.] A general designation, proposed by Haeckel, for the sciences that deal with inorganic nature, as contrasted with the biological sciences.

anorthoclase (an-ôr′thō-klāz), *n.* [Gr. *ἀνορθος*, not straight, + *κλάσις*, fracture. See *orthoclase*.] A triclinic feldspar allied to microcline but containing a considerable amount of soda: characteristic of certain igneous rocks, as the andesite of Pantelleria.

anorthographic (an-ôr-thō-graf′ik), *a.* [Gr. *ἀν-* priv. + *orthographic*.] That deviates from or is at variance with orthography or the accepted rules of spelling.

anorthographical (an-ôr-thō-graf′i-kal), *a.* Characterized by irregular or incorrect spelling; incorrectly spelled.

anorthographically (an-ôr-thō-graf′i-kal-i), *adv.* Irregularly as regards spelling. See the quotation.

> A fresco painting has been discovered . . . representing the two martyrs, one of whom [Hyacinthus] bears his name written *anorthographically* thus, *Iaquintus*.
> *Athenæum*, July 14, 1894, p. 72.

anorthography (an-ôr-thog′ra-fi), *n.* [Gr. *ἀν-* priv. + *ὀρθογραφία*, correct writing.] Same as *agraphia*.

anorthoscopic (an-ôr-thō-skop′ik), *a.* [*anorthoscope* + *-ic*.] Pertaining to the anorthoscope or to the visual illusion which that instrument produces. *Amer. Jour. Psychol.*, II. 240.

anorthose (an-ôr′thōs), *a.* [Gr. *ἀν-* priv. + *ὀρθός*, straight, + *-ose*.] Same as ★*anorthoclase*.

anorthosite (an-ôr′thō-sit), *n.* [*anorthose* + *-ite*[2].] In *petrog.*, a granular or gneissoid igneous rock of eastern Canada, consisting chiefly of the plagioclase feldspar, labradorite. The name (first used by Hunt in 1863) is now applied to rocks composed largely of any lime-soda feldspar (plagioclase). The anorthosites are regarded by some petrographers as the highly feldspathic extreme of the gabbro family of igneous rocks.

anosmatic (an-os-mat′ik), *a.* [Irreg. ⟨ Gr. *ἀν-* priv. + *ὀσμή*, smell, + *-atic*. A more correct form would be *anosmic*, **anosmetic*, or **anosmotic*.] Having the sense of smell or the olfactory organs small or wanting, as in porpoises. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 638.

anosmic (an-os′mik), *a.* [*anosmia* + *-ic*.] **1.** Having no odor.—**2.** Of or affected with anosmia.

anounou (ä-nō′ō-nō′ō), *n.* [Hawaiian.] In Hawaii, a species of peppergrass, *Lepidium Owaihiense*, found in all the islands of the group.

Anquetilia (an-kwē-til′i-ä), *n.* [NL. (Decaisne, 1848), named in memory of A. H. Anquetil-Duperron (1731–1805), a French orientalist.] A genus of dicotyledonous plants of the family *Rutaceæ*. See *Skimmia*.

Ansate fissure or **sulcus.** See ★*fissure*.

anselmino (än-sel-mē′nō), *n.* [It.] A silver coin of Mantua: so named from the effigy and name on the reverse.

Anseremme limestone. See ★*limestone*.

anseriform (an-ser′i-fôrm), *a.* [NL. *anseriformis*, < L. *anser*, goose, + *forma*, shape.] Resembling a goose; pertaining to the *Anseriformes*, a group of birds which contains the ducks and geese.

Anspach porcelain. See ★*porcelain*[1].

ant[1], *n.*—**Black ant,** *Monomorium minutum*, a common species in the United States, frequently entering houses. Also called *little black ant*.—**Bulldog ant,** any ant of the genus *Myrmecia*, which is confined to Australia and Tasmania and contains about 30 species. They form large mounds of earth for their nests, and are the most formidable of all ants, possessing large jaws and stinging severely.—**Corn-louse ant,** *Lasius brunneus*, a small brown ant which nests in fields and cares for certain plant-lice that feed on the roots of grains and grasses.—**Imbauba ant,** a Brazilian arboreal ant, of the genus *Azteca*, which forms small nests in the interior of plants and is thought to protect them from the attacks of the leaf-cutting ants.—**Leaf-cutting ant,** *Atta fervens*, a large brown ant which defoliates trees: common throughout Central America, and found also abundantly in southern Texas.—**Mound-building ant,** *Formica exsectoides*, a species in the United States which builds large mounds. Some of these mounds are 10 or 12 feet in diameter. The head and thorax of this ant are rust-red and the legs and abdomen are black.—**Porcupine-grass ant,** an Australian ant, *Hypoclinea flavipes*, which makes its nest at the roots of the porcupine-grass, frequently covering the leaves with sand brought up from the ground.—**Red ant.** See *red*[1].—**Shed-builder ant,** *Cremastogaster lineolata*, a species, common in the southern United States, which sometimes builds sheds, composed of a paper-like pulp, over herds of aphids or scale-insects, from which they obtain honeydew. *Comstock*.—**Small yellow ant,** *Solenopsis debilis*.

anta[3] (än-tä′), *n.* [Native name.] A name in northwestern South America of the ivory-nut palm, *Phytelephas macrocarpa*. See *Phytelephas*.

Antæan (an-tē′an), *a.* [L. *Antæus*, < Gr. Ἀνταῖος.] Of, pertaining to, or resembling Antæus, a giant, in Greek legend, slain by Hercules. Antæus was invincible as long as he remained in contact with his mother Gæa, the earth; but Hercules, who discovered the source of his strength, lifted him into the air and crushed him.

antagonal (an-tag′ō-nal), *a.* Antagonistic: as, "*antagonal* principles of faith and sight," *J. Woodford*. *N. E. D.*

antagonistic, *a.* **2.** In the psychology of visual sensation, complementary: as, blue and yellow are *antagonistic* colors.

Antarctogæa (an-tärk-tō-jē′ä), *n.* In *zoögeog.*, a name proposed by Sclater for an area chiefly in the southern hemisphere and embracing Central and South America, Australasia, Polynesia, and Austro-Malaysia. The association is based upon the faunal relationships.

Antarctogæan (an-tärk-tō-jē′an), *a.* Of or pertaining to the zoögeographical area known as *Antarctogæa*. Also *Antarctogæal* and *Antarctogæic*. See the extract.

> The *Antarctogæan* area thus includes what are regarded by Blandford, Lydekker and others as two separate realms, *i. e.*, Neogæa (South and Central America) and Notogæa (Australasia, Polynesia and Austro-Malaysia), while Africa south of the Sahara was regarded as a region or dependence of Arctogæa.
>
> *Science*, Feb. 5, 1904, p. 220.

Antarian (an-tā′ri-an), *a.* and *n.* **I.** *a.* Pertaining to or resembling the star Antares.—**Antarian stars,** stars of Secchi's third type, resembling Antares in having a fluted spectrum in which the dark flutings are sharply defined at their upper edge (toward the blue end of the spectrum) and fade out toward the red. They are far less abundant than Sirian and Arcturian stars, but still are not very rare.

II. *n.* A star of the type of Antares.

ant-cattle (ant′kat″l), *n.* See *ant-cow*.

ant-disk (ant′disk), *n.* A circular space cleared of herbage around the nests of agricultural ants. *Stand. Dict.*

anteal, *a.* **II.** *n.* In *ichth.*, the vomer; the anterior median bone of the cranium, immediately behind and below the maxillary bones. *Starks*, Synonymy of the Fish Skeleton, p. 508.

Antebrachial index. See ★*index*.

antebrachium, *n.* **2.** In *ichth.*, the hypercoracoid, a bone of the shoulder-girdle. *Starks*, Synonymy of the Fish Skeleton, p. 522.

antecedent, *a.* **2.** In *phys. geog.*, noting rivers or streams which have persisted in their courses in spite of an uplift of the land: thus the Meuse is an *antecedent* river, because it has persisted in its course by cutting a deep gorge through the uplifted area of the Ardennes.

> Streams which hold their courses in spite of changes which have taken place since their courses were assumed are said to be *antecedent*. They antedate the crustal movements which, but for preexistent streams, would have given origin to a very different arrangement of river courses. *Chamberlin and Salisbury*, Geol., I. 161.

Antecedent drainage, the drainage of antecedent streams.—**Antecedent valley,** a valley which has persisted throughout a period marked by crustal movement that has materially changed the attitude of the underlying strata.

antecilial (an-tē-sil′i-al), *a.* [L. *ante*, before, + *cilium*, eyebrow, + *-al*.] Same as ★*anteciliary*.

anteciliary (an-tē-sil′i-ā-ri), *a.* In the *Lepidoptera*, situated before the ciliary band, that is, before the band in front of the marginal fringe of the wings. *Proc. Zool. Soc. Lond.*, 1902, II. 118.

anteclypeus (an-tē-klip′ē-us), *n.* In *entom.*, the anterior part of the clypeus when that sclerite is divided into two parts.

antecrochet (an-tē-kroch′et), *n.* [L. *ante*, before, + *crochet*[2].] A fold of enamel directed posteriorly from the anterior cross-crest, or protoloph, in such a tooth as the molar of a rhinoceros. Sometimes erroneously spelled *anticrochet*. See cut under ★*tooth*.

antecubital (an″tē-kū′bi-tal), *a.* [L. *ante*, before, + *cubitus*, forearm: see *cubitus*.] In *anat.*, situated in front of the cubitus or forearm.

antedoctorial (an″tē-dok-tō′ri-al), *a.* Prior to becoming a doctor.

> Our doctor in his *antedoctorial* age was a student in Leyden. *Southey*, Doctor.

anteëssive (an-tē-es′iv), *a.* [Irreg. < L. *ante*, before, + *esse*, be, + *-ive*.] In *gram.*, noting the case which expresses position in front of. *Amer. Anthropologist*, Jan.–March, 1903, p. 26.

antefix, *n.* **2.** An ornament on a vase so placed as to conceal the part where the handle joins the body.

antefixal (an-tē-fik′sal), *a.* [*antefix* + *-al*.] Of, pertaining to, or of the nature of an antefix. *S. Birch*, Anc. Pottery, II. 7. *N. E. D.*

antefurcal (an-tē-fėr′kal), *a.* [*antefurca* + *-al*.] In *entom.*, relating or pertaining to the antefurca.

antehumeral (an-tē-hū′me-ral), *a.* In *entom.*, situated in front of the fore legs. *Proc. Zool. Soc. Lond.*, 1902, I. 77.

antelios (an-tē′li-os), *n.* [Gr. *ἀντήλιος*, opposite to the sun, < *ἀντί*, opposite, + *ἥλιος*, sun. Cf. *anthelion*.] The point in the heavens opposite to the sun. [Rare.]

antelope-beetle (an′tē-lōp-bē″tl), *n.* An American beetle, *Dorcus parallelus*, of the family *Lucanidæ*, with shorter jaws than the stag-beetles proper of the genus *Lucanus*.

antemedial (an-tē-mē′di-al), *a.* In *entom.*, situated before the middle, or cephalad of the theoretical middle transverse line, of the thorax: especially used in coleopterology. *Proc. Zool. Soc. Lond.*, 1902, I. 184.

antemedian (an″tē-mē′di-an), *a.* Same as ★*antemedial*.

antenna, *n.* **2.** (*b*) In *Rotifera*, a spur-like process bearing a tuft of setæ and projecting from the mid-dorsal line close to the trochal disk. Same as *calcar*[1], 4.—**4.** In *elect.*, the vertical conductor used in wireless telegraphy to send out electric waves (*sender*) or receive them (*receiver*). *Phys. Rev.*, Sept., 1904, p. 197.

Antennal gland, lobes. See ★*gland*, ★*lobe*.

Antennary feet, the second and most important pair of swimming-feet in the *Nauplius* larva of crustaceans. These feet become the antennæ of the adult.—**Antennary gland.** See ★*gland*.

antennular (an-ten′ū-lär), *a.* Of the nature of or resembling an antennula or small antenna: as, *antennular* organs. *Huxley*.

antenodal (an-tē-nō′dal), *a.* [L. *ante*, before, + *nodus*, node.] In *entom.*, situated before the nodus: referring to a vein, or nervure, or space, as in the wings of dragon-flies. *Proc. Zool. Soc. Lond.*, 1902, I. 49.

ante-partum (an-tē-pär′tum), *a.* [L. *ante partum*, before delivery.] In *obstet.*, prior to the delivery of the child.

antephenomenal (an″tē-fē-nom′e-nal), *a.* [L. *ante*, before, + NL. *phænomena*: see *phenomenon*.] Antecedent to phenomena; related to consciousness, considered as generating phenomena, as a condition to contemplating them.

antephenomenalism (an″tē-fē-nom′e-nal-izm), *n.* The character of being antephenomenal; the state of consciousness in so far as it generates phenomena.

anteposition, *n.* **3.** In *pathol.*, a forward displacement in the horizontal plane, especially a misplacement of the uterus.

anteriad (an-tē′ri-ad), *adv.* [*anteri(or)* + *-ad*[3].] Toward the anterior end or surface of the body; anteriorly.

> The rudiment of the gall-bladder which in the previous stage is very shallow and basin-like, and opens dorsad within the primary evagination of the proton, is, in the present stage, a somewhat deeper evagination of the ventral part of the posterior wall, and opens *anteriad*.
>
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 66.

anterodistal (an″te-rō-dis′tal), *a.* [L. **anterus*, assumed positive of *anterior*, anterior, + *distal*.] In *entom.*, situated at the front end and away from the body. *Proc. Zool. Soc. Lond.*, 1902, II. 275.

anterodistally (an″te-rō-dis′tal-i), *adv.* In *entom.*, at the front end and extending away from the body: as, an antennal joint prolonged *anterodistally* into a strong spine. *Proc. Zool. Soc. Lond.*, 1900, I. 26.

anterodorsal (an″te-rō-dôr′sal), *a.* Situated in front and on or toward the back. *Proc. Zool. Soc. Lond.*, 1903, I. 282.

antero-external (an″te-rō-eks-tėr′nal), *a.* Situated in front and on the outer side. *Amer. Jour. Sci.*, Jan., 1904, p. 29.

anterofixation (an″te-rō-fik-sā′shon), *n.* [L. **anterus*, positive of *anterior*, anterior, + E. *fixation*.] Fixation anteriorly, as of the uterus to the anterior abdominal wall in cases of retroversion of that organ.

anteroflexion (an′te-rō-flek″shon), *n.* A bending forward.

antero-inferior (an″te-rō-in-fē′ri-or), *a.* Situated in front and below or on the under side. *Buck*, Med. Handbook, II. 413.

antero-internal (an″te-rō-in-tėr′nal), *a.* Situated in front and on the inner side. *Amer. Jour. Sci.*, Jan., 1904, p. 32.

anterolaterally (an″te-rō-lat′e-ral-i), *adv.* In an anterolateral position or manner.

anteromedial (an″te-rō-mē′di-al), *a.* Situated in front and toward the median line. Also *anteromesial*. *Proc. Zool. Soc. Lond.*, 1901, I. 258.

anteromesial (an″te-rō-mes′i-al or -mē′zi-al), *a.* Same as ★*anteromedial*.

anteroposteriad (an″te-rō-pos-tē′ri-ad), *adv.* [*anter(ior)* + *posteri(or)* + *-ad*[3].] From in front backward, that is, from the anterior toward the posterior end or surface of the body; anteroposteriorly.

> The vitelline veins extend *antero-posteriad* in the extreme dorsal portion of the septum transversum.
>
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 58.

anteroposteriorly (an″te-rō-pos-tē′ri-or-li), *adv.* From the front to the back; fore and aft.

anteropygal (an″te-rō-pī′gal), *n.* The median bony plate of a turtle's carapace immediately behind the posterior neural plate, which is borne upon the spinous process of a vertebra. In the cut under *Chelonia*, the line from *Py* runs to the anteropygal. The pygal plates are unsupported by any vertebræ, and may be three in number, in which case they are termed *anteropygal*, *posteropygal*, and *marginal-pygal*.

anterosuperior (an″te-rō-sū-pē′ri-or), *a.* Situated in front and on the upper part. *Proc. Zool. Soc. Lond.*, 1901, I. 133.

anteroventral (an″te-rō-ven′tral), *a.* Situated in front and below or toward the ventral side. *Buck*, Med. Handbook, VII. 708.

anteroventrally (an″te-rō-ven′tral-i), *adv.* Forward and downward, or ventrally.

antescript (an′tē-skript), *n.* The writing which precedes (some other writing) as a prefatory note, or all that part of a letter which precedes the postscript, if there is one. *Mrs. Browning*, Letters, II. 164. [Rare.] *N. E. D.*

anthem, *n.* Hence—**2.** A song or hymn expressive of praise, patriotism, loyalty, etc., and set to music.—**National anthem,** a song or hymn adopted by a particular country, either officially or by common consent, as a distinctive expression of devotion to it or to its ruler, such as "God Save the King," the so-called national anthem of the British people, and the "Star-Spangled Banner," the national anthem of the United States. The former is said to have been written and composed by Henry Carey (1696–1743) and first sung by him at a patriotic dinner in 1740. The "Star-Spangled Banner" was written by Francis Scott Key (1780–1843) in 1814, while a prisoner on a British ship; was set, by his

desire, to the tune of "To Anacreon in Heaven," composed by John Stafford Smith (1750–1836); and was first sung in Baltimore by Ferdinand Durang.

anthemene (an'the-mēn), *n.* [*Anthemis* + *-ene.*] A hydrocarbon, $C_{18}H_{36}$, found in the blossoms of *Anthemis nobilis*. It melts at 64° C.

anthemic (an'the-mik), *a.* Pertaining to or derived from *Anthemis*.—**Anthemic acid**, a colorless, silky, crystalline principle of bitter taste contained in German camomile (*Matricaria Chamomilla*) and in *Anthemis arvensis*.

anthemidin (an-them'i-din), *n.* A tasteless crystalline principle contained in German camomile (*Matricaria Chamomilla*).

anthemol (an'the-mōl), *n.* [*Anthemis* + *-ol.*] A compound, $C_{10}H_{16}O$, found in the oil of camomile as esters of tiglic and angelic acids. It is a viscous oil with an odor like camphor.

antheridiophore (an-the-rid'i-ō-fōr), *n.* [NL. *antheridium* + Gr. *-φορος*, ‹ *φέρειν*, bear.] A gametophore bearing antheridia only.

antherless (an'thėr-les), *a.* [*anther* + *-less.*] Without anthers; anantherous.

antheromania (an″ther-ō-mā'ni-ạ), *n.* [NL., ‹ *anthera*, anther, + Gr. *μανία*, mania.] In *bot.*, an excessive development of anthers.

antherpetic (ant-hėr-pet'ik), *a.* Preventive or curative of herpes.

anther-smut (an'thėr-smut), *n.* A fungus (*Ustilago violacea*) which attacks the anthers of the carnation and of other nearly related plants.

Anthias (an'thi-as), *n.* [NL., ‹ Gr. *ἀνθίας*, a sea-fish, *Labrus* or *Serranus anthias*, prob. ‹ *ἄνθος*, a flower.] A genus of brilliantly colored fishes found in warm seas, the species longest known being the barbier, *A. anthias*, of the Mediterranean.

anthion (an'thi-on), *n.* [Gr. *ἀντί*, against, + *θεῖον*, sulphur.] The trade-name of a solution of potassium persulphate used by photographers to remove from their prints the last traces of sodium thiosulphate employed in washing.

anthocarp (an'thō-kärp), *n.* [Gr. *ἄνθος*, flower, + *καρπός*, fruit.] Same as *pseudocarp*.

anthocarpium (an-thō-kär'pi-um), *n.*; pl. *anthocarpia* (-ạ). [NL.] Same as ★*anthocarp*.

anthocaulus (an-thō-kâ'lus), *n.*; pl. *anthocauli* (-lī). [NL., ‹ Gr. *ἄνθος*, flower, + *καυλός*, stalk.] The pedicel or stalk of the trophozoöid, the upper part of which becomes expanded and disk-shaped during development and is finally set free as the adult *Fungia*

Anthoceros (an-thos'ē-ros), *n.* [NL. (Linnæus, 1753), referring to the long-horned capsule; ‹ Gr. *ἄνθος*, flower, + *κερώς*, horned.] A genus of bryophytic plants, type of the family *Anthocerotaceæ*. It is distinguished from the other two genera of the family by having the prolonged capsule inclosed in a sheath only at the base, and by the clearly developed columella. There are 79 species, found growing on moist ground (rarely on decaying logs) in nearly all parts of the world.

Anthocerotaceæ (an-thos″ē-rō-tā'sē-ē), *n. pl.* [NL. (Schiffner, 1895), ‹ *Anthoceros* (*Anthocerot-*) + *-aceæ.*] A family of bryophytic plants of the class *Hepaticæ*, typified by the genus *Anthoceros* and containing the two other genera *Notothylas* and *Dendroceros*. It is characterized by the thalloid proembryonal generation, monœcious reproductive organs, the antheridia inclosed at first in the depressions of the thallus, the archegonia depressed, and the sporogonia with the 2-lobed capsules much prolonged beyond the thallus. There are more than 100 species, small plants resembling liverworts, widely distributed over the globe.

Anthocerotales (an-thos″ē-rō-tā'lēz), *n. pl.* [NL. (Schiffner, 1895), ‹ *Anthoceros* (*Anthocerot-*) + *-ales.*] An order of cryptogamic plants of the phylum *Bryophyta*, class *Hepaticæ*, coextensive with the family *Anthocerotaceæ*, and regarded as intermediate between the *Marchantiales* and the *Jungermanniales*.

anthocerote (an-thos'ē-rōt), *n.* [NL. *Anthoceros.*] A plant of the family *Anthocerotaceæ*. *Amer. Nat.*, June, 1904, p. 479.

anthocodium (an″thō-kō'di-um), *n.*; pl. *anthocodia* (-ạ). [NL., ‹ Gr. *ἄνθος*, flower, + *κωδία*, *κώδεια*, head, esp. of a poppy or similar plant.] The free distal, tentacle-bearing portion of the body, as in alcyonarian polyps. Compare ★*anthostele*.

anthocyan, *n.* **2.** A red coloring matter developed in the young leaves of shade-loving plants when exposed to more light than they usually encounter.—**3.** A preparation from the juice of the sweet or purple violet used in making syrup of violets and to color and flavor liquors. Also *anthokyan*. *Thorpe*, Diet. Applied Chem., I. 174.

anthocyathus (an-thō-sī'ạ-thus), *n.*; pl. *anthocyathi* (-thī). [NL., ‹ Gr. *ἄνθος*, flower, + *κύαθος*, cup.] The free discoid adult formed by the expansion of the upper part of the calycle of the trophozoöid in *Fungia*. Compare ★*anthocaulus*.

Anthodon (an'thō-don), *n.* [Gr. *ἄνθος*, flower, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of theromorphous reptiles of the family *Pareiasauridæ* from the Karoo formation of South Africa.

antho-ecologist (an″thō-ē-kol'ō-jist), *n.* A student of flowers as correlated with their environment; a floral ecologist.

antho-ecology (an″thō-ē-kol'ō-ji), *n.* [Gr. *ἄνθος*, flower, + *ecology.*] The study of flowers in correlation with their environment; floral ecology.

anthogenetic (an-thō-jē-net'ik), *a.* Of or pertaining to anthogenesis.

anthomaniac (an-thō-mā'ni-ak), *n.* [*anthomania* + *-ac* (after *maniac*).] One who is extravagantly fond of flowers. *H. Smith*, Moneyed Man, II. 321. [Rare.] *N. E. D.*

Anthomedusæ (an″thō-mē-dū'sē), *n. pl.* **1.** An order of *Hydromedusæ* marked by a regular alternation of a sterile hydroid generation with a sexual generation of medusoids or other gonophores. Rigid permanent gonothecæ and hydrothecæ into which the hydroids are completely retractile are not formed. The sense-organs of the medusoids are ocelli, and the generative organs lie in the wall of the manubrium. The hydroid may be colonial or not, fixed or free. Same as *Gymnoblastea*.

2. [*l.c.*] The medusæ budded from polyps of the *Tubulariæ*, as distinguished from those budded from the polyps of the *Campanulariæ*. Compare *Leptomedusæ*. *Haeckel*.

anthony (an'tō-ni), *n.* [Orig. *Anthony pig*, also *Tantony pig.*] The smallest pig of a litter: from the fact that one of a litter was vowed to St. Anthony, patron saint of swineherds.

anthophagous (an-thof'ạ-gus), *a.* [Gr. *ἄνθος*, flower, + *φαγεῖν*, eat.] Flower-eating.

anthophobia (an-thō-fō'bi-ạ), *n.* [NL., ‹ Gr. *ἄνθος*, flower, + *-φοβία*, ‹ *φοβεῖν*, fear.] A morbid dislike or even fear of flowers.

Anthophorabia (an″thō-fō-rā'bi-ạ), *n.* [NL. (Newport, 1849), irreg. ‹ *Anthophora* + Gr. *βίος*, life.] A curious genus of hymenopterous parasites of the family *Chalcididæ*. Its species live, as *A. retusa*, in the nests of the wild bees of the genus *Anthophora*. They are remarkable in structure, the males having no compound eyes.

Anthophoridæ (an-thō-for'i-dē), *n. pl.* [NL., ‹ *Anthophora* + *-idæ.*] A family of solitary bees, of the superfamily *Apoidea*. It comprises forms usually thickly clothed with hair and usually burrowing into the earth, where they form earthen cells which they supply with pollen and honey for the sustenance of their young.

Anthophyta (an-thof'i-tạ), *n. pl.* [Gr. *ἄνθος*, flower, + *φυτόν*, plant.] The flowering plants: only occasionally used. *A. Braun*.

anthophyte (an'thō-fīt), *n.* [Gr. *ἄνθος*, flower, + *φυτόν*, plant.] One of the flowering plants. See ★*Anthophyta*.

anthopoma (an-thō-pō'mạ), *n.*; pl. *anthopomata* (-ma-tạ). [NL., ‹ Gr. *ἄνθος*, flower, + *πῶμα*, lid.] One of the spicular defenses, as calices and opercula, found among the alcyonarian polyps.

anthoptosis (an-thop-tō'sis), *n.* [NL., ‹ Gr. *ἄνθος*, a flower, + *πτῶσις*, a falling.] The fall or shedding of flowers.

anthostele (an'thō-stēl), *n.* [Gr. *ἄνθος*, flower, + *στήλη*, a pillar: see *stele*.] The proximal portion of the body of an alcyonarian polyp by which it is fused to the neighboring members of the colony. Compare ★*anthocodium*.

Anthostoma (an-thos'tō-mạ), *n.* [NL. (Nitschke, 1869), ‹ Gr. *ἄνθος*, flower, + *στόμα*, mouth.] A large genus of pyrenomycetous fungi, mostly saprophytic. The perithecia are buried in the bark or wood and are provided with necks. The spores are simple and are brown or black in color.

Anthostomella (an″thō-stō-mel'ạ), *n.* [NL. (Saccardo, 1875), ‹ *Anthostoma* + dim. *-ella.*] A large genus of pyrenomycetous fungi having the perithecia covered by the epidermis of the host and a thin circular layer of dark mycelium. The spores are simple and are brown in color. Most of the species are saprophytic, but *A. pisana* attacks and kills the leaves of *Chamærops humilis*.

anthotype (an'thō-tīp), *n.* [Gr. *ἄνθος*, flower, + *τύπος*, type.] A fugitive photographic print produced by the action of light upon paper treated with the expressed juice of flowers or plants. The petals of fresh flowers are crushed to a pulp and moistened with water or alcohol; the juice expressed is strained through cloth and spread upon paper; and the paper thus prepared is exposed beneath a negative. The light produces a change of color. The anthotype process was discovered by Sir John Herschel. Recently the use of artificial coloring matters, as quinoline blue, curcuma, and a rapidly fading red, has been suggested.

anthracene, *n.* **2.** A poisonous ptomaïne obtained from cultures of the anthrax bacillus.—**Anthracene acid-black, etc.** See ★*acid-black*, etc.

anthracitization (an″thra-sī-ti-zā'shọn), *n.* [*anthracite* + *-ize* + *-ation.*] The process of changing lignite or bituminous coal into anthracite. *Athenæum*, Oct. 17, 1903.

anthracnose, *n.* **2.** A name given to those diseases of plants which are caused by the attacks of fungi of the genera *Glœosporium* and *Colletotrichum*. Among the important diseases caused by *Glœosporium* are: anthracnose of the almond, due to *G. amygdalinum*; anthracnose of the apple, caused by *G. fructigenum*; anthracnose of the blackberry and raspberry, caused by *G. Venetum*; anthracnose of the currant, caused by *G. Ribis*; and anthracnose of the rose, caused by *G. Rosæ*. Among the diseases produced by *Colletotrichum* are: anthracnose of beans, caused by *C. Lindemuthianum*; anthracnose of cotton, caused by *C. Gossypii*; anthracnose of the hollyhock, caused by *C. Malvarum*; anthracnose of melons, caused by *C. lagenarium*; and anthracnose of tomatoes, caused by *C. phomoides*.

anthracnosis (an-thrak-nō'sis), *n.* [NL.] Same as *anthracnose*.

anthracolithic (an″thra-kō-lith'ik), *a.* [Gr. *ἄνθραξ*, coal, + *λίθος*, stone.] In *geol.*, containing anthracite coal: specifically applied by the Geological Survey of India to a series of Permian strata metamorphosed to mica schists, with graphitic and anthracitic seams. *Nature*, May 26, 1904, p. 86.

Anthracomartus (an″thra-kō-mär'tus), *n.* [NL. ‹ Gr. *ἄνθραξ*, coal, + (?) *μάρτυς*, a witness.] A genus of fossil spiders in which the cephalothorax is quadrangular and the abdomen is composed of 7 segments. It is found in the coal-measures of North America and Europe.

Anthraconectes (an″thra-kō-nek'tēz), *n.* [NL., ‹ Gr. *ἄνθραξ*, coal, + *νήκτης*, a swimmer.] A genus of extinct merostome crustaceans from the coal-measures of Illinois.

anthraconene (an-thrak'ō-nēn), *n.* [Gr. *ἄνθραξ* (*ἀνθρακ-*), coal, + *-n-* + *-ene.*] A resin found between the coal strata near Schlan, in Bohemia. It is brownish black or, in thin layers, hyacinth-red.

Anthracosia (an-thra-kō'si-ạ), *n.* [NL., ‹ Gr. *ἄνθραξ*, coal, + L. *-os(us)* + *-ia*[2].] A freshwater or estuarine genus of pelecypod mollusks, allied to living unios, found in the Carboniferous and Permian rocks.

anthracotic (an-thra-kot'ik), *a.* [*anthracosis* (*-ot-*) + *-ic.*] Relating to or affected by anthracosis. *Jour. Exper. Med.*, V. 156.

anthracotypy (an'thra-kō-tī″pi), *n.* [Gr. *ἄνθραξ* (*ἀνθρακ-*), coal, + *τύπος*, type.] Printing by means of powdered charcoal or other colors; in *photog.*, a process of reproducing subjects in tint on thin transparent paper. The image on a bichromated gelatin film is treated with warm water, which causes it to swell and become sticky at the parts not affected by light. These parts are thereby adapted to receive and hold powdered colors, which by printing may be transferred to paper.

anthraflavic (an″thra-flav'ik), *a.* [Prob. ‹ *anthra*(*cene*) + L. *flavus*, yellow.] Noting an acid, 1.6-dihydroxyanthraquinone, $C_6H_3OH(CO)_2C_6H_3OH$. It is isomeric with alizarin, and crystallizes in yellow needles which melt above 330° C.

anthranil (an'thra-nil), *n.* [*anthra*(*cene*) + *anil* (indigo).] The anhydrid of anthranilic or orthoaminobenzoic acid, $C_6H_4\langle\begin{matrix}CO\\NH\end{matrix}$. It is an oil with an odor resembling that of oil of bitter almonds.

anthranilic (an-thra-nil'ik), *a.* [*anthranil* + *-ic.*] Noting an acid, orthoaminobenzoic acid, $C_6H_4(NH_2)CO_2H$: so named because it was first obtained by boiling indigo with potassium hydroxid. It has acquired great commercial importance in the manufacture of synthetic indigo. It melts at 145° C. and has a sweet taste.

anthranol (an'thra-nōl), *n.* [*anthran*(*il*) + *-ol.*] A substance, 9-hydroxyanthracene, $C_6H_4\langle\begin{matrix}C(OH)\\C\end{matrix}\rangle C_6H_4$. It crystallizes in needles which melt, with decomposition, at 163°–170° C.

Anthrapalæmon (an″thra-pa-lē'mon), *n.* [NL., irreg. ‹ Gr. *ἄνθραξ*, coal, + NL. *Palæmon*, a genus of crustaceans.] The generic name of an extinct crawfish from the coal-measures of Illinois and Scotland.

anthrapurpurin, anthrapurpurine (an″thra-pėr′pū-rin), *n.* [*anthra(cene)* + *purpurin.*] A mordant color, a trihydroxyanthraquinone, $C_6H_3OH(CO)_2C_6H_2(OH)_2$, isomeric with purpurin: sometimes called *isopurpurin.* It is applied in the same manner as alizarin, but produces a yellower or more fiery red. The so-called yellow shades of alizarin often contain anthrapurpurin. See ★*alizarin.*

anthraquinoline (an″thra-kwin′ō-lin), *n.* [*anthra(cene)* + *quinoline.*] A base, $C_{17}H_{11}N$, formed by distilling alizarin blue with zinc-dust. It melts at 170° and boils at 446° C. It is related to both anthracene and quinoline in its structure.

Anthraquinone red. See ★*red*[1].

anthrarobin (an″thra-rō′bin), *n.* [*anthrac(ene)* + *Rob(inia)* + *-in*[2].] A compound, 1.2-dihydroxyanthranol, or 1.2.9-dihydroxyanthracene, $C_6H_4\langle^{COH}_{CH}\rangle CH_2(OH)_2$, formed by the reduction of alizarin. It crystallizes in yellow leaflets or needles which melt at 208° C. Also called *desoxyalizarin.*

anthrarufin (an″thra-rō′fin), *n.* [*anthra(cene)* + *ruf(ous)* + *-in*[2].] A compound, 1.5-dihydroxyanthraquinone, $HOC_6H_3(CO)_2C_6H_3OH$, isomeric with alizarin. It crystallizes in yellow leaflets which melt at 280° C., and is used as a dyestuff.

anthrasol (an′thra-sōl), *n.* An oily substance possessing soothing and antipruritic powers.

anthrol (an′thrōl), *n.* [*anthr(acene)* + *-ol.*] A substance, 2-hydroxyanthracene, $C_6H_4(CH)_2C_6H_3OH$. It consists of leather-colored leaflets or needles which decompose at 200° C.

anthrophotoscope (an-thrō-fō′tō-skōp), *n.* [Irreg. ⟨ Gr. *ἄνθρωπος*, man, + *photoscope.*] A photographic instrument having rotating glass disks on the marginal edges of which backgrounds and figures are mounted: these, when viewed through a long-focus lens, produce the effect of a peep-show. Also used in rephotographing to change the grouping or background.

anthropic, *a.* 2. [*cap.*] In *geol.*, a term introduced by Sir J. W. Dawson to designate the human period, or the period of such Pleistocene and recent deposits as are found to contain human relics. It was divided by him into an early, or Palanthropic, and a late, or Neanthropic, stage. See *human* ★*period.*

anthropinism (an-thrō′pin-izm), *n.* [Gr. *ἀνθρώπινος*, of man (⟨ *ἄνθρωπος*, man), + *-ism.*] The habit of considering everything as subordinate to man, or of considering things in relation to man and his needs and destiny. *Grant Allen.* [Rare.]

anthropinistic (an-thrō-pin-is′tik), *a.* Of the nature of anthropinism; considering things from a purely human standpoint, or in their relation to man only. *Grant Allen.* [Rare.]

anthropism (an′thrō-pizm), *n.* The doctrine or opinion that man is essentially different from, and contrasted with, everything else in nature, and the end for which the natural world was made.

anthropistic (an-thrō-pis′tik), *a.* Of or pertaining to the doctrine or opinion of anthropism.

anthropocentricism (an″thrō-pō-sen′trisizm), *n.* The doctrine or opinion that the world, or the universe, has been made for man, and for the purpose of securing human welfare.

anthropoclimatologist (an″thrō-pō-klī-mātol′ō-jist), *n.* One who makes a special study of the relations of the weather or the climate to mankind.

anthropoclimatology (an″thrō-pō-klī-mā-tol′-ō-jī), *n.* [Gr. *ἄνθρωπος*, man, + *climatology.*] The study of the mutual relations of climate and mankind, including all human interests; the environment of a race or a nation; the influence of climate on the evolution of man.

anthropocosmic (an″thrō-pō-koz′mik), *a.* [Gr. *ἄνθρωπος*, man, + *κόσμος*, world.] Of man and nature. *J. G. Schurman.*

anthropofagy, *n.* A simplified spelling of *anthropophagy.*

anthropogeographer (an″thrō-pō-jē-og′ra-fėr), *n.* A person who is versed in anthropogeographical science. *Brinton*, Basis of Social Relations, p. 181.

anthropogeographic (an″thrō-pō-jē-ō-graf′ik), *a.* Of or pertaining to anthropogeography.

anthropogeography (an″thrō-pō-jē-og′ra-fi), *n.* [Gr. *ἄνθρωπος*, man, + *geography.*] Geography as related to man and the conditions of his habitat.

In our estimation, *anthropogeography* is a convenient term under which to include all those aspects of geography that deal with the relations of humanity, as a whole or divided into communities, to the earth, with which alone physical geography has to deal. "Applied Geography" might be taken as an alternative term, though on the whole it has a wider scope. "Political Geography" may be regarded as a subdivision or special application of *anthropogeography*, and therefore Prof. Ratzel's latest work is a natural sequel to that on the more general subjects. *Geog. Jour.* (R. G. S.), XIII. 171.

anthropoidometry (an″thrō-poi-dom′e-tri), *n.* [Gr. *ἀνθρωποειδής*, like a man (see *anthropoid*), + *-μετρία*, ⟨ *μέτρον*, measure.] The measurement of the bodies of anthropoid apes. *Amer. Anthropol.*, Oct.–Dec., 1903, p. 708.

anthropolatric (an-thrō-pol′a-trik), *a.* Of or pertaining to anthropolatry.

anthropolith (an′thrō-pō-lith), *n.* Same as *anthropolite.*

anthropologically (an″thrō-pō-loj′i-kal-i), *adv.* In an anthropological way or direction.

anthropology, *n.*—**Criminal anthropology,** that branch of anthropology which deals with the physical and mental characteristics of criminals.—**Culture anthropology,** that branch of anthropology which deals with the mental life of mankind, or with human activities: opposed to *physical anthropology*, or somatology, which deals with the physical characteristics of man.

anthropometer, *n.* 2. An instrument used for anthropometric measurements.

anthropometrician (an″thrō-pō-mē-trish′an), *n.* [*anthropometric* + *-ian.*] Same as *anthropometer*, 1. *Smithsonian Rep.*, 1890, p. 563.

anthropometrics (an″thrō-pō-met′riks), *n.* Same as *anthropometry.*

anthropometrist (an-thrō-pom′e-trist), *n.* One versed in anthropometry, or engaged in anthropometric investigations.

Anthropometrists think growth in height to be more or less antagonistic to growth in girth.
G. S. Hall, Adolescence, I. 19.

anthropomorph (an′thrō-pō-môrf), *n.* [Gr. *ἀνθρωπόμορφος*, of human form, ⟨ *ἄνθρωπος*, man, + *μορφή*, form.] An element in decorative art, derived from the human form. *Haddon*, Evolution in Art, p. 41.

Anthropomorph, primitive American.

anthropomorphism, *n.* 3. In *pragmatistic philos.*, that philosophic tendency which, recognizing an absolute impossibility in the attainment by man of any conception that does not refer to human life, proposes frankly to submit to this as a decree of experience and to shape metaphysics to agreement with it. The term was first used in this sense by F. C. S. Schiller (Riddles of the Sphinx). See ★*humanism.*

anthropomorphological (an″thrō-pō-môr-fō-loj′i-kal), *a.* Characterized by or of the nature of anthropomorphology.

anthropomorphologically (an″thrō-pō-môr-fō-loj′i-kal-i), *adv.* With anthropomorphic language. *McCosh*, Divine Gov., p. 475.

anthropomorphously (an″thrō-pō-môr′fus-li), *adv.* In an anthropomorphous manner.

anthropopsychic (an″thrō-pō-sī′kik), *a.* Of or pertaining to ★anthropopsychism (which see).

anthropopsychism (an″thrō-pō-sīk′izm), *n.* [Gr. *ἀνθρωπος*, man, + *ψυχή*, soul, + *-ism.*] The doctrine of a God who is anthropomorphic in the vaguely magnified sense of being personal and spiritual, but not necessarily in the sense of having a human body: a term proposed by the Duke of Argyll, somewhat unnecessarily, since none but the most primitive men believe in any other anthropomorphism than this.

anthroposociologist (an″thrō-pō-sō-shi-ol′ō-jist), *n.* [Gr. *ἀνθρωπος*, man, + *sociologist.*] A sociologist who is primarily an anthropologist and who explains social phenomena for the most part by anthropologic principles; especially, one of a group of writers, headed by Lapouge, who base their classification mainly on the cephalic index and hold that the dolichocephalous races are superior and are destined to dominate all others. *Ward*, Pure Sociol., p. 231.

anthroposociology (an″thrō-pō-sō-shi-ol′ō-ji), *n.* [Gr. *ἀνθρωπος*, man, + *sociology.*] Sociology as studied primarily from the point of view of the physical characteristics of population constituting social groups; specifically, the science, or alleged science, which classifies the human races primarily by the cephalic index, arranging those of Europe in a hierarchy with the dolichocephalous races at the head. *Jour. Polit. Econ.*, Dec., 1900, p. 76.

anthropoteleological (an″thrō-pō-tel″ē-ō-loj′i-kal), *a.* [Gr. *ἀνθρωπος*, man, + *teleological.*] Pertaining to the teleological working of the human mind which adapts means to ends: distinguished from ★*theoteleological*, which applies to the teleological working of the divine mind. *Ward*, Dynamic Sociol., I. 28.

anthropoteleology (an″thrō-pō-tel-ē-ol′ō-ji), *n.* [Gr. *ἀνθρωπος*, man, + *teleology.*] The doctrine that the human mind always works teleologically. *Ward*, Dynamic Sociol., I. 28.

anthropotheism (an″thrō-pō-thē′izm), *n.* [Gr. *ἀνθρωπος*, man, + *θεός*, God, + *-ism.*] A stage in the evolution of religion in which deities are conceived in the image of man and are often believed to be the surviving spirits of once powerful men. *Ward*, Dynamic Sociol., II. 257.

anthropotoxin (an″thrō-pō-tok′sin), *n.* [Gr. *ἀνθρωπος*, man, + *τοξ(ικόν)*, poison, + *-in*[2].] A poisonous substance given off from the lungs.

anthropozoic (an″thrō-pō-zō′ik), *a.* and *n.* [Gr. *ἀνθρωπος*, man, + *ζωή*, life.] **I.** *a.* Of the time of the existence of man; belonging to those recent geologic formations which have been deposited since the appearance of man upon the earth.

II. *n.* [*cap.*] The final member in the series Azoic, Eozoic, Paleozoic, Mesozoic, Cænozoic, Anthropozoic, or Psychozoic.

anthropozoömorphic (an″thrō-pō-zō-ō-môr′fik), *a.* [Gr. *ἀνθρωπος*, man, + *ζῷον*, animal, + *μορφή*, form, + *-ic.*] In *anthrop.*, partaking of the character of both man and animal: said in reference to animals which are believed by primitive tribes to be, or to have been, endowed with all the characteristics of their species and also with those of human beings, and to be able to assume animal or human form at will.

It is rather a worship of the ancestors of the Snake clans, which are *anthropo-zoömorphic* beings, called the Snake youth and the Snake maid.
An. Rep. Bur. Amer. Ethnol., 1897–98, p. 1008

Anthurium, *n.* 2. [*l. c.*] A plant of the genus *Anthurium.* *A. Veitchii* and *A. Warocqueanum* are cultivated for their foliage; others, conspicuously *A. Andræanum*, for their showy spathes and spadices. The last-named has the spathe cordate and spreading, sometimes very large, of an orange-red color varying to white.

anthurus (an-thū′rus), *n.* [NL. ⟨ Gr. *ἀνθος*, flower, + *οὐρά*, tail.] A cluster of flowers at the end of a long stalk. *Jackson.* [Rare.]

anthypophoretic (ant″hi-pof-o-ret′ik), *a.* Of the nature of an anthypophora. *Urquhart*, Works, p. 292.

anti (an′ti), *n.* [Short for *anti-monopolist, -prohibitionist, -imperialist*, etc., according to the case.] One who is opposed to some proposed or undertaken course of action, policy, measure, movement, or enactment, as, for example, to imperialism. [Colloq.]

anti-. (3) In *chem.*, a prefix used to indicate that two groups or two atoms which might react with each other are so separated in space that they do not readily do this. It is contrasted with the prefix *syn-*. Thus in *anti*benzaldoxime, C_6H_5–CH, the H and OH do not readily combine to form water, while in *syn*benzaldoxime, C_6H_5–CH, such a combination takes place easily.

anti-abrin (an-ti-ā′brin), *n.* [*anti-* + *abrin.*] The antibody to abrin.

anti-albumid (an-ti-al′bū-mid), *n.* A product of albuminous digestion characterized by its resistance to proteolytic ferments.

anti-albumose, *n.* 2. In *immun.*, a specific precipitin corresponding to albumose.

anti-amboceptor (an-ti-am′bō-sep-tor), *n.* The antibody to an amboceptor.

antianaphylaxis (an″ti-an″a-fi-lak′sis), *n.* The state which, in an anaphylactic animal, immediately succeeds anaphylactic shock. *Journal of Medical Research*, August, 1910, p. 59.

anti-antibody (an-ti-an′ti-bod-i), *n.*; pl. *anti-antibodies* (-iz). The antibody to any adaptation-product.

anti-antitoxin (an″ti-an-ti-tok′sin), *n.* An antibody resulting on immunization with an antitoxin, which counteracts the effect of the latter.

anti-apex (an-ti-ā′peks), *n.* The point opposite the "apex of the sun's way," toward which his motion in space is directed. *Amer. Jour. Sci.*, Aug., 1903, p. 136.

Antiarcha (an-ti-är'kä), *n. pl.* [NL., said to be < Gr. *ἀντί*, against, + *ἀρχός*, rectum.] An ordinal term introduced by Cope for a group of extinct ostracoderm fishes characterized by their heavily plated head and abdomen. The head is articulated to the trunk and two paddle-like pectoral appendages are articulated to the plates of the trunk. The best-known genera of this order are *Pteraspis* and *Asterolepis*: all its representatives are restricted to the Devonian formations.

antiarigenin (an″ti-a-rij'e-nin), *n.* [*antiar* + L. *-gen*, produce, + *-in*².] A crystalline compound, $C_{21}H_{30}O_5$, obtained by the decomposition of antiarin. It melts at about 180° C.

anti-arthrin (an-ti-är'thrin), *n.* [Gr. *ἀντί*, against, + *ἄρθρον*, a joint.] A compound formed by the condensation of tannin and saligenin. It is used as a remedy in acute and chronic gout and rheumatism.

anti-autolysin (an″ti-â-tol'i-sin), *n.* An antibody which will inhibit the action of the corresponding autolysin.

antibacterial, *a.* 2. Preventing the action or development of bacteria. *Med. Record,* Mar. 28, 1903, p. 511.

antibacteriolytic (an″ti-bak-tē″ri-ō-lit'ik), *a.* [*anti-* + *bacteriolytic.*] Antagonistic to bacteriolytic action.

antiballooner (an″ti-ba-lön'ėr), *n.* In *textile manuf.*, a device employed on a ring-spinning frame to restrict the centrifugal bulging of the yarn during spinning. *Nasmith,* Cotton Spinning, p. 356.

antibenzenepyrine (an″ti-ben-zēn-pī'rin), *n.* [Gr. *ἀντί*, against, + E. *benzene* + Gr. *πῦρ*, fire, + *-ine*².] The trade name of a material for use in scouring clothing and textile fabrics generally. It is used in order to avoid or to diminish the danger of fire from using ordinary benzin, which is liable to become ignited by electric sparks produced by friction on the surface of the cloth. Antibenzenepyrine is said to consist of 60-65 per cent. benzin of specific gravity .700, 20-25 per cent. hydrocarbon oil of specific gravity .825-.830, and 10-12 per cent. magnesia soap.

antibiotic, *a.* 2. In *biol.*, injurious or deadly to the living substance: as, an *antibiotic* secretion.

Glandular powers directed to the production of a bactericidal, or at least *antibiotic* substance.
Philos. Trans. Roy. Soc. (London), 1894, ser. B, 185. 312.

antiblennorrhagic (an″ti-blen-ō-raj'ik), *a.* and *n.* [*anti-* + *blennorrhagia* + *-ic.*] **I.** *a.* Curative of catarrh or of gonorrhea. *Buck,* Med. Handbook, I. 103.

II. *n.* A remedy possessing this property.

antibody (an'ti-bod-i), *n.*; pl. *antibodies* (-iz). [*anti-* + *body.*] A body or substance which inhibits the action of another substance. Also called *antisubstance* and, as a general term, *adaptation-product.* See ★*adaptation-product* and ★*immunity.*

The reaction is caused by the development within the blood-serum of the injected animal of an *anti-body* or a property or substance which causes a certain reaction with the serum homologous to the one injected.
Med. Record, June 13, 1903, p. 953.

antibromic (an-ti-brō'mik), *a.* and *n.* [*anti-* + Gr. *βρῶμος*, smell, + *-ic.*] **I.** *a.* Deodorant.

II. *n.* A deodorant.

anticathode (an-ti-kath'ōd), *n.* The plate, often of platinum, placed opposite the cathode in a vacuum-tube, on which the cathode rays, or streams of electrified particles, impinge and thus produce the Röntgen rays.

anticeltina (an″ti-sel-ti'nä), *n.* A compound of urea and mercury which does not precipitate albumen: used hypodermically in affections of the cornea and iris.

anticephalalgic (an″ti-sef-a-lal'jik), *a.* and *n.* [Gr. *ἀντί*, against, + *κεφαλαλγία*, headache, + *-ic.*] **I.** *a.* Preventive or curative of headache.

II. *n.* A remedy possessing such properties.

antichlorin (an-ti-klō'rin), *n.* Same as *antichlor.*

antichretic (an-ti-krē'tik), *a.* [*antichresis* (*-et-*) + *-ic.*] Of the nature of antichresis: as, an *antichretic* agreement or contract.

antichrome (an'ti-krōm), *n.* [*anti-* + *chrome.*] A name given to certain pigments which are free from the defects of those in which chrome or chromium is an ingredient.

antichymosin (an-ti-kī'mō-sin), *n.* An antibody which will inhibit the coagulating action of chymosin on milk.

anticipant, *a.* **II.** *n.* One who anticipates or looks forward to something; an anticipator: as, "the sweet *anticipant* of dawn," *B. Taylor,* Poems of the Orient, p. 396.

Anticipating intermittent. See ★*intermittent.*

anticipatorily (an-tis'i-pā-tō-ri-li), *adv.* In anticipation; beforehand. *Ruskin,* Notes, I. 71. [Rare.] *N. E. D.*

anticipatoriness (an-tis'i-pā-tō-ri-nes), *n.* In *psychol.*, a complex feeling accompanying the antecedent image in volition.

The antecedent image is not a volition, unless it includes a certain realized *anticipatoriness,* which we may describe roughly as 'the thought of a real happening.'
M. W. Calkins, Introd. to Psychol., p. 300.

anticize (an'tik-īz), *v. i.*; pret. and pp. *anticized,* ppr. *anticizing.* [*antic* + *-ize.*] To play antics; cut capers; caper about; frolic. *Browning,* Prince Hohenstiel, l.1307. [Rare.] *N. E. D.*

anticlinal, *a.*—**Anticlinal cells,** parent-cells that persist and do not produce antipodal cells. They may be (*a*) *inert,* (*b*) *active* (albuminigenous), or (*c*) *cotyloid. Vesque.* —**Anticlinal planes.** Same as ★*anticlinal walls.*—**Anticlinal valley,** a valley whose general course follows the arch of folded strata: contrasted with a *synclinal valley,* which follows the trough.—**Anticlinal vertebra.** See ★*vertebra.*—**Anticlinal walls,** walls cutting the surface, or periclinal walls at right angles. Also *anticlinal planes.*

anticlinorium (an-ti-klī-nō'ri-um), *n.*; pl. *anticlinoria* (-ä). [NL., < *anticline* + *-orium.*] A mountain formed by an anticline; a series of folds in which the anticlinal type predominates: a series of great arches with many minor undulations. Originally applied by J. D. Dana to an anticlinal mountain range resulting from a geanticlinal elevation of the earth's crust; also used in later years in a structural sense for a mountain range consisting of one or more anticlines, and hence generally for complex anticlines.

anticoagulant (an″ti-kō-ag'ū-lant), *a.* and *n.* [*anti-* + *coagulant.*] **I.** *a.* Possessing the property of retarding or preventing coagulation, especially of the blood. *Buck,* Med. Handbook, V. 493.

II. *n.* Any agent which retards or prevents coagulation.

anticoagulin (an″ti-kō-ag'ū-lin), *n.* An antibody to a coagulin.

anticœlous (an″ti-sē'lus), *a.* In *ornith.*, noting that condition of the intestine in which its folds are united by the mesentery and are alternately turned in opposite directions.

anticoherer (an″ti-kō-hēr'ėr), *n.* [*anti-* + *coherer.*] A device which, like a coherer, is a detector of electric waves, but whose resistance is increased by them.

anticomplement (an-ti-kom'plē-ment), *n.* The antibody to a complement. Substances of this order result by immunizing animals with normal serum; they inhibit the action of the corresponding complements.

anticor (an'ti-kōr″), *n.* [Also *anticore, antecor, anticour; anti-* + L. *cor,* heart.] A circumscribed swelling or slough on the neck of a horse in the region of the collar, resulting from pressure of badly fitting harness or from irritating masses of dirt, sweat, or hair under the harness.

Anticosti group. See ★*group*¹.

anticreep (an'ti-krēp), *a.* In *mech.*, preventing creeping: applied specifically to devices for keeping the rails of a railway from creeping or moving lengthwise, and for diminishing the lengthwise motion of flat leather belts upon their pulleys.

anticryptic (an-ti-krip'tik), *a.* [Gr. *ἀντί*, against, + *κρυπτός*, hidden.] In *biol.*, serving to conceal or fitted for concealing one organism to the disadvantage of another: as contrasted with *procryptic,* serving to hide an organism for its own welfare.—**Anticryptic colors,** in *zoöl.*, those colors which cause an animal to resemble its surroundings, or some other species, and thus facilitate the capture of prey. Thus some spiders closely resemble parts of flowers, and so are enabled to capture insects, while the weasel so harmonizes with the snow in winter and the earth in summer that it can approach its prey unnoticed.

anticyclic (an-ti-sī'klik), *a.* In *math.*, two on a circle, the other two inverse as to that circle: said of four points.

anticyclonal (an-ti-sī'klō-nal), *a.* Same as *anticyclonic.*—**Anticyclonal gradient,** the barometric gradient directed away from the center of an anticyclone, especially in the outer portions of the anticyclone.

anticyclonic, *a.*—**Galton's anticyclonic law.** See ★*law.*

anticytolysin¹ (an-ti-sī-tol'i-sin), *n.* The antibody to a cytolysin.

These cytolytic or, as some prefer to call them, cytotoxic sera, when introduced into the living bodies of the species from which the cells inciting their formation are derived, act as toxins to which the organism responds, each after its kind, by the development of antitoxic substances. These are called *anticytolysins* or anticytotoxins. *Med. Record,* Feb. 14, 1903, p. 247.

anticytotoxin (an-ti-sī-tō-tok'sin), *n.* Same as ★*anticytolysin.*

antidiabetic (an-ti-dī-a-bet'ik), *n.* An agent or medicine that will prevent or cure diabetes; specifically, a drug which diminishes the elimination of sugar.

anti-diastase (an-ti-dī'as-tās), *n.* An antibody which inhibits the action of diastase.

Antidicomarian (an″ti-dī-kō-mā'ri-an), *n.* Same as *Antidicomarianite.*

antidiphtheritic (an″ti-dif- or -dip-thē-rit'ik), *a.* [*anti-* + *diphtheritis* + *-ic.*] Antagonistic to the toxin of diphtheria: as, *antidiphtheritic* serum.

Antidiphtheritic serum has, in the few short years of its existence, so thoroughly proved its value and reliability that the failure of other antitoxic serums to produce equally good results has resulted in disappointment, and in some distrust of serum therapy in general.
Therapeutic Gazette, Feb. 15, 1903, p. 97.

antidote, *n.*—**Chemical antidote,** an antidote which combines chemically with the poison to form an innocuous compound.

antidromal, *a.*—**Antidromal torsion,** a twisting of a twining stem or organ in a direction opposite to that of twining.

antidrome (an'ti-drōm), *n.* and *a.* [Gr. *ἀντίδρομος*: see *antidromous.*] **I.** *n.* Same as ★*heterodrome.*

II. *a.* Same as *antidromous.*

The blaze reaction, whether unequivocal (homodrome) or equivocal (*antidrome*), requires short strong currents for its manifestation. *Nature,* Sept. 18, 1902, p. 191.

anti-enzym (an-ti-en'zim), *n.* The antibody to an enzym. Also *antiferment.*

We have already seen that bacteria are not digested in the alimentary canal and it is a familiar fact that ascarides can survive the digestive juices and it has recently been shown that the body wall of ascaris contains an *anti-enzyme* to pepsin. But what is more important and interesting is the fact that the human stomach wall contains an *anti-enzyme* to its own ferment.
Lancet, April 4, 1903, p. 946.

anti-epithelial (an-ti-ep-i-thē'li-al), *a.* Noting a serum obtained on immunization with epithelial cells and accordingly containing epitheliotoxins.

anti-expansionist (an″ti-eks-pan'shon-ist), *n.* In recent United States politics, one who is opposed to the expansion of the United States by acquisition or conquest of new territory beyond the seas.

antifebrine (an-ti-feb'rin), *n.* Acetanilide: employed in medicine as an antipyretic.

antiferment, *n.* 2. A specific antibody which will inhibit the action of the corresponding ferment. The gastro-intestinal mucous membrane and possibly all the tissues of the animal body probably protect themselves against autodigestion by such means.

antifever-tree (an-ti-fē'vėr-trē), *n.* Same as *fever-tree,* 1.

antigen (an'ti-jen), *n.* [*anti-* + *-gen.*] In Ehrlich's theory of immunity, a substance giving rise to the production of an antibody.

antigenic (an-ti-jen'ik), *a.* Of or of the nature of an antigen.

antiglobulin (an-ti-glob'ū-lin), *n.* A specific precipitin corresponding to globulins.

Antigonia (an-ti-gō'ni-ä), *n.* [NL., < (?) Gr. Ἀντίγονος or Ἀντιγόνη, a personal name.] A genus of fishes allied to the boar-fish, *Capros,* found in tropical seas. The color is salmon-red and the body is much compressed, being deeper than it is long.

Antigoniidæ (an-ti-gō-nī'i-dē), *n. pl.* The family of boar-fishes. The principal genera are *Capros* and *Antigonia.* Also *Caproidæ.*

antigopher-plant (an-ti-gō'fėr-plant), *n.* [*anti-* + *gopher* + *plant.*] Same as *mole-tree.*

antigravitate (an-ti-grav'i-tāt), *v. i.* [*anti-* + *gravitate.*] To rise from the surface of the earth; to be repelled, instead of being attracted like ordinary matter, in a gravitational field of force.

The author refers to Hovenden's theory of a substance or fluid which, when uninfluenced by external forces, rises from the surface of the earth or "*antigravitates.*"
Electrochem. Industry, June, 1904, p. 250.

antihalation (an″ti-hā-lā'shon), *a.* Counteracting the effects of halation.—**Antihalation plate,** a photographic dry plate so prepared that the rays reflected from the glass-support do not affect the sensitive film.

antihemolysin (an″ti-hē-mol'i-sin), *n.* In *physiol. chem.*, an adaptation-product which inhibits the action of the corresponding hemolysin. Its action is dependent upon the simultaneous formation of an anti-amboceptor and an anticomplement. Also *antihæmolysin.*

antihemolytic (an-ti-hem-ō-lit'ik), *a.* Inhibiting hemolysis. *Science,* May 27, 1904, p. 831. Also *antihæmolytic.*

antiheterolysin (an″ti-het-e̤-rol′i-sin), *n.* An antibody resulting on immunization with a heterolysin.

antihidrotic (an-ti-hī-drot′ik), *a.* Same as *anhidrotic.*

antihydrophobic (an″ti-hī-drō-fō′bik), *a.* [*anti-* + *hydrophobia* + *-ic.*] Preventive or curative of rabies.

antihydropic (an″ti-hī-drop′ik), *a.* and *n.* [*anti-* + *hydrop(sy)* + *-ic.*] **I.** *a.* Curative of dropsy.

II. *n.* A medical agent employed in the treatment of dropsy.

anti-immune (an-ti-i-mūn′), *a.* Adverse to an immune body.—**Anti-immune body,** the antibody to an amboceptor. Such bodies result on immunization with specific immune bodies (amboceptors).

The "anti-body" prevents the linking of the immune body to the cell receptor and hence acts as an *anti-immune* body. *Med. Record,* Feb. 14, 1903, p. 247.

anti-imperialism (an″ti-im-pē′ri-a̤l-izm), *n.* The principles or spirit of the anti-imperialists.

anti-imperialist (an″ti-im-pē′ri-a̤l-ist), *a.* and *n.* **I.** *a.* Pertaining to the ideas of the anti-imperialists.

II. *n.* One who is opposed to imperialism, or to the spirit, principle, or methods of empire; specifically, in United States politics, one who is opposed to the acquisition and government of dependencies beyond the seas by the arbitrary will of President or Congress, without regard to the rights of the people to self-government. In use especially since the Spanish-American war of 1898.

anti-imperialistic (an″ti-im-pē″ri-a̤-lis′tik), *a.* Same as ★*anti-imperialist.*

anti-intermediary (an″ti-in-tėr-mē′di-ā-ri), *a.* Used only in the following phrase.—**Anti-intermediary body.** Same as ★*anti-amboceptor.*

The next experiment was to determine whether any action was exerted by venom upon the complements of these sera. For the purpose of obtaining the serum-complement free from the intermediary body, the rabbit was treated with dog's serum heated to 56° C. In this way the *anti-intermediary body* was obtained, which, when heated to 56° C. (to remove rabbit's complement) and added to fresh dog's serum, neutralized the action of the latter upon rabbit's corpuscles. From this it could be concluded that the intermediary body of the dog's serum was neutralized by the *anti-intermediary body* contained in the immunized rabbit's serum, leaving behind the pure dog's complement in the fluid.

Jour. Exper. Med., VI. 299.

anti-isolysin (an″ti-ī-sol′i-sin), *n.* An antibody which will inhibit the action of the corresponding isolysin.

antikamnia (an-ti-kam′ni-ä), *n.* [Irreg. < Gr. *ἀντί,* against, + *κάμνειν,* suffer, be ill.] The trade-name of a preparation for medicinal use, antipyretic and anodyne in its action. It is said to contain acetanilide.

antikinase (an-ti-kin′ās), *n.* In *physiol. chem.,* a substance which inhibits or prevents the action of a kinase: such bodies occur in blood-serum.

antilactase (an-ti-lak′tās), *n.* An antiferment which will inhibit the cleavage of lactose into glucose and galactose by means of lactase.

antilactoserum (an″ti-lak-tō-sē′rum), *n.*; pl. *antilactosera* (-rä). A serum containing the antiprecipitin corresponding to lactoserum, which will therefore inhibit the action of the latter.

antileucotoxin (an″ti-lū-kō-tok′sin), *n.* The antibody to a leucotoxin.

Antilopine kangaroo. See ★*kangaroo.*

antilysin (an-ti-lī′sin), *n.* [Also erron. *antilisin.*] The antibody to a given lysin.

antilytic, *a.* 2. Inhibiting the lytic action of a substance.

antimalarial (an″ti-mä-lā′ri-a̤l), *a.* [*anti-* + *malaria* + *-al.*] Preventive or curative of malaria.

antimephitic (an″ti-mē-fit′ik), *a.* [*anti-* + *mephitis* + *-ic.*] Tending to purify the atmosphere; destructive of noxious emanations.

antimeron (an-tim′e-ron), *n.*; pl. *antimera* (-rä). [NL.: see *antimere.*] Same as *antimere.*

antimerous (an-tim′e̤-rus), *a.* Antimeric; pertaining to paired organs.

antimetrically (an-ti-met′ri-kal-i), *adv.* As against the metric system of weights and measures. [Nonce-word.]

The questions propounded . . . are clearly biassed *antimetrically.*

Electrical World and Engineer, Nov. 28, 1903, p. 867.

antimetropia (an″ti-me-trō′pi-ä), *n.* [NL., < *ἀντί,* against, + *μέτρον,* measure, + *ὤψ,* eye.] A condition in which myopia exists in one eye and hypermetropia in the other.

antimetropic (an″ti-me-trop′ik), *a.* Relating to or of the nature of antimetropia. *Optical Jour.,* June 2, 1904, p. 977.

antimiasmatic (an″ti-mī-az-mat′ik), *a.* [*anti-* + *miasma(t-)* + *-ic.*] Same as ★*antimalarial. Amer. Physician,* Jan., 1903, p. 14.

antimicrobic (an″ti-mī-krō′bik), *a.* [*anti-* + *microbe* + *-ic.*] Destructive to, or inimical to the development of micro-organisms: as, *antimicrobic* sera. *Encyc. Brit.,* XXVI. 69.

Antimonial cup, a drinking-cup made of glass of antimony, claimed to impart the emetic antimony compounds to the contained liquid.—**Antimonial nickel, powder.** See ★*nickel, powder.*

Antimonious sulphid, a substance occurring as a natural mineral, stibnite, the chief source from which antimony and its other compounds are obtained. Artificially prepared, it was formerly called *mineral kermes* and *golden sulphid of antimony;* it is still occasionally used in medicine, but the official preparation usually contains a little of the oxid of the metal.

antimonsoon (an″ti-mon-sön′), *n.* [*anti-* + *monsoon.*] **1.** A current of air moving in a direction opposite to that of the monsoon: it may lie above the monsoon proper, but is generally strongest on the west side of it; the northerly wind which opposes the principal southwest monsoon of India, and is overcome by it.—**2.** A northerly wind of the Gulf States opposed to the southeasterly winds that draw inward from the Gulf toward the dome of the western continent in the spring and summer seasons and constitute light monsoon winds.

Antimony glass. See *glass of antimony,* under *glass.*—**Antimony ocher,** a name sometimes given to oxidized ores of antimony when of earthy or pulverulent texture.—**Feathered antimony,** refined metallic antimony showing distinct crystalline structure by feather-like markings on the surface of the ingot.—**Plumose antimony.** Same as *feathered* ★*antimony.*—**Tartarized antimony.** Same as *tartar emetic.*

antimonyl (an′ti-mō-nil), *n.* [*antimon(y)* + *-yl,* < Gr. *ὕλη,* matter, substance.] In *chem.,* a compound radical having the constitution SbO and exhibiting the valence of a monad.

antimony-salt (an′ti-mō-ni-sâlt″), *n.* A trade-name for a double salt of antimony fluoride and ammonium sulphate which has the formula $SbF_3(NH_4)_2SO_4$. It is sold as a substitute for tartar emetic, and is used chiefly as a fixing agent for tannin in the application of the basic colors.

Antimora (an-tim′ō-rä), *n.* [NL., < Gr. *ἀντί,* opposite to, + NL. *Mora,* a related genus.] A genus of deep-sea *Gadidæ,* allied to the ling.

antineuralgic (an″ti-nū-ral′jik), *a.* and *n.* [*anti-* + *neuralgia* + *-ic.*] **I.** *a.* Curative of neuralgia.

II. *n.* A remedy employed in the treatment of neuralgia.

anting-anting (än′ting-än″ting), *n.* [Tagalog *anting-anting,* a charm, amulet: same as Malay *anting-anting,* an ear-ring.] A charm supposed to protect the owner from injury, especially from bullets. [Philippine Is.]

antiniad (an-tin′i-ad), *adv.* [Appar. irreg., < L. *ante,* before, + *-in*[2] + *-i-* + *-ad*[3].] Forward; toward the anterior portion of the cranium, like the horns of a musk-ox. [Rare.] *Sir J. Richardson,* Zoöl. of the 'Herald.'

antinion (an-tin′i-on), *n.* [Gr. *ἀντί,* against, opposite to, + *ἰνίον,* the back of the head.] The antinial region. See *antinial.*

antinonnin (an-ti-non′in), *n.* A trade-name for a mixture of orthodinitrocresol, soap, and glycerol, used in very dilute solution as a disinfectant and preservative.

antinosine (an-tin′ō-sin), *n.* [Gr. *ἀντί,* against, + *νόσος,* disease.] The sodium salt of nosophen (tetra-iodo-phenolphtalein), a bluish, water-soluble powder, used as a substitute for iodoform.

antiodontalgic (an″ti-ō-don-tal′jik), *a.* [*anti-* + *odontalgia* + *-ic.*] **I.** *a.* Relieving toothache.

II. *n.* A remedy for toothache.

Antiopa butterfly. See *butterfly.*

antiophidic (an″ti-ō-fid′ik), *a.* A term applied by Vital to a serum devised for the treatment of snakebite, and supposedly of universal efficacy. It is a mixture of equal parts of bothropic and anticrotalic serum.

antiparallelogram (an″ti-par-a̤-lel′ō-gram), *n.* Same as ★*contraparallelogram.*

antiparamœcious (an″ti-par-a̤-mē′shus), *a.* Applied to a serum resulting on immunization with paramœcium, an organism belonging to the protozoa.

antiparasitic (an″ti-par-a̤-sit′ik), *a.* and *n.* [*anti-* + *parasite* + *-ic.*] **I.** *a.* Inimical to parasites.

II. *n.* A remedy employed for the destruction or removal of parasites.

antipathacean (an″ti-pa-thā′sē-a̤n), *a.* and *n.* [*Antipathacea* + *-an.*] **I.** *a.* Pertaining to or having the characters of the *Antipathacea.*

II. *n.* One of the *Antipathacea.*

Antipatharia, *n. pl.* 2. An order or a suborder of *Zoantharia.* They are colonial and tree-like in form, with tentacles and mesenteries 6 to 24 in number and a skeleton in the form of a branched chitinoid axis, developed from the ectoderm, which extends throughout the colony. The "black corals" belong in this group, which includes the families *Savagliidæ, Antipathidæ,* and *Dendrobrachiidæ.*

Antipathidea (an″ti-pa-thid′ē-ä), *n. pl.* [NL., < *Antipathes* + *-idea.*] An order of colonial *Zoantharia paramera* with a spinose, horny, usually branching axial skeleton on which the zoöids are seated. Six tentacles are usually longer than the others, and six primary mesenteries are always present. It includes the families *Antipathidæ, Leiopathidæ,* and *Dendrobrachiidæ.*

antipedal (an-tip′ē-dal), *a.* [Gr. *ἀντί,* against, + L. *pes* (*ped-*), foot, + *-al.*] Situated opposite to the foot: as, the *antipedal* area of a mollusk. *Lankester.*

antipepsin (an-ti-pep′sin), *n.* The antibody to pepsin, which inhibits the action of the latter.

antipeptone, *n.* 2. In *immunity,* a specific precipitin corresponding to peptones.—**Fibrin antipeptone,** antipeptone obtained from fibrin.

antipericœlous (an″ti-per-i-sē′lus), *a.* In *ornith.,* having the second intestinal loop open, right-handed, and inclosing the third, which is left-handed and closed.

anti-pest (an″ti-pest), *a.* Same as ★*anti-plague.*

antiphagocytic (an″ti-fag-ō-sit′ik), *a.* Destructive to phagocytes.—**Antiphagocytic serum,** a serum which causes the destruction of phagocytes.

An *antiphagocytic serum,* prepared in this sense, has produced its demolishing effect not only upon the macrophages, but also upon their enemies, the useful microphages. *Med. Record,* July 18, 1903, p. 83.

antiphase (an′ti-fāz), *n.* and *a.* **I.** *n.* Opposition of phase, or difference of phase amounting to one half period or 180 degrees.

II. *a.* Of or pertaining to an antiphase.

antiphonic, *a.* 2. In *anc. Gr. music,* of or pertaining to the interval of an octave: opposed to ★*paraphonic.*

antiphthisical (an-ti-tiz′i-kal), *a.* [*anti-* + *phthisic* + *-al.*] Same as *antiphthisic.*

anti-plague (an″ti-plāg′), *a.* Used in the treatment or as a preventive of plague: as, *anti-plague* serum.

antiplanat (an″ti-pla-nat′), *n.* [G. *antiplanat,* < Gr. *ἀντί,* against, + L. *planatus,* made plane: see *planation.*] A combination of lenses, invented in 1881 by Adolph Steinheil, in which there are two members having large opposite aberrations which correct each other.

antiplanatic (an″ti-pla-nat′ik), *a.* Used, erroneously, for *aplanatic.*

antiplateau (an″ti-pla-tō′), *n.* An area in the general ocean-floor which sinks to a greater depth than the average sea; a deep. Such areas are contrasted with plateaus, and extend downward from the ocean-floor in much the same manner in which plateaus protrude above the continental surface. *Chamberlin and Salisbury,* Geol., I. 8.

antiplenist (an-ti-plē′nist), *n.* [*anti* + *plenum* + *-ist.*] One who does not believe that space is a plenum (wholly occupied with matter); a vacuist.

antipneumococcic (an″ti-nū-mō-kok′sik), *a.* [*anti-* + *pneumococcus* + *-ic.*] Tending to destroy or prevent the development of pneumococci: as, an *antipneumococcic* serum. *Encyc. Brit.,* XXXI. 526.

antipodagric (an″ti-pō-dag′rik), *a.* and *n.* [*anti-* + *podagra* + *-ic.*] **I.** *a.* Curative of gout.

II. *n.* A remedy for gout.

Antipodal cone, triangle. See ★*cone* and ★*triangle.*

antipoint, *n.* (*b*) Given any system of coaxal circles, another system of coaxal circles may be constructed such that every circle of either system cuts orthogonally every circle of the other system. The limiting points of either system are the antipoints of the limiting points of the other system.

antipole, *n.* 2. In *cytol.,* a term applied to one of the two poles of the karyokinetic spindle of the dividing cell, the term *pole* being reserved for the one under immediate consideration.

antipolo (ăn-tē-pō′lō), *n.* [Tagalog name.] A name in the Philippines of the fertile bread-fruit tree (*Artocarpus communis*), the sterile form of which is called (in Bisayan) *coló*. The seeds, sometimes called bread-nuts, are roasted and eaten like those of the jackfruit, and the milky latex is used for bird-lime and as pitch for calking boats. Canoes are made of the logs, but they do not resist exposure to the weather and must be painted and kept covered when out of the water. The wood is soft and of a yellow color. It is used for interior woodwork in construction, but is not suitable for posts or sleepers. Also called *tipolo*, and on the island of Guam *dugdug*. See *Artocarpus*, *bread-fruit*, ★*bread-nut*, and ★*dugdug*.

antiprecipitin (an″ti-prē-sip′i-tin), *n.* The antibody to a precipitin, which will inhibit the action of the latter. See ★*antibody*.

antipruritic, *a.* **II.** *n.* A remedy which tends to relieve itching.

antipudic (an-ti-pū′dik), *a.* Used or worn to prevent shame; intended to cover the pudendum, for the sake of decency.

> The men in certain islands [of Melanesia] wear only *antipudic* garments. *Deniker*, Races of Man, p. 499.

antiputrid (an-ti-pū′trid), *a.* and *n.* **I.** *a.* Antiputrescent; antiputrefactive; antiseptic.

II. *n.* Any substance which has the power of inhibiting, preventing, or destroying putrefaction. *Diseases of the Horse*, U. S. Dept. Ag., 1903, p. 511.

antipyresis (an-ti-pir′ē-sis), *n.* [Gr. *ἀντί*, against, + *πυρετός*, fever.] Reduction of fever; treatment for the reduction of fever.

antiquarianize (an-ti-kwā′ri-ạn-īz), *v. i.*; pret. and pp. *antiquarianized*, ppr. *antiquarianizing*. To engage in antiquarian pursuits or research. *Lyell*.

antiquarianly (an-ti-kwā′ri-ạn-li), *adv.* As an antiquarian; in the manner of an antiquarian. *Walpole*, Letters, I. 37. [Rare.] *N. E. D.*

Antirabic serum, a serum intended to inhibit the action of the specific virus of rabies. *Encyc. Brit.*, XXIX. 377.

antirattler (an-ti-rat′lėr), *n.* A device for holding a bolt and eye together to prevent rattling without interfering with the movement.

antirealism (an-ti-rē′ạl-izm), *n.* [*anti-* + *real* + *-ism*.] The doctrine that there is nothing whose characters are independent of all actual thought about them.

> The "*anti-realism*," which takes the lion's share in "transfigured realism," is simply a development of the phenomenalism of Hume. *Encyc. Brit.*, XXX. 675.

antirennet (an-ti-ren′et), *n.* The antibody to the action of rennin (chymosin). See ★*antibody*.

antirentism (an-ti-ren′tizm), *n.* [*antirent* + *-ism*.] The principles of the Antirent party (which see).

antirevisionist (an″ti-rē-vizh′ọn-ist), *n.* One who is opposed to a particular measure of revision, as, in recent French history, one who is opposed to a revision of the constitution.

antirheumatic (an″ti-rö-mat′ik), *a.* and *n.* **I.** *a.* In *med.*, tending to prevent or cure rheumatism.

II. *n.* A remedy for rheumatism.

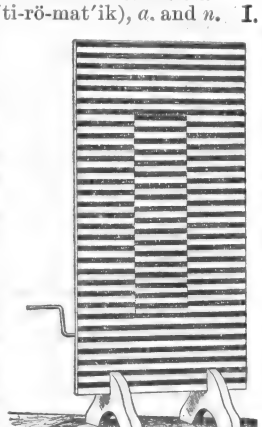


Fig. 64.
Antirrheoscope.

antiricin (an-ti-rī′-sin), *n.* The antibody to ricin. See ★*antibody*.

antirrheoscope (an-ti-rē′ō-skōp), *n.* [Gr. *ἀντί*, against, + *ῥεῖν*, flow, + *σκοπεῖν*, view.] In *psychol.*, the artificial waterfall; an apparatus in which a band of horizontally striped cloth moves up or down upon a stationary background of the same material: used for the demonstration of after-images of motion.

antiscion (an-tis′i-ọn), *n.* [NL. *antiscion*, < Gr. *ἀντίσκιον*, neut. of *ἀντίσκιος*: see *antiscian*.] In *astrol.*, a sign of the zodiac equidistant with another sign on the opposite side. Signs having north declination are called *commanding*, those with south declination *obeying*.

Anti-Semite (an″ti-sem′īt), *n.* One who seeks by political or other means to lessen the commercial, political, or social influence of the Jews. The name is given especially to those who have participated in the agitation against the Jews in Germany, Russia, and Austria which began about 1878.

Anti-Semitic (an″ti-sē-mit′ik), *a.* Of or pertaining to the Anti-Semites.

Anti-Semitism (an″ti-sem′it-izm), *n.* The agitation conducted by the Anti-Semites or its motives; antagonism to the Jews.

antisepsine (an-ti-sep′sin), *n.* A colorless crystalline compound, $C_6H_4Br.NH.CH_3CO$, obtained by adding bromine to a solution of acetanilide in glacial acetic acid; para-brom-acetanilid. It is antipyretic. Also called *asepsine*.

antiseptol (an-ti-sep′tōl), *n.* [*antisept(ic)* + *-ol*.] A trade-name for a solution of 25 parts of cinchonine sulphate in 2,000 parts of water, mixed with a solution of 10 parts of iodine and 10 parts of potassium iodide in 1,000 parts of water. It is used as an antiseptic.

antiserum (an-ti-sē′rum), *n.*; pl. *antiserums* (-rumz) or *antisera* (-rạ). A serum containing the antibody to a given immunizing substance, as antidiphtheria serum, antitetanus serum, etc. See ★*immunity*.

> The author has produced a specific *antiserum* by the successive inoculation of animals with this toxin. Such an *antiserum* absolutely destroys the action of the toxin when the two are mixed in vitro. It also causes the symptoms produced by the toxin to rapidly disappear if inoculated subcutaneously or instilled into the eye of a susceptible individual shortly after such a toxin has been similarly introduced.
>
> *Med. Record*, March 28, 1903, p. 511.

antisicular (an-ti-sik′ū-lär), *a.* [NL. *anti-*, opposite to, + *sicula*, sicula.] Opposite the sicula: used to designate the part of the graptolite rhabdosome which is opposite the sicula-bearing or sicular end.

antisilverite (an-ti-sil′vėr-īt), *n.* In recent United States politics, one who is opposed to the free coinage of silver.

antisiphonal (an-ti-si′fọ-nal), *a.* [NL., < Gr. *ἀντί*, opposite to, + *σίφων*, pipe: see *siphon*.] Lying opposite to the siphonal (lobe): in the terminology of the ammonoid cephalopod shell, noting a lobe of the suture which lies on the inner dorsal side of the whorl and opposite to that on the ventral surface, called the siphonal lobe. Both of these are present in, and are indicative of, primitive stages, and become modified in progressed conditions.

Antislavery china. See ★*china*.

antisocial, *a.* 3. Specifically, in *sociol.*, pertaining to a class of persons devoid of normal social instincts and showing criminal tendencies. *Giddings*, Prin. of Sociol., p. 72.

antisociality (an″ti-sō-shi-al′i-ti), *n.* A quality, act, or habit of an individual, class, or group which is antagonistic to social feeling, habit, or interest. Extreme antisociality is criminality. *Amer. Jour. Psychol.*, XIII. 586.

antisolar (an-ti-sō′lär), *a.* Situated at the point in the heavens opposite the sun, as the center of the rainbow, or the 'gegenschein.'

antispace (an′ti-spās), *n.* In *math.*, that part of the complete spatial manifold which is without the absolute: that part which is inclosed within the absolute is called *space*.

antispectroscopic (an-ti-spek-trō-skop′ik), *a.* Such as to counteract the spectroscopic effect. *Wall*, Dict. of Photography, p. 44.

antispermotoxin (an-ti-spėr-mō-tok′sin), *n.* The antibody to a spermotoxin, which inhibits the action of the latter. See ★*antibody*.

antispermy (an-ti-spėr′mi), *n.* [Gr. *ἀντί*, against, + *σπέρμα*, seed.] In spermatophytes, the coalescence of the fertile divisions of the phyllome into a single fertile body opposed to and superposed upon the sterile division. *Delpino*.

antisporangism (ar-ti-spō-ran′jizm), *n.* [Gr. *ἀντί*, against, + *sporangium* + *-ism*.] In pteridophytes, the condition corresponding to antispermy in spermatophytes. *Delpino*.

antisquama (an-ti-skwā′mä), *n.*; pl. *antisquamæ* (-mē). [NL., < Gr. *ἀντί*, against, + L. *squama*, scale.] The middle one of three basal lobes of the wing of a dipterous insect, the inner one being the *squama* and the outer one the *alula*. *A. S. Packard*, Text-book of Entomology, p. 124.

antisquamic (an-ti-skwam′ik), *a.* and *n.* [*anti-* + L. *squama*, scale, + *-ic*.] **I.** *a.* In *med.*, tending to prevent or cure scaly affections of the skin.

II. *n.* A remedy used for this purpose.

antistaphylococcic (an″ti-staf-i-lō-kok′sik), *a.* [*anti-* + *staphylococcus* + *-ic*.] Tending to destroy or hinder the development of staphylococci. *Med. Record*, March 28, 1903, p. 510.

antisteapsin (an-ti-stē-ap′sin), *n.* An antibody which will inhibit the action of steapsin.

antistrephon (an-tis′tre-fon), *n.* [Gr. *ἀντιστρέφων*, ppr. of *ἀντιστρέφειν*, turn against: see *antistrophe*.] In *logic*, an argument in a lawsuit which is of such a nature that either party may urge it against the other with some appearance of conclusiveness. Antistrephons belong to the general class of crocodiles, the following stock example being from Aulus Gellius. Euathlus agreed to pay Protagoras, his teacher in rhetoric, a large sum of money should he win his first case in court. Having received the instruction, but not having had any case in court, he was sued by Protagoras for the amount, on the ground that should Euathlus win the suit he must pay, according to the contract (and a second suit would compel him to do so), while if the suit went the other way the court would compel payment. Euathlus replied that if the court decided in his favor that must be final, while if the court decided against him a further proceeding would award the money to him.

antistreptococcal (an″ti-strep-tọ-kok′ạl), *a.* Same as *antistreptococcic*.

antistreptococcic (an″ti-strep-tō-kok′sik), *a.* [*anti-* + *streptococcus* + *-ic*.] Tending to destroy or hinder the development of streptococci: as, *antistreptococcic* serum. *Nature*, July 9, 1903, p. 227.

antistrofe, *n.* A simplified spelling of *antistrophe*.

antistrophic, *a.* 2. Enantiomorphous.

antistrophize (an-tis′trō-fīz), *v. i.*; pret. and pp. *antistrophized*, ppr. *antistrophizing*. [*antistrophe* + *-ize*.] To form an antistrophe; correspond, but in inverse order. *De Quincey*, Blackwood's Mag., LI. 12. [Rare.] *N. E. D.*

antisubstance (an′ti-sub-stạns), *n.* Same as ★*antibody*. See ★*adaptation-product*. *Jour. Exper. Med.*, V. 62.

antisudorific (an″ti-sū-dō-rif′ik), *a.* and *n.* [*anti-* + *sudorific*.] **I.** *a.* Tending to repress the secretion of sweat. *Buck*, Med. Handbook, I. 338.

II. *n.* A remedy possessing this property.

antisun (an-ti-sun′), *n.* 1. The point in the sky diametrically opposite the sun.—2. A point in the sky opposite the sun in azimuth, but having the same altitude as the sun, and therefore not diametrically opposite to it. This use of the word is common only in describing halos and parhelia. *Encyc. Brit.*, XXX. 705.

antitegula (an-ti-teg′ū-lạ), *n.*; pl. *antitegulæ* (-lē). [NL., < Gr. *ἀντί*, against, + L. *tegula*, tile.] Same as ★*antisquama*.

antiteleology (an″ti-tel-ē-ol′ọ-ji), *n.* [*anti-* + *teleology*.] That attitude of mind which fails or refuses to see any proof of teleology in nature; the doctrine or tendency which disputes all attempts to show that there are actions in nature determined by anything which is to be in the future.

antitetanic (an″ti-tet′ạ-nik), *a.* [*anti-* + *tetanus* + *-ic*.] Tending to destroy or prevent the development of tetanus bacilli; preventive or curative of tetanus: as, *antitetanic* serum. *Science*, June 26, 1903, p. 1006.

antitetanin (an″ti-tet′ạ-nin), *n.* The antitoxin to the soluble poison produced by the tetanus bacillus.

antitetanolysin (an-ti-tet-an-ol′i-sin), *n.* The antibody to tetanolysin.

antithermic (an-ti-thėr′mik), *a.* [Gr. *ἀντί*, against, + *θέρμη*, heat, + *-ic*.] In *med.*, same as *antipyretic*. *Med. Record*, March 7, 1903, p. 376.

antithermin (an-ti-thėr′min), *n.* [Gr. *ἀντί*, against, + *θέρμη*, heat, + *-in*[2].] Phenylhydrazinelevulinic acid. It has been used as an antipyretic agent in medicine under this trade-name.

antithesism (an-tith′e-sizm), *n.* [Irreg. < *antithes(is)* + *-ism*.] An antithetic sentence; an example or instance of antithesis. [Rare.] *N. E. D.*

antithesistic (an-tith-ē-sis′tik), *a.* [Irreg. < *antithes(is)* + *-istic*.] Presenting an antithesis; contrary: as, *antithesistic* ideas. *Dr. E. Darwin*, Zoonomia, IV. 234. [Rare.] *N. E. D.*

antithesize (an-tith′e-sīz), *v. t.*; pret. and pp. *antithesized*, ppr. *antithesizing*. To put into the form of an antithesis. *Burns*. *N. E. D.*

antithrombin (an-ti-throm′bin), *n.* A substance which inhibits the action of thrombin.

antitoxic (an-ti-tok′sik), *a.* and *n.* **I.** *a.* Serving to inhibit or neutralize toxic action; having the character of antitoxin.

The term *antitoxic* signifies that the serum has the power of neutralizing the action of the toxin.
Encyc. Brit., XXVI. 67.

Antitoxic immunity. See ★*immunity*.—**Antitoxic serum,** serum containing antitoxin, as antidiphtheritic serum and antitetanic serum.—**Antitoxic unit,** the unit of antitoxin, of such strength that it will just neutralize the hundredfold minimal fatal dose of the corresponding toxin.

II. *n.* An antitoxic remedy.

antitoxin (an″ti-toks′in), *n.* [*anti-* + *toxin.*] **1.** A substance which neutralizes the action of a poison.—**2.** Specifically: (*a*) The antibody to a toxin of bacterial or related origin which is produced as the result of immunization with the corresponding toxin. Examples are the diphtheria antitoxin and the tetanus antitoxin. (*b*) In *bot.*, a substance secreted by a plant which protects it against destructive microbes.—**Fernbach's antitoxin flask,** a special form of culture-flask used for cultures of diphtheria.—**Streptococcus antitoxin,** an antitoxin obtained by repeated inoculations of horses with streptococcus cultures: employed by hypodermic injection in the treatment of erysipelas, puerperal fever, septicemia, and other conditions in which there is infection by streptococci. Also called *antistreptococcus serum.*

antitragal (an-tit′rā-gal), *a.* Of or pertaining to the antitragus, or projection on the inferior side of the opening of the ear.—**Antitragal notch,** in *zoöl.*, the notch or emargination at the base of and behind the antitragus, which marks its posterior boundary. The phrase is much used in describing the ears of bats. *Annals and Mag. Nat. Hist.*, May, 1904, p. 386.

antitrust (an-ti-trust′), *a.* Opposed to the power or development of trusts, or of large combinations of capital.

antitrypsin (an-ti-trip′sin), *n.* An antibody which inhibits the action of trypsin. Normal blood sometimes contains such a body. *Science*, Aug. 19, 1904, p. 243.

antitryptic (an-ti-trip′tik), *a.* [*anti-* + *tryptic.*] Antifermentative. *Med. Record*, June 27, 1903, p. 1043.

antituberculous (an″ti-tū-bėr′kū-lus), *a.* [*anti-* + *tubercul(osis)* + *-ous.*] Tending to prevent or cure tuberculosis. *Med. Record*, July 25, 1903.

antitussin (an-ti-tus′in), *n.* [See ★*antitussive.*] A white, crystalline, fragrant compound ($C_6H_4F_2$), used in ointments; difluor diphenyl. It is used as an antispasmodic and hypnotic in whooping-cough.

antitussive (an-ti-tus′iv), *a.* and *n.* [Gr. *ἀντί*, against, + L. *tussis*, a cough.] **I.** *a.* Preventing or relieving cough. *Buck*, Med. Handbook, VI. 573.

II. *n.* Any agent which possesses this property.

anti-twilight (an-ti-twī′līt), *n.* The bright arc, or twilight arc, when first seen near the eastern horizon opposite the sun just before sunset, due to sunlight reflected from the illuminated portion of the atmosphere. The twilight arc rises, as the sun sinks lower, and eventually passes westward over the zenith.

antityphoid (an-ti-tī′foid), *a.* Tending to prevent or cure typhoid fever: as, *antityphoid* serum. *Med. Record*, June 27, 1903, p. 1043.

antivaccination (an″ti-vak-si-nā′shọn), *a.* Opposed to the practice of vaccination; considering or dealing with the subject of antivaccination: as, an *antivaccination* lecture; the *antivaccination* movement.

antivenene (an″ti-vē-nēn′), *n.* [*anti-* + **venene.*] The antibody to venene, which inhibits the action of the latter. *Buck*, Med. Handbook, VI. 716. Also called *antivenin, antivenine.*

antivenenian (an″ti-vē-nē′ni-ạn), *a.* [Gr. *ἀντί*, against, + *venenum*, poison, + *-ian.*] Same as *antidotal.*

antivenin, antivenine (an-ti-ven′in), *n.* [L. *anti-* + *ven(enum)*, poison, + *-in*[2].] Same as ★*antivenene.*

antivenomous (an-ti-ven′ọ-mus), *a.* Antagonistic to the action of snake-poison. *Buck*, Med. Handbook, VI. 715.

antivivisectionist (an″ti-viv-i-sek′shọn-ist), *n.* [*anti-* + *vivisection* + *-ist.*] One who is opposed to the making of physiologic and therapeutic experiments on living animals. *Med. Record*, Feb. 14, 1903, p. 264.

antlerite (ant′lėr-īt), *n.* [*Antler* (see def.) + *-ite*[2].] A hydrated copper sulphate occurring in soft lumps of a light-green color: from the Antler mine, Yucca Station, Arizona.

antodonin (an-tō′dō-nin), *n.* A pigment found in certain invertebrate animals, notably crinoids. *Science*, May 31, 1901, p. 847.

antonino (ān-tō-nē′nō), *n.* [Sp. (equiv. to E. *Tony*), dim. of *Antonio*, Antony.] A Cuban name of the mackerel-scad, *Decapterus macarellus.*

antorbital, *a.*—**Antorbital vacuity,** in *anat.*, the open space in front of the antorbital plate and behind the maxillary process of the nasal.

II. *n.* **1.** In *ichth.*, the preorbital bone.—**2.** In *ornith.*, a bony plate morphologically the equivalent of the prefrontal of reptiles, standing at an obtuse angle to the interorbital septum and forming the anterior border of the orbit of the eye.

ant-orchis (ant′ôr″kis), *n.* An Australian and Tasmanian terrestrial orchid, *Chiloglottis Gunnii.*

ant-rice (ant′rīs), *n.* A grass, *Aristida oligantha*, growing in the clearings around the nests of the agricultural ants of Texas, which feed upon its seeds.

Antrophyum (an-trō′fi-um), *n.* [NL. (Kaulfuss, 1824), < Gr. *ἄντρον*, cavity, groove, + *φύειν*, grow.] A genus of polypodiaceous ferns, with simple linear-lanceolate to oblong-elliptical fronds and sori borne in continuous lines (either superficial or in shallow grooves, whence the name) following the reticulate venation. There are about 25 species, widely distributed throughout the humid tropics of both hemispheres.

antrorse, *a.* **2.** In *ichth.*, turned forward: said of spines.

antroversion (an-trọ-vėr′shọn), *n.* [See ★*antrovert.*] A turning forward: same as *anteversion. Syd. Soc. Lex.*

antrovert (an-trọ-vėrt′), *v. t.* [*antro-* for *antero-* + L. *vertere*, turn.] To tip, turn, or bend forward. *Owen.*

Antrum femininum, the small tubular entrance to the female generative passage in polyclads.—**Antrum masculinum,** the outer tubular opening of the male generative organs in polyclads.—**Mastoid antrum,** the cells in the mastoid process of the temporal bone taken collectively.—**Maxillary antrum.** Same as *antrum Highmorianum.*

ant-spider (ant′spī″dėr), *n.* Any one of several spiders which closely resemble ants, forming notable examples of aggressive mimicry.

Antwerp (ant′wėrp), *n.* The name of a city in Belgium, used to distinguish a breed of domesticated pigeons having a large, massive head and short, stout beak with a small wattle at the base. They are bred in a variety of colors, but silver, silver-checkered, "creamies," and black are those preferred. These birds fly well and have a strong homing sense: during the Franco-German war they were used for carrying despatches.—**Antwerp rose.** See ★*rose*[1].

anubing (a-nö′bing), *n.* [Philippine Sp. *anubing, anubiong, anubin, anubion*, < Tagalog *anobing.*] A valuable timber-tree, *Artocarpus Cumingiana.* It yields a fine-grained wood of a yellowish-gray color, which is light and very durable if properly seasoned. It also resists dampness, and is used for posts in house-building. [Philippine Is.]

anuclear (a-nū′klē-ạr), *a.* Non-nucleated; concerning or pertaining to the alleged absence of a nucleus in certain low organisms.

anuhe (ä-nö′hā), *n.* [Maori *anuhe*, a large caterpillar, = Hawaiian *anuhe*, Samoan *anufe*, etc., a worm, a caterpillar.] The New Zealand caterpillar-fungus, a species of *Cordyceps*, which attacks certain lepidopterous larvæ. See ★*aweto.*

anunu (ä-nö′nö), *n.* [Hawaiian, < *anunu*, greedy.] In Hawaii, a name of several species of climbing or prostrate herbs belonging to the genus *Sicyos*, of the gourd family.

anuretic (an-ū-ret′ik), *a.* [*anuresis* (*-ret*) + *-ic.*] Same as ★*anuric.*

anuric (a-nū′rik), *a.* [*anuria* + *-ic.*] Resulting from or relating to anuria.

Anus cerebri, the anterior opening of the aqueduct of Sylvius.—**Anus vestibularis** or **vulvovaginalis,** a malformation in which the anus is imperforate, the rectum terminating at the vulva.—**Artificial anus,** an opening made into the large intestine for the purpose of giving exit to the fecal contents in cases of complete obstruction below.

anusim (a-nö′sēm), *n. pl.* [Heb., 'the forced,' < *anas*, compel, force, constrain.] Jews who were forced to accept the Catholic religion at the time of their expulsion from Spain (1492), but who secretly observed the principal tenets of their faith: same as *maranos.*

Anversian (an-vėr′sian), *a.* and *n.* [F. *Anvers*, Antwerp.] **I.** *a.* Of or pertaining to Antwerp.

II. *n.* In *geol.*, a division of the Miocene in the vicinity of Antwerp, Belgium.

anvil, *n.*—**Plattner's anvil,** a small polished steel block used in blowpipe analysis.

anvil-cutter (an′vil-kut″ėr), *n.* A chisel-like cutting instrument whose shank is inserted in a square hole in the face of an anvil, the bar

to be cut being laid upon the cutting edge and struck with a hammer or sledge.

anvil-paper (an′vil-pā″pėr), *n.* See ★*paper.*

Anxious seat or bench, a seat, bench, or pew set apart for 'anxious inquirers,' or those who are concerned about their souls' salvation and desire advice or comfort: often figurative. *Haliburton*, The Clockmaker.

anytin (an′i-tin), *n.* A trade-name for a derivative of ichthyol which is used in dermatological practice.

anytol (an′i-tōl), *n.* A solution of such a substance as phenol or guaiacol in water containing anytin.

A. O. In *astron.*, an abbreviation of *Argelander-Oeltzen*, referring to a catalogue of southern stars observed by Argelander in zones and reduced to a regular catalogue by Oeltzen.

aoa (ä-ō′ä), *n.* [Polynesian name.] A name, throughout Polynesia, of the banian-tree (*Ficus Aoa* and other species). These trees were thought by the natives to be the lurking-places of spirits, and in some islands were planted near temples. Though not occurring in Hawaii, the aoa is mentioned in the ancient songs of the aboriginal inhabitants. See *banian*[2].

A. O. M. An abbreviation of *Artium Obstetricarum Magister*, Master of Obstetric Arts.

aorta, *n.* **2.** In the higher invertebrates, the large blood-vessel leading from the heart, usually anteriorly and posteriorly.—**Aorta chlorotica,** the small-sized aorta sometimes present in one suffering from chlorosis.

Aortic cartilage, the second costal cartilage on the right side, behind which is the arch of the aorta.—**Aortic incompetence,** or **insufficiency,** failure of the aortic valve of the heart to close completely, thus allowing of regurgitation of blood into the left ventricle at each diastole.—**Aortic isthmus,** a narrow portion of the aorta, most marked in the fetus, at the point of attachment of the *ductus arteriosus.*—**Aortic murmur,** a cardiac murmur indicating obstruction or insufficiency at the aortic orifice.—**Aortic notch,** a point in sphygmographic tracing indicating the time of closure of the aortic valve.—**Aortic obstruction,** a condition in which there are adhesions or thickening of the cusps of the aortic valve, preventing the free flow of blood from the left ventricle into the aorta.—**Aortic spindle,** a slight fusiform dilatation of the aorta just below the isthmus.

aosmic (ā-oz′mik), *a.* [Gr. *ἄοσμος*, equiv. to *ἄνοσμος*, without odor: see *anosmia.*] Same as ★*anosmic.*

A. P. A. An abbreviation of *American Protective Association.*

Apache blue-grass. See ★*blue-grass.*

apachicta (ap-a-chēk′tä), *n.* [Also *apachita, apachecta;* Quichua of Peru and Aymará.] In Peru and Bolivia, a heap of stones and twigs raised by the Indians at any prominent landmark, such as a pass, divide, crest, or height. The twigs are symbols of prayers offered on the site to spirits supposed to dwell on or about it, and the stones symbolize an offering. A quid or cud of chewed coca-leaves is invariably deposited there also in sacrifice.

apachite (a-pach′īt), *n.* [*Apache* (mountains), in Texas, + *-ite*[2].] In *petrog.*, a variety of the igneous rock *phonolite*, first observed in the Apache mountains of Texas, characterized by sodic amphiboles and ænigmatite as associates of the usual sodic pyroxenes, and by microperthite feldspar. *Osann*, 1896.

apagogically (ap-a-goj′i-kal-i), *adv.* In an apagogical manner; by indirect demonstration or proof; by *reductio ad absurdum. E. Caird*, Philos. of Kant, II. 568. *N. E. D.*

apaid†, *p. a.* [ME. *apaied*, etc., pp. of *apay.*] Satisfied; pleased; repaid. *Robert of Gloucester. N. E. D.*

apalit (ä-pä′lēt), *n.* [Phil. Sp.] A name in the Philippines of *Pterocarpus Blancoi*, a tree with pinnate leaves, smooth, winged pods, and red wood with an aromatic odor. Like other species of *Pterocarpus*, it is sometimes called *narra* and *asana*, and is used for furniture; but it is distinguished by its fragrance, and is sometimes called *Philippine sandalwood.*

Apama (a-pä′mä), *n.* [NL. (Lamarck, 1783), from an Indian name of the type species of the genus.] A genus of dicotyledonous plants of the family *Aristolochiaceæ*, characterized by the short, three-lobed, campanulate corolla. See *Bragantia.*

apandry (a-pan′dri), *n.* [Gr. *ἀπό*, without, + *ἀνήρ* (*ἀνδρ-*), man, male.] In *bot.*, fusion of the antheridium with the oögonium: also extended to the corresponding organs in spermatophytes. *M'Nab.*

aparaphysate (a-pa-raf′i-sāt), *a.* [*a-*[18] + *paraphysis* + *-ate*[1].] In *bot.*, destitute of paraphyses.

apasanca (ä-pä-sän′kä), *n.* [Sp. in Peru and Bolivia, < Peruv. (Quichua) *apasanca* (Tschudi); also used in Bolivia among the Aymará.] The bush-spider, or great *Mygale*, of which a smaller variety is found as high as 13,000 feet and more in the Bolivian Andes.

apasote (ä-pä-sō′tā), *n.* [Also *pasote*, and in Porto Rico *basote;* Mex. Sp., < *yepatzotl*, the Nahuatl name of the plant.] A name in Guam and the Philippine Islands of *Chenopodium ambrosioides*, an aromatic plant of Mexican origin now widely spread over the warmer regions of the earth and commonly known as *Mexican tea* (which see, under *Mexican*).

Apate (ap′ā-tē), *n.* [NL. (Fabricius, 1775), < Gr. *ἀπάτη*, deceit, fraud.] A genus of bostrychid beetles which has been subdivided into several genera by recent authors. *A. terebrans* Pall. is an inhabitant of Africa.

apatetic (ap-ā-tet′ik), *a.* [Gr. *ἀπατητικός*, serving to deceive, < *ἀπάτη*, deceit.] Concerning or pertaining to the copying, in an animal, of some useful characteristic of another species for the sake of obtaining the like advantage. —**Apatetic colors**, those colors which cause an animal to resemble some part of its surroundings, or cause it to be mistaken for another species. *Poulton*, Colours of Animals, p. 338.

apathetic, *a.* 2. In *biol.*, of or pertaining to the *Apathetica* of Lamarck.

apathetic-active (ap-ā-thet″ik-ak′tiv), *a.* In *psychol.*, noting a composite character or temperament of the moral or stoical type. *Ribot* (trans.), Psychol. of Emotions, p. 400.

apathetic-sensitive (ap-ā-thet″ik-sen′si-tiv), *a.* In *psychol.*, noting a composite character or temperament which finds its highest expression in the martyr, the hero, and the creative artist. *Ribot* (trans.), Psychol. of Emotions, p. 401.

apathic (a-path′ik), *a.* [As *apath-y* + *-ic.*] Without feeling or sensation. *Todd*, Cyc. Anat., I. 107.

Apathus (ap′ā-thus), *n.* [NL. (Newman, 1834), < Gr. *ἀπαθής*, without suffering: see *apathy.*] A genus of true bees, of the family *Apidæ*, allied to the bumblebees of the genus *Bombus*, which they mimic and in whose nests they lead an inquiline life. The word is a synonym of *Psithyrus* (St. Fargeau, 1832), and the genus is now generally referred to under that name.

apathy, *n.* 2. In the *Stoic philos.*, a certain imperturbability produced in the wise man's soul by sincere rejection of the notion that pleasure is in itself desirable, or pain in itself undesirable and by trained watchfulness to exclude all unreasonable passions (all passions affecting conduct being regarded as unreasonable).

Apatosaurus (ap-ā-tō-sâ′rus), *n.* [NL., < Gr. *ἀπάτη*, deceit, + *σαῦρος*, lizard.] A genus of dinosaurian reptiles of the family *Camarasauridæ*, described by Marsh from the Upper Jurassic rocks of Colorado.

A. P. D. An abbreviation of *Army Pay Department.*

ape[2] (ä′pā), *n.* [Hawaiian.] 1. *Gunnera peltoloidea*, a plant of the high mountain slopes of Hawaii, bearing large, broad, reniform leaves from two to three feet in width.— 2. A name in the Hawaiian and Society islands of *Alocasia macrorhiza*, an aroid plant with large, oval, sagittate leaves. It is cultivated in India, China, and many of the Polynesian islands, where the leaves of the very young plant and the corms are eaten after volatilizing the acrid principle by drying or the application of heat. Also called *apii* in Hawaii.

Ape (*Alocasia macrorhiza*).

A, inflorescence with spathe removed: *a*, female flowers at base of spadix; *b*, male flowers; *c*, neutral zone; *d*, terminal appendage. (After figure in Engler and Prantl's "Pflanzenfamilien.")

ape-cleft (āp′kleft), *n.* Same as ★*ape-fissure. Buck*, Med. Handbook, II. 278.

apedioscope (a-ped′i-ō-skōp), *n.* [Gr. *ἀ-* priv. + *πεδίον*, a plain (taken as 'plane'), + *σκοπεῖν*, view.] An apparatus for observing stereoscopic projections. It consists of a wooden box having two apertures for the eyes of a spectator, who views one picture in a direct line while the other picture is superposed on the first by the aid of a couple of mirrors.

ape-fissure (āp′fish″ūr), *n.* A deep fissure in the occipital lobe of the brain, present in the ape and occasionally also in man. Also called *exoccipital fissure.*

ape-hand (āp′hand), *n.* In *pathol.*, a deformity of the hand in which it resembles the fore paw of the ape in consequence of atrophy of the muscles of the thumb.

apeiry (a-pī′ri), *n.* [Gr. *ἀπειρία*, the boundlessness of space, < *ἄπειρος*, boundless.] In *geom. topics*, a number associated with a place of three or more dimensions and indicating how many places it contains for unbounded solid bodies that have no room within it to shrink to nothing. The apeiry of real space may be assumed to be either 0 or 1. If space, though infinite, be limited, so that there is no geometrical impossibility in the expansion of a small homogeneous mass without any union of parts that had been separate, so as to fill all space, the apeiry is 0: but if that substrate fluid which the vortex-atom theory supposes to fill all space geometrically could not, even if it were compressible, be so deformed as to leave any part of space empty, then the apeiry is at least 1; and while it is easy to imagine that even after a first rupture of that fluid there would still be a geometrical impossibility in its shrinking indefinitely toward occupying no solid space, which would make the apeiry of space greater than 1, there is nothing in experience to warrant or make pertinent such a suggestion.

Apeltes (a-pel′tēz), *n.* [NL., < Gr. *ἀ-* priv. + *πέλτη*, a shield.] A genus of American sticklebacks of the family *Gasterosteidæ*, having the pelvic shield divided and the skin naked.

apena (a-pē′nä), *n.* [NL., < Gr. *ἀπήνη.*] In *Gr. antiq.*, a wagon or chariot, four-wheeled or two-wheeled, sometimes used for racing. The vehicle sometimes had a tilt or cover with windows at the sides.

apertometry (ap-ėr-tom′e-trī), *n.* [Irreg. < L. *apertus*, open, + Gr. *-μετρία*, < *μέτρον*, measure.] In *optics*, the art of measuring the effective or equivalent apertures of a lens or system of lenses. *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 94.

aperturate (a-pėr′tū-rāt), *a.* [NL. *aperturatus*, < L. *aperture*, aperture.] Having apertures; specifically, having reference to that division of the brachiopod genus *Spirifer*, termed the *Aperturati*, which is typified by the species *S. aperturatus* and characterized by the plications on the fold and sinus of the valves.

aperture, *n.*—**Absolute aperture**, the actual or measured size of the aperture of a diaphragm, generally stated in giving its diameter: used in contradistinction to *effective aperture.*— **Pedal aperture**, the opening in the mantle of mollusks through which the foot is protruded.—**Relative aperture of a lens**, the radius of the actual aperture divided by the focal length of the lens.

Apetala (a-pet′ą-lą), *n. pl.* [Gr. *ἀ-* priv. + *πέταλον*, a leaf.] In some classifications, a section or division of the echinoids belonging to the family *Spatangidæ*, characterized by apetalous ambulacra crossed by fascioles.

apetalous, *a.* 2. In the echinoids or sea-urchins, having one of the five ambulacral rays more or less imperfectly developed.

apex, *n.* 1. (*f*) In *projective geom.*, the point determined by 3 planes.— 3. *pl.* The abacus-marks. *Boethius.* The *apices* of Gerbert's abacus are symbols for the digits from 1 to 9, but without the zero. *Beman and Smith*, Hist. of Math., p. 39.

aphakial (a-fā′ki-ąl), *a.* Same as *aphacic.*

Aphaneura (af-ą-nū′rą), *n. pl.* [NL., irreg. < Gr. *ἀφανής*, unseen, + *νεῦρον*, sinew (nerve).] A family of *Oligochæta*, containing the single fresh-water genus *Ælosoma.* It is peculiar in having the central nervous system reduced to the central ganglia, which, moreover, retain the embryonic character of connection with the epidermis. The worms are small and their transparent bodies contain droplets of brightly colored oil.

aphanisis (a-fan′i-sis), *n.* [NL., < Gr. *ἀφάνισις*, abolition, suppression, < *ἀφανίζειν*, abolish, suppress, hide, < *ἀφανής*, unseen, invisible.] In *bot.*, the suppression or abortion of parts required by morphological analogy.

aphanistic (af-ą-nis′tik), *a.* [< Gr. *ἀφανής*, unseen, invisible.] That renders invisible; obliterative to the eye: as, *aphanistic* coloration. *Nature*, Oct. 27, 1910, p. 537.

aphanophyre (a-fan′ō-fīr), *n.* [*aphan(itic)* + *-o-* + (*por*)*phyr*(*y*).] In *petrog.*, a porphyry with aphanitic ground-mass: analogous to *granophyre, melaphyre, felsophyre*, etc.

aphasia, *n.*—**Associative aphasia**, aphasia due to lesion in the association-area of the brain intercepting one or more of the pathways of impulses between the various centers.— **Auditory aphasia**, aphasia due to lesion in the hearing-center of the brain, the patient having lost the ability to understand spoken words; word-deafness.— **Motor aphasia**, loss of power to employ words in phrases, although the ability to read, write, and understand spoken words is unimpaired.— **Optic aphasia**, a form of aphasia in which the patient is unable to recall the name of an object when he sees it.—**Visual aphasia**, a form of aphasia in which the patient is unable to appreciate the significance of printed or written words, although he sees the words distinctly.— **Wernicke's aphasia of conduction.** Same as *word-deafness.*

Aphelandra (af-e-lan′drą), *n.* [NL.] A genus containing about 60 species of the family *Acanthaceæ*, evergreen, tropical, American shrubs grown in hothouses for the fine foliage and showy 4-sided terminal spikes of red or yellow gaudy-bracted flowers. The species most common in trade are *A. aurantiaca* (including *A. Rœzlii*), *A. squarrosa* (*chrysops*), and *A. Fascinator.*

Aphelops (af′e-lops), *n.* [Gr. *ἁφελής*, level, smooth, + *ὤψ*, eye, face.] In Cope's classification of the extinct rhinoceroses, a group, represented chiefly by North American species, having but three digits on the manus. These are considered as belonging to the acerathine or hornless division of the genus. They occur in the Tertiary beds.

aphengoscope (a-feng′gō-skōp), *n.* Same as *aphengescope.*

aphestic (a-fes′tik), *a.* [Gr. *ἀφέστιος*, far from hearth and home, < *ἀπό*, from, + *ἑστία*, hearth, family.] Relating to matters outside the home circle. *A. Sutherland.*

aphidein, aphideine (a-fid′ē-in), *n.* [*aphis* (*aphid-*) + *-e* + *-in*[2].] The red coloring matter of the *Aphididæ*, a composite substance which may be separated into three constituents called by Sorby *aphidiluteine, aphidiluteoline*, and *aphidirhodeine.*

Aphidiides (af-i-dī′i-dēz), *n. pl.* [NL., prop. *Aphidiidæ* or *Aphidiadæ*, < *Aphidius.*] A group of hymenopterous parasites, of the family *Braconidæ*, typified by the genus *Aphidius.*

Aphidiinæ (af-i-di-ī′nē), *n. pl.* [NL., < *Aphidius* + *-inæ.*] A subfamily of the hymenopterous family *Braconidæ.* All of its members are parasitic upon aphides, and they constitute one of the principal checks to the multiplication of these very injurious insects.

Aphidius (a-fid′i-us), *n.* [NL. (Nees, 1818), < NL. *aphis* (*aphid-*).] An important genus of hymenopterous insects, of the family *Braconidæ*, typical of the subfamily *Aphidiinæ* or *Aphidiides*, comprising a host of minute species, all of which are parasitic on aphides.

aphidoid (af′i-doid), *a.* [NL. *aphis* (*aphid-*) + *-oid.*] Belonging to or resembling the family *Aphididæ.*

aphidologist (af-i-dol′ō-jist), *n.* One who is learned in the study of the *Aphididæ.*

aphidophagous (af-i-dof′ą-gus), *a.* Same as *aphidiphagous.*

aphikomon, aphikomen. See ★*afikomen.*

aphis, *n.*—**Black** or **brown aphis**, an aphis, *Rhopalosiphum violæ*, which injures violets, especially those in greenhouses.— **Corn aphis.** See ★*corn-aphis.*— **Corn-root aphis**, an American aphidid, *Aphis maidi-radicis*, found commonly on the roots of Indian corn.— **Peach aphis.** See ★*peach-aphis.*

aphis-fly (ā′fis-flī), *n.* Any species of any one of numerous genera of flies of the family *Syrphidæ*, the larvæ of which prey upon aphides.

aphis-wolf (ā′fis-wůlf), *n.* The larva of any species of *Hemerobius*, as distinguished from the aphis-lions of the genus *Chrysopa.*

Aphlebia (a-flē′bi-ą), *n.* [NL. (Presl, 1838), < Gr. *ἀ-* priv. + *φλέψ* (*φλεβ-*), vein.] A supposed genus of fossil plants with lobed, flabellately pinnatifid, or pinnate fronds destitute of veins, found attached to or apparently climbing over other plants, especially *Pecopteris, Neuropteris*, and *Sphenopteris.* There is now little doubt that they are stipellar outgrowths or adventitious pinnæ of these plants. See *Rhacophyllum* and *Schizopteris.*

aphodal (af′ō-dal), *a.* [*aphodus* + *-al*[1].] Pertaining to an aphodus; possessing aphodi: as, the *aphodal* type of canal system in sponges.

aphodus (af′ō-dus), *n.*; pl. *aphodi* (-dī). [NL., < Gr. *ἀφοδος*, a going out, < *ἀπό*, off, + *ὁδός*, a way.] In certain sponges, a small canal leading from a flagellated chamber to the excurrent canal.

aphonic (a-fon′ik), *a.* [Gr. *ἀ-* priv. + *phonic.*] 1. Having no sound or pronunciation. *N.E.D.* —2. Having no voiced quality; not voiced. *Scripture*, Elements of Experimental Phonetics, p. 443.

aphorisming (af′ō-riz-ming), *p. a.* Affecting the use of aphorisms in speaking and writing. *Milton*, Reform, II. 33. *N.E.D.*

aphorizer (af'ō-rī-zėr), *n.* One who indulges in aphorisms in speaking and writing; an aphorist.

Aphoruridæ (af-ō rū'ri-dē), *n. pl.* [NL., < *Aphorura* (Gr. ἀφορος, not bearing, + οὐρά, tail) + *-idæ.*] A family of thysanurous insects, of the suborder *Collembola*, having no ventral spring below the abdomen. It is composed of very small soft-bodied insects which are not uncommon, although seldom noticed.

aphotic (a-fō'tik), *a.* [Gr. ἀ- priv. + φῶς, light, + *-ic.*] In *phytogeog.*, without light: applied to the deep level in a body of water in which only non-assimilating organisms can exist. *Schimper* (trans.), Plant Geog., p. 782.

aphotometric (a-fō-tō-met'rik), *a.* [Gr. ἀ- priv. + φῶς (φωτ-), light, + μέτρον, measure.] Noting zoöspores which not only take up a definite position with regard to the direction of light-rays (phototactic), but which invariably present the same end to the light.

aphototropic (a-fō-tō-trop'ik), *a.* [Gr. ἀ- priv. + φῶς (φωτ-), light, + τρόπος, a turning.] Pertaining to or exhibiting the absence of growth with reference to light; not phototropic.

The direct tropic effect of light is greatest in the green rays, absent in the blue, and reversed in the red. The effect is modified by the absorbing or scattering character of the background, and by the age of the animal. At the moment of hatching, Convoluta is *aphototropic.* *Nature*, July 9, 1903, p. 237.

aphrasia (a-frā'zi-ą), *n.* [NL., < Gr. ἀ- priv. + φράσις, speech: see *phrase.*] In *pathol.*, loss, through disease, of the power of expressing one's self in formed sentences.

aphrodæscin (af-rō-des'in), *n.* [Gr. ἀφρώδης, foamy, + L. *æsc(ulus)*, horse-chestnut, + *-in*[2].] A glucoside, $C_{52}H_{82}O_{23}$, occurring in the cotyledons of the horse-chestnut. It forms an amorphous powder easily soluble in water.

aphrodisia[2] (af-rō-diz'i-ą), *n.* [NL., < Gr. Ἀφροδίσιος: see *Aphrodisia*[1].] 1. Eroticism. —2. The sexual act.

Aphroditeum (af″rō-dī-tē'um), *n.* [NL., < *Aphrodite*, Aphrodite.] In *Gr. antiq.*, a temple, shrine, or precinct sacred to Aphrodite. There was such a temple at Cnidos, which contained the famous statue of the divinity by Praxiteles.

Aphrothoraca (af″rō-thō-rā'kä), *n. pl.* [Gr. ἀφρός, foam, + θώραξ, breast.] Same as ★*Aphrothoracida.*

Aphrothoracida (af-rō-thō-ras'i-dä), *n. pl.* [NL., < Gr. ἀφρός, foam, + θώραξ, breast, + *-ida.*] An order of *Heliozoa* having no skeleton, but with the power of amœboid motion and with plastic or stiff pseudopodia, the latter possessing axial filaments. It includes the genera *Vampyrella*, *Nuclearia*, *Myxastrum*, *Actinophrys*, *Actinosphærium*, and others.

aphtha, *n.*— **Aphthæ tropicæ,** a digestive disorder, accompanied by an aphthous eruption, occurring in tropical regions.— **Bednar's aphthæ,** an eruption of yellowish spots on the mucous membrane of the hard palate in infants.

Aphthartodocetic (af-thär″tō-dō-sē'tik), *a.* Of or pertaining to the Aphthartodocetæ or their teachings. See *Aphthartodocetæ.*

aphthite (af'thīt), *n.* An alloy composed of 800 parts of copper, 25 of platinum, 10 of tungsten, and 170 of gold. *Thorpe*, Diet. Applied Chem., I. 189.

aphthongal (af'thong-ąl), *a.* [*aphthong* + *-al.*] Of the nature of an aphthong; written but not pronounced; mute.

aphthongia (af-thong'gi-ą), *n.* [Gr. ἀφθογγος, voiceless, < ἀ- priv. + φθέγγεσθαι, speak.] In *pathol.*, spasmodic contraction of the muscles supplied by the hypoglossal nerve, resulting in loss of voice.

Aphyllites (a-fi-lī'tēz), *n.* [NL., < Gr. ἀ- priv. + φύλλον, a leaf, + *-ites.*] See ★*Agoniatites.*

aphyric (a-fir'ik), *a.* [Gr. ἀ- priv. + (*por*)*-phyric.*] Non-porphyritic: a term applied to an igneous rock which does not possess the porphyritic texture.

Apiaceæ (ā-pi-ā'sē-ē), *n. pl.* [NL. (Lindley, 1836), < *Apium* + *-aceæ.*] A family of dicotyledonous, choripetalous plants of the order *Apiales*, the parsley, carrot, or celery family, based on the genus *Apium* as the type. See *Umbelliferæ* and ★*Apium.*

apiaceous (ā-pi-ā'shius), *a.* [NL. *Apiaceæ* + *-ous.*] Belonging to the *Apiaceæ;* umbelliferous.

a piacere (ä pi-ä-chā're). [It., 'at pleasure': see *pleasure.*] In *music*, same as *ad libitum.*

Apiales (ā-pi-ā'lēz), *n. pl.* [NL. (Ward, 1905), < *Apium* + *-ales.*] An order of dicotyledonous, choripetalous plants embracing the families *Apiaceæ*, *Araliaceæ*, and *Cornaceæ*, and characterized chiefly by having flowers in umbels. See *Umbellales.*

apicad (ap'i-kad), *adv.* [L. *apex*, apex, + *ad*, toward.] Toward the apex: introduced by Hyatt in the terminology of the cephalopod shell, and used to express the relation of parts to the apex. *Zittel* (trans.), Textbook of Paleon., I. 574.

apical, *a.*— **Apical axis,** in diatoms, the line through the center of the pervalvar axis in the direction of the raphe.— **Apical body.** Same as ★*acrosome.*— **Apical cone,** the growing point.— **Apical growth,** growth from the apex which lengthens the axis.— **Apical organ.** Same as ★*apical plate.*— **Apical plane,** in diatoms, the plane perpendicular to the valvar plane passing through the pervalvar and apical axis.— **Apical plasm,** the idioplasm to which the growth of a new shoot in a plant is due according to Weismann's doctrine of germ-plasm.— **Apical plate,** a thickening in the anterior end of a trochosphere or larval stage of certain invertebrates which is the nerve-center of the larva.— **Apical system,** in the echinoids or sea-urchins, the system of plates at the summit of the test or corona. Also called the *dorsocentral system.*

apicasm (ap'i-kazm), *n.* [Gr. ἀπείκασμα, a copy, < ἀπεικάζειν, form from a model, copy, < ἀπό, from, + εἰκάζειν, make like to, represent, < εἰκών, likeness, image.] A sign whose significance is due to characters which might conceivably equally belong to it although the object it represents had never existed; a copy or analogue; an icon. *C. S. Peirce.*

apicasy (ą-pik'a-si), *n.* [Gr. ἀπεικασία, representation by a copy or analogue.] Representation in an apicasm. See ★*apicasm.*

apicular (a-pik'ū-lär), *a.* [NL. *apiculus* + *-ar.*] In *bot.*, situated or occurring at the apex: as, *apicular* dehiscence.

apiculation (a-pik-ū-lā'shon), *n.* [NL. **apiculatio(n-)*, < *apiculatus*, < *apiculus:* see *apiculus.*] In *bot.*, a short and abrupt but not stiff point at the apex of an organ; an apiculus.

apigenin (a-pij'e-nin), *n.* [*api(in)* + *-gen*, -produced, + *-in*[2].] A compound, $C_{15}H_{10}O_5$, formed by the hydrolysis of apiin. It crystallizes in bright-yellow needles.

apikoros (ä-pi-kō'ros), *n.*; pl. *apikorsim* (ä-pi-kōr'sēm). [Gr. Ἐπίκουρος, Epicurus: see *epicure.* The word has been referred to an Aram. source, *paḳar*, be free, break through.] In Jewish use, one who is unsound in belief or lax in the observance of religion or ceremony; one who is irreverent to rabbis; a skeptic or heretic.

apio (ä'pē-ō), *n.* [A colonial use of Sp. *apio*, celery, < L. *apium*, parsley.] A biennial, umbelliferous plant, *Arracacia Arracacha*, a native of the Andes of northern South America. Its large, fleshy yellow roots contain from 20 to 22 per cent. of starch, and from the expressed juice of the root alcohol is made. See *arracacha.*

Apiocera (ap-i-os'e-rą), *n.* [NL. (Westwood, 1835), < ἄπιος, distant, + κέρας, horn.] A genus of bombylioid *Diptera* typical of the family *Apioceridæ.* *A. haruspex* inhabits the Yosemite valley.

Apioceridæ (ap″i-ō-se'ri-dē), *n. pl.* [NL., < *Apiocera* + *-idæ.*] A family of brachycerous *Diptera*, of the superfamily *Bombylioidea*, having the wings provided with five posterior cells. They are large and slender flies somewhat resembling the robber-flies, and the North American species all inhabit the western portions of the continent.

apioid, *n.* 2. A solid of revolution shaped something like a pear: a form assumed by a rotating liquid spheroid when the speed becomes too great for the persistence of the ellipsoid which followed the spheroid as the speed increased.

apioidal (ap-i-oi'dąl), *a.* Having an incipient dumb-bell form resembling the apioid. *Knowledge*, Nov., 1903, p. 253.

apiol, *n.* 2. In *med.* and *phar.*, the green liquid alcoholic extract of parsley-seeds used as an emmenagogue and antiperiodic.

apiolic (ap-i-ol'ik), *a.* [*apiol* (?) + *-ic.*] Noting an acid, $CH_2{:}O_2{:}C_6H(OCH_3)_2CO_2H$, formed by the oxidation of apiol. It consists of needles which melt at 175° C.

apione (ap'i-ōn), *n.* [*api(in)* + *-one.*] A compound, $CH_2{:}O_2{:}C_6H_2(OCH_3)_2$, formed by heating apiolic acid with dilute sulphuric acid. It crystallizes in needles which melt at 79° C.

apionic (ap-i-on'ik), *a.* [*apione* + *-ic.*] Noting an acid, $C_{14}H_{12}O_6$ or $C_{14}H_{10}O_6$, formed by the oxidation of isapiol. It consists of small needles which melt with decomposition at 252° C.

Apionichthys (ap″i-ō-nik'this), *n.* [NL., < (?) Gr. ἀπίων, not fat (< ἀ- priv. + πίων, fat), + ἰχθύς, fish.] A genus of small soles or tongue-fishes of the family *Soleidæ*, found in South America.

Apiosoma (ap″i-ō-sō'mä), *n.* [NL., < Gr. ἄπιον, pear, + σῶμα, body.] A genus of amœboid organisms found in the red corpuscles of the blood of cattle affected by Texas fever, the infection of which is carried by ticks: a synonym of ★*Piroplasma.*

Apiosporium (ap″i-ō-spō'ri-um), *n.* [NL. (Kunze, 1817), < Gr. ἄπιον, pear, + σπορά, spore.] A genus of fungi of the order of *Perisporiales*, having spherical perithecia, and asci containing eight brown spores with transverse septa. Many of the described species are known only in their conidial forms, which grow on leaves and branches, where the honeydew of plant-lice is present, causing what is called sooty mold.

apiri (ä-pē'rē), *n.* See ★*aalii.*

Apis[1], *n.* 2. A small southern constellation situated between the Cross and the Chameleon. Same as *Musca.*

apism (āp'izm), *n.* [*ape* + *-ism.*] The practice of aping; mimicry. *Carlyle*, Past and Present.

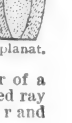
apiton (ä-pē-tōn'), *n.* [Philippine Sp., < Bisayan *apitong*, the resin of the tree 'dragon's-blood.'] In the Philippine Islands, a large forest-tree, *Dipterocarpus grandiflorus*, which yields a fine-grained wood of a grayish or greenish-gray color, used in construction and for the planking of boats. Like many of its congeners, this tree yields an oleoresin, which, however, is inferior to that of the panao or malapaho (*Dipterocarpus vernicifluus*). See *Dipterocarpus* and ★*panao.*

Apium (ā'pi-um), *n.* [NL. (Linnæus, 1753, adopted from Tournefort, 1700), < L. *apium*, the name of parsley and related plants: see *ache*[2].] A genus of dicotyledonous plants, type of the family *Apiaceæ.* They are erect or prostrate glabrous herbs with compound leaves and umbels of white flowers. They are distinguished by the laterally flattened fruit and by the solitary oil-tubes in the intervals between the usually prominent ribs of the carpels. The genus includes about 20 species, natives of the eastern hemisphere, with the exception of *A. Ammi*, which occurs from North Carolina to Florida and Mexico and extends into South America. Two or three introduced species occur locally in the eastern United States and in California. For *A. graveolens* see *celery, marsh-parsley,* 1, and *smallage.*

apjohnite (ap'jon-īt), *n.* [Named after James *Apjohn*, an English chemist, who first described it.] A manganese alum occurring in silky white fibrous masses and also in crusts.

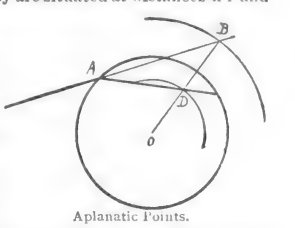
Aplacophora (ap-la-kof'ō-rä), *n. pl.* [NL., < Gr. ἀ- priv. + πλάξ (πλακ-), a flat piece or part, + *-φορος*, < φέρειν, bear.] A suborder of *Amphineura*, having the body vermiform, foot absent or merely a groove, and the cuticle more or less covered with spicules. It includes the families *Neomeniidæ* and *Chætodermatidæ.* Same as *Solenogastres.* Compare *Polyplacophora.*

aplanat (ap'la-nat), *n.* [G. *aplanat*: see *aplanatic.*] A system of lenses invented by Adolph Steinheil, in 1866, for use in photography, consisting of a biconvex crown-glass lens placed between two concavo-convex lenses of flint-glass. The invention of these objectives was a great improvement in photography, since before that time no objective gave a wide view-field undistorted and with sufficient illumination.— **Group aplanat,** an aplanat of large aperture with the members at a moderately great distance, effecting high illumination.



Aplanat.

Aplanatic points, in *optics*, two points, lying upon any straight line passing through the center of a sphere, which serve to locate the path of a refracted ray within the sphere. They are situated at distances n r and $\frac{1}{n}$ r from the center of the sphere, where *r* is the radius of the sphere and *n* is its index of refraction. Let a ray of light meet the surface of the sphere at *A* and let *B* be the point in which the continuation of the ray meets a circle drawn in the plane of incidence with radius nr and having the same center *O* as the sphere. Let the line *O B* from the center of the sphere cut a circle drawn with radius $\frac{1}{n}$r at *D*. The line *A D* is the path of the refracted ray within the sphere, and the points *B* and *D* are aplanatic points.—**Aplanatic surface,** in *optics*, a surface from every point of which the sum of the optical paths to two given points, with reference to which the surface is defined, is constant.—**Aplanatic system,** in *optics*, a system of lenses free from aberration for two points upon the axis called the *aplanatic points.*



Aplanatic Points.

aplanospore (a-plan'ō-spōr), *n.* [Gr. ἀπλανής, not wandering, fixed, < ἀ- priv. + πλάνος, wandering, + σπορά, spore.] Same as *hypnospore.* See ★*akinete.*

aplasmic (a-plaz′mik), *a.* [Gr. *ἀ-* priv. + *πλάσμα*: see *plasma.*] Containing little or no protoplasm, sarcoplasm, or other form of plasma. *Buck*, Med. Handbook, III. 269.

aplastic, *a.* 2. Not molded, formed, or developed; imperfectly developed: as, *aplastic* organs. *Buck*, Med. Handbook, I. 140.

aplitic (ap-lit′ik), *a.* See ★*haplitic.*

Aplocheilus (ap-lō-kī′lus), *n.* [NL., prop. **Haplochilus*, ⟨ Gr. *ἁπλόος*, single, + *χεῖλος*, lip.] A genus of top-minnows of the family *Pœciliidæ*, found mainly in India.

Aplocœla (ap-lō-sē′lä), *n. pl.* [NL., prop. *Haplocœla*, ⟨ *ἁπλόος*, single, + *κοῖλον*, a hollow.] Same as ★*Nemertini. Blanchard.*

Aplodinotinæ, Aplodinotus. See ★*Haplodinotinæ, Haplodinotus.*

Aplodontidæ (ap-lō-don′ti-dē), *n. pl.* The first published form of *Haplodontidæ.*

Aplysioidea (ap-li-si-oid′ē-ä), *n. pl.* [NL., ⟨ *Aplysia* + *-oidea.*] A group of tectibranchiate gastropods of the order *Opisthobranchiata*, consisting of the family *Aplysiidæ.* The other subdivisions of the order are *Bulloidea, Pleurobranchoidea*, and *Siphonarioidea.*

aplysiopurpurin (ap-lis″i-ō-pėr′pū-rin), *n.* [*Aplysia* (see def.) + *purpurin.*] A purple pigment found in the secretion of the dermal glands of *Aplysia.*

apnea, *n.* See *apnœa.*

apneustic (ap-nūs′tik), *a.* [Gr. *ἄπνευστος*, not blown through, ⟨ *ἀ-* priv. + **πνευστός*, ⟨ *πνεῖν*, breathe.] In *entom.*, having a tracheal system which is closed, that is, without stigmata or spiracles: or if these are present they are functionless. The apneustic system is found only in certain aquatic or parasitic larvæ in which the blood is oxygenated through tracheal gills or through a very delicate general body-integument. *A. S. Packard*, Textbook of Entom., p. 440.

apo-. In *chem.*, this prefix is sometimes used to indicate production 'from' the particular source specified, as *apomorphia*, made or prepared from morphia by chemical change. In *petrog.*, it is used with the name of an igneous rock to indicate that the rock has been altered from an original glassy state to a more or less completely crystalline condition: as, *apobsidian, aporhyolite, apoandesite*, etc. These devitrified rocks are commonly of cryptocrystalline or microcrystalline texture and exhibit traces of perlitic or other textures of the original glass. *Bascom*, 1893.

apoatropin (ap-o-at′rō-pin), *n.* [*apo-* + *Atropa* + *-in*2.] A crystalline alkaloid, $C_{17}H_{21}NO_2$; formed in the roots of *Atropa Belladonna*, and also prepared by treating atropin with nitric acid. It melts at 60° C.

apobiosis (ap-ō-bī′ō-sis), *n.* [Gr. *ἀποβίωσις*, departure from life, ⟨ *ἀποβιοῦν*, depart from life, + *ἀπό*, away, + *βίος*, life.] Death as a physiologic fact.

apocalyps, *n.* A simplified spelling of *apocalypse.*

apocarp (ap′ō-kärp) *n.* [Gr. *ἀπό*, from, + *καρπός*, fruit.] In *bot.*, a fruit with several separate carpels. *Jackson*, Glossary.

apocarpy (ap′ō-kär-pi), *n.* In *bot.*, the character of being apocarpous.

apocatastatic (ap″ō-kat-a-stat′ik), *a.* Of, pertaining to, or of the nature of apocatastasis or restoration.

apocenter (ap′ō-sen″tėr), *n.* [Gr. *ἀπό*, from, + *κέντρον*, center.] **1.** In the orbit of a heavenly body, the point most distant from the body or point around which it revolves. *Science*, Feb. 7, 1902, p. 221.—**2.** In *biol.*, an organism or organ which may be regarded as a specialized or divergent descendant from a more primitive or less specialized organism or organ.

apocentric (ap-ō-sen′trik), *a.* [Gr. *ἀπό*, from, + *κέντρον*, center.] 1. Of or pertaining to an apocenter, in either sense. *Encyc. Brit.*, XXVIII. 343.—**2.** Departing more or less from the primitive or average type; specifically, in *ornith.*, departing from the primitive type of intestine.

Markedly *apocentric* though they may be in the matter of their intestinal coils. *Nature*, July 3, 1902, p. 235.

apocentrically (ap-ō-sen′tri-kal-i), *adv.* In an apocentric manner, or the manner that is characteristic of apocentricity. *Trans. Linnean Soc., London*, Oct., 1901, p. 204.

apocentricity (ap′ō-sen-tris′i-ti), *n.* [★*apocentric* + *-ity.*] The property of being apocentric or of pertaining to an apocenter.

It is obvious that the mere *apocentricity* of a character can be no guide to the affinities of its possessor. *Encyc. Brit.*, XXVIII. 343.

Multiradial apocentricity, in *ornith.*, adaptive modifications of the intestine.—**Pseudocentric apocentricity,** in *ornith.*, slight departure from the primitive intestinal type.—**Uniradial apocentricity,** in *ornith.*, complex structural variation in the intestinal loops, not due to any adaptive cause.

apocentron, apocentrum (ap-ō-sen′tron, -trum), *n.*; pl. *apocentra* (-trä). [NL.: see ★*apocenter.*] Same as ★*apocenter*, 1.

Apoceras (a-pos′ē-ras), *n.* [NL. (Coville, 1905), ⟨ Gr. *ἀπό*, away from, + *κέρας*, horn.] A genus of trees belonging to the *Rutaceæ* and characterized by five horn-like diverging ovaries, four of which disappear in the fruit. It is improperly called *Pentaceras* by many authors. See *Pentaceras.*

Apocheilichthys (ap″ō-kī-lik′this), *n.* [NL., ⟨ Gr. *ἀπό*, off, + *χεῖλος*, lip, + *ἰχθύς*, fish.] A genus of very small top-minnows of the family *Pœciliidæ*, found in the rice-ditches of Japan.

apochromat (ap′ō-krō-mat), *n.* [*apochromatic.*] A lens system, designed by Abbe, consisting of a combination of ten lenses with homogeneous immersion. It is achromatic for three colors, and therefore free from secondary spectra, and aplanatic for two colors.

a poco (ä pō′kō). [It., 'by little': see *pococurante.*] Gradually: used to qualify several terms for musical style or expression: as, *a poco più lento*, gradually slower; *a poco più mosso*, gradually faster.

apocodeine (ap-ō-kō-dē′in), *n.* [*apo-* + *codeine.*] An alkaloid, $C_{18}H_{19}NO_2$, prepared by heating codeine hydrochlorid with a concentrated solution of zinc chlorid. Both the base and its salts are amorphous.

apocopation (a-pok-ō-pā′shon), *n.* [See *apocope.*] The dropping or omission of a letter or syllable from the end of a word; abbreviation by apocope.

apocrenate (ap-ō-kren′āt), *n.* [*apocren(ic)* + *-ate*2.] Any salt of apocrenic acid, $C_{21}H_{12}O_{12}$. Some of the salts are found in the humus of soil, in sinter deposits, and, sometimes, in ferrugineous waters.

Apocrita (a-pok′ri-tä), *n. pl.* [NL., ⟨ Gr. *ἀπόκριτος*, separated, ⟨ *ἀποκρίνειν*, separate.] A suborder of insects of the order *Hymenoptera*, having the abdomen connected with the thorax by a deep constriction. It comprises the vast majority of the hymenopterous insects, including the three great series *Parasitica, Tubulifera*, and *Aculeata. Brauer.*

apocryfal, *a.* A simplified spelling of *apocryphal.*

apocryph (ap′ō-krif), *n.* An apocryphal writing.

apocytial (ap-ō-sish′al), *a.* [NL. **apocytium*, ⟨ Gr. *ἀπό*, from, + *κύτος*, a hollow (a cell).] Noting fungi and algæ, such as the *Siphonales* and *Phycomycetes*, which contain a number of nuclei within a single cell-wall.

apodal, *a.* **II.** *n.* An amphibian of the order *Apoda*; a cœcilian. *Encyc. Brit.*, XXV. 383. [Rare.]

apodete (a-pod′ē-tē), *n.* [NL. *apodetē*, ⟨ Gr. *ἀπό*, off, + *δετή*, fagot, fem. of *δετός*, bound.] That region in a bunch of alcyonarian polyps where the zoöids are separate. Compare ★*syndete.*

Apodichthys (ap-ō-dik′this), *n.* [NL., ⟨ Gr. *ἄπους* (*ἀποδ-*), without feet (that is, ventral fins), + *ἰχθύς*, fish.] A genus of ribbon-shaped blennies found on the coast of California.

Apodina (ap-ō-dī′nä), *n. pl.* [NL., ⟨ Gr. *ἄπους* (*ἀποδ-*), footless, + *-ina.*] A suborder or section of *Gastrotricha*, containing forms having no pedal appendages, as *Dasydetes* and *Gossea.* See ★*Euichthydina.*

apoëmbryony (ap-ō-em′bri-ō-ni), *n.* [*apo-* + *embryon* + *-y*3.] Suppression of the embryostage, in which the oösphere gives rise immediately to the vascular members.

apogalacteum (ap″ō-ga-lak-tē′um), *n.*; pl. *apogalactea* (-ä). [NL. **apogalactæum*, ⟨ Gr. *ἀπό*, from, + *γαλαξίας* (*γαλακτ-*), the Milky Way, + *-æum*, as in *apogæum*, apogee.] The point of maximum distance from the Milky Way in the orbit of a star supposed to be revolving in an orbit within the galactic ring. *Amer. Jour. Sci.*, Aug., 1903, pp. 135, 136.

apogalactic (ap″ō-ga-lak′tik), *a.* At a maximum distance from the Galaxy. See ★*apogalacteum.*

apogamous, *a.* **2.** In *biol.*, illustrative of, pertaining to, or due to apogamy, or the substitution of vegetative for sexual reproduction.

apogamy, *n.* **2.** Mating, pairing, or marriage at random, or without conscious or unconscious preference; pangamy.

Indiscriminate isolation allows free interbreeding of all varieties, or *apogamy.* *Buck*, Med. Handbook, IV. 33.

apogeny (a-poj′e-ni), *n.* [NL. **apogenia*, ⟨ Gr. *ἀπό*, away, + *-γενεια*, ⟨ *-γενης*, -producing.] Sexual impotence, both male and female organs having lost their functions.

apoglucic (ap-ō-glō′sik), *a.* [*apo-* + *gluc(ose)* + *-ic.*] Derived from glucose.—**Apoglucic acid,** an acid, $C_{18}H_{10}O_7$, found in cane-juice and formed by the action of an alkali on glucose.

apogyny (a-poj′i-ni), *n.* [NL. **apogynia*, ⟨ Gr. *ἀπό*, away, + *γυνή*, female, + *-y*3.] Loss of reproductive power in the female organs.

apohyal, *n.* **2.** In *ichth.*, the basihyal bone. *Starks*, Synonymy of the Fish Skeleton, p. 517.

apoid (ap′oid), *a.* Of or belonging to bees of the typical family *Apidæ.*

Apoidea (a-poi′dē-ä), *n. pl.* [NL. (Ashmead, 1899), ⟨ *Apis* + *-oidea.*] The true bees, considered as a superfamily and including the families *Apidæ, Bombidæ, Anthophoridæ, Nomadidæ, Ceratinidæ, Xylocopidæ, Megachilidæ, Stelidæ, Andrenidæ, Colletidæ*, and *Prosopidæ.*

apoikogenic (a-poi-kō-jen′ik), *a.* [Irreg. ⟨ Gr. *ἀποικος*, absent from home, + *-γενης*, -producing.] Concerning or pertaining to eggs which are abundantly supplied with food-yolk, and which at an early stage of development leave the follicle in which they were formed and pass into the cavity of the ovarian tube to complete their development: contrasted with ★*katoikogenic. Nat. Sci.*, Oct., 1896, p. 232. [Rare.]

apoise (a-poiz′), *adv.* [*a*3 + *poise.*] Poised; in a poised or balanced position. [Rare.]

apolar, *a.* **2.** In *geom.*, having no determinate polar.

apolarity (a-pō-lar′i-ti), *n.* [*apolar* + *-ity.*] In *geom.*, the condition of being apolar.

apolaust (ap′ō-lâst), *n.* [A back-formation from *apolaustic.*] **1.** A pleasure-seeker.—**2.** A student of apolaustic or esthetics.

apolausticism (ap-ō-lâs′ti-sizm), *n.* [*apolaustic* + *-ism.*] The philosophy of taste or enjoyment; apolausties.

He was indeed only fervent in his *apolausticism.* *Aut Diabolus aut Nihil*, p. 6 (1894).

apolegamic (ap-ō-lē-gam′ik), *a.* [Erroneously formed ⟨ Gr. *ἀπολέγειν*, pick out, + *γάμος*, marriage.] Pertaining to or characterized by the conscious and intentional selection of mates in pairing or marriage.—**Apolegamic mating.** See ★*mating.*

Apollinaris (a-pol-i-nā′ris), *n.* See *Apollinaris water*, under *water.*

Apollo red. See ★*red*1.

apollonicon (ap-o-lon′i-kon), *n.* [*Apollo(n-)* + *-icon*, as in *harmonicon.*] A variety of orchestrion invented in 1800 by J. H. Völler of Hesse-Darmstadt, but first manufactured in 1828 in London. It was essentially a pipe-organ which could be played either mechanically by cylinders or, as it had six keyboards, by several players, each taking part of a concerted effect.

Apollonize (a-pol′on-īz), *v. i.*; pret. and pp. *Apollonized*, ppr. *Apollonizing.* [Gr. *Ἀπόλλων*, Apollo, + *-ize.*] To act the Apollo, the god of the fine arts, music, poetry, eloquence; hence, to speak or decide oracularly on these subjects. [Rare.] *N. E. D.*

apolog, *n.* A simplified spelling of *apologue.*

apologete (a-pol′ō-jēt), *n.* One skilled in that branch of theology which has to do with the grounds and defense of the Christian faith.

apolysin (a-pol′i-sin), *n.* A yellowish-white crystalline powder, differing from phenacetin in that it contains the citric acid radical in place of the acetic. It is antipyretic and anodyne.

Apomotis (ap-ō-mō′tis), *n.* [NL.] A genus of fresh-water sunfishes abounding in the Mississippi valley.

aponeurosis, *n.*—**Gluteal aponeurosis.** See ★*gluteal.*—**Palmar aponeurosis.** See ★*palmar.*

Aponogeton (ap″ō-nō-jē′ton), *n.* [NL. (Linnæus filius, 1781), ⟨ Gr. *ἀπονος*, without trouble (?), + Gr. *γείτων*, neighbor (as in *Potamogeton*).] A genus of ornamental monocotyledonous plants, the type and only genus of the family *Aponogetonaceæ.* The species most frequent in cultivation is *A. distachyon.* See *Ouvirandra.*

Aponogetonaceæ (ap″ō-nō-jē-tō-nā′sē-ē), *n. pl.* [NL. (Engler, 1886), ⟨ *Aponogeton* + *-aceæ.*] A family of monocotyledonous plants of the

order *Naiadales*, the lattice-leaf family, containing the genus *Aponogeton* only. See ★*Aponogeton* and *Ouvirandra*.

aponogetonaceous (ap″ō-nō-jē-tō-nā′shius), *a.* [*Aponogetonaceæ* + *-ous*.] In *bot.*, belonging to the family *Aponogetonaceæ*.

apophantic, *a.* **II.** *n.* The logical theory of the proposition. *Sir W. Hamilton.*

apophony (a-pof′ō-ni), *n.* [F. *apophonie*, < NL. *apophonia*, < Gr. *ἀπό*, off, + *φωνή*, sound.] Vowel-gradation; the vowel-differentiation of words known as *ablaut* (which see). *N. and Q.*, 8th ser., IX. 222.

apophysal (a-pof′i-sal), *a.* Pertaining to or having the characters of an apophysis. *Amer. Jour. Sci.*, 4th ser., XV. 280.

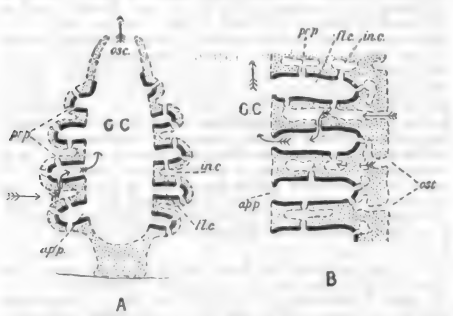
apophysary, *a.*— **Trousseau's apophysary points,** various points on the spine, pressure upon which causes pain in certain cases of neuralgia.

Apophysis mamillaris, the olfactory bulb.— **Cerebral apophysis,** the pineal body.— **Genial apophysis.** See ★*genial*[2].

apoplectoid (ap-ō-plek′toid), *a.* Resembling or of the nature of apoplexy; apoplectiform.

apoplexy, *n.*— **Bulbar apoplexy,** hemorrhage into the substance of the pons Varolii.— **Choroid apoplexy,** hemorrhage between the choroid and the retina.— **Heat apoplexy,** sunstroke.— **Hepatic apoplexy,** hemorrhage into the substance of the liver.— **Nervous apoplexy,** the occurrence of symptoms of apoplexy without hemorrhage or other injury of the brain.— **Placental apoplexy,** hemorrhage into the substance of the placenta.— **Pulmonary apoplexy,** an effusion of blood from the capillary vessels into the air-vesicles and intervening lung substance.— **Serous apoplexy,** a condition in which symptoms of apoplexy are due to an effusion of serum into the ventricles of the brain.— **Verminous apoplexy,** coma occurring as a reflex symptom of the presence of parasitic worms in the intestine.

apopyle (ap′ō-pīl), *n.* [Gr. *ἀπό*, off, + *πύλη*, gate.] In the rhagon type of sponge, the open-



Diagrams of the rhagon type of canal system. A, simple type, with separate radial tubes. B, more complex type, with radial tubes fused and thickened distally to form cortex and incurrent canals; a portion only of the wall is represented. *ost.*, ostia; *in.c.*, incurrent canals; *pr.p.*, prosopyle; *fl.c.*, flagellated chamber; *ap.p.*, apopyle; *osc.*, osculum; G.C., gastral cavity. The arrows show the direction of the currents. The thick black line represents the gastral layer, and the dotted portion represents the dermal layer. (From Lankester's "Zoology.")

ing by which a flagellated chamber communicates with the cloacal cavity.

aporetin (ap-ō-rē′tin), *n.* [Gr. *ἀπό*, from, + *ῥητίνη*, resin.] One of the resinous substances remaining after the crystalline substances have been removed from rhubarb extract.

aporrhaoid (ap-ō-rā′oid), *a.* [*Aporrhais* + *-oid*.] Resembling the *Aporrhaidæ*.

aporrhysa (ap-ō-rī′zä), *n. pl.* [NL., irreg. pl. based on Gr. *ἀπόρρυσις*, otherwise *ἀπόρρευσις*, a flowing off, < *ἀπορρεῖν*, flow off, < *ἀπό*, off, + *ῥεῖν*, flow. Cf. *epirrhysa*.] In Rauff's terminology of sponge morphology, the exhalant canals terminating on the cloacal surface.

aposematic (ap″ō-sē-mat′ik), *a.* [Gr. *ἀπό*, away, + *σῆμα*, mark; see *sematic*.] Of a nature to warn or alarm; serving to warn or alarm enemies: noting characteristics of organisms which, when displayed, effect this.

We often see the combination of cryptic and sematic methods, the animal being concealed until disturbed, when it instantly assumes an *aposematic* attitude.
Encyc. Brit., XXVII. 147.

Aposematic character, any characteristic of a dangerous, poisonous, or unpalatable organism which, when displayed, serves to warn or alarm an enemy; a warning character. The hood of the cobra, the rattle of the rattlesnake, and the large white tail of the skunk are familiar examples.— **Aposematic coloring,** in dangerous, poisonous, or unpalatable organisms, conspicuous colors which warn or alarm enemies; warning colors.

apositic (ap-ō-sit′ik), *a.* [*aposit(ia)* + *-ic*.] Causing apositia or loathing of food; tending to diminish appetite.

aposorbic (ap-ō-sôr′bik), *a.* [Gr. *ἀπό*, from, + (?) *sorb(inose)* + *-ic*.] Noting an acid, $C_5H_8O_7$, prepared by oxidizing sorbinose with nitric acid. It crystallizes in leaflets, is bibasic, and melts at 110° C.

apostatic (ap-ō-stat′ik), *a.* [*apostate* + *-ic*.] Characterized by apostasy; apostate; backsliding. *Golding.* [Rare.] *N. E. D.*

apostatism (a-pos′tā-tizm), *n.* [*apostate* + *-ism*.] Departure from or relinquishment of the faith: as, "political *apostatism*." *Sir R. Wilson*, Diary, II. 308. *N. E. D.*

Apostolic delegate, an ambassador or diplomatic agent of second rank commissioned by the pope to a national church or to a government.— **Apostoli method.** See ★*method*.— **Apostolic party.** See *apostolics*, in *Cyclopedia of Names*.— **Prefect apostolic.** See ★*prefect*.

apostrofize, *v.* A simplified spelling of *apostrophize*.

apostrophism (a-pos′trō-fizm), *n.* Apostrophic mode of address. *Morning Star* (London), Dec. 18, 1866. [Rare.] *N. E. D.*

apotactical (ap-ō-tak′ti-kal), *a.* [Gr. *ἀποτακτικοί*, also *ἀπότακτοι*, certain heretics, < *ἀπότακτος*, set apart, < *ἀποτάσσειν*, set apart, arrange, < *ἀπό*, from, + *τάσσειν*, arrange.] Recreant. *Bp. Hall*, No Peace with Rome, p. 661.

apothecal (ap-ō-thē′kal), *a.* [L. *apotheca*, a shop: see *apothecary*.] Of or pertaining to a shopman; shopkeeper's: as, "bucolic menace and *apothecal* libel," *Mortimer Collins.* [Rare.] *N. E. D.*

Apothecaries' measure. See *measure*.

apothegmatically (ap-ō-theg-mat′i-kal-i), *adv.* In an apothegmatic manner; sententiously; pithily.

apotheose (a-poth′ē-ōz), *v. t.*; pret. and pp. *apotheosed*, ppr. *apotheosing*. [*apotheosis*.] To place or rank among the gods; apotheosize; exalt; glorify. [Rare.]

He must be *apotheosed*, or more than mortality or mankind will permit, and so omnipresent.
F. Philipps, Reg. Necess., p. 269.

a potiori (ā pō-shi-ō′rī or ä pō-ti-ō′rē). [L.] Literally, from the stronger or more important; hence, in *logic*, from the prevailing trend, or principal contents, of an argument or exposition.

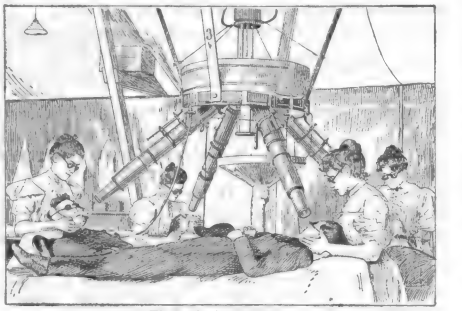
apotype (ap′ō-tīp), *n.* One of a series of specimens upon which are based supplementary descriptions, giving additional details about some previously described species: proposed to take the place of ★*hypotype*, which is used in another sense. *Science*, N. S., XXI, 900.

Appalachia (ap-a-lach′i-ä), *n.* [NL.] A continental area of Paleozoic time which occupied in part the general position of the present Appalachian region.

Appalachian, *a.* **2.** In *geol.*, specially noting an anticlinal fold, slightly overthrown so as to have one flank dipping more steeply than the other. See the extract.

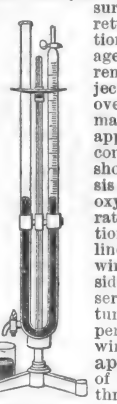
The folding in the rocks of the area is of three types: minute crinkling, small unsymmetrical wavy folds, and broad *Appalachian* ones in which the adjustment appears to have taken place along the bedding.
Amer. Jour. Sci., Feb., 1904, p. 150.

apparatus, *n.*— **Arsenic apparatus of Fresenius and Babo,** an apparatus for the reduction of arsenious sulphid by means of potassium cyanid in a current of carbon-dioxid gas, which excludes air. Arsenic appears as a mirror at the narrow exit-tube.— **Buck's extension apparatus,** an apparatus for making extension of the leg, in order to counteract muscular action and prevent displacement of the fragments in cases of fracture of the thigh-bone.— **Carbonic-acid apparatus,** an apparatus for the gravimetric estimation of carbonic dioxid in alkali. See *alkalimetry*. Various forms have been devised by Fresenius, Geissler, Mohr, Kipp, Schroetter, and others.— **Clayton's apparatus,** an apparatus for the generation of anhydrous sulphurous and sulphuric acids in the hold of a ship, for the purpose of disinfection and to kill the rats.— **Elliott's apparatus,** an apparatus for the rapid analysis of gaseous mixtures, such as illuminating gas. The sample is collected in the graduated eudiometer. It is then transferred to the laboratory-tube, where it is subjected to the action of a solvent. The residual gas is then returned to the graduated tube and the loss in volume measured.— **Fell-O'Dwyer apparatus,** an appliance for forcing air into the lungs through an intubation-tube by means of a bellows.— **Finsen's apparatus,** a system of lenses for concentrating the

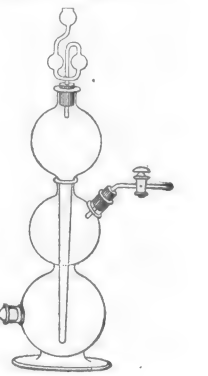


Finsen's Apparatus.
Drawn from Buck's "Reference Handbook of the Medical Sciences."

violet rays of light, used in the light-treatment of lupus and other diseases.— **Fresenius's drying apparatus,** a form of drying-oven. The temperature of the interior is controlled by a thermostat attachment.— **Hempel's gas-analysis apparatus,** an apparatus for the rapid and exact analysis of a mixture of gases, whereby a sample measured volume contained in a graduated burette is successively transferred to absorption pipettes, or other vessels containing reagents, the effect of which is determined by remeasuring the gaseous volume after subjecting it to each test. The gas is collected over mercury, though in some cases water may serve.— **Hofmann's apparatus,** an apparatus designed to demonstrate the combination of gases by volume. The one shown in the illustration is for the synthesis of water from its elements, hydrogen and oxygen.— **Hüfner's apparatus,** an apparatus designed for the quantitative estimation of urea.— **Jäderin apparatus,** a base-line measuring apparatus comprising two wires of different thermal expansion placed side by side, whose relative lengths are observed and used to determine the temperature of the wires and from this the temperature-corrections to the lengths of the wires and of the line measured.— **Kipp's apparatus,** an apparatus for the evolution of gases at a uniform rate. It consists of three globular communicating glass vessels. A solid put into the central one is subjected to the action of some liquid, as water or an acid. The gas generated is permitted to escape through a lateral stop-cock which regulates the flow. When an excess of gas is set free it causes a pressure within the globe and pushes the liquid away from the solid into the lower globe, and thence by the long central tube into the upper reservoir. The mutual action of the chemicals is also thus suspended when the gas is not needed.— **Kjeldahl's apparatus,** an apparatus for the determination of nitrogen in organic compounds by its conversion to ammonia, the weight of which is ascertained from its neutralizing a standard acid.— **Langen's apparatus,** an apparatus for collecting the waste gases in a blast-furnace by closing the mouth of the furnace. It has the form of a bell-shaped tube resting in an inverted conical ring. It is raised and lowered by means of a lever, and is provided at the extremity with a lip which dips into a water-trough in the gas-main, forming a perfectly air-tight joint. At the time of charging, the bell is lifted and, sliding in the water-joint on the gas-tube, allows the charge in the cup-shaped ring to fall into the furnace.— **Lindeman's oxygen apparatus,** an apparatus for the determination of oxygen in gaseous mixtures, based on its removal by union with phosphorus. The gas is collected in a measuring-eudiometer and transferred to a vessel containing small sticks of phosphorus. On being brought again to the graduated tube, the loss in volume indicates the amount of oxygen absorbed.— **Marsh's arsenic apparatus,** the form of apparatus originally proposed by Marsh for the application of his method of detecting minute quantities of arsenic. It consisted of a U-shaped tube of glass, with a bulb on each limb, and a stop-cock ending in a small jet from which the arseniureted hydrogen gas was allowed to escape and be ignited. It is now superseded by a simpler but more efficient arrangement.— **Memory apparatus.** See ★*memory*.— **Oettel's apparatus,** an apparatus for the volumetric determination of fluorin. Silicon tetrafluorid is evolved by heating the fluorid, under analysis, with quartz and sulphuric acid. The fluorin is calculated from the volume of the gas set free.— **Orsat's apparatus,** a portable apparatus for the rapid analysis of gases. It consists of a graduated burette, surrounded by a water-jacket, connected with a movable two-necked bottle by a rubber hose, and capable of being filled with gas from a stack, flue, etc., through the capillary tube and stop-cock attached thereto. The measured volume can then be transferred to any one of the absorption pipettes by opening the stop-cock connecting the pipette with the capillary. The gaseous volume is then returned to the burette and the loss due to absorption determined. Thus several constituents may rapidly be removed in succession. These are usually carbon dioxid, carbon monoxid, and oxygen. The reagents used are aqueous potassium hydrate, ammoniacal cuprous chlorid, and a solution of pyrogallol in potassium hydrate, respectively. Hydrogen is determined by means of palladium warmed by a spirit-flame and contained in a capillary tube connected with a pipette filled with water, which is displaced by the gases not acted on by any of the reagents.— **Puddling apparatus** (of Godfrey and Howson), an arrangement for the conversion of cast-iron into malleable iron or mild steel by means of a blast of previously heated gas and air directed into a rotating vessel lined with infusible material.— **Reaction apparatus.** See ★*reaction*.— **Roese-Stutzer apparatus,** an apparatus for the determination of fusel-oil. The spirit to be tested is shaken with chloroform and dilute sulphuric acid. The increase in the volume of the chloroform indicates the proportion of fusel-oil present.— **Root's calibrating apparatus.** See ★*calibrate*.— **Scheibler's apparatus,** an apparatus for the estimation of calcium carbonate in bone-black. The carbon dioxid, liberated by the action of hydrochloric acid on a given weight of bone-black, displaces air, the volume so displaced being measured with accuracy by means of the graduated eudiometer. The volume of gas being ascertained, the weight of the calcium carbonate may be calculated.— **Schelling's apparatus,** an apparatus for the determination of the specific gravity of gases



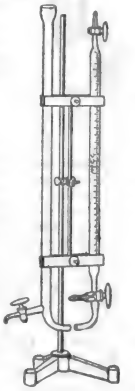
Hofmann's Apparatus.



Kipp's Apparatus.

according to the Bunsen method, by ascertaining the rate of effusion.—**Schilling's blast apparatus** a simple device for combining an aspirator and an air-blast, operated by water-pressure.—**Soxhlet's extraction apparatus**, an apparatus for the extraction of soluble constituents, as fat, with a minimum quantity of solvent, as ether. The solvent is boiled in the lower flask (see the illustration), the vapor is condensed in the water-cooled spiral, and the liquid drops upon the substance contained in the central vessel, where it accumulates until it reaches the top of the siphon, when it runs into the lower flask. This operation is repeated until the extraction is complete. The extract is obtained by boiling off the solvent.—**Squibbs's urea apparatus.** See ★*urea.*—**Telesmatic apparatus.** See ★*telesmatic.*—**Time-sense apparatus.** See ★*time-sense.*—**Triple-effect apparatus**, an important modification of the vacuum-pan used in sugar-refining and other branches of industry, involving the use of latent heat from the vapor of a first pan to boil the liquid contained in a second pan in which a higher vacuum is maintained, and in like manner applying the vapor from the second to a third pan. Sometimes even a larger number of vessels than three is employed.—**Wiborgh's apparatus**, an apparatus for the rapid estimation of sulphur in iron and steel. About .5 gram of drillings are heated in a flask with water. Sulphuric acid is then run in from the side-funnel and hydrogen sulphid is evolved. This reacts with the cadmium acetate with which a cloth fastened over the mouth of the upper funnel-like vessel has been saturated. The shade of yellow developed is compared with a set of standards.—**Winkler's apparatus for gas analysis**, a convenient form of gas burette. It consists of an accurately graduated eudiometer with a simple stop-cock at its upper and a three-way stop-cock at its lower end. The lower end is connected by means of rubber hose to the leveling tube. The gas may be collected over mercury or water.—**Yaryan apparatus** or **evaporator**, an ingenious and successful arrangement for evaporation by multiple effect, introduced in 1886: applicable to the evaporation of solutions of sugar and the concentration of liquids for many other purposes.

Soxhlet's Extraction Apparatus.



Winkler's Apparatus.

appareling (ą-par'el-ing), *n.* Clothes; clothing.

Fishing and hunting the abundant waterfowl, as well as other game, contribute to the tribal subsistence, and during recent years part of the corn, beans, and peas is carried on horseback to Yuma, where it is bartered chiefly for *appareling.* *Smithsonian Rep.*, 1901, p. 72.

Apparent celestial latitude. See ★*latitude.*—**Apparent danger.** See ★*danger.*—**Apparent efficiency.** See ★*efficiency.*—**Apparent energy.** Same as *apparent* ★*power.*—**Apparent power.** See ★*power*[1].—**Apparent resistance.** See *impedance.*—**Apparent solar day.** See ★*day*[1].

apparition (ap-ą-rish'ọn), *v. t.* To cause to to appear in phantom form. *Mrs. Whitney*, Sights and Insights, II. 468. [Rare.] *N. E. D.*

appassionato (ä-pä-si-ō-nä'tō), *a.* [It., < ML. *ad-* + *passionatus*, passionate.] Impassioned; emotional: in *music*, noting passages to be so rendered.

appatriation (a-pā-tri-ā'shọn), *n.* [L. *ad*, to, + *patria*, country, + *-ation.*] The assignment, as of a song or a saying, to the country or place where it originated. *Athenæum*, July 7, 1883. [Rare.]

appeal, *v. i.*—**To appeal from the chair**, to take exception to a decision of the chairman or presiding officer of a deliberative body, and ask the sense of the meeting or assembly in regard to it; to appeal to the house from a decision of the chair.

appeal, *n.*—**Circuit court of appeals**, a federal court of appellate jurisdiction established for the hearing of appeals from judgments, orders, or decrees of the various federal district and circuit courts throughout the United States.

appel, *n.* (*b*) A stroke on the opponent's foil or sword designed to notify him that the bout is to begin. (*c*) The stamping of the foot during ceremonial salutes prior to the bout. See *salute.*

appellatived (ą-pel'ą-tivd), *p. a.* Called; named. *Bulwer*, Disowned, i. [Rare.]

Appendages of the eye, the lacrymal apparatus, ocular muscles, eyelids, eyelashes, and eyebrows. — **Appendages of the fetus**, the umbilical cord, placenta, and membranes.—**Appendages of the skin**, the sweat and sebaceous glands, nails, and hair.—**Appendages of the uterus.** Same as ★*adnexa.*—**Auricular appendage.** Same as *appendix auriculæ* (which see, under *appendix*).—**Cæcal appendage, vermicular appendage**, the vermiform appendix.

appendant, *a.*—**Appendant powers**, those powers which the donee is authorized to exercise out of the estate limited to him, and which depend for their validity upon the estate which is in him. A life-estate limited to a man, with a power to grant leases in possession, is an example. *Bouvier*, Law Dict.

appendectomy (ap-en-dek'tọ-mi), *n.* A shortened form of ★*appendicectomy.* *Med. Record*, July 11, 1903, p. 46.

appendical, *a.* 2. Relating to an appendix, specifically to the vermiform appendix.

appendicectomy (a-pen-di-sek'tọ-mi), *n.* [NL. *appendix* (*vermiformis*) + Gr. ἐκτομή, excision.] Excision of the vermiform appendix. *Med. Record*, March 28, 1903, p. 484.

appendicitis (ą-pen-di-sī'tis), *n.* [L. *appendix* (*-dic-*) + *-itis.*] In *pathol.*, inflammation of the vermiform appendix (which see, under *appendix*). The disease occurs at all ages, but most commonly in young adults, especially young men. The apparently increased prevalence of the affection in late years is to be accounted for chiefly by greater skill in diagnosis. The exciting causes of inflammation of the appendix are digestive disturbances (especially intestinal indigestion attended with much flatulence), influenza, rheumatism, and blows on the abdomen; the presence of seeds in the appendix is not, contrary to the popular belief, a frequent cause of the disease. The inflammation may be acute or chronic. The most prominent symptoms of the acute form are pain of a colicky nature, usually beginning in the neighborhood of the umbilicus and later becoming localized in the right lower abdominal region; rigidity of the abdominal muscles on the right side; and tenderness to pressure. The last, at the beginning, is nearly always most acute at "McBurney's point," which is situated about two inches from the anterior spinous process of the ilium on a line joining this process with the umbilicus. Nausea and vomiting, prostration, fever, rapid pulse, constipation or more rarely diarrhea, and chills are other symptoms usually present in varying degrees. In chronic appendicitis, the most prominent manifestation is constant pain in the right iliac region, which is aggravated by exertion or fatigue; but the condition may be seriously prejudicial to health in many other ways, while there is also the ever present danger of an acute exacerbation with all its perils. In the treatment of acute appendicitis surgeons usually advise operation as soon as the diagnosis is made. "Interval operations" are those in which the appendix is removed after the subsidence of an acute attack, so as to prevent a recurrence of the disease.—**Chronic, recurrent,** or **relapsing appendicitis**, a low grade of inflammation of the vermiform appendix, continuing without marked symptoms, but interrupted from time to time by acute exacerbations.—**Perforative appendicitis**, inflammation of the vermiform appendix in which perforation of this part occurs.

appendicula (ap-en-dik'ū-lą), *n.*; pl. *appendiculæ* (-lē). [L., dim. of *appendix*; see *appendix.*] A fine hair-like growth borne at the apex of hymenomycetous fungi.

appendicular, *a.* 2. Relating to an appendicle, specifically to the appendix vermiformis: as, *appendicular* colic. *Buck*, Med. Handbook, I. 39.

appendiculocæcal (ap-en-dik″ū-lō-sē'kạl), *a.* Relating to both the cæcum and the vermiform appendix. *Lancet*, Aug. 29, 1903, p. 600.

appending (ą-pen'ding), *p. a.* Attached; appendant.

appending (ą-pen'ding), *n.* Addition; an addition. *Athenæum*, April 27, 1895, p. 532.

Appendix cerebri, the pituitary body.

appendix (ą-pen'diks), *v. t.* To add as an appendix. [Rare.] *N. E. D.*

apperception, *n.* 5. In Wundt's psychology, the process whereby a perception or idea attains to clearness in consciousness; also, the introspective contents of this process, that is, the clear idea itself and the changes resulting in consciousness from the induction of the attentive state.

Here we understand by *apperception* a psychological process in which, on the objective side, a certain contents becomes clear in consciousness and, on the subjective, certain feelings arise which, as referred to any given contents, we ordinarily term the state of 'attention.'

W. Wundt (trans.), Physiol. Psychol., I. 316.

Apperception center. See ★*center.*

apperceptionism (ap-ėr-sep'shọn-izm), *n.* In *psychol.*, the explanation and systematization of mental phenomena in terms not only of the mental elements and their physiological conditions but also of the process of apperception. The word is usually applied, in current controversy, to the psychological attitude represented by Wundt's system, that is, to a specific form of voluntarism: contrasted with *associationism.*

But without returning to *apperceptionism* we can overcome the one-sidedness of associationism.

H. Münsterberg, Harvard Psychol. Stud., I. 644.

apperceptionist (ap-ėr-sep'shọn-ist), *n.* An epistemologist who embraces apperceptionism.

The idealist's view is that of the '*apperceptionists.*'

Jour. Philos., Psychol. and Sci. Methods, Aug. 18, 1904, [p. 466.

apperceptionistic (ap-ėr-sep″shọn-is'tik), *a.* In *psychol.*, pertaining to or characterized by apperceptionism. *H. Münsterberg*, Harvard Psychol. Stud., I. 653.

apperceptive, *a.* 2. In current *psychol.*: (*a*) characterized by clearness, or by the state of attention; (*b*) resulting from or pertaining to the psychological process of apperception.

In almost every moment of the waking life an *apperceptive* process is taking place. Whenever an object is attended to, the presentation of it is apperceived.

G. F. Stout, Anal. Psychol., II. 113.

We may distinguish intellectual processes from associations, on the purely psychological basis, as *apperceptive* connections of ideas.

W. Wundt (trans.), Human and Animal Psychol., p. 312.

Apperceptive signal, in *psychophys.*, a premonitory signal to the observer to concentrate his attention on the coming impression.

apperceptively (ap″ėr-sep'tiv-li), *adv.* In *psychol.*, in an apperceptive manner; by way of the process of apperception: as, *apperceptively* known; *apperceptively* constituted.

appercipient (ap-ėr-sip'i-ẹnt), *a.* [NL. *appercipiens*, ppr. of *appercipere*, apperceive.] Apperceiving; capable of apperception. *G. F. Stout*, Anal. Psychol., II. 128.

Appert glass. See ★*glass.*

appetizement (ap-ę̄-tīz'mẹnt), *n.* [*appetize* + *-ment.*] Appetite; craving for food; hunger. *Scott*, Woodstock. [Rare.]

appetizingly (ap'ę̄-tī-zing-li), *adv.* In an appetizing manner; in a way to whet appetite: as, food cooked *appetizingly.*

applanation (ap-la-nā'shọn), *n.* [NL. **applanatio*(*n-*), < **applanare*, < L. *ap-* for *ad-*, to, + LL. *planare*, make plane: see *plane*[1], *v.*] Flattening: said of the crystalline lens.

In some cases the eye becomes myopic, which fact can be explained only by the assumption that the crystalline lens in toto is pressed forward toward the cornea, and that, in spite of the fact that in this manner the zonule of Zinn is stretched, and that an *applanation* of the lens is taking place. *Buck*, Med. Handbook, IV. 361.

apple, *n.* 1 and 2. The apple thrives under a very wide range of conditions, and in practically all temperate regions. In North America the chief regions in which it is produced commercially are the Eastern Canadian region, comprising parts of Ontario, Quebec, and the maritime provinces; the New England and New York region; the Piedmont region of Virginia; the Michigan-Ohio region; the prairie-plains region, from Indiana and Illinois to Missouri and Kansas, in which the Ben Davis variety is the leading factor; the Ozark region, comprising part of Missouri and Arkansas, often known as "the land of the big red apple"; and the rapidly developing regions of the Rocky Mountain States and the Coast States. In all these sections there are certain dominant varieties, which are usually less successful in other localities. As a country grows older, it usually happens that the list of desirable apples increases in length, because of the choosing of varieties to suit special localities and special needs. It is impossible to give lists of varieties for planting in all parts of the country, either for market or home use. The number of varieties of apples runs into the thousands. A generation and more ago, the great emphasis in apple-growing was placed on varieties, and the old fruit-books testify to the great development of systematic pomology. The choice of varieties is not less important now; but other subjects have greatly increased in importance with the rise of commercial fruit-growing, such as the necessity and means of tilling the soil, fertilization and cover-cropping, the combating of insects and diseases (especially by means of spraying), and revised methods of handling, storing, and marketing. The result is the transfer of the emphasis to scientific and commercial questions. The apple has been generally referred to the rosaceous genus *Pyrus*, although some recent authors reinstate the old genus *Malus.* Under the former genus it is known as *Pyrus Malus*; under the latter as *Malus Malus.* The nearest generic allies are the pears, comprising the typical genus *Pyrus.* The pears are distinguished, among other things, by having the styles free to the base; the apples by having the styles more or less united below. The species *Malus Malus* has run into almost numberless forms under the influence of long domestication. These forms are distinguished not only by differences in fruit, but by habit of tree and marked botanical characteristics. Thus the bloomless apple (see *seedless* ★*apple*) has more or less diclinous flowers, and it was early described as a distinct species under the name of *Pyrus dioica.* There are many forms of dwarf apple-trees, the best-known of which is the paradise or garden-apple. On this and similar stocks any variety of apple may be grafted or budded if very small or dwarf trees are desired. There are apple-trees with variegated foliage, others with double flowers, and others with a weeping or drooping habit. In China and Japan there is a double-flowered and showy-flowered apple of a very closely allied but apparently distinct species, *Malus spectabilis.* See also ★*crab-apple.*—**Apple bark-beetle, apple-blight, apple bud-worm, apple case-bearer.** See ★*bark-beetle*, ★*blight*, ★*bud-worm*, ★*case-bearer.*—**Apple canker.** See ★*canker.*—**Apple family**, the *Malaceæ*, often treated as a subfamily of *Rosaceæ.*—**Apple fruit-beetle.** See ★*fruit-beetle.*—**Apple leaf-miner, apple Lyonetia, apple saw-fly, apple twig-borer, apple-wood stainer.** See ★*leaf-miner*, ★*Lyonetia*, ★*saw-fly*, ★*twig-borer*, ★*stainer.*—**Argyll apple**, *Eucalyptus cinerea*, a gregarious species of New South Wales, yielding, with others, eucalyptus-oil.—**Bitter-rot of apple.** See ★*bitter-rot.*—**Black apple**, the native or wild plum, so called, of Australia, *Sideroxylon australe*, bearing edible fruit of an insipid flavor. Also called *bush-apple.* See *wild plum*, (*c*), under *plum*[1], and *Sideroxylon.*—**Black-rot of apple.** See ★*black-rot.*—**Bush-apple.** Same as *black* ★*apple*, above.—**Cannibal apple**, the fruit of *Solanum Uporo.* It is red like a tomato and is 5 or 6 cm. in diameter. It was formerly eaten by the Fijians at their cannibal feasts. In their vernacular it was called *boro dina*, or 'true boro.' In Samoa it is called *polo.* See *Solanum* and *cannibal's tomato*, under *tomato.*—**Green apple leaf-tier.** See ★*leaf-tier.*—**Lesser apple leaf-folder.** See ★*leaf-folder.*—**Mooley apple.** See ★*emu-apple.*—**Osage apple**, the Osage orange, *Toxylon pomiferum.* [Tennessee.]—**Possum-pocket apple**, the papaw, *Asimina triloba.* [Dismal Swamp region.]—**Seedless apple**, a variety of apple which normally has no seeds.

Such apples are not new, being mentioned in ancient times; nor has any seedless apple yet received general commendation. 'Seedless' apples are of two kinds—apples of normal form and structure in which the core is reduced to a minimum, and apples with nearly or quite apetalous and more or less imperfect flowers. The latter group comprises the so-called 'bloomless' apples, which have been known for centuries. The mere fact of comparative seedlessness has no significance in the choice of a variety, for the apple-grower must have a variety of certain quality, color, and form, with a high degree of productivity and other desirable qualities.—**Seven-year apple**, a West Indian tree, *Genipa clusiæfolia*, or its fruit. See *Genipa*.—**Sooty blotch of apple.** See ★*blotch*.

apple-aphis (ap'l-ā″fis), *n.* The common leaf-louse, *Aphis mali*, of the apple, especially abundant in the late spring and early summer. Also *apple-leaf aphis* and *apple-louse*. See cut under *Aphis*.

apple-borer (ap'l-bōr″ėr), *n.* An insect which bores into apple-trees, as the round-headed apple-borer (larva of *Saperda candida*), or the flat-headed apple-tree borer (larva of *Chrysobothris femorata*). See cuts under *Saperda* and *Chrysobothris*.

apple-coal (ap'l-kōl), *n.* Free or soft coal; coal which mines easily. [Scotch.]

Applecross group. See ★*group*[1].

apple-dowdy (ap-l-dou'di), *n.* Same as ★*apple-slump*.

apple-essence (ap'l-es″ens), *n.* Same as ★*apple-oil*.

apple-faced (ap'l-fāst), *a.* Having a face round like an apple. *Dickens*, Dombey and Son. [Rare.]

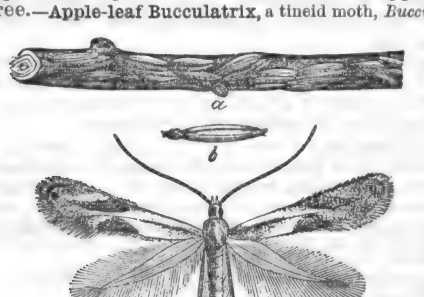
apple-fly (ap'l-flī), *n.* **1.** A little fruit-fly, *Drosophila ampelophila*, of the family *Drosophilidæ*, which lays its eggs in overripe apples and other fruit, and especially swarms around cider-mills. See cut under *fruit-fly*.—**2.** A trypetid fly (*Trypeta pomonella*) whose larva, known as the *apple-maggot* or *railroad-worm*, infests apples in the northeastern United States. See cut under *Trypeta*.

apple-gall (ap'l-gâl), *n.* A gall resembling an apple.—**Grape-vine apple-gall**, a gall, globular, fleshy, greenish in color, and nearly an inch in diameter, attached to the stems of grape-vines: produced by the larva of a fly, *Cecidomyia vitis-pomum*.

apple-grinder (ap'l-grīn″dėr), *n.* A grinding-mill for pulping apples, grapes, peaches, etc., or for grinding roots as food for cattle; a grinding-mill.

apple-gum (ap'l-gum), *n.* A medium-sized tree, *Eucalyptus Stuartiana*, resembling the common apple. It yields a useful hard, brown timber, and a kino. Also called *turpentine-tree*, *peppermint-tree*, and *apple-scented gum*. [Victoria.]

apple-leaf (ap'l-lēf), *n.* A leaf of the apple-tree.—**Apple-leaf Bucculatrix**, a tineid moth, *Buccu*



Apple-leaf Bucculatrix (*Bucculatrix pomifoliella*).
a, apple twig covered with cocoons; *b*, cocoon, enlarged; *c*, moth, much enlarged (Riley).

latrix pomifoliella, whose larva feeds abundantly on the leaves of the apple in the eastern United States and hibernates within a whitish elongate, longitudinally ribbed cocoon attached to the twigs or trunk of the tree. **Apple-leaf flea-weevil.** See ★*flea-weevil*.

apple-leather (ap'l-leтн″ėr), *n.* A sort of tough paste of a leathery consisteney, made of apples partly cooked and dried in a hot sun.

apple-louse (ap'l-lous), *n.* Same as ★*apple-aphis*.—**Woolly apple-louse**, *Schizoneura Americana*. See *American* ★*blight*.

apple-maggot (ap'l-mag″ot), *n.* The larva of *Trypeta pomonella*, a dipterous insect which damages apples in the New England States.

apple-midge (ap'l-mij), *n.* A small chironomid fly, *Molobrus mali*, whose larva feeds on the flesh of ripe and stored apples, hastening their decay.

apple-nuts (ap'l-nuts), *n. pl.* A commercial name for the apple-shaped fruits of the ivory-nut palms, *Cœlococcus Amicarum* and *C. Solomonensis*, of the Caroline and Solomon Islands. See *ivory-nut*.

apple-oil (ap'l-oil), *n.* Ethyl or amyl valerianate diluted with alcohol: used to imitate the odor of apples in confectionery and soda-water syrups. Also *apple-essence*.

apple-scab (ap'l-skab), *n.* A disease of the apple-tree which attacks both the leaves and fruit, caused by the fungus *Fusicladium dendriticum*. See *Fusicladium* and *scab*, 5.

apple-scale (ap'l-skāl), *n.* Any one of several species of scale-insects or bark-lice that infest the apple, notably, the oyster-shell bark-louse of the apple (*Lepidosaphes ulmi*, formerly *Mytilaspis pomorum*) and the scurfy scale (*Chionaspis furfurus*).

apple-slicer (ap'l-slī″sėr), *n.* An instrument for cutting apples into slices for culinary use.

apple-slump (ap'l-slump), *n.* Hot apple-sauce covered with a rich dough and cooked. [U.S.]

apple-sphinx (ap'l-sfingks), *n.* A sphingid moth, *Sphinx gordius*. Its apple-green larva feeds on the foliage of the apple in Canada and the United States, from the Mississippi valley eastward.

apple-thrips (ap'l-thrips), *n.* A minute thysanopterous insect, *Phlæothrips mali*, which is often found on young withered apples.

apple-toddy (ap'l-tod″i), *n.* A toddy into which the pulp of baked or roasted apples is stirred; also, a toddy made of apple-jack.

Apple-tree borer. See ★*borer*.—**Apple-tree canker.** See ★*canker*.—**Apple-tree pruner.** See ★*pruner*.—**Apple-tree shot-hole borer.** See ★*borer* and ★*shot-borer*.—**Apple-tree tent-caterpillar.** See ★*tent-caterpillar*.—**Bronze apple-tree weevil.** See ★*weevil*.—**Red-humped apple-tree caterpillar.** See ★*caterpillar*.—**Yellow-necked apple-tree caterpillar.** See ★*caterpillar*.

apple-worm (ap'l-wėrm), *n.* The larva of the codling-moth, *Carpocapsa pomonella*, a cosmopolitan tortricid moth. See *codling-moth*.—**Many-dotted apple-worm**, the larva of a noctuid moth, *Balsa malana*, two generations or broods of which appear during the summer, often feeding in numbers on the foliage of the apple. It is an inch or more in length and light green in color, with longitudinal white lines and many whitish dots.

apply, *v. i.* **5.** In *astrol.*, of a heavenly body, to approach to the conjunction or aspect of another.

appointment, *n.*—**Bureau of appointments.** See ★*bureau*.—**Illusory appointment**, such an appointment or disposition of property under a power as is merely nominal and not substantial. *Bouvier*, Law Dict.

Appolt coke-oven. See ★*coke-oven*.

apport (a-pōrt' or, as F., a-pôr'), *n.* [F., < *apporter*, < L. *apportare*, bring to, introduce.] The introduction, professedly by occult or supernormal means, of flowers, musical instruments, etc.: used with reference to performances of spiritualistic mediums.

Some of the physical phenomena which I have adduced as among those proclaimed to have occurred, such as *apports*, scent, movement of objects, passage of matter through matter, bear a perilous resemblance to conjuring tricks, of a kind fairly well known; which tricks if well done can be very deceptive.
Sir Oliver Lodge, in Proc. Soc. Psychical Research, XVII. 48.

apportionable (a-pōr'shon-a-bl), *a.* [*apportion* + *-able*.] Liable to be apportioned. *Sir E. Coke*.

apposal (a-pō'zal), *n.* The act of apposing.—**Apposal of sheriffs**, in *English law*, the charging them with money received upon account of the Exchequer. *Bouvier*, Law Dict.

apposit, *a.* A simplified spelling of *apposite*.

apposition[2] (ap-ō-zish'on), [OF. *apposition*, var. of *opposition*. See *appose*[2].] A public disputation or examination: now used only as a name of Speech Day in St. Paul's School, London.

appositively (a-poz'i-tiv-li), *adv.* In apposition or so as to stand in apposition; appositionally: as, substantive expressions put *appositively*.

appraisable (a-prāz'a-bl), *a.* [*appraise* + *-able*.] Capable of being appraised or of having the value fixed.

appreciation, *n.*—**The world of appreciation**, the world as it appears to spiritual insight, to the broadest and wisest conception of the most human good sense. Opposed to the *world of description*, or world of facts, under a materialistic and, as far as possible, scientifically theoretical aspect. The word *appreciation* in this phrase is to be understood in sense 2, as "sympathetic understanding" which "estimates the qualities of things and gives them their due value." The world of appreciation is a world of real, living, and purposing beings, in some sense the children of God. The term was introduced in 1892 by J. Royce. See the extract.

We shall be led to make a provisional sundering of the two points of view, viz. (1) that of our appreciative or most explicitly volitional consciousness, and (2) that of our descriptive or more theoretical consciousness. . . . We shall express the opposition of the two points of view by calling the realm of Being, as more abstractly theoretical consciousness defines it, the World of Description; while the world as otherwise interpreted is the world of life,—*the World of Appreciation*. . . . The only justification for the more abstractly theoretical conception of the World of Description is its value as a means of organizing our conduct and our conception of what the will seeks.
Royce, The World and the Individual, 2d ser., p. 26.

appreciativeness (a-prē'shi-ā-tiv-nes), *n.* [*appreciative* + *-ness*.] The character of being appreciative; disposition to recognize excellence.

apprehension, *n.*—**Implicit apprehension**, in *psychol.*, the understanding of a whole in its unity and distinctness, without discernment of all or even any of its component details.

This circumstance suggests a name for that apprehension of a whole which takes place without discernment of its parts. We may call it *implicit apprehension*.
G. F. Stout, Anal. Psychol., I. 95.

apprenticement (a-pren'tis-ment), *n.* [*apprentice* + *-ment*.] The act of apprenticing; apprenticeship. [Rare.]

The premature *apprenticements* of these tender victims.
Lamb, Essays of Elia, Praise of the Chimney Sweeper.

appressor (a-pres'or), *n.* Same as ★*appressorium*.

appressorium (a-pre-sō'ri-um), *n.*; pl. *appressoria* (-ä). [NL., < L. *apprimere*, pp. *appressus*, press to: see *appressed*.] The organ by which parasitic fungi attach themselves to their hosts, consisting usually of the flattened or swollen end of a hypha.

Appressoria are also formed by some parasitic Fungi, as a minute flattening of the tip of a very short branch (Erysiphe), or the swollen end of any hypha which comes in contact with the surface of the host (Piptocephalis, Syncephalis), haustoria piercing in each case the cell-wall below. In Botrytis the *appressoria* assume the form of dense tassels of short branches.
Encyc. Brit., XXVIII. 555.

approach, *n.* **6.** In *golf*, the play by which a player endeavors to get his ball on to the putting-green.

approbatory, *a.*—**Articles approbatory.** See ★*article*.

Approver in the marches. See ★*march*[1].

Approximate numbers. See ★*number*.

approximator (a-prok'si-mā-tor), *n.* One who approximates or comes near.

Appunn's lamella or **reed.** See ★*lamella*.

apricot, *n.*—**Essence of apricot**, amyl butyrate mixed with ayml alcohol and diluted with ordinary alcohol: used to imitate the odor of apricots in confectionery and soda-water syrups.

apricot-oil (ā″pri-kot-oil'), *n.* A fat oil expressed from the kernels of apricots: now often substituted for almond-oil.

a prima vista (ä prē'mä vis'tä). [It.: see *prime* and *vista*.] At first sight: as, to read a piece of music *a prima vista*.

Aprion (a-prī'on), *n.* [NL., < Gr. *ἀ-* priv. + *πρίων*, saw.] A genus of snappers of the family *Lutianidæ*, found in the tropical seas: distinguished by the scaleless fins. *A. virescens* of the Pacific is an excellent food-fish.

apriorist, *n.* **II.** *a.* Of or pertaining to a priori cognition, or to apriorism.

The *apriorist* notion that among free competitors wealth must go to the industrious.
G. B. Shaw, Fabian Essays in Socialism, p. 177.

aproctia (a-prok'ti-ä), *n.* [NL., < Gr. *ἀ-* priv. + *πρωκτός*, anus.] The condition of having an imperforate anus.

apron, *n.* **2.** (*j*) In *mining*, a block of timber forming an off-set to a pump-rod. (*k*) In *gold-milling*, the amalgamated copper plates outside of a stamp-battery, used to collect the gold from the pulp which flows over these plates in a thin stream from the mortar. Also *apron-plate*.

4. (*b*) The vertical portion of the slide-rest of an engine-lathe which carries the clasp-nut and the gearing for the feed. (*c*) The slide or grate of a punching- or shearing-machine.

5. (*d*) A platform built of timbers at the foot of a slide, which guides in the desired direction logs leaving the slide. (*e*) The shield in front of the face of an undershot water-wheel, intended to keep the water in action upon the buckets.

6. An overwashed deposit of gravel and sand such as is commonly spread southward from the greater moraines of the northeastern United States. Also *frontal apron* and *morainic apron*.

Where the topography was not rugged, numerous ice-derived streams built sloping plains resembling low alluvial fans. These are well seen on Long Island and Martha's Vineyard, and to those of the latter place Professor Shaler has given the very descriptive name of *frontal aprons*. *Bulletin Amer. Geog. Soc.*, XXX. 205.

7. A trough or channel, or a shallow vat, of considerable width as compared with its depth, over which water or other liquid flows in a thin wide sheet, or in which it stands; specifically, the wide, shallow channel through which the water flows to the periphery of a breast-wheel or overshot wheel.—**8.** In *salt-manuf.*, a shallow tray in which a dilute solution of brine is exposed to the sun to be evaporated and concentrated. — **Hottentot apron.** Same as ★*tablier*.

apron-conveyor (ā′prun-kon-vā″ėr), *n.* See ★*conveyer*, 4.

apron-fall (ā′prun-fâl), *n.* A piece of leather attached to the top of the dash-board of a carriage: used as a cover to the apron when the latter is folded.

apronful (ā′prun-fûl), *n.* [*apron* + *-ful.*] As much as can be held in an apron: as, "an *apronful* of flowers," *Miss Braddon.*

apron-hook (ā′prun-hůk), *n.* A short hook with an eye by which it is secured to the dash of a carriage. Together with a ring, it holds the apron in place when folded.

apron-plate (ā′prun-plāt), *n.* Same as ★*apron*, 2 (*k*).

aprosexia (ap-rō-sek′si-ą), *n.* [NL., < Gr. *ἀπροσεξία*, inattention, < *ἀ-* priv. + *πρόσεξις*, attention, < *προσέχειν*, attend, hold to, < *πρός*, toward, + *ἔχειν*, hold.] Lack of power to keep the attention fixed on any subject; an extreme degree of mind-wandering. *Buck*, Med. Handbook, VI. 112.

Apseudes (ap-sū′dēz), *n.* [NL., < Gr. *ἀψευδής*, without deceit, < *ἀ-* priv. + *ψεῦδος*, lie, deceit: see *pseudo-*.] The typical genus of the family *Apseudidæ*. *Leach*, 1814.

Apseudidæ (ap-sū′di-dē), *n. pl.* [NL., < *Apseudes* + *-idæ*.] A small family of cheliferous *Isopoda*, having the body depressed, the carapace with a well-developed rostrum, and the first antennæ with two many-jointed flagella. The typical genus is *Apseudes*.

Apsilus (ap-sī′lus), *n.* [NL., < Gr. *ἀ-* priv. + *ψιλός*, smooth.] A genus of snappers of the family *Lutianidæ*, found in tropical seas and often handsomely colored.

apterion (ap-tē′ri-on), *n.*; pl. *apteria* (-ą). Same as *apterium*.

apteros (ap′te-ros), *a.* [Gr. *ἄπτερος*, wingless.] Wingless: an epithet of Nike (Victory) as represented, unusually, without wings (signifying that she did not intend to leave the precinct favored by her presence). There was a temple of Nike Apteros at Athens. See cut under *Ionic*.

Apterura (ap-te-rū′rą), *n. pl.* [NL., < Gr. *ἄπτερος*, wingless, + *οὐρά*, tail.] A division of anomurous crustaceans in which the appendages of the sixth segment of the pleon are not expanded and wing-like: contrasted with *Pterygura*.

Apterygogenea (ap-ter″i-gō-jen′ē-ą), *n. pl.* [NL., < Gr. *ἀ-* priv. + *πτέρυξ* (*πτερυγ-*), wing, + *-γενής*, -producing.] In Brauer's classification, one of two principal divisions of the class *Insecta*, the other being the *Pterygogenea*. It includes only the order *Thysanura* (*Aptera* of Sharp's system).

Apterygota (ap-ter-i-gō′tą), *n. pl.* [NL., < Gr. *ἀ-* priv. + *πτερυγωτός*, winged, < *πτέρυξ*, wing.] A group of insects including only the order *Thysanura*, which contains wingless forms only that are supposed to have descended from wingless ancestors.

apterygotism (ap-ter-i-gō′tizm), *n.* [*apterygot*(*ous*) + *-ism.*] In *entom.*, the state of being wingless and also of being descended from wingless ancestors.

apterygotous (ap-ter-i-gō′tus), *a.* [Gr. *ἀ-* priv. + *πτερυγωτός*, winged.] In *entom.*, without wings and derived probably from wingless ancestors, as the *Thysanura* and *Collembola*.

Were an *apterygotous* insect gradually to develop wings, it would be on the exopterygotous system.
Encyc. Brit., XXIX. 502.

Aptian (ap′ti-ąn), *a.* and *n.* [*Apt* in Vaucluse, France.] In *geol.*, noting a geologic stage or division at the top of the Lower Cretaceous formation in France and Belgium. It comprises marls, clays, and impure limestones, and in places attains a thickness of 1,800 feet, divisible into an upper and a lower group and abounding in fossils.

aptyalia (ap-ti-ā′li-ą), *n.* [Gr. *ἀπτύαλος*, without spittle, < *ἀ-* priv. + *πτύαλον*, spittle.] Same as ★*aptyalism*.

aptyalism (ap-tī′ą-lizm), *n.* [See *aptyalia.*] In *pathol.*, diminution or suppression of the salivary secretion.

Aptychus beds, rock strata in the Alps of Upper Jurassic age characterized by the abundance of aptychi. See *aptychus*.

apyknomorphous (a-pik-nō-môr′fus), *a.* [Gr. *ἀπυκνος*, not dense (< *ἀ-* priv. + *πυκνός*, dense), + *μορφή*, form.] Noting the character of a cell which, in consequence of the fact that its chromatic or staining element is not compactly arranged, takes the ordinary dyes less readily than is usual, or irregularly.

apyrene (ap′ī-rēn), *n.* [Gr. *ἀ-* priv., without, + *πυρήν*, the stone of a fruit (nucleus).] Deficient in nuclear substance: noting certain abnormal or unusual forms of spermatozoa.

apyrite (a-pī′rīt), *n.* [Gr. *ἀ-* priv. + *πῦρ*, fire, + *-ite*[2].] A refractory substance containing about 93 per cent. of silica: used at some German iron-works for furnace-linings.

A. Q. M. G. An abbreviation of *Assistant Quartermaster-General*.

aqua, *n.* **3.** In *phar.*, a solution of an essential oil or gas in water, a solution of any other substance being termed *liquor*. In the British pharmacopœia, only a solution of an essential oil is called *aqua*, that of a gas being called *liquor*.—**Aqua dolce sauce.** See ★*sauce*.—**Aqua fontis,** in *phar.*, spring water.—**Aqua pura,** in *phar.*, pure water (distilled water).

aquacultural (ā-kwą-kul′tūr-ąl), *a.* Pertaining to aquaculture.

aquaculture (ā′kwą-kul-tūr), *n.* [L. *aqua*, water, + *cultura*, culture.] Culture of the natural inhabitants (animal or plant) of water, as in tracts of water reserved by law; aquiculture.

aquadag (ak′wą-dag), *n.* [L. *aqua*, water, + *dag*, initials of "deflocculated Acheson graphite."] Deflocculated graphite in an aqueous solution. This graphite, because of the special treatment given to it, will remain suspended and diffused in water, notwithstanding the fact that the specific gravity of the graphite is 2¼ times that of water. [Trade-name.]

Aquæductus cerebri, the infundibulum of the brain.—**Aquæductus Cotunnii.** Same as *aquæductus vestibuli*.

aquamarine-chrysolite (ā″kwą-mą-rēn′kris′ō-līt), *n.* The pale-yellow variety of beryl.

aquarial (ą-kwā′ri-ąl), *a.* Same as *aquarian*.

aquarian, *n.* **2.** One who keeps an aquarium. [Rare.] *N. E. D.*

Aquarii (ą-kwā′ri-ī), *n. pl.* [See *Aquarius.*] A sect of the early church who used water instead of wine in the Lord's Supper. See ★*Abstemii*.

Aquariid (ą-kwā′ri-id), *n.* [*Aquari*(*us*)+*-id*[2].] One of the meteors of the flock which about May 4 radiate from the constellation of Aquarius. Also *Aquarid*.

aquate (ā′kwāt), *n.* [NL. **aquatum*, < L. *aqua*, water.] In *chem.*, same as *hydrate*.

aquatic, *a.*—**Aquatic plants,** in *hort.*, those plants which are grown continuously in water, as in ponds and aquaria. Typical examples are the water-lilies. In looser usage the term is sometimes applied to species that grow in bogs or other very wet places as well as to those that grow only in water of greater or less depth. Most aquatic plants are permanently attached to the earth or rocks at the bottom of the water, but some of them eventually break loose and for a part of their existence may float free.

aquation (ą-kwā′shon), *n.* [L. *aquatio*(*n-*), < *aquari*, bring or fetch water, < *aqua*, water.] **1.** The procurement of a supply of water: as, "conveniently situated for *aquation*." *Gibson*, Camden's Brit.—**2.** Disposal of the dead by sea-burial. *Sci. Amer.*, Jan. 7, 1899. [Rare in both uses.]

aquativeness (ą-kwat′iv-nes), *n.* [**aquative* (< L. *aquari*, get water) + *-ness.*] In *phren.*, a propensity for water.

aquavalent (ā-kwą-vā′lent), *n.* [L. *aqua*, water, + E. *valent.*] In *chem.*, the proportion of water, counted by molecules, which is needed by a single molecule of a salt to form with it a cryohydrate.

aqueoglacial (ā″kwē-ō-glā′shial), *a.* [*aqueo*(*us*) + *glacial.*] Formed or acted upon by glacial ice or water from glacial streams, or exhibiting characters which show the influence of both. *J. Geikie*, The Great Ice Age, p. 418.

aqueo-igneous (ā″kwē-ō-ig′nē-us), *a.* In *geol.*, resulting from the action of heat in the presence of much steam or of its dissociated elements: applied to those rocks which, like pegmatite, exhibit the effects both of igneous action and of aqueous solution.

Aqueous chambers of the eye. See *chambers of the eye*, under *chamber*.—**Aqueous extract,** in *phar.*, an extract made by evaporating a watery solution of the drug.—**Aqueous lava.** Same as *moya*.

Aquia Creek group. See ★*group*[1].

aquicolous (a-kwik′ō-lus), *a.* [L. *aqua*, water, + *colere*, dwell in: see *cult.*] Inhabiting the water.

The larvæ possess a proboscis armed with hooks and bore into the body cavity of *aquicolous* insect larvæ, or rarely mollusks, where they encyst.
Buck, Med. Handbook, VI. 224.

aquifer (ak′wi-fėr), *n.* [L. *aqua*, water, + *-fer*, < *ferre*, bear.] In *geol.*, a water-bearing bed or stratum, necessarily of some open-textured rock.

The artesian system shows four or five *aquifers*, or water-bearing strata, more or less completely separated from one another. *Science*, Nov. 22, 1901, p. 794.

Aquifoliaceæ (ak″wi-fō-li-ā′sē-ē), *n. pl.* [LL. (A. P. de Candolle, 1813), < *Aquifolium*, Tournefort's name for the genus *Ilex* (< L. *aqua*, water, + *folium*, leaf).] A family of dicotyledonous, choripetalous plants of the order *Sapindales*, the holly family. It is characterized by regular polygamodiœcious flowers, berry-like drupes, and simple alternate leaves mostly without stipules. They are trees or shrubs with watery sap. The family embraces four genera, of which only *Ilex* is specially important. See *Ilex* and *Nemopanthes*.

aquifoliaceous (ak″wi-fō-li-ā′shius), *a.* [NL. *Aquifoliaceæ* + *-ous.*] Belonging to the plant family *Aquifoliaceæ*.

aquilin, *a.* A simplified spelling of *aquiline*.

aquilino (ä-kwi-lē′nō), *n.* [It.: see *aquila.*] A small silver coin, bearing an eagle, which was struck in Padua during the republican epoch (1200–1300).

aquiloid (ak′wi-loid), *a.* [L. *aquila*, eagle, + *εἶδος*, form.] Resembling an aquiline form; noting particularly a nose which resembles in form an aquiline nose. *Keane*, Man Past and Present, p. 470.

Aquilonian (ak-wi-lō′ni-ąn), *a.* and *n.* [See *aquilon.*] In *geol.*, noting a division of the Jurassic formation in the Syzran district of Russia.

aquincubital (a-kwin-kū′bi-tal), *a.* [Irreg. < Gr. *ἀ-* priv. + L. *quin*(*tus*), fifth, + *cubitus*, forearm, + *-al*[1].] Noting that condition of a bird's wing in which the fifth secondary is absent, although the coverts are present. *Wray*, Proc. Zool. Soc. London, 1887, p. 348.

aquintocubital (a-kwin-tō-kū′bi-tal), *a.* A later, partly amended form of *aquincubital*. *Pycraft*, 1899.

aquintocubitalism (a-kwin-tō-kū′bi-tal-izm), *n.* In *ornith.*, the state or condition of lacking the fifth secondary. Also called *diastataxy*. *Trans. Linnean Soc. London*, Zoöl., Oct., 1901, p. 221.

aquiparous (ą-kwip′ą-rus), *a.* [L. *aqua*, water, + *parere*, produce.] Producing water: applied to the parotid glands, which secrete a thinner fluid than the other salivary glands.

Aquitanian, *a.* and *n.* **2.** In *geol.*, noting a division or stage in the Tertiary formations of the Paris basin representing the latest Oligocene. The deposits of this stage were essentially lacustrine, and the fossils are fresh-water and terrestrial mollusks, especially *Helix*, together with the remains of *Rhinoceros* and other mammals.

aquo-igneous (ā-kwō-ig′nē-us), *a.* Same as ★*aqueo-igneous*.

ar, *v.* A simplified spelling of *are*.

Ar_0, Ar_1, Ar_2, Ar_3, etc. Points of flexure in the curves of cooling of iron and steel.

A. R. A. An abbreviation of *Associate of the Royal Academy*.

araban (ar′a-ban), *n.* Same as *arabin*. *Jour. Soc. Chem. Industry*, XI. 931.

Arabellites (ar-ą-be-lī′tēz), *n.* [NL. *Arabella*, a genus of worms, + *-ites.*] A genus of fossil worms based on detached jaws which are preserved as black and highly lustrous objects, and which are occasionally found in sets of like pairs. They are very variable in form, and certain phases of them have been referred to other genera, as *Eunicites*, *Œnonites*, *Polygnathus*, and *Prioniodus*: found throughout the Paleozoic rocks.

a rabesche (ä rä-bes′ke). [It.] With arabesques: said of decoration with motives of arabesque form usually painted on a light ground, frequently seen on the majolica wares of Genoa and Venice.

arabesquely (ar′ą-besk-li), *adv.* In the style of the Arabians. [Rare.] *N. E. D.*

Arabesquely shapen barks of Carthaginian lands.
Hirst, Poems, p. 66.

Arabianize (a-rā′bi-an-īz), *v. t.*; pret. and pp. *Arabianized*, ppr. *Arabianizing*. To make Arabian; to assimilate to Arabian form and usage.

It is probable that the Persian Persianized in this way neighboring tongues, that the Arabian *Arabianized* them. *Tarde* (trans.), Laws of Imitation, p. 258.

Arabicism (a-rab′i-sizm), *n.* [*Arabic* + *-ism.*] A word, idiom, or expression peculiar to Arabic. *Southey.*

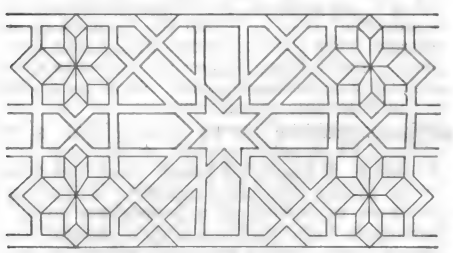
Arabic pottery. See ★*pottery.*

arabinone (ar′a-bi-nōn), *n.* [*arabin* + *-one.*] A compound, $C_{10}H_{18}O_9$, intermediate between arabin and arabinose, as dextrine is intermediate between starch and glucose. It is syrupy and sweet.

arabite (ar′a-bīt), *n.* [*arab(in)* + *-ite*2.] A pentacid alcohol, $C_5H_7(OH)_5$, formed by the reduction of arabinose. It is an optically inactive compound, sweet, and soluble in water.

arabonic (ar-a-bon′ik), *a.* Noting an acid, $C_5H_{10}O_6$, formed by the oxidation of arabinose with bromine. It is monobasic, and the optically active form melts at 89° C.

arabotedesco (ar″a-bō-te-des′kō), *a.* [It., 'Arabic-German': see *Arab* and *Dutch.*] Having, or supposed to have, the characteristics at once of Saracenic and of German building or



Arabotedesco Mosaic.
From the Royal Chapel, Palermo.

design: applied to Romanesque of the more florid sort and suggested by the use of the German *Byzantinisch* for the German round-arched building.

Araby (ar′a-bi), *a.* and *n.* [ME. *Araby*, < OF. *Arabi*, < L. *Arabius*: see *Arabian.*] **I.** *a.* Arabian; Arabic: as, "the *Arabye* language," *Arnold's Chronicle*, p. 158. [Now only poetic.]

II†. *n.* **1.** A native of Arabia. *Trevisa.*—**2.** An Arabian horse.

Elfaydes, and *Arrabys*, and olifauntez noble.
Morte d'Arthur, l. 2288. *N. E. D.*

araça (ä-rä-sä′), *n.* [Tupi *araçá.*] A general name in Brazil of several varieties of guava, shrubs or trees of the genus *Psidium*, distinguished by qualifying words: as, *araça-guazu* (*P. Guajava*), *araça-iba* (*P. Araca*), *araça-mirim* (*P. Araca*), and *araça de Praya* (*P. Cattleyanum*).

arachic (a-rak′ik), *a.* [*Arachis* + *-ic.*] Same as *arachinic.*

arachinic (ar-a-kin′ik), *a.* Pertaining to or derived from the earth-nut, *Arachis hypogæa*: as, *arachinic* acid.

arachnean (a-rak′nē-an), *a.* [Gr. *ἀραχναῖος*, < *ἀράχνη*, a spider.] Of the nature of or resembling a spider's web in texture.

Arachnites (ar-ak-nī′tēz), *n.* [NL. (F. W. Schmidt, 1793), in allusion to the form of the flowers, < Gr. *ἀραχνίτης*, spider-like, < *ἀράχνη*, spider.] A genus of orchidaceous plants allied to *Orchis*: characterized by two pollen-glands inclosed in separate sacs. The genus is improperly called *Ophrys* by many authors. See *Ophrys.*

Arachnoidinæ (a-rak-noi-dī′nē), *n. pl.* [NL., < *Arachnoidius* (a genus of coleoptera) + *-inæ.*] A group of *Clypeastridæ*, containing the low, flat forms with open petals.

arachnophagous (ar-ak-nof′a-gus), *a.* [Gr. *ἀράχνη*, a spider, + *φαγεῖν*, eat.] Spider-eating; feeding upon spiders or other arachnids: said of some birds.

arada (ä-rä′dä), *n.* [Sp., < *arar*, < L. *arare*, plow.] Plowed or cultivated land; arable land. [Southwestern U. S.]

Aragallus (ar-a-gal′us), *n.* [NL. (Necker, 1790), appar. an anagram or an analogical formation from *Astragallus*, a form used by the same author for *Astragalus.*] A genus of dicotyledonous plants of the family *Fabaceæ.* See *Oxytropis.*

Arago-Davy photometer. See ★*photometer.*

Aragonite group, the isomorphous orthorhombic species: aragonite, $CaCO_3$; bromlite, $(Ca, Ba)CO_3$; witherite, $BaCO_3$; strontianite, $SrCO_3$; and cerusite, $PbCO_3$.

Arago's law of polarization. See ★*polarization.*

araguane (ä-rä-gwä′nā), *n.* [Native name in Venezuela.] In Venezuela, a tree of the bignonia family, *Tecoma spectabilis*, yielding a very hard wood of a dark-olive color.

araiocardia (a-rā-ō-kär′di-ä), *n.* [NL., < Gr. *ἀραιός*, thin, porous, with intervals, + *καρδία*, heart.] Same as ★*brachycardia. Lancet*, Aug. 22, 1903, p. 529.

Arales (a-rā′lēz), *n. pl.* [NL. (Lindley, 1833), < *Arum* + *-ales.*] An order of monocotyledonous plants embracing the families *Araceæ* and *Lemnaceæ* (which see). The inflorescence is usually a spadix inclosed in a spathe, whence the name *Spathifloræ*, but it is sometimes naked. In Lindley's system the aral alliance included also the *Pandanaceæ* and *Typhaceæ.*

araliad (a-rā′li-ad), *n.* [NL. *Aralia*, + *-ad*1.] A plant of the family *Araliaceæ.*

aralie (ä-rä-lē′), *n.* [F. form of a native name (?) Cf. *Aralia.*] A name in the West Indies of two parasitic trees, *Clusia alba* and *C. rosea.* Also called *Scotch attorney, strangler-tree, murderer-tree,* ★*chigoe-poison*, and ★*cupay.* See the last two names and *Clusia.*

araliin (a-rā′li-in), *n.* [*Aralia* + *-in*2.] A crystalline glucoside of unknown composition found in *Aralia spinosa.*

Aralo-Caspian (ä″ra-lō-kas′pi-an), *a.* Of or pertaining to the Aral and Caspian Seas.—**Aralo-Caspian basin**, the original area of sea-water cut off from the ancient and greater Mediterranean by the uprising of its floor in recent geologic times, and embracing the present Caspian Sea, the Sea of Aral, and the extensive salt-lagoons and marshes about them. The waters of these seas are still tenanted by seals and other animals elsewhere inhabiting the ocean. The Black Sea had a similar origin, but has been separated from the Caspian region, and the ridge that divides it from the Mediterranean has been cut through so that it now communicates therewith. It is believed that the Caspian and Aral Seas are still shrinking by evaporation.

A. R. A. M. An abbreviation of *Associate of the Royal Academy of Music.*

aramaca (ä″rä-mä-kä′), *n.* [Tupi *aramacá.*] A Brazilian name of a wide-eyed flounder, *Syacium papillosum.*

Aramigus (a-ram′i-gus), *n.* [NL. (Horn, 1876), formation not obvious.] A genus of otiorhynchid beetles. It contains two North American species, one of which, *A. fulleri*, is a serious enemy to the rose, its larvæ living on the roots, while the adults feed on the foliage and flowers. See cut under *rose-beetle.*

aramina (ä-rä-mē′nä), *n.* [Brazilian Pg., < Pg. *arame*, wire.] The commercial name in Brazil of the fiber obtained from the guaxima or cæsar-weed, *Urena lobata.* It is white and strong, and is considered a good substitute for jute in the manufacture of sacking and twine. See ★*cæsar-weed*, ★*guaxima*, and *Urena.*

aranga (ä-rän′gä), *n.* [Sp. *aranga*, from a native name (in Tayabas province ?).] In the Philippine Islands, a large forest-tree, *Homalium Luzoniense*, of the *Flacourtia* family, which yields straight logs often 75 feet long. The wood is hard and durable, of a reddish color streaked with violet, and is used for building purposes, cabinet-work, and the piles of wharves. It has the property of resisting the attacks of ship-worms.

Aran's ether. Same as *ethylidene* ★*chlorid.*

Arapaho group. See ★*group*1.

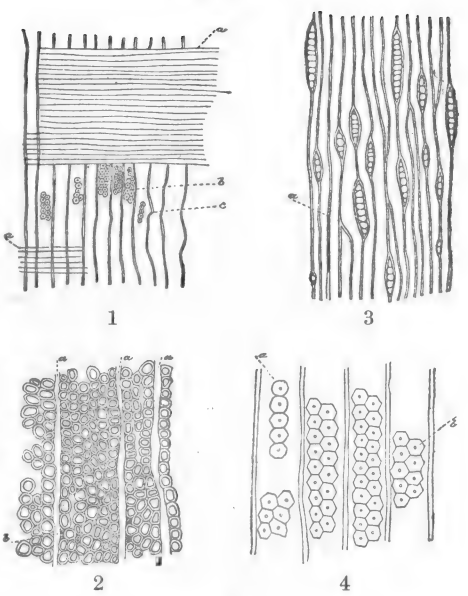
Arapaimidæ (ar-a-pī′mi-dē), *n. pl.* [NL., < *Arapaima* + *-idæ.*] A family of osteoglossoid fishes found in fresh waters of the tropics. It includes the gigantic *Arapaima gigas*, which reaches a length of 15 feet and a weight of 400 pounds and is an important food-fish.

arara, *n.* **2.** A fish, *Hæmulon plumieri*, found in abundance from Rio Janiero to Cape Hatteras.

ararıba (ä-rä″rē-bä′), *n.* [Tupi **ararıbá*, < Tupi *arára*, parrot, + *-iba*, fruit, tree.] A leguminous tree of Brazil, *Centrolobium robustum*, the beautiful striped wood of which is one of the kinds known as *zebra-wood.* Also called *araroba.*

araticu (ä-rä-tē-kō′), *n.* [Native name in Brazil.] In Brazil, one of several trees, belonging to the genus *Anona* and to the related genus *Rollinia*, which bear edible fruits: as, *araticu do brejo* (*A. palustris*), *araticu do rio* (*A. spinescens*), and *araticu do mato* (*R. sylvatica*).

Araucarioxylon (ar″â-kā-ri-ok′si-lon), *n.* [NL. (Kraus, 1870), < *Araucaria* + Gr. *ξύλον*, wood.] A genus of fossil coniferous plants, based entirely on the internal structure of the wood, which has not been connected with other parts, and which agrees in most respects with that of *Araucaria.* The leading character is the hexagonal



Araucarioxylon Virginianum. From the Trias of Taylorsville, Virginia.

1. Radial section: *a*, *a*, medullary rays; *b*, tracheïds with two rows of hexagonal pits; *c*, walls of tracheïds dislocated by pressure.
2. Transverse section: *a*, *a*, *a*, medullary rays; *b*, *b*, intercellular spaces.
3. Tangential section: *a*, sections of bordered pits on radial walls.
4. Radial section further enlarged: *a*, single row of rounded pits; *b*, double row of hexagonal pits.

areolate punctations of the tracheïds shown in radial section, which are always in two or more rows. The genus is properly Mesozoic, and chiefly Triassic, but certain Paleozoic forms have been referred to it. See *Dadoxylon*, *Pinites*, and *fossil wood* (*a*), under *wood*1.

araxina (ä-rä-shē′nä), *n.* [Native name.] A name applied to a tree of southern Brazil, *Vochy gummiferum*, which yields large quantities of a useful gum, similar in appearance and properties to gum arabic.

arbacin (är′ba-sin), *n.* [*Arbacia* + *-in*2.] A histon obtained from the spermatozoa of *Arbacia pustulosa. Simon*, Physiological Chem., p. 71.

Arbacina (är-ba-sī′nä), *n. pl.* [NL., < *Arbacia* + *-ina*2.] A suborder of *Diademoida* containing echinoids in which the ambulacral plates are simple primaries near the apical area, while at the ambitus they are compound. The interambulacral plates and the peristome are large.

Arbaciosa (är-bā-si-ō′sä), *n.* [NL., < *Arbacia* + *-osa.*] A genus of cling-fishes of the family *Gobiesocidæ.* They live in rock-pools with the sea-urchin, *Arbacia*, which the fishes mimic in color.

arbalistry† (är′ba-lis-tri), *n.* [Also *arbalestry*; as *arbalist* + *-ry.*] The art of shooting with the arbalist.

arbelon (är-bē′lon), *n.* [Gr. **ἀρβηλον*, otherwise *ἀρβηλος.*] In Greek use, a peculiar ax-shaped, round-edged knife employed in working leather. A symbol similar to the arbelon is often found in Cretan pictographs and gems.

This symbol which is the most frequent of all, occurring no less than eleven times in the present series, may represent an instrument like an *arbelon*—for cutting leather. *A. J. Evans*, in Jour. Hellenic Studies, XIV. 305.

arbitragist (ar′bi-trā-jist), *n.* [*arbitrage* + *-ist.*] On exchange, one who carries on an arbitrage business.

arbor2, *n.* **5.** A platform of boards upon which sea-island cotton is dried to prevent heating and improve the luster. [Islands of South Carolina.]

arborean (ar-bō′rē-an), *a.* Same as *arboreal.*

arborescent, *a.* **2.** In *bacteriol.*, specifically applied to the branched, tree-like colony formed by certain bacteria in stab-cultures.

arborescently (ar-bo-res′ent-li), *adv.* In the manner of an arborescent plant; branchingly.

arborize, *v.* **II.** *intrans.* To divide into numerous branches.

One limb of each fibre turning caudad, . . . finally to *arborize* about the cells of the spinal nucleus associated with this tract. *Buck*, Med. Handbook, I. 632.

arboroid (är′bo-roid), *a.* [L. *arbor*, tree, + Gr. *εἶδος*, form.] Tree-like or bush-like in shape: as, an *arboroid* colony of *Protozoa.*

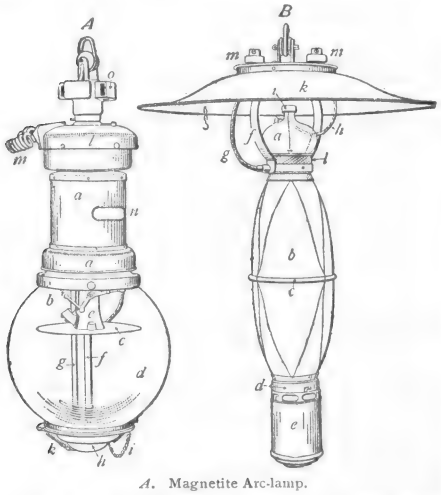
arborolater (är-bo̤-rol′a-tėr), *n.* [L. *arbor*, a tree, + *-o-later* as in *idolater*.] A tree-worshiper.

arbor-press (är′bor-pres″), *n.* See ★*mandrel-press*.

Arbroath flags. See ★*flag*⁴.

arbustum, *n.* 2. A woody branching plant without a distinct trunk.— 3. A treatise on the woody plants of any region; a sylva.

Arc rectifier. See ★*rectifier* (*e*).—**Arcs of parallel,** portions of a parallel of latitude on the earth's surface measured both astronomically and geodetically, in order to determine the length of a degree of longitude in that latitude. Such arcs furnish data for determining the dimensions of the earth.—**Arc-spectrum.** See ★*spectrum.*—**Bigonial arc,** in *anthrop.*, the arc which extends along the inferior border of the lower jaw from one gonion to the other.—**Brocard arcs.** If Ω and Ω′ are the Brocard points of the triangle ABC, then the arcs AΩC, AΩ′B, BΩA, BΩ′C, CΩB, and CΩ′A are the *Brocard arcs* of the triangle.—**Crater of an arc,** in *elect.* Same as *crater*, 6.—**Electric arc,** the passage of current across the gap between two conductors or terminals, through a bridge of conducting vapors consisting of and continuously replenished by the material of the electrodes. The arc must be started by forming this vapor-bridge, which is usually done by bringing the electrodes into contact and then withdrawing them from each other. The mechanism for this, and for maintaining the electrodes at a constant distance from each other, is called an *arc-lamp*. The voltage consumed by an arc is usually moderate, being from 40 to 80 volts. The temperature of the arc-stream is the boiling-point of the electrodes, hence it is extremely high with carbon terminals, so that these terminals, and especially the positive, get very hot and luminous. The electric arc between carbons is therefore used for illumination in the carbon arc-lamp. With free access of air these carbon terminals rapidly consume, and therefore have to be replaced daily in the open arc-lamp. To increase the life of the carbons, in the inclosed arc-lamp the arc is surrounded by an inner globe which incloses it almost air-tight, so that the life of the carbons is increased about tenfold and they have to be renewed less frequently. The arc proper, or the vapor-bridge, with carbon electrodes, gives very little light, but most of the light comes from the incandescent tip of the positive carbon. To increase the amount of light, and thereby the efficiency, mineral salts (as calcium fluorid in the *Brehmer arc-lamp*) are mixed with the carbon and by entering the arc-stream make it luminous. Such prepared carbons are called *flame-carbons*, or *effect-carbons*, and their arcs *flame-arcs*. They are more efficient, but must be used in an open arc-lamp, since they give off some smoke and therefore require daily renewal. In the magnetite arc-lamp, the use of carbon electrodes has been eliminated altogether. Positive terminal copper is used, which does not consume and so requires no renewal, while the negative electrode consists of the conducting oxids of iron, titanium, etc. These do not consume in the air and therefore have a life several times longer than even the inclosed carbon arc, together with a very much greater efficiency, due to the great brilliancy and whiteness of the iron-titanium spectrum. In the mercury arc-lamp, mercury is used as the negative terminal and carbon, iron, or mercury as the positive. The temperature of this arc is so low that it is inclosed in an exhausted glass tube. The mercury arc is very long, of low voltage, and brilliant, but of a greenish color. Such arcs as the *magnetite* and *mercury arc*, in which the light is given by the arc-flame, are called *luminous arcs*, since the light is due probably to electroluminescence, *i. e.*, to direct transformation of electric energy into light. They are the most efficient illuminants known.—



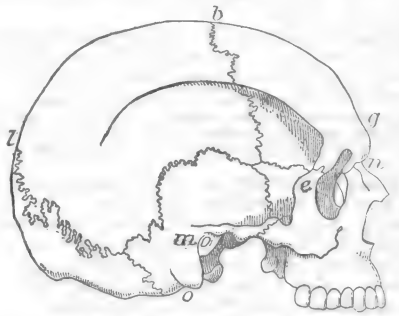
A. Magnetite Arc-lamp.

a, outer casing; *b*, globe-holder; *c*, reflector; *d*, globe; *e*, chimney; *f*, negative electrode; *g*, electrode-holder; *h*, ash-pan; *i*, ash-pan chain; *k*, ash-pan spring; *l*, body-casting; *m*, leads; *n*, name-plate; *o*, wind-shield.

B. Mercury Arc-lamp.

a, arc-tube; *b*, holophane globe; *c*, guard; *d*, solenoid cap; *e*, solenoid case; *f*, shade-support; *g*, negative lead; *h*, positive lead; *i*, positive lamp terminal; *k*, reflector; *l*, ventilator screen; *m*, *m*, hood terminals.

Flame-arc. See *electric* ★*arc.*—**Frontal arc,** in *anthrop.*, an arc extending from the nasion to the bregma over the surface of the frontal bone.—**Length of an arc.** Assume that with every arc is connected a sect such that if an arc be cut into 2 arcs, this sect is the sum of their sects; moreover, this sect is not less than the chord of the arc, nor, if the arc be minor, is it greater than the sum of the sects on the tangents from the extremities of the arc to their intersection; this sect itself, or its length, may be called *the length of the arc.*—**Luminous arc.** See *electric* ★*arc.*—**Magnetite arc-lamp.** See *electric* ★*arc.*—**Maximum transverse arc,** in *anthrop.*, an arc extending transversely over the skull between the external auditory meatus.—**Mercury arc.** See *electric* ★*arc.*—**Nasomalar arc,** in *anthrop.*, an arc between the outer margins of the orbits over the nasion.—**Occipital arc,** in *anthrop.*, an arc extending from the lambda to the opisthion.—**Parietal arc,** in *anthrop.*, an arc extending



m b m′, maximum transverse arc; *e n e′*, nasomalar arc; *l o*, occipital arc; *b l*, parietal arc; *m g m′*, pre-auricular arc; *n b*, frontal arc; *n b l o*, sagittal arc. (*e′* and *m′* are the points on the left side corresponding respectively to *e* and *m*.)

from the bregma to the lambda.—**Pre-auricular arc,** in *anthrop.*, an arc extending from the external auditory meatus over the glabella.—**Reflex arc,** in *physiol.*, the course of nervous action originating in the periphery, where the stimulus is applied, traversing the afferent nerve to the spinal-cord center, and then passing outward along the efferent nerve to the organ or muscle where the reflex act takes place.—**Sagittal arc,** in *anthrop.*, an arc extending from the nasion over the bregma and lambda to the opisthion.—**Supra-auricular arc,** in *anthrop.*, an arc extending transversely over the skull from the superior borders of the external auditory processes.—**Total horizontal arc,** in *anthrop.*, the horizontal circumference of the skull taken at the height of the glabella.

Arcacea (är-kā′sē-ä), *n. pl.* [NL., < *Arca* (a genus of mollusks) + *-acea.*] A group of asiphonate, bivalve mollusks of the order *Filibranchiata*. They have the mantle edge open; 2 well-developed adductors; heart with 2 aortæ; branchiæ free, without interlamellar junctions; and the renal and generative apertures distinct. The group includes the families *Arcadæ* and *Trigoniidæ*.

Arca clay. See ★*clay.*

arcade, *n.* 5. In *anat.* and *zoöl.*, those portions of the cranium having an arch-like structure and running from the postero-external to the orbital region. The *inferior temporal arcade* corresponds to the zygoma of mammals and is largely or entirely formed by the squamosal and jugal. The *superior arcade*, lacking in most vertebrates, is formed by the postorbital. *A. S. Woodward*, Vertebrate Palæontol., p. 144. See cuts under ★*Diapsida* and ★*Synapsida*.

Arcadianly (är-kā′di-an-li), *adv.* In Arcadian fashion; to or toward Arcadianism.

If *Arcadianly* given, he might fancy the yellow buttercups were asphodel. *Froude*, Carlyle, II. 152.

arcading (är-kā′ding), *n.* Construction or decoration by means of arcades, as in Romanesque and Gothic architecture, where arcading is a common adornment and also increases the rigidity of the walls.

arcanite (är′ka-nīt), *n.* [*arcanum* (duplicatum: alchem. name) + *-ite*².] Native potassium sulphate crystallizing in the orthorhombic system.

arcato (är-kä′tō), *a.* [It., 'bowed,' < *arco*, a bow: see *arch*¹.] Bowed: in music for bowed instruments, marking passages to be played with the bow: opposed to *pizzicato*.

Arcestes (är-ses′tēz), *n.* [NL.; origin not obvious.] The typical genus of the family *Arcestidæ*.

Arcestidæ (är-ses′ti-dē), *n. pl.* [NL., < *Arcestes* + *-idæ.*] A family of ammonites having smooth and deeply involute shells with contracted outer whorl and phylliform septal sutures. The species are chiefly Triassic.

arch¹, *n.*—**Braced arch,** an arch of articulated members of timber, iron, or steel, kept in position by articulated bracing above the arch and usually extending up to the horizontal top-member on a level with or slightly above the crown of the arch.—**Carpal arches.** See ★*carpal.*—**Chord of an arch.** See ★*chord.*—**Compound arch,** an arch made up of several rings of voussoirs, each projecting beyond that next below, so that the section is in steps. Compare *compound* ★*pier.*—**Dry arch,** an arch built of voussoirs without mortar: peculiar care in fitting and setting the stones is required.—**Hyoid arch.** See ★*hyoid.*—**Imperfect arch,** an arch the first sign or altitude of which is less than half its span. Also called *diminished arch* and *skene arch*. [Not in use among builders or technical writers.]—**Maxillojugal arch,** in *ornith.*, the slender bar of bone running from the beak to the quadrate, composed of the maxillary, jugal, and quadratojugal bones. *Proc. Zool. Soc. London*, 1903, I. 265.—**Parahyal arch,** in some parrots (notably the lories), a slender loop of bone formed by the union of two processes (parahyal processes) directed forward, upward, and at their ends inward from the superior face of the posterior portion of the basihyal.—**Precoracoid arch,** a bony arch found in the salmon, carp, and most other soft-rayed fishes, on the inside of the shoulder-girdle, near the base of the clavicle. Also called *mesocoracoid arch.*—**Relieving arch.** Same as *arch of discharge* (which see, under *arch*¹).—**Rising arch.** Same as *rampant arch* (which see, under *rampant*).—**Straight arch.** Same as *flat arch* (which see, under *arch*¹).—**Subocular arch,** the inverted arch of cartilage which extends downward and outward from the basal plate of the cranium of the lamprey, forming a support for the eye. *Parker and Haswell*, Textbook of Zool., II. 118.—**Twilight arch.** See *twilight bow*, under ★*bow*².

Archæan, *a.*—**Archæan protaxis,** that portion of North America, consisting of the most ancient rocks, about which as an axis the later sediments were deposited. *Geog. Jour.* (R. G. S.), XIII. 231.

Archæic (är-kē′ik), *a.* Same as *archæan*.

Archæochelys (är″kē-ok′ē-lis), *n.* [NL., < Gr. *ἀρχαῖος*, ancient, + *χέλυς*, a tortoise.] A genus of chelonians or turtles, from the English Wealden formation, in which the paired shields of the plastron were separated by a median series of azygous shields extending backward from the intergular to the extremity of the xiphiplastral.

Archæocidaridæ (är″kē-ō-si-dar′i-dē), *n. pl.* [NL., < *Archæocidaris* + *-idæ.*] A family of extinct sea-urchins, or *Palæechinoidea*, with a spherical test in which the ambulacra are narrow, two rows of perforated ambulacral plates, and interambulacrals beveled and frequently with strong spines. They occur only in the Paleozoic formations.

Archæocyathidæ (är″kē-ō-sī-ath′i-dē), *n. pl.* [NL., < Gr. *ἀρχαῖος*, ancient, + *κύαθος*, a cup, + *-idæ.*] A family of fossils from the Cambrian rocks, originally regarded as sponges but now construed as a generalized type of perforate *Hexacoralla*, having a simple turbinate form, porous septa and outer wall, and a distinct inner wall which leaves an empty central tube or cone.

Archæocyathus (är′kē-ō-sī′a-thus), *n.* [NL., < Gr. *ἀρχαῖος*, ancient, + *κύαθος*, cup.] The typical genus of the family *Archæocyathidæ*.

archæocyte (är′kē-ō-sīt), *n.* [Gr. *ἀρχαῖος*, primitive, + *κύτος*, a hollow (a cell).] In *embryol.*, one of the undifferentiated blastomeres of the sponge embryo which give rise to the wandering and reproductive cells of the adult organism.

The *archæocytes* may be considered from two points of view: first, as wandering cells, or amœbocytes; secondly, as reproductive cells, or tokocytes. These two categories are not, however, to be regarded as two distinct classes of cells, but simply as two different phases in the activity of one and the same kind of cell.

E. R. Lankester, Treatise on Zool., II. 58.

archæographic (är-kē-ō-graf′ik), *a.* Of or pertaining to archæography or the description of antiquities.

Archæohyracidæ (är″kē-ō-hī-ras′i-dē), *n. pl.* [NL., < *Archæohyrax*, the type genus (< Gr. *ἀρχαῖος*, ancient, + *ὕραξ*, shrew), + *-idæ.*] A family of extinct ungulates of small size and supposedly related to the existing hyrax, *Procavia*, from the Miocene of Patagonia. *Ameghino*, 1897.

archæolithic (är″kē-ō-lith′ik), *a.* [Gr. *ἀρχαῖος*, ancient, + *λίθος*, stone.] Of or pertaining to the earliest stone age.

archæomorphic (är″kē-ō-môr′fik), *a.* [Gr. *ἀρχαῖος*, ancient, + *μορφή*, form.] In *petrog.*, a term applied to rocks of which the component mineral particles have been formed in place and have retained their original form. Unaltered igneous rocks are *archæomorphic* as contrasted with *metamorphic* rocks.

archæontological (är-kē-on-tō-loj′i-kal), *a.* Of or pertaining to archæontology.

archæontology (är″kē-on-tol′ō-ji), *n.* [Gr. *ἀρχαῖος*, ancient, + *ὤν* (*ὀντ-*), being, + *-λογία*, < *λέγειν*, speak.] Archæology which deals with the remotest antiquity or with prehistoric man.

Archæopithecidæ (är″kē-ō-pi-thes′i-dē), *n. pl.* [NL., < *Archæopithecus*, the type genus (< Gr. *ἀρχαῖος*, primitive, + *πίθηκος*, ape), + *-idæ.*] A family of extinct primitive primates, of moderate size, whose bones occur in the Miocene (?) of Patagonia. *Ameghino*, 1897.

Archæoplax (är′kē-ō-plaks), *n.* [Gr. *ἀρχαῖος*, ancient, + *πλάξ*, something flat, a plank.] A genus of fossil crabs from the Miocene Tertiary formation at Gay Head, Massachusetts.

archæopsychism (är″kē-op-sī′kizm), *n.* [Gr. *ἀρχαῖος*, ancient, + *ψυχή*, mind, + E. *-ism.*] A

vestigial mental function; a mental process which is atavistically conditioned. *G. S. Hall*, Adolescence, II. 65.

Archæopteris (ärkē-op'tē-ris), *n.* [NL. (Dawson, 1871), < Gr. *ἀρχαῖος*, ancient, + *πτερίς*, fern.] A genus of fossil ferns, found chiefly in the Devonian, characterized by bi- to tripinnate fronds with oval pinnules narrowed toward the base. The fertile pinnules, which are borne above the sterile ones on the same pinnæ, consist of a naked axis bearing on the upper side two rows of stalked sporangia. The genus is regarded by some authors as probably belonging to the *Marattiaceæ*. See *Palæopteris*.

archæopterygoid (ärˊkē-op-ter'i-goid), *a.* Related or pertaining to the genus *Archæopteryx*.

Archæornithes (är-kē-ôr'ni-thēz), *n. pl.* [Gr. *ἀρχαῖος*, ancient, + *ὄρνις*, pl. *ὄρνιθες*, a bird.] An ordinal name introduced to include fossil birds of the genus *Archæopteryx* which have a bird-like skull, conical socketed teeth, amphicœlous vertebræ, and a long, lizard-like tail.

Archæotherium (ärˊkē-ō-thē'ri-um), *n.* [NL., < Gr. *ἀρχαῖος*, ancient, + *θηρίον*, wild beast.] One of several names which have been given to a genus of extinct swine, of the family *Chæropotamidæ*, in which the last lower true molar has no third lobe, the premolars are large, the canines are strong, and the functional digits are reduced to two. Other names are *Elotherium*, *Entelodon*, *Oltinotherium*, and *Pelonax*, the first of these being preferred. Its remains have been found in the Tertiary of Quercy and Ronzon, France, in the Isle of Wight, and in North America.

Archæozoic (arˊkē-ō-zō'ik), *a.* and *n.* [Gr. *ἀρχαῖος*, ancient, + *ζωή*, life.] **I.** *a.* In *geol.*, having reference to the earliest life-forms found in the rocks: a term introduced by Le Conte and employed by Dana to designate a hypothetical division or eon of Archæan time contradistinguished from the Azoic eon. This division is founded on the assumption of the existence of life on the earth during the later stages of Archæan time, although the rocks of this age are chiefly crystalline or altered by metamorphism and vulcanism. On presumptive physical conditions Dana divided the Archæozoic into two eras: (1) that of the first plants, such as algæ and bacteria, which might exist in an ocean having a temperature of 150° F., and of the deposition of limestone, silica, carbon, iron oxids and carbonates, in the accumulation of which plant life may have played an intermediary part; (2) that of the first animal life, involving a reduction of mean oceanic temperature from about 115° F. at the beginning to 90° F. or less at the end, the deposits being such lime, silica, and iron compounds as might result from animal secretions or decomposition. Actual evidences of organic remains in the rocks (Huronian or Algonkian) of this eon are still of the most dubious character, although a considerable number of objects have been described as such. The *Eozoön*, found in Archæan rocks in various parts of the world and described as a gigantic foraminifer; the *Archæophyton*, a supposed plant; and alleged sponge and radiolarian spicules from Brittany and New Brunswick, are no longer regarded as of organic origin. Other remains more palpably organic, and described as from Archæan rocks, are not yet generally admitted to be of Archæozoic age, as their geologic position is not fully determined. Also *Archizoic*, *Archiozoic*.

II. *n.* The Archæozoic eon.

Archæozonites (ärˊkē-ō-zō-nī'tēz), *n.* [NL., < Gr. *ἀρχαῖος*, ancient, + *ζώνη*, a girdle, + *-ites*.] A genus of pulmonate gastropods of the family *Zonitidæ*, from the Oligocene and Miocene Tertiary, having helix-shaped shells.

archaicism, *n.* 2. In *biol.*, abnormal or exceptional resemblance to ancestors; atavism; reversion. [Rare.] *Philos. Trans. Roy. Soc.* (London), ser. B, 1903, p. 185.

archangelical (ärk-an-jel'i-kal), *a.* Archangelic: as, "*Archangelical* Orders," *Cudworth*, Intell. Syst., p. 565.

Archanodon (ärk-kan'ō-don), *n.* [Gr. *ἀρχή*, beginning, + NL. *Anodon*, a genus of mollusks.] A genus of extinct fresh- or brackish-water pelecypods. Same as ★*Amnigenia*. Also *Archanodonta*.

Archasterinæ (ärˊkas-te-rī'nē), *n. pl.* [NL., < *Archaster* (a genus) + *-inæ*.] A group of asteroid *Stellaroidea* of the order *Phanerozonia*, family *Archasteridæ*. It includes the forms with a definite median line of abactinal plates, the remainder being arranged in oblique rows and with pedicellariæ present.

archdeaconess (ärch-dē'kn-es), *n.* The wife of an archdeacon.

arche[3] (ärˊkē), *n.* [Gr. *ἀρχή*, beginning, origin.] Something, having some mode of real being, from the understanding of which facts of experience can be deduced. The word is Greek, and was used in all periods of Greek philosophy, even by the Ionic philosophers. Plato in the Phædrus (245 D) calls the soul an arche of motion, and declares that an arche is ingenerate; and in the Timæus (42 E) "the immortal *arche* of a mortal being" is said to be received from the Creator. Aristotle uses the word frequently and loosely, sometimes as a cognitive principle; at other times as a cause of any kind, an element, etc.

archecentric (ärˊkē-sen'trik), *a.* [Irreg. < Gr. *ἀρχή*, beginning, + *κέντρον*, center.] In *ornith.*, relating to or having the characters of the primitive type of intestine. *P. Chalmers Mitchell*, 1901.

archecentricity (ärˊkē-sen-tris'i-ti), *n.* [*archecentric* + *-ity*.] In *ornith.*, the state or condition of having the intestine of a primitive type.

Archegoniatæ (ärˊkē-gō-ni-ā'tē), *n. pl.* [NL. (Engler, 1887), < *archegonium* + *-atæ*.] A great group or subkingdom of cryptogamic plants (also called by Engler the *Embryophyta asiphonogama*), embracing the *Bryophyta* (mosses and liverworts) and *Pteridophyta* (ferns and fern allies), and made coördinate with the *Embryophyta siphonogama* (phanerogams, spermatophytes). Generation is by means of antheridia and archegonia. Called *Archegoniata* by Sachs.

archegosaurian (ärˊkē-gō-sâ'ri-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of *Archegosaurus*.

II. *n.* An amphibian of the genus *Archegosaurus*.

archegosauroid (ärˊkē-gō-sâ'roid), *a.* and *n.* **I.** *a.* Having characters similar to those of *Archegosaurus*.

II. *n.* An amphibian related to *Archegosaurus*.

archeion (är-kī'on), *n.*; pl. *archeia* (-ä). [Gr. *ἀρχεῖον*: see *archive*.] In *Gr. antiq.*, originally the name of the office or official residence of a magistracy; later, the body of magistrates itself, and, afterward, the depot in which public archives were preserved. Ruins of the archeia of Megalopolis have been recovered by excavation.

archencephalic, *a.* 2. In *craniom.*, having a hypsicephalic skull curving from the glabella to the occipital protuberance so as to form a more or less regular arch. *A. Meigs*.

archenema (är-kē-nē'mä), *n.* [NL., < Gr. *ἀρχε-*, primitive, + *νῆμα*, a thread.] A gametophytic structure in the lower cryptogams. *C. Macmillan*.

archer, *n.* 4. A Persian gold coin, the daric, bearing the figure of an archer.

archery-ground (ärˊcher-i-ground), *n.* A field measured and marked for an archery meeting. Usually the targets are in two parallel rows facing each other so that after shooting in one direction the archers may recover their arrows and shoot in the opposite direction instead of returning to their original standing-points. The ground is a rectangle having the target-bases on opposite sides at the greatest distance to be shot (in the York Round 100 yards) plus 5 yards. Targets are placed at intervals on each target-base. On interior lines parallel therewith and at the proper distances for the several ranges, shooting-points are marked opposite each target.

Archery-ground.

archesporial (ärˊkē-spō'ri-al), *a.* Of or relating to archespores.—**Archesporial cells**, the first eight cells in a spore-formation.—**Archesporial pad**, a mass of cells developing beneath the sporogenous tissue in certain pteridophytes. *Bower*.

archestome (ärˊkē-stōm), *n.* See *archæostoma*.

archetypally (ärˊkē-tī-pal-i), *adv.* Same as *archetypically*.

arch-genethliac (ärchˊjē-neth'li-ak), *n.* In *astrol.*, the chief calculator of nativities.

Here amid the scrawled
Uncouth recordings of the dupes of this
Old *arch-genethliac*, lie my life's results!
Browning, Paracelsus, ii. 25.

archibenthal (ärˊki-ben'thal), *a.* [*archibenthos* + *-al*.] Of or pertaining to the depths of the primitive ocean or archibenthos.

The *archibenthal* species, as was to be expected, have a greater range than those restricted to the more variable environment of the shallow waters of the coast.
Science, Oct. 7, 1904, p. 463.

archibenthos (ärˊki-ben'thos), *n.* [NL., < Gr. *ἀρχι-*, primitive, + *βένθος*, depth.] The depths of the primitive or Paleozoic ocean.

archicarp, *n.* 2. In ascomycetous fungi, the cell or group of cells fertilized by a sexual act.

archicembalo (ärˊki-chem'ba-lō), *n.* [It.] A form of cembalo, said to have been made in Italy about 1537, provided with an enharmonic scale, 31 tones to the octave. See *cembalo*, 2.

archicenter (ärˊki-sen'tėr), *n.* [Gr. *ἀρχι-*, first, + *κέντρον*, center.] An archetype; an organism or an organ which may be regarded as the primitive or ancestral or central or unspecialized type from which allied organisms or homologous organs are descended. Also *archecenter*. *Encyc. Brit.*, XXVIII. 343.

archicentric (ärˊki-sen'trik), *a.* Of or pertaining to an archicenter; archetypal. An archicentric organism or organ is one which may be regarded as the common ancestor of allied organisms or homologous organs. Also *archecentric*.

When a series of the modifications of an anatomical structure has been sufficiently examined, it is frequently possible to decide that one particular condition is primitive, ancestral, or central, and that the other conditions have been derived from it. Such a condition has been termed . . . *archecentric*. *Encyc. Brit.*, XXVIII. 343.

archicentricity (ärˊki-sen-tris'i-ti), *n.* [*archicentric* + *-ity*.] The property of being or of pertaining to an archetype or archicenter.

archicerebrum (är-ki-ser'ē-brum), *n.*; pl. *archicerebra* (-brä). [NL., < Gr. *ἀρχι-*, first, + L. *cerebrum*, brain.] The primary brain of arthropods. The brain of an arthropod is to be regarded as a compound structure or syncerebrum consisting of the archicerebrum fused with the morphological equivalents of two or more ganglionic portions of the ventral nervous system.

Archichætopoda (ärˊki-kē-top'ō-dä), *n. pl.* [NL., < Gr. *ἀρχι-*, first, + NL. *Chætopoda*.] An order of *Polychæta* consisting of aberrant or primitive forms in which the nervous system is not separated from the epidermis and the ventral nerve-cord is not segmented into ganglia. *Saccocirrus* is the only genus.

Archichlamydeæ (ärˊki-kla-mid'ē-ē), *n. pl.* [NL. (Engler, 1887), < Gr. *ἀρχι-*, first, + *χλαμύς* (*χλαμυδ-*), mantle, + *-eæ*.] A series of dicotyledonous plants embracing the *Apetalæ* (*Achlamydeæ* and *Monochlamydeæ*) and the *Choripetalæ* (*Polypetalæ*), and coördinate with the *Metachlamydeæ*. The plants of this series appeared earlier in the geologic history of plants, and possess a lower organization than those of the *Metachlamydeæ*.

archichlamydeous (ärˊki-kla-mid'ē-us), *a.* [*Archichlamydeæ* + *-ous*.] Belonging to the plant series *Archichlamydeæ*.

archiclistogamous (ärˊki-klīs-tog'a-mus), *a.* [Gr. *ἀρχι-*, first, + *clistogamous*.] In *bot.*, having none of the flowers opening at any time; unqualifiedly clistogamous.

archicœle (ärˊki-sēl), *n.* [Gr. *ἀρχι-*, first, + *κοῖλος*, hollow.] A cœloma, or body-cavity, which is a persistent remnant of the segmentation-cavity.

archicyte (ärˊki-sīt″), *n.* [Gr. *ἀρχι-*, first, + *κύτος*, a hollow (a cell).] In *embryol.*, the fertilized egg before it undergoes segmentation.

archidepula (ärˊki-dep'ū-lä), *n.*; pl. *archidepulæ* (-lē). [NL. (Haeckel), < Gr. *ἀρχι-*, first, + NL. *depula*, depula.] In *embryol.*, the depula arising by cell-division from the archicytula.

Archidesmus (ärˊki-des'mus), *n.* [NL., < Gr. *ἀρχι-*, chief, + *δεσμός*, band.] A genus of extinct centipeds from the Old Red Sandstone of Scotland.

archigenesis (ärˊki-jen'ē-sis), *n.* [NL., < Gr. *ἀρχι-*, first, + *γένεσις*, genesis.] The genesis of the first living beings in the history of the earth. While there is no reason to believe that the first appearance of life on earth was abrupt, or that, if one had witnessed it, he could have recognized the exact point when the boundary between lifeless matter and the first living things was passed, belief in the fact of a first origin of life (archigenesis) seems to be logical and necessary.

archigonocyte (ärˊki-gon'ō-sīt), *n.* [Gr. *ἀρχι-*, first, + *gonocyte*.] The primary germ-cell which results from segmentation of the impregnated ovum. *Buck*, Med. Handbook, VI. 864.

archigonous (är-kig′ō-nus), *a.* [NL. **archigonus, *archegonus,* < Gr. *ἀρχέγονος,* first-born, < *ἀρχε-, ἀρχι-,* first, + *-γονος,* -born, -produced.] Produced at the beginning; originating as first of living beings. *Haeckel* (trans.), Wonders of Life, p. 157.

archigony (är-kig′ō-ni), *n.* [Gr. **ἀρχιγονία* for **ἀρχεγονία,* < *ἀρχέγονος,* first-born, of the primeval race: see ★*archigonous.*] Archigenesis.

archikaryon (är-ki-kar′i-on), *n.*; pl. *archikarya* (-ä). [Gr. *ἀρχι-,* first, + *κάρυον,* nut (nucleus).] In *embryol.*, the nucleus of the fertilized egg; the cleavage-nucleus. Also *archicaryon.*

Archil extract. Same as ★*archil substitute.*—**Archil substitute.** There are three so-called archil substitutes, all artificial dyestuffs of the monoazo-sulphonic-acid type. See *Apollo* ★*red.*—**Brilliant archil C,** an acid coal-tar color of unpublished composition, which dyes wool and silk red in an acid bath.—**Canary archil,** a lichen, *Roccella tinctoria.* See *archil.*—**Flat archil,** a name sometimes applied to the lichen *Roccella fuciformis.*

archilithic (är-ki-lith′ik), *a.* [Gr. *ἀρχι-,* first, + *λίθος,* rock.] In *geol.*, noting the period of primitive rocks. [Rare.]

archimartyr (är-ki-mär′tėr), *n.* [Gr. *ἀρχι-,* first, + *μάρτυρ,* martyr.] The most eminent or chief among a group of martyrs in a given period or country.

A group of sufferers called the Madaurian martyrs seems to belong to the same period: for in the correspondence of St. Augustine, Namphamo, one of their number, is spoken of as "*archimartyr,*" which appears to mean protomartyr of Africa. *Encyc. Brit.*, XXXII. 462.

Archimedes (är″ki-mē′dēz), *n.* [NL., < L. *Archimedes,* < Gr. *Ἀρχιμήδης,* a Greek philosopher. The allusion is to *Archimedes's screw.*] A genus of extinct cryptostomatous bryozoans having a broadly spiral zoarium coiled about a solid vertical axis. It is very abundant in the Lower Carboniferous limestones.—**Archimedes limestone,** a formation of Lower Carboniferous age, well developed in the Mississippi valley, especially in Missouri and Iowa. It was defined by Swallow as lying below the St. Louis limestone and as characterized by the screw-shaped bryozoan *Archimedes.*

archimime (är′ki-mīm), *n.* [L. *archimimus,* < Gr. *ἀρχίμιμος,* < *ἀρχι-,* chief, + *μῖμος,* mime.] The chief mime; the hero of the Roman low comedy; also, the chief buffoon at a Roman funeral. See *mime.*

archimorphic (är-ki-môr′fik), *a.* [Gr. *ἀρχι-,* first, + *μορφή,* form.] Of the first form, or of the form shown in the earlier ages: as applied in *anthrop.*, characteristic of races which for very long periods have had a fixed habitat, as the Mediterranean, Mongolian, and negro races: distinguished from *protomorphic* and *metamorphic. Amer. Anthropol.*, July–Sept., 1902, p. 539.

Archimycetes (är″ki-mī-sē′tēz), *n. pl.* [NL., < Gr. *ἀρχι-,* first, + *μύκητες,* pl. of *μύκης,* fungus.] A subclass of the *Phycomycetes,* including the single order *Chytridiales.*

Archimylacris (är″ki-mi-lak′ris), *n.* [Gr. *ἀρχι-,* first, + *μυλακρίς,* a cockroach.] A genus of extinct cockroaches from the Carboniferous rocks.

Archipithecus (är″ki-pi-thē′kus), *n.* [Gr. *ἀρχι-,* first, + *πίθηκος,* ape.] A supposed apeform, assumed as the ancestor of the *Pithecanthropus.*

archiplasm (är′ki-plazm), *n.* [Gr. *ἀρχι-,* first, + *πλάσμα,* anything formed.] 1. The simplest and most primitive living matter, homogeneous, undifferentiated into nucleus and cell-body. *Haeckel* (trans.), Wonders of Life, p. 158.—2. In *embryol.*, the substance of which the fertilized ovum consists: not to be confounded with ★*archoplasm* (which see).

archipresbyteral (är″ki-pres′bit-ē-ral), *a.* Pertaining to the office of archipresbyter, which arose in the church in the fourth century. His duty was to preside over worship and to take the place of the bishop in his absence.

archipterygial (är″kip-tē-rig′i-al), *a.* Pertaining to or like an archipterygium, the theoretical primitive fin from which the limbs of vertebrates have been developed.

As regards the Dipneusti, in the course of some interesting remarks on vertebrate limb theories, the author adopts Dollo's view as to their probable derivation from the Crossopterygii, the corollary to which, as the present writer has also pointed out, is that the "*archipterygial*" form of limb must have been diphyletically realised, on the one hand, by the Pleuracanthid Selachii, and on the other by the Holoptychii and the lung-fishes.
Nature, Aug. 7, 1902, p. 340.

archisperm (är′ki-spėrm), *n.* [See *Archispermæ.*] 1. A member of the ★*Archispermæ* (which see).—2. A structure formed before fertilization, or at an early stage in the macrospore. *Boulger.*

Archispermæ (är-ki-spėr′mē), *n. pl.* [NL. (Strasburger, 1872), fem. of L. *archispermus,* adj., < Gr. *ἀρχι-,* first, + *σπέρμα,* seed.] Same as *Gymnospermæ* (which see) and ★*Metaspermæ.* The term is designed to emphasize the fact that these plants appeared early in the geologic series, occurring as they do in the Paleozoic. See ★*Archichlamydeæ.*

archispore (är′ki-spōr), *n.* [Gr. *ἀρχι-,* first, + *σπόρος,* seed (see *spore*).] In certain *Coccidiidea,* one of the uninucleate masses of protoplasm into which the sporont divides and from which later spores arise. *Labbé,* 1899. Same as *sporoblast.* Also *archespore.*

In general, it may be stated that the entire organism takes part in the formation of *archispores* (or sporoblasts), each *archispore* giving rise to spores, and each spore to sporozoites, either directly or indirectly.
Calkins, Infusoria, p. 151.

Archistes (är-kis′tēz), *n.* [NL., < Gr. *ἀρχός,* rectum, + *-ist-es* (?).] A genus of small sculpins of the family *Cottidæ,* found in the Kurile islands.

architecturalization (är-ki-tek″tū-ral-i-zā′shon), *n.* Adaptation to architectural purposes: as, "the *architecturalization* of foliage," *G. G. Scott,* Lectures on Med. Arch., I. 103.

architecturalize (ar-ki-tek′tū-ral-īz), *v. t.*; pret. and pp. *architecturalized,* ppr. *architecturalizing.* To adapt to architectural purposes. *G. G. Scott,* Lectures on Med. Arch., II. 139.

architecture, *n.*—**Celtic architecture,** the megalithic monuments of western Europe.—**Chalukyan architecture,** architecture as developed under the influence of the family of Chalukya, or the Chalukyas, who ruled in the Deccan, in the southern part of the Indian peninsula, from the sixth to the thirteenth century A. D.—**Columnar architecture,** architecture characterized by a free use of columns, especially in classic and neoclassic styles. The style of the Grecian temples, the Roman porticos, and all buildings not vaulted was columnar.—**Cottage architecture,** architecture displayed in the careful planning and designing of modern cottages, from either an artistic or a sanitary point of view.—**Dravidian architecture.** See *Indian architecture,* under *Indian.*—**Federal architecture.** See ★*federal.*—**Flemish architecture,** the architecture of ancient Flanders, including the important cities of Tournai, Bruges, Ypres, Douai, and Oudenarde.—**Garden architecture.** (*a*) The design and regulation of pleasure-grounds, especially formal gardens. (*b*) The design of the strictly architectural buildings in such pleasure-grounds (pavilions, casinos, terrace walls, parapets, perrons, and pedestals for statues).—**Georgian architecture,** architecture as developed in England under the four Georges, especially the earlier sovereigns of that name. Its reproduction in the American colonies produced what has been called in the United States *colonial architecture* (which see, under *colonial*).—**Greco-Roman architecture,** architecture as developed at Rome or under the influence of the Roman dominion, but founded on Greek models. Throughout the empire the tendency was steadily away from the purely Greek type, and the buildings of the fourth century can hardly be classed as Greco-Roman except that porticos of purely columnar architecture were still in favor. See cut under *hexastyle.*—**Indo-Aryan architecture.** See *Sanskrit architecture,* under *Sanskrit.*—**Indo-Saracenic architecture,** the architecture of the Moslem dominion in northern India, beginning with the Moslem conquest in the twelfth century A. D. See *Saracenic architecture,* under *Saracenic,* and *Indian-Saracenic.*—**Jewish architecture,** the architecture of the Jews, especially at two important periods of their history: (*a*) that of the kingdom of David and Solomon (about 1033–953 B. C.), of which very little is known and which is supposed to have been a mere variant of Phenician art; (*b*) that of the time of Herod Agrippa (37–44 A. D.), under whom the system of design was Roman, with only such modification as was common in the cities of Syria.—**Kmer or Khmer architecture,** the ancient architecture of Cambodia and of some neighboring districts in farther India. It is known chiefly by important sculptures which have been brought to France and are stored in the Louvre museum.—**Landscape architecture.** See ★*landscape-architecture.*—**Mesopotamian architecture,** the architecture of the great plains between the Tigris and the Euphrates and near those rivers on the east and the west. It includes the well-known styles called *Assyrian* and *Babylonian,* and also the as yet little-known styles of primitive times, such as the Accadian and the Chaldean, the last including the Babylonian style.—**Mohammedan architecture.** Same as *Moslem* ★*architecture.*—**Monastic architecture.** See ★*monastic.*—**Monolithic architecture.** (*a*) Rock-cut work, as in the case of the Buddhist caves. See *chaitya* and *Buddhist architecture.* (*b*) Architecture in which the work is cast in a solid mass (as in *pisé,* or rammed clay), in recent times by means of artificial stone.—**Moorish architecture,** the architecture of the Moslems in North Africa and in Spain. The most important building which has been studied is the mosque of Cordova, now the cathedral. The best-known is the palace of the Alhambra, on a hill above Granada. See *Saracenic architecture,* under *Saracenic.* and cuts under *Alhambraic, arcade, court, Moorish art.*—**Moslem architecture,** the architecture of the peoples conquered by the Arabs. It has existed in Egypt, Syria, and Persia since the seventh century A. D.; in North Africa and Spain since the eighth century; and in India since about 1250. The style may be divided into several substyles, with marked variations. See cuts under *Arabic architecture, Mogul architecture, mosque, stilted arch.*—**Mudejar architecture,** Spanish architecture from the fourteenth to the sixteenth century, exhibiting Moorish influence: often covered with ornament and showing a mixture of Oriental and Gothic detail.—**Neo-classic architecture,** the architecture which has been used in modern Europe since the Italian *risorgimento* at the beginning of the fifteenth century. It includes the Renaissance proper; the Italian *classicismo* and *decadenza* of the sixteenth century; the French and German styles as they grew to a close following of classic types about 1550; and the Jacobean of England, at least from the time of Inigo Jones. The succeeding styles (called *baroque, rocaille,* or *rococo*), the revived classic of the eighteenth century, and the buildings of the nineteenth and twentieth centuries founded on the above-named styles, are all included under this term. In careful writing it may be used to distinguish that which is closely Greco-Roman in style from that which shows much modern influence.—**Persepolitan architecture,** the architecture of Persia during the sixth and fifth centuries B. C., or from about the conquests of Cyrus (549 B. C.) to the conquests of Alexander (334 B. C.): named from the ruins at Persepolis near Shiraz.—**Persian architecture,** the architecture of the country now known as the kingdom of Persia. It is generally divided into three great schools, or epochs, the *Persepolitan,* the *Parthian,* and the *Mohammedan,* beginning with the Moslem conquest in the ninth century and existing to the present day.—**Peruvian architecture,** the architecture of western South America before the invasion of the Spaniards in the sixteenth century. The epoch of the most important buildings cannot be fixed with precision. They consist largely of tombs, in the form both of mounds and of masonry towers. The ancient city of Cuzco near Lake Titicaca contains the most important residential architecture and the most elaborate sculptured decorations.—**Phenician architecture,** the architecture of the people of Syria before the strong Greco-Roman influence was felt. The Phenicians were hardly a building race, but used largely a monolithic architecture, mainly in the form of rock-cut caves. Their colonies on the shores of the Mediterranean developed styles of their own, as at Carthage, though these have been little studied. The buildings of the Roman empire superseded and often replaced those of the Phenicians.

architrave, *n.*—**Banded architrave,** an architrave, as in the case of a window opening, of which the molded parts forming the usual architrave of the order employed are cut across, or interrupted by plain projecting blocks: a device of the latest neo-classic ★architecture (which see).

archive, *n.*—**Bureau of Indexes and Archives.** See ★*bureau.*

archivolt, *n.*—**Interlacing archivolts,** an arcade apparently formed by a series of arches, generally semicircular, crossing one another so that the actual openings are pointed arches below and triangular spandrels above: a feature peculiar to Romanesque architecture. The construction may be strictly arcuate, but is oftener a fitting together of stones cut to produce the decorative effect required. The arcades so produced were a common English wall decoration in the twelfth century. See cut at *interlacing arches,* under *interlace.*—**Returned archivolt,** an archivolt in which the band forming it is carried off horizontally, making a sharp angle with the curve-part, or, more rarely, is curved up again to meet another archivolt, as was often done in Syrian churches of the sixth and seventh centuries. See cut under *return.*

Archizoic (är-ki-zō′ik), *a.* and *n.* [Gr. *ἀρχι-,* first, + *ζωή,* life.] In *geol.*, noting the period of earliest life. Same as ★*Archæozoic.*

archontal (är′kon-tal), *a.* [*archon(t-)* + *-al*[1].] Of or pertaining to the office of archon. *Athenæum,* Aug. 22, 1891, p. 257.

archoplasm (är′kō-plazm), *n.* [Gr. *ἀρχός,* ruler, + *πλάσμα,* anything formed.] In *cytol.*, the substance which forms the attraction-spheres, astral rays, and spindle-fibers in the karyokinetic figure of dividing animal and plant cells. *Boveri,* 1888.

archoplasma (är′kō-plaz″mą), *n.* [NL.] Same as ★*archoplasm.*

archoplasmic (är-kō-plaz′mik), *a.* Consisting of or pertaining to archoplasm.

Archosargus (är-kō-sär′gus), *n.* [NL., < Gr. *ἀρχός,* chief (?), + *σαργός,* a fish: see *Sargus.*] A genus of sparoid fishes, containing the well-known sheepshead, *A. probatocephalus,* of the Atlantic coast of the United States.

Archosauria (är-kō-sâ′ri-ą), *n. pl.* [NL., < Gr. *ἀρχός,* chief (?), + *σαῦρος,* a lizard.] A name introduced by Cope to distinguish those orders of reptiles which have two temporal arches, the *Rhynchocephalia, Crocodilia, Dinosauria,* and *Pterosauria.* According to Zittel, the group properly includes the *Squamata* in which one or both arches have become obsolete.

archosaurian (är-kō-sâ′ri-an), *a.* and *n.* I. *a.* Of or relating to the *Archosauria.*

II. *n.* A member of that group.

Archozoic (är-kō-zō′ik), *a.* Same as ★*Archæozoic.*

arch-solid (ärch′sol″id), *n.* Same as *arch-stone.*

archt.[1] An abbreviation of *architect.*

archt[2], *p. a.* A simplified spelling of *arched.*

arciform, *a.* 2. Having the form or structure of the shell of the molluscan genus *Arca.*

arc-lamp (ärk′lamp), *n.* See *electric lamp,* under *electric,* and *electric* ★*arc.*—**Differential arc-lamp,** an arc-lamp the operation of which is controlled by the opposing magnetic forces of a shunt coil and a series coil. This is the most common type of lamp.

A. R. C. O. An abbreviation of *Associate of the Royal College of Organists.*

arcocentrous (är-kō-sen′trus), *a.* [Irreg. < L. *arcus,* arch, + Gr. *κέντρον,* center.] Having the

vertebral centra formed by the development of the arches about the sheath of the notochord; arcogenous.

The vertebræ do not possess, and cannot form, neurocentral sutures, because their bodies are exquisitely *arcocentrous*, formed, in fact, by the arches proper, namely, by the basidorsalia and basiventralia, while the interbasalia produce the ventral, intervertebral mass.
H. Gadow, in Philos. Trans. Roy. Soc. (London), 1896, [ser. B, 187. 14.

arcogenous (ärˈkoj'e-nus), *a.* [L. *arcus*, arch, + *-genus*, -producing.] Having the centra of the vertebræ developed from arcualia, or arches formed about the sheath of the notochord, and not from ossifications arising in the chordal sheath. Such vertebræ are found in *Amphibia* and their centra are called *arch-centra*. *Philos. Trans. Roy. Soc.* (London), 1896, ser. B, 187. 51.

arcose, *n.* See *arkose*.

Arcot rupee. See ★*rupee*.

Arctatlantis (ärkt-at-lanˈtis), *n.* [NL., < Gr. *ἄρκτος*, the north, + *Ἀτλαντίς*, the Atlantic (ocean).] In *zoögeog.*, a sea-region proposed by Sclater, consisting of the northern portion of the Atlantic down to about 40° north latitude.

The North Atlantic Sea-region, or *Arctatlantis*, consisting of the northern portion of the Atlantic down to about 40° N. lat. *Geog. Jour.* (R. G. S.), X. 219.

arctian, *n.* **II.** *a.* Of or belonging to the lepidopterous genus *Arctia* or to the family *Arctiidæ*.

Arctic ★flounder, ★grayling, ★highlander, ★migration, ★skipper, ★sperm-oil. See the nouns.

Arctica (ärkˈti-kä), *n.* [NL., said to be < Gr. *ἀρκτικός*, of the beginning, < *ἀρχεσθαι*, begin.] A genus of teleodesmaceous pelecypods belonging to the family *Pleurophoridæ*. They have oval or rounded valves, prominent curved beaks, and three cardinals in each valve. The genus abounds in the Jurassic and Cretaceous formations, and also exists in present seas.

arcticize (ärkˈti-sīz), *v. t.*; pret. and pp. *arcticized*, ppr. *arcticizing*. [*arctic* + *-ize*.] To accustom or inure to arctic conditions. *Kane*, Grinnell Exped., p. 261.

Arctirenia (ärk-ti-rēˈni-ä), *n.* [Gr. *ἄρκτος*, the north, + *εἰρήνη*, peace.] In *zoögeog.*, a sea-region proposed by Sclater, comprising the northern portion of the Pacific Ocean down to about the tropic of Cancer.

The North Pacific Sea-region, or *Arctirenia*, containing the northern portion of the Pacific Ocean to about the tropic of Cancer. *Geog. Jour.* (R. G. S.), X. 220.

Arctium (ärkˈti-um), *n.* [NL. (Linnæus, 1753), < Gr. *ἄρκτιον*, a plant mentioned by Dioscorides, supposed by some of the early German botanists to be the burdock.] A genus of dicotyledonous plants of the family *Asteraceæ*. They are coarse, branching herbs with broad alternate leaves and heads of purple or white flowers: distinguished from *Carduus*, a related genus, by the bracts of the involucre ending in a long stiff point hooked at the extremity. There are about six species, natives of Europe and Asia. Three have been introduced into the United States. For *A. Lappa* see *batweed, burdock, hardock*, and *harebur*.

Arctogæic (ärk-tō-jēˈik), *a.* Same as *Arctogæal* and *Arctogæan*.

arctoidean (ärk-toiˈdē-an), *a.* **1.** Pertaining to or resembling the *Arctoidea*.—**2.** Loosely, same as *arctoid*.

Arctopithecus, *n.* **2.** A genus of three-toed sloths comprising those species in which the pterygoids are not inflated. *Gray*, 1850. Considered by some as synonymous with *Bradypus*.

Arctos (ärkˈtos), *n.* [Gr. *ἄρκτος*, bear.] The constellation of the Great Bear, Ursa Major.

Arcturian (ärk-tūˈri-an), *a.* and *n.* **I.** *a.* Pertaining to or resembling the star Arcturus. —**Arcturian stars,** those of Secchi's second type, which have a spectrum resembling that of Arcturus (*α* Boötæ). In the main it is like the solar spectrum, with extremely numerous metallic lines. Next to the Sirian stars these are the most abundant.

II. *n.* A star of the type of Arcturus.

arcuale (ärˈkū-āˈlē), *n.*; pl. *arcualia*-(li-ä). [NL., neut. of **arcualis*, adj., < L. *arcus*, a bow, an arch: see *arc*[1], *arch*[1].] The name given by Gadow to one of the paired cartilages which form on the superior and inferior faces of the notochord in amphibians and by their extension and ossification form the centra, spinous processes, and hemapophyses of the vertebræ. There are typically four pairs of arcualia, the two above being the *basidorsalia* and *interdorsalia*, and the two inferior pairs the *basiventralia* and *interventralia*. See ★*arcocentrous*, ★*gastrocentrous*, and ★*notocentrous*.

arculite (ärˈkū-līt), *n.* [L. *arculum*, a hoop, dim. of *arcus*, a bow, + *-ite*[2].] In *petrog.*, a term proposed by Rutley, 1891, to denote minute bow-shaped aggregates of crystallites, such as are commonly found on the microscopical study of semi-vitreous volcanic rocks, especially rhyolites and pitchstones.

Arcus juvenalis [L., 'bow of youth'], an opacity encircling the cornea, sometimes seen in the young, which greatly resembles the arcus senilis.

arcyid (ärˈsi-id), *a.* and *n.* **I.** *a.* Having the characteristics of or pertaining to the spider family *Arcyidæ*.

II. *n.* A spider of the family *Arcyidæ*.

Ardisia (är-disˈi-ä), *n.* [NL. (Swartz, 1788) < Gr. *ἀρδις*, a point.] A very large genus of tropical trees and shrubs of the family *Myrsinaceæ*, a very few of which are grown in hothouses and conservatories. About a dozen species are in cultivation, but only two are generally known, and these are grown as pot-plants for their berries. They are *A. crenulata*, red-berried, and *A. Japonica*, white-berried. The former, from eastern Asia, is one of the popular pot-plants, with persistent foliage and berries that remain for months or even for a year or more. It is a synonym of *Icacorea*.

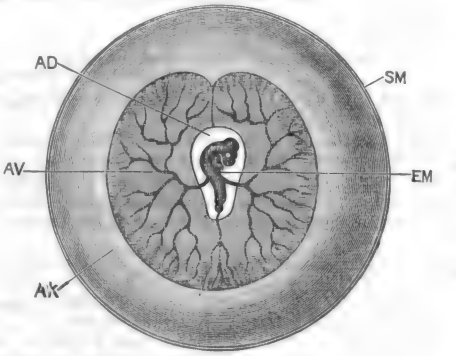
ardite (ärˈdē'te), *n.* [Sp.; referred by some to Basque *ardia*, sheep.] An ancient copper coin of Catalonia.

Ardois lantern, signal system. See ★*lantern*, ★*signal*.

Ardor urinæ, a scalding sensation on urination, in cases of urethritis.—**Ardor ventriculi,** pyrosis; heartburn.

-are. A suffix applied to the names of orders in the quantitative classification of igneous rocks proposed by Cross, Iddings, Pirsson, and Washington: as, *canadare, columbare*. See *classification of igneous rocks*, under ★*rock*.

area, *n.* **5.** In *conch.*, a space behind the apex of the shell, in certain bivalves, including the dorsal posterior side.—**6.** In *Polyzoa*, the calcareous surface outlined on the zoœcium by a raised ridge.—**Abysmal area,** that part of the lithosphere which is more than 10,000 feet below sea-level.—**Alleghanian (faunal or floral) area,** the eastern humid division of Merriam's transition life zone. (See ★*zone*.) It covers part of Nova Scotia, a large part of New England, New York and Pennsylvania, middle Ontario and Michigan, most of Wisconsin, a large part of Minnesota, and parts of the Dakotas.—**Area amniotica,** the transparent portion in the human embryo corresponding in general to the area pellucida in the chick.—**Area cribrosa** ('sieve-like tract') or **cribriform area.** In *anat.*: (*a*) The anterior surface of the nipple, marked by the orifices of the milk-pores. (*b*) The area at the bottom of the internal auditory meatus giving passage to branches of the auditory nerve.—**Area of characterization,** a region in which the several varieties of plants and animals inhabiting it have been able to preserve their individuality through geographical isolation. *W. Z. Ripley*, Races of Europe, p. 48.—**Area of high pressure,** any region on the earth over which barometric pressure is higher than in the neighboring region. There are permanent tropical areas of high pressure, the pressure being slightly higher under the tropics of Cancer and Capricorn than to the north or south. This increase is specially marked over the continents in the winter and over the oceans in the summer season. Small areas of high pressure move from the poles toward the equator at irregular intervals, especially in the respective winter seasons, and are usually designated on the daily weather-maps as "highs."—**Areas of Langerhans,** minute collections of cells in the interstitial connective tissue of the pancreas: more commonly called *islands of Langerhans*.—**Area of low pressure,** any region on the earth over which atmospheric or barometric pressure is lower than in the neighboring regions. A large region of this kind occupies the antarctic circle and there is a less marked region in the arctic circle: these are called *polar areas*. Continental areas of low pressure develop over the continents in their summer seasons and oceanic areas over the extreme North Atlantic and North Pacific oceans in the summer season. There is a belt of areas of low pressure (*equatorial areas*) lying within the torrid zone near the equator. The smaller areas of low pressure which occupy the central portions of all cyclonic storms, and are usually designated on the weather-maps as "lows," are called *storm-areas*.—**Area opaca,** in *embryol.*, that portion of the blastodisc known



The yolk of a hen's egg at the end of the third day of incubation. AD, area pellucida of the blastoderm. AK, area opaca. AV, area vasculosa. EM, embryo. SM, vitelline membrane. (From Marshall's "Vertebrate Embryology.")

as the *opaque* as distinguished from the *pellucid* area (*area pellucida*), especially in the embryonic bird.—**Area placentalis,** that portion of the ectoderm, in the human ovum, which is in intimate contact with the wall of the uterus.—**Area system,** in *photog.*, a system of calculating relative exposures with various stops and lenses, based on the law of squares.—**Arid transition (faunal or floral) area,** that part of Merriam's transition zone, (see ★*zone*) lying west of the hundredth meridian and merging at length into the Pacific coast humid area. Its outlines are very irregular, being much affected by altitude. It extends interruptedly from British America far into the mountains of Mexico.—**Association areas,** portions of the cerebral cortex in which there are apparently no motor nor sensory centers, their function seeming to be to correlate the various impressions received and excite motor impulses consistent with them; in other words, to exercise the functions of the mind.—**Austroriparian (faunal or floral) area,** the eastern humid division of Merriam's lower austral life zone (see ★*zone*), alternatively called *Louisianian area*. Beginning in southern Virginia, it extends along the coast-plain to Florida, thence west over a large portion of the Gulf States to middle Texas. In the Mississippi valley it reaches north to the boundaries of Illinois and Indiana. The semitropical or gulf strip is a subdivision of this. The southern extremities of Florida and Texas belong to the tropical region.—**Broca's area,** the portion of gray matter in the brain between the peduncle of the corpus callosum and the middle olfactory lobe where are stored the memories of the movements necessary to articulate speech.—**Carolinian (faunal or floral) area,** the eastern moist division of Merriam's upper austral life zone (see ★*zone*). It extends along the coast from Connecticut to Virginia, thence along the base of the mountains to Alabama, north through Tennessee, to Ontario, and from there west over Indiana and succeeding States to the hundredth meridian.—**Conservation of areas,** the description of equal areas in equal times by the radius vector in all orbits described under the action of a central force.—**Cord area,** the portion of the brain injury to which is often followed by degenerative processes in the spinal cord.—**Culture area,** an area in which the forms of human culture have assumed a definite shape, owing to the influence of geographical environment.—**Distributional area, germinal area, hyperbolic area.** See ★*distributional*, ★*germinal*, ★*hyperbolic*.—**Louisianian area.** Same as *austroriparian* ★*area*.—**Lower Sonoran (faunal or floral) area,** the dry western division of Merriam's lower austral life zone. (See ★*zone*). It extends from western Texas to New Mexico, reaching far south into Mexico at middle altitudes. It reappears west of the Rocky Mountains, occupying irregular and interrupted areas in Arizona, California, Mexico, and Lower California.—**Motor area,** that portion of the anterior and posterior central convolutions of the brain where the nerve-centers for motion are believed to reside.—**Pacific coast transition (faunal or floral) area,** the humid western division of Merriam's transition zone. (See ★*zone*.) It comprises portions of western Washington and Oregon and northern California, together with a large part of the California coast.—**Principle of the preservation or conservation of areas,** in *mech.*, Kepler's law that the radius vector of a planet revolving in an ellipse about the sun describes equal areas in equal times in all parts of the orbit. Newton showed that this is a necessary consequence of the laws of motion of a body attracted or repelled by central forces only. In meteorology Ferrel showed that the same law applies to the motions of the atmosphere and of all bodies on the earth's surface held there by gravitation if friction is neglected; and H. Bruns (1883) showed that this law holds good even if the friction is appreciable, as the latter diminishes the area but does not affect the constancy.—**Rolandic area.** Same as *motor* ★*area*.—**Sensation or sense area.** (*a*) The surface of distribution, peripheral or central, of a particular sensory nerve or nerve-branch. (*b*) A term sometimes used to denote the separation that must be given to two esthesiometric points impressed upon the skin if the two stimuli are to be separately sensed; the limen of dual impression.—**Sensory area,** that portion of the brain cortex, embracing the superior temporal convolution and the posterior part of the occipital lobe, where the centers for receiving sensory impressions are believed to reside.—**Silent area,** an area of the surface of the brain injury to which is not expressed by special motor or sensory symptoms: now usually called *association* ★*area*.

But as it is in the association areas (hitherto termed the "*silent areas*" because, forsooth, we understood them not) that the higher intellectual activities are carried on, it is in these portions of the cortex that the higher feelings assume shape and control or influence the somæsthetic areas with which they are connected. Herein it is that the mind of man differs most from that of the brute.
Amer. Anthropologist, Oct.–Dec., 1903, p. 609.

Subpermanent areas of pressure. See ★*pressure*.—**Upper Sonoran (faunal or floral) area,** the western arid division of Merriam's upper austral life zone. (See ★*zone*.) It occupies irregular and discontinuous spaces, determined largely by altitude, west of the hundredth meridian from Montana and Washington to far south in Mexico.—**Vascular area,** in the amniote embryo, that portion of the extra-embryonic blastodisc which gives rise to the first blood-vessels. See cut at ★*area opaca*.

area-drain (āˈrē-ä-drān), *n.* An area near the foundation-walls of a building, having a slight slope to carry the moisture off.

Areal geology, stimulation, etc. See ★*geology*, etc.

area-wall (āˈrē-ä-wâl″), *n.* The wall which retains the earth on either side of an area. In cities it is becoming increasingly common to set buildings of all kinds in what seems a pit formed by areas on all the street-fronts; the area-wall then becomes an important construction, like the counterscarp of a fortification.

arecaidine (ar-ē-kāˈi-din), *n.* [Irreg. < *areca* + *-id* + *-ine*[2].] An alkaloid, $C_7H_{11}NO_2+H_2O$, formed by the saponification of arecoline with barium hydroxid. It is crystalline, melts at 223° C., and is not poisonous. It is an acid as well as a base.

arecaine (ar'ē-kā-in), *n.* [Irreg. < *areca* + *-ine*².] An alkaloid, $C_7H_{11}NO_2 + H_2O$, found in the betel-nut from *Areca Catechu*. It is crystalline and melts at 213° C.

arecoline (ar'ē-kō-lin), *n.* [*areca* + *-ol-* + *-ine*².] The chief alkaloid, $C_8H_{13}NO_2$, of the betel-nut from *Areca Catechu*. It is an oil, is easily soluble in water, boils at 220° C., and is very poisonous. It is the methyl ester of arecaidine, and is used in medicine, principally as arecoline hydrobromate, as a vermifuge.

Arenacea (ar-ē-nā'sē-ä), *n. pl.* [NL., neut. pl. of *arenaceus*, of sand: see *arenaceous*.] A group of *Foraminifera* in which the test is not secreted by the organism, but is constructed by it from particles of sand, shell, sponge-spicules, and other adventitious bodies picked up by it and cemented together by a modification of the sarcode. The name does not indicate a true zoölogical group.

arenicole (a-ren'i-kōl), *a.* [L. *arena*, *harena*, sand, + *colere*, dwell in: see *cult.*] Living or burrowing in the sand, as certain marine worms; arenicolous.

areniferous (ar-ē-nif'e-rus), *a.* Bearing or containing particles of sand, as the horny fibers of certain sponges.

Arenig group. See ★*group*¹.

arenoid (ar'ē-noid), *a.* [L. *arena*, sand, + εἶδος, form.] Resembling sand. *Buck*, Med. Handbook, IV. 114.

arenosity (ar-ē-nos'i-ti), *n.* [*arenose* + *-ity.*] Sandy character or quality; sandiness. *Dr. H. More.*

areographer (ā-rē-og'ra-fėr), *n.* One who writes upon or describes the physical features of the planet Mars.

areola, *n.* **2.** (*b*) A tessellation in the thallus of some lichens.—**Areola umbilicalis,** a dark circle surrounding the umbilicus in pregnancy.

Areolar cancer. See ★*cancer.*

Areolate mildew of cotton. Same as ★*leaf-mold of cotton.*

areolatin (ar'ē-ō-lā-tin), *n.* A white crystalline neutral compound, $C_{12}H_{10}O_7$, found in the lichen *Pertusaria rupestris*. It melts at 270° C.

areolin (a-rē'ō-lin), *n.* A white crystalline substance, $C_{16}H_{14}O_7$, found in the lichen *Pertusaria rupestris*. It melts at 243° C.

areometrically (ar″ē-ō-met'ri-kal-i), *adv.* By means of the areometer or hydrometer.

Arethusina (ar-ē-thū-sī'nä), *n.* [NL., < L. *Arethusa*, < Gr. Ἀρέθουσα, a proper name, + *-ina*¹.] A genus of trilobites belonging to the family *Proëtidæ*. It is characterized by a broad cephalon with small glabella and ocular ridges running out to the eyes, a thorax with 22 segments, and a small pygidium. It occurs in the Silurian rocks.

a reverbero (ä rā-ver'be-rō). [It.: see *reverberate.*] With reflection: noting a peculiar tint of luster found on the old Moorish and majolica wares, consisting of iridescent metallic pigments.

Argand diagram. See ★*diagram.*

arganin (är'ga-nin), *n.* A glucoside, probably identical with ★*sapotin.*

argantid (är-gan'tid), *a.* and *n.* **I.** *a.* Having the characteristics of or belonging to the family *Argantidæ.*

II. *n.* A tick of the family *Argantidæ.*

Argelander's method, scale. See ★*method,* ★*scale*³.

argentamine (är-jent-am'in), *n.* [As *argent* + *amine.*] A solution of silver phosphate in an aqueous solution of ethylene diamine; ethylene-diamine silver phosphate. It is used as an antiseptic.

argentan, *n.* **1.** This alloy, also known as German silver, is often made with manganese instead of with nickel, the other constituents, copper and zinc, being the same in either case.

argentine, *n.* **7.** Metallic tin in a state of fine subdivision, precipitated by zinc from a dilute solution of a tin salt: used for tinplating and for printing upon paper and cloth.—**8.** A gold coin of the Argentine Republic, equivalent to $4.824.

argento (är-jen'tō), *n.* [It.] A silver coin struck by Pope Clement V. at Carpentras near Avignon in the early part of the fourteenth century.

argentol (är-jen'tōl), *n.* [L. *argentum*, silver, + *-ol.*] The trade-name of silver hydroxyquinolinesulphonate, $HOC_9H_5NSO_3Ag$. It is a yellow, pulverulent compound used in surgery as a dusting-powder.

argentotype (är-jen'tō-tīp), *n.* **1.** A picture printed by exposure behind a negative, on paper previously prepared by the use of ferric oxalate and silver nitrate solutions. The process was devised by Mallman.—**2.** A special make of gelatinobromide paper.

argillomagnesian (är-jil″ō-mag-nē'ṡiạn), *a.* [Gr. ἀργιλλος, clay, + NL. *magnesia*, magnesia.] Containing both clay and magnesia, as a limestone or a cement made from it.

argillophyre (är-jil'ō-fīr), *n.* [L. *argilla*, clay, + (*por*)*phyr*(*y*).] In *petrog.*, a porphyry, with a ground-mass rich in clay, resulting from the decomposition of the original feldspar particles contained in it.

arginase (är'ji-nās), *n.* [*argin*(*in*) + *-ase.*] A ferment which causes the decomposition of arginin into ornithin and urea. It has been found in the liver, the thymus, lymph glands, the mucosa of the small intestine, etc. *Nature*, June 16, 1904, p. 160.

arginin (är'jin-in), *n.* [Gr. ἀργιν(όεις), bright-shining, white (< ἀργός, white), + *-in*².] A constant decomposition product of the protamins and possibly of all albumins. It is a hexone base, $C_6H_{14}N_4O_2$. On hydrolysis it yields urea and ornithin.

Argiope (är-jī'ō-pē), *n.* [L. *Argiope*, < Gr. Ἀργιόπη, a proper name.] A genus of brachiopods having a straight hinge-line, plicate shells, dorsal valve with from three to five septa, and a broad continuous brachidium divided into lobes by the septa. It occurs fossil in Mesozoic and Tertiary rocks, and also exists in present seas.

Argoan (är'gō-an), *a.* [L. *Argōus*, < Gr. Ἀργῷος, < Ἀργώ, Argo.] Of or pertaining to the ship Argo, in which Jason sailed for the golden fleece.

argon (ar'gon), *n.* [Gr. ἀργόν, neut. of ἀργός, inert.] A gaseous element having, in the pure state as a gas, a density of 19.96 (H=1) and an atomic weight of 39.6. It exists in the atmosphere, and is also obtained from the gases yielded by the water of some springs, and, with helium (which see), from certain minerals and from meteoric iron. It was first recognized in 1895 by Lord Rayleigh and Professor W. Ramsay, who separated it from the nitrogen with which it had till then been confounded largely because of its chemical inertness, it being more indifferent to reagents than even that element. It yields two characteristic spectra, marked respectively by certain prominent red and blue lines. This element, the first of five previously unknown gases existing in the atmosphere, exhibits the same chemical inertness or incapacity for combination as the others, with which when first examined it was more or less mixed. It can now be separated from them by reduction to the liquid state and fractional distillation of the mixture. When liquefied it boils under normal pressure at −186.1° C., and in the solid state it melts at −189.5° C. Argon is nearly 2½ times as soluble in water as nitrogen. As a gas it is more opaque to the Röntgen rays than either nitrogen or oxygen. It forms about .94 per cent. by volume or 1.33 per cent. by weight of the atmosphere. The fact that this substance was actually obtained by Cavendish in 1785 is interesting, although he did not pursue its examination or ascertain its elementary character.

Argonian (är-gō'ni-an), *a.* and *n.* [*Argo* + *-n-* + *-ian.* The normal adj. from *Argo* is *Argoan* (Gr. Ἀργῷος).] **I.** *a.* Noting stars having spectra like those of γ Argus and ζ Puppis (the stars shown in the figure of the constellation on page 305, the former (●) on the deck a little forward of the mast, the latter (♣) north of it and just overboard). These spectra are characterized by the predominance of the two series of hydrogen lines. They are considered by Lockyer to be the hottest of all stars, and some of them show bright lines.

II. *n.* An Argonian star.

argonin (är'gō-nin), *n.* [Gr. ἀργός, white, + *-on* + *-in*².] A white, amorphous, practically neutral compound of silver (4 per cent.) and casein. It is used as a bactericide in cases of gonorrhœa.

argosy, *n.* **2.** A fleet of ships.

> Fun enough to float an *argosy* of second rates.
> *Forster*, Life of Dickens.

argotic (är-got'ik), *a.* Of the nature of argot or slang: as, *argotic* locutions.

Argovian (är-gō'vi-an), *a.* and *n.* [NL. *Argovia*, F. *Argovie*, G. *Aargau*, a canton of Switzerland.] In *geol.*, noting a division of the Middle Jurassic or Oxfordian in France and the Jura, corresponding to the upper part of the Oxfordian.

Arguesian (är-gē'si-an), *a.* [(*Des*)*argues* + *-ian.*] Of or pertaining to the French mathematician Gérard Desargues (1593–1661).—**Arguesian transformation.** See *transformation.*

argument, *n.* **8.** (*c*) When one variable is dependent upon another, the dependent variable is called a function of the other variable, which is then called the *argument* of the function.

> The graph of an equation shows very clearly how the function varies as the *argument* changes.
> *G. A. Gibson*, Introd. to the Calculus, p. 3.

argumentarian (är-gū-men-tā'ri-an), *n.* An arguer or debater. [Colloq.]

Argumentum a contingentia mundi [L., 'argument from the indeterminate nature of the universe'], the argument that because the universe was not by any *a priori* necessity arranged exactly as it is, therefore it must have a preëxistent and independent cause.

argus-butterfly (är-gus-but'ėr-flī), *n.* Any one of the meadow-browns of the family *Agapetidæ*, as the little wood-satyr, *Cissia eurytus:* so called on account of the numerous eye-spots on the wings.

argus-tortoise (är'gus-tôr″tis), *n.* A tortoise-beetle of the family *Cassididæ*, *Chelymorpha argus*, a large brick-red American species with many black dots. It feeds on herbaceous plants of different families.

Argyll-Robertson phenomena. See ★*phenomenon.*—**Argyll-Robertson's sign.** Same as *Argyll-Robertson pupil* (which see, under *pupil*²).

argyræscin (är-ji-res'in), *n.* [Gr. ἀργυρος, silver, + L. *æsc*(*ulus*), horse-chestnut, + *-in*².] A glucoside found in the horse-chestnut.

argyrol (är'ji-rol), *n.* [Gr. ἀργυρος, silver, + *-ol.*] The trade-name of a compound of silver with proteid material said to be obtained from wheat: used as an antiseptic instead of the more irritant mineral salts of silver.

argyropyrite (är″ji-rō-pī'rīt), *n.* [Gr. ἀργυρος, silver, + πυρίτης, pyrites.] A sulphid of silver and iron from Freiberg in Saxony. It is allied to the more definitely known species sternbergite. Argentopyrite from Joachimsthal in Bohemia is a closely related compound.

argyrosis (är-ji-rō'sis), *n.* [NL., < Gr. ἀργυρος, silver, + *-osis.*] Same as *argyrism.*

Argyrosomus (är″ji-rō-sō'mus), *n.* [NL., < Gr. ἀργυρος, silver, + σῶμα, body.] A genus of ciscos or lake-herrings of the family *Salmonidæ.* It is distinguished by the relatively large mouth in connection with the large scales and small teeth. *A. artedi*, the lake-cisco or Michigan herring, is the commonest of the numerous American species.

arhinencephalus, *n.* See ★*arrhinencephalus.*

arhythmia, arhythmic. See *arrhythmia, arrhythmic.*

ari (ä'rē), *n.* [Telugu.] A small crooked tree, *Bauhinia racemosa*, distributed from India to Burma, China, and Malaysia. It yields a strong fiber used for cordage.

aria, *n.* Special varieties of movement or style are indicated by adding various terms: as, *aria cantabile*, an aria in a flowing, connected style, with but slight accompaniment; *aria concertato*, an aria of large dimensions, with an elaborate or concerted accompaniment; *aria parlante*, an aria in which the dramatic delivery of the text is conspicuous; *aria di bravura* or *d'agilità*, an aria in which special opportunity is given for vocal display through rapid passages and figures, trills and other embellishments, extreme notes, and the like; *aria d'imitazione*, an aria in which the music recalls some physical sound like the song of birds, the noises of battle, etc.

aribine (ar'i-bin), *n.* [NL. *Ar*(*ar*)*iba* (< Tupi *arariba*, < *arara*, a (red) parrot, + *iba*, fruit (tree), + *-ine*².] An alkaloid, $C_{23}H_{20}N_4 + 8H_2O$, found in the bark of *Arariba rubra*, which is used in Brazil as a red dye. The alkaloid is crystalline and melts at 229° C.

Arid region, a region where the rainfall is decidedly less than the annual evaporation, such as the great deserts of Sahara, Arabia, and Persia, and portions of Nevada, Utah, southern California, Arizona, New Mexico, and Spain.

aridian (a-rid'i-an), *a.* [NL. **Aridia*, the arid region (< L. *aridus*, arid) + *-an.*] Relating to the arid countries of the southwestern parts of the United States.—**Aridian culture,** the culture of the pueblos of the southwest. *F. N. Cushing.*

Aridine red. See ★*red*¹.

aridium (a-rid'i-um), *n.* [NL., < L. *aridus*, dry: see *arid.*] A supposed new chemical element announced by Ullgren in 1850: later shown to consist of the oxids of iron, chromium, and phosphorus.

ariegite (ar'i-e-jīt), *n.* [*Ariège*, a locality in the French Pyrenees, + *-ite*².] In *petrog.*, a granular igneous rock consisting essentially of pyroxenes (diopside, diallage, bronzite) and spinel, with or without garnet (pyrope) and hornblende. This rock was named by Lacroix in 1901.

Aries, *n.*—**First of Aries** or **first point of Aries,** the point at which the sun crosses the celestial equator in the spring; the vernal equinox, from which right-ascension and (celestial) longitude are reckoned; the Greenwich of the celestial sphere.

arietean (a-ri-ē'tē-an), *a.* Pertaining to or having the characters of the cephalopod genus *Arietes.*

Arietes (ar'i-e-tēz or a-rī'e-tēz), *n.* [NL., < L. *aries* (*ariet-*), a ram.] The typical genus of the family *Arietidæ.*

Arietidæ (a-ri-et′i-dē), *n. pl.* [NL., ⟨ *Arietes* + *-idæ.*] A family of ammonoid cephalopods comprising discoidal and widely umbilicate shells having a channeled periphery, strong ribs on the sides of the whorls, and highly complex septal sutures: characteristic of the Lower Lias beds.

arigue (ä-rē′gā), *n.* [Philippine Sp. (Blumentritt), a form of Tagalog and Bisaya *haligi.*] In the Philippine Islands, timber, especially when whole, used in the construction of buildings; a post or pile.

a-ripple (a-rip′l), *adv.* [*a*[3] + *ripple.*] In a ripple; rippling.

> That young man,
> The muscles all *a-ripple* down his back.
> *Browning*, Cleon.

Arisæma (ar-i-sē′ma), *n.* [NL.] A genus of about 50 widely distributed species of tuberous-rooted herbs of the family *Araceæ.* The tropical species are sometimes grown as hothouse subjects; but those commonly known are the two native species, *A. Dracontium*, the dragon-root, and *A. triphyllum*, the Indian turnip or jack-in-the-pulpit. These two species are easily transferred to the garden, and they can be grown in pots indoors for very early spring bloom.

Arisaig series. See ★*series.*

aristiform (a-ris′ti-fôrm), *a.* [L. *arista*, awn, + *forma*, form.] Of the form of an arista, in either sense; awn-like.

aristochin (a-ris′tō-kin), *n.* A white tasteless derivative of quinine; diquinine-carbonic-ether. It possesses antimalarial properties. Also *aristoquin.*

Aristoclesia (ar″is-tō-klē′zi-ä), *n.* [NL. (Coville, 1905), ⟨ Gr. Ἀριστοκλῆς, Aristocles, the early name of Plato, the Greek philosopher. See *Platonia.*] A genus of trees belonging to the family *Clusiaceæ*, improperly known by the name *Platonia* (which see).

Aristocystidæ (ar″is-tō-sis′ti-dē), *n. pl.* [NL., ⟨ ★*Aristocyst(ites)* + *-idæ.*] A family of cystoid echinoderms or cystids having a spherical or pear-shaped calyx composed of numerous very irregular plates which are traversed by simple canals. The ambulacral grooves lie beneath the plates. These echinoderms are without arms or stem. They are found only in the Silurian rocks.

Aristocystites (ar″is-tō-sis-tī′tēz), *n.* [NL., ⟨ Gr. ἄριστος, best, + κύστις, bladder, + *-ites.*] The typical genus of the family *Aristocystidæ.*

aristodemocratical (ar″is-tō-dem-ō-krat′i-kal), *a.* Of the nature of an aristodemocracy; combining both aristocratic and democratic features of government, as the Swiss Confederacy.

> We may conclude that those authors have erred who call the government of Soleure *aristo-democratical*, for it is certainly a most complete aristocracy.
> *Coxe*, Trav. in Switzerland, I. letter xx.

aristogen (a-ris′tō-jen), *n.* [Gr. ἄριστος, the best, + *-γενης*, -producing.] In *photog.*, a trade-name for a concentrated solution of hydroquinone used in developing faintly printed pictures on printing-out paper.

aristol (a-ris′tōl), *n.* [Gr. ἄριστος, best, + *-ol.*] A pale-brown amorphous compound, $C_3H_7.CH_3.C_6H_2(OI)_2$, of faint odor, containing 45.8% iodine, obtained by treating thymol with sodium hydrate, iodine, and potassium iodide; di-thymol-di-iodide; thymol iodide. It is used as a substitute for iodoform. Also called *annidalin.*

aristolic (ar-is-tol′ik), *a.* [*Aristol(ochia)* + *-ic.*] Derived from *Aristolochia.*—**Aristolic acid**, an orange-red compound, $C_{15}H_{11}O_7N$ or $C_{15}H_{13}O_7N$, contained in Virginia and Texas snakeroot, *Aristolochia argentina.* It crystallizes in needles and melts at 260°–270° C.

Aristolochiales (ăr″is-tō-lō-ki-ā′lēz), *n. pl.* [NL. (Lindley, 1833), ⟨ *Aristolochia* + *-ales.*] An order of dicotyledonous, apetalous (monochlamydeous) plants, characterized chiefly by the thick, leathery, tubular, corolline calyx. It embraces the families *Aristolochiaceæ*, *Rafflesiaceæ*, and *Hydnoraceæ.*

aristolochine (ar″is-tō-lō′kin), *n.* [*Aristolochia* + *-ine*[2].] An alkaloid, $C_{32}H_{22}N_2O_3$, found in the seeds of *Aristolochia Clematitis.* It crystallizes in orange-yellow needles which decompose at 215° C. It is a violent poison for animals.

Aristotelian experiment. See ★*experiment.*

Aristotelism (ar″is-tot′el-izm), *n.* Same as *Aristotelianism.*

aristotype (a-ris′tō-tīp), *n.* [Gr. ἄριστος, best, + τύπος, type.] A photograph printed on paper on which silver salts are spread with collodion or gelatin. The name was originally given by Liesegang to the gelatinochlorid or collodiochlorid printing-out process. *Woodbury*, Encyc. Dict. of Photog., p. 42.

Aristozoe (ar″is-tō-zō′ē), *n.* [NL., ⟨ Gr. ἄριστος, best, + ζωή, life.] A genus of extinct crustaceans of the order *Phyllocarida.* They have a bivalved nodose carapace jointed by symphysis along the back, and a long cylindrical abdominal segment curiously articulated with the caudal spine. Typical species are from the Devonian of Bohemia.

arithmachine (a-rith′ma-shēn″), *n.* [Irreg. ⟨ Gr. ἀριθ(μός), number, + E. *machine.*] A form of computing-machine. Its principal parts are figure-wheels operated by endless chains moved by a stylus, and sundry mechanisms whereby fundamental arithmetical operations and much of the labor of involution and evolution may be performed. A machine of this kind, invented by Goldman, may be carried in the pocket.

arithmachinist (a-rith′ma-shē-nist), *n.* One who is versed in the theory, construction, and operation of an arithmachine.

arithmechanical (a-rith-mē-kan′i-kal), *a.* Of or pertaining to devices for computation by mechanical means or by machines.

arithmetic, *n.*—**Mechanical arithmetic**, the science of the constructive principles and the practical use of mechanical aids to arithmetical computation.

arithmetization (a-rith″mē-tī-zā′shon), *n.* [*arithmet(ic)* + *-ize* + *-ation.*] The process by which any part of mathematics is so recast as to be made to depend only upon purely arithmetical concepts, to the exclusion of all measurement.

> The Theory of Functions of Real Variables as it has been remodelled in the process of complete *arithmetization.*
> *Encyc. Brit.*, XXVIII. 544.

arithmetize (a-rith′mē-tīz), *v. t.*; pret. and pp. *arithmetized*, ppr. *arithmetizing.* To render arithmetical. See ★*arithmetization.*

arithmetizer (a-rith′mē-tī-zėr), *n.* One who arithmetizes. Specifically: (*a*) One who builds the entire number system, irrational numbers, and the mathematical continuum without any use of measurement or intuition or geometric magnitudes. *Dedekind* and *Georg Cantor.* (*b*) One who would abolish irrational numbers and the modern extensions of the number concept, substituting for them equivalents expressed in terms of whole numbers only. *Kronecker.*

arithmogram (a-rith′mō-gram), *n* [Gr. ἀριθμός, a number, + γράμμα, a letter.] The number obtained by summing the numerical values of the letters of a word.

arithmography (ar-ith-mog′ra-fi), *n.* [As *arithmograph* + *-y*[3].] A formal presentation of the properties of numbers.

arithmological (a-rith″mō-loj′i-kal), *n.* In *math.*, of or pertaining to arithmology; pertaining to the rigorous treatment of numbers.

arithmology (ar-ith-mol′ō-ji), *n.* [Gr. ἀριθμός, number, + *-λογία*, ⟨ λέγειν, speak.] The theory of numbers; higher arithmetic. *André*, 1873.

arithmomania (a-rith″mō-mā′ni-ä), *n.* [NL., ⟨ Gr. ἀριθμός, number, + μανία, madness.] In *pathol.*, a morbid impulse to work over mathematical problems, or to count objects or acts, such as buttons, steps, etc. *Baldwin*, Diet. of Philos. and Psychol., I. 68.

arithmomechanics (a-rith″mō-mē-kan′iks), *n. pl.* [Gr. ἀριθμός, number, + *mechanics.*] Mechanical principles and devices employed in the construction of machines for performing arithmetical operations.

Ariyalur group. See ★*group*[1].

arize, *v. i.* and *n.* A simplified spelling of *arise.*

Arizonian (ar-i-zō′ni-an), *a.* and *n.* [*Arizona* + *-ian.*] **I.** *a.* Of or pertaining to Arizona.

II. *n.* A native or an inhabitant of Arizona.

A. R. jug. See ★*jug*[1].

arkyochrome (är′ki-ō-krōm), *n.* [Gr. ἄρκυς, net, + χρῶμα, color.] In *neurol.*, a somatochrome nerve-cell in which the stainable portion of the cytoplasm appears in the form of a network or reticulum. *Nissl.*

> *Arkyochromes* or cells in which the chromatic substance is present in the form of anastomosing chains, making a coarser or finer meshwork; as, for example, in the Purkinje cells of the cerebellum and in the mitral cells of the olfactory lobe. *Jour. Exper. Med.*, V. 552.

arkyostichochrome (är″ki-ō-stik′ō-krōm), *n.* [Gr. ἄρκυς, net, + στίχος, row, + χρῶμα, color.] A somatochrome nerve-cell in which the stainable cytoplasmic substance combines a striate with a reticular arrangement. Typical examples of such cells are the Purkinje cells of the cerebellar cortex. *Nissl.*

> In the cerebellum, the only cells of special interest, when subjected to the method of Nissl, are those of Purkinje. Formerly classed as *arkyostichochromes*, these cells Nissl now includes in the arkyochrome group. They lie as a distinct row of cells at the junction of the molecular layer with the granular layer, their cell bodies embedded in the latter. *Jour. Exper. Med.*, V. 568.

arm[1], *n.* **7.** In *violin-playing*, the arm or its action in reference to the style of bowing: as, he plays with a good *arm.*—**8.** In *archery*, the longitudinal half of a bow, extending from the handle to the end of the bowstaff; limb: classified as *upper* and *lower arm*, according to their relative position when the bow is held perpendicularly, as in shooting.—**At arm's end**, beyond the reach of one's arm; hence, at a distance, or at such a distance as to prevent contact or familiarity in personal, social, or other relations: as, to keep one *at arm's end.*—**At arm's length.** (*a*) At arm's end; at a distance as regards personal relations. (*b*) At a disadvantage: as, to work *at arm's length.*—**Base-ball pitcher's arm**, a condition of sprain, with pain and soreness over the points of insertion of the muscles, occurring sometimes as a result of overuse by base-ball players.—**Glass arm**, a neurosis, analogous to writers' cramp, marked by spasm of the pronator teres muscle, occurring in base-ball pitchers.—**Golf arm**, a neurosis, analogous to writers' cramp, which interferes with the motions of driving or putting at golf.

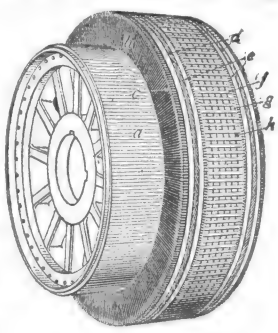
arm[2], *n.*—**Cessation of arms**, suspension of hostilities; an armistice or truce.—**Manual of arms**, a prescribed method of using a military arm.

Armadillidæ (är-ma-dil′i-dē), *n. pl.* Same as ★*Armadillididæ.*

Armadillidæ (är-ma-di-lid′i-dē), *n. pl.* [NL., ⟨ *Armadillidium* + *-idæ.*] A family of land isopods having the body very convex and contractile into a globular form. *Armadillidium* is the typical genus.

Armadillidium (är-ma-di-lid′i-um), *n.* [NL., ⟨ *Armadillo*, *n.*, 2, + dim. *-idium*, Gr. *-ίδιον.*] The typical genus of the family *Armadillididæ. Brandt*, 1833.

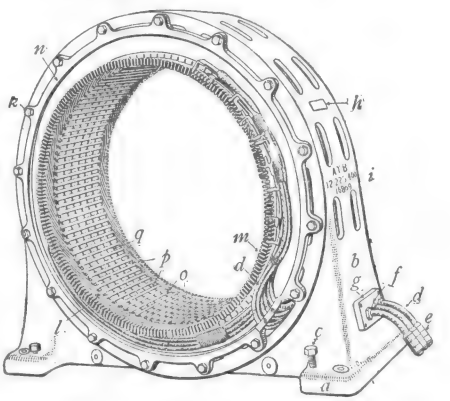
armament, *n.* **2.** In a large war-ship, the armament is distinguished as the *main armament*, including all the largest guns, usually mounted in barbettes or turrets in the largest vessels; the *secondary* or *intermediate armament*, including all the medium-caliber guns such as 5-inch or 6-inch; and the *tertiary* or *minor armament*, including the smaller guns such as 3-inch, 6-pounders etc.



Revolving Armature.

a, commutator; *b*, commutation-leads; *c*, soldered clips; *d*, armature-winding; *e*, binding-wires; *f*, top stick; *g*, laminations; *h*, ventilating ducts.

armature, *n.* **6.** (*b*) That part of an electric machine in which electric power is generated (generator) or consumed (motor). Sometimes the rotating element is called *armature*, irrespective of its function. See *field*, 13.



Stationary Armature.

a, foot; *b*, frame; *c*, holding-down bolts; *d*, armature-leads; *e*, couplings; *f*, lead inlets; *g*, connection-board; *h*, name-plate; *i*, rating; *k*, clamping-bolts; *l*, armature-windings; *m*, soldered clips; *n*, clamping-ring; *o*, top-stick; *p*, laminations; *q*, ventilating-ducts.

arm-chair, *n.* **II.** *a.* In one's arm-chair; seated comfortably at home; fireside; hence, theoretical, not practical: as, *arm-chair* geographers.

> Much of the objection to horizontal fishing had no greater weight than belongs to *armchair* disputations on the subject. *Geog. Jour.* (R. G. S.), XIII. 153.

Armeniaca (är-mē-nī′a-kä), *n.* [NL., ⟨ L. *Armeniacus*, adj., ⟨ Gr. Ἀρμενιακός, ⟨ Ἀρμενία, L. *Armenia*, Armenia.] An old generic name of the common apricot, but now most commonly used as a specific name in *Prunus*, as *P. Armeniaca.* The purple apricot is *Prunus* (*Armeniaca*) *dasycarpa.* The Japanese apricot is *P.* or (*A.*) *Mume.*

armeniaceous (ärˌmē-ni-āˈshus), *a.* Having the color of an apricot, *Prunus Armeniaca;* dull orange.

Armenioid (ärˈmēˈni-oid), *a.* [L. *Armenii,* < Gr. *Ἀρμένιοι,* Armenians, + *εἶδος,* form.] Resembling the Armenian; in *anthrop.*, noting a type of man found in Armenia and throughout Asia Minor, and in a few places in Syria and Mesopotamia: a branch of the Melanochroi characterized by a very short and high head and narrow, high nose. *W. Z. Ripley,* Races of Europe, p. 444.

Armenoid, *a.* Same as ★*Armenioid.*

Armeria (ärˌmēˈri-ạ), *n.* [NL.] A genus of plants of the family *Plumbaginaceæ,* commonly called sea-pink or thrift. They are small perennial herbs, with rosettes of narrow, evergreen leaves on the ground. The species are much confused. They are used chiefly for border-planting in the open.

armes parlantes (ärm pärˌlänt′). [F.] Allusive or canting heraldry. See *allusive arms,* under *arm*[2].

arm-guard, *n.* **2.** In *archery,* a guard of leather, metal, ivory, or other substance to protect the bow-arm and wrist from the friction of the bow-string, and to prevent the string from catching on the sleeve; a bracer.

armied (ärˈmid), *a.* [*army*[2] + *-ed*[2].] Forming an army; army-like. *Bailey,* Festus, xxxiii. 358. *N. E. D.*

armilla, *n.* **6.** In *bot.,* the frill originally covering the hymenium of agarics and adhering to the stipe after the expansion of the pileus.

Armillaria (ärˌmi-lāˈri-ạ), *n.* [NL. (Endlicher, 1836), < L. *armilla,* ring, + *-aria.*] A genus of white-spored agarics having the gills decurrent

Armillaria mellea.

Fruiting plants arising from the mycelium (*Rhizomorpha*). (After figure in Engler and Prantl's "Pflanzenfamilien.")

and the stipe furnished with an annulus. *A. mellea* is a common and widely distributed species, growing about old stumps, and regarded as the cause of certain root-diseases of trees.

Arminianizer (ärˌmin′i-ạn-ī-zėr), *n.* [*Arminianize* + *-er*[1].] One who spreads or seeks to spread Arminian doctrines; a promoter of Arminianism.

arm-lyre (ärmˈlīr), *n.* A lira da braccio (which see, under *lira*[2]).

armor, *n.* **5.** In *paleobotany,* the thick covering or jacket which surrounds the woody axis of fossil cycadean trunks, consisting of the persistent leaf-bases and the copious ramentum which fills the interstices between them. The ramentum is firmly silicified, forming walls around the leaf-bases; and where, as is usually the case, only the lower portion of the leaf-bases is preserved, the triangular cavities remaining give to the trunks a honeycomb-like appearance.

armor-bar (ärˈmor-bär), *n.* In a man-of-war, a heavy steel bar, about an inch thick and six inches to a foot deep, used to protect an opening in a protective deck from shot or splinters. An assemblage of such bars constitutes an *armor-grating* (which see).

armor-belt (ärˈmor-belt), *n.* The portion of the armor of a war-ship in the vicinity of the waterline. In a battle-ship, it is usually thicker than the armor above it. A *complete armor-belt* extends the whole length of the vessel; a *partial belt* covers only the middle portions, behind which are the engines and boilers.

armor-clad (ärˈmor-klad), *n.* A war-vessel protected by external armor; an ironclad. Modern armor-clads include battle-ships, armored cruisers, and armored coast-defense vessels.

In 1861 the British Government began the construction of eleven *armour-clads,* six of which, including the Hector and Valiant, sister ships of 6700 tons, were iron vessels. *Encyc. Brit.,* XXXII. 554.

Armored scale, wood. See ★*scale*[3], ★*wood*[1].

Armorial porcelain. See ★*porcelain*[1].

Armorican sandstone, in *geol.,* the lowest division of the Silurian series of northwestern France.

armor-plating (ärˈmor-plāʺting), *n.* The protective sheets or masses of steel which are used to cover the hull of a war-ship or cruiser, in whole or in part, to resist the perforating impact of projectiles.

arm-ossicle (ärmˈosʺi-kl), *n.* One of the elongate ambulacral plates which form a roof over the ambulacral furrows of the *Asterozoa. Proc. Zool. Soc. London,* 1896, p. 1029.

arm-plate (ärmˈplāt), *n.* One of the constituent plates in the arm of a crinoid or ophiurid; a brachial.

armstake (ärmˈstāk), *v. t.;* pret. and pp. *armstaked,* ppr. *armstaking.* In *leather-working,* to stake or soften by means of a crutch. *Modern Amer. Tanning,* p. 162.

arm-viol (ärmˈvī-ọl), *n.* A viola da braccio (which see, under *viola*[1]).

Army blanket. See ★*blanket.*

army-ant (ärˈmi-ạnt), *n.* The foraging ant. See *Eciton.*

army-worm, *n.*—**Beet army-worm,** the larva of a cosmopolitan noctuid moth, *Caradrina exigua,* which damages sugar-beet plantations.—**Cotton army-worm,** the larva of a noctuid moth, *Alabama argillacea,* occurring abundantly in tropical America and in the southern United States. In former years it damaged the cotton crop of the United States very seriously, the estimated annual money loss amounting to $15,000,000.—**Fall army-worm.** See *grass-worm.*—**Forest army-worm,** another name for the so-called forest tent-caterpillar larva of *Malacosoma disstria.*—**Sciara army-worm,** the larva of any one of several species of midges of the genus *Sciara.* These larvæ are gregarious and travel in large snake-like masses, whence the name *army-worm* or *worm-snake.*

Arnica yellow. See ★*yellow.*

arnillo (ärˌnēlˈyō), *n.* [Cuban Sp., < Sp. *arnilla,* a small beehive.] The Cuban name of a snapper-like fish of the species *Apsilus dentatus.*

arnimite (ärˈnim-īt), *n.* [Named after the German family Von *Arnim.*] A hydrated copper sulphate occurring as a green incrustation in porcelain-jasper: found at Planitz, near Zwickau, Bohemia.

Arnoglossus (ärˌnō-glosˈus), *n.* [NL., < Gr. *ἀρνός* (gen.), lamb, + *γλῶσσα,* tongue.] A genus of small, thin-bodied flounders found in southern Europe.

Arnold's canal, fold. See ★*canal*[1], ★*fold*[1].

Arnusian (ärˌnūˈsi-ạn), *a.* and *n.* [Irreg. < It. *Arno,* L. *Arnus,* a river of Italy, whose valley (Val d'Arno) is famous.] Noting the uppermost stage in the Pliocene Tertiary deposits of the Mediterranean.

aroar (ạ-rōrʹ), *adv.* [*a*[3] + *roar.*] In a roar; roaring.

Hail! day of storms! with thy woods *aroar* like rivers and thy rivers *aroar* like seas.
Blackwood's Mag., XXXIX. 842. *N. E. D.*

aroast (ạ-rōstʹ), *adv.* [*a*[3] + *roast.*] In process of roasting.

He smelleth not his flesh
A-roast, nor yet the sandal and the spice
They burn. *Edwin Arnold,* Light of Asia, iii.

aroeira, *n.* **2.** The name of several other trees of the cashew family, especially *Schinus terebinthifolius* of Brazil and *Astronium fraxinifolium,* an allied Brazilian tree. All of these yield medicinal resins, and the last-named yields a very hard, valuable wood.

aroid, *n.* **II.** *a.* Like or representing the genus *Arum* or the family *Araceæ*: as, an *aroid* type.

Aroides (a-rō-īʹdēz), *n.* [NL. (Heister, 1763), < *Arum* + *-oides.*] A genus of monocotyledonous plants of the family *Araceæ.* See *Richardia* and *Zantedeschia.*

Aromatic species, a mixture of the leaves and stems of several aromatic plants.—**Aromatic wine.** See ★*wine.*

aromaticalness (ar-ō-matʹi-kạl-nes), *n.* Aromatic quality; spiciness. *Bailey,* 1731.

aromaticness (ar-ō-matʹik-nes), *n.* Same as ★*aromaticalness.*

aromite (ạ-rōʹmīt), *n.* [*Aroma* (see def.) + *-ite*[2].] A hydrated sulphate of aluminium and magnesium from the Pampa de Aroma, Tarapaca, Chile.

aromo (ä-rōʹmō), *n.* [Sp. *aromo,* prob. < *aroma,* fragrance.] The sponge-tree, *Acacia Farnesiana.* It yields a reddish gum similar to gum arabic, and its wood is very heavy, hard, reddish-brown in color, and handsomely grained. See *Acacia* and *sponge-tree.*

aroze, preterit of *arize.* A simplified spelling of *arose.*

Arpaditidæ (är-pa-dit′i-dē), *n. pl.* [NL., < ⁎*Arpadites* (?) + *-idæ.*] A family of ammonoid cephalopods or ammonites. They have laterally compressed whorls with low transverse ribs, a channeled periphery or venter, and comparatively simple ceratitoid sutures. The species occur in the Triassic formation.

arpeggione (är-pej-i-ōʹne), *n.* [It., < *arpeggio:* see *arpeggio.*] A small six-stringed violoncello, invented by Staufer of Vienna in 1823, having a body shaped somewhat like that of a guitar: hence also called *guitar-violoncello.*

arpenteur (är-pañ-tėrʹ), *n.* [F., < *arpent,* arpent.] A land-surveyor. *Arthur Young,* Trav. France, p. 149.

arras[3] (ăʹrăs), *n.* [Sp., < L. *arrha:* see *arrha.*] In *Spanish law,* a voluntary gift made by a husband to his wife upon marriage in consideration of the portion which he receives from her. If made, and the property is not more than one-tenth of the husband's estate, it becomes the absolute property of the wife, free from all debts of the husband.

array, *n.* **10.** In *statistics,* the values of one variable which are correlated with a certain, definite value of another variable. See ★*correlation,* 5.—**Commissioner of array,** the officer who held, in England, a 'commission of array' for a county: now superseded by the lord lieutenant of the county. See *array,* 8, and *commission of array,* under *commission*[1].

arrayado (ä-rä-yäʹdō), *n.* [Cuban Sp.] The Cuban name of the fish sailor's-choice, *Hæmulon parra.*

arrayan (ä-rä-yänʹ), *n.* [Sp. *arrayán,* myrtle.] **1.** *Eugenia apiculata,* a small Chilean tree or shrub of the myrtle family, which has been introduced in the milder regions of the United States and Europe as an ornamental plant.—**2.** A similar shrub of Ecuador and Colombia, *Eugenia Arayan,* first collected by Humboldt in the Andes.

arre[3] (ärʹe), *n.* [Also in a more English-looking form *arrie,* NL. *arra* (Pallas), from a native name in the Aleutian Islands, based upon the harsh cry of the birds, represented by *arrr, arrr.*] A name given by the Aleutian natives to the Pacific murres, *Uria troile californica* and *Uria lomvia arra.*

arrest, *n.*—**Nerve of arrest.** See ★*nerve.*

arrested (ạ-resʹted), *p. a.* Retaining through life an infantile or a juvenile state of development with respect to any organ. Modifications of structure from *arrested* development, so great or so serious as to deserve to be called monstrosities, are of common occurrence. *Darwin,* Variation of Animals and Plants, II. 379.

arretted (a-retʹed), *p. a.* **1.** Convened before a judge and charged with a crime. *Bouvier,* Law Dict.—**2.** Imputed or laid to one's charge: as, no folly may be *arretted* to any one under age. *Bouvier,* Law Dict.

arrhenal (a-rēʹnal), *n.* A name of the sodium salt of monomethyl arsenite, $Na_2CH_3AsO_3 + 6H_2O$.

Arrhenius's theory of electrolysis. See ★*electrolysis.*

arrhenoid (arʹē-noid), *n.* [Gr. *ἄρρην,* male, + *εἶδος,* form.] In *embryol.,* the attraction-sphere or aster belonging to the sperm during the fertilization of the egg. *Henking,* 1890.

arrhepsia (a-repʹsi-ạ), *n.* [NL., < Gr. *ἀρρεψία,* equilibrium, < *ἀ-* priv. + ⁎*ῥεπτός,* < *ῥέπειν,* incline, as a balance.] Mental equilibrium: same as *ataraxia.*

Arrhina (a-rīʹnạ), *n. pl.* [NL., neut. pl.] An ordinal name formerly applied to a division of the fishes including the extinct genera *Pteraspis* and *Cephalaspis:* not now recognized.

arrhine (arʹin), *a.* and *n.* [NL. *arrhinus,* < Gr. *ἄρρις,* noseless, < *ἀ-* priv. + *ῥίς* (*ῥιν-*), nose.] **I.** *a.* Noseless: applied specifically to the *Arrhina,* an extinct order of fishes, including *Pteraspis* and *Cephalaspis.*

II. *n.* One of the *Arrhina.*

arrhinencephalus (ar-in-en-sefʹạ-lus), *n.*; pl. *arrhinencephali* (-lī). [NL., < Gr. *ἄρρις* (*ἀρριν-*), without nose (power of smell), + *ἐγκέφαλος,* brain.] A monster without the olfactory lobe of the brain, or rhinencephalon. Also spelled *arhinencephalus.*

arriccio (ä-richʹō), *n.* [It., < *arricciare,* bristle up, < *riccio,* < L. *ericius,* a hedgehog: see *urchin.*] In *Italian art,* generally a coat of plaster prepared for mural painting, but not usually a final coat. See *intonaco.*

arrogater, arrogator (ar'ō-gā-tėr, -ọr), *n.* One who makes unwarrantable or pretentious claims.

Against all Merlinical *arrogators*.
Gaule, Magastron., p. 376.

arrow, *n.*, **1.** Arrows now used in archery are of two kinds, the *self-arrow* and the *footed arrow*. The former has a shaft made of a single piece of wood, the latter a foreshaft or footing of hard wood about 7 inches long next the head. The parts of an arrow are the *horn* at the butt (the end resting upon the bowstring), in which is cut a nock for the string; the *shaft* or *staff* of soft wood; the *feathers*, glued upon the shaft near the butt; the *foreshaft* (in a footed arrow); and the *head* or *pile* at the point or striking end. Arrows are now usually from 25 to 28 inches long, and their weight is measured by that of new (British) silver coins: as, a 4s. 6d. *arrow*. They are made in four shapes: *bobtail*, with the greatest diameter at the point; *chested*, with the greatest diameter at a point between the middle and the nock; *barreled*, with the greatest diameter at the middle; and *parallel* or *cylindrical*, with a uniform diameter throughout.

2. (*c*) The arrow-shaped panicle of the sugar-cane. *Nature*, LXVII. 356. — **Love's arrows,** an English translation of the French *flèches d'amour*. Also called *Venus's hair-stones*. — **Rankling arrow,** an arrow the head of which is loosely attached to the shaft, so that it stays in the wound while the shaft drops off. *O. T. Mason.* — **Retrieving arrow,** an arrow with a barbed head designed for retrieving fish or burrowing animals.

arrow, *v. i.* **3.** To blossom: said particularly of sugar-cane, which throws out an arrow-like flowering stalk.

arrow-head, *n.* **4.** The pointed member of an egg-and-dart molding; the 'dart' or 'tongue.' See cut at *egg and dart*, under *egg*[1]. — **Arrow-head and feather illusion.** See ★*illusion*.

arrow-maker (ar'ō-mā-kėr), *n.* One who makes arrows.

There the ancient *Arrow-maker*
Made his arrow-heads of sandstone,
Arrow-heads of chalcedony,
Arrow-heads of flint and jasper.
Longfellow, Hiawatha, iv.

arrow-pocket (ar'ō-pok-et), *n.* In *archery*, a pocket in a coat, used instead of a quiver by an archer to hold his arrows while shooting.

arrow-point (ar'ō-point), *n.* Same as *arrow-head*.

arrow-poison (ar'ō-poi-zọn), *n.* See *poison*.

arrowroot, *n.* — **Florida arrowroot.** See *Zamia*.

arrow-shaft (ar'ō-shaft), *n.* The shaft of an arrow. — **Arrow-shaft polisher,** an implement made of stone, with a groove extending across one surface: often found in pairs. The shaft of the arrow was placed in the groove, or in the tube formed by the two grooves of the pair of polishers placed face to face; then the surface of the arrow-shaft was rubbed down.

arrow-staff (ar'ō-staf), *n.* **1.** The wooden shaft or main part of an arrow, from the nock or horn at the butt to the head or pile at the end. — **2.** A selected and prepared piece of wood for an arrow; the arrow in a rough state.

arrow-straightener (ar'ō-strāt″nėr), *n.* An implement used for straightening arrow-shafts, consisting of a strong piece of bone perforated at one end. By means of this implement the arrow-shaft when steamed is bent until it is straight.

arrow-weed (ar'ō-wēd), *n.* Same as ★*cachimilla*.

arrow-wood, *n.* **2.** Same as ★*cachimilla*.

'Arry (ar'i), *n.* [The cockney form of the very common Eng. name *Harry*.] A type of the London cockney of the lowest middle class, whose animal spirits and good-natured vulgarity of manner (as displayed in public, frequently in the company of his sweetheart or wife, *'Arriet*) are made prominent in the comic papers. [Eng.]

'Arryish (ar'i-ish), *a.* Like *'Arry*; vulgarly jovial. [Eng.]

A. R. S. A. An abbreviation of *Associate of the Royal Scottish Academy*.

arseneted, arsenetted (är'se-net-ed), *a.* Same as *arseniureted*.

arseniated (är-sē'ni-ā-ted), *a.* Same as *arseniureted*.

Arsenic mirror. See ★*arsenical mirror*. — **Arsenic test,** any one of several methods for detecting minute quantities of arsenic, often required in cases of supposed poisoning. The most important of these are known as the *Marsh test*, the *Reinsch test*, and the *electrolytic test*, the last of which has been improved and rendered more delicate by Thorpe. In using the first and last of these the arsenic is obtained in the elementary or metallic form deposited upon the surface of a piece of porcelain or a small glass tube; in the direct application of the Reinsch test a like deposit is formed upon a strip of pure copper foil. — **Fresenius test for arsenic.** See ★*test*[1]. — **Flowers of arsenic,** the white oxid of arsenic (As_2O_3) in fine powder.

arsenical, *a.* — **Arsenical mirror,** the lustrous deposit of metallic arsenic obtained upon the surface of a glass tube by means of the Marsh test. See ★*arsenic test*. — **Arsenical paste of Frère Côme,** a paste made of gum arabic, arsenious acid, red sulphid of mercury, charcoal and water: used as a caustic application in the treatment of cancer.

II. *n.* A substance which owes its efficiency for the purpose to which it is to be applied to the presence of arsenic or some of its compounds, as medicinally employed remedies, insecticides applied to cultivated plants, etc. *Yearbook U. S. Dept. Agr.*, 1896, p. 619.

arsenic-glass, *n.* **2.** The white oxid of arsenic (As_2O_3) when first sublimed, in an amorphous and therefore transparent state. In time it crystallizes and becomes white, nearly opaque, and porcelain-like. — **Yellow arsenic-glass,** an impure sulphid of arsenic obtained by subliming white arsenic with sulphur. It contains much oxid and is therefore very poisonous.

arsenide, *n.* — **Hydrogen arsenide.** Same as *arseniureted hydrogen*.

arseniopleite (är-sē″ni-ō-plē'īt), *n.* [*arsenicum* + Gr. *πλείων*, more, + *-ite*[2].] A basic arseniate of manganese occurring in brownish-red masses: found in Sweden.

arseniosiderite (är-sē″ni-ō-sid'ē-rīt), *n.* [*arsenio-* + *siderite*.] A basic arseniate of ferric iron and calcium occurring in yellowish-brown fibrous forms.

Arsenious acid. This acid, corresponding to the ortho-arsenites, has the formula H_3AsO_3, while the acid corresponding to the meta-arsenites is $HAsO_2$; but neither of these has been obtained in the separate and pure state. — **Arsenious anhydrid.** Same as *arsenious oxid* (As_2O_3).

arsenohæmol (är″se-nō-hē'mōl), *n.* A brown powder consisting of hæmol containing one per cent. of arsenious acid.

arsenoid (är'se-noid), *n.* [*arsenic* + *-oid*.] The trade-name applied to various commercial arsenical insecticides. — **Pink arsenoid,** the trade-name for an insecticide preparation consisting essentially of lead arsenite.

arsenolamprite (är″se-nō-lam'prīt), *n.* [*arsenic* + Gr. *λαμπρός*, bright, + *-ite*[2].] A supposed allotropic form of native arsenic.

arsenous (är'se-nus), *a.* Same as *arsenious*.

Arsinoite (är-sin'ō-īt), *a.* Of, pertaining to, or made at Arsinoë in the Fayûm, Egypt: as, the *Arsinoite* collection of antiquities.

Arsinotherium (är-sin″ō-i-thē'ri-um), *n.* [NL., < Gr. *'Αρσινόη*, a queen of Egypt (who had a palace in the region where the fossils

Skull and lower jaw of *Arsinoitherium Zitteli*, from the Upper Eocene of the Fayum, Egypt.
About one-twentieth natural size.
(From "A Guide to the Fossil Mammals of the British Museum," by permission of the Trustees.)

have been discovered), + *θηρίον*, a wild beast.] A genus of extinct ungulate mammals recently discovered in the Upper Eocene rocks of the Libyan desert. The creature seems to have attained the size of a large rhinoceros, and bore a pair of very heavy bony horns over the nose. The form of the feet and legs suggests relationship to the elephants and *Dinocerata*.

arsonist (är'sọn-ist), *n.* [*arson* + *-ist*.] One who commits arson.

Those whose houses were first seen in flames were imprisoned at the Yevo-gan's quarters, but they were not proved to be the real *arsonists*.
R. F. Burton, Mission to Gelele, II. 305.

arsonium (är-sō'ɪɪ-um), *n.* [Formation not obvious; appar. an arbitrary formation, *ars(enic)* + *-on-* + *-ium*.] A hypothetical group, AsH_4, known only in derivatives: as, tetramethyl *arsonium* hydroxid, $(CH_3)_4AsOH$.

Arts and crafts, industrial art. The name was originally given to a society founded by William Morris, Walter Crane, and others for the encouragement of artistic design in utilities.

It was momentous for the painter's art that in Germany, no less than in England and France, a new movement at this time set in — the so-called "*arts and crafts*." Hitherto the various branches of art had followed different courses. The most beautiful paintings were often hung in surroundings grievously lacking in taste. Now arose the ambition to make the room itself a work of art.
Encyc. Brit., XXXII. 450.

Arts of design, those arts in which graphic or plastic methods are employed, as distinguished from music, poetry, dancing, etc. — **Graphic arts.** See *graphic*, 3. — **Intermediate arts,** the intermediate grade in any particular course of study in the faculty of arts, as distinct from the 'junior' and 'advanced' grades. — **Liberal arts.** See *art*[2], 6. — **Social art,** the application of social science to human betterment, especially through legislation and government. *L. F. Ward*, Outlines of Sociol., p. 271. — **The art preservative of all arts,** printing. — **The manly art or the art of self-defense,** boxing.

artanthic (är-tan'thik), *a.* [*Artanthe* + *-ic*.] Noting an acid found in the oil from the matico, *Piper angustifolium* (*Artanthe elongata*).

artarine (är'ta-rin), *n.* An amorphous alkaloid, $C_{21}H_{23}O_4N$, from the root-bark of *Zanthoxylon Senegalense*.

artel (är-tel'), *n.* [Russ. *artélĭ*.] In Russia, a voluntary association of workingmen for any general or specific purpose. It is an ancient institution. Formerly the members of an artel usually dwelt together communistically, and the practice is still found among the peasantry.

artemisin (är-tem'i-sin), *n.* [*Artemisia* + *-in*[2].] A compound sometimes found as an impurity in commercial santonin.

Arteria profunda cerebri, a branch of the basilar artery distributed to the temporosphenoidal and occipital lobes.

Arterial constitution, the florid habit in which the blood is rich in fibrin and contains a relatively large proportion of red blood-globules. — **Arterial sclerosis.** Same as *arteriosclerosis*.

arterin (är'tē-rin), *n.* [*arter(y)* + *-in*[2].] A hypothetic compound of oxyhemoglobin and lecithin occurring in arterial blood.

arteriofibrosis (är-tē″ri-ō-fī-brō'sis), *n.* [NL., < *arteria*, artery, + *fibra*, fiber, + *-osis*.] Same as *arteriosclerosis*.

arteriolith (är-tē'ri-ō-lith), *n.* [Gr. *ἀρτηρία*, artery, + *λίθος*, stone.] A concretion formed in an artery; arterial calculus.

arteriometer (är-tē-ri-om'e-tėr), *n.* [Gr. *ἀρτηρία*, artery, + *μέτρον*, a measure.] An instrument for determining the changes in caliber of an artery caused by the cardiac pulsations. *Buck*, Med. Handbook, I. 130.

arteriosclerosis, *n.* An increase of connective tissue in the walls of the arteries, especially in the inner coat. The resulting progressive thickening and contraction of the vessels interfere with the blood-supply of their own walls so that these become degenerated and weak, while at the same time their abnormal rigidity makes it difficult or impossible for the normal variations in caliber, in response to nervous stimuli, to take place. Local areas of fatty degeneration with the subsequent deposition of lime salts are apt to form, especially in the larger vessels, and are called atheromatous patches. A pulse of high tension with enlargement of the heart, due to the increased resistance to the blood flow, and Bright's disease owing to the involvement of the small vessels of the kidney, frequently accompany arteriosclerosis. Various disorders of the brain, including a tendency to apoplexy and a predisposition to gangrene of the extremities, are other common consequences of the disease. In old age there is usually a greater or less degree of arteriosclerosis, and its presence then indicates that the bodily machine is beginning to wear out, but certain other factors, notably intemperance in eating and drinking, may cause it to appear early in life. — **Diffuse arteriosclerosis,** general fibrous thickening of the walls of the arteries. — **Nodular arteriosclerosis,** a disease of the arteries marked by the presence of nodules of fibrous tissue in the lining membrane at points where special strain occurs. — **Senile arteriosclerosis,** fibrous thickening of the walls of the arteries, characteristic of senile degeneration.

arteriosclerotic (är-tē″ri-ō-sklē-rot'ik), *a.* Relating to or affected with arteriosclerosis. *Buck*, Med. Handbook, II. 107.

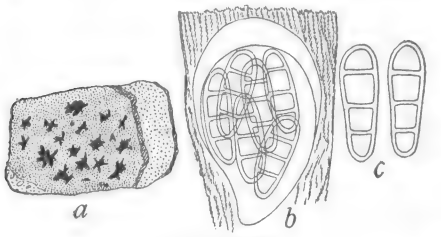
Arteritis deformans, a condition of roughness and calcareous infiltration of the inner walls of the arteries following upon atheromatous ulceration.

artery, *n.* — **Celiac artery.** Same as *celiac axis* (which see, under *axis*[1]). — **Central arteries of the brain** See ★*central*. — **Dental arteries.** See ★*dental*. — **Gasserian artery,** a branch of the middle meningeal or internal carotid artery which supplies the Gasserian ganglion. — **Hemorrhoidal arteries,** three sets of arteries, superior, middle, and inferior, which supply the rectum and anus. — **Interosseous arteries,** numerous small arteries running between the metacarpal bones of the hand and the metatarsal bones of the foot. There are two sets of each, dorsal and palmar in the hand, and dorsal and plantar in the foot. — **Mammary arteries.** See ★*mammary*. — **Metatarsal artery,** an artery crossing transversely the dorsum of the foot and giving off branches to the interosseous muscles. — **Nasal artery.** See ★*nasal*. — **Pallial artery,** either of two branches which arise from the lesser aorta in certain cephalopods and run forward and backward respectively to supply the mantle and other organs. — **Pipe-stem arteries,** a late stage of arteriosclerosis in which the walls of the arteries have become calcified and converted into hard inelastic tubes. — **Terminal artery,** an artery which has no anastomotic connection with another.

arthemis (är'thę-mis), *n.* [NL.; appar. a factitious name.] A nymphalid butterfly, *Basilarchia arthemis*, inhabiting the northern At-

lantic United States. The upper surface of the wings is velvety chocolate-black, with a conspicuous white arch extending across each pair. The larva lives on the foliage of birch, poplar, and the shad-bush. Also called the *banded purple*.

Arthonia (är-thō′ni-ä), *n.* [NL. (Acharius), said to be formed (erroneously) < Gr. *ἀρθεῖν*, sprinkle, water.] A genus of discolichens of the family *Arthoniaceæ*, having a crustaceous thallus and spores, mostly hyaline, with two or more cells. The species are numerous, occurring on rocks and the bark of trees.



Arthonia radiata.

a, a group of star-shaped apothecia showing the habit of the lichen; *b*, hymenium with spore-case; *c*, spores. (*b* and *c* highly magnified.) (Drawn from Engler and Prantl's "Pflanzenfamilien.")

Arthoniaceæ (är-thō-ni-ā′sē-ē), *n. pl.* [NL., < *Arthonia* + *-aceæ*.] A family of discolichens typified by the genus *Arthonia*.

arthrectomy (är-threk′tō-mi), *n.* [Gr. *ἀρθρον*, a joint, + *ἐκτομή*, excision.] Exsection of a joint.

Arthritis interna, gout of the stomach or other internal organ.—**Diaphragmatic arthritis.** Same as *angina pectoris*.—**Navicular arthritis,** an inflammation of the cartilage covering the small bone (navicular bone) situated on the back of the joint within the hoof of the horse. It frequently extends to the bone itself and sometimes involves the pedal joint.—**Rheumatic arthritis,** acute rheumatism.—**Urethral arthritis,** inflammation of one or more joints associated with urethritis or following the passage of a catheter or sound.—**Visceral arthritis.** Same as ★*arthritis interna*.

arthritism (är′thri-tizm), *n.* [*arthrit(is)* + *-ism*.] A predisposition to rheumatic or gouty joint-affections; uric-acid diathesis.

arthrobranch (är′thrō-brangk), *n.* [NL. *arthrobranchia*.] Same as *arthrobranchia*.

Arthroclema (är-thrō-klē′mä), *n.* [NL., < Gr. *ἄρθρον*, joint, + *κλῆμα*, twig.] A genus of extinct cryptostomatous *Bryozoa* having segmented zoaria, celluliferous on all sides: widely distributed in Silurian and Devonian formations.

arthrodesis (är-throd′ē-sis), *n.* [NL., < Gr. *ἄρθρον*, joint, + *δέσις*, a binding.] In *surg.*, the operative production of ankylosis in a joint. *Lancet*, June 18, 1904.

Arthrodira (är-thrō-dī′rä), *n. pl.* [NL., < Gr. *ἄρθρον*, joint, + *δειρή*, neck.] In Woodward's classification, a subclass of Paleozoic fishes with persistent notochord and head and trunk covered with symmetrically arranged bony plates, the head-shield being movably articulated to the body-shield. The group embraces the coccostean fishes formerly included in the *Placodermi*, and its species are among the most striking and enormous of the ancient fishes, *Dinichthys* and *Titanichthys*. All belong to the Devonian formations, especially to the black Upper Devonian shale of Ohio and the Old Red Sandstone of Great Britain.

arthrodiran (är-thrō-dī′ran), *a.* Of or pertaining to fishes of the order *Arthrodira*.

arthrodire (är′thrō-dīr), *n.* A fish of the subclass *Arthrodira*. *Science*, Nov. 7, 1902, p. 749.

arthrodirous (är′thrō-dī′rus), *a.* [Gr. *ἄρθρον*, joint, + *δειρή*, the neck.] Same as ★*arthrodiran*.

Arthrodonteæ (är-thrō-don′tē-ē), *n. pl.* [NL., < Gr. *ἄρθρον*, joint, + *ὀδούς* (*ὀδοντ-*), tooth.] A division of the stegocarpous mosses in which the teeth of the peristome are transversely septate. It embraces by far the greater number, including some in which the teeth are wanting. Compare *Nematodonteæ*. Also written *Arthrodontei*.

arthrogastran (är-thrō-gas′tran), *a.* and *n.* **I.** *a.* Pertaining to or resembling the *Arthrogastra*.

II. *n.* A member of the *Arthrogastra*.

arthrogenous (är-throj′e-nus), *a.* [Gr. *ἄρθρον*, joint, + *-γενής*, -produced.] Originating from a joint; noting any deformity caused by gout or other articular disease. *Buck*, Med. Handbook, IV. 496.

Arthrognatha (är-throg′na-thä), *n. pl.* [NL., neut. pl., < Gr. *ἄρθρον*, joint, + *γνάθος*, jaw.] A term applied by Dean to the group of fossil fishes commonly called *Arthrodira*, the latter name being restricted by him to those having the coat of mail jointed at the nape.

arthrolite (är′thrō-līt), *n.* [Gr. *ἄρθρον*, joint, + *λίθος*, stone.] In *geol.*, a cylindrical concretion with transverse segmentation, occasionally found in marls and clays. *Tschersky*, 1887.

Arthrolycosa (är″thrō-lī-kō′sä), *n.* [NL., < Gr. *ἄρθρον*, joint, + *λύκος*, a wolf, also by transfer a spider.] A genus of fossil spiders belonging to the order *Anthracomarti*, obtained from the ironstone nodules in the coal-measures of Mazon creek, Illinois.

arthromeningitis (är-thrō-men-in-jī′tis), *n.* [NL., < Gr. *ἄρθρον*, joint, + NL. *meningitis*.] Same as *synovitis*.

arthroncus (är-throng′kus), *n.* [NL., < Gr. *ἄρθρον*, joint, + *ὄγκος*, bulk, mass.] Swelling of a joint.

arthropathic (är-thrō-path′ik), *a.* Relating to arthropathy. *Buck*, Med. Handbook, IV. 512.

arthropathy, *n.*—**Charcot's arthropathy,** a disease of the joints (usually of the larger joints, though even the fingers may at times suffer) occurring as a result of trophic disturbances in certain diseases of the spinal cord, especially locomotor ataxia and syringomyelia.—**Osteopulmonary arthropathy,** an enlargement of the ends of the long bones occurring in connection with chronic disease of the lungs.

arthroplastic (är-thrō-plas′tik), *a.* Relating to or of the nature of arthroplasty. *Med. Record*, May 30, 1903, p. 877.

arthroplasty (är′thrō-plas-ti), *n.* [Gr. *ἄρθρον*, joint, + *πλαστός*, formed.] In *surg.*, the operative establishment of an artificial joint in cases of ankylosis.

Arthropleura (är-thrō-plȫ′rä), *n. pl.* [NL., < Gr. *ἄρθρον*, joint, + *πλευρόν*, rib.] A genus of extinct isopod crustaceans, or sow-bugs, from the Carboniferous formation.

arthropodal (ar-throp′ō-dal), *a.* [*arthropod* + *-al*[1].] Same as *arthropodous*.

arthrosteitis (är-thros-tē-ī′tis), *n.* [NL., < Gr. *ἄρθρον*, joint, + *ὀστέον*, bone, + *-itis*.] Same as ★*osteoarthritis*.

arthrostome (är′thrō-stōm), *n.* [Gr. *ἄρθρον*, joint, + *στόμα*, mouth.] The mouth of an arthropod.

Arthrostraca, *n. pl.* **3.** An order of *Arthropoda*, including those malacostracous crustaceans which have the first, and sometimes the second, thoracic segment fused with the head and bearing maxillipeds, while the remaining seven are free and bear legs, the eyes usually being sessile. The order includes the *Amphipoda* and the *Isopoda*.

Arthrostylidæ (är-thrō-stī′li-dē), *n. pl.* [NL., < *Arthrostylus* + *-idæ*.] A family of cryptostomatous *Bryozoa* in which the zoaria are composed of rod-shaped articulated segments united into pinnate colonies. Usually all sides of the segments are celluliferous. Representatives of the family are common in the Silurian formations.

Arthrostylus (är-thrō-stī′lus), *n.* [NL., < Gr. *ἄρθρον*, joint, + *στῦλος*, pillar.] The typical genus of the family *Arthrostylidæ*.

arthroxesis (är-throk′sē-sis), *n.* [NL., < Gr. *ἄρθρον*, joint, + *ξέσις*, scraping, < *ξέειν*, scrape.] In *surg.*, the process of scraping the articular surfaces for the removal of fungosities.

artichoke, *n.*—**Chinese artichoke,** *Stachys Sieboldi*, a species from China bearing tubers somewhat like those of the Jerusalem artichoke. Known in France as *crosnes*.

article, *n.*—**Articles approbatory,** in *Scotch law*, that part of the proceedings which corresponds to the answer to the charge in an English bill in chancery. *Bouvier*, Law Dict.—**Articles improbative,** in *Scotch law*: (*a*) Articulate averments setting forth the facts relied upon. (*b*) That part of the proceedings which corresponds to the charge in our English bill in chancery to set aside a deed. The answer is called articles approbatory. *Bouvier*, Law Dict.—**Articles of partnership,** a written agreement between two or more parties stating the conditions and terms upon which an enterprise for profit shall be carried on by the parties.—**Articles of roup,** in *Scotch law*, the conditions under which property is offered for sale at auction.—**Articles of set,** in *Scotch law*, an agreement for a lease. *Bouvier*, Law Dict.—**Proprietary articles,** patent medicines and other patented articles the manufacture and sale of which are restricted to the patentee or patentees or their assigns.—**The Schwabach articles,** seventeen articles of faith drawn up by Luther and presented to the princes of the evangelically minded states at Schwabach (Oct. 16, 1529) as the foundation for their political combination. The articles are directed mainly against Zwinglianism; hence the prominence of the doctrine of original sin, of baptism, and of the doctrine of the real presence of Christ's body and blood in the eucharist. These articles furnished the material for the positive (first) part of the Augsburg Confession.—**The Torgau articles,** ten articles drawn up by Luther, Melanchthon, and Jonas, by order of the Elector, at Torgau, Mar. 20, 1530. They were a kind of apologia for the Elector, stating that he had established a true service of God and had proscribed certain abuses of the Roman Church. These articles furnished the material for the polemical part of the Augsburg Confession.

articulability (är-tik-ū-la-bil′i-ti), *n.* The quality of being articulable.

articulable (är-tik′ū-la-bl), *a.* Capable of being articulated or uttered as distinct syllables or words.

articulamentum (är-tik″ū-la-men′tum), *n.*; **pl.** *articulamenta* (-tä). [NL., < L. *articulare*, join, articulate: see *articulate, v.*] In the chitons or amphineurous mollusks, the inner or porcelanous layer of the shell-substance, the outer being termed the *tegmentum*. In many of the chitons the articulamentum projects beyond the outer layer of the shell and its ends are firmly inserted in the flexible girdle which binds the shell-valves together.

Articular arteries. (*a*) Five small arteries, three superior and two inferior, derived from the popliteal and surrounding the knee-joint. (*b*) The circumflex arteries of the arm (which see, under *circumflex*).—**Articular dropsy.** See ★*dropsy*.—**Articular sense,** the consciousness which attends movement of a joint.

articulary, *a.* **II.** *n.* In *ichth.*, the articular bone, or bone at the joint or insertion of the lower jaw. *Starks*, Synonymy of the Fish Skeleton, p. 515.

Articulata, *n. pl.* *(f)* An order of the *Crinoidea* which includes all recent and later fossil forms of this class, characterized by having the mouth and food-grooves exposed or suprategminal and the lower brachial plates incorporated into the calyx.

articulation, *n.*—**Axis of articulation,** in arthropods, a line drawn between the right and left hinges of the segments of the abdomen.—**Peg-and-socket articulation,** a term applied to the insertion of scales of ganoid and other primitive fishes having bony scales, in which each scale has a produced point or peg, which is inserted into a socket or cavity in a scale above or below it. The structure is sometimes complicated by the presence of two pegs.

articulationist (är-tik-ū-lā′shon-ist), *n.* One who teaches articulation to deaf-mutes. *N. E. D.*

articulo-angular (är-tik″ū-lō-ang′gū-lär), *a.* Relating to the articular and angular elements of the jaw collectively. *Proc. Zool. Soc. London*, 1901, I. 173.

articulo-kinesthetic (är-tik″ū-lō-kin-es-thet′-ik), *a.* In *psychol.*, pertaining to the sensations aroused by the movements of articulation: opposed to ★*graphokinesthetic*. *Psych. Rev. Mo. Sup.*, III. xiv. 26.

articulus, *n.* **2.** In the pelecypod mollusks, the hinge: a term comprising the whole articulating apparatus, hinge-plate, teeth, and ligament.

artifactitious (är″ti-fak-tish′us), *n.* [*artifact* + *-itious* (after *factitious*).] Possessing the character of an artifact; caused by manipulation and not existing in nature. *Buck*, Med. Handbook, II. 40.

artificery (är-tif′i-se-ri), *n.* [*artifice* + *-ery*.] Workmanship; skill as an artificer. *Scottish Rev.*, VI. 246. *N. E. D.*

artificialism (är-ti-fish′al-izm), *n.* [*artificial* + *-ism*.] An artificial principle or practice.

> Made up of *artificialisms*—for nothing seemed real about him but his ill-temper.
> *Mrs. H. Wood*, Roland Yorke, III. 156.

artificing (är-tif′i-sing), *n.* [**artifice, v.* (a back-formation from *artificer*), + *-ing*[1].] Artificers' work; craftsmanship.

> Yet in spite of all this backwardness in invention, the city is full of beautiful workmanship in every branch of *artificing*. *W. D. Howells*, Venetian Life, p. 300.

artinite (är′ti-nīt), *n.* [Named for E. *Artini* of Milan.] A basic hydrated magnesium carbonate occurring in spherical forms with radiated structure: found at the asbestos-mines of Val Lanterna, Italy.

Artinskian (är-tinsk′i-an), *a.* and *n.* **I.** *a.* Of or pertaining to Artinsk in the Urals: in *geol.*, noting the lowest division or stage in the development of the Permian system in the Ural Mountains. It consists of sandstones, conglomerates, shales, and limestones which carry a marine fauna having many species of the Carboniferous formation below and show no unconformity with those strata. This stage is named from Artinsk, but its rocks are distributed from the Arctic Ocean to the Kirghiz steppe. It apparently corresponds in age, as it does in position, to the Autunian of France, which bears a terrestrial flora.

II. *n.* The Artinskian division.

artiphyllous (är-tif′i-lus), *a.* [Gr. *ἄρθρον*, a joint, + *φύλλον*, leaf.] In *bot.*, bearing buds or leaves on the nodes or joints.

Artique's process. See ★*process*.

artisticism (är-tis′ti-sizm), *n.* [*artistic* + *-ism*.] Artistic pursuits or theories; artistic tendency.

> Our present-day, lackadaisical, sham *artisticism*.
> *H. Herman*, His Angel, p. 40.

artlike (ärt′līk), *adv.* and *a.* **I.** *adv.* According to the rules of art: as, "not *artlike* writ," *W. P. Taylor*, 1630.

II. *a.* Having the appearance of art.

It is among birds that we find specific modes of nest-building and a highly *artlike*, almost artistic song.
Whitney, Life and Growth of Lang., xiv. 289.

art nouveau (är nö-vō′). [F., 'new art.'] A name given to a secession movement in art which had its origin in Paris at the close of the nineteenth century, and is still in process of development. It is concerned with architecture and the decorative arts chiefly. So far as the movement has any definite underlying principle, it is the negation of the conventional types which have attached themselves to art in the course of centuries and the realization of beauty by the proper management of necessary lines and values. In the hands of the practitioners, however, liberty has become libertinism, and results have been produced which have thrown discredit upon the movement.

artois (är-two′), *n.* [*Artois*, an ancient province of northern France.] A long coat worn by women about 1790. It had several capes, and lapels and revers like a box-coat.

artophagous (är-tof′a-gus), *a.* [Gr. *ἄρτος*, bread, + *φαγεῖν*, eat.] Bread-eating: as, an *artophagous* propensity.

Aruncus (a-rung′kus), *n.* [NL., < L. *aruncus*, < Gr. *ἤρυγγος*, Doric *ἀρυγγος*, a goat's beard, also a plant (see *eringo*).] A genus of tall, perennial herbs of the family *Rosaceæ*, often referred to the genus *Spiræa*, with numerous small, diœcious flowers. There are two species, *A. Aruncus* in the northern parts of America and Europe, and *A. astilboides* from Japan. *Aruncus* is often confounded with *Astilbe*. The latter is much used for forcing.

Arundel group. See ★*group*[1].

Arvernian (är-vėr′ni-an), *a.* **1.** Of or pertaining to the Arverni, a tribe of ancient Gaul which occupied a region corresponding to the modern Auvergne.—**2.** In *ethnol.*, relating to or exhibiting the European type, commonly known as *Alpine*, of which the inhabitants of Auvergne are typical representatives.

Arvonian (är-vō′ni-an), *a.* and *n.* [W. *Arfon* (pron. *arvon*) in Wales.] A term applied by Hicks to a division of rocks in Pembroke regarded by him (together with the Dimetian below and the Pebidian above) as of Precambrian age, but by others considered as purely eruptive intrusions into Cambrian rocks.

I regard the so-called "Dimetian" as a granite which has invaded the Cambrian rocks; the "*Arvonian*" includes the quartz porphyries which appear as apophyses of the granite; while the "Pebidian" is an interesting group of basic lavas which form here the lowest visible part of the Cambrian system. *Geikie*, Text-book of Geol.

Aryanization (är″yan-i-zā′shon), *n.* The process of Aryanizing or the state of having been made Aryan in character, appearance, etc.

The *Aryanization* of Europe doubtless resembled that of India. *I. Taylor*, Origin of Aryan, p. 212.

aryballoid (ar-i-bal′oid), *a.* [*aryballus* + *-oid*.] Like an aryballus.

aryl (ar′il), *n.* [*ar*(*omatic*) + *-yl*.] A name introduced by Vorländer to designate a radical derived from an aromatic hydrocarbon, as phenyl, C_6H_5, tolyl, C_7H_7.

arzrunite (ärts-rō′nit), *n.* [Named after A. *Arzruni*, a German mineralogist.] A mineral consisting of basic copper sulphate and copper chlorid, and occurring in bluish-green crystalline crusts: found in Chile.

ås (ås), *n.*; pl. *åsar* (å′sär). [Sw. *ås*.] Same as *os*[3] or *eskar*.

Asana.

Pterocarpus Indicus. (From a photograph by Warburg.)
(Drawn from Engler and Prantl's "Pflanzenfamilien.")

Asaheim (as′ä-hām), *n.* [Icel. **Āsa heimr*, 'home of the gods.'] Same as *Asgard*.

asana (ä-sä-nä′), *n.* [Tagalog *asaná* (Bisaya *naga*, whence Sp. *narra*).] A name in the Philippine Islands of *Pterocarpus Indicus* and *P. echinatus*, valuable timber-trees, the wood of which is sometimes called *Philippine mahogany*. The trunks are surrounded at their base by radiating buttresses which yield planks of extraordinary width. The wood is of a beautiful red color often variegated with yellow, hard and durable, but porous and very brittle. It takes a fine polish and is much used in the Philippines for cabinet work and for furniture, handsome large table-tops being often made of single slabs. *P. Indicus* is known in the East Indies as *Burmese rosewood*, *Andaman redwood*, and *kiabooca-wood*. In the Philippines it is also called *narra*. *P. echinatus*, known as *narra pula*, or "red narra," is distinguished by having spiny seed-pods. See *Pterocarpus* and *kiabooca-wood*.

asaphia (as-ā-fī′ä), *n.* [NL., < Gr. *ἀσάφεια*, indistinctness, < *ἀσαφής*, indistinct, < *ἀ-* priv. + *σαφής*, clear, distinct.] Defective speech, heard especially in cases of cleft palate.

Asaphic (a-saf′ik), *a.* Of or pertaining to Asaph, one of the chief singers in the Temple in the time of David and Solomon, and eponymous head of one of the gilds of singers, "sons of Asaph." Psalms 50 and 73–83 are called *Asaphic*, having the name of Asaph superscribed. Also *Asaphitic*.

asaphid (as′a-fid), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the trilobite family *Asaphidæ*.

II. *n.* A member of the family *Asaphidæ*.

Asaphidæ (a-saf′i-dē), *n. pl.* [NL., < *Asaphus* + *-idæ*.] A family of trilobites which have a large and subequal cephalon and a pygidium, in both of which the lobes and furrows are rather obscure. The eyes are large; the facial sutures cut the posterior margin of the head-shield within the genal angles and unite at the middle of the frontal border; and the thorax has from 5 to 10 segments. The family includes highly important genera of Silurian trilobites, *Asaphus*, *Illænus*, *Nileus*, and *Ogygia*.

Asaphitic (as-ä-fit′ik), *a.* Same as ★*Asaphic*.

Asaphus (as′ä-fus), *n.* [Also *Asaphes*. NL., < Gr. *ἀσαφής*, indistinct.] The typical genus of the family *Asaphidæ*.

asaprol (ā′sa-prōl), *n.* Same as ★*abrastol*.

åsar, *n.* Plural of ★*ås*.

asaresinotannol (as-a-rez″i-nō-tan′ōl), *n.* An amorphous compound, $C_{48}H_{68}O_8(OH)_2$ or $C_{24}H_{33}O_4.(OH)$, existing in small quantities in the free state, but principally combined as a ferulic acid ester in the resin of asafetida.

asarol (as′a-rōl), *n.* [*Asarum* + *-ol*.] A colorless, feebly dextrorotatory alcohol, $C_{10}H_{18}O$, contained in oil of Canadian snakeroot, *Asarum Canadense*. It boils at 196°–199° C. and is probably identical with linalool.

asaronic (as-a-ron′ik), *a.* [*asarone* + *-ic*.] Derived from asarone; noting an acid, the trimethyl ether of 2, 4, 6-trihydroxybenzoic acid $C_6H_2(OCH_3)_3CO_2H$, formed by the oxidation of asarone. It crystallizes in needles which melt at 144° C.

asarotum (as-a-rō′tum), *n.* [L. *asarotum*, neut. of *asarotos*, applied to floors painted in spots or divisions as if not swept clear, < Gr. *ἀσάρωτος*, unswept, < *ἀ-* priv. + **σαρωτός*, < *σαροῦν*, sweep, < *σάρον*, a broom, < *σαίρειν*, sweep.] In *anc. arch.*, a species of painted pavement used by the Romans before the invention of mosaic work. *Sturgis*, Dict. of Arch.

Asarum, *n.*—**Oil of Asarum Canadense,** an essential oil or essence used in perfumery and soap.

asbarg (äs′bärg), *n.* A dyestuff consisting of the dried flowers and flowering stems of *Delphinium Zalil*, imported from Afghanistan and Persia: used in native calico-printing and for dyeing silk a bright sulphur-yellow. See ★*zalil*.

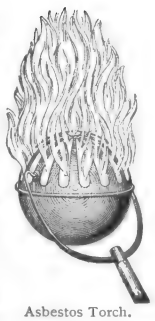
asbestic, *a.* **II.** *n.* A local commercial name for massive asbestos reduced to a fibrous pulp and used for wall-plaster, etc.

asbestin, *a.* A simplified spelling of *asbestine*.

asbestinize (as-bes′ti-nīz), *v. t.*; pret. and pp. *asbestinized*, ppr. *asbestinizing*. To treat (cotton goods) chemically in order to render them fire-proof or not easily inflammable.

asbestolith (as-bes′tō-lith), *n.* [Gr. *ἄσβεστος*, asbestos, + *λίθος*, stone.] The trade-name of a material made from short-fiber asbestos, with the addition of cementing and coloring substances, for use in the construction of the floors and walls of houses. It has the advantages of light weight, durability, and capability of resisting fire and dampness.

Asbestos burner, a gas-stove burner employing Bunsen burners in combination with sheets or masses of fibrous asbestos which become incandescent in the flame. Such burners are used with gas-logs and gas fireplace-heaters.—**Asbestos cloth,** a fabric composed of woven fibrous asbestos: used in making gloves for protection against heat and acids, as a covering for dining-tables and for steam-heated rolls, as a strainer in filtering acids, and for other purposes.—**Asbestos curtain,** a curtain of asbestos cloth hung before an open fireplace. When drawn down it acts as a fire-screen and a blower. Large and heavy curtains of this material are hung in the proscenium arch of theaters as a protection against the spread of fire.—**Asbestos porcelain.** See ★*porcelain*.—**Asbestos torch,** a metal vessel or cresset suspended from a pole and packed with asbestos which is saturated with oil: used to destroy the nests of caterpillars.



Asbestos Torch.

A. S. C. An abbreviation of *Army Service Corps*.

ascalaphoid (as-kal′a-foid), *a.* Belonging to or resembling a member of the family *Ascalaphidæ*.

ascaricide (as-kar′i-sīd), *n.* [*ascar*(*id*) + L. *-cida*, < *cædere*, kill.] An agent destructive of round- or thread-worms which occur as intestinal parasites.

Ascaris equorum, the eel-worm or lumbricoid worm parasitic in the small intestine of the horse. It measures from 15 to 37 centimeters in length, and in most cases is without serious effect. *Goeze*, 1782.—**Ascaris megalocephala.** Same as ★*ascaris equorum*. *Cloquet*, 1824.

Ascelichthys (as-ē-lik′this), *n.* [NL., < Gr. *ἀσκελής*, without legs (without fins), + *ἰχθύς*, fish.] A genus of small sculpins found in the rock-pools along the coast of California. It is characterized by the absence of ventral fins. *A. rhodorus* is the known species.

ascendancy, *n.* **2.** Same as *ancestry*.

Epilepsy is followed chiefly by brain affections in childhood, while phthisis and alcoholism are prominent in the *ascendency*. *Buck*, Med. Handbook, V. 37.

Ascending ★degeneration, ★neuritis. See the nouns.

Ascension theory, in *mining geol.*, the theory that ores are derived from the depths of the earth by means of uprising solutions.—**Right-ascension circle** or **hour-circle.** See ★*circle*.

ascensionist (a-sen′shon-ist), *n.* One who makes ascensions; a mountain-climber; also, a balloonist who makes ascensions.

Ascensiontide (a-sen′shon-tīd), *n.* The period comprising the ten days from Ascension day to Whitsunday.

ascent, *n.*—**Song of ascents.** Same as *song of degrees* (which see, under *degree*).

ascesis (a-sē′sis), *n.* [Gr. *ἄσκησις*, training, walk of life, monastic life: see *ascetic*.] Self-discipline; self-denial.

Ascetta (a-set′ä), *n.* [NL.; origin not obvious.] A genus of sponges containing the simplest and most primitive forms, of which *A. primordialis* is an example.

aschaffite (a-shaf′īt), *n.* [*Aschaff*(*enburg*), a city in Bavaria, + *-ite*[2].] In *petrog.*, a name proposed by Gümbel, in 1865, for an igneous rock of the diorite family rich in quartz, feldspar, and mica. It is now considered as belonging to kersantite.

ascham, *n.* **2.** A box for carrying bows, arrows, and other archery equipment from place to place; a bow-box.

ascharite (ash′a-rīt), *n.* A hydrated magnesium borate occurring in white lumps with boracite: found near Aschersleben, Germany.

Aschersonia (ash-ėr-sō′ni-ä), *n.* [NL. (Montagne, 1848), named for F. M. *Ascherson*, a German botanist who wrote about fungi.] A genus of sphæropsidaceous fungi having the pycnidia buried in a pulvinate, fleshy stroma, and the hyaline, fusiform spores borne on filiform sporophores. The species are mostly tropical, growing on leaves. *A. Aleurodis* grows on *Aleurodes Citri*, a plant-louse on *Citrus* in Florida.

Aschersonia haptogenic membrane. See ★*haptogenic membrane*.

aschistic (a-skis′tik), *a.* [Gr. *ἀσχιστος*, undivided, + *-ic*.] In *petrol.*, a term applied to hypoabyssal igneous rocks occurring in dikes which are considered to represent undifferentiated magmas of the depths, and thus to stand in contrast to ★*haplitic* and *lamprophyric* dike rocks, considered as complementary differentiation products of deep-seated magmas.

ascidicolous (as-i-dik′ō-lus), *a.* [NL. *ascidium* + L. *colere*, dwell in.] Inhabiting or parasitic in or on an ascidian.

Ascitan (as-sī′tan), *n.* [L. *ascitæ*, < Gr. *ἀσκῖται*, pl., < *ἀσκός*, a skin.] A member of a sect, an offshoot of the Montanists, which appeared

in Galatia about 173 A. D. In their religious revels they danced around skin bottles, declaring them to be the ones referred to in Mat. ix. 17.

asclepiadin (as-klē-pī′a-din), *n.* [*Asclepias* (*-ad-*) + *-in*².] A glucoside of uncertain composition derived from *Asclepias vincetoxicum.*

Asclepieum (as-klē-pi-ē′um), *n.* [Gr. Ἀσκληπιεῖον, < Ἀσκληπιός, Æsculapius.] A temple or shrine sacred to Æsculapius.

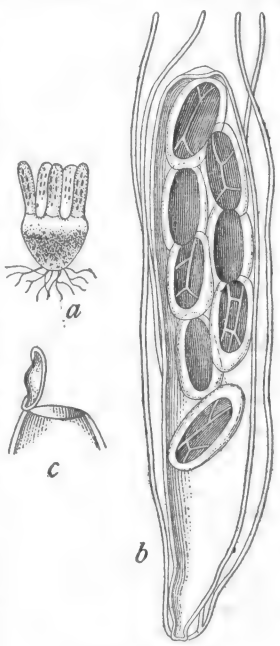
asclepione (as-klē′pi-ōn), *n.* [*Asclepias* + *-one.*] A neutral, tasteless, crystalline compound, $C_{20}H_{34}O_3$, formed in the juice of the milkweed, *Asclepias syriaca L.* It melts at 104° C.

ascobacterium (as″kō-bak-tē′ri-um), *n.*; pl. *ascobacteria* (-ä). [NL., < Gr. *ἀσκός*, a bag, + *βακτήριον*, a staff or rod.] In *bacteriol.*, a bacterium whose cells form masses embedded in or surrounded by gelatinous matter.

Ascobolaceæ (as-kō-bō-lā′sē-ē), *n. pl.* [NL., < *Ascobolus* + *-aceæ.*] A family of saprophytic, discomycetous fungi occurring mostly on dung. *Ascobolus* is the typical genus. Also erroneously written *Ascoboleæ.*

Ascoboleæ (as-kō-bō′lē-ē), *n. pl.* See ★*Ascobolaceæ.*

Ascobolus (as-kob′ō-lus), *n.* [NL. (Persoon, 1791), in allusion to the forcible projection of the asci, < Gr. *ἀσκός*, sac, ascus, + *βόλος*, a throw.] A genus of discomycetous fungi having a fleshy ascoma and simple brown or violet spores. The asci when mature are projected from the disk and the spores forcibly expelled. The species are mostly saprophytic and occur on old dung.



Ascobolus immersus.

a, a plant showing the habit, enlarged; *b*, an ascus with paraphyses, cut longitudinally to show the spores, greatly magnified; *c*, upper end of an ascus, showing the lid sprung open for the forcible expulsion of the spores, greatly magnified. (Drawn from Engler and Prantl's "Pflanzenfamilien.")

Ascoceras (as-kos′ē-ras), *n.* [Gr. *ἀσκός*, a leather bag, + *κέρας*, a horn.] A singular genus of nautiloid cephalopods. In early growth it had a regularly septate shell with a siphuncle, but in old age the septal chambers were contracted by the incomplete development of the septa, leaving a long tubular living-chamber with the septa of later growth at one side. It occurs in the Silurian rocks and is typical of the family *Ascoceratidæ.*

Ascochyta (as-kok′i-tä), *n.* [NL. (Libert, 1831), < Gr. *ἀσκός*, sac, + *χυτός*, poured out, < *χεῖν*, pour.] A genus of sphæropsidaceous fungi having membranous pycnidia embedded in discolored spots on the leaves and twigs of the host. The pycnospores are hyaline and uniseptate. About 250 species have been described. *A. Pisi* attacks the leaves and pods of the pea. See ★*leaf-spot of pea.*

Ascococcus (as″kō-kok′us), *n.*; pl. *ascococci* (-sī). [NL., < Gr. *ἀσκός*, sac, + *κόκκος*, berry.] In *bacteriol.*, a generic name generally regarded as a synonym of *Micrococcus.* See *Micrococcus.*

Ascocorticiaceæ (as″kō-kôr″ti-si-ā′sē-ē), *n. pl.* [NL., < *Ascocorticium* + *-aceæ.*] A family of simple, saprophytic, ascomycetous fungi containing the single genus *Ascocorticium.*

Ascocorticium (as″kō-kôr-tis′i-um), *n.* [NL. (Brefeld, 1891), < Gr. *ἀσκός*, sac, ascus, + *Corticium* (which see).] A genus of simple, ascomycetous fungi in which the asci are borne on a thin membranous, mycelial layer and the spores are simple and colorless.

Ascoglossa (as″kō-glos′ä), *n. pl.* [NL., < Gr. *ἀσκός*, a bag, + *γλῶσσα*, tongue.] A group of gasteropods of the order *Opisthobranchiata.* The branchiæ, mantle cavity, and shell are generally wanting; the liver is ramified, with its branches inclosed in external papillæ called *cerata*, or beneath the dorsal surface; the radula has one series of strong teeth, and the worn-out teeth at the front end do not drop off, but are preserved in a special sac, or ascus, whence the name of the group. It includes the families *Oxynoëidæ, Hermæidæ, Elysiidæ*, and *Limapontiidæ.*

ascoglossan (as-kō-glos′an), *a.* and *n.* [*Ascoglossa* + *-an.*] **I.** *a.* Resembling or pertaining to the *Ascoglossa.*

II. *n.* One of the *Ascoglossa.*

ascogonial (as-kō-gō′ni-al), *a.* [*ascogonium* + *-al.*] Of or pertaining to an ascogonium.

When the fertilized oospore of Sphærotheca develops it puts out an *ascogonial* filament, destined to form the ascus. *Encyc. Brit.*, XXVIII. 562.

Ascolichenes (as-kō-lī-kē′nēz), *n. pl.* [NL., < Gr. *ἀσκός*, sac, ascus, + *Lichenes* (which see).] A large group of lichens, including all those which produce asci. They are divided into two subgroups, the *Discolichenes* and *Pyrenolichenes.*

ascoma (as-kō′mä), *n.*; pl. *ascomata* (-ma-tä). [NL., < Gr. *ἀσκωμα*, a leather pad or bellows, < *ἀσκός*, a leather bag: see *ascus.*] The sporocarp of discomycetous fungi and truffles.

It seems probable that the *ascomata* of the truffle are formed in the late autumn, and lie over the winter in a practically mature state. *Bot. Gazette*, June, 1903, p. 428.

ascomycetal (as-kō-mī-sē′tal), *a.* Same as *ascomycetous.*

ascomycete (as′kō-mī-sēt), *n.* Any member of the class *Ascomycetes.*

Ascospora (as-kos′pō-rä), *n.* [NL. (Fries, 1825), < Gr. *ἀσκός*, a leather bag, + *σπορά*, seed.] A genus of pyrenomycetous fungi having small perithecia and asci and simple hyaline spores. *A. Beyerinckii* produces a leaf-spot of cherries, peaches, plums, etc. *Coryneum Beyerinckii* is said to be its conidial form, and to cause gummosis of cherry-trees.

ascosporic (as′kō-spō-rik), *a.* Of or pertaining to an ascospore.

ascript, *a.* **II.** *n.* An annexed remark, note, or explanation; a gloss. *Athenæum*, Aug. 27, 1892, p. 280.

ascription, *n.* **3.** A prayer at the end of a sermon, ascribing praise to God.

-ase. [An assumed suffix taken from *diastase* (prop. *dia-sta-se*, where only *-se* is suffixal), used parallel to *-ose.*] **1.** In *chem.*, a suffix used to designate the different kinds of ferments, as arginase, lipase, maltase, etc., as well as diastase. See the etymology.—**2.** A suffix applied to the names of rangs in the quantitative classification of igneous rocks: as, *liparase.* See *classification of igneous rocks*, under ★*rock*¹.

asebotin (a-sē′bō-tin), *n.* [*asebo*(*fuscin*, etc.) + *-t-* + *-in*².] A glucoside, $C_{24}H_{28}O_{12}$, which is the active poison of *Pieris japonica.* It crystallizes in colorless needles which melt at 148° C.

asebotoxin (a-sē-bō-tok′sin), *n.* [*asebo*(*fuscin*, etc.) + *toxin.*] An extremely poisonous neutral crystalline compound, $C_{31}H_{50}O_{10}$, found in Japan in the leaves of *Pieris japonica* and in the United States in laurel (*Rhododendron maximum*). It is often fatal to sheep and cows.

asellate (a-sel′āt), *a.* [Gr. *à-* priv. + L. *sella*, a seat, saddle.] Without saddle: applied to the primitive septal suture in the ammonoid cephalopods or goniatites, in which the course of the suture over the venter is direct, or without curve.

asellin (a-sel′in), *n.* [L. *asellus*, a sea-fish taken to be a cod or haddock, + *-in*².] A ptomaïne ($C_{25}H_{32}N_4$) found in cod-liver oil.

asepsine (a-sep′sin), *n.* Same as ★*antisepsine.*

Aseptic surgery. See ★*surgery.*

aseptically (a-sep′ti-kal-i), *adv.* In an aseptic manner; by means of asepsis.

asepticism (a-sep′ti-sizm), *n.* The state of being aseptic; the carrying out of measures which insure asepsis.

Popliteal, carotid, and other aneurysms, which are not of traumatic origin, are sometimes most successfully dealt with on this plan [dissecting out the aneurysm], which is the old "Method of Antyllus" under the influence of *asepticism.* *Encyc. Brit.*, XXXIII. 76.

aseptol (a-sep′tōl), *n.* [*asept*(*ic*) + *-ol.*] The trade-name for an antiseptic solution containing 33⅓ per cent. of orthophenolsulphuric acid, $C_6H_4(OH)SO_3H$.

aseptolin (a-sep′tō-lin), *n.* A solution said to contain 2.74 per cent. of phenol and .018 per cent. of pilocarpine. It is used subcutaneously in phthisis.

asequence (a-sē′kwens), *n.* [*a-*[18] + *sequence.*] In *pathol.*, a lack of normal sequence; specifically, an irregularity in relation between the auricular and ventricular contractions of the heart.

The blood pressure . . . is also fairly high when some simple ratio is maintained between the rate of the auricular and ventricular beats and is lowest when the *asequence* of the two chambers is most marked. *Buck*, Med. Handbook, II. 689.

asexuality (a-sek-ṣū-al′i-ti), *n.* The quality of being asexual; absence of sex.

asexualization (a-sek″ṣū-al-i-zā′shon), *n.* [*asexualize* + *-ation.*] The act of rendering sexually incompetent, as by castration. *Buck*, Med. Handbook, II. 713.

asfalt, *n.* and *v. t.* A simplified spelling of *asphalt.*

asfyxia, *n.* A simplified spelling of *asphyxia.*

ås-gravel (ås′grav″el), *n.* The water-worn constituents of eskars.

This theory seems to account satisfactorily for the passage of the *ås-gravels* into morainic matter, and for the fact that the gravels in the upper part of an as are often not well rounded. *J. Geikie*, The Great Ice Age, p. 171.

ash¹, *n.* **1.** (*d*) In Australia, the name of various trees having a real or fancied resemblance to those of the genus *Fraxinus*, especially of trees of the genera *Elæocarpus* and *Flindersia.* —**American ash,** specifically, the white ash, *Fraxinus Americana.*—**Arizona ash,** the leatherleaf ash, *Fraxinus velutina.*—**Basket-ash,** the black ash, *Fraxinus nigra*: so called because it affords basket splints. [Massachusetts.]—**Berlandier ash,** *Fraxinus Berlanderiana* of the Mexican boundary region.—**Blue ash.** (*a*) See *ash*¹, 1, (*a*). (*b*) *Fraxinus lanceolata.* [Arkansas and Iowa.] (*c*) A small Australian tree, *Elæodendrum australe*, whose close-grained pinkish wood is used for staves, oars, and shingles. Also called *olive-wood.*—**Blueberry-ash,** an Australian tree, *Elæocarpus holopetalus*, yielding a close-grained white wood valuable for turning and cabinet-work.—**Brown ash,** *Fraxinus nigra*; also, *F. Pennsylvanica.*—**Cane-ash,** the white ash, *Fraxinus Americana*: so called because it grows in cane-brakes. [Gulf States.] —**Crow's ash,** a very large tree, *Flindersia australis*, of Queensland and New South Wales. Also called *beech, red cedar*, and *rasp-pod.* See *rasp-pod* and *Flindersia.*—**Dwarf ash,** a shrub, *Fraxinus anomala*, of Utah and elsewhere. The trifoliate dwarf ash is *F. anomala triphylla.*—**Fringe-ash,** *Fraxinus cuspidata* of Mexico and the adjacent United States. The shrubby fringe-ash is *F. dipetala* of California.—**Gregg ash,** *Fraxinus Greggii* of the Mexican boundary region.—**Leather-leaf ash,** *Fraxinus velutina* of the southwestern United States.—**Moreton Bay ash,** a very large tree, *Eucalyptus tessellaris*, of central and northeastern Australia, yielding a timber, tough but not hard, which is excellent for building purposes. It also yields a kino from which a varnish may be made.—**New Zealand ash.** See ★*titoki.*—**Oregon ash,** *Fraxinus Oregona* of the northwestern coast of North America.—**Pop-ash, poppy-ash,** the water-ash, *Fraxinus Caroliniana.* [Florida and Alabama.]—**Pumpkin-ash,** *Fraxinus profunda*, found in river-swamps in the eastern United States.—**River-ash,** the red ash, *Fraxinus Pennsylvanica.* [Rhode Island and Ontario.]—**Swamp-ash.** (*a*) Same as *hoop-ash.* (*b*) The green ash, *Fraxinus lanceolata.* [Gulf States.]—**Texas ash,** *Fraxinus Texensis.* Also called *mountain-ash.*

ash², *n.* **4.** The involatile constituents of wine; the solid residue evaporated to dryness.

As a distinctive mark of genuine wine the *ash* is of the greatest value. *Encyc. Brit.*, I. 173.

Canada ashes, a trade-name for ashes from Canada valued as a fertilizer.—**In sackcloth and ashes,** clothed in sackcloth and sitting in ashes, in sign of deep mourning: a custom among Orientals. Also used figuratively. Mat. xi. 21.

ashamnu (a-sham′nö), *n.* [Heb. *ashamnu*, 'we have trespassed,' < *asham*, trespass.] The Jewish 'short confession of sin.' It is composed of twenty-four acrostic sections which begin with the letters of the Hebrew alphabet in consecutive order (the twenty-first letter, the last, being used three additional times).

ash-bed (ash′bed), *n.* A bed of ashes; specifically, in *geol.*, a greatly decomposed amygdaloidal basalt on Keweenaw Point, Michigan, which is locally impregnated with native copper.—**Ash-bed diabase.** See ★*diabase.*

Ashberry metal. See ★*metal.*

ash-canker (ash′kang-kėr), *n.* A disease of ash-trees which has been attributed to bacteria.

ash-cart (ash′kärt), *n.* A cart in which ashes and other refuse are carried.

ash-chute (ash′shöt), *n.* Same as *ash-shoot.*

ash-conveyer (ash′kon-vā″ėr), *n.* Any form of conveyer used in removing ashes, as from a boiler-room or locomotive-engine house. Examples are: (1) a screw-conveyer which removes the ashes as fast as they fall from the locomotives into the ash-pit of an engine-house, and delivers them to a traveling-apron or carrier; and (2) a combined conveyer and elevator which passes through a series of ash-pits in an engine-house, conveying and lifting the ashes to an elevated hopper, where they may be discharged into cars. These machines are made in a great variety of forms.

Ashdown sand. See ★*sand*¹.

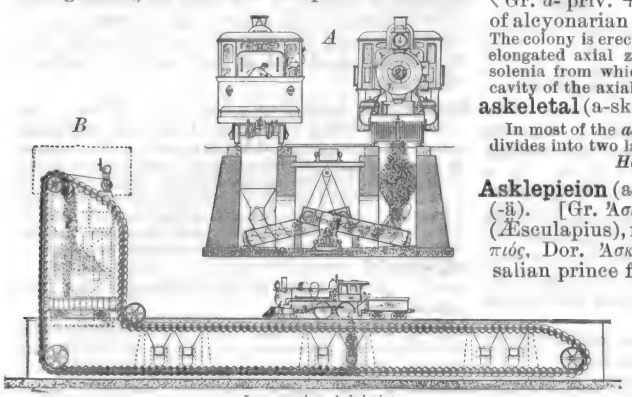
ash-dump (ash′dump), *n.* **1.** A place where ashes are put, either temporarily or permanently.—**2.** A device for dumping the ashes from a furnace or conveyer.

ash-elevator (ash′el″ē-vā-tor), *n.* Same as ★*ash-hoist.*

ashen light. See ★*light*¹.

asherah (ash′ē-rä), *n.* [Heb. *'asherah*, pl. *'asherūn*, or, rarely, *asherōth;* Assyr. *ashirtu*, pl. *ashrāti*.] **1.** A wooden post or pole planted near the altars of various Semitic gods: in the authorized version of the Bible erroneously translated 'grove.'—**2.** [*cap.*] A Semitic goddess not mentioned in the Bible except in three dubious passages, but whose name is certified by early tablets. She was sometimes confused with Ashtoreth. Baal seems to have been the consort of Asherah. The two are often mentioned together in connection with the idolatrous worship of Israel: see 2 Ki. xxiii. 4; 2 Chron. xxxiii. 3; Judges iii. 7. See *Ashtoreth.*

ash-hoist (ash′hoist), *n.* An apparatus for lifting ashes, as from the ash-pit of a locomotive-engine house, the boiler-room in a building, or the stoke-room of a vessel. The simplest form is a telescopic frame which when open extends from the basement of a building upward through an opening in the sidewalk and carries a block and tackle for hoisting ash-barrels to the sidewalk, where they may be dumped into a cart. When closed the frame sinks below the walk and the opening is covered. A more complicated form consists of a telescopic frame inclosing a drain-and-bucket elevator for lifting ashes from a subcellar to the street and discharging them through a chute into a cart.—**Pneumatic ash-hoist**, a traveling-crane having a pneumatic hoisting-cylinder which lifts the body of a car loaded with ashes and travels with it across the tracks to an ash-car, into which it is dumped.—**Skip ash-hoist**, a skip traveling upon an inclined track from the ash-pit of a boiler-house to the top of a tower over a railroad track. The ashes are discharged through a hopper into the skip, which is then hoisted by cable to the top of the tower, where it is dumped into a hopper, which delivers its load to a car on the track below.



Locomotive Ash-hoist.

A, section across the tracks, showing the inclined screw-conveyers which lift the ashes to the longitudinal bucket-conveyer shown in *B*. *B*, section along the tracks, showing the long conveyer by which the ashes are transferred to the dump.

ash-hopper (ash′hop-ėr), *n.* Same as *leach-tub.* [Local, U. S.]

ashiver (a-shiv′ėr), *adv.* [a^3 + *shiver.*] In a shiver; quivering.

ashler, *n.* **4.** In *carp.*, studding or furring used to cut off the angle at the floor in a garret, so that the room inclosed will have a vertical wall of some height.—**Coursed ashler**, ashler masonry in which the stones form regular courses, all the blocks in one course being of the same height.—**Random-coursed ashler**, ashler masonry in which rather broad courses are made of uniform height or width from end to end, but are made up in part of smaller stones, two or three of which together make the height of the course. See cut under *ashler* (*a*, *b*, and *c*).—**Rough ashler**, quarried stone selected for ashler masonry, but not dressed.

ashlered, ashlared (ash′lėrd, -lärd), *p. a.* Faced with ashler: said of a wall.

Ashley beds. See ★*bed*[1].

Ashmolean (ash-mō′lē-an), *a.* Of or pertaining to Elias Ashmole, an eminent English antiquary (1617–92), who founded the Ashmolean Museum at Oxford University in 1679. His collections, which were presented to the university, consisted of books, manuscripts, coins, curiosities, and antiquities. The Ashmolean Society, founded in 1828, was named in his honor.

ash-pan (ash′pan), *n.* A pan under the grate of a boiler or other fire, into which ashes and clinker may fall and be caught when the fire is sliced or the fireplace cleaned.

ash-pumpkin (ash′pump″kin), *n.* [*ash*[2] + *pumpkin.* It is covered with an ashy bloom.] The wax-gourd, *Benincasa hispida*. See *Benincasa* and ★*condol.* [East Indies.]

ashrafi (ash′ra-fē), *n.* [Also *ashrafee, ashraffi;* Hind. Pers. *ashrafi*, < *ashrāf*, < Ar. *ashrāf*, gentle, refined, urbane, *ashrāf*, n., nobles, gentry.] The gold mohur of India.

ash-trolley (ash′trol-i), *n.* An overhead trolley from which ash-buckets are suspended for transporting ashes from ash-pits to the place of disposal.

Asiatic class, a group of domesticated fowls comprising those breeds which are supposed to have originated in eastern Asia, and including the brahmas, cochins, and langshans.

asilid (a-sil′id), *a.* and *n.* **I.** *a.* Having the characteristics of or belonging to the dipterous family *Asilidæ*.

II. *n.* An insect of the family *Asilidæ*.

asiminine (a-sim′i-nin), *n.* [*Asimina* + *-ine*[2].] An alkaloid obtained from the fruit of *Asimina triloba*.

asimmer (a-sim′ėr), *adv.* [a^3 + *simmer.*] In a simmering state.

> Noon smote fierce the roof's red tiles to heart's desire,
> The court *a-simmer* with smoke.
> *Browning*, Ned Bratts, st. iv.

Asiphonacea (ā-sī-fō-nā′sē-ä), *n. pl.* [NL., < Gr. *ἀ-* priv. + *σίφων*, pipe, + *-acea.*] A group of alcyonarian polyps of the order *Stelechotokea*. The colony is erect, simple or branching, consisting of an elongated axial zoöid with thickened walls containing solenia from which secondary zoöids are formed. The cavity of the axial zoöid is not divided by a partition.

askeletal (a-skel′e-tal), *a.* Having no skeleton.

> In most of the *askeletal* vermalia the subdermal muscle divides into two layers.
> *Haeckel* (trans.), Wonders of Life, p. 277.

Asklepieion (as-klē-pi-ī′on), *n.*; pl. *asklepieia* (-ä). [Gr. Ἀσκληπιεῖον, a temple of Asklepios (Æsculapius), neut. of Ἀσκληπίειος, adj., < Ἀσκληπιός, Dor. Ἀσκλαπιός, L. *Æsculapius*, a Thessalian prince famous as a physician, later the tutelary god of medicine.] A temple of Asklepios (Æsculapius).

> If we regard with reverence the dim traditional form of Asklepios as a founder of our art, and the *Asklepieia* where throughout Greece and Magna Græcia medicine was practised and taught, in greater degree should we reverence the much more venerable I-em-hotep and view with interest the primæval medicine temples and hospitals of Egypt.
> *Lancet*, June 25, 1904, p. 1771.

asmolder, asmoulder (a-smōl′dėr), *adv.* [a^3 + *smolder.*] In a smoldering state. *Swinburne.*

asoka (ä-sō′kä), *n.* [Skt. *ásoka* (*áçoka*), a tree so called (lit., free from sorrow) < *a-* priv. + *soka* (*çoka*), flame, anguish, sorrow.] **1.** A low-spreading, leguminous tree, *Saraca Indica*, bearing large sweet-scented, pale orange-scarlet flowers. It is found from southeastern India and Ceylon to Burma and the Malay peninsula and archipelago, and is much cultivated for its beauty and the odor of its flowers. It is a sacred tree of the Hindus, and figures prominently in their legends and literature.

2. The mast-tree or Indian fir, *Polyalthia longifolia*, of the custard-apple family. It is cultivated for the sake of its flowers, and is planted in avenues and near temples. See ★*vanjula.*

asonant (a-sō′nant), *a.* [*a*-[18] + *sonant.*] Without sound; not sonant.

asouth (a-south′), *adv. phr.* [a^3 + *south.*] In or on the south; to or toward the south. *J. Barlow*, Columbiad, i. 571.

asparaginate (as-par′a-ji-nāt), *n.* [*asparagin* + *-ate*[1].] A salt of asparagin: as, silver *asparaginate*, $NH_2COCH(NH_2)CH_2CO_2Ag$. Also *aminosuccinamidate.*

asparagus-knife (as-par′a-gus-nīf), *n.* A knife having a long bent handle with a chisel-blade at the end, used in cutting the stems of asparagus. The chisel-blade is pushed into the soil to cut off the blanched portion of the stem below the surface.

asparagus-miner (as-par′a-gus-mī″nėr), *n.* The larva of a dipterous insect of the family *Agromyzidæ*, *Agromyza simplex.*

asparagus-rust (as-par′a-gus-rust″), *n.* A serious disease of asparagus, caused by the fungus *Puccinia Asparagi.*

asparkle (a-spär′kl), *adv. phr.* [a^3 + *sparkle.*] In a sparkling state; sparkling.

> Otho, free to judge of both,
> Ecelin the unready, harsh and loth,
> And this more plausible and facile wight
> With every point *a-sparkle*, chose the right.
> *Browning*, Sordello, iv. 585–588.

aspect, *n.* **9.** In *forestry*, the direction toward which a slope faces. The eight main points of the compass, north, northeast, east, southeast, south, southwest, west, northwest, are distinguished in forest description. Also called *exposure.*—**10.** In *logic*, the concept of a compound object, or this object itself, resulting from mentally connecting a definite conception to an indefinite or partially indesignate object, the compound being regarded as identical with the previously indefinite object.

If with each unit of a collection *a*, *b*, *c*, . . . of *n* units [where *a*, *b*, *c*, etc., are absolutely indistinguishable, so that there is nothing to determine which unit is *a*, which *b*, etc.] of any form we mentally associate one of a given discrete heap of *n* marks [if, for example, we distinguish the units by numbers arbitrarily attached to them, or by proper names,] so that each unit thereby becomes distinguished from each of the others and from all other units, we obtain what I have termed an *aspect* of *a*, *b*, *c*, . . .
A. B. Kempe.

Aspect of the sky, the appearance of the sky as to clouds or rain or color, especially with reference to the possibility of forecasting from it an approaching change of the weather.—**Aspect of the weather-map**, the appearance of the isobars, isotherms, and other details given in the daily weather-maps, with special reference to the changes then progressing toward a given station; specifically, the direction of the gradient at any given station. If the gradient rises toward the northwest the aspect is northwest.—**Barometric aspect,** in a weather-map, the direction toward which the principal barometric gradient is rising; the direction from which the barometric pressure appears to be pushing hardest toward a given station.—**Dexter aspect,** in *astrol.*, one cast in the reverse order of the signs.—**Doctrine of two aspects** or **double-aspect theory,** a variety of psychophysical parallelism consisting in the opinion that the external physical world and the mental world (whether this is understood as synonymous with the internal world or not) are two aspects, though not necessarily aspects of any third more substantive being.

> From causal theories we must distinguish sharply what may be called ultimate theories of the relation of mind and body: theories, that is, which seek to explain and make intelligible to us why mind and body are connected at all. The *double aspect theory*, with its assertion of one reality manifesting itself under two diverse forms, is an example of such a theory.
> *C. A. Strong*, Why the Mind has a Body, p. 3.

Globe aspect, the presentation of features upon the surface of a sphere as seen from the outside, i. e. as given upon a terrestrial or celestial globe, or upon a geographical map: opposed to *sky aspect*, which represents things as seen from inside the sphere, as in star-maps. In the globe aspect, north being at the top of the map, east is at the right; in the sky aspect east is at the left.—**Sky aspect,** the presentation of features of a sphere as viewed from a point within it: used in maps of portions of the celestial sphere, which show the relative positions of stars as seen by one looking up to the sky: opposed to *globe* ★*aspect* (which see).—**Thermal aspect,** in a weather-map, the direction toward which the principal thermometric or temperature gradient is moving; the direction from which a higher or a lower temperature appears to be advancing toward a given station.

aspectabund†, *a.* [NL. **aspectabundus*, < L. *aspectare*, look at, observe: see *aspect, v.*] Of expressive countenance; expressive in face. [Rare.]

> On the stage he [Dogget] is very *aspectabund*, wearing a farce on his face, his thoughts deliberating, framing his utterance congruous to his look. He is the only comic original now extant.
> *Downes*, Roscius Anglicanus, p. 52.

asperated (as′pe-rā-ted), *p. a.* Roughened; characterized by unevenness or harshness. *Boyle*, in Phil. Trans., XI. 806.

aspergation (as-pėr-gā′shon), *n.* [Erron. formed from L. *aspergere*, sprinkle, + *-ation.*] The act of sprinkling; aspersion.

> They [the Indians and Iranians] had common words for priest, sacrifice, song of praise, religious *aspergation*, for the sacred soma drink, for God, Lord, for heroes and demons, and for Mithra, the god of light.
> *Isaac Taylor*, Origin of the Aryans, p. 190.

asperger (as-pėr′jėr), *n.* [*asperge* + *-er*[1].] One who sprinkles.

> This *asperger* personates the old Tcamahia of Wukoki, who parted from the Snake clans at that pueblo to seek his fortune in the east, finding it at Acoma.
> *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. 589.

Aspergillaceæ (as″pėr-ji-lā′sē-ē), *n. pl.* [NL., < *Aspergillus* (see *Aspergillus*, 2) + *-aceæ.*] A family of the lower ascomycetous fungi including *Aspergillus.*

Aspergillales (as″pėr-ji-lā′lēz), *n. pl.* [NL., < *Aspergillus* + *-ales.*] An order of ascomycetous fungi including six families and a great diversity of forms. The ascocarp is mostly small and without an opening. The conidial forms include the common molds *Aspergillus* and *Penicillium.*

Aspergillidæ (as-pėr-jil′i-dē), *n. pl.* Same as ★*Brechitidæ.*

aspergillin (as-pėr-jil′in), *n.* [*Aspergillus*, 2 (?), + *-in*[2].] Same as *palmellin.*

aspergillosis (as-pėr-ji-lō′sis), *n.* [NL., < *Aspergillus* + *-osis.*] A morbid condition resulting from the presence in the ear, sometimes in the lungs, of certain forms of *Aspergillus.*

> Other forms of fungus disease or Mycoses are described. *Aspergillosis*, or pigeon-breeders' disease, is the result of the infection with the Aspergillus fumigatus.
> *Encyc. Brit.*, XXXI. 534.

asperite (as′pe-rīt), *n.* [L. *asper*, rough, + *-ite*[2].] In *petrog.*, a term proposed by Becker for andesitic lavas of light color which are porous in texture and consequently rough or harsh to

the touch. The asperites are contrasted with the darker, denser andesites of basaltic habit. They are more commonly called *trachytic andesites*.

aspermia (a-spėr′mi-ă), *n.* [NL., ⟨ Gr. *ἀσπερμος*: see *aspermatism*.] Same as *aspermatism*.

asperolite (as′pę-rō-līt), *n.* [L. *asper*, rough, + Gr. *λίθος*, stone.] A variety of chrysocolla copper ore from Tagilsk, Russia.

Asperula (as-per′ū-lă), *n.* [NL., fem. dim., ⟨ L. *asper*, rough.] A genus of dwarf hardy herbs, used for borders, rockeries, and shady places, containing almost 80 species of ill-defined plants of the family *Rubiaceæ*, two of which, *A. odorata*, commonly called sweet woodruff, and *A. hexaphylla* are commonly cultivated in America.

asperulous (as-per′ū-lus), *a.* [NL. *asperulus*, dim. of L. *asper*, rough.] In *bot.*, minutely roughened.

asphaleia (as-fa-lē′yă), *n.* [Gr. *ἀσφάλεια*, security, safety, certainty, ⟨ *ἀσφαλής*, secure, safe.] A name applied to a safety system of stage mechanism in which the stage-floor and the overhead scenic appliances are all moved by hydraulic power.

Asphalt brown, process. See ★*brown*, ★*process*.

asphaltene (as-fal′tēn), *n.* [*asphalt* + *-ene*.] A name originally given by Boussingault to a residue left on distilling asphalt from an oil-bath. The name is now used to designate that portion of asphalt which is soluble in boiling turpentine or cold chloroform, but not in gasolene, ether, or acetone. The portion soluble in the latter solvents is called *petrolene*.

asphaltum, *n.*—**Gum asphaltum,** a term sometimes applied to the purer and more glossy forms of bitumen or asphalt, as used in the manufacture of varnishes.

Asphodeline (as″fō-de-lī′nē), *n.* [NL., ⟨ Gr. *ἀσφοδέλινος*, adj., ⟨ *ἀσφόδελος*, asphodel.] A genus of hardy herbs of the family *Liliaceæ*. About 14 species are found along the Mediterranean Sea and extending into Persia and Caucasia. *A. lutea* is most commonly grown in the United States, but other species are not unlikely to be found under cultivation.

Asphodelus (as-fod′ę-lus), *n.* [NL.: see *asphodel*.] A genus of hardy, stemless herbs, with white, lily-like flowers in long racemes, members of the family *Liliaceæ*. There are 6 or 7 species natives of the Mediterranean region, Western Asia, the East Indies, and Madagascar, some of which are found in flower-gardens. *A. ramosus* and *A. albus* are the only common trade-names in America. Most of the species are found along the Mediterranean Sea.

asphyxia, *n.*—**Secondary asphyxia,** asphyxia which sometimes recurs with fatal result after apparent recovery from drowning or other form of suffocation.

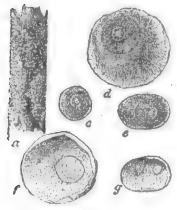
asphyxiater (as-fik′si-ā-tėr), *n.* **1.** A device or apparatus for producing suffocation by surrounding the victim with an irrespirable gas. —**2.** Specifically, a portable fire-extinguisher which operates by filling the air or space about the fire with a gas which does not support combustion.

asphyxied (as-fik′sid), *p. a.* Asphyxiated. *Carlyle*.

aspidate (as′pi-dāt), *a.* [Gr. *ἀσπίς* (*-ιδ-*), shield, + *-ate*[1].] Shield-shaped; having the form of a flat plate. *Zittel* (trans.), Textbook of Paleon., II. 143.

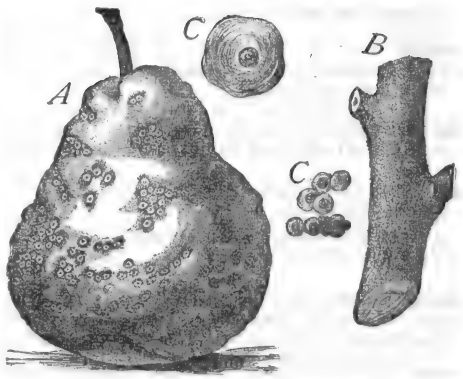
aspidin (as′pi-din), *n.* [*Aspidium* + *-in*[2].] A crystalline principle, $C_{23}H_{32}O_7$, said to be poisonous, which is contained in the rhizome of the male-fern, *Dryopteris* (*Aspidium*) *Filix-mas*.

Aspidiotus (as-pi-di-ō′tus), *n.* [NL. (Bouché, 1834), ⟨ Gr. *ἀσπιδιώτης*, shielded, or provided with a shield.] A very important genus of diaspine scale-insects, comprising many notorious pests of fruit-trees. The scales are small and round, those of the males being somewhat oblong; the pellicles of the female are completely superposed, and in both sexes are more or less centrally located; the pellicles are surrounded by a broad secretionary supplement; and the circumgenital glands occur in not more than five groups. To this genus belong the San José scale (*A. perniciosus*), the grape-scale (*A. uvæ*), the walnut-scale (*A. juglans-regiæ*), the oleander-scale (*A. nerii*), the quince-scale (*A. cydoniæ*), and many other destructive species.



European fruit-scale (*Aspidiotus ostreæformis*). *a*, scales on twig; *c*, immature stage; *d*, female; *e*, male; *f* and *g*, inside of scales. (Marlatt, U. S. D. A.)

Walnut-scale (*Aspidiotus juglans-regiæ*). *d* and *e*, infested twigs. (Howard, U. S. D. A.)



San José Scale (*Aspidiotus perniciosus*). *A*, infested fruit; *B*, branch; *C*, enlarged scales. (Howard, U. S. D. A.)

Aspidistra (as-pi-dis′trä), *n.* [NL.] A genus of the *Liliaceæ*, one species of which (*A. lurida*) from China is a common florists' plant. It is grown for its handsome crown of long, shining, recurving foliage, in the north in pots and as a window decoration, in the south in the open in moist ground. There is a striped-leafed form. The flowers are inconspicuous.

aspidium, *n.* **3.** In *phar.*, the rhizome of *Dryopteris Filix-mas* and *D. marginalis*, the oleoresin obtained from which is used for the expulsion of tape-worms.

Aspidobranchiata (as″pi-dō-brang-ki-ā′tă), *n. pl.* [NL.] Same as *Scutibranchia*.

aspidobranchiate (as″pi-dō-brang′ki-āt), *a.* and *n.* [NL. *aspidobranchiatus*, ⟨ Gr. *ἀσπίς* (*ἀσπιδ-*), a shield, + *βράγχια*, gills.] **I.** *a.* Having the gills bipectinate, as certain gasteropods.

II. *n.* One of the *Aspidobranchiata*.

Aspidocephali (as″pi-dō-sef′ą-lī), *n. pl.* [NL., ⟨ Gr. *ἀσπίς*, shield, + *κεφαλή*, head.] A Paleozoic order of singular ostracoderm fishes. They have a large, heavily plated head-shield composed of three layers; orbits close together; body, in the typical genera, covered with quadrangular scales; no paired fins; and heterocercal tail. The best-known of these forms is *Cephalaspis*. The species have been found only in the Upper Silurian beds of Great Britain and the Baltic provinces and in the Old Red Sandstone.

Aspidoceras (as-pi-dos′ę-ras), *n.* [NL., ⟨ Gr. *ἀσπίς* (*ἀσπιδ-*), shield, + *κέρας*, horn.] A genus of Jurassic ammonites with wide umbilicus and rounded whorls having ribs in young stages and tubercles at full growth.

Aspidoceratidæ (as″pi-dō-se-rat′i-dē), *n. pl.* [NL., ⟨ *Aspidoceras* + *-idæ*.] A family of ammonoid cephalopods from the Jurassic formation.

Aspidocotylea (as″pi-dō-ko-til′ē-ă), *n. pl.* [NL., ⟨ Gr. *ἀσπίς* (*ἀσπιδ-*), shield, + *κοτύλη*, socket, + *-ea*.] A group or an order of trematode platyhelminths having a large ventral round or oval adhesive apparatus, with numerous suckers in one or several rows. They are parasitic in the gall-bladder and alimentary canal of chelonians and fishes and in various organs of mollusks. The group contains the single family *Aspidobothridæ*.

Aspidoganoidei (as″pi-dō-ga-noi′dē-ī), *n. pl.* [NL., ⟨ Gr. *ἀσπίς* (*ἀσπιδ-*), shield, + NL. *Ganoidei*, the ganoid fishes.] The proper name for the group of fishes, including extinct species, commonly called *Ostracodermi* or *Ostracophori*. *Gill*, 1876.

Aspidophoroides (as″pi-dof-ō-rō-ī′dēz), *n.* [NL., ⟨ *Aspidophorus* + *-ides*.] A genus of very small fishes (sometimes called *sea-poachers*), of the family *Agonidæ*, found in the Atlantic and North Pacific. It is characterized by the absence of the first dorsal fin. *A. monopterygius* is the common species.

Aspidosoma (as″pi-dō-sō′mă), *n.* [Gr. *ἀσπίς* (*ἀσπιδ-*), shield, + *σῶμα*, body.] A genus of Paleozoic star-fishes of the order *Asterozoa*. They have broad ambulacral fields with well-defined marginal plates, and a madreporite on the oral side of the disk. The genus, represented by the species *A. petaloides*, occurs in the Lower Devonian of the Rhine.

aspidospermatine (as″pi-dō-spėr′ma-tin), *n.* [*Aspidosperma*(*t-*) + *-ine*[2].] A crystalline, strongly basic, bitter alkaloid, $C_{22}H_{28}O_2N_2$, found in quebracho bark. It melts at 162° C.

aspidospermine (as″pi-dō-spėr′min), *n.* [*Aspidosperma* + *-ine*[2].] A crystalline alkaloid, $C_{22}H_{30}ON_2$, found in *Aspidosperma Quebracho*. It melts at 206° and is very difficultly soluble in water.

aspirate, *v. t.* **2.** To impel by aspiration or suction: as, to *aspirate* a current of air through a tube.

They connected a series of four air-tight cages by means of rubber tubing and *aspirated* a steady current of air through them. *Buck*, Med. Handbook.

aspiration, *n.* **7.** The staccato mark (which see, under *staccato*).—**8.** The drawing forward, in flight, against the direction of motion of a wind-current. See the extract.

It would not account for those flights in which the bird maintains his altitude without turning upon his course, as he so often does when the winds are high. This feat . . . is known as "*aspiration*."

E. C. Huffaker, in The Aeronaut. An., 1897, pp. 130, 131.

Aspiration pneumonia, pneumonia due to the inhalation of infectious material, as of vomited matter in a patient recovering from surgical anæsthesia.—**Aspiration psychrometer.** See ★*psychrometer*.

aspirin (as′pi-rin), *n.* A white crystalline compound, obtained by the action of acetic anhydrid or acetyl chlorid on salicylic acid; acetylsalicylic acid. It is used in the treatment of chorea.

Asplenieæ (as-plē-nī′ę-ē), *n. pl.* [NL., ⟨ *Asplenium* + *-eæ*.] A large tribe of polypodiaceous ferns, typified by the genus *Asplenium*. It contains many important genera of various types, with fronds uniform or dimorphous, venation free or anastomosing, and usually with the sori distinct, oblong to elongate, uniserial or biserial, mostly lateral and indusiate; or, as in *Stenochlæna*, with the naked sori diffused over the parenchyma of the under surface.

asplenioid (as-plē′ni-oid), *a.* [*Asplenium* + *-oid*.] Resembling or pertaining to the fern genus *Asplenium*.

Asporea (a-spō′rę-ă), *n. pl.* In Labbé's classification of *Sporozoa*, a group in which the oöcyte gives direct origin to sporozoites. It includes the single genus *Eimeria*. Also *Monogenica*.

Asporocystea (as″pō-rō-sis′tę-ă), *n. pl.* [NL., ⟨ Gr. *ἀ-* priv. + *σπορά*, a seed (spore), + *κύστις*, bladder.] One of two divisions, the other being *Sporocystea*, proposed by Mesnil for the *Coccidia*.

asporogenic (a-spō-rō-jen′ik), *a.* [Gr. *ἀ-* priv. + *σπορά*, a seed (spore), + *-γενής*, -producing.] Not spore-bearing: applied to bacteria, algæ, and similar simple plants which have no spores.

asporogenous (a-spō-roj′ę-nus), *a.* [*a-*[18] + *sporogenous*.] Not reproducing by means of spores; asporous. *Buck*, Med. Handbook, I. 712.

Asporomycetes (as″pō-rō-mī-sē′tēz), *n. pl.* [NL., ⟨ Gr. *ἀ-* priv. + *σπορά*, seed (spore), + *Mycetes* (see *Mycetes*[2]).] A name given by Wallroth to a heterogeneous group of fungi, including sterile and imperfect forms, as well as the work of insects (*erineum*).

asporulate (a-spor′ō-lāt), *a.* [*a-*[18] + *sporulate*.] Not producing spores or encysted bodies: as, the *asporulate* cycle in the development of certain coccidia.

Aspro[1] (as′prō), *n.* [NL., ⟨ (?) LGr. *ἄσπρος*, white, or (?) ⟨ L. *asper* (It. *aspro*), rough.] A genus of European river-fishes of the family *Percidæ*. They live in swift waters, lying close to the bottom and moving with great quickness from one station to another, in the fashion of the American darters (*Etheostomatinæ*), to which they are closely related.

aspro[2] (as′prō), *n.* A silver coin of the Knights of St. John of Jerusalem at Rhodes, in the 14th century; the Rhodian danaro.

âs-river (âs′riv″er), *n.* [See ★*âs*.] A stream which is so related to glacial waste as to accumulate gravelly debris in the form of long ridges or eskars.

There can be no doubt, for example, that the âsar are in some way connected in their origin with the great ice-sheet. Dr. Holst therefore accepts Hummel's main contention. He thinks, however, that the *âs-rivers* flowed upon and not underneath the mer de glace.

J. Geikie, The Great Ice Age, p. 171.

assailableness (a-sāl′a-bl-nes), *n.* The quality of being assailable or open to attack.

Assam fever. Same as ★*kala-azar*.

Assamese. I. *a.* **2.** Pertaining to the languages of Assam.

II. *n.* **2.** A language of Assam, one of the Aryan family, akin to Bengali.

assassin-bug (a-sas′in-bug), *n.* Same as ★*cannibal-bug*.

Assault at arms. (*b*) A hand-to-hand contest.

assay, *n.*—**Brightening of assay.** See *blick*.

assaying, *n.* In *chem.*, this term is usually applied to the ascertainment of the presence and amount of one or more metals in a given substance, and commonly refers to the precious metals, gold and silver. But it is sometimes used in the more general sense, the testing or examination of any substance, as, for example, the determination of the proportion of pure sulphur in a sample of the crude material.

assay-office (a-sā′of-is), *n.* A laboratory where ores or metals are assayed.

assedation (as-ē-dā′shon), *n.* In *Scotch law*, a term formerly used to signify the right of any inferior tenant in the feudal system.

assemblage, *n.* 4. In the logicomathematical science of multitude, otherwise called the theory of cardinal numbers, a collection, not in the sense that the objects are assembled or collected, but merely in the sense that many things are regarded in thought as constituting one thing. Thus, in this sense, all the variable stars make up an assemblage, although they are scattered through all the universe. The word *collection* has from ancient times been used in this sense, but *assemblage* has only recently been so used, by a small number of persons who are either unacquainted with or indifferent to the established terminology of logic.

assemble[1], *v. t.* 4. In *entom.*, to collect together (the males of certain moths and other insects) by exposing a female in a wire-gauze cage: an insect-collector's device.

assembler, *n.* 4. That part of a linotype type-making machine which groups and holds together, against the mold, the matrices arranged in order for one line of type.

When a key is depressed, the matrix to which it corresponds emerges from its channel, is caught upon an inclined traveling belt, and is then carried to the *assembler*.
Census Bulletin 216, June 28, 1902, p. 57.

assembling-box (a-sem′bling-boks), *n.* In a type-casting machine, a box in which the matrices are assembled prior to their delivery to the casting position.

As the keys are struck on the keyboard the matrices and spacers descend into the *assembling-box*, traveling a distance of about four inches, and the bars are dropped more or less, according to the position of the letter to be brought in line to be cast.
Census Bulletin 216, June 28, 1902, p. 58.

assembling-line (a-sem′bling-līn), *n.* A line which unites the head of a harpoon to the shaft, and is carried down the shaft, to which it is made fast here and there with knots, thus holding the pieces together in case of a break. *J. Murdoch.*

The connecting line of a barbed harpoon at first was only a bit of string or thong uniting the head to the shaft. If there be no connecting line between head and shaft, the weapon is called a rankling arrow, because the head stays in the animal and causes death. However, the rude Fuegian inventors have gotten beyond that, for the thong is carried halfway down the shaft and made fast here and there with knots. The same happy thought is called by Murdoch an "*assembling line*," since it serves in case of a break in the shaft to save the pieces.
Smithsonian Rep., 1900, p. 200.

assembling-shop (a-sem′bling-shop), *n.* A shop, room, yard, or other place where the parts, as of machines, barrels, vehicles, motors, pumps, watches, etc., are put together to form the finished product. Also called *setting-up shop.*

assentaneous (as-en-tā′nē-us), *a.* [*assent* + *-aneous*, as in *consentaneous.*] Inclined to assent; deferential. *Landor.*

assentatious (as-en-tā′shius), *a.* [*assentati(on)* + *-ous.*] Ready to assent; compliant.

assertoric, *a.* **II.** *n.* A proposition capable of being stated absolutely but not affirmed as necessary.

Symbolic logic is confined exclusively to one kind of propositions, viz. *assertorics.*
Athenæum, April 8, 1905, p. 439.

assertorically (a-sėr-tor′i-kal-i), *adv.* [Erron. < *assertor* + *-ic-al* + *-ly*[2].] In an assertorial manner; as an assertion. *J. Martineau*, Essays, II. 190.

asservilize (a-sėr′vil-īz), *v. t.*; pret. and pp. *asservilized*, ppr. *asservilizing.* [*asservile* + *-ize.*] To make servile; reduce to the condition of a serf. [Rare.] *N. E. D.*

assessment, *n.* 5. In *marine insurance*, the fixing of that part of a loss which saved property must bear to compensate for property voluntarily sacrificed to prevent a total loss.

assessment-roll (a-ses′ment-rōl), *n.* The official list filed with the tax department of a municipality, containing the names of the property-holders and the amount of property upon which the tax is to be levied.

assest, *pp.* A simplified spelling of *assessed.*

assets, *n. pl.*—**Assets enter mains,** property coming at once to an executor, administrator, or trustee to satisfy the debts of the estate.—**Assets per descent,** real property of an heir which may be charged to satisfy the debts of his ancestor.—**Liquid assets.** See ★*liquid.*

asseverantly (a-sev′e-rant-li), *adv.* By way of assertion. *Abp. Abbot*, Expos. on Jonah, p. 562. *N. E. D.*

assi (as′i), *n.* [Creek Indian *assi*, abbrev. of *assi lupub'ski*, said to mean 'small leaves.'] The yapon, *Ilex Cassine*, or the drink made from it. Also *assi-shrub.*

The Creeks made use of the *assi* as we use fermented liquors, to promote conviviality.
Gatschet, quoted in Bulletin 14, Botany, U. S. Dept. [Agr., p. 13.

assideration (a-sid-ėr-ā′shon), *n.* [= It. *assiderazione*, < ML. **assideratio(n-)*, < **assiderare*, pass. **assiderari* (It. *assiderare*), in pp. *assideratus*, benumbed, < L. *ad-* + *siderari*, be benumbed, paralyzed, or planet-struck, < *sidus* (*sider-*), a constellation, star: see *sidereal.*] A form of homicide, especially of infanticide, in which death is caused by placing the victim in ice-cold water.

assiette (ä-si-et′), *n.* [F., seat, base, foundation, < *asseoir*, sit: see *assize.*] In *bookbinding*, a compound applied to the trimmed edges of the leaves of books before the application of gold-leaf. It is usually made of bole, bloodstone, and galena.

assify (as′i-fī), *v. t.*; pret. and pp. *assified*, ppr. *assifying.* [*ass* + *-i-fy.*] To make an ass of: as, to *assify* one's self. *Southey.* [Humorous.]

assigned (a-sīnd′), *p. a.* Allotted; appointed; transferred; prescribed: as, an *assigned* position; an *assigned* quantity.—**Assigned servant,** during the early history of New South Wales and other British colonies, a convict assigned or allotted to a settler as an unpaid servant, "bound to perform diligently from sunrise to sunset all usual and reasonable labor." The system of assigning convicts from the British islands in this way was established in Australia in 1804. See *assignment*, 7, and ★*assignee*, 2.

assignee, *n.* 2. An assigned servant; a convict formerly assigned to an Australian settler as an unpaid servant. See ★*assigned* and *assignment*, 7.

assigneeship (as-i-nē′ship), *n.* The official position of an assignee.

assignment, *n.*—**Equitable assignment,** the sale or transfer of property, or rights of property not in existence, or not capable of delivery at the time of the sale, but which may come into existence in the future. Such a sale or transfer is not enforceable except in courts of chancery.

assimilater, assimilator (a-sim′i-lā-tėr,-tor), *n.* One who or that which assimilates.

assimilation, *n.* (*e*) In *physiol.*, the conversion of chyle into material suitable for appropriation by the tissues. (*f*) In *psychol.*: (1) The process whereby new contents are received into a given consciousness: a general term covering the processes of fusion, association contrast, recognition, etc. (2) In Wundt's terminology, a particular form of the simultaneous association of ideas.

Simultaneous associations made up of elements from different psychical compounds may be divided into two classes: into *assimilations*, or associations between the elements of like compounds, and complications, or associations between elements of unlike compounds.
W. Wundt (trans.), Outlines of Psychol., p. 227.

(*g*) In *petrog.*, a term used to express the theory that molten magmas, when forced upward into the solid rocks, may, through fusion of included fragments or wall rock, absorb or assimilate a certain amount of these foreign materials, thus changing in some degree the chemical composition of the magma as a whole.—**Primary assimilation,** in *physiol.*, the taking up of chyle by the lacteals.—**Progressive assimilation,** in *philol.*, assimilation of a sound to the grade or nature of one that precedes it, as of *d* (a medial) to *k* (a tenuis) in the word *looked*, namely, by becoming *t* (a tenuis).

assishness (as′ish-nes), *n.* The quality of being like an ass, as in stupidity, stubbornness, etc.; asinine quality or character. *Florio*, 1598.

assistant, *a.* 3. Assisting; hence, subordinate in rank; specifically, as an official designation, occupying the next lower grade: as, an *assistant* adjutant-general.

assistful (a-sist′fûl), *a.* [*assist* + *-ful.*] Helpful. *Chapman*, tr. of Iliad, v. 120.

assize, *n.* 10. [F. *assise.*] In geological classification, the French equivalent of the term *bed*, constituting one of the minor subdivisions in geology. An assize, or bed, is composed of two or more zones; two or more assizes, or beds, constitute a group, stage, or *étage.*—**Tholed an assize,** a plea in bar in Scotland, in a criminal case, to the effect that the accused has once been tried for the offense charged. *Bouvier*, Law Dict.

Assmann's aspiration psychrometer. See ★*psychrometer.*

Associate. **I.** *a.*—**Associate antagonists,** muscles which, when acting singly, are antagonists, but when acting together move the part in an intermediate direction.—**Associate movements,** in *physiol.*, movements which take place in a paralyzed part when the non-paralyzed fellow is moved.—**Associate muscles,** muscles which act together to effect a certain movement.

II. *n.* 6. In *logic*, a unit not contained in the collection which is paired with each unit of the collection so as to make a pair distinguished from every pair consisting of the associate and a unit not a member of the collection. Thus if we consider a number of indistinguishable regular tetrahedrons each with a point at its center, the point at the center of any one of these is an *associate* of the collection of its summits. According as the pairs of the associate with the different units of the collection are all, some but not all, or none, distinguished from one another, it may be called a *discrete pair associate*, a *various pair associate*, or a *uniform pair associate*; but Kempe terms the last two *multiple pair associate* and *single pair associate.*

7. In *law*: (*a*) An officer in each of the superior courts of common law in England whose duty it was to keep the records of his court, to attend its *nisi prius* sittings, and to enter the verdict, make up the *postea*, and deliver the record to the party entitled thereto. *Abbott*, Law Dict. (*b*) A person associated with the judges and clerks of assize in commission of general jail delivery. *Mozley and Whiteley Dict.* (*Bouvier*, Law Dictionary.)

associated (a-sō′shi-ā-ted), *p. a.* United into or forming an association; showing association; specifically, in *phys. chem.*, noting liquids some of whose molecules consist of aggregates of two or more of the molecules in which the substance exists when in the state of vapor. Thus water in the state of vapor has molecules whose weight is eighteen times the weight of an atom of hydrogen; but in the liquid state it is believed that many of its molecules are two or three times as heavy, or that water is an *associated* liquid. See ★*association*, 3. *Amer. Jour. Sci.*, June, 1904, p. 428.—**Associated Press,** an association of newspapers (originally confined to New York) for the collection and distribution of telegraphic news throughout the United States, with central bureaus in New York, Chicago, Cincinnati, and Washington.

associatedness (a-sō′si-ā-ted-nes), *n.* The condition or fact of being associated. *Fitzedward Hall*, Hindu Philos. Syst., p. 226.

association, *n.* 3. In *phys. chem.*, the union of chemical molecules to form more complex aggregates; especially, the union of the molecules of a vapor to form more complex aggregates when the temperature is reduced nearly to the boiling-point, or when they condense into liquids. Acetic acid at 250° C. consists of molecules weighing sixty times the atom of hydrogen, but at 125° C. about half of the molecules weigh twice as much, which proves that two thirds of its gaseous molecules show association of two normal molecules into one. *Amer. Jour. Sci.*, June, 1904, p. 428.

4. In *phytogeog.*, the aggregation of plant individuals initiated by reproduction on the spot of growth, but finally determined by environment. See ★*formation* and *plant* ★*association.*

Association is divided into several kinds, according to the factor determining in specific cases, *e. g.* light *association*, water-content *association.*
F. E. Clements, Bot. Surv. Neb., VII. 9.

Anthropogenic association, in *sociol.*, an assumed stage of social evolution in which ape-like creatures, once merely animal, were becoming human, through increasingly close association and coöperation; the stage in which language, religion, and other distinctively human acquisitions were evolved. *Giddings*, Prin. of Sociol., p. 74.—**Association area** that portion of the brain surface which is not occupied by centers of sensation: believed to be the seat of the intellectual activities of perception, ideation, memory, etc.—**Association center,** a nerve-center which regulates associated movements.—**Association consciousness** or **associative consciousness.** See ★*consciousness.*—**Association disease,** myoclonus epilepsy; the coexistence of myoclonus and epilepsy.—**Association factor,** in *phys. chem.*, a factor which defines the amount of association in a given liquid.—**Association fiber, association reaction** or **associative reaction.** See ★*fiber*, ★*reaction.*—**Association theory,** the theory that association governs all the actions of the mind, except where disturbed by dissociation.—**Demogenic association,** in *sociol.*, a stage of social evolution in which individuals live together and coöperate without regard to kinship relations, the association constituting a demos or people: contrasted with *ethnogenic* (tribal) *association. Giddings*, Prin. of Sociol., p. 74.—**Ethnogenic association,** in *sociol.*, a stage of social evolution in which individuals are socially organized on the basis of kinship, traced through clan and tribal relations; a tribal or gentile association. *Giddings*, Prin. of Sociol., p. 74.—**External** or **extrinsic association,** in *psychol.*, a connection of ideas resulting from associative practice; association by contiguity.—**Internal** or **intrinsic association,** in *psychol.*, a connection of ideas resulting from associative relationship; association by similarity.—**Mediate association,** in *psychol.*, association by unconscious or unnoticed intermediaries.—**Müllerian association,** all the organisms which exhibit the same sort of Müllerian mimicry in the same locality considered collectively. See ★*mimicry.*—**Plant association,** in *phytogeog.*: (*a*) A plant formation in a limited application: see ★*formation*, 5. (*b*) A local aggregation of plants within a formation characterized more by the species which compose it than by any biological peculiarity. *T. H. Kearney*, Contr. Nat. Herb., V. 269.—**Religious association law.** See ★*religious.*—**Simultaneous association,** in *psychol.*, a form of association of ideas in which the process of connection is given to introspection as a single instantaneous act.—**Successive association,** in *psychol.*, a form of association of ideas in which the process of connection falls, for introspection, into two stages: the appearance of the reproducing elements, and the appearance of the elements reproduced. *W. Wundt* (trans.), Outlines of Psy-

chol., p. 296.—**Writ of association,** in English practice, a writ whereby certain persons (usually the clerk of assize and his subordinate officers) are directed to associate themselves with the justices and sergeants; and they are required to admit the said persons into their society in order to take the assizes. *Bouvier,* Law Dict.—**Zoögenic association,** in *sociol.*, a stage of social evolution in the lower animals in which the animals consorting in bands, swarms, flocks, or herds find in mutual aid a powerful arm in the struggle for existence, and in which social instincts greatly affect the processes of natural and sexual selection. *Giddings,* Prin. of Sociol., p. 74.

associationistic (ą-sō″si-ā-shon-is′tik), *a.* Pertaining to the theory of associationism. *Amer. Jour. Psychol.*, XIII. 164.

association-time (ą-sō-si-ā′shon-tīm″), *n.* In *psychophys.*, the time required for the completion of a mental association. The term is used most commonly for the time obtained by subtracting the simple from the associative reaction-time; sometimes used for the total duration of the associative reaction.

Associative ★aphasia, ★comparison, ★consciousness, ★memory, ★reaction. See the nouns.

associatively (a-sō′shi-ā-tiv-li), *adv.* In *psychol.*, by way of association of ideas.

associatory (ą-sō′si-ą-tō-ri), *a.* Associative; having the quality of associating: as, the *associatory* activity of the senses.

Assoc. Sc. An abbreviation of *Associate in Science.*

Assonia (a-sō′ni-ą), *n.* [NL. (Cavanilles, 1786), named in honor of Ignacio Jordan de *Asso* y del Rio (1742–1814), a Spanish botanist.] A genus of sterculiaceous trees or shrubs, usually with cordate leaves and axillary or terminal cymose flowers. See *Dombeya.*

assortative (ą-sôr′ta-tiv), *a.* [*assort* + *-ative.*] Involving a sorting of objects which brings together those of one kind and separates them from all other kinds.—**Assortative mating.** See ★*mating.*

assortive (ą-sôr′tiv), *a.* [*assort* + *-ive.*] Same as ★*assortative.*

assumentum (as-ū-men′tum), *n.*; pl. *assumenta* (-tą). [NL., < LL. *assumentum,* a patch: see *assument.*] In *bot.*, one of the valves of a silique.

assumingness (ą-sū′ming-nes), *n.* The quality of assuming, or of taking upon one's self more than is proper or just. *Bentham,* 1832.

assumption, *n.*—**Archimedes's assumption,** the following: let A_1 be any point on a straight line between any given points A and B; then take the points A_2, A_3, A_4, . . . , such that A_1 lies between A and A_2, A_2 between A_1 and A_3, A_3 between A_2 and A_4, and so on, and also such that the sects AA_1, A_1A_2, A_2A_3, A_3A_4, . . . , are congruent; then in the series of points A_2, A_3, A_4, . . . , there is always such a point, A_n, that B lies between A and A_n.

assurant (ą-shör′ant), *n.* [*assure* + *-ant.* The word should mean the assurer, not the assured.] One whose life or whose property is covered by insurance. [Rare.] *N. E. D.*

Assyro-Aramean (ą-sī″rō-ar-ą-mē′an), *a.* Including Assyrian and Babylonian on one side, and Aramean and its cognates on the other: a group-name in a classification of Semitic languages.

Assyro-Babylonian (ą-sī″rō-bab-i-lō′ni-an), *a.* Pertaining to or common to both Assyria and Babylonia.

Assyroid (ą-sī′roid), *a.* [More prop. **Assyrioid,* < L. *Assyrii,* Gr. Ἀσσύριοι, Assyrians, + *εἶδος,* form.] Of or pertaining to a race of western Asia, the purest representatives of which are pictured on ancient Assyrian monuments: characterized by a prominent hooked nose and thick lips. *Deniker,* Races of Man, p. 290.

Astacidea (as-ta-sid′ē-ą), *n. pl.* [*Astacus* + *-idea.*] A tribe of macrurous decapod crustaceans including the families *Eryontidæ, Nephropsidæ, Potamobiidæ,* and *Parastacidæ.*

astacoid, *a.* 2. Resembling a lobster or crawfish.—**Astacoid rash,** a diffuse reddish form of eruption in smallpox, the color of which resembles that of the shell of a boiled lobster.

astacomorph (as-tak′ō-môrf), *n.* [*Astacomorph-a.*] One of the *Astacomorpha.*

Astacomorpha (as″ta-kō-môr′fą), *n. pl.* [NL., < Gr. *ἀστακός,* a lobster, + *μορφή,* form.] A group of crustaceans which includes the crawfishes and lobsters. *Huxley.*

astacomorphous (as″ta-kō-môr′fus), *a.* [As *astacomorph* + *-ous.*] Resembling or having the characters of the *Astacomorpha.*

astalk (ą-stâk′), *adv.* [*a*[3] + *stalk.*] Stalking about; afoot; lurking about. *M. N. Murfree,* Broomsedge Cove, p. 471.

A-standard (ā′stan″dărd), *n.* A vertical framing shaped like the capital letter A: used as a support for the parts of vertical pumps and engines. Also called ★*A-frame.*

astarboard, *adv.* 2. Specifically, said of the tiller when it is shoved or drawn over to the starboard side of the vessel.—**Hard astarboard** (*naut.*), a phrase signifying that the tiller is jammed to starboard to its fullest extent, so that the rudder is thrown to the port side as far as it will go.

Astartian (a-stär′ti-an), *a.* and *n.* [NL. *Astarte,* a genus of mollusks.] In *geol.*, noting a subdivision of the Jurassic system in France and the Jura, constituting the upper substage of the Sequanian, which lies between the Kimmeridgian below and the Oxfordian above and corresponds to the Corallian or Coral Rag of Britain.

astartoid (as-tär′toid), *a.* and *n.* [NL. *Astarte,* a genus of mollusks, + *-oid.*] **I.** *a.* Similar to the genus *Astarte.*

II. *n.* A pelecypod mollusk allied to *Astarte.*

Astasia, *n.* 2. [*l. c.*] Inability to stand in consequence of defective muscular action, which is not necessarily incoördination or paralysis.

astatki (as-tat′ki), *n.* [Appar. a trade corruption of Russ. *ostatoku,* residue.] The residuum from the distillation of Russian petroleum after the more volatile hydrocarbons, up to and including kerosene or illuminating oil, have been driven off. It occurs in the proportion of 10 to 15 per cent., and has a specific gravity of .9 to .95. This material is to some extent treated for the production of lubricating oil, but is for the most part utilized as fuel.

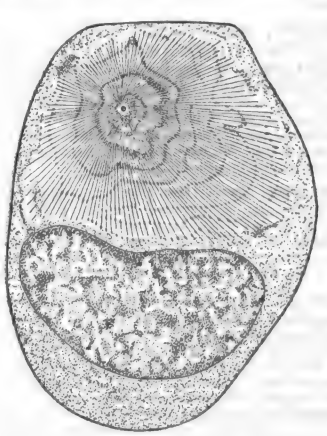
Astbury ware. See ★*ware*[2].

astegorrhine (as-teg′ō-rin), *a.* [Gr. *ἀ-* priv. + *στέγος,* roof, + *ῥίς* (*ῥιν-*), nose.] In *craniom.*, having a flat nose, like apes. *Von Török.*

astelic (a-stel′ik), *a.* In *bot.*, destitute of a stele or axial cylinder.

astely (a-stē′li), *n.* [NL. **astelia,* < Gr. *ἀ-* priv. + *στήλη,* pillar: see *stele.*] In *bot.*, absence of a stele or axial cylinder.

aster[1], *n.* 6. In *sponges,* a multiactinate microsclere: same as *euaster.*—7. In *cytol.*,



Spermatogonium of Salamander. (Drüner.)

The nucleus lies below. Above is the enormous aster, the centrosome at its center, its rays showing indications of nine concentric circles of microsomes. The area within the second circle probably represents the "attraction-sphere" of Van Beneden. Highly magnified. From Wilson's "The Cell."

the star-shaped structure at either pole of the karyokinetic figure during cell-division: same as ★*karyaster* (which see).—8. Two small arches of precious metal, transversely riveted (said to have been invented by St. John Chrysostom), placed over the sacred wafer in the paten in preparation for the eucharistic sacrifice, to prevent the veil from touching it: now out of use.

The *aster* consists of two crossed half-hoops of silver and is used to place over the wafer.

Encyc. Brit., XXVII. 238.

Calico-aster, *Aster lateriflorus*: so called on account of the calico-like effect of its dull purple-and-whitish heads. Also called *starved aster.*—**Frostweed-aster.** Same as *white heath-aster,* below.—**New England aster,** *Aster Novæ-Angliæ,* a tall species bearing large heads with deep-purple rays.—**New York aster,** an Atlantic coast species, *Aster Novi-Belgii,* the heads of which have violet rays.—**Plume-aster,** a species, *Aster plumarius,* on North Carolina mountain-tops, which has a long violet inflorescence.—**Purple-stem aster,** a large swamp species, *A. puniceus,* ranging from Nova Scotia to Minnesota and south to North Carolina, with numerous smallish, violet-purple flowers and thick, rough-hairy, purple stems. See ★*cocash.*—**Rayless aster,** a plant of the asteraceous genus *Brachyactis,* the heads of which have the rays very short or wanting.—**Rice-button aster,** *Aster dumosus,* a delicate species with small white-rayed heads on slender branchlets.—**Sea-shore aster,**

Aster Tripolium, a salt-marsh species of Europe and Russian Asia.—**Starved aster.** Same as *calico-aster,* above.—**White heath-aster,** a pasture weed, *Aster ericoides,* with small white heads: very abundant in the eastern United States.—**White-wreath aster,** *Aster multiflorus*: so called from its densely crowded small white heads.—**Wood-aster,** one of several woodland species, especially *A. cordifolius,* the blue wood-aster.

-aster. From its use in *oleaster,* etc., this suffix has been used in new formations, implying 'false,' as in *verticillaster,* false verticil. The Latin form appears in new systematic names, as *Lupinaster, Malvastrum,* etc.

Asteraceæ (as-te-rā′sē-ē), *n. pl.* [NL. (Lindley, 1836), < *Aster* + *-aceæ.*] A family of dicotyledonous sympetalous plants, the aster family, usually included in the *Compositæ,* of which it constitutes the *Tubulifloræ,* except that the *Ambrosiaceæ* are now segregated. Called *Carduaceæ* by some authors. See *Compositæ*[1], *Tubulifloræ, Cichoriaceæ, Ligulifloræ,* and ★*Ambrosiaceæ.*

asteraceous (as-te-rā′shius), *a.* [*Asteraceæ* + *-ous.*] Belonging to or having the characters of the *Asteraceæ.*

astereognosis (as-tē″ri-og-nō′sis), *n.* [NL., < Gr. *ἀ-* priv. + *στερεός,* solid, + *γνῶσις,* knowledge.] A defect in tactile sensation, which causes inability to estimate the form or substance of a body by touch.

Isolated loss of muscle sense usually shows itself in one of two ways: as loss of power to appreciate the position of the limbs, and as *astereognosis,* or failure to estimate the size, shape and weight of objects. The former is more marked in the legs and is seen in some cases of locomotor ataxia and multiple sclerosis; the latter is more often found in the arms and is a rare accompaniment of organic brain disease.

Buck, Med. Handbook, VII. 120.

Asteriidæ, *n. pl.* 2. A family of asteroid *Stellaroidea,* of the order *Cryptozonia,* having opposite ambulacral ossicles, tube-feet in four rows, and an abactinal skeleton reticular and consisting of small unequal plates. It includes *Asterias, Anasterias, Uniophora,* and several other genera.

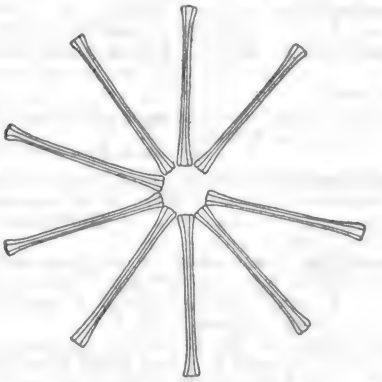
Asterina, *n.* 2. In *bot.*, a genus of perisporiaceous fungi having the perithecia covered with or seated on a dark-colored radiating layer of hyphæ. The spores are uniseptate and brown. Many of the species are tropical and occur on leaves and stems. *Léveillé,* 1845.

Asterinidæ, *n. pl.* 2. A family of asteroid *Stellaroidea,* of the order *Phanerozonia.* They have opposite ambulacral ossicles, small inconspicuous marginal plates whose axes are convergent, and intermediate plates imbricate and without pedicellaria. The family includes *Asterina, Radiaster, Nepanthia, Palmipes,* and other genera.

asterioid (as-tē′ri-oid), *a.* [*Asterias* + *-oid.*] Shaped like a starfish.

asterion, *n.* 2. [*cap.*] The northern of the two 'hunting-dogs' in the constellation *Canes Venatici.* The other is *Chara.*

Asterionella (as-tē″ri-ō-nel′ą), *n.* [NL., irreg. < Gr. *ἀστέριος* (neut. *ἀστέριον*), starlike (< *ἀστήρ,* star), + dim. *-ella.*] A genus of diatoms



Asterionella formosa. Hass. Greatly magnified. (From West's "British Freshwater Algæ.")

characterized by the arrangement of the frustules into stellar shapes: one of the organisms responsible for a bad odor and taste in drinking-water.

asterisk (as′te-risk), *v. t.* To insert an asterisk (in a text) as the reference to a foot-note or for any other reason for which an asterisk is used. See *asterisk,* 1.

asterismal (as-te-riz′mal), *a.* Of or pertaining to asterisms, or groups of stars.

asterium (as-tē′ri-um), *n.* [NL., < Gr. *ἀστήρ,* a star.] The name given by Lockyer to a supposed element the presence of which in

the atmosphere of certain stars seemed to be indicated by spectroscopic examination of the light received from them. At one time it was suspected that helium was compound in character and asterium one of its constituents; but the more careful study of helium by Ramsay has rendered it improbable that this is the case or that asterium really exists.

Asternata (as-tėr-nā′tą̈), *n. pl.* [NL., ⟨ Gr. *ἀ-* priv. + *στέρνον*, sternum, + *-ata*[2].] A suborder of irregular *Echinoidea*, of the order *Atelostomata*. The peristome is central and never bilabiate; the ambulacra are simple, petaloid, and generally all similar; the floscelle is usually present; and there is no sternum.

Asternopteryx (as-tėr-nop′tę-riks), *n.* [NL., ⟨ Gr. *ἀ-* priv. + *στέρνον*, breast, + *πτέρυξ*, wing, fin.] A genus of small blennies without ventral fins, found on the coast of Greenland.

asterol (as′tę-rol), *n.* [Gr. *ἀστήρ*, a star, + *-ol*.] A trade-name for a double salt of mercuric paraphenolsulphonate and ammonium tartrate, $(C_6H_5(OH)SO_3)_2Hg.4C_4H_4O_6(NH_4)_2 + 8H_2O$. It is used as an antiseptic in place of mercuric chlorid.

asterolepid (as-tę-rō-lep′id), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of *Asterolepis*, a genus of fossil fishes.

The theory which explains *asterolepid* limbs as the produced and jointed head-angles, or 'cornua,' of forms like *Cephalaspis*. *Amer. Jour. Sci.*, Aug., 1904, p. 141.

II. *n.* A member of the genus *Asterolepis*.

Asterolepidæ (as″tę-rō-lep′i-dē), *n. pl.* [NL., ⟨ *Asterolepis* + *-idæ*.] A family of extinct and very curious fishes from the Devonian formations of Great Britain, Germany, and Canada, of which *Pterichthys*, *Asterolepis*, and *Bothriolepis* are the best-known genera. In *Pterichthys* the head and trunk are heavily plated, the former being articulated to the latter and having a movable plate between the orbits; the tail is scaly and bears a single dorsal fin and a heterocercal caudal fin; and a pair of lateral plated appendages is jointed to the anterior part of the trunk. These were articulated near the middle and were probably used in crawling over muddy bottoms.

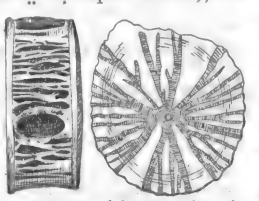
asterolithology (as″tę-rō-li-thol′ō-ji), *n.* Same as *astrolithology*.

Asteroma (as-tę-rō′mą̈), *n.* [NL. (De Candolle, 1815), ⟨ Gr. *ἀστήρ*, star, + *-oma*.] A genus of sphæropsidaceous fungi having the small pycnidia seated on star-like, dark mycelial patches. The pycnospores are minute, simple, and hyaline. The species are numerous and widely distributed, occurring mostly as parasites on leaves.

Asterophora (as-tę-rof′ō-rą̈), *n. pl.* [NL., ⟨ Gr. *ἀστήρ*, star, + *-φορος*, ⟨ *φέρειν*, bear.] Same as ★*Astrophora*.

Asterospondyli (as″tę-rō-spon′di-lī), *n. pl.* [NL., ⟨ Gr. *ἀστήρ*, star, + *σπόνδυλος*, a vertebra.] A suborder or division of sharks containing those species in which the vertebral ossifications radiate from the centers of the vertebræ, which are largely cartilaginous: correlated with ★*Cyclospondyli*.

asterospondylous (as″tę-rō-spon′di-lus), *a.* Having vertebræ which are partly cartilaginous and partly ossified by the deposit of bone radiating from the center: this, when seen in cross-section, has a starlike pattern.



Asterospondylous vertebra of a fossil shark, *Oxyrhina*, seen in profile and in section, showing the star-like rays of bone.

Asterozoa (as″tę-rō-zō′ą̈), *n. pl.* [NL., ⟨ Gr. *ἀστήρ*, star, + *ζῷον*, animal.] One of the groups (the others being *Pelmatozoa* and *Echinozoa*) into which Haeckel divided the *Echinodermata*. It includes the *Ophiuroidea* and the *Asteroidea*.

asterozoan (as″tę-rō-zō′an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Asterozoa*.

II. *n.* A member of the branch or order *Asterozoa*.

asthenic. **I.** *a.*—**Asthenic emotions.** See ★*emotion*.

II. *n.* One who is asthenic or physically undeveloped or run down.

asthenical (as-then′i-kạl), *a.* Relating to asthenics or asthenic conditions or persons; asthenic.

Asthenodonta (as″the-nō-don′tą̈), *n. pl.* [NL., ⟨ Gr. *ἀσθενής*, feeble, + *ὀδούς* (*-ντος*), a tooth.] A group of pelecypod mollusks of subordinal value in which the hinge-teeth have become obsolete from disuse. It comprises boring and burrowing species. In some of the genera, as *Pholas*, a conspicuous myophore is developed. The group also includes the myas, corbulas, saxicavas, and teredos.

asthenoid (as-then′oid), *a.* Weak; prone to decay or die out; lacking in persistency.

The dwindling or *asthenoid* species, by failing with different successive periods of time have a value of another kind in associating rocks together in groups. *Etheridge*, Man. of Geol., I. 437.

asthenope (as′the-nōp), *n.* [Back-formation from *asthenopia*.] One who suffers from asthenopia or weak vision. *Buck*, Med. Handbook, I. 581.

Asthma crystals. See *Charcot-Leyden crystals*, under *crystal*. — **Bronchial asthma**, true asthma, due to spasm of the smaller bronchial tubes and not dependent upon any evident organic lesion.—**Essential asthma**, Same as *bronchial* ★*asthma* or *asthma* (without qualifying word).—**Furriers' asthma**, chronic bronchitis, due to the inhalation of hair-dust and particles of dyes, to which workers in fur are exposed.—**Heberden's asthma**, angina pectoris.—**Humid asthma**, asthma accompanied by profuse expectoration; edema of the lungs. —**Kopp's asthma**, laryngismus stridulus. — **Miners' asthma**, anthracosis. — **Potters' asthma**, pneumonoconiosis.

asthma-herb (ast′mą̈-ėrb), *n.* A spurgewort, *Euphorbia hirta*, found in the tropics of the whole world, and of repute in Australia as a remedy for asthma.

asthma-paper (ast′mą-pā″pėr), *n.* Bibulous paper moistened with a definite-strength solution of potassium nitrate and dried. The fumes from the ignited paper are inhaled by asthmatics.

asthmatic, *n.* **2.** Any agent or medicine capable of preventing or relieving asthmatic attacks, as stramonium, chloroform, etc.

Astian (as′ti-an), *a.* and *n.* [It. *Asti*, a town in Piedmont.] In *geol.*, noting the middle stage in the Pliocene series of the Mediterranean region, consisting of fluviatile and fluviolacustrine sands interbedded with marine deposits. These beds abound in fossils, among them being remains of rhinoceroses, mastodons, the Asiatic apes, and the African antelopes.

astigmatic, *a.* **2.** In *bot.*, without a stigma: applied to the flowers of gymnosperms from an ecological point of view. See ★*Stigmaticæ*. *F. E. Clements.*—**Astigmatic difference**, in the theory of lenses, the distance between the two focal lines in the image of a luminous point, formed by the passage of any elementary ray through an astigmatic system.

astigmatically (as-tig-mat′i-kạl-i), *adv.* In an astigmatic manner, as when, in the formation of images, the beam of light is oblique to the axis of a lens system or mirror, or when the reflecting or refracting surface has two different curvatures.

Astigmatism against the rule, a condition of astigmatism in which the curvature of the refracting surface is greater in the horizontal meridians.—**Astigmatism with the rule**, the usual form of astigmatism, in which the curvature of the refracting surface is greater in the vertical meridians.—**Compound astigmatism**, astigmatism combined with myopia or hypermetropia.—**Corneal astigmatism**, astigmatism due to irregular refraction in the cornea.—**Hypermetropic astigmatism**, astigmatism in which hypermetropia coexists in one meridian (*simple*) or in both meridians (*compound*).—**Irregular astigmatism**, astigmatism the degree of which varies in different portions of the same meridian.—**Lenticular astigmatism**, astigmatism due to irregular refraction in the crystalline lens.—**Mixed astigmatism**, astigmatism in which hypermetropia coexists in one meridian and myopia in the other.—**Myopia astigmatism**, astigmatism in which myopia coexists in one meridian (*simple*) or in both meridians (*compound*).—**Regular astigmatism**, astigmatism in which the meridians of greatest refraction are at right angles to each other.

astigmia (as-tig′mi-ą̈), *n.* [NL.] Same as *astigmatism*.

astigmoscope (as-tig′mō-skōp), *n.* [*astigm* (*atism*) + Gr. *σκοπεῖν*, view.] Same as *astigmometer*.

Astilbe (as-til′bē), *n.* [NL.] A genus of perennial plants, belonging to the family *Saxifragaceæ*. There are some 7 or 8 species in Asia and North America. *A. Japonica*, with large, conical or pyramidal, terminal clusters of many small, white flowers, is much used for forcing, particularly for early spring bloom. These plants may also be grown in the open. This genus is often confounded with the rosaceous genus *Aruncus*. The genera *Aruncus* and *Spiræa* are characterized by having many stamens and usually several or many pistils; *Astilbe* has 8 or 10 stamens and a single 2-3-lobed pistil. *Astilbe Lemoinei* is said to be a hybrid between *Astilbe Japonica* and *Aruncus astilboides*.

astipulate (as-tip′ū-lāt), *a.* [*a-*[18] + *stipulate*, *a.*] Same as *exstipulate*.

astite (as′tīt), *n.* [From Cima d'*Asta*.] In *petrog.*, the name proposed by Salomon, in 1898, for hornfels consisting of mica and andalusite.

astogenetic (as-tō-jē-net′ik), *a.* [Gr. *ἀστυ*, city, + *γένεσις*, birth: see *genetic*.] In *zoöl.*, a term applied to the growth-stages of a compound individual or colony: as, *astogenetic* series, in distinction from *ontogenetic* series, or the growth-stages of the simple individual organism.

astomatal (as-tō′mą-tạl), *n.* Same as *astomatous*.

Astomea (as-tō′mē-ą̈), *n. pl.* [NL., ⟨ Gr. *ἀ-* priv. + *στόμα*, mouth.] A group of *Protozoa*, of the class *Mastigophora* and the order *Polymastigida*, having many flagella and no mouth-opening. It includes the genera *Multicilia* and *Grassia*.

astomia (as-tō′mi-ą̈), *n.* [NL., ⟨ Gr. *ἀστόμιος*, *ἄστομος*, without a mouth, ⟨ *ἀ-* priv. + *στόμα*, mouth.] Congenital absence of the mouth.

astonishedness (ą-ston′ishd-nes), *n.* The state of being astonished; astonishment. *Palsgrave*. [Rare.] *N. E. D.*

Astoria shales. See ★*shale*[2].

astræiform, *a.* **2.** In the study of the madreporarian corals, noting colonies of calycles, all of which reach the same height and seem to exhibit no tendency to grow or bud independently: from the coral genus *Astræa*.

The true *astræiform* colony is therefore that built up by a calicle which is by habit low and whose buds spread laterally over the substratum all round the parent. *Annals and Mag. Nat. Hist.*, Jan., 1904, p. 27.

astragal, *n.* **5.** The game of knuckle-bones; knuckle-downs. *Amer. Anthropologist*, Jan.–March, 1902, p. 154.

astragalectomy (as-trag-ą-lek′tō-mi), *n.* [Gr. *ἀστράγαλος*, astragalus, + *ἐκτομή*, excision.] In *surg.*, excision of the astragalus.

astragalizont (as′trą-gal-i-zont), *n.* [Gr. *ἀστραγαλίζων* (*-οντ*) ppr. of *ἀστραγαλίζειν*, play with astragali, ⟨ *ἀστράγαλος*, astragalus.] In *Gr. antiq.*, an astragalus or hucklebone player. This was a favorite subject with Greek artists, and several statues representing it are to be found in European museums. There was a famous statue of an astragalizont by Polycletus.

astragalocalcanean (as-trag″ą-lō-kal-kā′nē-ą̈n), *a.* In *anat.*, relating to both the astragalus and the calcaneum. *Buck*, Med. Handbook, IV. 192.

astragalocrural (as-trag″ą-lō-krū′ral), *a.* In *anat.*, relating to the astragalus and to the leg; specifically, noting the ankle-joint. *Buck*, Med. Handbook, IV. 194.

astragalus, *n.* **3.** *pl.* The small carpal and tarsal bones of animals, used by the ancients in games of chance. Different sides had different numbers and different names. There were many artificial astragali, some of which were decorated.

astral, *a.* **3.** In *cytol.*, of or pertaining to an aster: as, the *astral* rays in the karyokinetic or mitotic division-figure of the cell.—**4.** In some geologic classifications, noting the primitive period or era in the earth's history characterized as "that of the fluid globe, having a heavy vaporous envelop containing the future water of the globe or its dissociated elements and other heavy vapors or gases." *Dana*, Manual of Geology, p. 440.—**Astral light**, in *theosophy*, the light supposed to be derived from the stars.—**Astral world**, in *theosophy*, the world of stars and stellar spaces with the spirits supposed to inhabit them.

astralin (as′trą-lin), *n.* [*astral* + *-in*[2].] One of the grades of illuminating oil from Russian petroleum.

astrally (as′trạl-i), *adv.* **1.** By means of or according to the stars.—**2.** In *theos.*, with reference to or by means of astral bodies, the astral fluid, etc.

astrapophobia (as″trą-pō-fō′bi-ą̈), *n.* [NL., ⟨ Gr. *ἀστραπή*, lightning, + *-φοβία*, ⟨ *φοβεῖν*, fear.] A morbid fear of lightning.

Astrapotheria (as-trą-pō-thē′ri-ą̈), *n. pl.* [NL., pl. of *Astrapotherium*, the type genus, ⟨ Gr. *ἀστραπή*, lightning, + *θηρίον*, beast.] The *Astrapotheriidæ* considered as a suborder.

Astrapotheriidæ (as-trą-pō-thē-rī′i-dē), *n. pl.* [NL. *Astrapotherium*, the type genus, + *-idæ*.] A family of extinct ungulate mammals of large size, with molars much like those of a rhinoceros, a pair of tusk-like upper incisors, and tusk-like lower canines. Their bones are found in the Miocene of Patagonia. *Ameghino*, 1887.

astrochemistry (as-trō-kem′is-tri), *n.* [Gr. *ἄστρον*, star, + E. *chemistry*.] That part of astronomy which treats of what is known of the chemistry of the celestial bodies.

astrocœle (as′trō-sēl), *n.* [Gr. *ἄστρον*, star, + *κοῖλος*, hollow.] In *cytol.*, the space in which the centrosome lies at the center of the astrosphere at either pole of the karyokinetic spindle.

Astrocrinidæ (as-trō-krin′i-dē), *n. pl.* [NL., ⟨ *Astrocrinus* (⟨ Gr. *ἄστρον*, star, + *κρίνον*, a lily)

+ *-idæ*.] The only family of the irregular blastoid echinoderms of the order *Irregulares*. They are unpedunculated forms in which one ambulacrum differs in form and size from the rest. They occur in the Carboniferous limestone.

astrocyte (as'trō-sīt), *n.* [Gr. *ἀστρον*, star, + *κύτος*, a hollow (a cell).] In *histol.*, a bone-cell or bone-corpuscle: so called on account of its starlike form.

astrographic (as-trō-graf'ik), *a.* Dealing with or pertaining to astrography, or the charting of the stars. At present this charting is done mainly by means of photography. *Nature*, June 4, 1903, p. 111.—**Astrographic chart.** See ★*chart*.

astroidin (as-trō'i-din), *n.* A yellow pigment found in certain lower invertebrates.

astrolarva (as-trō-lär'vä), *n.*; pl. *astrolarvæ* (-vē). The swimming bilateral larval stage of an echinoderm.

The little *astrolarva* has no muscles, and no water-vessels nor blood-vessels.
Haeckel (trans.), Wonders of Life, p. 279.

astrolater (as-trol'a-tėr), *n.* A worshiper of the stars and other heavenly bodies.

astrologous (as-trol'ō-gus), *a.* Astrological. *Byron.* [Rare.]

astrology, *n.*—**Judicial astrology,** the art of foretelling future events by the positions and motions of the stars, as contradistinguished from *natural astrology*, which treats of the supposed influence of the stars upon mankind, but does not attempt prediction.

Astrolytes (as-trol'i-tēz), *n.* [NL., ⟨ Gr. *ἀστρον*, star, + *λυτήρ*, releaser.] A genus of sculpins found on the coast of California.

astromancer (as'trō-man-sėr), *n.* An astrologer.

astrometeoroscope (as″trō-mē'tē-o-rō-skōp), *n.* An instrument used to project, by means of the optical lantern, geometrical designs which constantly change their form.

astrometrical (as-trō-met'ri-kal), *a.* Pertaining to astrometry or designed to furnish, in astronomical work, quantitative measures of magnitude, position, distance, and motion.

Radial-velocity determinations, for example, are based largely upon astrophysical methods, but the direct results are mostly *astrometrical*.
Astrophysical Jour., Sept., 1903, p. 156.

Astronomical geography. See ★*geography*.—**Astronomical meridian,** a great circle passing through the zenith and the celestial poles.—**Astronomical** ★**revolver,** ★**telescope,** ★**unit,** ★**zenith.** See the nouns.

astronomy, *n.* Several other branches of the science are recognized: *gravitational astronomy* or *astronomical mechanics*, replacing the term *physical astronomy*, which is now generally discarded because of the danger of confusion with *astronomical physics* or *astrophysics*; *nautical astronomy*, astronomy applied to navigation; *sidereal astronomy*, the branch of the science which deals with the stars; *spheric astronomy*, which treats of the apparent position and motions of bodies on the celestial sphere; *theoretical astronomy*, which deals with the calculation of orbits and perturbations. These various branches interlace in all directions.—**Astronomy of the invisible,** that branch of the science which deals with heavenly bodies which cannot be seen, and deduces inferences concerning them from their effects on those that are visible. Thus Bessel ascertained the existence of the companions of Sirius and Procyon long before any telescope was made which would show them. *Knowledge and Scientific News*, Mar., 1904, p. 31.

astrophobia (as-trō-fō'bi-ä), *n.* [NL., ⟨ Gr. *ἀστρον*, star, + *-φοβία*, ⟨ *φοβεῖν*, fear.] Morbid dread of starlight, or of going out of doors on a cloudless night.

Astrophora (as-trof'ō-rä), *n. pl.* [NL., ⟨ Gr. *ἀστρον*, star, + *-φορος*, ⟨ *φέρειν*, bear.] A group of choristidan, tetractinellid sponges one or more of whose microscleres are asters.

astrophotographic (as-trō-fō-tō-graf'ik), *a.* [*astrophotograph*(*y*) + *-ic*.] Of or pertaining to astrophotography or astrographic work carried on by means of photography: also sometimes applied to any astronomical work into which photography enters: as, the general investigation of the "Conditions of Maximum Efficiency in *Astrophotographic* Work," *Astrophysical Jour.*, XVI. 672.—**Astrophotographic campaign,** the combined operations of various observatories for forming a complete photographic chart of the heavens: begun in 1888.

astrophotometry (as-trō-fō-tom'e-tri), *n.* [Gr. *ἀστρον*, star, + *photometry*.] The science and art of measuring the brightness of stars or other heavenly bodies; astronomical photometry.

astrophysicist (as-trō-fiz'i-sist), *n.* An astronomer who occupies himself with astrophysics. *Sci. Amer. Sup.*, Nov. 22, 1903, p. 22487.

astrophysicize (as-trō-fiz'i-sīz), *v. i.* To turn (astronomy) into astrophysics; study (astronomy) chiefly as astrophysics. *G. S. Hall*, Adolescence, II. 548.

astrophysics (as'trō-fiz″iks), *n.* Astronomical physics.

Astrophytonidæ (as″trō-fi-ton'i-dē), *n. pl.* [NL., ⟨ *Astrophyton* + *-idæ*. The correct formation is *Astrophytidæ*.] A family of ophiurans having the arms much branched, as the basket-fish.

astropyle (as'trō-pīl), *n.* [NL., ⟨ Gr. *ἀστρον*, star, + *πύλη*, a gate.] In *zoöl.*, one of the funnel-like projections of the membrane around the pores in *Cannopylea*.

astrorhiza, *n.* 2. [*l. c.*; pl. *astrorhizæ*.] In the fossil hydrocorallines named *Stromatoporoidea*, one of the shallow stellate furrows on the surfaces of successive laminæ which radiate outward from numerous centers.

Astrorhizidea (as″trō-ri-zid'ē-ä), *n. pl.* [NL., ⟨ *Astrorhiza* + *-idea*.] An order of *Foraminifera* containing the families *Astrorhizidæ*, *Pilulinidæ*, *Saccamminidæ*, and *Rhabdamminidæ*.

astrorhizidean (as″trō-ri-zid'ē-an), *a.* and *n.* **I.** *a.* Pertaining to or resembling the *Astrorhizidea*.

II. *n.* One of the *Astrorhizidea*.

Astroscopus (as-tros'kō-pus), *n.* [NL., ⟨ Gr. *ἀστρον*, star, + *σκοπός*, watcher.] A genus of fishes belonging to the family *Uranoscopidæ* (star-gazers), found along the Atlantic coast of the United States.

astrospectroscopic (as-trō-spek-trō-skop'ik), *a.* Pertaining to the observation of the spectra of heavenly bodies. *Nature*, July 14, 1904, p. 252.

astrosphere (as'trō-sfēr), *n.* [Gr. *ἀστρον*, star, + *σφαῖρα*, ball, sphere.] In *cytol.*: (*a*) In the karyokinetic figure, the central portion of the aster, inclusive of the region in which the centrosome lies, but exclusive of the astral rays; the attraction-sphere of Van Beneden. *Fol*, 1891; *Strasburger*, 1892. See cut at ★*aster*[1], 7. (*b*) The whole aster, exclusive of the centrosome; the astral sphere of Mark. *Boveri*, 1895.

astrozoön (as-trō-zō'on), *n.*; pl. *astrozoa* (-ä). An echinoderm.

By a very curious modification the small bilateral astrolarva is transformed into the totally different pentaradiad *astrozoon*, the large sexually mature echinoderm with a pronounced five-rayed structure.
Haeckel (trans.), Wonders of Life, p. 279.

astylic (a-stī'lik), *a.* Same as *astylar*.

Astylospongia (as″ti-lō-spon'ji-ä), *n.* [NL., ⟨ Gr. *ἀστυλος*, without a pillar, + *σπόγγος*, a sponge.] A genus of silicious lithistid sponges, spherical in form, depressed at the summit, with large exhalant orifice, numerous radial canals, and larger circular canals. The skeleton consists of 4-rayed spicules with their arms fused to those adjoining, forming a continuous network. The species are highly characteristic of the Silurian formations.

asudden (a-sud'n), *adv.* [*a*[3] + *sudden*.] Of a sudden; suddenly; at once.

A-sudden stood I in a glowing sphere.
B. Taylor, tr. of Goethe's Faust, I. iv.

asulcar (a-sul'kär), *a.* [*a-*[18] priv. + *sulcus* + *-ar*. The preferable form would be *antisulcar*.] In *Anthozoa*, pertaining to that aspect of the body which is opposite to the sulcus; dorsal.

The zooids so oriented that their sulcar (ventral) aspects are abaxial, their *asulcar* (dorsal) aspects axial.
Trans. Linnean Soc. London, Zoöl., March, 1900, p. 527.

asweat (a-swet'), *a.* [*a*[3] + *sweat*.] In a sweating state; sweaty; sweating; moist.

The Dardan shore
So oft *asweat* with blood.
J. Long, tr. of Æneid, ii. 739.

asyllabia (a-si-lā'bi-ä), *n.* A form of word-blindness or visual aphasia in which the patient recognizes the letters but is unable to form them into syllables.

asylum, *n.*—**Asylum of ignorance** [L. *asylum ignorantiæ*], a phrase used by Spinoza to denote the pronouncing of any matter to be a mystery in order to evade arguments against its reality.

asymmetric, *a.*—**Asymmetric carbon atom,** a carbon atom combined directly with four different atoms or groups. All optically active carbon compounds have been found to contain such an atom.—**Asymmetric compound,** a compound in which the atoms are not symmetrically arranged; especially, a derivative of benzene having atoms or groups in the position 1, 2, 4.—**Asymmetric group,** in *crystal.* See ★*symmetry*.—**Asymmetric reflection,** reflection from a grooved surface or from a fabric, such as cloth, which is made up of numerous parallel strands.—**Asymmetric synthesis.** See ★*synthesis*.

asymmetrical, *a.* **4.** In the terminology of Herbert Spencer, entirely destitute of approximation toward symmetry, and thus distinguished from *unsymmetrical*.—**Asymmetrical fertilization.** See ★*fertilization*.

Asymmetron (a-sim'e-tron), *n.* [NL., ⟨ Gr. *ἀσύμμετρος*: see *asymmetric*.] A genus of lancelets constituting the family *Branchiostomatidæ*. It is distinguished by having the reproductive structures developed on one side only. Substantially equivalent to *Epigonichthys*, an earlier name.

asymmetry, *n.* **3.** In *chem.*, absence of symmetry in the positions particular atoms are believed to occupy in the molecule of a compound substance. See ★*asymmetric*.

asymptote, *n.* **2.** In *zoöl.*, either of two straight lines drawn from the apex to the aperture of the conical part of the phragmocone in the belemnites or fossil dibranchiate cephalopods. The smaller of the surfaces bounded by these lines occupies about one fourth of the circumference of the aperture and is marked with loop-lines of growth curving forward.—**Asymptote cone,** in *geom.*, the cone generated by the asymptotes of the generating hyperbola of a hyperboloid of revolution.—**Parabolic asymptote,** a parabola having 5-pointic contact with the cubic at infinity.

asynartetic (a-sin-är-tet'ik), *a.* Same as *asynartete*.

Asynchronous generator. See ★*generator*.

asyndetically (as-in-det'i-kal-i), *adv.* According to, or in accordance with, the rhetorical figure known as *asyndeton*; by omission of connectives.

asynergia (as-i-nėr'ji-ä), *n.* Same as ★*asynergy*.

asynergy (a-sin'ėr-ji), *n.* [NL., ⟨ Gr. *ἀ-* priv. + *συνεργία*, coöperation: see *synergy*.] In *pathol.*, lack of harmony between parts, organs, or muscles whose actions are normally coördinated.

asyngamy (a-sin'ga-mi), *n.* [Gr. *ἀ-* priv. + *συγγαμία*, marriage, ⟨ *σύγγαμος*, married, ⟨ *σύν*, together, + *γάμος*, marriage.] Absence of syngenesis or sexual reproduction; the relation of two types in which fertile interbreeding is impossible. See *syngenesis*.

a. t. In *elect.*, an abbreviation of *ampere-turn*.

ata (ä'tä), *n.* [Hind. Hindi Pers. Bengali *ātā*, also *atā*; said to be of Brazilian origin.] The name in Bengal, Assam, and other parts of India of the sweet-sop, *Anona squamosa*. See ★*atis* (with cut), ★*atta*[2], 2, *Anona*, and *sweet-sop*.

atactic, *a.* **2.** Same as *ataxic*.

atactiform (a-tak'ti-fôrm), *a.* [*ataxia* (*atact-*) + L. *forma*.] Resembling ataxia; slightly ataxic. *Buck*, Med. Handbook, II. 240.

atajo (ä-tä'hō), *n.* [Sp., a separation, a separate part, etc., ⟨ *atajar*, cut off, separate, ⟨ *a-* + *tajar*, cut off: see *tail*[2].] **1.** A fence, or an inclosed place for corralling cattle.—**2.** A drove of mules or horses. [Spanish America.]

Atamosco (at-a-mos'kō), *n.* [NL. (Adanson, 1763), after an American Indian name. See *atamasco*.] A genus of monocotyledonous plants of the family *Amaryllidaceæ*. See *Zephyranthes*.

Atana series. See ★*series*.

atatchite (a-tach'īt), *n.* [Mount *Atatch*, a peak of the Ural Mountains, Russia, + *-ite*[2].] In *petrog.*, an igneous rock, a vitro-orthophyre, consisting of orthoclase, augite, biotite, magnetite, sillimanite, and cordierite, in a glassy base. The rock is dark and compact, with hyalopilitic texture. *Morozevicz*, 1901.

atavist (at'a-vist), *n.* [*atav*(*ism*) + *-ist*.] In *biol.*, an organic being which exhibits atavism.

ataxia, *n.*—**Cerebellar ataxia,** muscular incoördination dependent upon disease of the cerebellum.

ataxiagraph (a-tak'si-ä-graf), *n.* [Irreg. ⟨ Gr. *ἀταξία*, disorder (see *ataxy*), + *γράφειν*, write.] In *psychophys.*, an instrument for recording the involuntary movements of the body, the subject standing upright and endeavoring to maintain a constant attitude. *J. A. Hancock*, Ped. Sem., III. 13.

Ataxic agraphia, amimia. See ★*agraphia*, ★*amimia*.—**Ataxic gait,** an irregular, jerky walk characteristic of locomotor ataxia and of other disorders of coördination.

ataxiform (a-tak'si-fôrm), *a.* Same as ★*atactiform*.

ataxite (a-tak'sīt), *n.* [Gr. *ἀταξία*, disorder, (see *ataxia*), + *-ite*[2].] **1.** A meteoric iron, or siderite, which is destitute of distinct and regular crystalline structure.—**2.** In *petrog.*, a name proposed by Loewinson-Lessing, in 1888, for lavas characterized by the presence of many angular fragments, of irregular arrangement, the fragments being regarded as the result of

the differentiation of the magma containing them and not as derived from any foreign source. See ★*taxite*.

ataxonomic (a-tak-sō-nom′ik), *a.* [*a*-18 + *taxonomic*.] In *bot.*, incapable of classification; abnormal; teratological: said of some structures.

-ate[1] (*b*). In *chem.*, serious mistakes may arise in regard to the meaning of this and analogous suffixes by failure to observe the proper use and translation of New Latin forms. New Latin forms as used by Germans are often erroneously translated or transferred into English in druggists' circulars and elsewhere. Thus New Latin *calcium sulfuratum, sulfuricum,* and *sulfurosum* as used by Germans answer to what are called in the prevalent abbreviated English phrasing *calcium sulphid* or *sulphide, sulphate,* and *sulphite* respectively. (*c*) In *petrog.*, a suffix added to the names of grads in the quantitative classification of igneous rocks. See ★*rock*[1].

ateknia (a-tek′ni-ä), *n.* [Gr. *ἀτεκνία*, ‹ *ἄτεκνος*, childless, ‹ *ἀ-* priv. + *τέκνον*, child.] Childlessness.

ateleiosis, ateliosis (at-e-lī-ō′sis), *n.* [NL., ‹ Gr. **ἀτελεωσις*, ‹ *ἀτελείωτος*, uncompleted, ‹ *ἀ-* priv. + **τελειωτός*, completed, ‹ *τελειόειν*, make complete or perfect, ‹ *τέλειος*, complete, perfect, ‹ *τέλος*, end, completion.] A form of dwarfism due to imperfect or arrested development. *Med. Record*, July 18, 1903, p. 96.

atelestite (at-e-les′tīt), *n.* [So called because the composition was unknown when the mineral was first described: Gr. *ἀτέλεστος*, uncompleted, ‹ *ἀ-* priv. + **τέλεστος*, ‹ *τελεῖν*, complete, fulfil.] A bismuth arseniate which occurs in minute yellow monoclinic crystals.

Atelostomata (at″e-lō-stō′ma-tä), *n. pl.* [NL., ‹ Gr. *ἀτελής*, imperfect, + *στόμα*, mouth.] An order of irregular *Echinoidea* in which there are no jaws, teeth, perignathic girdle, or external branchiæ. It includes the families *Cassidulidæ, Spatangidæ, Pourtalesiidæ*, and others.

a tempo. Various qualifying terms are often added: as, *a tempo commodo* or *ordinario*, at any convenient or ordinary pace; *a tempo rubato* (see *rubato*).

atemporal (a-tem′pō-ral), *a.* [*a*-18 + *temporal*.] Free from time relations or limitations; timeless. *D. Simon*, Dorner's Person of Christ, II. 273. [Rare.] *N. E. D.*

athanatism (a-than′a-tizm), *n.* [Gr. *ἀθάνατος*, deathless, + *-ism*.] The doctrine of immortality.

athaumasia (ath-â-mā′si-ä), *n.* [NL., ‹ Gr. *ἀθαυμασία*, erroneous form of *ἀθαυμαστία*, ‹ *ἀθαύμαστος*, not wondering, ‹ *ἀ-* priv. + *θαυμαστός*, ‹ *θαυμάζειν*, wonder.] The state of being surprised at nothing (*nil admirari*), which, according to the Stoics, is characteristic of the wise man.

atheciferous (a-thē-sif′e-rus), *a.* [Gr. *ἀ-* priv. + *θήκη*, box, L. *-fer*, ‹ *ferre*, bear.] Bearing no thecæ, as certain graptolites.

athelia (a-thē′li-ä), *n.* [NL., ‹ Gr. *ἀθηλος*, not having nipples (found in the sense 'unsuckled'), ‹ *ἀ-* priv. + *θηλή*, nipple.] Congenital absence of the nipples.

atheologically (a″thē-ō-loj′i-kal-i), *adv.* [*a*-18 + *theologically*.] As one who is opposed to theology or who is no theologian; in opposition to theology.

Atheresthes (ath-e-res′thēz), *n.* [NL., ‹ Gr. *ἀθήρ*, beard of an ear of corn, + *ἐσθίειν*, eat.] A genus of flounders of the North Pacific; the arrow-toothed halibut: distinguished by the slender body and arrow-shaped teeth.

Atherfield clay. See ★*clay*.

Atherinella (ath″e-ri-nel′ä), *n.* [NL., ‹ *Atherina* + *-ella*.] A genus of silversides of the family *Atherinidæ*, found in the region about Panama.

Atherinops (ath-e-rī′nops), *n.* [NL., ‹ *Atherina* + *ὤψ* (*ὠπ-*), eye, face.] A genus of silversides of the family *Atherinidæ*, found on the coast of California. *A. affinis* is a common food-fish sold as "small smelt."

Atherinopsis (a-the-ri-nop′sis), *n.* [NL., ‹ *Atherina* + Gr. *ὄψις*, look, aspect.] A genus of silversides of the family *Atherinidæ*, found on the coast of California. *A. californiensis* reaches a length of 18 inches and is highly valued as a food-fish. It is known in the markets as *blue smelt*, although it has little in common with the true smelt.

atheroid (ath′e-roid), *a.* [Gr. *ἀθήρ*, an ear of grain, + *εἶδος*, form.] Having the form of or resembling an ear of grain.

atheromasia (ath″e-rō-mā′si-ä), *n.* [NL., ‹ *atheroma* + *-ia*.] In *pathol.*, the occurrence of atheroma; atheromatous condition.

atheromatosis (ath″e-rō-ma-tō′sis), *n.* [NL., ‹ *atheroma*(*t-*) + *-osis*.] A morbid condition marked by the presence of atheroma.

atherospermine (ath″e-rō-spėr′min), *n.* [*Atherosperma* + *-ine*[2].] An amorphous bitter alkaloid, $C_{30}H_{40}N_2O_5$ (?), found in the bark of *Atherosperma moschatum*. See *Australian sassafras*(*a*) under *sassafras*.

athetesis (a-thet′ē-sis), *n.* [Gr. *ἀθέτησις*, ‹ *ἀθετεῖν*, set aside, ‹ *ἄθετος*, set aside, put aside: see *athetize*.] The act or fact of setting aside as spurious; rejection as spurious; invalidation.

No serious objection, apart from *athetesis* of a few single lines [of the Iliad] has been raised to any passage, except, etc. *Leaf*, The Iliad, II. 435.

athetosic (ath-e-tō′sik), *a.* [*athetosis* + *-ic*.] Relating to athetosis. *Buck*, Med. Handbook, II. 448.

Athlennes (ath-len′ēz), *n.* [NL., a blunder for *Ablennes*, ‹ Gr. *ἀβλεννής*, without mucus, ‹ *ἀ-* priv. + *βλέννα, βλέννος*, mucus, slime: see *blenny*.] A genus of needle-fishes of the family *Belonidæ*, characterized by the ribbon-shaped body. The single species *A. hians* reaches a length of 4 feet and more, and is found throughout the West Indies and in Hawaii.

Athletic heart, simple hypertrophy of the heart without valvular disease, occurring in athletes.

athlothete (ath′lō-thēt), *n.* [Gr. *ἀθλοθέτης*, ‹ *ἆθλον*, prize, + *-θετης*, ‹ *τιθέναι*, place.] Same as *agonothete*.

at-home (at-hōm′), *n.* A reception announced by a card stating that on a specified day a host or hostess will be "at home" during certain hours to receive and entertain visitors.

athrogenic (ath-rō-jen′ik), *a.* [Appar. irreg. ‹ Gr. *ἀθροος*, in crowds, heaps, or masses, + *-γενης*, -produced.] In *petrol.*, a term applied by Renevier to clastic rocks the materials of which are of volcanic origin, such as tuff, lapilli, etc.

athumia (a-thū′mi-ä), *n.* Same as *athymia*.

The Danes slily remark that a good appointment and the easy temptation of rixdollars would greatly modify all this *athumia* and nostalgia.
R. F. Burton, Ultima Thule, I. 366.

athwartwise (a-thwârt′wīz), *adv.* Crosswise. *Hawthorne*, Amer. Note-book, II. 223.

athyreosis (a-thir-ē-ō′sis), *n.* [NL., ‹ Gr. *ἀ-* priv. + *θύρα*, door (see *thyroid*), + *-osis*.] A morbid condition due to loss or impairment of function of the thyroid gland.

athyria (a-thir′i-ä), *n.* [NL., ‹ Gr. *ἀ-* priv. + *θύρα*, door: see *thyroid*.] In *pathol.*, a constitutional state induced by functional defect or absence of the thyroid gland.

Athyridæ (a-thir′i-dē), *n. pl.* [NL., ‹ *Athyris* + *-idæ*.] A family of brachiopods wide-spread through the early rocks and having great vertical range. It is characterized by its laterally directed brachial cones, or spiralia, and its frequently highly complicated scissors-shaped jugum. It is very abundant in the Paleozoic rocks everywhere and is continued upward into the Mesozoic.

Athyris (ath′i-ris), *n.* [NL., ‹ Gr. *ἀ-* priv. + *θύρα*, door. It was thus named on the supposition that it has no perforation for the pedicle.] A genus of Paleozoic brachiopods with elaborate brachidium usually consisting of a single pair of spirals placed base to base and connected by a saddle-shaped loop. Processes from this loop extend backward, and may be produced between the primary lamellæ of the spirals.

athyroid (ath′i-roid), *a.* Similar or pertaining to *Athyris*.

athyroidea (a-thi-roi′dē-ä), *n.* Same as ★*athyria*. *Lancet*, April 4, 1903, p. 939.

athyroidism (a-thi-roi′dizm), *n.* Same as ★*athyria*.

atinga (a-tēng′gä), *n.* [Pg.] The Portuguese name of the porcupine-fish, *Diodon diodon*, and related species.

atingle (a-ting′gl), *adv.* [*a*[3] + *tingle*.] Tingling.

Some think fireflies pretty, when they mix in the corn and mingle,
Or thrid the stinking hemp till the stalks of it seem *a-tingle*.
Browning, Up at a Villa, viii.

a tirata (ä tē-rä′tä). [It.] With a stripe or strap: said of interlaced strap-work and foliated scrolls on a light ground, peculiar to certain majolica wares.

atis (ä′tis), *n.* [Hind. Hindi Pers. *ātā*, the same plant.] A name in Guam and the Philippines of the sweet-sop and ★*atta*[2] (which see).

atisine (at′i-sin), *n.* An amorphous alkaloid, $C_{23}H_{31}NO_2$, found in the root of *Aconitum heterophyllum*.

Atis, the Sweet-sop (*Anona squamosa*).

Atka fish, mackerel. See ★*fish*.

Atalanta butterfly. See ★*butterfly*.

Atlantic, *a.* **3.** [*l. c.*] Relating to the atlas or first vertebra of the neck.

atlanto-axial (at-lan-tō-ak′si-al), *a.* Same as *atlo-axoid*. *Buck*, Med. Handbook, I. 553.

Atlanto-Mediterranean (at-lan′tō-med-i-te-rā′nē-an), *a.* Of or pertaining to both the Atlantic and the Mediterranean; specifically, in *anthrop.*, of or pertaining to the dark, dolichocephalic, tall European type inhabiting the shores of the Mediterranean from Gibraltar to the mouth of the Tiber and several points of the Atlantic coast. Also called *littoral*. *Deniker*, Races of Man, p. 331.

atlantosaur (at-lan′tō-sâr″), *n.* A reptile of the genus *Atlantosaurus*.

Atlantosaurus beds, one of the divisions of the Jurassic formation in Colorado, Wyoming, and Montana. These beds are regarded as of lacustrine origin, and are underlain by similar lacustrine deposits, named the *Baptanodon beds*, which rest on marine strata of Lower Jurassic age. They are from 100 to 300 feet thick and contain abundant remains of reptiles and of marsupial and oviparous mammals.

Atlas orange. Same as *orange II* (which see, under *orange*[1]).—**Atlas powder, red.** See ★*powder*, ★*red*[1].

atlas-weave (at′las-wēv), *n.* Same as *satin-weave*.

atlatl (ät-lätl′), *n.* [Nah.] The throwing-stick of the Mexicans, used for propelling spears with great force. See *throwing-stick*.

Among the accessories to the harpoon, the throwing stick or board, called *atlatl* by the Mexicans, must not be omitted. True, the cunning device was used all around the Pacific Ocean and across the Arctic for projecting spears as well as harpoons, and there are other methods of using the harpoon effectively; but the elaboration of the *atlatl* throughout was greatly stimulated by association with the harpoon. *Smithsonian Rep.*, 1900, p. 212.

atman (ät′män), *n.* [Skt. *ātmán*, breath, soul, life, self, universal soul.] The soul as it is conceived by the Brahman philosophers: the existence of it is denied by the Buddhists. The soul of the universe is equally called *atman*.

Kapila's dualism proclaimed that a distinction existed between soul and body, yet Kapila regarded man's sensations and thoughts and desires as material. The soul was to him a transcendent being, which by a kind of sublimated body (similar to the so-called astral body of our modern theosophists, and supposed to reside in the material body) was implicated in the world of matter. This metaphysical soul-being of the Sâmkhya philosophy was supposed to be the apprehending principle in all psychic activities. It was said that the eye does not see, the ear does not hear, and the thoughts do not think, but it is that mysterious something called *âtman*, i.e., self or soul, which is the smeller in the nose, the taster in the tongue, the seer in the eye, the thinker of our thoughts, and the doer of our acts.
P. Carus, Buddhism and its Christian Critics, p. 24.

atmiatry (at-mī′a-tri), *n.* [Gr. *ἀτμός*, vapor, + *ἰατρεία*, healing.] The treatment of disease by means of inhalations or fumigation.

atmidalbumose (at-mi-dal′bū-mōs), *n.* [Gr. *ἀτμίς*, vapor, + *albumose*.] An albumose-like body which is formed from albumins through the action of superheated steam in neutral or alkaline solution. It is essentially an albumose of the anti-group which has lost a certain amount of its nitrogen and sulphur.

atmidometer, *n.* Atmidometers may be classed as: (1) *Micrometric*, such as Lamont's, in which the gradual fall of the surface of the water in a shallow pan is measured by the turning of a micrometer-screw, or is counteracted by the inflow of additional water pushed from a reservoir by means of a micrometer-screw. (2) *Balance atmidometers*, in which the loss of water is shown by loss of weight. (3) The *Piche evaporometer*, in which the evaporating surface is a small disk of porous paper closing the lower end of a vertical tube conveying water. The amount of evaporation is shown by measuring the descent of the feed-water in the tube. See cut on page 88.

(4) The *Stelling evaporometer*, in which the evaporating-pan floats on the surface of a river or lake and the loss of water is measured from hour to hour by measuring either weight or volume. (5) The *lysimeter*, in which the evaporation from the surface of growing plants is measured by establishing the plant in a large vessel resting on the pan of a balance.

The Piche Evaporometer.

a, eye by which tube is suspended; *b*, tube containing water; *c*, disk of paper kept in place by a metallic spring, *d*, attached to a slitted collar, *e*, that moves along the tube. Each scale number corresponds to a cubic centimeter of water or the evaporation of a layer 0.0264 inch deep, from a free water surface in the instrument-shelter.

atmidometric (at″mi-dom′e-tri), *a.* Of or pertaining to the atmidometer or to atmidometry.

atmidometry (at-mi-dom′e-tri), *n.* [As *atmidometer* + *-y*³.] The art of constructing and using atmidometers and of discussing the results given by them; the scientific study and measurement of the evaporation of water under natural conditions in the open air.

atmocausis (at-mō-kâ′sis), *n.* [Gr. *ἀτμός*, steam, + *καῦσις*, a burning.] In *surg.*, cauterization by means of steam.

atmocauterization (at-mō-kâ″tėr-i-zā′shon), *n.* [Gr. *ἀτμός*, steam, vapor + E. *cauterization*.] Cauterization by means of steam.

atmogenic (at-mō-jen′ik), *a.* [Gr. *ἀτμός*, vapor, steam, + *-γενής*, -producing, + *-ic*.] In *petrol.*, a term applied to formations due to the metamorphosing action of volcanic vapors or gases upon rocks adjacent to fumarolic vents. It is also used as a synonym of *æolian*.

atmograph (at′mō-gråf), *n.* [Gr. *ἀτμός*, vapor (breath), + *γράφειν*, write.] **1.** An instrument for recording mechanically the frequency and extent of the respiratory movements. – **2.** In *photog.*, a picture obtained or developed by the action of smoke or vapors. See ★*vapograph*. *Wall*, Dict. of Photog., p. 60

atmokausis, *n.* See ★*atmocausis*.

atmologic (at-mō-loj′ik), *a.* Of or pertaining to atmology.

atmosfere, *n.* A simplified spelling of *atmosphere*.

atmosferic, *a.* A simplified spelling of *atmospheric*.

atmosphere, *n.*—**Homogeneous atmosphere,** an atmosphere identical in composition and density throughout. The height of a homogeneous atmosphere is the vertical height of a body of gas, of density equal to that of the air at the surface of the earth, which would exert a pressure of one atmosphere. See *pressure* ★*height*.—**Soil atmosphere,** the gases (mostly atmospheric air) contained in the interstices of the soil, including those absorbed by the capillary films of water utilized in symbiosis and otherwise affecting the growth of plants. This air expands and contracts with changes of pressure and temperature, and thereby in turn modifies the distribution of the water in the soil.—**Yearly swing of the atmosphere.** See ★*swing*.

Atmospheric absorption. See ★*absorption*.—**Atmospheric electric gradient,** the rate at which the electric charge or potential varies in the free air. The horizontal gradient varies greatly with the advent of an electric storm; the vertical gradient has systematic diurnal and annual variations in addition to the irregular ones which attend electric storms. A cumulus cloud of one kilometer radius, with its center three kilometers above the earth's surface, will, by the induction due to its own internal change, produce a diversion of downward gradient of about 11,000 volts per meter of vertical distance.—**Atmospheric radiation.** See ★*radiation*.—**Atmospheric recorder.** See ★*recorder*.—**Atmospheric spectrum.** See ★*spectrum*.

atmospherics (at-mos-fer′iks), *n.* The study of atmospheres and of all their phenomena; meteorology.

atmospherology (at″mos-fē-rol′ō-ji), *n.* [E. *atmosphere* + Gr. *-λογία*, < *λέγειν*, speak.] The study of the phenomena of the atmosphere of any planet or satellite, or of the sun itself; specifically, the study of the earth's atmosphere; meteorology.

atocia (a-tō′si-ą), *n.* [NL., < Gr. *ἀτοκία*, < *ἄτοκος*, childless, < *ἀ-* priv., + *τόκος*, offspring.] Childlessness; barrenness.

atokal (at′ō-kal), *a.* [Gr. *ἀ-* priv. + *τόκος*, offspring, + *-al*¹.] Non-sexual, or not producing sexual cells, as certain regions of the bodies of worms, for example *Nereis*.

At the end of October (1897) the Samoan reef was "literally alive with Palolo," which were discovered by prising off pieces of rock with a crowbar. . . . The total length averages 400 mm., about one-fourth of which is in the anterior *atokal* part.
Jour. Roy. Micros. Soc., April, 1904, p. 183.

atoke (at′ōk), *a.* and *n.* [Gr. *ἄτοκος*, without offspring, < *ἀ-* priv. + *τόκος*, offspring.] **I.** *a.* Same as ★*atokal*.

II. *n.* The sexless portion of certain *Polychæta*. See ★*epitoke*.

In other Polychaetes the sexual part (epitoke) separates from the sexless *atoke* portion and swims freely, while the *atoke* produces new epitokes.
Hertwig (trans.), Zoology, p. 311.

atokous (at′ō-kus), *a.* Same as *atokal*.

atole, atolle (ä-tō′lā), *n.* [Mex. Sp., < Nahuatl *atolli*.] A mush made of Indian corn, also diluted and used as a drink: a favorite food in Spanish-American countries.

atoll, *n.*—**Sphagnum atoll,** an annular island occurring in certain ponds in Minnesota, covered with sphagnum and other vegetation, the surrounding water being shallow and the lagoon deep. *C. Macmillan*, Minn. Bot. Stud., IX. 2.

atolle, *n.* See ★*atole*.

atom, *n.* **1.** (c) Recent investigations on the discharge of electricity in gases and on the phenomena of radioactivity have suggested reasons for believing that the atom of a chemical element, as hitherto imagined, instead of being primordial and indivisible, may consist of numerous and far smaller particles, to which the name *electrons* has provisionally been given. See ★*electron*.—**Atom of electricity.** See ★*electricity*.—**Gram atom.** See ★*gram*².

atomechanics (at-ō-mē-kan′iks), *n.* [*ato(m-) mechanics*.] The mechanics of atoms; the science of the motions of atoms and of atomic forces.

atomic, *a.* **3.** In *chem.*, existing in the condition of isolated atoms of the same kind; not united into groups to constitute molecules: as, for example, active oxygen at the instant of its separation from hydrogen dioxid.—**Atomic capacity,** the equivalence or valence of an atom.—**Atomic mass,** a term preferable to the more common *atomic weight*.—**Atomic value,** a term sometimes, but not well, substituted for *valence*.—**Atomic weight.** The weight (or mass) of the atom of a chemical element was for a long time expressed in terms of the weight (or mass) of an atom of hydrogen taken as the unit, and it was long supposed that, so expressed, the atomic weight (or mass) of oxygen was 16. But it having been found that this value is not correct and that the true number is more nearly 15.88, while the numbers for most of the other elements have been directly compared with that for oxygen, many chemists prefer to represent the oxygen atom by 16, and thus to assign to hydrogen the value 1.0079 or 1.008. Under ★element will be found lists of atomic weights both on the basis of H=1 and of O=16.

Atomiosoma (ą-tom″i-ō-sō′mą), *n. pl.* [NL., for **atomosoma*, < Gr. *ἀτομος*, not cut (see *atom*), + *σῶμα*, body.] Same as *Monoeyttaria*.

atonement, *n.*—**Day of Atonement.** Same as *Yom Kippur*. See *Jewish* ★*fasts*.

atonia (a-tō′ni-ą), *n.* [NL.] Same as *atony*.

atonicity (a-tō-nis′i-ti), *n.* [*atonic* + *-ity*.] Same as *atony*.

atonied (at′ō-nid), *a.* [*atony* + *-ed*.] Marked by atony. *Buck*, Med. Handbook, II. 751.

atoning (ą-tōn′ing), *p. a.* Expiatory; that makes or is intended to make amends for offenses; reconciling: as, Christ's *atoning* blood.

Dion's *atoning* friendliness has a ring of artificiality.
George Eliot, Theo. Such, p. 122.

atoningly (ą-tōn′ing-li), *adv.* By way of atonement.

Being just, I had slain their slayer *atoningly*.
Swinburne, Atalanta, l. 1647.

atopomenorrhea, atopomenorrhœa (at″ō-pō-men-ō-rē′ą), *n.* [Gr. *ἀτοπος*, out of place, + NL. *menorrhœa*.] Vicarious menstruation (which see, under *vicarious*).

Atoposauridæ (at″ō-pō-sâ′ri-dē), *n. pl.* [NL. **Atoposaurus* (< Gr. *ἀτοπος*, strange, + *σαῦρος*, lizard) + *-idæ*.] A family of extinct crocodilians of small size, with small triangular skull and dorsal armor composed of paired longitudinal series of oblong plates. Its members are found only in the Upper Jurassic rocks.

atoxyl (a-tok′sil), *n.* [*atox(ic)*? + *-yl*.] An organic arsenical compound, a sodium salt of arsenic acid in which a molecule of aniline has replaced one of the hydroxyl groups. It has been used in the treatment of sleeping-sickness and other forms of trypanosomiasis, but is liable to produce incurable blindness.

atractylic (at-rak-til′ik), *a.* [*Atractylis* + *-ic*.] Derived from *Atractylis*.—**Atractylic acid,** a crystalline acid, $C_{30}H_{54}S_2O_{18}$, found as a potassium salt in the roots of *Atractylis gummifera*.

atractylin (a-trak′ti-lin), *n.* [*atractyl(ic)* + *-in*².] An amorphous, gummy, sweet glucoside, $C_{20}H_{30}O_6$, formed by the decomposition of atractylic acid.

atranoracid (at-rą-nor′a-sid), *n.* [*atranor(ic)* + *acid*.] Atranoric acid.

The products [of metabolism in lichens] he has determined are *atranoracid*, one of the most wide-spread lichen compounds. . . .
Jour. Roy. Micros. Soc., Aug., 1903, p. 537.

atranoric (at-rą-nor′ik), *a.* [Irreg. < L. *atra* + (*Leca*)*nora* (see def.) + *-ic*.] Noting an acid, a crystalline compound, $C_{19}H_{18}O_8$, found in *Lecanora atra* and other lichens. It melts at 196° C. Also called *atranorin*.

atranorin (at-rą-nō′rin), *n.* [*atranor(ic)* + *-in*².] Atranoric acid.

atranorinic (at-rą-nō-rin′ik), *a.* [*atranor(ic)* + *-in*¹ + *-ic*.] Noting an acid, a compound, formed by the decomposition of atranoric acid, to which Paterno gave the formula $C_9H_{10}O_4$, but which Hesse has shown to be 1, 3, 5-trihydroxytoluene, $C_6H_2(OH)_3CH_3$. It crystallizes in needles which melt at 104° C. Called by Hesse *physciol*.

atraric (a-trā′rik), *a.* [*atra(no)ric*.] Derived from atranoric acid.—**Atraric acid,** betorcinol carboxylic methyl ester, $(CH_3)_2C_6H(OH)_2CO_2CH_3$. It is formed together with trihydroxytoluene (physciol) by the decomposition of atranoric acid. It crystallizes in leaflets which melt at 141° C. Also called *ceratophyllin* and *physcianin*.

Atremata (a-trem′a-tą), *n. pl.* [NL., < Gr. *ἀ-* priv. + *τρῆμα*, a hole.] In Beecher's classification of the brachiopods, the primary order including inarticulate shells with the pedicle emerging from between the two valves, both sharing the pedicle-opening. Contrasted with *Neotremata*, which are also inarticulate, but which have the pedicle-opening restricted to the ventral valve. *Obolus* and *Lingula* are examples of *Atremata*. The species are mostly Paleozoic.

atrematous (a-trem′a-tus), *a.* Having the characters of the *Atremata*.

atremble (ą-trem′bl), *adv.* [*a*³ + *tremble*.] In a trembling state; quivering.

I'll write about her presently;
My hand 's *a-tremble* as I had just caught up
My heart to write with, in the place of it.
Mrs. Browning, Aurora Leigh, vi.

atremia (a-trē′mi-ą), *n.* A condition in which there is inability to maintain an upright position, but no loss of the power of voluntary movements.

atresic (a-trē′sik), *a.* Same as *atresial*. *Nature*, Aug. 20, 1903, p. 384.

atretic (a-tret′ik), *a.* [*atresia* (*atret-*) + *-ic*.] Of or pertaining to atresia; characterized by atresia; imperforate.

The *atretic* follicle differs from the developing corpus luteum in the absence of any discharge to the exterior; the membrana granulosa degenerates and disappears prior to any considerable ingrowth from the connective-tissue wall. *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 485.

Atrichia, *n.* **3.** [*l. c.*] In *pathol.*, absence of hair; alopecia or atrichosis.

atrioporal (ā″tri-ō-pō′rąl), *a.* Relating to the atriopore.

atriopore (ā′tri-ō-pōr), *n.* [L. *atrium*, hall, + Gr. *πόρος*, passage.] The posterior opening of the body-cavity of the lancelet, *Branchiostoma*, from which issues the water taken in at the mouth. *Parker and Haswell*, Zoology, II. 39.

atripaic (at-ri-pā′ik), *a.* Noting a crystalline acid, $C_6H_6O_{12} + 6H_2O$, found in sugar-beets. It may be reduced to hydroxyeitric acid, $C_6H_6O_8$.

Atrium genitale. (*a*) In *Turbellaria*, a cavity into which open the ducts from the male and female sexual glands, the uteri, and the yolk-glands. (*b*) In *Oligochæta*, a dilatation on the *vas deferens* close to its opening.—**Atrium laryngis,** the portion of the larynx which lies above the superior or false vocal cords.—**Atrium of infection,** in *pathol.*, the point of entrance into the body of the contagium of disease.—**Atrium vaginæ.** Same as *vestibule*, 2 (*b*).—**Corinthian atrium,** an atrium of which the compluvium is large and the curb or plate of the roof is supported by a number of columns (which need not be of the Corinthian style).—**Displuviate atrium,** an atrium in which the roof sloped outward, so that the water did not run toward the compluvium and into a cistern, but was thrown outward as in a modern house: a rare form.—**Testudinate atrium,** an atrium of which the roof had no opening, so that it was merely a large central room out of which other rooms opened. As the atrium was the only important room of the unpretentious early Roman house, this form must have been common, especially in places more exposed to cold than was the city of Rome.—**Tetrastyle atrium,** an atrium in which four columns only were used at the four corners of the opening; differing from the Corinthian form, in which there was a row of columns on either side.—**Tuscan atrium,** an atrium in which the roof is supported on girders, having no columns even at the corners of the compluvium.

atrochal (at′rō-kal), *a.* [Gr. *ἀ-* priv. + *τροχός*, a wheel, + *-al*¹.] In *Polychæta*, having the surface of the larva uniformly covered with cilia and the preoral circlet of cilia absent.

a trofei (ä trō-fā′i), [It.] With trophies: said of decorative motives consisting of musical in-

struments, arms, tools, and other trophies, painted on certain majolica wares, particularly those of Urbino, Italy.

atrofy, *n.* and *v. i.* A simplified spelling of *atrophy.*

atronene (at′rō-nēn), *n.* A hydrocarbon, $C_6H_5.C_{10}H_9$, formed by the slow distillation of isatropic acid. It boils at 325° C.

atronic (a-tron′ik), *a.* Noting an acid, $C_{17}H_{14}O_2$, formed by distillation of isatropic acid. It is amorphous and melts at 164° C.

Atrophic nasal catarrh. See ★*catarrh.*

atrophy, *n.*—**Acute yellow atrophy of the liver.** See *yellow.*—**Atrophy of disuse,** atrophy resulting from lack of normal use, as of the muscles in an immobilized limb.—**Compression atrophy,** in *pathol.*, wasting due to the action of continuous pressure.—**Concentric atrophy,** diminution in size of a hollow organ, as the heart, with reduced capacity of its cavity.—**Eccentric atrophy,** pathological increase in the size of the cavity of a hollow organ, as the heart, with attenuation of the walls.—**Granular atrophy of the kidney,** chronic interstitial inflammation resulting in compression and atrophy of the parenchyma of the kidney, usually associated with arteriosclerosis. See *granular kidney,* under *granular.*—**Gray atrophy,** a form of degeneration of the spinal cord and also of the optic disk in which the nerve matter becomes of a grayish color.—**Inflammatory atrophy,** atrophy of the functionating elements of an organ, as the kidney, due to overgrowth of the fibrous structures consequent upon chronic inflammation.—**Progressive muscular atrophy.** See *progressive.*—**Senile atrophy,** normal shrinkage of the tissues in the aged.

atropic, *a.*—**Atropic acid,** α-phenyl-acryllic acid, $CH_2=C(C_6H_5)CO_2H$, formed by boiling atropin with barium hydroxid. It crystallizes in scales or needles which melt at 106° C.

Atropidæ (a-trop′i-dē), *n. pl.* [NL., ⟨ *Atropos* + *-idæ.*] A family of corrodentian insects, distinct from the *Psocidæ,* including the minute forms known as *book-lice.* They are widely distributed, and are commonly found on book-shelves and in old volumes and records, where they feed on the starch paste used in binding. They also feed on flour and meal.

atropinization (at″rō-pin-i-zā′shon), *n.* [*atropinize* + *-ation.*] The act of bringing under the influence of atropin; specifically, of inducing the mydriatic effects of that drug.

Atropos, *n.* **4.** [*l. c.*] A neuropterous insect of the genus *Atropos.*—**Divining atropos,** *Atropos divinatorius* of Europe, so named on account of its supposed ability to predict death.

atroscine (at′rō-sin), *n.* The dihydrate of the optically inactive scopolamine, $C_{17}H_{21}O_4N + H_2O$. It is crystalline and melts at 37° C. The levorotatory form of the base is sometimes called *hyoscine.*

A-truss (ā′trus″) *n.* A roof- or bridge-truss shaped like the letter A spread out. It is either a simple truss consisting of two rafters and a tie-beam only, or it is a braced truss. *Lockwood.*

atta[2] (ät′ä), *n.* [Brazilian.] **1.** The name in Brazil of the fruits of several trees belonging to the genus *Anona,* especially of those of *A. obtusiflora,* a native of the Antilles and cultivated in Brazil.—**2.** The name given by the Singalese to the sweet-sop, *Anona squamosa,* which was introduced into India and Ceylon by the Portuguese several centuries ago. In India the name is represented by *ata,* and in Guam and the Philippines by *atis.* See *Anona,* ★*atis* (with cut), and *sweet-sop.*

attach, *v. t.*—**Attaching system,** the mnemonic system which consists in physically attaching an object to be remembered to another that is sure to be thought of. Thus a man may adopt the habit, in visiting, of putting his hat over his umbrella, lest he should otherwise forget the latter.

attacher (a-tach′ėr), *n.* One who arrests or seizes person or property under a writ of attachment. [Obsolete or rare.]

attachment, *n.*—**Attachment of privilege.** See ★*privilege.*—**Solar attachment.** See ★*solar.*

attachment-disk (a-tach′ment-disk), *n.* The holdfast of an alga.

attachment-pad (a-tach′ment-pad), *n.* The disk-like end of the narrow stem growing from the aboral pole of certain medusæ, as *Halicystus,* used for temporary fixation. *Proc. Roy. Soc.* (London), 1903, II. 186.

attacht, *pp.* A simplified spelling of *attached.*

attacine (at′a-sin), *a.* Of or belonging to the genus *Attacus,* or resembling the moths of that group. *A. S. Packard,* Text-book of Entom., p. 634.

attack, *n.*—**Cozio counter-attack,** in *chess-playing,* a variation of the 1 P—K 4, P—K 4; 2 Kt—KB 3, P—K B 4 variation in the King's Knight's gambit.—**Donop's** or **Ghulam Kassim's attack,** in *chess-playing,* a variation of the King's Knight's gambit, first played by Colonel Donop of Brussels, namely, 5 P—Q 4. See *King's Knight's* ★*gambit.*—**Fraser's attack,** in *chess-playing,* a continuation or variation of the Scotch gambit (4 Kt x P, Q—R 5; 6 Kt—KB 3).—**Grimm's attack,** in *chess-playing,* a certain continuation against an old-fashioned defense to the King's Bishop's gambit.—**Lolli's attack,** in *chess-playing,* a continuation of the Muzio gambit, white sacrificing a second piece, namely the king's bishop, on his fifth move. However, this attack is considered unsound.—**Macdonnell's attack,** in *chess-playing,* a variation of the king's bishop's opening wherein the first player sacrifices two pawns at the outset.—**Mortimer's attack,** in *chess-playing,* a variation of the Evans gambit (which see, under *gambit*).—**Ponziani's attack,** in *chess-playing,* one of the forms of the King's Knight's opening (3 P—QB 3). Also called *Staunton's opening.*

attacolite (a-tak′ō-līt), *n.* [Said to be ⟨ Gr. *ἀτταϰείς,* 'the salmon,' + *λίθος,* stone. The name is said to refer to the color.] A hydrated phosphate of aluminium and manganese occurring in light-red massive forms: found in Sweden.

Attacus (at′a-kus), *n.* [NL. (Hübner, 1816), ⟨ Gr. *ἄτταϰος,* also *ἀττάϰης,* a kind of locust.] A genus of saturniid moths, comprising some of the largest and most beautiful species, now mostly merged in the genera *Samia, Philosamia,* and *Callosamia.*

Attagenus (at-a-jē′nus), *n.* [NL. (Latreille, 1802), ⟨ Gr. *ἀτταγήν,* a bird: see *attagen.*] A genus of dermestid beetles, some of them of world-wide distribution. The European *A. pellio* is a well-known museum pest and a general enemy of furs and skins, and *A. piceus,* common to Europe, Asia, and North America, has similar habits, damaging carpets and woolen goods in the United States.

Attagides (a-taj′i-dēz), *n. pl.* [NL., pl. of *Attagis.*] A group of wading birds comprising the genera *Attagis* and *Thinocorus.* The family *Thinocoridæ* is considered to have the rank of a suborder.

Attalid (at′a-lid), *a.* Of or pertaining to one of the three kings named Attalus, who reigned at Pergamon in the second century B. C.

> Naturally the island which stood in the closest relation to the *Attalid* capital as a centre of Art was Rhodes.
> *L. R. Farnell,* Jour. Hellenic Stud., XI. 203.

attar, *n.* The chemical composition of this valuable perfume has been carefully studied, and its principal constituent, geraniol ($C_{10}H_{18}O$), obtained from cheaper sources (as from the essential oil of Indian grass or Turkish geranium), is now—with perhaps the addition of some of the minor constituents, also from relatively cheap sources—offered for sale as *synthetic attar of roses.*

attention, *n.* **1.** The concept of attention has come to play an increasingly large part in the psychological systems worked out under the influence of the experimental method. Looked at contentwise, as a certain modification of the make-up or structure of consciousness, attention consists essentially of a distribution of clearness values (the ideas attended to being clear, the ideas attended from obscure), accompanied by organic sensations due to the adjustment of the observing sense-organ or to the general bodily attitude (as in the scout, the eavesdropper, etc.), and by affective process. Looked at from the point of view of mental function, attention is simply the mind at work, the concentration or focalization of consciousness upon a given topic, whether of perception or of thought. "If and so far as any content of consciousness is a perception, idea, conception, apprehension or awareness of somewhat, the activity in and through which this content exists is *attentive* activity." (*Stout.*) It is customary to distinguish types of attention as *passive* and *active* or as *involuntary* and *voluntary.* The difference, however, is simply a difference of condition. *Passive attention* is constrained attention, attention which one cannot help giving, unequivocally conditioned attention: a loud sound, a moving object in the visual field, things that fit in with the present contents of consciousness—such stimuli compel attention, whether one will or not; and the reasons for their compelling power are to be sought in biology, not in psychology. *Active attention* is attention under difficulties, attention with distraction, attention to which there are rival claimants,—in short, an equivocally conditioned attention which is accompanied by the experience of effort: the organism is called upon, so to speak, to adjust itself to two different situations at one and the same moment. It is important to notice that with repetition of the conflict some one of the rival claimants will gain a permanent victory, so that active passes over into a secondary passive attention. The man of science immersed in his special study has traveled beyond the stage of active to this ultimate stage of secondary passive attention. Experimental work upon the attentive state has been concerned with the fluctuations of attention, or the duration of a single attentive effort or concentration; the range or scope of attention, or the number of ideas to which one can attend at one time; the effects of complication, or the subjective temporal displacement of disparate impressions simultaneously presented; distraction, or the behavior of attention when rival claimants of varying compulsive power are artificially introduced into the attentive consciousness; the organic concomitants of attention, changes of pulse, respiration, etc., which accompany the induction of the attentive state; and the effects of attention upon special mental functions, such as reproduction, retention, discrimination, action, etc. No adequate theory of attention has as yet been propounded. It cannot be derived from affective process, from intensity of sensation, or from any special group of sensations (as sensations of strain); neither can it be identified with motor adjustment. It seems probable that attention is paralleled, on the physiological side, by processes of reinforcement (or facilitation) and processes of inhibition running their course in the cerebral cortex, and that the feelings and organic sensations which accompany attention are in fact mere concomitants and not essential constituents.

At the same time, it appears that certain special phenomena, usually referred to the center, are in reality due to changes at the periphery of the organism; thus it is very doubtful whether 'fluctuations of attention' are not due to fluctuations of excitatory process in the sense-organ. It may be, too, that psychology has tended to make the attentive state unitary when actually it is diverse, and that we ought rather to speak of *visual attention, cutaneous attention,* etc., than of attention in the abstract.—**Attention wave,** in *psychol.*, a single pulse or rise and fall of the attention, considered as a fluctuating or periodic process.—**Field of attention.** (*a*) The range of clear consciousness; the contents of consciousness at any moment attended to. (*b*) The whole of consciousness, regarded as made up of contents which may successively become clear under attention. The first usage is based on the analogy of the visual field of regard, the second on the analogy of the field of vision.—**To call attention.** See ★*call*[1], *v. t.*

attentional (a-ten′shon-al), *a.* [*attention* + *-al*[1].] Of or pertaining to attention; due to or conditioned by attention.

> The experiments on *attentional* time-displacement form one of the most interesting and most difficult chapters of experimental psychology.
> *E. B. Titchener,* Exper. Psychol., I. ii. 206.

attenuated (a-ten′ū-ā-ted), *p. a.* **1.** Thin; slender: as, long *attenuated* fingers; *attenuated* parchment.—**2.** Thin in consistency; diluted; rarefied: as, "*attenuated* small beer," *Lamb,* Elia.

attenuation, *n.* **5.** In *elect.*: (*a*) The decrease of telephonic currents with increasing distance, due to the absorption of current by the electrostatic capacity of the telephone line. (*b*) More generally, the decrease of electrical effects with increasing distance.

attenuative (a-ten′ū-ā-tiv), *a.* and *n.* Attenuant.

attestant (a-tes′tant), *a.* and *n.* **I.** *a.* Bearing witness.

II. *n.* An attesting witness; an attester.

attestment (a-test′ment), *n.* [*attest* + *-ment.*] Testimony; attestation. *J. M. Neale,* Mediæv. Hymns, p. 155. *N. E. D.*

attic[2], *n.* **3.** The upper portion of the tympanic cavity of the ear. *Med. Record,* Feb. 14, 1903, p. 279.—**4.** Figuratively, a man's 'top story'; the skull.

> Here a gentleman present, who had in his *attic*
> More pepper than brains, shrieked—The man's a fanatic.
> *Lowell,* Fable for Critics, st. 50.

False attic, in *arch.*, an external division of the wall resembling an attic, but having no story of rooms behind it: in this sense often used for a dwarf wall built above the main cornice to receive an inscription or for a purely decorative purpose.

attingent (a-tin′jent), *a.* Touching or coming in contact with each other, as the elytra of a beetle or the tegmina of a grasshopper.

attitude, *n.* **3.** In *geol.*, the particular position or relation which the land bears at any time to the ocean. The geologist's point of view is that the land either has emerged from the oceanic waters or is to be again buried by them, and therefore at any particular time assumes an attitude with relation to the ocean. The term is also applied to the position and structural relations of any bed or mass of rock to others.

> Perhaps a word of general explanation is necessary in speaking of the *attitude* of the land. Geologists are prone to talk of elevation and subsidence—of the uprising of the earth's crust at one place or at one time, and of its downsinking at another place or another time. Their language usually seems to imply the rise or fall of an area all together, without any relative displacement of its parts; but you will readily see that, unless a rising or sinking tract is torn asunder from its surroundings, there must be all about it a belt in which the surface assumes an inclined position, or, in other words, where the *attitude* of the land is changed. *Smithsonian Report,* 1890, p. 239.

Crucifixion attitude, a posture assumed in certain cases of hystero-epilepsy, in which the arms are extended at right angles to the body, the lower extremities being together and in the axis of the trunk.—**Illogical attitudes,** various strange and seemingly almost impossible attitudes sometimes assumed by subjects of hystero-epilepsy.

attitudinization (at-i-tū-di-ni-zā′shon), *n.* Attitudinizing; posturing or the striking of attitudes.

attorney[1], *n.*—**Attorney's certificate.** (*a*) In *English law,* a certificate of the commissioners of stamps that the attorney therein named has paid the annual duty. *Bouvier,* Law Dict. (*b*) In *United States law,* the certificate of the court admitting an attorney to practise, which testifies that the attorney has qualified and taken his oath of office.—**Prosecuting attorney, State's attorney,** terms usually synonymous with *district attorney.* They indicate the persons representing the people of the State in a criminal action. They are to be distinguished from *attorney-general* and *deputy attorney-general,* whose duties are to represent the State in civil actions.

attraction, *n.*—**Crystallic attraction,** the attraction between crystalline masses in alloys and other composite solids. "There is evidence that the large crystalline masses in solids have an attractive force for the smaller particles of the same kind, and under suitable conditions draw them to themselves." *J. E. Stead,* Jour. Roy. Micros. Soc., April, 1904, p. 254.—**Law of attraction and repulsion,** a rhetorical name for the assumption

that the fundamental processes of society are identical with those of the physical world; that the drawing together and the separations of men are inevitable effects of their natures, like chemical affinities and oppositions. *Gumplovicz*, Outlines of Sociol., p. 33.—**Mass attraction**, the mutual attraction between masses, taken as a whole, as distinguished from the attraction between the individual molecules of a body; molar attraction. —**Newtonian attraction**, the gravitational attraction which each portion of matter in the universe has for every other portion.

attraction-cone (a-trak′shon-kōn), *n.* In *embryol.*, the conic protrusion of the surface protoplasm of the egg at the point where the spermatozoön is about to enter.

attraction-sphere (a-trak′shon-sfēr), *n.* Same as ★*astrosphere* and ★*centrosphere*.

attributal (at′ri-bū-tal), *a.* Of the nature of an attributive: as, *attributal* or descriptive names. *Jour. Amer. Folk-lore*, Jan.–March, 1902, p. 14.

attritive (at′ri-tiv), *a.* Involving attrition or wearing away by attrition: as, "subjected to some further *attritive* process," *Hugh Miller*, Rambles Geol., II. 246.

attuite (a-tū′it), *v. i.* and *t.*; pret. and pp. *attuited*, ppr. *attuiting*. [L. *ad*, to, + *tueri* (pp. *tuitus*), look to, regard: see *tuition* and *intuit*.] In *psychol.*, to have attuition; to become conscious of objects outside ourselves. The term was introduced by *S. S. Laurie*.

He carries its operation before reason still further, supposing that "attuition" makes particular inferences about outside objects, and that a man, or a dog, through association, "*attuites*" sequence and invariableness of succession, and, in fact, gets as far in the direction of causation as Hume thought it possible to go at all. *Encyc. Brit.*, XXX. 677.

attuition (at-ū-ish′on), *n.* In *psychol.*, a hypothetical process which is more than sensation and less than perception, involving the coördination of sensations into an aggregate and the reference of this aggregate to the outside world.

His [S. S. Laurie's] psychology is founded on a proposed distinction between "*attuition*" and reason. His theory of "*attuition*," by which he supposes that we become conscious of objects outside ourselves, is his "return to dualism," . . . "*attuition*." It is, according to him, something more than sensation, but less than perception; it is common to us with lower animals such as dogs; its operation consists in co-ordinating sensations into an aggregate which the subject throws back into space, and thereby has a consciousness of a total object outside itself, e. g., a stone or a stick, a man or a moon. *Encyc. Brit.*, XXX. 677.

atty. A contraction of *attorney*.

atua (ä-tō′ä), *n.* [Polynesian, Maori, Samoan, Tahitian *atua*, Tongan *otua*, Marquesan *etua*, etc., a god, demon.] The supernatural powers; more particularly the gods and deified human beings, but also guardian spirits, in some cases even hostile spirits.

Atylus (at′i-lus), *n.* [NL. (Salisbury, 1807), < Gr. *ἀ-* priv. + *τίλος*, callosity. The name alludes to the absence of the four hypogynous glands or scales which occur in some of the related genera.] A genus of dicotyledonous plants belonging to the family *Proteaceæ*. See *Petrophila*[1].

Atypical children, a term suggested to designate children who are not strictly abnormal or degenerate, yet who are potentially so; children on the border-line between normality and degeneracy.

atypy (at′i-pi), *n.* [Gr. **ἀτυπία*, < *ἄτυπος*, not typic: see *atypic*.] Departure from the typic or normal condition. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 610.

aua (ä′ö-ä), *n.* [Maori *aua*, a sea-mullet, = Tahitian and Samoan *aua*, a small fish.] A name of *Agonostomus forsteri*, one of the mullets found in abundance on the coasts of New Zealand and Tasmania.

aubépine (ō-bā-pēn′), *n.* [F., hawthorn: see *albespine*.] A trade-name for anisaldehyde. It is used as a perfume.

Aubergine purple. See ★*purple*.

aubernage (ō-ber-näzh′), *n.* [F., a local term in the department of Yonne.] A disease of the grape-vine caused by a fungus, *Dematophora necatrix*, which attacks the roots.

Aubert diaphragm. See ★*diaphragm*.

aubonne (ō-bon′), *n.* A silver crown of Lorraine in the 18th century, named from M. d'Aubonne, director of the mint 1724–1728.

Aubrey group. See ★*group*[1].

Aubrieta (â-bri-ē′tä), *n.* [NL. (Adanson, 1763) for Claude *Aubriet*, a botanical draftsman.] A genus of perennial, bright-flowered plants, more or less evergreen trailers, of the family *Brassicaceæ*, sometimes grown for rock-work or edgings. Twelve species are found in Italy, Greece, Asia Minor, and Persia. *A. deltoidea* (including *A. Græca*) is commonest in America.

Auchenaspis (â-kē-nas′pis), *n.* [Gr. *αὐχήν*, neck, + *ἀσπίς*, shield.] A name given by Egerton to cephalaspid fish remains from the Upper Silurian and lower Old Red Sandstone passage-beds of Hereford: equivalent to *Thyestes* of the Baltic Upper Silurian.

Auchenopterus (â″kē-nop′te-rus), *n.* [NL., < Gr. *αὐχήν*, neck, + *πτερόν*, wing.] A genus of small blennies found in the rock-pools of the West Indies and the west coast of Mexico: characterized by having the soft dorsal reduced to a single ray.

au clou (ō klō′). [F.] With the nail: applied to gold which has been burnished with a nail fixed in a wooden handle, as that of the old soft-paste porcelain of Sèvres. This style of burnishing may be recognized by the scratches which are found on the gilding. The nail was replaced by the agate burnisher about the beginning of the nineteenth century.

auction-penuchle (âk′shon-pē′nuk-l), *n.* A variety of penuchle in which the players bid for the privilege of making the trump, naming the number of points they will make. It is always played by four hands, the bidder's side having the first count. See ★*penuchle*.

auction-pool, *n.* On shipboard, the number of miles the ship will run next day is assumed, and 10 or 15 above and below this number are subscribed for and drawn. Each number is then put up at auction, and may be bought in by the owner or by any other passenger, half the amount realized being returned to the subscriber for that number. Choice of the highest and lowest numbers is usually sold separately at the end. The holder of the number agreeing with the ship's run next day, or the one nearest to it if it is below or above any number drawn, takes the entire pool.

aucubin (â′kū-bin), *n.* [*Aucuba* + *-in*[2].] A slightly bitter crystalline glucoside found in *Aucuba Japonica*. It melts at 181° C.

audad (ou′dăd), *n.* Same as *aoudad*. *Geog. Jour.* (R. G. S.), XI. 601.

audiclare (â′di-klār), *n.* [Irreg. < L. *audire*, hear, + *clarus*, clear. Cf. *clairaudient*.] An apparatus for use in defective hearing, consisting of a tube with a diaphragm attachment at one end and a bell-shaped expansion at the other.

audiential (â-di-en′shal), *a.* Of or pertaining to an audience.

There must be *audiential* response or the actor's portrayal is dead. *Marcella Sembrich*, in New York Independent, Oct. 5, [1899.

audile, *n.* **II.** *a.* Of, pertaining to, or acting through the auditory nerves and tracts; ear-minded.

audist (â′dist), *n.* One who has an ear-memory; one whose memory is more tenacious of things heard than of things only seen.

Charcot, who classified people into "visualists"—those whose recollections were chiefly of things seen, who had to read a name in order to remember it; "*audists*"—those whose memories were of things heard, whose auditory sense was paramount, etc. *Pop. Sci. Mo.*, April, 1895, p. 732.

Audit certificate, the certificate issued by an auditor on the completion of an audit.

The efficiency, in most cases, of audits conducted by skilled accountants has led the public to attach exceptional value to their *audit certificates*, and to demand extensive knowledge and ability in the conduct of the audit of the accounts of public companies. *Encyc. Brit.*, XXV. 25.

audition, *n.*—**Chromatic audition**, a subjective impression of color excited by sounds.

auditization (â-di-ti-zā′shon), *n.* [*auditize* + *-ation*.] In *psychol.*, representation in auditory terms; imaging in sound.

In silent reading there is a similar motorization, or *auditization*. *E. B. Huey*, Amer. Jour. Psychol., XII. 309.

auditize (â′di-tīz), *v.*; pret. and pp. *auditized*, ppr. *auditizing*. [*audit* + *-ize*.] In *psychol.*, to represent in auditory terms; to image in sounds. *Amer. Jour. Psychol.*, XII. 119.

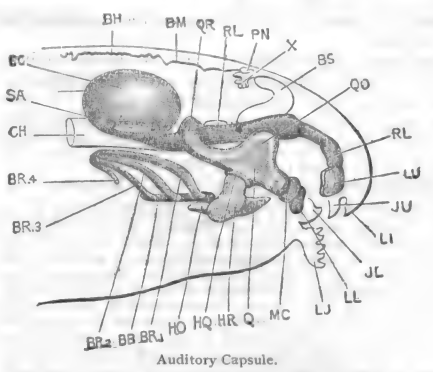
Auditor of the imprest. See ★*imprest*.

auditor-general (â″di-tor-jen′e-ral), *n.* In some States, the title given to the chief auditor of the State.

auditorially (â-di-tō′ri-al-i), *adv.* As a hearer or auditor; through the ear (as opposed to through the eye). *Rolleston*, Memoirs, p. 910.

Auditory agraphia. See ★*agraphia*. —**Auditory aphasia.** See ★*aphasia*.—**Auditory area.** Same as (*a*) ★*auditory center* and (*b*) ★*auditory field*.—**Auditory capsule**, in *embryol.*, the cartilaginous capsule surrounding the membranous labyrinth of the ear in the vertebrate embryo: same as *otic capsule*. (See cut in next column.) —**Auditory cells**, cells in the internal ear which bear the auditory hairs.—**Auditory center**, the supposed

nerve-center for hearing in the first temporosphenoidal convolution of the brain.—**Auditory epithelium.** Same as *auditory hairs*. (See extracts under *auditory*.)



Auditory Capsule.

The skull of a 12 mm. tadpole, seen from the right side. The notochord, the brain, and the entire head are represented in outline, in order to show the relations of the skull to them. Magnified 30 times.

BB, basibranchial; BH, roof of hind-brain; BM, roof of mid-brain; BR.1, BR.2, BR.3, BR.4, first, second, third, and fourth branchial bars; BS, cerebral hemisphere; CH, notochord; EC, *auditory capsule*; HO, urohyal; HQ, articulation of ceratohyal with quadrate; HR, ceratohyal; JL, lower jaw; JU, upper jaw; LI, upper lip; LJ, lower lip; LL, lower labial cartilage; LU, upper labial cartilage; MC, Meckel's cartilage; PN, pineal body; Q, quadrate; QO, orbital process of quadrate; QR, connection of quadrate with trabecula; RL, trabecula cranii; SA, membranous patch in the outer wall of the auditory capsule, in which the stapes is developed at a slightly later stage; X, choroid plexus of third ventricle. (From Marshall's "Vertebrate Embryology.")

—**Auditory field**, the space throughout which a sound can be heard.—**Auditory ganglion.** Same as *acoustic tubercle* (which see, under *acoustic*).—**Auditory hairs.** (*b*) In *entom.*, certain hairs of the antennæ of the male *Culicidæ* and *Chironomidæ*, which experimental tests seem to prove to have an auditory function.—**Auditory hyperæsthesia**, abnormal acuteness of hearing.—**Auditory meatus.** Same as *auditory canal*.—**Auditory nuclei**, the nuclei of origin, within the brain, of the auditory nerves.—**Auditory plate.** (*b*) An expanse of epithelium which receives the terminations of the auditory nerve. (*c*) The portion of the temporal bone which forms the roof of the tympanum.—**Auditory saucer**, in *embryol.*, the saucer-shaped invagination of the ectoderm, which eventually gives rise to the otocyst or membranous labyrinth of the ear.

Auer burner, light. See ★*burner*, ★*light*.

Auerbach, ganglion of. See ★*ganglion*.

auerlite (ou′ėr-līt), *n.* [Named after Carl *Auer* von Welsbach.] A rare mineral occurring in from yellow to red tetragonal crystals and consisting of the silicate and phosphate of thorium: found in North Carolina.

auge[2] (ou′ge), *n.*; pl. *augen* (-gen). [G. *auge*, AS. *ēage*, E. *eye*.] A word adopted from the German by many English and American petrographers to designate a round or lenticular nodule, either a single mineral particle or an aggregate, often found in gneissic or schistose rocks, which in comparison with the inclosing finer-grained material produces an appearance compared to that of an eye. The term *eye* is less extensively used in this sense.

augelite (â′je-līt), *n.* [Irreg. < Gr. *αὐγή*, light, luster, + *λίθος*, stone.] A hydrated phosphate of aluminium occurring in tabular monoclinic crystals and in cleavable masses with strong pearly cleavage: first found in Sweden, and now also in Bolivia.

augengneis (ou′gen-gnīs), *n.* [G. *augen*, eyes, + *gneis*, gneiss.] A variety of gneiss which has lenticular nuclei, of one mineral or of several, more coarsely crystalline than the normal components of the rock, and around which the foliation forks and passes, so as to suggest eyes within eyebrows and eyelashes.

augite, *n.* The name of this member of the pyroxene group of silicate minerals is frequently used in petrography in composition with the name of any rock in which it occurs as a prominent or noteworthy constituent: as, *augite-andesite*, *augite-syenite*, *augite-gneiss*, etc.

augite-rock (â′jīt-rok), *n.* In *petrog.*, a term formerly applied to igneous or metamorphic rocks of granular texture consisting chiefly of augite. Most of the rocks once so named are now called *pyroxenite*.

augitite (â′ji-tīt), *n.* [*augite* + *-ite*[2].] In *petrog.*, a non-feldspathic, basaltic rock consisting essentially of augite and magnetite with a generally scanty glass base. Augitite is closely related to limburgite, from which it differs in its freedom from olivin.

augitophyre (â′ji-tō-fīr), *n.* [*augite* + (*por*)*phyr*(*y*).] In *petrog.*, a porphyry in which the most prominent phenocrysts are of augite:

analogous to orthophyre. The term was first applied by Scacchi to the augitic and leucitic lavas of Italy in which the augite is megascopically the more prominent.

augitophyric (â″ji-tō-fir′ik), *a.* [*augitophyre* + *-ic.*] Porphyritic through the presence of augite phenocrysts. See ★*augitophyre.*

augitoporphyric (â″ji-tō-pôr-fir′ik), *a.* [*augite* + *porphyr(it)ic.*] Augitic and porphyritic: applied to a porphyritic igneous rock whose phenocrysts are augitic.

augmental (âg-men′tal), *a.* and *n.* [*augment* + *-al*[1].] Formed by augmentation, as a number. See ★*augmentation*, 6.

In tracing vestiges in the form of *augmentals*, it is clearly to be borne in mind that their significance, like that of the primary numbers, is mystical rather than quantitative.

An. Rep. Bur. Amer. Ethnol., 1897–98, p. 848.

augmentation, *n.* **6.** A hypothesis relating to the development of number systems, according to which the primary number-concept was based on the idea of the self and of the four directions *front*, *back*, *right*, *left*, and sometimes, in addition to these, *above* and *below*.

Augmentation was the process of forming higher numbers by multiplying the directions by 2, 3, etc., while the self remained single. Thus the augmentals of the former system are 1+2×4, 1+3×4, etc.; those of the latter 1+2×6, 1+3×6, etc.

W. J. McGee, An. Rep. Bur. Amer. Ethnol., 1897–98, [pp. 839–842.

7. In *astron.*, the excess of the moon's apparent diameter, seen from a given point, over its diameter as it would be if seen from the center of the earth. The excess is due to the fact that the moon, except when on the horizon, is nearer to the observer than to the earth's center.—**8.** In *bot.*, same as *multiplication*, 3.—**9.** In *law*, a share of the great tithes temporarily granted to the vicars by the appropriators, and made perpetual by a statute of Charles II.: also used in a similar sense in the Canadian law. *Bouvier*, Law Dict.—**Coefficient of augmentation.** See ★*coefficient.*

augmentor (âg-men′tor), *a.* Causing to increase; specifically, noting the nerves stimulation of which causes an increase in force and size of the cardiac contractions.

Wundt goes so far as to assume a differentiation of the bodies of nerve-cells into two parts, the anabolic inhibitory and the katabolic *augmentor* parts, and applies this hypothesis to the explanation of the valve-like nature of the paths of the spinal cord. *Nature*, Nov. 6, 1902, p. 3.

au gratin (ō gra-taṅ′). [F.] With a breaded or browned crust.

Augusta limestone. See ★*limestone.*

Augustan, *a.* **II.** *n.* One who belongs to the Augustan age or school of literature. See ★*Augustanism.*

Poetry is a spiritual thing, and, like the soul of man, it is fluent and fluctuating and impalpable. Wordsworth was half a Romantic and half an *Augustan*, and in the end his romanticism was subjugated by "an austerer mode," by his didactic passion.

Athenæum, March 18, 1905, p. 328.

Augustanism (â-gus′tan-izm), *n.* Qualities such as those which characterized the reign of the Roman emperor Augustus (63 B. C.–14 A. D.) or (especially) the Roman literature of that period.

Perhaps the most profound passages in this essay are those dealing with the period of *Augustanism* in English literature—that age of acceptance which began after Milton and ended with Gray and Collins.

Athenæum, Jan. 16, 1904, p. 78.

Augustin, *n.* **2.** [*l. c.*] A silver coin of Mexico, the dollar or peso, of 1822, of Iturbide or Augustin I.

auhi (ou′hē), *n.* [Tigré.] A name in Abyssinia of a small tree of the borage family, *Cordia Abyssinica*, which yields a valuable timber and very sweet, edible fruits. It is much cultivated in the native gardens and is planted around the villages. Also called *wanza.*

auhola (ä-ū-hō′lä), *n.* Same as ★*ahuhu.*

aukery (âk′ę-ri), *n.* A place to which auks resort: as, *Aukery*, Nameless Bay, Novaya Zemlya. *Geog. Jour.* (R. G. S.), xi, 335.

Aulacocephalus (â″la-kō-sef′a-lus), *n.* [NL. < Gr. *αὖλαξ* (*-ακ-*), a furrow, + *κεφαλή*, head.] A genus of serranoid fishes found in the Pacific and Indian oceans.

Aulacoceras (â-la-kos′ę-ras), *n.* [Gr. *αὖλαξ* (*-ακ-*), a furrow, + *κέρας*, a horn.] A genus of belemnitoid dibranchiate cephalopods from the Triassic rocks, characterized by the long, slender guard and very long phragmocone, in which are retained the septa perforated by a siphuncle.

Auld Licht, one of the party in the Scottish church, during the latter part of the eighteenth century, which held by the traditions of the original seceders. The party was made up of the conservative members of the Burghers and Antiburghers, the two divisions of the seceders.

aulete (â-lē′tē), *n.* Same as *auletes.*

Aulopidæ (â-lop′i-dē), *n. pl.* [NL., < *Aulopus* + *idæ.*] A family of lizard-fishes allied to the *Synodontidæ*. The typical genus is *Aulopus.*

Auloporidæ (â-lō-por′i-dē), *n. pl.* [NL., < *Aulopora* + *-idæ.*] A primitive family of tabulate corals having a reptant and branching corallum composed of trumpet-shaped corallites multiplying by lateral and basal gemmation. The septa are reduced to marginal striæ, and tabulæ are present in greater or less degree. They are confined to the Paleozoic rocks.

Aulopus (â-lō′pus), *n.* [NL., < Gr. *αὐλός*, a flute, pipe, + *ὤψ* (*ὠπ-*), eye, face.] A genus of lizard-fishes characterized by the roughish skull, the well-developed maxillary, and the presence of the adipose fin.

aulos (â′los), *n.*; pl. *auloi* (-loi). [Gr. *αὐλός*, a flute, pipe.] The Greek flute, which was of the direct or flageolet class. It was often double, and was provided with several finger-holes, in which stopples were sometimes inserted, probably to alter the pitch slightly. It is possible that the name *aulos* was also applied to pipes sounded by a reed, in which case they should be called oboes rather than flutes. Flute-players often wore the capistrum, a tight band encircling the head so as to support the cheeks in blowing.

Aulosteges (â-los′tē-jēz), *n.* [Gr. *αὐλός*, a flute, pipe, + *στέγη*, a roof, valve.] A genus of brachiopods having short but broad cardinal areas on both valves, the deltidium covered with spinules, and the surface of both valves thickly set with spines. It was allied to *Strophalosia*, but the valves were not adherent. It is characteristic of the Permian formation.

aulu (ä′ö-lö), *n.* [Hawaiian.] A large Hawaiian tree, *Sideroxylon Sandwicense*, of the sapota family, the thick milk-sap of which is used by the natives as bird-lime; also, a tree, *Sapindus Oahuensis*, belonging to the soapberry family.

aumil (â′mil), *n.* [Also *amil*, Hind. *'āmil*, < Ar. *'āmil*, an agent, < *'amala*, he performed a task or office.] In India, a collector of revenue in some of the native states, and the chief authority in his district. See *amaldar.*

auntly (änt′li), *a.* [*aunt* + *-ly*[1].] Natural to or characteristic of an aunt: as, *auntly* blessings; *auntly* affection. [Rare.] *N. E. D.*

aupaka (ä-ö-pä′kä), *n.* [Hawaiian.] *Isodendrion pyrifolium*, a shrub of the violet family with sweet-scented greenish-white flowers.

aur (our), *n.* [Assumed stem of Icel. *aurar* (gen. *auro*, dat. *aurum*), pl. of *eyrir*, (gen. *eyris*, dat. and acc. *eyri*), an ounce of silver, money in general, perhaps < L. *aurum*, gold.] A current subsidiary coin of Iceland, equivalent to .27 of a cent or .01 of a krona.

aura[1], *n.* **4.** [*cap.*] In *Gr. myth.*, a personification of the lighter winds or breezes, the divinities of the air. It was a subject frequently

Auræ from Terra Cotta Astragalus.

employed in Greek art. Pliny describes two marble statues of Auræ sailing by aid of their garments. The so-called Nereids of the famous Xanthian sepulchral monument in the British Museum are probably Auræ.—**Intellectual aura,** a peculiar dreamy reminiscent mental state preceding an epileptic attack.

aurally (â′ral-i), *adv.* By means of the ear or of audition; in an auditory manner.

auramine, *n.* The name is applied to two basic dyestuffs of the diphenyl-methane type. The older was discovered in 1883; the suffixes *O*, *I*, and *II* indicate various degrees of its purity and strength. The other, known as *auramine G*, was discovered in 1892, and differs from the former in that it contains a tolyl in place of a phenyl group.

Aurantia screen, a collodion film dyed with aurantia and used in orthochromatic photography. *Woodbury*, Encyc. Dict. of Photog., p. 48.

aurantiamarin (â-ran-ti-am′a-rin), *n.* The bitter constituent of the rind of bitter orange (*Citrus Aurantium vulgaris*).

aurantiin (â-ran′ti-in), *n.* [*auranti(um)* orange, + *-in*[2].] Same as ★*naringin.*

aurantine (â-ran′tin), *n.* [? ML. *aurant(ium)* + *-ine*[2].] Same as *abietene.*

aurantium (â-ran′shi-um), *n.* [NL., < ML. *aurantium*, orange: see *orange.*] In *bot.*, same as *hesperidium.*

Aureobasidium (â″rē-ō-bā-sid′i-um), *n.* [NL. (Viala and Boyer, 1891), < L. *aureus*, golden, + NL. *basidium.*] A genus of simple basidiomycetous fungi having a thin byssoid hymenial layer and basidia bearing a variable number of sterigmata with light-yellow cylindrical spores. Only one species, *A. vitis*, is known; it is the cause of a disease of the fruit and leaves of the grape in France. See ★*scald of grape.*

aureole, *n.* **2.** The zone of contact-metamorphism about an intrusive igneous mass. It is equivalent to ★*contact-zone.*

Auric acid, auric hydroxid, $Au(HO)_3$. It behaves as a weak acid, forming with caustic potash potassium aurate, an unstable substance which has been used in gilding.

aurichlorid (â-ri-klō′rid), *n.* [L. *aurum*, gold, + *chlorid.*] In *chem.*, a double chlorid of gold and some more electropositive metal or compound radical, in which the gold exhibits triad valence: as, for example, potassium *aurichlorid* ($KAuCl_4$).

auricle, *n.* **3.** (*d*) *pl.* In the echinoids or sea-urchins having dentary apparatus, a structure composed of ambulacral processes and interambulacral ridges which together underlie the jaws and afford attachment for their muscles: equivalent to *perignathic girdle.* (*e*) In lobate ctenophorans, one of the elongated plate-bearing processes found at the base of each of the four shorter swimming-plates. (*f*) In *Rotifera*, one of a pair of lateral hollow ciliated pits on the body which can be everted to serve as additional swimming-organs.—**Cat's auricle,** a condition in the human subject in which the auricle is folded over on itself.—**Darwinian auricle,** a pointed auricle: so called from the fact that Charles Darwin first called attention to its evolutionary significance.—**Wildermuth auricle,** a condition of the auricle in which the antihelix is larger than the helix.

Auricular angle, in *craniom.*, any angle formed by two lines which meet at the center of the external auditory meatus.—**Auricular appendage** or **appendix.** Same as *appendix auriculæ* (which see, under *appendix*).—**Auricular crura.** See ★*crus.*—**Auricular height,** in *craniom.*, the distance of the auricular point from the horizontal plane tangent to the vertex.—**Auricular index,** the relation of the length of the external ear to its breadth.—**Auricular septum.** Same as *septum auricularum* (which see, under *septum*).—**Auricular sinus.** Same as *sinus venosus* (which see, under *sinus*).—**Auricular triangle,** a triangle formed by lines drawn between the tip of the auricle and the two extremities of its base of insertion.

auriculare (â-rik-ū-lā′rē), *n.* In *craniom.*, the point above the middle of the auditory meatus on the superior border of the external auditory process. *Von Török.*

auricularia, *n.* **3.** [*cap.*] [NL. (Bulliard, 1786).] A genus of fungi, type of the family *Auriculariaceæ*, having an irregular gelatinous more or less ear-shaped sporocarp, with a smooth or somewhat wrinkled hymenium. *A. Auricula-Judæ* is a common and widely distributed species. See *Jew's-ear.*

Auriculariaceæ (â-rik″ū-lā-ri-ā′sē-ē), *n. pl.* [NL., < *Auricularia* + *-aceæ.*] A family of basidiomycetous fungi, belonging to the group *Protobasidiomycetes*. *Auricularia* is the most common and widely distributed genus.

Auriculariales (â-rik″ū-lā-ri-ā′lēz), *n. pl.* [NL., < *Auricularia* + *-ales.*] A small order of basidiomycetous fungi including two families, the best-known being the *Auriculariaceæ.*

auricularis, *n.* **2.** One of the muscles attached to the concha of the ear.

auriculately (â-rik′ū-lāt-li), *adv.* In an auriculate manner.

auriculation (â-rik-ū-lā′shon), *n.* [*auriculate* + *-ion.*] The development or possession of ear-like projections, as in the shells of the pelecypod mollusks.

auriculo-infraorbital (â-rik″ū-lō-in″frą-ôr′bi-tal), *a.* In *craniom.*, relating to a plane passing through the upper borders of the auricular foramina and the lower borders of the orbits, accepted by German anthropologists as the horizontal plane of the skull.

auriculospinal (â-rik″ū-lō-spī′nal), *a.* Of or pertaining to the auricular foramina and the spine.—**Auriculospinal plane.** Same as *Camper's plane* (which see, under *plane*[1]).

auricyanide (â-ri-sī′a-nid), *n.* [L. *aurum*, gold, + E. *cyanide.*] In *chem.*, a double cyanide of gold and some more electropositive metal or compound radical. It is distinguished from an aurocyanide by the fact that the gold in the latter exhibits monad valence, whereas in an auricyanide the valence is triad. For example, potassium aurocyanide (formed in the important McArthur-Forrest process for the metallurgical extraction of gold, and also largely used in electrogilding), has the composition $KAu(CN)_2$, while potassium auricyanide is $KAu(CN)_4$.

aurifex (â′ri-feks), *n.* [L. *aurifex*, < *aurum*, gold, + *facere*, do, make.] A worker in gold. *Athenæum*, Aug. 30, 1862, p. 276. [Rare.] *N. E. D.*

aurification (â″ri-fi-kā′shọn), *n.* [L. *aurum*, gold, + *-ficare*, < *facere*, make.] **1.** The working of gold; goldsmith's work.—**2.** The stopping or filling of teeth with gold. *Times* (London), Feb. 2, 1881. [Rare.] *N. E. D.*

aurochlorid, aurochloride (â-rọ̄-klō′rid), *n.* [L. *aurum*, gold, + E. *chlorid.*] In *chem.*, a double chlorid of gold and some more electropositive metal or compound radical in which the gold exhibits monad valence, as, for example, potassium aurochlorid ($KAuCl_2$).

auroduct (â′rọ̄-dukt), *n.* [L. *aura* (< Gr. *αὔρα*), air, + *ductus*, duct.] The central canal of an aurophore.

auronect (â′rọ̄-nekt), *n.* One of the *Auronectæ*.

Auronectæ (â-rō-nek′tē), *n. pl.* [NL., < Gr. *αὔρα*, air in motion, + *νήκτης*, a swimmer.] A section or other group of siphonanthous *Siphonophora*, having a large pneumatophore, a corona of nectocalyxes, and a network of canals in the jelly of the thickened trunk. The siphosome is rounded in shape. They are deep-sea forms.

aurophore (â′rọ̄-fōr), *n.* [Gr. *αὔρα*, air in motion, + *-φορος*, < *φέρειν*, bear.] In *Siphonophora*, an appendage to the pneumatocyst, containing a central tube which puts the cavity of the pneumatocyst in communication with the exterior; possibly it serves as a gas-secreting gland.

aurora, *n.* **5.** In *elect.*, an electric glow-discharge, appearing at very high voltages and somewhat resembling the aurora borealis. It first appears as a blue glow at surfaces and especially at points; at higher electric pressures or voltages pink streamers issue, which gradually lengthen with increasing voltage until ultimately a disruptive spark occurs. See *electric spark*. Also called *corona*.—**Aurora belt,** the belt of maximum auroral frequency extending from Alaska to the southern part of Canada, thence east to Labrador, northeast to northern Sweden and Norway, and east over Siberia to the starting-point.

Auroral arch, an arch of auroral light, usually symmetrical with reference to the magnetic meridian. Sometimes several concentric arches are seen, separated by diffuse light; below the lowest arch is a dark space (the 'dark segment'), but above the highest arch the light gradually fades away toward the zenith. Every effort that has been made to determine the altitude of these sharply defined arches has only accumulated more evidence to show that no two persons see the same arch, and that the whole phenomenon is some form of perspective illusion.—**Auroral beams,** straight beams or bars of auroral light, usually perpendicular to the auroral arch, but often visible alone when the arch is not well formed or when it is entirely below the horizon.—**Auroral corona,** an arrangement of small auroral beams symmetrically surrounding a central point that lies in the direction of the freely suspended magnetic needle. Within the corona thus formed only faint diffuse light, if any, prevails. The small beams ("daggers" or "swords") forming the corona generally have a movement toward the center. The whole phenomenon is a perspective illusion; the beams of light are really parallel to each other and moving away from the observer; perspectively they point and move toward their vanishing-point.—**Auroral distribution,** the distribution of auroral frequency over the earth's surface. It was first shown by Fritz that a zone of maximum auroral frequency passes in an irregular way through southern Canada, Iceland, northern Norway, and Sweden around the north pole. Observers north of this belt see the aurora to the south of them rather than to the north. The aurora is very rarely seen at stations within thirty degrees of the equator, and it is less frequent at any latitude in the southern than in the northern hemisphere. The general distribution of auroras is shown by charts of auroral isochasmic lines.—**Auroral flashes,** variations in brightness of the auroral light: the beams and rays usually grow longer and broader as they brighten; specifically, the upward flashing movement of the short beams or spots of light which form the auroral corona.—**Auroral glory,** an auroral corona; auroral beams encircling a small region of the sky and pointing or converging toward its center. See *corona*.—**Auroral needles,** the finest elementary lines of auroral light. The apparent character of the perspective phenomena, such as arches, drapery, coronæ, waves, and diffuse light, depends upon the varying arrangements of the auroral needles.—**Auroral period.** (*a*) The season of frequent auroras. (*b*) The length of time elapsing between successive maxima or minima of auroral displays, as the diurnal, the annual, the sun-spot, and the 55-year period. The last is possibly equivalent to 5 sun-spot periods. See ★*auroral periodicity*.—**Auroral periodicity,** the periodic changes in brightness and frequency of the auroral display. Such changes are more frequent at 9 or 10 P. M., which indicate a diurnal maximum; they are more frequent in certain months of the year (after allowance is made for the interruptions by moonshine and by twilight), the annual maximum occurring in September; they are also more frequent in or near the years of maximum sun-spot frequency.—**Auroral waves,** local periodic variations in brightness running rapidly along each auroral beam or converging from all directions toward the center of an auroral corona. When only a single beam crosses the sky it sometimes appears broken up into individual parts, auroral clouds, or transverse striæ, each of which has a rapid progressive motion along the beam. It seems likely that the lines or needles of auroral light are arranged in obedience to magnetic or electric influences, and that when the latter undergo rapid disturbances, as in magnetic storms, the lines of light are also influenced, so that the perspective effect, which is called an auroral arch, beam, or flash, shows corresponding symmetrical periodical changes.

aurorium (â-rō′ri-um), *n.* A hypothetic chemical element the existence of which has been supposed to be indicated by a particular line observed by Angström in the spectrum of auroral light.

Still awaiting discovery by the fortunate spectroscopist are the unknown celestial elements *aurorium*, with a characteristic line at 5,570.7, and nebulum, having two bright lines at 5,007.05 and 4,959.02.

Sir W. Crookes, Address to the Brit. Assoc., 1898.

aurotin (â′rọ̄-tin), *n.* [L. *aurum*, gold, + *-t-* + *-in*[2].] A mordant acid color of the triphenylcarbinol type. It dyes wool an orange-yellow.

aurotype (â′rọ̄-tīp), *n.* [L. *aurum*, gold, + Gr. *τύπος*, type.] A photograph upon paper impregnated with a solution of gold salt. *Stand. Dict.*

aurulent (â′rū-lent), *a.* [LL. *aurulentus*, < L. *aurum*, gold.] Gold-colored. *Bailey.* [Rare.]

Aurum mosaicum or **musivum.** (*b*) Stannic sulphid or tin disulphid, SnS_2. This substance has been used to rub over the silk cushion of an electric machine.

Ausgleich (ous′glīch), *n.* [G., a compromise, < *ausgleichen*, make equal, even or smooth, balance, compromise, < *aus*, out, + *gleichen*, make like or equal: see *like*[2].] In German or Austrian politics, a compromise or agreement between conflicting parties; particularly an agreement made in 1867 between Austria and Hungary, renewable every ten years, by which autonomy was granted to Hungary.

austenite (âs′ten-īt), *n.* [*Austen*, a surname, + *-ite*[2].] A constituent of steel, obtained by quenching high carbon steel from a temperature of 1000° C. in a menstruum such as iced brine, which will produce very rapid cooling. It is probable that austenite is a true solid solution of carbon in iron, and that martensite, troostite, and sorbite are stages in the decomposition of the solid solution—that is, are intermediate steps between austenite on the one hand and pearlite on the other. On the subject of the constituents of hardened steel there exists at the present time a great deal of confusion in the nomenclature, nor is it possible to say definitely what is the true nature of any of these constituents.

austenitic (âs-te-nit′ik), *a.* Of, pertaining to, or characteristic of austenite.

Except that the polyhedral or "*austenitic*" type of structure has never been obtained alone in a pure carbon steel, the types of the high-speed tool steels might all be obtained from pure iron carbon steels by appropriate thermal treatment. The *austenitic* structure appears to be that of the nose of the tool in actual use.

Nature, May 18, 1905, p. 69.

Austin limestone. See ★*limestone*.

austral, *a.* **2.** [*cap.*] Of or pertaining to the great group of islands in the southern hemisphere of which New Zealand, Tasmania, and the continental island of Australia are the chief; Australasian.—**Austral continent,** the supposed continent in the south-polar region.—**Austral-English,** English as spoken in Australia and New Zealand, its distinguishing features being a certain number of English words and phrases and names of animals and plants used with Australian applications, a number of slang terms and idioms, and, finally, a considerable number of words from the native Australian and Maori languages. *E. E. Morris*, Austral English, p. xi.

Australian ballot. See ★*ballot*.—**Australian blight.** Same as ★*angioneurotic edema*.—**Australian brome-grass.** See ★*brome-grass*.—**Australian harebell.** Same as *Tasmanian* ★*bluebell*.—**Australian ladybug.** See ★*ladybug*.—**Australian region,** a zoögeographic division including Australia, Tasmania, and the immediate adjacent islands. By some authorities it is extended to include New Guinea.

Australic (âs-trā′lik), *a.* Same as *Australioid*.

australium (âs-trā′li-um), *n.* [NL., < *Australia*.] The name given by Wedgewood in 1790 to a supposed new chemical element. The sand from Australia in which it was believed to be present proved on more careful examination to contain only substances already well known. The name *sydneium* was proposed as a synonym.

austraterebinthene (âs″tra-ter-ē-bin′thēn), *n.* [*Austra*(*lene*) + *terebinth* + *-ene*.] Same as *australene*. See ★*pinene*.

austriacum (âs-trī′a-kum), *n.* [NL., < *Austriacus*, adj., < *Austria*, Austria.] The name proposed by Brauner (of Prague, Austria) for a hypothetic chemical element of high atomic weight, of the probable presence of which in tellurium as hitherto known he supposed he had found some evidence. If really present this would serve to explain the failure of tellurium, with its usually accepted atomic weight, to fall into its proper place in the periodic classification of the elements.

Austrian brome-grass, cinnabar. See ★*brome-grass*, ★*cinnabar*.

austrium (âs′tri-um), *n.* [NL., < *Austria*, Austria.] The name proposed in 1886 by Linnemann for a supposed new chemical element which he believed he had found in the mineral orthite. It proved to be identical with gallium. In 1900 Pribram announced that he had found spectroscopic evidence of the presence in orthite of traces of another new element, not that of Linnemann, to which it was proposed that the name *austrium* should be transferred. To prevent confusion the latter has been distinguished as *austrium II*.

austrocentral (âs-trō-sen′tṛal), *a.* [L. *auster*, south wind, + *centrum*, center, + *-al*[1].] Of the south-central region.

Austro-Hungarian (âs″trō-hung-gā′ri-a̤n), *a.* Of or pertaining to Austria-Hungary.

Austronesian (âs-trō-nē′sian), *a.* [L. *auster*, the south (wind), + Gr. *νῆσος*, island.] Same as *Malay-Polynesian*.

Father Schmidt rejects Müller's idea that the Polynesians were the first, the Melanesians a second, section of the migration represented by the oceanic peoples, but accepts that part of his theory which sees in the Melanesians a mixed race sprung from the Papuan aborigines and *Austronesian* (Malayo-Polynesian) immigrants.

Amer. Anthropologist, Jan.–March, 1903, p. 164.

austro-occidental (âs-trō-ok-si-den′tal), *a.* Of the southwestern region.

austro-oriental (âs-trō-ō-ri-en′tal), *a.* Of the southeastern region.

austroriparian (â-strō-rī-pā′ri-a̤n), *a.* [L. *auster*, the south (wind), + *riparius*, riparian.] Pertaining to or situated on the southern bank or border; specifically, belonging to the austroriparian area: as, an *austroriparian* species, the *austroriparian* fauna. See ★*area*.

It was early shown by the division that the *Austroriparian* is the direct continuation of the arid Lower Sonoran fauna of the table-land of Mexico and the southwestern United States, and that this same fauna belt occupies the interior valley of California and most of the peninsula of Lower California.

Yearbook, U. S. Dept. Agr., 1894, p. 208.

Austroriparian zone. Same as *austroriparian* ★*area*.

ausubo (ou-sō′bō), *n.* [W. Ind. native name.] The name in Porto Rico of the West Indian mastic-tree, *Sideroxylon fœtidissimum*. Its timber is the most important and widely used on the island, being noted for its great durability.

autarch (â′tärk), *n.* [LGr. *αὐταρχος*, an autocrat, noun use of Gr. *αὐταρχος*, self-ruling: see *autarchy*.] An absolute ruler. [Rare.]

autarchic (â-tär′kik), *a.* [*autarchy* + *-ic*.] Of or pertaining to autarchy; specifically, pertaining to a stage of social evolution in which groups are held together in larger wholes involuntarily and by force. *Amer. Jour. Sociol.*, Jan., 1901, p. 505.

autarith (â′ta-rith), *n.* [Irreg. < Gr. *αὐτός*, self, + *ἀριθ(μός)*, number.] An automatic calculating-machine capable of performing the four fundamental arithmetical operations of adding, subtracting, multiplying, and dividing. Buttons are moved by the operator along certain slots corresponding to the figures with which the operation is to be performed. All further movements are effected automatically through the action of a weight or spring-motor which supplies the requisite energy. *Sci. Amer. Sup.*, Feb. 21, 1903, p. 22,689.

aute (ä′ö-tā), *n.* [Maori and Tahitian.] A name in Tahiti and New Zealand of the paper-mulberry, *Papyrius papyrifera*. See *Broussonetia*.

Auteupuccinia (â″-tū-puk-sin′i-ạ), *n.* [NL., < Gr. *αὐτός*, self, + *εὖ*, well (good), + *Puccinia*.] The name applied by De Bary to a section of the genus *Puccinia* characterized by having the spermagonia, æcidia, uredospores, and teleutospores borne on the same host-plant.

authenticater, authenticator (â-then′ti-kā-tėr, -tọr), *n.* One who authenticates a document, statement, fact, or the like, or establishes or guarantees its genuineness, validity, or credibility.

authigenetic (â″thi-jē-net′ik), *a.* See ★*authigenic*.

authigenic (â-thi-jen′ik), *a.* [Gr. *αὐθιγενής*, born on the spot, < *αὐθι*, there, + *-γενής*, -born.] Originating where found: applied to the minerals of an igneous or metamorphic rock which have crystallized in place, as contrasted with the fragments of preëxisting rocks which form the sediments. Also *authigenetic* and *authigenous*. *Geikie*, Text-book of Geol., p. 90.

authigenous (â-thij′e-nus), *a.* See ★*authigenic*.

author, *n.* **7.** *pl.* A game of cards played with a special pack bearing the names of authors and their works. The pack is dealt out one at a time as far as it will go for the players engaged. The one on the left of the dealer begins by asking any player he chooses for a card of the same denomination as one in his hand, naming the suit he wants. If the player asked has it he must give it up, and the same player may ask again; if he has not the card it becomes his turn to ask. As soon as any player gets four of the same denomination (a 'book') he lays them aside. The winner is the one who lays aside the greatest number of 'books' in this way.—**Author's proof.** See ★*proof*.

author-catalogue, author-catalog (â'thọr-kat'a-log), *n.* A library catalogue in which the books are arranged alphabetically according to authors.

authorcraft (â'thọr-kraft), *n.* The craft of the author; the exercise of the skill of an author; authorship: as, "the mysteries of *author-craft*," *Scott*, Antiquary, xiv.

author-entry (â'thọr-en″tri), *n.* In *library-cataloguing*, the entry of a book under the name of the author, as distinct from a subject-entry.

authorially (â-thō'ri-ạl-i), *adv.* As an author; after the manner of an author or writer of books.

> I was, *authorially* speaking, behind the door.
> *Tupper*, Twins, p. 170. [Rare.] *N. E. D.*

authorish (â'thọr-ish), *a.* [*author* + *-ish*[1].] Somewhat like an author.

> Yet it hath an *authorish* twang about it.
> *Lamb*, Final Mem., p. 257.

authorized (â'thọr-īzd), *p. a.* 1. Duly empowered: as, an *authorized* agent.—2. Formally sanctioned by those having the right or power to sanction, as a reprint or translation of a book: as, an *authorized* edition; the *authorized* version of the Bible. Also *authorised*.

authorless (â'thọr-les), *a.* [*author* + *-less*.] 1. Of unknown or unadmitted authorship; anonymous: as, an *authorless* rumor.

> As I am not ignorant, so I ought to be sensible of the false aspersions some *authorless* tongues have laid upon me. *Mrs. T. Sackville*, Guardian, Aug. 13, 1713, No. 133.

2. That never had an author; unoriginated by any one; uncreated. *Fitzedward Hall*, Hindu Philos. Syst., p. 64.—3. Without authors or writers: as, "an interval of *authorless* years," *B. Wheatley*. [Rare.] *N. E. D.*

author-number (â'thọr-num″bėr), *n.* The number which, when appended to the initial letter of an author's name, is used throughout a library catalogue to represent that name: for example, *F*54 for John Fiske, *F*87 for E. A. Freeman, etc.

authotype (â'thō-tīp), *n.* [Appar. an error for *autotype*. Confused with *author*.] In *printing*: (*a*) The printed facsimile of a signature or design. (*b*) The block or plate by which the facsimile is produced.

autic (â'tik), *a.* [*aut(o)*[3] + *-ic*.] Of, pertaining to, or consisting of autos or real existences.

> We should also bear in mind that behind and above the great universe of natural objects, and the true cause of all the rest, stands the *autic* universe.
> *G. J. Stoney*, reprinted in Smithsonian Report, 1899, [p. 221.

auto[2] (â'tō), *n.* A colloquial abbreviation of *automobile*; a motor-car. *Amer. Inventor*, Feb. 15, 1904, p. 79.

auto[3] (â'tō), *n.*; pl. *autos* (-tōz). [A detached use of *auto-*.] A real existence; what actually exists, in contradistinction to what only apparently exists.

> An *auto*, then, is a thing that really exists and in no wise depends on the way we, human minds, may happen to regard it. Our impressions or beliefs about it may be correct or may be erroneous, but the term *auto* means the thing itself.
> *G. J. Stoney*, Proc. Roy. Dub. Soc., VI. (N. S.) 478, 1896.

auto-abstract (â-tō-ab'strakt), *n.* A summary or abstract of an address or communication, as before a learned society, prepared by the speaker himself for insertion in the printed proceedings. *Nature*, LXVII. 253.

auto-active (â-tō-ak'tiv), *a.* Self-active or self-acting: as, *auto-active* minds.

auto-anticoherer (â″tō-an-ti-kō-hēr'ėr), *n.* In *elect.*, an anticoherer which recovers spontaneously. See ★*anticoherer*.

auto-anticomplement (â″tō-an-ti-kom'plē-ment), *n.* An anticomplement which is formed within the same body against its own complements. See ★*complement*, 8.

Autobasidii (â″tō-bā-sid'i-ī), *n. pl.* [NL., pl. of adj. from *autobasidium*.] Same as ★*Autobasidiomycetes*.

Autobasidiomycetes (â″tō-bā-sid″i-ō-mī-sē'tēz), *n. pl.* [NL., ‹ Gr. *αὐτός*, self, + *Basidiomycetes*.] A group of *Basidiomycetes* having unicellular basidia with sterigmata borne at the apex which produce a single spore. Also *Autobasidii*.

autobasidium (â″tō-bā-sid'i-um), *n.*; pl. *autobasidia* (-ạ). [NL., ‹ Gr. *αὐτός*, self, + *basidium* (which see).] A simple basidium without septation, as in the *Autobasidiomycetes*.

autobiografer, *n.* A simplified spelling of *autobiographer*.

autobiografy, *n.* A simplified spelling of *autobiography*.

autobiographal (â″tō-bī-og'ra-fal), *a.* Same as *autobiographical*. [Rare.] *N. E. D.*

autoboat (â'tō-bōt″), *n.* A boat equipped with an automobile engine which, by virtue of its ability to make many more revolutions per minute than the regular marine type of engine, gives a high rate of speed. The first regular autoboat race in America took place on May 30, 1904, under the charge of the Manhasset Bay Yacht Club of New York. See ★*motorboat*.

autoboating (â'tō-bōt″ing), *n.* The sailing or navigation of an autoboat for pleasure or recreation.

autobolide (ō-tō-bō-lēd'), *n.* [F. **autobolide*, ‹ Gr. *αὐτός*, self, + *βολίς* (*βολιδ-*), a missile.] An automobile car designed to be projected through the air from a specially constructed track: an exhibition of daring devised in France. The car and operator descend a steep aërial incline which curves inward and backward at the foot. The car is held from falling by guard-rails as it turns upside down at the foot of the incline. The stored momentum of the car sends it across an air-gap in the track, and a counter-weight under the car causes it to turn a half-somersault in the air, landing against a curved surface which passes into a gentle incline on which the car, now right side up, is gradually retarded until it runs easily off on the ground and is brought to rest. The track is less than 200 feet long, and the act occupies about 4 seconds.

autobus (â'tō-bus″), *n.* [*auto-* + *bus*.] An automobile omnibus; a vehicle propelled by its own motor and capable of carrying a dozen or more passengers.

autocar (â'tō-kär), *n.* [*auto(-mobile)* + *car*.] 1. An automobile car; a car which contains in itself a motor with its source of power.—2. A trade-name of a special form of motor-car.

autocarette (â″tō-kä-ret'), *n.* [*auto-* + *carette*.] A commercial name for a type of motor-driven omnibus or wagonette used in cities.

autocarpous, *a.* (*b*) Self-fruiting, that is, fruiting as the result of self-fertilization.

autocarpy (â'tō-kär-pi), *n.* [NL. **autocarpia*, ‹ Gr. *αὐτόκαρπος*, self-fructifying, ‹ Gr. *αὐτός*, self, + *καρπός*, fruit.] The condition of self-fruiting, or fruiting as the result of self-fertilization.

autocarriage (â'tō-kar-ạj), *n.* [*auto-* + *carriage*.] A motor-driven vehicle or motor-car, usually of the pleasure-vehicle class and carrying more than two persons.

autocatalysis (â″tō-ka-tal'i-sis), *n.* [*auto-* + *catalysis*.] In *phys. chem.*, the catalytic action of a complex substance upon itself, in which one of its functions accelerates the velocity of reaction of another function.

autocatalytic (â″tō-kat-ạ-lit'ik), *a.* In *phys. chem.*, acting by autocatalysis, or exhibiting the phenomenon of autocatalysis.

autochore (â'tō-kōr), *n.* [Gr. *αὐτός*, self, + *χωρεῖν*, spread abroad.] In *phytogeog.*, a plant distributed by its own motility: applied to the same plants as *mastigospore*, but in a different sense. *F. E. Clements*.

autochrome (â'tō-krōm), *a.* [Gr. *αὐτός*, self, + *χρῶμα*, color.] A term applied to the Lumière process of color ★photography (which see). *The Century*, Jan., 1908, p. 326.

autochthon, *n.* 3. That element or portion of the fauna of a given region which has descended directly from animals which occupied the region at a much earlier period: contrasted with *heterochthon*.

autochthonous, *a.* 3. In *petrol.*, noting rocks which have originated *in situ*, such as peat, rock-salt, and stalagmitic limestone; also applied to constituent minerals of rocks which have crystallized in the place they now occupy. Autochthonous materials are contrasted with the mechanically derived particles of clastic rocks.

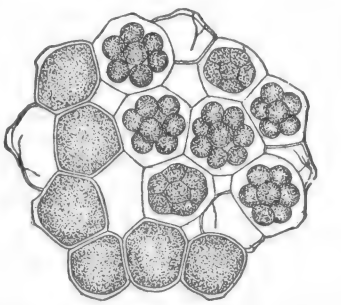
autoclastic (â-tō-klas'tik), *a.* [Gr. *αὐτός*, self, + *κλαστός*, ‹ *κλᾶν*, break.] In *geol.*, noting a fragmental rock produced by dynamic crushing or granulation, without loss of cohesion: contrasted with sediments the particles of which come from a distance.

> Another term, "*autoclastic*," introduced by American writers and frequently used in this memoir, might with advantage be changed to "anthiclastic" (= brecciated *in situ*). *Nature*, April 16, 1903, p. 555.

autoclave, *n.* 2. A form of digester in which mixtures of chemicals can be safely heated under great pressure: largely used in the manufacture of coal-tar dyestuffs.—3. A device for the sterilization by steam under pressure of bacterial cultures or culture media, milk, and other substances.

autocoherer (â″tō-kō-hēr'ėr), *n.* [*auto-* + *coherer*.] In *elect.*, a coherer which spontaneously recovers its resistance after the passing of the electric wave. See ★*coherer*.

autocolony (â'tō-kol-ọ-ni), *n.* [*auto-* + *colony*.] In *bot.*, the union in the form of a colony of



Autocolony.

Cœlastrum sphæricum, Näg.; large cœnobia giving rise to daughter-cœnobia (autocolonies). X 475.) (From West's "British Freshwater Algæ.")

several autospores at the time of their expulsion.

autoconduction (â'tō-kọn-duk'shọn), *n.* [*auto-* + *conduction*.] A method of employing high-frequency currents by placing the part to be acted upon within the solenoid, but not in direct connection with the circuit.

autoconverter (â″tō-kọn-vėr'tėr), *n.* See ★*autotransformer*.

autocopyist (â-tō-kop'i-ist), *n.* [Gr. *αὐτός*, self, + *copyist*.] In *photog.*, a simplified method of printing from sheets of bichromated gelatin in an ordinary letter-copying press.

autocratress (â-tok'ra-tres), *n.* A female autocrat; an autocratrix.

autocriticism (â-tō-krit'i-sizm), *n.* Criticism of one's self or of one's own productions; self-criticism.

autocycle (â'tō-sī-kl), *n.* [*auto-* + *cycle*.] 1. The trade-name of a combination of two tandem bicycles side by side, between which are the tanks and appliances appropriate to a chemical fire-extinguisher, and a propelling motor. The saddles of the bicycles will carry four men, and the motor will propel the machine at high speed. See also ★*autoquadricycle*.—2. Same as ★*motor-cycle*.

autocytolysin (â″tō-sī-tol'i-sin), *n.* [Gr. *αὐτός*, self, + *κύτος*, a hollow (a cell), + *λύσις*, dissolution, + *-in*[2].] Same as ★*autolysin*.

autocytolytic (â″tō-sī-tō-lit'ik), *a.* [*autocytolysis*(*-lyt-*) + *-ic*.] Of or pertaining to the destruction of cells by cytotoxins produced in the body of the same animal.

> Just what the agencies are under which in normal living tissues cells are protected from the action of the *autocytolytic* substances is not yet clear.
> *Med. Record*, Feb. 14, 1903, p. 247.

autocytotoxin (â-tō-sī-tō-tok'sin), *n.* [*auto-* + *cytotoxin*.] A cytotoxin produced in the body of an animal against its own cells. The formation of such bodies is rare, but it seems to occur at times. See ★*autohemolysin*.

> In a few instances *autocytotoxins* for blood-cells have been produced. *Science*, May 2, 1902, p. 697.

autodermalium (â″tō-dėr-mā'li-um), *n.*; pl. *autodermalia*(-ạ). [NL., ‹ Gr. *αὐτός*, self, + *δέρμα*, skin: see *dermal*.] In sponges, one of the spicules which support the dermal membrane. They are usually hexactinal or pentactinal, with 4 similar rays lying embedded in the membrane and with the axial cross placed within the latter. Compare *hypodermale*.

Autodetus (â-tod'ẹ-tus), *n.* [Gr. *αὐτόδετος*, self-bound, ‹ *αὐτός*, self, + **δετός*, ‹ *δεῖν*, bind.] A genus of tubicolous annelids which make a regularly spiral tube attached by the apical whorls: erroneously regarded by some authors as gastropod mollusks. The species are all extinct and are found in Silurian and Devonian formations.

autodiagnosis (â″tō-dī-ag-nō'sis), *n.* [*auto-* + *diagnosis*.] Diagnosis of one's own disease or state of health.

autodiagnostic (â″tō-dī-ag-nos'tik), *a.* [*auto-* + *diagnostic*.] Relating to or effecting autodiagnosis.

> The same hand must not be used for *autodiagnostic* purposes all the time, but it is advisable to change hands methodically, using the right hand at one séance, and the left at another. *Med. Record*, LXIII, 169.

autodifferentiation (â″tō-dif-e-ren″shi-ā′-shon), *n.* In *biol.*, differentiation produced by intrinsic causes or due to conditions resident in the organism. *A. W. Trettien*, Amer. Jour. Psychol., XII. p. 25.

autodigestion (â″tō-di-jes′tyon), *n.* [*auto-* + *digestion.*] Digestion by the gastric juice of portions of the mucous membrane of the stomach which have lost their vitality. See ★*autolysis.*

autodrome (â′tō-drōm), *n.* [*auto*[2] + *-drome*, as in *hippodrome.* Cf. Gr. *αὐτόδρομος*, running of itself, ‹ *αὐτός*, self, + *-δρομος*, ‹ *δραμεῖν*, run.] A circus or course for the running of automobiles, especially for speeding or racing.

autœcious, *a.* 2. In *mycol.*, passing through all its stages of development on the same host, as certain species of the genus *Puccinia.*

autœcism (â-tē′sizm), *n.* [*autœc(ious)* + *-ism.*] The state or condition of an autœcious parasite.

auto-epigraph (â-tō-ep′i-graf), *n.* [*auto-* + *epigraph.*] An epigraph written by the subject of it; an inscription composed by one's self for one's own tomb or monument.

auto-erotism (â″tō-e-rot′izm), *n.* [*auto-* + *erot(ic)* + *-ism.*] A form of sexual perversion in which the presence or thought of another person is not necessary to arouse desire.

autogamic (â-tō-gam′ik), *a.* 1. In *bot.*, of, pertaining to, or exhibiting self-fertilization.—2. In *biol.*, of or pertaining to the pairing or mating of like with like.

Pearson adds, "Variations do not occur accidentally, or in isolated instances; *autogamic* and assortative mating are realities."
T. H. Morgan, Evol. and Adapt., p. 269.

Autogamic mating. See ★*mating.*

autogamy, *n.* 2. In *biol.*, the pairing or mating of like with like.

autogastralium (â″tō-gas-trā′li-um), *n.*; pl. *autogastralia* (-ä). [Gr. *αὐτός*, self, + *gastralis*, gastral. Cf. *gastralium.*] One of the spicules which support the gastral membrane in sponges. Also *gastralium.*

autogen (â′tō-jen), *n.* [Gr. *αὐτογενής*, self-produced.] A self-sustaining organism, as contrasted with one that is dependent upon others. [Rare.]

The broadest distinction that can be named is that which separates the manufacturing organisms from the non-manufacturing organisms, the *autogen* from the parasite. *L. F. Ward*, Dynamic Sociol., I. 412.

autogeneric (â″tō-jē-ner′ik), *a.* [*auto-* + *generic.*] Pertaining to other individuals of the same living type: used by K. Pearson in such phrases as *autogeneric* influence, *autogeneric* selection, etc.

autogenetic, *a.* 2. In *phys. geog.*, pertaining to a stream of which the course has not been determined by the slope of the original surface of the land. — **Autogenetic drainage,** drainage (streams) of which the course has not been determined by the original surface of the land. Such streams are characteristic of many plains and of the valley-sides of master-streams. — **Autogenetic topography,** land relief which has been produced by the work of autogenetic streams.

autogenic, *a.* 2. Same as ★*authigenic.*

Autogenous soldering. This process is now carried out with metals, in addition to the older methods, by means of the oxyacetylene blowpipe and of the aluminothermy of Goldschmidt.—**Autogenous valley,** a valley formed by an autogenetic stream.

autograf, *a.*, *n.*, and *v. t.* A simplified spelling of *autograph.*

autogram (â′tō-gram), *n.* [Gr. *αὐτός*, self, + *γράμμα*, writing.] 1. A telegraphic message sent and received in the handwriting of the sender. See *telautograph.*—2. An autograph.

Autograph recorder, a time-recording device which, when the autograph of an arriving or leaving employee is inscribed on a tape or tablet, simultaneously records the time of the inscription.

autographism (â′tō-gráf-ism), *n.* [As *autograph* + *-ism.*) A condition in which tracings made on the skin with the end of a stick or other hard object persist for a time as elevations on the surface; dermographism.

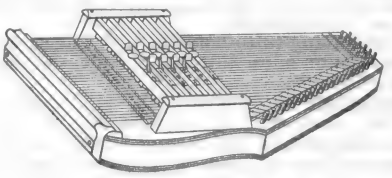
autographize (â′tō-gra-fīz), *v. i.*; pret. and pp. *autographized*, ppr. *autographizing.* [*autograph* + *-ize.*] To collect autographs. *Dibdin.* [Rare.] *N. E. D.*

autographizer (â′tō-gra-fī″zėr), *n.* One who is engaged in making a collection of autographs. *Dibdin.* [Rare.] *N. E. D.*

autographometer (â″tō-gra-fom′e-tėr), *n.* [Gr. *αὐτόγραφος*, self-written, + *μέτρον*, measure.] An instrument which registers the topography of surfaces over which it is rolled.

autogravure (â″tō-grą-vūr′), *n.* [*auto-* + F. *gravure*, ‹ *graver*, engrave, record.] A photomechanical modification of the etching process. The placing of a bituminous ground on copper is followed by the transfer of a photographic image from a reversed transparency, etching being accomplished by solutions of ferric chlorid. *Woodbury*, Encyc. Dict. of Photog., p. 49.

autoharp (â′tō-härp), *n.* [*auto-* + *harp.*] A musical instrument of the zither class, having



Autoharp.

across the strings several bars provided with projecting dampers so arranged that when one of the bars is pressed down all strings are damped or rendered mute except those of some particular chord. By supplying such bars for a number of chords usually required in simple accompaniments, the instrument is made usable for convenient arpeggio effects with but little technical knowledge or skill on the part of the player.

autohemolysin (â″tō-hē-mol′i-sin), *n.* A hemolysin directed against the red corpuscles of the same individual.

autohemolysis (â″tō-hē-mol′i-sis), *n.* Hemolysis referable to the action of autohemolysins. It is of rare occurrence. Also *autohæmolysis.*

Some observations are recorded in which, after profuse internal hemorrhage, hæmaturia has developed, indicating the possibility of *autohæmolysis* under special conditions. *Med. Record*, Feb. 14, 1903, p. 247.

autohemolytic (â″tō-hem-ō-lit′ik), *a.* Referring to the action of autohemolysins. Also *autohæmolytic.*

autohypnosis (â″tō-hip-nō′sis), *n.* [*auto-* + *hypnosis.*] Self-induced hypnotic trance.

autohypnotic (â″tō-hip-not′ik), *a.* and *n.* **I.** *a.* Relating to or of the nature of autohypnosis.

II. *n.* One who has the power to put himself into the hypnotic state.

autohypnotism (â-tō-hip′nō-tizm), *n.* [*auto-* + *hypnotism.*] Self-induced hypnotism.

autohypnotization (â-tō-hip″nō-ti-zā′shon), *n.* The induction of hypnosis by autosuggestion; self-hypnotizing.

The conduct of our witch-burning ancestors now becomes intelligible, a step on the way to being pardonable. With their methods and inherited prejudices, they could scarcely have reasoned otherwise than they did in certain cases of hysteria and *autohypnotization.*
Encyc. Brit., XXXII. 58.

auto-immunity (â″tō-i-mū′ni-ti), *n.* [*auto-* + *immunity.*] Immunity acquired through disease, or congenital, as distinguished from that effected by the injection of prophylactic serums.

auto-immunization (â″tō-i-mū-ni-zā′shon), *n.* The immunization of an animal with cells or cellular products derived from the same animal. The resulting adaptation-products are toxic for the same cells which gave rise to their formation. Such an occurrence is rare. See ★*autohemolysin.*

auto-infection (â″tō-in-fek′shon), *n.* Self-infection; infection of the body from within, in contradistinction to exogenic infection; the act whereby an organism infects itself with parasites, as sometimes happens in cases of tapeworm, pinworms, bacterial diseases, etc.

Some are short-lived, and from knowledge of their life history one may conclude that they are not likely to be met with in large numbers, while in other cases *auto-infection* renders a considerable increase in numbers probable as is the case with the pinworms, Oxyuris vermicularis, or threatens to infest the host with dangerous larval stages as in the pork tapeworm, Tænia solium.
Trans. Amer. Micros. Soc., Nov. 1903, p. 111.

autoing (â′tō-ing), *n.* The use of automobiles for business or pleasure traveling.

auto-intoxication (â″tō-in-tok-si-kā′shon), *n.* Poisoning with substances produced within the body; systemic poisoning by toxic material formed within one's own body during the process of intestinal digestion, or by the waste products of metabolism.

The common starting-point of *auto-intoxication* theories is the influence of certain products of decomposition of living substance upon the continuance of cell-activity.
H. H. Foster, Amer. Jour. Psychol., XII. 160.

autoist (â′tō-ist), *n.* [*auto* + *-ist.*] One who owns, uses, or runs an 'auto' or automobile. *Sci. Amer.* LXXXVIII. 134.

autokinesis (â″tō-ki-nē′sis), *n.* [See *autokinesy.*] In *physiol.*, spontaneous motion.

autolimnitic (â″tō-lim-nit′ik), *a.* [Gr. *αὐτός*, self, + *λίμνη*, lake, + *-it-ic.*] Floating or swimming in fresh water and confined to the superficial layer of water. See ★*bathylimnitic*, ★*limnitic*, ★*zonolimnitic.* *Haeckel* (trans.) Planktonic Studies, p. 580.

autologist (ä-tol′ō-jist), *n.* One who is engaged in the scientific study of self. See *autology.*

autoluminescence (â″tō-lū-mi-nes′ens), *n.* The spontaneous emission of light. See ★*luminescence.*

Of more popular interest was Prof. George F. Barker's "Note on Radio-activity and *Autoluminescence.*"
Sci. Amer., May 7, 1904, p. 366.

autoluminescent (â″tō-lū-mi-nes′ent), *n.* [*auto-* + *luminescent.*] Capable of emitting luminous rays spontaneously and without excitation from other bodies: said of the so-called radioactive substances. See ★*luminescence.*

autolysin (â-tol′i-sin), *n.* [*autolysis* + *-in*[2].] A lysin which will cause the dissolution of cells in the body of the animal in which it is formed. The formation of such bodies is rare. Also *autocytolysin.*

autolysis (â-tol′i-sis), *n.* [Gr. *αὐτός*, self, + *λύσις*, dissolution.] Self-dissolution; in *physiol.*, self-digestion; autodigestion. Until recently it was generally held that the only ferments occurring in the animal body were the common ferments of the digestive secretions, and that cellular digestion, in contradistinction to gastro-intestinal digestion, was referable to the peculiar activity of living protoplasm. Salkowski, however, demonstrated as early as 1890 that liver-tissue, when finely minced and kept in saturated chloroform water, will undergo changes which are manifestly analogous to those occurring during pancreatic digestion. For this form of tissue-digestion Salkowski proposed the term *autodigestion*, and he suggested that probably the process was referable to the action of ferments contained in the liver-cells which were liberated after the death of the latter by the chloroform. Similar changes could be demonstrated in the case of muscle-tissue. Other investigators, while admitting that autodigestion of organs does occur, explained the phenomenon on the basis of a supposed absorption of gastro-intestinal zymogens and their transformation into the corresponding enzyms by the chloroform. This view has been definitely abandoned, it having been satisfactorily demonstrated that Salkowski's interpretation of the process of autodigestion, or *autolysis*, as it is now more commonly termed, is correct, and that cellular digestion is undoubtedly referable to intracellular ferment-action. This is in accord with observations made in vegetable physiology, where it had already been shown that the transformation of starch in developing seeds, in tubers, and in rhizomes was referable to an intracellular diastase, and that the solution of glucosides and fats was dependent upon the action of enzyms. Nevertheless the full import of intracellular ferment-action was not fully recognized until Büchner showed that even though ferments cannot be extracted from all dead cells by ordinary means, they can be demonstrated after the destruction of the cell-envelop by high pressure, by repeated freezing and thawing, etc. These researches, which were essentially conducted with yeast-cells, and led to the discovery of the intracellular zymose, are now classical. In their general behavior the intracellular autolytic ferments are similar to the common digestive ferments. Here, as there, are proteolytic ferments, diastatic ferments, and lipolytic ferments. There is, however, a greater multiplicity; for in certain cells is recognized the existence also of oxidizing ferments, of ferments which are capable of causing the cleavage of nucleins, of others which can transform amido-acids into amides, and of still others which are capable of splitting off carbon dioxid from certain bodies, etc. Apparently we are only on the threshold of knowledge of these ferments, the number of which in a single cell may be remarkable, as in the liver-cell, where at least 12 different ferments, side by side, have been demonstrated. Autolytic proteolysis is strictly analogous to peptic and tryptic digestion, but it is noteworthy that the autolytic proteases are more specific in their action. Generally speaking, they cause the cleavage of the albumins of their respective tissues more readily than of heterologous tissues, and certain members of the group, such as the proteolytic ferment of the liver, are totally incapable of acting upon the albumins of other organs, as lung-tissue, for example. Therefore Jacobi has suggested restricting the term *autolysis* to the destructive action of the ferments of a given organ or tissue upon the corresponding tissue, and designating the action of a given ferment upon a foreign tissue as *heterolysis.* Whether the autolytic ferments are also capable of constructive action has not yet been ascertained. *A priori* this appears likely, and it may be imagined that under normal conditions a certain equilibrium of reaction exists between the complex cellular components and the corresponding radicals. The recognition of this principle will lead to a more satisfactory understanding of many problems connected with cell-nutrition, not only under normal but also under pathological conditions. Jacobi has already shown that liver autolysis is much accelerated (in a catabolic direction) in animals poisoned by phosphorus, thus furnishing a satisfactory explanation of many obscure phenomena noted in this condition as well as in allied degenerative changes. The importance of autolytic processes is further exemplified in pneumonia, where the resolution of the exudate is unquestionably largely effected in this manner. There is evidence to show that

autolytic processes may be active in the defense of the animal body against bacteria and bacterial products, and hence of moment in the production of immunity. Knowledge of the subject is still in its infancy, but it may safely be asserted that the discovery of autolysis is one of the most important in the domain of physiology and physiological chemistry.

autolytic (â-tō-lit′ik), *a.* [*autolysis* (*-lyt-*) + *-ic.*] Relating to or of the nature of autolysis.

One can readily convince himself of the energetic action of *autolytic* ferments by the simple experiment of placing a piece of fresh pneumonic lung in the stage of gray hepatization under chloroform and noting the rapid solution of the exudate, in contrast with the absence of this process in earlier stages of the disease.
Science, Nov. 28, 1902, p. 858.

autolyze (â′tō-līz), *v. t.*; pret. and pp. *autolyzed*, ppr. *autolyzing*. [*autoly(sis)* + *(-i)ze.* Cf. *analyse* from *analysis.*] To undergo or cause to undergo autolytic digestion. *Science*, July 3, 1903, p. 15.

automacy (â-tom′a-si), *n.* [Gr. *αὐτοματία* (recorded only as a name for the goddess of chance), < *αὐτόματος*, self-moving.] Same as *automatism*, 1; action determined by outer conditions and not by the will.

The several comparisons seem to define that course of volitional development arising in the chemical and mechanical affinities of the mineral realm, burgeoning in simple vitality, multiplying in the motility of animal life, greatly expanding in the collective activity of demotic organization, and culminating in the conquest of nature through the mind-guided powers of enlightened mankind. Expressed briefly, this course of development may be characterized as the progressive passage from *automacy* to autonomy.
W. J. McGee, An. Rep. Bur. Amer. Ethnol., XVII. 177.

automat (â′tō-mat), *n.* [G., < Gr., *αὐτόματον*: see *automaton.*] **1.** A photographic lens-shutter which is opened and kept open by means of a pneumatic bulb.—**2.** An apparatus consisting of a series of lifts in compartments from which, by means of automatic machinery, separate articles of food at stated prices are delivered to any one who will drop the necessary coin into a slot; also, a restaurant which serves its customers by means of such an apparatus. The aim is to do away with the intermediation of waiters. [Recent.]

automatic. **I.** *a.*—**Automatic combustion** or **automatic fire.** Same as *spontaneous combustion.*—**Automatic feeder.** See ★*feeder.*—**Automatic firearm,** a firearm in which the recoil, or part of the force of the explosive, is used to eject the spent cartridge-shell, introduce a new cartridge, cock the striker, and close the breech. It will continue to fire as long as there are cartridges supplied and the gunner presses the trigger. See ★*parabellum.*—**Automatic ★photography, ★piano-player.** See the nouns.—**Automatic printer,** in *photog.*, a machine for automatically printing upon slips of sensitized bromide or chlorid paper: devised by Urie. The strip is pressed by a pad against a negative for a suitable period, such as two seconds, and exposed during this time to the action of electric light. The lights are then turned down, and the strip is moved and a fresh portion exposed. All movements are actuated by clockwork. The strips are developed by being passed through chemical baths, and are then washed and dried. In this way several thousand prints a day can be secured.—**Automatic reel.** See ★*reel*1.—**Automatic writing,** writing performed unconsciously or subconsciously, while the attention of the writer is otherwise engaged: the term is applied to planchette-writing, on the theory that the writing done with that instrument is not always done with some degree of intention to deceive or entertain.

II. *n.* One who is subject to automatism.

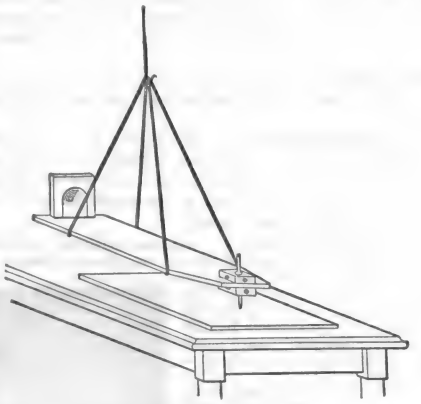
automatism, *n.* **4.** Specifically, in *psychol.*: (*a*) An action performed unconsciously or subconsciously while the agent's attention is otherwise engaged, or while he is in a trance or sleep-like state. (*b*) The mental state of the agent during such a performance.

This leads us to the chief field of research in "*automatisms*," or actions of the subconscious or "subliminal" self. The prototype of such things is found in the performances of natural somnambulists, who in all ages have seemed to exhibit faculties beyond their power when in a normal condition.
Encyc. Brit., XXXII. 52.

automatist, *n.* **3.** Specifically, in *psychol.*, the subject of automatism; one who writes, etc., automatically.

Trance is a name applied to a form of automatism, whether healthy or morbid, in which the *automatist* appears to be in some way altered, or even asleep, but in which he may speak or write certain matter of which his normal personality is ignorant at the time, and which it rarely remembers on his return to waking life. If there appears to be not merely a modification but a substitution of personality in the trance, it is called possession. Trance occurs spontaneously in so-called somnambulism, as a result of disease in hysteria, and as a result of suggestion, etc., in hypnotic states. A fuller analysis shows classes which slide into each other in various ways.
F. W. H. Myers, Proc. Soc. Psychical Research, [XVII. 67.

automatograph (â-tō-mat′ō-gräf), *n.* In *psychophys.*, an instrument for recording the



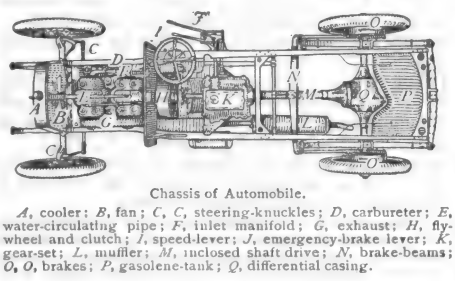
Automatograph.

involuntary movements of hand and arm; a scientific form of the planchette. *J. Jastrow*, Amer. Jour. Psychol., IV. 400.

automnesia (â-tom-nē′si-ä), *n.* [Gr. *αὐτός*, self, + *μνῆσις*, memory.] In *psychol.*, spontaneous memory; the revival of past experience without apparent conditions in association. *Ribot* (trans.), Psychol. of Emotions, p. 153.

automobile. **I.** *a.*—**Automobile chair,** a chair on wheels, driven by an electric motor and storage-battery, used at exhibitions and fairs for carrying visitors about the buildings and grounds. The chair has somewhat the lines of a low phaëton, the larger wheels under the body being the driving-wheels, and the two smaller ones in front under the foot-rest being used for steering and steadying. The operator sits at the rear. The batteries and motors give a speed of about three miles an hour.—**Automobile cycle.** See ★*cycle*1.

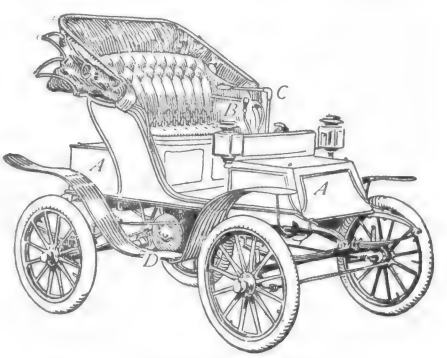
II. *n.* **2.** Any device or apparatus which is movable by a force placed within itself and is self-acting as to direction and control; specifically—(*a*) A torpedo, carrying within itself a store of accumulated energy, which can be launched from a vessel or fort, and which, when properly directed and adjusted, will move through the water until it reaches the object at which it is aimed. (*b*) A vehicle, carrying within itself the source of the mechanical power which propels it, designed to move on common roads or highways: a motor-car. The automobile or motor-car is not strictly an automobile, since a human intelligence always steers it and controls the power. The motor-car differs from the locomotive in that it does not travel on rails, and from the traction-engine or tractor in that it carries the load instead of drawing it after itself in other wheeled vehicles. The motor-bicycle and motor-tricycle differ from the motor-car in that the latter has nearly always four wheels. The types of vehicle included under the name *automobile* fall under one of four groups: (1) The *racing-car* (rarely called an 'automobile'), designed for great speed on prepared special tracks or speedways, carrying one or at most two persons, and made as light as is consistent with high power; (2) the *touring-car*, designed to carry four or five persons, made to secure comfort on long trips, and of high power in the moderate class; (3) the *service-car*, intended for use in cities or suburban districts, of moderate power and speed, and carrying two or more persons; (4) the *business wagon* or *truck*, intended for the delivery of merchandise, having considerable carrying capacity but slow speed. Again, motor-cars may be grouped, according to their source of propelling energy, into: (1) *electric-cars*, driven by electric motors energized from storage-batteries; (2) *steam-cars*, in which a boiler supplies steam to an engine geared to the driving-axles; (3) *gasolene-cars* (more properly termed *internal-combustion motor-cars*), in which the expansive force of a mixture of gasolene vapor and air, on being ignited, is used to drive the motor-piston. Compressed air has also been used to drive motor-cars. The wheels of the motor-car usually have rubber tires, pneumatic on the lighter and speedier vehicle, and solid on the motor-truck and -cab. The axle-bearings are fitted with steel balls in runways to reduce friction. The vehicle is usually steered by the front pair of wheels, which are carried on special mountings from the front axle, and the proper direction is given by a steering-lever or -wheel at the driver's seat. The wheel-steering device transmits



Chassis of Automobile.

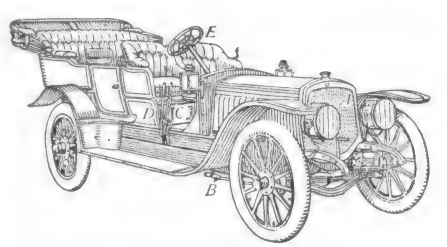
A, cooler; *B*, fan; *C*, *C*, steering-knuckles; *D*, carbureter; *E*, water-circulating pipe; *F*, inlet manifold; *G*, exhaust; *H*, fly-wheel and clutch; *I*, speed-lever; *J*, emergency-brake lever; *K*, gear-set; *L*, muffler; *M*, inclosed shaft drive; *N*, brake-beams; *O*, *O*, brakes; *P*, gasolene-tank; *Q*, differential casing.

less shock from the roadway to the controlling hand, and is universal on all but light cars. The rear axle is the driving-axle, receiving its motion either by drive-chains or by a shaft and gears. In the electric car the motors (two usually) drive the axle by spur-gears, giving convenient reduction. The motors are controlled by a controller which is operated by a combined lever and switch. The car is fitted with two brakes, one a service-brake and the other a more powerful one for emergencies. The driving-wheels or axle must be fitted with a compensating-gear to allow the outer wheel on turning a curve to travel a longer path than the wheel which is nearer the center. The gasolene-motor has its ignition effected by electric spark (see *internal-combustion* ★*motor*), and can be controlled by a throttle-valve and by advancing or retarding the spark. Such motors must also have change-speed gears for varying resistances and to permit the direction of the motor to be reversed; a clutch must also be placed between motor- and driving-wheels to allow the car to be stopped without stopping the motor. In steam-cars the flash or semi-flash type of boiler is much used, eliminating some troubles connected with the fire-tube types. For night use motor-cars are equipped with powerful reflector- or lens-lanterns, fed by acetylene gas from generators on the car. The speed of racing-cars is not fixed, but 120 miles an hour has been reached with motors of from 80 to 100 horse-power. The carrying capacity of trucks has been limited to about 10 tons on account of difficulties from the road-bed. Touring-cars have a capacity of from 16 to 60 horse-power, and speeds ranging up to 40 or 50 miles an hour. Light electrics have a radius of action of about 30 miles from a charging-station, or a 60-mile limit. Increasing comfort and luxury are secured by inclosing the rear or tonneau part of the touring-car, making it a vehicle for all weathers and temperatures and not a pleasure-vehicle only.



Electric Automobile.

A, *A*, receptacles for storage-batteries; *B*, motor control; *C*, steering-gear; *D*, motor.



Gasolene Automobile.

A, cooler (or radiator); *B*, connecting steering-rod; *C*, change-speed lever; *D*, emergency-brake lever; *E*, steering-wheel, with spark and throttle controls.

automobile (â-tō-mō′bil), *v. i.* To ride in an automobile vehicle. [Recent.] *Cosmopolitan*, XXV. 485.

automobilism (â-tō-mō′bil-izm), *n.* The use of automobile vehicles. [Recent.]

automobilist (â-tō-mō′bil-ist), *n.* One who uses an automobile vehicle.

automobility (â-tō-mō-bil′i-ti), *n.* [*automobile* + *-ity* (or *auto-* + *mobility*).] **1.** The character or fact of being automobile; capacity for making automatic movements. See *automatic*, 2.—**2.** The use of automobiles as a means of locomotion; travel by means of automobiles. *Nature*, Nov. 26, 1903 (advt.). [Rare.]

automobilize (â-tō-mō′bil-īz), *v. i.*; pret. and pp. *automobilized*, ppr. *automobilizing*. [*automobile* + *-ize.*] To use, ride in, or drive an automobile as a means of locomotion or for pleasure. *N. Y. Times*, March 26, 1902. [Rare.]

automorph (â′tō-môrf), *n.* [Gr. *αὐτός*, self, + *μορφή*, form.] In *math.*, the product of a form by its unit form.

As to the forms $(mx^2 \sim ny^2)$, $(x^2 \sim mny^2)$, mere *automorphs* of the same form, i.e., products of the form by its unit-form $r^2 - mn\,v^2 = 1$, are not to be considered as distinct forms.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 552.

automorphic, *a.* **2.** In *math.*, characterized by automorphism. See ★*automorphism*, 2.—**3.** Same as *idiomorphic.*—**Automorphic function,** in *math.*, a function which is unchanged by all the substitutions of any group of linear transformations.

Two classes of *automorphic functions* are known by which this uniformisation may be effected: namely, one which was first given by Weber in Göttinger Nachrichten, 1886, and one which was first given by the author, Phil. Trans., 1898.

E. T. Whittaker, Modern Analysis, p. 339.

automorphism, *n.* **2.** In *math.*, the property of remaining unchanged by all the substitutions of any group of linear transformations. *Science*, June 5, 1903, p. 904.—**3.** Anthropomorphism; the conception of the lower animals by analogy with man. *H. M. Stanley*, Evol. Psychol. of Feeling, p. 297.

automorphous (â-tǭ-môr'fus), *a.* Same as *automorphic.*

automotive (â-tǭ-mō'tiv), *a.* [*auto-* + *motive.*] Propelled by its own power; automobile.

automotor (â-tǭ-mō'tọr), *n.* [*auto-* + *motor.*] A motor-propelled vehicle; an automobile.—**Automotor crane.** See ★*crane*².

autonephrotoxin (â-tǭ-nef-rǭ-tok'sin), *n.* [*auto-* + *nephrotoxin.*] A nephrotoxin which has resulted in the body of an animal as the result of an auto-immunization, and which is directed against the renal epithelium of the same individual.

autonoëtic (â″tǭ-nō-et'ik), *a.* [Gr. *αὐτός*, self, + *νοητικός*, ‹ *νοητός*, perceiving; see *noëtic.*] Self-perceiving. Clairvoyant: as, the *autonoëtic* action of the mind. *N. E. D.*

autonomical (â-tǭ-nom'i-ka̤l), *a.* Autonomous; same as *autonomic.*

autonomically (â-tǭ-nom'i-ka̤l-i), *adv.* In an autonomic manner.

autonomism (â-ton'ǭ-mizm), *n.* [*autonomy* + *-ism.*] **1.** The principle of autonomy or the independence of municipalities or of communities each containing but a single municipality. *J. Fiske.*—**2.** The theory that the forms into which animals and plants develop are determined by an inward agency. *Biol. Bull.*, Sept. 1904, p. 201.

autonomistic (â-ton-ǭ-mis'tik), *a.* Of or pertaining to autonomism. *Biol. Bull.*, Sept., 1904, p. 201.

autonomize (â-ton'ǭ-mīz), *v. t.*; pret. and pp. *autonomized*, ppr. *autonomizing.* [*autonom*(*ous*) + *-ize.*] To make autonomous; render self-governing.

autonym, *n.* **4.** In *anthrop.*, the name by which a people call themselves.

auto-objective (â″tǭ-ob-jek'tiv), *a.* Subjectively objective; relating to an object residing in the subject. Thus an objective sensation is one aroused by the action of an external stimulus—sound, for example; a subjective sensation is a sensation produced in the absence of peripheral stimulation—an 'image' of an objective sensation; an auto-objective sensation is a sensation aroused by a stimulus residing in the body of the subject—an organic sensation (as pain, hunger, etc.).

The second class of objective sensations may be called indirect objective or *auto-objective.* This class of sensations includes hunger, thirst, suffocation, pain, fatigue, etc. It will be noted that these *auto-objective* sensations all arise from different conditions that exist within the system, the first three named being manifestations of needs of the body for more matter, the last two, manifestations of overstimulation or overwork. *Buck*, Med. Handbook, VII. 742.

auto-ophthalmoscope (â″tǭ-of-thal'mǭ-skōp), *n.* See *autophthalmoscope.*

auto-ophthalmoscopy (â″tǭ-of-thal'mǭ-skō-pi), *n.* [*auto-* + *ophthalmoscopy.*] Inspection of the interior of one's own eye by means of a specially devised instrument, the autophthalmoscope.

autopelagic (â″tǭ-pē-laj'ik), *a.* [Gr. *αὐτός*, self, + *πέλαγος*, sea.] Living only at the surface of the water, or, in stormy weather, at slight depths. See *pelagic*, ★*bathypelagic*, ★*spanipelagic.* *Haeckel* (trans.), Planktonic Studies, p. 582.

autophonia (â-tǭ-fō'ni-ä), *n.* [Gr. *αὐτός*, self, + *φωνή*, voice.] A condition in which one's own voice is heard with abnormal distinctness and volume, as if one were speaking into a barrel.

autophonic (â-tǭ-fon'ik), *a.* Pertaining to autophony: as, *autophonic* resonance.

autophotograph (â-tǭ-fō'tǭ-graf), *n.* A print obtained by the exposure, in the dark, of a sensitive surface to the radioaction of minerals and other objects. *Nature*, Feb. 25, 1904, p. 403.

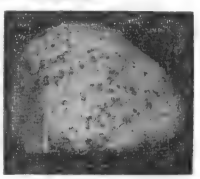
autophya (â-tō'fi-ä), *n. pl.* [NL., ‹ Gr. *αὐτοφυής*, self-grown, ‹ *αὐτός*, self, + *φύεσθαι*, grow.] A name given by Haeckel to the skeleton elements secreted by the sponge itself, as distinguished from the admixture of foreign particles (as sand grains), the latter being designated *xenophya.*

autophyte (â'tǭ-fīt), *n.* [Gr. *αὐτός*, self, + *φυτόν*, plant.] In *phytogeog.*, an autotrophic plant.

autophytograph (â-tǭ-fī'tǭ-graf), *n.* [*auto-* + *phytograph.*] An impression, tracing, or outline of a plant upon a rock, due to the effect of the plant in staining the matrix or in removing its natural color.

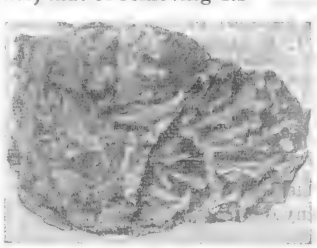
For such plant pictures, or plant writings, in which the traces or outlines of plants are distinguishable by their color, and in which the variation of color from the matrix is due to chemical change brought about by the plant reproduced, the name *autophytograph* . . . is proposed.

C. H. White, in Amer. Jour. Sci., March, 1905, pp. 231–232.



Positive Autophytography, showing the impression of some plant, probably *Microcranthemum orbiculatum*, on the polished surface of a pebble found on a bar of gravel on Cub Creek, Wilkesboro, N. C.

autophytography (â″tǭ-fī-tog'ra̤-fi), *n.* [*auto-* + *phytography.*] The natural process by which autophytographs are produced. That of staining the matrix is called *positive*, that of removing its original color *negative autophytography. C. H. White.*



Negative Autophytography, showing the impression of a fossil plant, *Fucoides Bollensis*, from the Lias of Boll, Würtemberg. (After Seward.)

Autoplastic graft. See ★*graft*².

autoplate (â'tǭ-plāt), *n.* [*auto-* + *plate.*] A curved stereotype which has been automatically cast, shaved, and beveled.

In stereotyping, a device known as the *autoplate* was invented in 1900 by means of which the time required for casting plates was considerably reduced.

Census Bulletin, June 28, 1902, p. 51.

Autoplate machine, a combination machine containing a papier-mâché matrix or mold for rapidly and automatically casting, shaving, and beveling curved stereotypes: used principally in newspaper-printing.

autopoisonous (â″tō-poi'zn-us), *a.* Acting as a poison to the organism by which it is formed. *Buck*, Med. Handbook, IV. 184.

autopore (â'tǭ-pōr), *n.* [Gr. *αὐτός*, self, + *πόρος*, a pore.] In the tabulate *Hexacoralla* of the extinct family *Chætetidæ*, one of the larger tubes of the corallites, which are surrounded on all sides by smaller tubes or mesopores.

autoprint (â'tǭ-print), *n.* Same as ★*autophotograph.*

autopsy (â'top-si), *v. t.*; pret. and pp. *autopsied*, ppr. *autopsying.* [*autopsy, n.*] To make a post-mortem examination of; perform an autopsy on. *Jour. Exper. Med.*, V. 257.

autopsychic (â-tǭ-sī'kik), *a.* [*auto-* + *psychic.*] Pertaining to consciousness in its relation to the self, or to self-consciousness.

Consciousness is a function of the associative mechanism and may be considered in its threefold relationship to the outer world, the body and self—allopsychic, somatopsychic, and *autopsychic.* *Buck*, Med. Handbook, V. 27.

autopsychical (â-tǭ-sī'ki-ka̤l), *a.* Same as ★*autopsychic.*

autopticity (â-top-tis'i̤-ti), *n.* [*autoptic* + *-ity.*] Autoptic quality, character, or nature. *Jour. Sacred Lit.*, XIV. 169. *N. E. D.*

autoquadricycle (â-tǭ-kwod'ri-sī-kl), *n.* [*auto-* + *quadricycle.*] A four-wheeled motor-cycle having accommodation for two persons tandem. One sits on a saddle and steers and controls the motor, while the other (the passenger) sits on a small seat with a back and a dash, supported by the front wheels. *Hiscox*, Horseless Vehicles, p. 213.

autoradiograph (â-tǭ-rā'di-ǭ-graf), *n.* Same as ★*autophotograph.*

Another exhibit which naturally attracted much attention was that by Sir William Crookes, illustrative of the properties of the emanations of radium. There were *autoradiographs*, photographs of radium emanations, luminous effects of radium emanations.

Science, June 19, 1903, p. 976.

autoreduction (â″to-rē-duk'shǫn), *n.* In *chem.*, the reduction to the state of metallic silver or mercury of either of these metals when its

cyanide is simply heated with water in a sealed tube. *Nature*, Jan. 8, 1903, p. 238.

autoregulation (â″tǭ-reg-ṳ̄-lā'shǫn), *n.* Self-regulation.

autoscope, *n.* **2.** Any instrument for the examination of an organ of one's own body.

autositic (â-tǭ-sit'ik), *a.* [*autosite* + *-ic.*] That is, or is of the nature of, an autosite (which see).

autoskeleton (â-tǭ-skel'e-tǫn), *n.* [NL., ‹ Gr. *αὐτός*, self, + *σκελετόν*, skeleton.] In sponges, the true skeleton secreted by the cells of the sponge itself. It consists of mineral sclerites or spicules, or of an organic substance called *spongin*, which usually occurs either as a cementing substance or as fibers. Distinguished from ★*pseudoskeleton.*

autosoteric (â″tǭ-sǭ-ter'ik), *a.* [Gr. *αὐτός*, self, + *σωτηρικός*, saving, delivering, ‹ *σωτήρ*, a saver, savior.] Self-saving; based on the principle of salvation by one's own efforts or character. [Rare.]

autospore (â'tǭ-spōr), *n.* [Gr. *αὐτός*, self, + *σπορά*, seed.] A daughter-cell arising from a mother-cell of certain of the unicellular algæ and possessing the exact shape and structure of the original cell.

Crucigenia rectangularis (Näg) Gay, with formation of autospores. (From West's "British Freshwater Algæ.")

autospray (â'tǭ-sprā), *n.* [Gr. *αὐτός*, self, + E. spray.] A small tubular glass with one or two narrow necks having capillary orifices and armed with metallic caps to retain a volatile liquid such as ethyl-chlorid. When a cap is removed and the liquid is allowed to flow to that end, a spray is ejected, owing to the pressure of the vapor within the tube.

autostage (â'tǭ-stāj), *n.* [*auto-* + *stage.*] A motor-driven vehicle capable of carrying a number of passengers; a motor-driven stage. See ★*autobus.*

autostarter (â'tǭ-stär″tėr), *n.* An autotransformer used for starting motors. See ★*autotransformer.*

Each induction motor is started by the manipulation of a four-pole, double-throw, oil-break switch that is combined with its auto-converter in a single oil tank—the combination being termed an "oil-break *auto-starter*" switch. *Elect. Rev.*, Sept. 17, 1904, p. 459.

autostyly (â-tos'ti-li), *n.* [Gr. *αὐτός*, self, + *στῦλος*, pillar: see *style*².] The condition of having the palatoquadrate fused with the cartilaginous cranium, the second visceral arch broken up and not acting as a suspensorium, and the hyomandibular small and united with the cranium. In this restricted sense autostyly occurs in the *Dipnoi* and *Amphibia.* *Biological Bulletin*, June, 1904.

autosuggestion (â″tō-su-jes'chǫn), *n.* In *psychol.*, self-suggestion, especially the voluntary arousal and fixation of the idea that one will fall into the hypnotic sleep.

The confirmed hypnotic will try in every possible way to procure the enjoyment which he craves. And he has in *autosuggestion* a means lying always ready to his hand. *W. Wundt* (trans.), Human and Animal Psychol., p. 331.

autotelic (â-tǭ-tel'ik), *a.* [Gr. *αὐτός*, self, + *τέλος*, end.] In *esthetics*, being an end in itself; existing or proceeding for its own sake: opposed to ★*heterotelic.* *Baldwin*, Dict. of Philos. and Psychol., I. 96.

autotomize (â-tot'ǭ-mīz), *v. t.*; pret. and pp. *autotomized*, ppr. *autotomizing.* [*autotomy* + *-ize.*] To practise autotomy; to cut off an organ or part of an organ: said of certain animals, as crabs, which drop their claws or legs, and lizards, which drop their tails, when rudely handled. *Morgan*, Regeneration, p. 153.

autotomous (â-tot'ǭ-mus), *a.* Relating to or of the nature of autotomy. See ★*autotomy.* *Proc. Zool. Soc. London*, 1898, p. 926.

autotomy (â-tot'ǭ-mi), *n.* [Gr. *αὐτός*, self, + *-τομία*, ‹ *ταμεῖν*, cut.] The reflex throwing off of certain parts of the body, as the rays in starfishes and the legs of some arthropods, which do not, as in fission and budding, develop into new individuals. This property may be of use to animals by enabling them to escape from their captors at the expense of only the part seized.

One of the most remarkable cases of *autotomy* is that in the holothurians, in which the Cuvierian organs, and even the entire viscera, may be ejected when the animal is disturbed. *Morgan*, Regeneration, p. 154.

autotoxemia (â″tǭ-tok-sē'mi-ä), *n.* [*auto-* + *toxemia.*] Same as ★*auto-intoxication.*

autotoxic (â-tǭ-tok'sik), *a.* [Gr. *αὐτός*, self, + *τοξικόν*, poison: see *toxic.*] Self-poisoning; of or pertaining to the action of autocytotoxins.

In considering the development of the disease, we believe the excitant is a toxic or *autotoxic* agent. *Med. Record*, May 30, 1903, p. 857.

autotoxication (â″tō-tok-si-kā′shọn), *n.* Same as ★*auto-intoxication.*

autotoxicity (â″tō-tok-sis′i-ti), *n.* [*autotoxic* + *-ity.*] The character of being autotoxic; toxicity directed against the individual in whose body the toxin has been produced.

autotoxin (â-tō-tok′sin), *n.* [*autotox(ic)* + *-in*[2].] A poisonous substance formed in the body of an animal and directed against its own tissues.

autotoxis (â-tō-tok′sis), *n.* [NL., ⟨ Gr. *αὐτός*, self, + *τοξ(ικόν)*, poison, + *(s)is*, as in abstract nouns from Gr., as *sepsis*, etc.] Same as ★*auto-intoxication.*

autotransformer (â″tō-tråns-fôr′mėr), *n.* In *elect.*, a transformer, in which a part of the primary coil is used as secondary coil, or inversely. Frequently this part of the coil may be variable and so permit a regulation of the voltage. The autotransformer has the advantage, compared with the transformer, of smaller size and higher efficiency, but the disadvantage of connecting the primary and the secondary circuit together electrically. See *transformer.* Also called *compensator.*

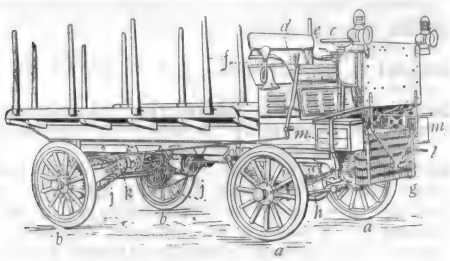
autotransfusion (â″tō-tråns-fū′zhọn), *n.* [*auto-* + *transfusion.*] A method of forcing the mass of the blood to the internal organs by the application of tight bandages to the extremities.

autotrophic (â-tō-trof′ik), *a.* [Gr. *αὐτος*, self, + *-τροφος*, ⟨ *τρέφειν*, nourish.] Self-nourishing: said of plants which derive their nourishment directly from inorganic matter, that is, of all plants except parasites and saprophytes. See the quotation under ★*hemiparasite* and compare *holophytic.*

The root-difference between plants and animals is one of nutrition. Plants are *autotrophic*, animals heterotrophic.

Rep. Brit. Ass'n Advancement of Sci., 1901, p. 208.

autotruck (â′tō-truk), *n.* [*auto-* + *truck.*] A motor-driven wagon for carrying freight or



Autotruck.

a, *a*, front or leading-wheels; *b*, *b*, driving-wheels; *c*, steering-wheel; *d*, brake-lever; *e*, controlling-levers on post of steering-wheel; *f*, alarm-horn; *g*, radiator to cool circulating water; *h*, casing surrounding motor; *j*, *j*, drive-chains; *k*, compensating or differential shaft; *l*, starting-crank; *m*, *m*, battery-box, tools and supplies.

bundles, as distinguished from a passenger vehicle; a delivery-wagon propelled mechanically; the commercial motor-car. Usually they have a carrying capacity of from a half-ton to 10 tons.

autotypic, *a.* **2.** Setting one's own standard; determining by reference to one's self what shall be considered as typical.

Man the measurer—has always been and still is more *autotypic* than he knows, reproducing in his representation of the human form the type of his own race.

G. S. Hall, Adolescence, I. 124.

autotypy (â′tō-tī-pi), *n.* The art of making facsimiles by printing.

autovaccination (â″tō-vak-si-nā′shọn), *n.* [*auto-* + *vaccination.*] Same as *auto-inoculation.*

autovalve (â′tō-valv), *n.* In a prepayment meter, a valve which automatically shuts off the gas-supply. *W. L. Dibdin*, Public Lighting, p. 176.

autoxenous (â-tok′se-nus), *a.* [Gr. *αὐτός*, self, + *ξένος*, host. Same as ★*autœcious.*

autoxeny (â-tok′se-ni), *n.* Same as ★*autœcism.*

autoxidation (â-tok-si-dā′shọn), *n.* [*aut(o-)* + *oxidation.*] **1.** A process in which the oxygen in a compound oxidizes another portion of the molecule of the same compound.—**2.** A process in which a substance undergoing oxidation in air or oxygen causes a portion of the oxygen to assume an active condition, as ozone, hydrogen peroxid, or a peroxid of the substance, which may, in turn, cause the further oxidation of the same or of some other compound. *Amer. Chem. Jour.*, March, 1903, p. 179.

autoxidizable (â-tok-si-dī′za-bl), *a.* In *chem.*, capable of spontaneously undergoing oxidation, as by mere contact with the oxygen of the air.

autozoöid (â″tō-zō′oid), *n.* [Gr. *αὐτός*, self, + *zoöid.*] In alcyonarians, the ordinary normal zoöid as distinguished from the siphonozoöid.

Autumnal catarrh. See ★*catarrh.*—**Autumnal fever.** See ★*fever*[1].—**Autumnal point,** the point of the celestial equator crossed by the sun at the autumnal equinox.

autumnize (â′tum-nīz), *v. t.*; pret. and pp. *autumnized*, ppr. *autumnizing.* [L. *autumnus*, autumn, + *-ize.*] To give an autumnal appearance to.

When first the maple begins to *autumnize* the grove.

Jesse, Jour. Nature, p. 109. *N. E. D.*

Autunian (â-tū′ni-an), *a.* and *n.* Of or pertaining to Autun, in France: in *geol.*, noting the lowest subdivision of the Permian in France: so called from Autun, where it carries a terrestrial flora. See ★*Artinskian.*

auxanogram (âk-san′ō-gram), *n.* [Gr. *αὐξάνειν*, increase, + *γράμμα*, anything written.] The result obtained by growing colonies of microorganisms according to ★*auxanography* (which see).

auxanography (âk-sa-nog′ra-fi), *n.* [Gr. *αὐξάνειν*, increase, + *-γραφια*, ⟨ *γράφειν*, write.] A method devised by Beyerinck for testing the effect of various nutrient media upon bacteria. The bacteria are plated out in a medium known to be poorly adapted for their nourishment, and there are then added to the surface of the plate a few drops of the solution to be tested. If the requisite nutrient has been added the bacteria will develop rapidly in these spots.

auxesis, *n.* **3.** In *bot.*, the method of increase in size of the valves of diatoms.

auxetophone (âk-set′ō-fōn), *n.* [Gr. *αὐξητός*, that may be increased, + *φωνή*, sound.] A device for increasing the loudness of the sounds produced by a phonograph. See the extract.

The Hon. C. A. Parsons, the inventor of the steam turbine, also had a highly interesting exhibit, the *auxetophone.* This may be described as a kind of pneumatic-acting stylus for the phonograph. Instead of the recording stylus of the instrument causing the diaphragm to vibrate in the usual manner, the sound waves operate a minute air-valve on the same principle as a relay. This air-valve controls the admission of air into the trumpet of the talking machine under a pressure of two pounds to the square inch.

Sci. Amer. Sup., June 2, 1904, p. 23832.

auxiliary. I. *a.*—**Auxiliary note or tone,** in *music*, any note or tone a degree above (or occasionally below) one that is essential to the harmony, and attached to the latter for some purpose of embellishment. Thus both appoggiaturas and suspensions may be called *auxiliary notes.*—**Auxiliary sailing-vessel,** one that has full sail-power, and boilers and engines of moderate horse-power. In this type of vessel sail is the main, and steam the auxiliary power.—**Auxiliary scale,** (*b*). Same as ★*adipose lobe.*—**Auxiliary steam-vessel,** one that has full steam-power and a moderate sailing rig, so that steam is the main and sail the auxiliary power.

II. *n.* **5.** In the nomenclature of the sutural inflections in the ammonoid cephalopods, a lobe or saddle lying between the umbilical curve or line of involution and the second lateral lobe.—**6.** In *mech.*, any machine except the principal one: a term applied specifically to the feed-pumps, fire-pumps, etc., in power plants.—**7.** A vessel fitted with power other than sails for propulsion but depending ordinarily on the latter.

Auxis (âk′sis), *n.* [NL., ⟨ Gr. *αὐξίς*, the young of the tunny.] A genus of fishes of the family *Scombridæ*, known as frigate-mackerels. They range widely in large schools over the warm seas, though occasionally coming to the New England coast. The only well-known species is *A. thazard.*

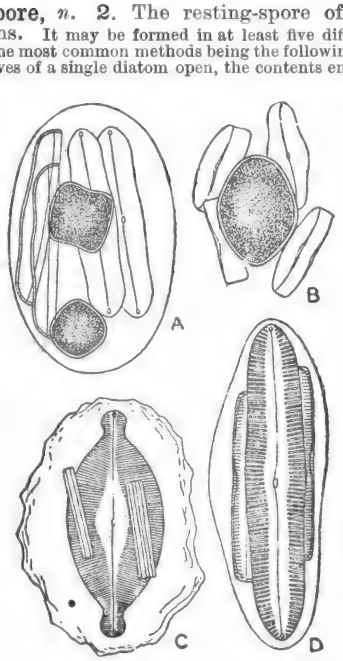
auxochrome (âk′sō-krōm), *a.* and *n.* [Gr. *αὐξάνειν*, increase, + *χρῶμα*, color.] In *chem.*, noting those groups contained in dyes which enable them to combine with the fiber of the cloth or with a mordant. The most important of these are the hydroxyl-, amino-, sulpho-, and carboxyl-groups. *Athenæum*, July 15, 1893, p. 100.

auxochromous (âk-sō-krō′mus), *a.* [Gr. *αὐξ(άνειν)*, increase, + *χρῶμα*, color.] Capable of increasing or developing color.—**Auxochromous group,** a group of elements which if introduced into a chromogen will develop a dyestuff. According to Witt's theory the coloring power of a dyestuff depends largely upon the simultaneous presence of an auxochromous group and a chromophorous group.

auxocyte (âk′sō-sīt), *n.* [Irreg. ⟨ Gr. *αὐξάνειν*, increase, + *κύτος*, a hollow (a cell).] A cell which has to do with growth and reproduction, such as a spermatocyte. *Buck*, Med. Handbook, III. 72.

auxology (âk-sol′ō-ji), *n.* [Irreg. ⟨ *αὐξ (ησις)*, growth, + *-λογία*, ⟨ *λέγειν*, speak.] That branch of biology which deals with the growth of organisms. *Natural Science*, Sept., 1898, p. 153.

auxospore, *n.* **2.** The resting-spore of the diatoms. It may be formed in at least five different ways, the most common methods being the following: (1) the valves of a single diatom open, the contents emerge,



A, *Navicula limosa* (Kütz.), from the New Forest, Hants. (x 450) B, *Achnanthes flexella* (Kütz; Bréb.), from Craig-an-Lochan, Scotland (x 450). C, *Navicula Amphisbæna* (Bory), from Barnes Common, Surrey (x 450). D, *N. viridis* (Kütz.), from Clough, Antrim, Ireland (x 350). C and D illustrate the first method of auxospore formation, B the third method, and A the fifth method. (From West's "British Freshwater Algæ.")

become inclosed in a thin membrane, and increase in volume; (2) the contents of two diatoms emerge and unite to form a single spore; (3) the contents of two diatoms, after emerging, are held together by a common gelatinous envelop, each mass producing a spore without fusion.

Aux Vases sandstone. See ★*sandstone.*

A. V. An abbreviation of *Authorized Version.*

availer (ạ-vāl′ėr), *n.* One who is helpful or proves serviceable. *Florio.* [Rare.]

availing (ạ-vāl′ing), *p. a.* Profitable, advantageous.

A truly valuable or *availing* thing.

Ruskin, Unto this Last, p. 118. *N. E. D.*

Avalanche conduction, in *neurol.*, the kind of conduction of nerve-currents which is made possible when the terminals of the neuraxon of one cell come in contact with the cell-bodies of several or many other neura.

avalanchine (av-ạ-lânch′in), *a.* Of the nature of an avalanche; overpowering: as, *avalanchine* weight. *W. Gaspey*, Doom. Creat. *N. E. D.*

avalent (a-vā′lent), *a.* [*a-*[18] + *valent.*] In *chem.*, having zero valence, as argon, helium, and the other newly discovered gases of the atmosphere, which appear to be incapable of entering into chemical combination with one another or with any of the elements.

avania (ä-vä-nē′ä), *n.* [= F. *avenie*, Sp. Pg. *avania*, It. *avania*, NGr. *ἀβανία*, Turk. Ar. *'awānī*, *'awān*, *'awānia*: origin uncertain.] An imposition or tax levied by Turkish officials on merchants; as generally considered, an extortionate tax.

avant-courier (ạ-vänt′kö″ri-ėr), *v. t.* To announce as by herald; herald. *Lowell*, Among my Books, 1st ser., p. 167.

avaremotemo (ä-vä″rā-mō-tā′mō), *n.* [Tupi (in Piso).] A tree of the mimosa family, *Pithecolobium Avaremotemo*, the bitter bark of which is used medicinally. [Brazil.]

avascular (a-vas′kū-lạr), *a.* [*a-*[18]+ *vascular.*] Without blood-vessels or lymphatics, or scantily supplied with them. *Buck*, Med. Handbook, IV. 573.

A. V. D. An abbreviation of *Army Veterinary Department.*

Ave. A contraction of *Avenue* (in an address).

avellano (ä-vel-yä′nō), *n.* [Sp. *avellano*, a hazel-tree: see *avellane.*] The hazel-tree of South America, *Guevina Avellana.* The nut-like seeds are rich in oil and are edible. The wood is used for veneering. See *hazel-tree*, 2.

avenalin (a-ven′ạ-lin), *n.* [L. **avenalis*, adj., ⟨ *avena*, oats, + *-in*[2].] A crystallizable vegetable globulin found in the kernels of oats: similar to ★*excelsin.*

Avenger of blood. See ★*blood.*

avengingly (ạ-ven′jing-li), *adv.* In an avenging manner; with an avenging purpose; vengefully. *Galt*, Rothelan. [Rare.] *N. E. D.*

avenolith (ạ-vē′nō-lith), *n.* [L. *avena*, oats, + *λίθος*, stone.] An intestinal concretion having the husk or other indigestible part of oats as a nucleus.

avenue, *n.* **5.** In *archæol.*, a series of megalithic stones arranged in a row.

average[2], *n.* **4.** A mode of estimating, by comparison, the strength or weakness of a billiard play. The total points divided by the number of innings give the average of a game, and the aggregated points of all the games, divided by their total innings (but not the combined single averages divided by the number of games) gives the general or grand average. **5.** In *cricket:* (*a*) The aggregate number of runs a batsman has scored, divided by the number of his completed innings. (*b*) The aggregate number of runs scored from a bowler, divided by the number of batsmen he has 'dismissed.'

avernal (ạ-vėr′nal), *a.* and *n.* [L. *Avernalis*, < *Avernus:* see *Avernian.*] **I.** *a.* **1.** Relating or pertaining to Avernus. See *Avernian.*—**2.** Destructive of bird life: as, *avernal* places, *Stanley*, Hist. Philos. (in allusion to the ancient statement that birds attempting to fly across Lake Avernus were killed by its mephitic vapors. See etymology of *Avernian*).

II. *n.* A demon or other inhabitant of the infernal regions.

Averruncus (av-e-rung′kus), *n.* [NL., < L. *Averruncus*, an averting deity: see *averruncate.*] A genus of sea-poachers of the family *Agonidæ*, found in deep water off the coast of California and northward.

avertedly (ạ-vėr′ted-li), *adv.* In an averted position or manner; with aversion or repugnance; unfavorably.

Richard was silent; not *avertedly;* he was simply not outwardly responsive. *Mrs. Whitney*, Hitherto, p. 312.

avezacite (av′e-zạ-sīt), *n.* [*Avezac*(*-Prat*), a locality in the French Pyrenees, + *-ite*[2].] In *petrog.*, the name proposed by Lacroix in 1901 for an ultra-basic igneous rock of granular texture, consisting principally of augite, hornblende, ilmenite, and magnetite, with some apatite, and titanite. It occurs in narrow dikes in lherzolite.

aviado (ä-vi-ä′dō), *n.* [Amer. Sp., pp. of *aviar*, provide articles for a journey, prepare, < *a*, to, + *via*, < L. *via*, way: see *via.*] One who works a (silver-) mine with means furnished by another (called the *aviador*).

aviatics (ā-vi-at′iks), *n.* [Compare *aviation.*] The science or art of aviation.

aviation (ā-vi-ā′shọn), *n.* [L., *avis*, a bird.] The art or act of flying; specifically, the science or art of directing and controlling flying-machines; the art of navigating the air with machines heavier than air.

This mode of navigation [in air] is considered as an *aviation*, or support by mechanical means only.
Proc. Internat. Confer. on Aërial Navigation, Chicago, [1893, p. 334.

aviator (ā′vi-ā-tọr), *n.* **1.** A flying-machine employing the principle of the aëroplane. [Recent.]—**2.** One who directs the course of a flying-machine; an aëroplanist.

These types of gliders have been taken up in France by Captain Ferber, of the Artillery, and subsequently by Mr. Ernest Archdeacon, both of whom have become enthusiastic '*aviators.*'
G. H. Bryan, in Nature, 1905, p. 465.

aviatress (ā′vi-ā-tres), *n.* A woman aviator.

avichi (ạ-vē′chi), *n.* [Skt. *avīchi*, hell, lit. waveless, < *a*-priv. + *vīchi*, wave.] The Buddhist hell.

avicidal (av-i-sī′dạl), *a.* Relating or pertaining to the killing or slaughter of birds.

avicide (av′i-sīd), *n.* [NL. **avicidium*, < L. *avis*, bird, + *-cidium*, < *cædere*, kill.] The killing or slaughter of birds.

avicolous (a-vik′ō-lus), *a.* [L. *avis*, bird, + *colere*, inhabit.] Living on birds, as the birdticks of the suborder *Mallophaga.*

Aviculopinna (a-vik″ū-lō-pin′ä), *n.* [NL., < *Avicula* + *Pinna*, genera of *Pelecypoda.*] A genus of Paleozoic pelecypods of the family *Pinnidæ*, having a very small wing in front of the beaks.

aviculturist (av′i-kul″tụr-ist), *n.* [*aviculture* + *-ist.*] One who rears or keeps birds, especially small birds, in a state of domestication.

The title of this work must therefore be interpreted in the sense in which it is generally used by *aviculturists.*
Nature, March 31, 1904, p. 507.

avidity, *n.* **3.** In *phys. chem.*, a constant by means of which can be expressed the distribution of a base between two acids each sufficient to neutralize the whole of the base, or conversely; that is, the relative energy with which the acids tend to seize their shares of base: a term employed to avoid the use of the word *affinity.*

avidly (av′id-li), *adv.* Eagerly; greedily.

avidya (ä-vid′yä), *n.* [Skt. *avidyā*, < *avidya*, ignorant, < *a*-, without, + *vidya*, knowledge, understanding, < √ *vid*, see: see *Veda* and *wit*[1], *v.*] Ignorance; specifically, in Buddha's metaphysical system, the ignorance which mistakes the illusory phenomena of this world for realities. It is the first of the 12 *nidānas*, or links in the closed chain of cause and effect, in the whole range of sentient existence.

avio (ä-vē′ō), *n.* [Sp.] Money furnished the owners of a mine to work it, by another person, the aviador.—**Avio contract,** a contract between two parties for working a mine, by which one of the parties, the aviador, furnishes the money to the proprietors for working the mine. *Coal and Metal Miners' Pocket-book.*

aviolite (ā-vi-ō′līt), *n.* [Monte *Aviolo.*] In *petrog.*, a term proposed by Salomon in 1898 for hornfels consisting of mica and cordierite.

Avisseau pottery. See ★*pottery.*

avo (ä′vō), *n.* [Name in Timor?] A current subsidiary coin of Macao, Timor, equivalent to .42 of a cent.

Avocettina (av-ō-set′i-nä), *n.* [NL., < *avocetta*, *avosetta*, avoset.] A genus of snipe-eels of the family *Nemichthyidæ:* found in deep seas.

avoidance, *n.* **6.** The custom which forbids one member of a family to meet or address another member. This custom is found among many primitive tribes, and relates most frequently to a man and his mother-in-law.

It is assumed that the junior male would be allowed to remain only on condition that he respected the marital privileges of the senior; hence he would have to seek his mate from without the band; and the conditions in which he lived with the female members of his own family gave origin to the curious etiquette of "*avoidances*" which is still to be found amongst some savage races and the history of which has been such a puzzle to anthropologists.
Lancet, Aug. 23, 1903, p. 532.

avoidment (ạ-void′mẹnt), *n.* The act of avoiding; avoidance. [Rare.]

avoird. An abbreviation of *Avoirdupois.*

avolitional (ā-vō-lish′ọn-ạl), *a.* [*a*-[18] + *volitional.*] Not volitional; involuntary: as, *avolitional* motility.

Avon pottery. See ★*pottery.*

avowableness (ạ-vou′ạ-bl-nes), *n.* The quality of being avowable or openly acknowledgable. *Donne*, Sermons, iv. 549.

avowedness (ạ-vou′ed-nes), *n.* The quality or fact of being avowed.

avoyership (a-voi′ėr-ship), *n.* The office or position of avoyer (which see).

aw, *n.* and *v. t.* A simplified spelling of *awe.*

awa (ä′wä), *n.* [Hawaiian *awa* (= Samoan *ava*,= Maori *kawa*, *kawa-kàwa*), the plant and the drink, < Hawaiian *awa*, etc., sour, bitter, sharp, pungent. See *kava.*] **1.** A name, in Hawaii and other islands of Polynesia, of a plant of the pepper family, *Piper methysticum*, from which the natives prepare a beverage.—**2.** The beverage prepared from *awa.* See *kava.*

awa[2] (ä′wä), *n.* [Hawaiian.] The common Hawaiian name of the milk-fish, *Chanos chanos.* It is found in the gulf of California and about the Hawaiian islands, where it is an important food-fish, reaching a length of from 2 to 5 feet.

Awaji ware. See ★*ware*[2].

awakable (ạ-wā′kạ-bl), *a.* [*awake, v.*, + *-able.*] Liable to awake or be awakened. *Blackwood's Mag.*, iv. 631.

awapuhi (ä-wä-pō′hē), *n.* [Hawaiian and Tahitian.] **1.** A plant of the ginger family, *Zingiber Zerumbet*, which is distributed over all the volcanic islands of Polynesia and in India. See also ★*beta*[3]. [Hawaii.]—**2.** The name in Tahiti of another plant of the same family, *Amomum Cevuga.*

awardable (ạ-wârd′ạ-bl), *a.* [*award* + *-able.*] That is or may properly be awarded.

awaredom (ạ-wâr′dum), *n.* [Irreg. < *aware* + *-dom.*] The state of being aware or on one's guard. *Walpole*, Letters, III. 60. [Rare.] *N. E. D.*

awaruite (ä-wä-rö′īt), *n.* [*Awarua* (see def.) + *-ite*[2].] The bay owes its name to Maori *awarua*, a ditch, channel. Cf. *awa*, stream, river, and *rua*, a hole.] A native alloy of iron and nickel ($FeNi_2$) occurring in river-gravel with gold, platinum, tinstone, etc., and probably derived from a peridotite: found near Awarua bay, New Zealand.

awash, *adv.*—**Heave awash** (*naut.*), an order to the men at the capstan to heave round once more so as to bring the anchor into view at the surface of the water.

awatch (ạ-woch′), *adv.* [*a*[3] + *watch.*] On the watch; watching. *Mrs. Browning*, Aurora Leigh, vii.

away, *prep. phr.* as *adv.*—**To do away with,** to eliminate; remove entirely; dispense with; put an end to; abolish.—**To walk away from,** to outrun with ease, as if in a walk.

awebound (ạ′bound), *a.* Restrained or held in check or submissiveness by awe, or fear mingled with reverence or respect. [Rare.]

awelessness (ạ′les-nes), *n.* The state or quality of being aweless; utter lack of awe. *Golding*, Calvin on Deut., li. [Rare.] *N. E. D.*

aweoweo (ä-wā-ō-wā′ō), *n.* [Hawaiian.] A Hawaiian shrub or small tree, *Chenopodium Sandwicheum*, found on all of the islands, and sometimes eaten by the natives.

awesomely (ạ′sum-li), *adv.* In an awesome manner. [Rare.]

awesomeness (ạ′sum-nes), *n.* The fact or quality of being awesome. *Mrs. Whitney*, Sights and Insights, II. 609. *N. E. D.*

awest (ạ-west′), *adv.* [*a*[3] + *west.*] In or toward the west; westward. *J. Barlow*, Columbiad, i. 670.

aweto (ä-wā′tō), *n.* [Maori.] The so-called vegetable caterpillar, the larva of a hepialid moth, *Hepialus virescens.* It is attacked by a fungus, *Sphæria Robertsii*, which destroys it without altering its form, sending out a strong shoot from between the head and thorax. [New Zealand.]

A. W. G. In *wire-manuf.*, an abbreviation of *American wire-gage.* The American wire-gage differs somewhat from the standard gage used in England, known as the *Birmingham wire-gage* (B. W. G.), and sometimes called *Stubb's wire-gage* or *British wire-gage.* The American wire-gage is characterized by a regular geometric progression in the increase of standard diameters; the British wire-gage is slightly irregular in progression.

awhir (ạ-hwėr′), *adv.* [*a*[3] + *whir.*] In a whir; whirring.

awhirl (ạ-hwėrl′), *adv.* [*a*[3] + *whirl.*] In a whirl; whirling.

awikiwiki (ä-wē-kē-wē′kē), *n.* [Hawaiian, < *awiki*, to be quick.] A tall climbing bean, *Canavali galeatum.* [Hawaii.]

awink (ạ-wingk′), *adv.* [*a*[3] + *wink.*] Winking. *Edwin Arnold*, Ind. Idylls, p. 59. *N. E. D.*

awiwi (ä-wē′wē), *n.* [Hawaiian, < *awiwi*, hasten.] A species of centaury, *Centaurion sabæoides* (*Erythræa sabæoides* of Gray), a small herb with pink flowers which grows on grassy plains near the coast. [Hawaii.]

awmry†, *n.* An obsolete form of *ambry.*

awning-deck (ạ′ning-dek), *n.* See ★*deck.*

awning-decked (ạ′ning-dekt), *a.* In *shipbuilding*, noting a type of merchant steamer in which the highest continuous deck and the closed-in side just below it are of light construction.

awning-stanchion (ạ′ning-stan″shọn), *n.* One of the series of metal or wooden posts on the side of a ship above the rail, which support the ridge-rope to which the outer edges of the awnings are attached when they are spread to cover the decks.

awrack (ạ-rak′), *adv.* [*a*[3] + *wrack.*] Wrecked; ruined.

If she [the ship] split or sink, she is *awracke.*
Capt. John Smith, Seaman's Gram., p. 41.

awreck (ạ-rek′), *adv.* [*a*[3] + *wreck.*] In a wrecked condition; wrecked. *Joaquin Miller*, Songs of Italy, p. 122.

awsum, *a.* A simplified spelling of *awsome, awesome.*

axbreaker (aks′brā-kėr), *n.* A medium-sized tree, *Notelæa longifolia*, of the olive family, found from New South Wales to Queensland. It yields a hard, close-grained wood. Also called *mock-olive* and *coobagum.*

axed, *a.* **2.** Furnished with an ax or with axes. *F. W. Farrar*, St. Paul, IV. [Rare.]

axial, *a.*—**Axial angle,** a piece of the axial bounded by two of its planes as sides.—**Axial canal.** (*b*) In sponges, the cavity, in calcareous and silicious spicules, occupied by the axial thread or core of organic matter about which the mineral substance is deposited.—**Axial cell,** in *Dicyemida*, the single central cell of the body within which germ-cells arise.—**Axial cord,** in *Crinoidea:* (*a*) A thickening of the endothelium in the cœloma which gives rise to the gonads. (*b*) A nerve running in a special groove on the floor of the main brachial groove and proceeding from the aboral or dorsal nervous system. It sends branches to the muscles of the arms and to the supposed sensory endings in the ectoderm.—**Axial cross.** (*a*) In spicules of *Hexactinellida*, a cross formed by the union of the six axial threads or canals. (*b*) The projection of the crystallographic axes of a given

species, as used, for example, in the drawing of crystals.—**Axial current.** The central portion of the blood-stream in the smaller vessels, in which the red corpuscles are chiefly found, the white corpuscles moving sluggishly along in contact with the walls of the vessels in the so-called *still layer*.—**Axial duplicity.** See ★*duplicity*.—**Axial eject.** See ★*eject*.—**Axial fiber,** the delicate contractile thread contained in the stalk of certain sessile *Ciliata* among the *Infusoria* (for example, *Vorticella*). Contraction of it causes the stalk to shorten and coil up into a close spiral.—**Axial organ,** a structure of enigmatic function found in the axial sinus of *Echinodermata*, exclusive of the *Holothuroidea*. It is finely lobed, usually brownish, and pear-shaped, and consists of a complicated arrangement of tissue strands. It has been variously regarded as a heart, blood-plexus, chromatogen organ, lymph-gland, kidney, etc. Also called *dorsal organ*.—**Axial pitch.** See ★*pitch*[1].—**Axial projection.** See ★*projection*.—**Axial ratio,** the relative lengths of accepted fundamental crystallographic axes of a given species, expressed in terms of one of the axes taken as unity; also, the relative lengths of the axes pertaining to a given form.—**Axial sinus,** the vascular sinus which surrounds the ovoid gland of an echinoderm.—**Axial symmetry,** in *geom.*, symmetry with respect to an axis.—**Axial thread,** a thread of organic substance which occupies the axis of each sponge-spicule and of its primary branches.—**Harmonic axial pencil.** See ★*pencil*.

II. *n.* In *math.*, an axial pencil.

axiality (ak-si-al'i-ti), *n.* Axial quality or character: as, the *axiality* of a building.

Axifera (ak-sif'ẹ-rä), *n. pl.* [NL., < L. *axis*, axis, + *ferre*, bear.] An order of alcyonarian *Anthozoa*, consisting of *Synalcyonacea* that form colonies made up of a cœnenchymatous rind investing a horny or calcified axis. Same as *Gorgonacea*.

axilemma (ak-si-lem'ä), *n.* Same as ★*axolemma*.

axilla, *n.* 2. In *bot.*, same as *axil*, 2.

axillary. **I.** *a.*—**Axillary line,** a line descending vertically from the anterior fold of the axilla (*anterior axillary line*), the center of the axilla (*midaxillary line*), or the posterior fold of the axilla (*posterior axillary line*).

II. *n.* 2. In the *Crinoidea*, the pentagonal plate which supports the branched arms. The axillaries may be of different orders, according to the degree of branching in the arms. The first axillary in each ray is often a fixed part of the calyx, but may be free, and this is called by some writers the *palmar*. Also termed *axillary radial*.

axin (ak'sin), *n.* A substance secreted by a Mexican coccid (*Llaveia axinus*). It is chiefly fatty and contains axinic acid. It is used in medicine as an external application, and also as a varnish, drying and hardening on exposure to the air.

Axinella (ak-si-nel'ä), *n.* [NL., < Gr. *ἀξίνη*, ax, + dim. *-ella*.] The typical genus of the family *Axinellidæ*. *Schmidt*, 1862.

axinellid (ak-si-nel'id), *a.* Pertaining to or resembling the *Axinellidæ*; specifically, resembling the *Axinellidæ* in arrangement of the spicules of the skeleton-fibers; that is, having each component spicule inclined at an angle, usually acute, to the axis of the fiber, thus giving the latter a feathery or plumose appearance.

Axinellidæ (ak-si-nel'i-dē), *n. pl.* [NL., < *Axinella* + *-idæ*.] A family of halichondrine sponges having the skeleton typically non-reticulate, with the skeleton-fibers plumose, megascleres chiefly styli, and microscleres, if present, never chelate. It contains *Axinella*, *Auletta*, *Halicnemia*, and other genera.

axinic (ak-sin'ik), *a.* [*axin* + *-ic*.] Derived from axin.—**Axinic acid,** an oily acid, $C_{18}H_{28}O_{27}$, obtained by saponifying axin.

axiniform (ak-sin'i-fôrm), *a.* [Gr. *ἀξίνη*, ax, + L. *forma*, form.] Ax-shaped: as, "a broad, *axiniform* process." *Dana*, Crust., II. 769.

axiom, *n.*—**Middle axiom** [L. *axioma medium*], one of those generalizations of ordinary experience which nobody doubts, and which are soon replaced by scientific formulations, which latter are also, but less properly, termed *middle axioms*.—**Playfair's axiom,** the axiom, "two straight lines which intersect one another cannot be both parallel to the same straight line." It is given in Playfair's Euclid (1813), where Playfair says: "This Axiom has been assumed by others, particularly by Ludlam, in his very useful little tract, entitled *Rudiments of Mathematics*."

axioscotic (ak″si-ō-skot'ik), *a.* [Gr. *ἀξιος*, correct, + *σκότος*, darkness, shadow.] Correct in showing the relation of colors; orthochromatic; isochromatic.

axis[1], *n.* 11. In *arch.*, one of several lines, either imagined or laid down in the plans, etc., which pass through the middle of an important feature. Thus the axis of an entrance-hall will probably be carried through the middle of the outer doorway, the vestibule and inner doorway, and the hall proper. In symmetrical planning and designing the parts on one side of the axis are exactly like those on the other side. Any feature, as a door or a window, may or may not be on the axis. Compare ★*en axe*.—**Apical axis,** a line passing through the center of the main longitudinal axis of a diatom in the direction of the raphe and at the same distance from homologous points of the girdle.—**Axis of a storm,** the nearly vertical line about which as the older cyclonologists assumed, the storm-winds circulate; the severest part of a storm; the region of heaviest wind.—**Axis of collimation,** the line with reference to which a meridian telescope or other optical instrument having motion in one plane only is adjusted; the line of collimation. See *collimation*.—**Axis of curvature.** See ★*curvature*.—**Axis of elevation,** a line along which an uplift of the earth's crust has occurred.—**Axis of glacial movement,** the line along which the fastest movement of a glacier takes place.—**Axis of similitude.** If ABC, A′B′C′ be homothetic triangles, and OX a straight line through their center of similitude, and A″B″C″ a triangle symmetric to A′B′C′ with regard to OX as an axis of symmetry, then OX is the *axis of similitude* of the triangles ABC, A″B″C″.—**Axis of suspension,** the line passing through the center of mass (of a body suspended from a single point) and the point of suspension.—**Axis of symmetry (dyad** or **binary axis, triad** or **ternary axis,** etc.). See ★*symmetry*.—**Axis of the horizon.** See ★*horizon*.—**Declination axis,** the axis of an equatorial telescope which is perpendicular to the polar axis: so called because when the telescope is moved by turning the declination axis, the declination of the point viewed is altered, but not its hour-angle or right ascension.—**Hemal axis.** Same as *aorta*.—**Optic axis.** (*b*) In *crystal.*, that direction in a crystal for which there is only one wave and one wave-velocity. Crystals having only one optic axis are said to be *uniaxial*, those with two such axes *biaxial*.—**Pervalvar axis,** the main longitudinal axis of a diatom.—**Ray axis,** in *geometrical optics*, a straight line joining the center of the Fresnel wave-surface in a crystal to one of the points of intersection of the inner and outer sheets of the wave-surface; any direction, in a doubly refracting crystal, in which the ray-velocities of the two waves become the same.—**Secondary axis,** in *optics*: (*a*) of a mirror, any radius which does not pass through the center of the mirror; (*b*) of a lens, any straight line through the center of the lens which does not coincide with the radii of curvature. (Used only in the approximate theory of lenses, in which the thickness is ignored.)—**Transapical axis,** a line passing at right angles to the apical axis of a diatom and through the center of the main longitudinal axis.

axis-band (ak'sis-band), *n.* Same as *axis-cylinder*.

axis-plane (ak'sis-plān), *n.* In *geol.*, a plane which symmetrically bisects a fold and passes through its axis.

axis-traction (ak'sis-trak″shọn), *n.* Traction through an axis; specifically, in *obstet.*, traction made with the forceps along a curved line corresponding to the axis of the pelvis.

Axle safety-strap, in a car-truck, a curved strap hanging under the axle to support it in case of breakage. It takes the place of the axle-sleeve no longer used. See *car-truck*.—**Coached axle,** an axle-body which is square at the end. At the collar, next to the square, there is a short octagonal section, the rest of the body being round. The term is used of the body only.—**Concord axle,** an axle with a slightly tapered spindle: named from Concord, New Hampshire, where it originated.—**Cranked axle.** Same as *cranked* ★*shaft*.—**Fantail axle,** an axle-body drawn down thin and wide at the end where the center is welded: a term applied to the body only, without regard to the form of the spindle.—**Long-distance axle,** an axle with the spindle or box grooved so as to draw oil from an oil-chamber and distribute it when the wheel is in motion; also, an axle with a packing of felt which absorbs the oil and distributes it over the bearing surfaces.—**Mail patent axle,** a coach-axle with a straight spindle and without an axle-nut. Its peculiarity consists in two large plates, one of which bears against the rear of the collar and the other against the front end of the hub, the two plates being connected by long bolts which pass lengthwise through the hub and are tightened by nuts.—**Roller-bearing axle,** an axle provided with long steel rollers, placed parallel to or at an angle with the arm, which bear upon the spindle and reduce friction.

axle-cap (ak'sl-kap), *n.* A metallic cap which covers the axle-nut and the end of the axle-arm.

axle-grease (ak'sl-grēs), *n.* A lubricant of fatty character, used to diminish the friction of an axle, as of a vehicle, in its bearing. It is generally a mixture of semisolid oils with soap and resin.

axle-guide (ak'sl-gīd), *n.* On a locomotive, a guide which holds the boxes on the axles from moving endwise while leaving them free to move a certain distance vertically. Sometimes the guide is formed on the frame and at others it is a separate piece. Also called *pedestal*.

axle-lathe (ak'sl-lāᵺ), *n.* A special lathe for rapidly and exactly turning car-axles to dimension and gage. It is made very strong and stiff, and has several cutting tools.

axle-light (ak'sl-līt), *n.* See the following phrase.—**Axle-light system,** a system of electric train-lighting by means of a dynamo driven by the car-axle.

axle-setter (ak'sl-set″ėr), *n.* A machine which sets the spindles on the ends of axle-trees, making them true and giving them the required set and gather.

axle-wad (ak'sl-wod), *n.* A washer of papier-mâché or wood, placed in the back part of an axle-box to protect the bearing from the entry of dust and dirt. It is divided across the middle with beveled edges. *Lockwood*.

axode (ak'sōd), *n.* [Gr. *ἀξ(ων)*, axis, + *ὁδός*, way.] In *mech.*, the path of the instantaneous axis of a body moving in a plane.

axodendrite (ak-sō-den'drīt), *n.* [Irreg. < Gr. *ἄξων*, axis, + *δένδρον*, tree, + *-ite*[2].] In *anat.*, a fibril arising from the axon before it receives a sheath.

axogamy (ak-sog'ạ-mi), *n.* [L. *axis* (Gr. *ἄξων*), axis, + *γάμος*, marriage.] In *bot.*, bearing sexual organs on the axis or stem.

axoid, *a.* **II.** *n.* In *math.*, a curve traced by a point rotating about a moving center.

axoidean (ak-soi'dē-an), *a.* Same as *axoid*.

axolemma (ak-sō-lem'ä), *n.*; pl. *axolemmata* (-a-tä). [NL., for ★*axonolemma*, < Gr. *ἀξων* (L. *axis*), axis, + Gr. *λέμμα*, a husk, skin.] In *neurol.*, a membrane investing the neuraxon or axis-cylinder of a nerve-fiber.

axon, *n.* 2. The efferent or axis-cylinder process of a nerve-cell. Also spelled *axone*.

A single filament or *axon*, starting from the perikaryon by a cone of origin containing no chromatic elements. *Encyc. Brit.*, XXV. 394.

Axon hillock, the slight protuberance formed by the junction of the axon with the body of a nerve-cell.—**Naked axon,** an axon which is not inclosed in a medullary sheath.

axone (ak'zōn), *n.* Same as *axon*.

axoneme (ak'sō-nēm), *n.* [For ★*axononeme*, < Gr. *ἄξων*, axis, + *νῆμα*, thread.] One of the threads or strands in the central portion of the contractile stalk of *Vorticellidæ*.

Axonolipa (ak-sō-nol'i-pä), *n. pl.* [NL., < Gr. *ἄξων*, axis, + *λιπο-*, < *λείπειν*, be wanting.] An order of the graptolites in which a virgula or solid axis is absent. They comprise the earliest *Graptoloidea*, and appear in the Upper Cambrian, but do not extend beyond the Lower Silurian. *Dichograptus*, *Tetragraptus*, and *Didymograptus* are the most important genera of the order.

axonolipous (ak-sō-nol'i-pus), *a.* [Gr. *ἄξων*, axis, + *λιπο-*, < *λείπειν*, *λιπεῖν*, be wanting.] Pertaining to or having the characters of the *Axonolipa*.

Axonophora (ak-sō-nof'ō-rä), *n. pl.* [NL., < Gr. *ἄξων*, axle, + *-φορος*, < *φέρειν*, bear.] An order of the *Graptoloidea*, or graptolites, in which the rhabdosome is strengthened by a virgula or solid axis embedded in the dorsal periderm. The *Axonophora* appear in the later Lower Silurian after the *Axonolipa*. Their most typical genus is *Diplograptus*, and *Monograptus* is the predominating genus in the Upper Silurian.

axonophorous (ak-sō-nof'ō-rus), *a.* [Gr. *ἄξων*, axis, + *-φορος*, < *φέρειν*, bear.] Pertaining to or having the characters of the *Axonophora*.

axonost (ak'sō-nost), *n.* [Gr. *ἄξων*, axis, + *ὀστέον*, bone.] In *ichth.*, one of the interspinal bones; one of the rays of bones which support the dorsal and anal fins, their distal ends being typically inserted between the neural and the hemal spines. *Cope*.

axophyte (ak'sō-fīt), *n.* [Irreg. < Gr. *ἄξων*, axis, + *φυτόν*, plant.] A plant with stem and root, that is, with an axis; a cormophyte.

axopodium (ak-sō-pō'di-um), *n.*; pl. *axopodia* (-ä). [NL., for ★*axonopodium*, < Gr. *ἄξων*, axis, + *πούς* (*ποδ-*), foot.] A motionless pseudopodium with an axial filament, seen in certain *Mastigophora*, as *Dimorpha*, and in *Radiolaria*.

axospongium (ak-sō-spon'ji-um), *n.*; pl. *axospongia* (-ä). [Gr. *ἄξων*, axis, + *σπογγιά*, sponge.] The network of extremely delicate fibrillæ found in the protoplasm of the axis-cylinder or neuraxon of nerve-cells.

ayangao (ä-yäng'ou), *n.* [Native name in the Philippines.] Same as ★*ananaplas*.

Aymarist (ī'ma-rist), *n.* [Bolivian Sp. *Aymarista*, < *Aymará*, name of a people and their language.] One who is proficient in the Aymará language.

Aymestrey limestone. See ★*limestone*.

ayrampu (ī'räm-pö), *n.* [Quichua of Peru (Tschudi) and Aymará of Bolivia.] A vegetable dye of red color much used in Bolivia like cochineal. It comes from the seed of the fruit of a small cactus.

Ayrshire (ār'shėr), *n.* The name of a county in Scotland, used to distinguish a breed of medium-sized cattle, with short incurved horns, originating in that county and largely bred for dairy purposes. The general color is reddish brown, more or less mixed with white.

ayudante (ä-yö-dän'te), *n.* [Sp.: see *adjutant*.] An assistant; a hired man on a ranch or hacienda in some Spanish-American countries.

azadon (ä-thä-dōn'), *n.* [Sp., < *azada*, OSp. *axada* (= Pg. *enxada*, a mattock), < *axa*, < L. *ascia*, a mattock.] A kind of mattock or heavy hoe.

azafran (ä-thä-fränʹ), *n.* [Sp., saffron: see *saffron.*] 1. In Porto Rico, the Philippines, Mexico, and other Spanish-speaking countries, the safflower.—2. In Mexico, *Corythea filipes* of the spurge family and *Escobedia lævis* of the figwort family; in Peru, *E. scabrifolia.* The roots of these plants yield a yellow dye. In Guam and the Philippines this name is also applied to the turmeric plant (*Curcuma longa*).

azalea, *n.*— **Clammy azalea,** the swamp honeysuckle, *Azalea viscosa*; so called from the viscid tube of the corolla.—**Flame azalea,** *Azalea lutea,* an Alleghany species presenting in the spring immense masses of flame-colored bloom.—**Hoary azalea** or **mountain azalea,** *Azalea canescens,* a shrub of the rocky woods and mountains of eastern North America, with gray pubescent leaves and flowers less showy than in other species.—**Smooth azalea** or **tree-azalea.** (*a*) See *tree-azalea.* (*b*) *Azalea arborescens,* a species growing in the Alleghanies, forming a small tree and bearing innumerable white and pink spicy-scented flowers.

azalin (azʹa-lin), *n.* [*az*(*ure*) + *-al* + *-in*².] A mixture of quinoline blue and quinoline red: used in the manufacture of orthochromatic photographic dry plates.

azelaic (az-e-lāʹik), *a.* [*azo-* + Gr. *ἔλαιον,* oil (see *oil*), + *-ic.*] Noting an acid, $CO_2H(CH_2)_7CO_2H$, formed by the oxidation of castor-oil, cocoanut oil, or Chinese wax. It crystallizes in leaflets which melt at 106° C. Also called *lepargylic acid* and *anchoic acid.*

azimene (azʹi-mēn), *n.* [Origin unknown; perhaps Ar.] In *astrol.,* weak or tame degrees which, when ascending at birth, were supposed to afflict the native with infirmity.

Azimghar pottery. See ★*pottery.*

azimido-. Same as ★*azimino-.*

azimino-. [*az*(*o*)- + *imine* (from *amine*).] The initial part of some chemical names, designating a compound containing the group N_3H, as *aziminobenzene,* $C_6H_4N_3H$, which is formed by the action of nitrous acid on orthodiaminobenzene.

Azimuth circle. See ★*circle.*—**Azimuth error,** the amount by which the axis of a meridian instrument deviates from its correct east-and-west position: a matter of adjustment: sometimes used to designate the correction (to an observation) required by this deviation.—**Azimuth of the plane of polarization,** in *optics,* the angle made by the plane of polarization of a reflected ray of light with the plane of incidence.

azin, azine (azʹin), *n.* [*az*(*ote*) + *in*².] One of a group of organic compounds derived from various hydrocarbons of the benzene series by the replacement of two CH-groups with two nitrogen atoms. The simplest azin is derived from benzene and has the formula $C_4H_4N_2$. The azins are of considerable importance in the color industry. Also called *diazin.*—**Azin** ★**blue,** ★**color,** ★**green,** ★**scarlet.** See the nouns.

azo. Same as *azo-,* used adjectively without the hyphen.—**Azo** ★**acid-black,** ★**acid-blue,** ★**acid-brown,** ★**acid-magenta,** ★**black-blue, color, navy** ★**blue,** etc. See the nouns.

azo-alizarin (azʺō-al-i-zäʹrin), *n.* A mordant color of the diazo-salicylic-sulphonic-acid type. It dyes chromium-mordanted wool a vinous-red color. Also called *Bordeaux W.*

azo-black (az-ō-blakʹ), *n.* An acid color of the diazo-sulphonic-acid type. It is closely allied to naphthol black.

azo-blue (az-ō-blōʹ), *n.* A direct cotton coal-tar color of the diazo-sulphonic-acid type. It is prepared by combining diazotized toluidine with *a*-naphthol-monosulphonic acid, and dyes unmordanted cotton a grayish violet in a soap bath.—**Diamine azo-blue,** a direct cotton coal-tar color which dyes unmordanted cotton a dark reddish blue in a salt bath. By subsequent diazotizing and development the blues produced are rendered both clearer and faster.

azo-brown (az-ō-broun′), *n.* Same as *naphthylamine* ★*brown.*

azo-chromine (az-ō-krōʹmin), *n.* A mordant color of the monoazo type. It is prepared by combining diazotized para-amidophenol with pyrogallol, and produces dark brown when dyed with a chromium mordant.

azo-coccine (az-ō-kokʹsin), *n.* 1. A diazo-compound (*azo-coccine 7B*) prepared by combining diazotized amidoazo-benzene with *a*-naphthol-monosulphonic acid. Same as *cloth-*★*red G* (*b*).—2. A monoazo-compound (*azo-coccine 2R*) prepared by combining diazotized xyloidine with *a*-naphthol-monosulphonic acid. Also called *double scarlet R.*

azo-cochineal (az-ō-kochʹi-nēl), *n.* An acid color of the monoazo-sulphonic-acid type, prepared by combining diazotized orthoanisidine with *a*-naphthol-monosulphonic acid: so called because it dyes wool in an acid bath a color resembling that produced by cochineal.

azo-coralline (az-ō-korʹa-lin), *n.* An acid color of the monoazo-sulphonic-acid type, which dyes wool red in an acid bath.

azo-corinth (az-ō-korʹinth), *n.* A direct cotton coal-tar color of the triazo-sulphonic-acid type, which dyes unmordanted cotton brownish-violet in a soap bath.

Azo-diphenyl blue. See ★*blue.*

azo-eosin (az-ō-ēʹō-sin), *n.* An acid color of the monoazo-sulphonic-acid type. It is prepared by combining diazotized orthoanisidine with *a*-naphthol-monosulphonic acid, and dyes wool an eosin-color in an acid bath.

azoflavin, azoflavine (az-ō-flāʹvin), *n.* [*azo* + *flavin.*] An acid color of the monoazo type: so called because it resembles flavin in its coloring properties.

azo-fuchsin (az-ō-fōkʹsin), *n.* 1. An acid color (*azo-fuchsin B*) of the monoazo-sulphonic-acid type. It is prepared by combining diazotized toluidine with dihydroxy-naphthalene-sulphonic acid, and dyes wool magenta-red in an acid bath.

2. An acid coal-tar color of the monoazo-sulphonic-acid type. It is prepared by combining diazotized sulphanilic acid with dihydroxy-naphthalene-sulphonic acid, and dyes wool magenta-red in an acid bath.

azo-gallein (az-ō-galʹē-in), *n.* A mordant color of the monoazo-pyrogallol type. It is prepared by combining diazotized dimethyl-paraphenylene-diamine with pyrogallol, and gives a purple color with a chromium mordant.

azo-green (az-ō-grēn′), *n.* A mordant color of the monoazo-triphenyl-methane-carbinol type: but little used.

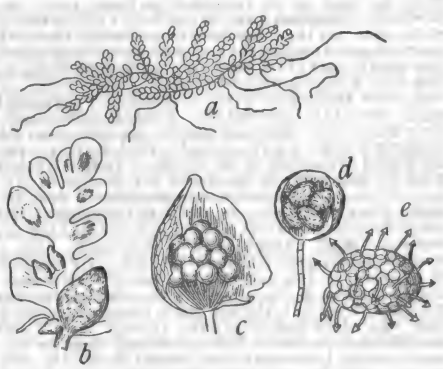
azo-grenadin (az-ō-grenʹa-din), *n.* The name applied to two different acid colors, of unpublished composition, which dye wool red in an acid bath.

azogue, *n.* 2. A poor silver ore.

azo-imide (az-ō-īʹmid), *n.* [*azo-* + *imide.*] In *chem.,* same as ★*hydrazoic acid.*

azole (azʹōl), *n.* [*az*(*o*)- + *-ole.*] A general name given to a class of carbon-compounds containing a five-membered heteroatomic ring in which at least one atom is nitrogen, as ★*pyrazole,* ★*oxazole,* ★*thiazole* (which see).

Azolla (a-zolʹä), *n.* [NL. (Lamarck, 1783), ⟨ Gr. *ἀζειν,* to dry, + *ὀλλύναι,* kill (the plants being killed by drought).] A genus of small,



Azolla Caroliniana.

a, plant, natural size; *b,* branch with sporocarps; *c,* a large sporocarp burst open showing the microsporangia; *d,* microsporangia with four microspores; *e,* a single microspore. *b, c, d,* and *e* highly magnified. (From Britton and Brown's "Illus. Flora of Northern States and Canada.")

communal, moss-like, floating plants of the family *Salviniaceæ,* having pinnately branched stems closely covered by minute, imbricate leaves and with descending, filiform, villous rootlets. There are 4 or 5 species of wide distribution, of which *A. Caroliniana* and *A. filiculoides* occur in the United States.

azo-mauve (az-ō-mōvʹ), *n.* 1. A direct cotton coal-tar color (*azo-mauve B*) of the diazo-sulphonic-acid type, derived from toluidine. It dyes unmordanted cotton a blackish-blue violet in a soap bath.—2. A direct cotton coal-tar color (*azo-mauve R*) similar to azo-mauve B, but derived from benzidine instead of toluidine.

azonal (a-zōʹnal), *a.* [Gr. *ἀζωνος,* zoneless, ⟨ *ἀ-* priv. + *ζώνη,* a zone, + *-al*¹.] In *phytogeog.,* not in or according to zones; without zones. See ★*zonal.*

azonation (a-zō-nāʹshon), *n.* [Gr. *ἀζωνος,* zoneless, + *-ation.*] In *phytogeog.,* an arrangement other than in zones.

An entire absence of zones, i. e., *azonation,* is exceptional in vegetation.

F. E. Clements, Bot. Surv. Neb., VII. 155.

azo-nigrin (az-ō-nīʹgrin), *n.* An acid color of the monoazo-sulphonic-acid type which dyes wool a brownish black in an acid solution.

azonium (a-zōʹni-um), *n.* A compound containing a quinquevalent nitrogen atom together with a second nitrogen atom in the same molecule: used chiefly as a final combining form: as, ethyl *phenazonium* iodide.

azo-orange (az-ō-orʹānj), *n.* A direct cotton color of the tetrakisazo type, derived from toluidine, which dyes unmordanted cotton orange in a salt bath.

azo-orchil (az-ō-ôrʹkil), *n.* An acid color of unpublished composition which dyes wool brownish red in an acid bath.

azo-orseillin (azʺō-ôr-sāʹlin), *n.* A direct cotton coal-tar color of the diazo type, derived from benzidine, which dyes unmordanted cotton brownish red in a soap bath.

azophenylene (az-ō-fēʹni-lēn), *n.* [*azo-* + *phenyl* + *-ene.*] Same as ★*phenazine.*

azophor (azʹō-fôr), *n.* [*azo* + Gr. *-φορος* = *bearer.*] See the etymology.—**Azophor blue.** See ★*blue.*—**Azophor red.** See ★*red*¹.

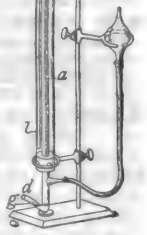
azophosphine (az-ō-fosʹfin), *n.* [*azo* + *phosph*(*orus*) + *-ine*².] A coal-tar color of the monoazo type derived from resorcin. It acts as a basic color, and at the same time will dye cotton directly in an acid bath. It is employed in the dyeing of cotton-and-wool union goods.

azote (ä-thōʹte), *n.* [Sp., ⟨ Ar. *al-sūt: al,* the, + *sūt,* whip.] A whip or switch. [Spanish America.]

azotea (ä-thō-tāʹä), *n.* [Sp., ⟨ Ar. *al-saṭḥ: al,* the, + *saṭḥ,* a flat roof.] A flat roof or a platform on the top of a house. [Spanish America.]

azotemia (az-ō-tēʹmi-ä), *n.* [NL. *azotæmia,* ⟨ Gr. *ἀ-* priv. + **ζωτός,* ⟨ *ζώειν,* live (see *azote*), + Gr. *αἷμα,* blood.] A disease of solipeds characterized by sudden paralysis of the hind quarters and the passage of blood-colored urine. Commonly called *paralysis.*

azotometer, *n.*—**Bunte's azotometer,** an apparatus for the estimation of nitrogen. It consists of a water-jacketed, graduated eudiometer, provided at its upper end with a funnel and a three-way stop-cock. It is also serviceable in general gas analysis.—**Horn's azotometer,** an apparatus for measuring the nitrogen liberated from gunpowder.—**Johnson's azotometer,** an apparatus for collecting and measuring nitrogen gas liberated in analysis, particularly in that of organic compounds. It consists of a water-jacketed, graduated eudiometer with a tubulus at its lower end for the admission of gas, and a side-tubulus connected with a reservoir containing mercury, which serves for adjusting the internal pressure.—**Lunge's azotometer,** a form of azotometer which permits of the manipulation of larger gaseous volumes than usual.—**Winkler's azotometer,** an instrument which serves not only for the determination of nitrogen, but which is also of general applicability in gas analysis.



Johnson's Azotometer.

a, graduated eudiometer; *g,* tubulus for admission of gas; *d,* opening in tubulus; *h,* stop-cock; *l,* water-jacket.

azoxy-, azoxy (azʹok-si). [*az*(*ote*) + *oxy*(*gen*).] A prefix, or separate adjective, denoting that the compound to the name of which it is prefixed contains the azoxy group. See the following phrase.—**Azoxy group,** a bivalent group of elements or radicals consisting of an azo-group into which an oxygen

atom has been introduced. Its formula is —N—N—.

Azulin yellow. See ★*yellow.*

azulmic (az-ulʹmik), *a.* Noting an amorphous brown acid, $C_4H_5N_5O$, formed by passing cyanogen into ammonia.

azure, *n.* **Spring azure,** a small blue American lycænid butterfly, *Cyaniris lædon,* of wide distribution and remarkable for its complicated polymorphism. Its larva feeds on dogwood, spiræa, sumac, and other shrubs and plants.

azureous (a-zūʹrē-us), *a.* Azure; of a clear blue color. [Rare.]

azurine, *n.* 4. A crystalline base, $C_{35}H_{32}N_4O_3$, formed by heating a mixture of orthotoluene diamine and salicylic aldehyde. It melts at 251° C.—**Brilliant azurine,** a direct cotton coal-tar color of the diazo type, derived from dianisidine, which dyes unmordanted cotton in a salt bath.

azygobranch (azʹi-gō-brangk), *n.* [*Azygobranchia.*] A member of the *Azygobranchia.*

Azygobranchiata (azʺi-gō-brang-ki-āʹtä), *n. pl.* [NL., ⟨ Gr. *ἀ-* priv. + *ζυγόν,* yoke, + *βράγχια,* gills.] A group of rhipidoglossate gasteropods of the order *Prosobranchiata,* in which only one ctenidium, the left, is present: contrasted with *Zygobranchiata.* It includes the families *Trochidæ, Turbinidæ, Helicinidæ, Neritidæ, Proserpinidæ,* and several others.

azygosperm (azʹi-gō-spėrm), *n.* [*a-*[18] + *zygosperm.*] Same as *azygospore.*

B 3. (*a*) The B next above middle C has (at French pitch) about 488 vibrations per second. (2) The final of the rarely used Locrian mode. (*g*) In *logic*, the initial of the name of a logical mood signifying that the mood is to be reduced to *Barbara*. (*h*) In *elect.*: (1) the symbol for *magnetic induction*, or the number of lines of magnetic force per square centimeter or square inch. (2) [*l. c.*] The symbol for *susceptance* in alternating current circuits.—4. (*e*) An abbreviation for *best*.

Baalitic (bā-al-it′ik), *a.* Same as ★*Baalitical*.

Baalitical (bā-al-it′ikal), *a.* Of or pertaining to Baal or the Baalites.

babbitted (bab′i-ted), *p. a.* Lined or faced with Babbitt metal.

Mr. Van Alstine attributes the low mileage shown by English truck axles to the fact that these are *babbitted* brasses. *Jour. Franklin Inst.*, July, 1903, p. 53.

babbitt-lined (bab′it-līnd), *p. a.* Having a lining of Babbitt or antifriction metal. *Whitham*, Const. Steam Eng., p. 78.

Babcock test. See ★*test*[1].

Babeldom (bā′bel-dum), *n.* The confusion and noise of Babel; a state of confusion and noise resembling that of Babel. *Contemporary Rev.*, Nov., 1882.

Babelize (bā′bel-īz), *v. t.*; pret. and pp. *Babelized*, ppr. *Babelizing*. To throw into confusion; render unintelligible; confound.

Babi (bä′bē), *n.* [Pers. *bābī*, < *bāb*, a gate.] Babism (which see).

babiche (bä-bēsh′), *n.* [Canadian F. *babiche*, said to be from a Micmac **ababich*, string, cord; cf. Micmac *abe*, a cord.] A rawhide thong.

The trader brought along with him the gun and the curved knife, with which men built better canoes and women cut the finest leather, called *babiche*. Result: better boats for water travel, better snow-shoes for snow travel and also better men and women.
O. T. Mason, Pop. Sci. Mo., Feb., 1902, p. 340.

Babinet's compensator. See ★*compensator*.

Babinski phenomenon or **reflex.** See ★*phenomenon*.

babooism, *n.* See ★*babuism*.

baboračka (bä-bo-räch′kä), *n.* [Cf. ★*baborák*.] A Bohemian dance, or the music for it, which is in triple rhythm, akin to the *Tyrolienne* (which see).

baborák (bä-bō-räk′), *n.* [Bohem., < *Babor*, *Bawor*, Bavarian.] A Bohemian dance, or the music for it. The latter properly consists of three strains, of which the second ends in the key of the dominant. In each strain two measures are in triple rhythm and two in duple rhythm.

Babo's gas-generator. See ★*gas-generator*.

babracot (bä-brä-kō′), *n.* A French variant of ★*barbacot*.

babuism (bä′bö-izm), *n.* [Also *babooism*.] The language, culture, or manners of the English-speaking native clerks of India. Their English is characterized by fluency, with a misplaced eloquence and pathos which produces a ludicrous effect. See *babu*.

Babul gum. See ★*gum*[2].

baby, *n.*—**Blue baby,** an infant suffering from congenital cyanosis or blue disease.

baby-blue-eyes (bā-bi-blū′īz), *n.* The Californian bluebell, *Nemophila insignis*. See *Nemophila*. The name *baby-eyes* is applied to the variety *intermedia*, which has less azure flowers, and either name is applied to the family *Hydrophyllaceæ*.

baby-eyes (bā′bi-īz), *n.* See ★*baby-blue-eyes*.

Babylonian. I. *a.*—**Babylonian** or **Babylonish captivity.** (*a*) The deportation of a large number of Jews to Babylonia, and their captivity there, after the capture of Jerusalem by Nebuchadnezzar in 597 B.C., and on two later occasions (586 and 582 B.C.), the total number deported being estimated at about one eighth of the whole population. About 539 B.C. a portion of the exiles then living returned to Judea under conduct of Ezra. (*b*) Figuratively, the term of years (1309–76) during which the papal court was at Avignon.

II. *n.* 4. A variety of ball game played with a large ball called a *medicine-ball*.

Babylonism (bab′i-lon-izm), *n.* 1. A word or phrase peculiar to the Babylonians. — 2†. Popery; the papal power. *Bp. Hall.*

babyolatry (bā-bi-ol′a-tri), *n.* Child-worship. *Chambers's Journal*, Feb., 1846, p. 129.

baby's-breath (bā′biz-breth), *n.* The common name of *Gypsophila paniculata*, a diffuse and rather tall-growing herb. The leaves are linear-lanceolate, the largest being about three inches long, becoming smaller toward the inflorescence, and sharp-pointed. The flowers are white and very numerous, with pedicels ⅔ times as long as the calyx. It is a very graceful European plant of the family *Silenaceæ*, and on account of its wiry, stiff stem is excellent for cutting. Related species of *Gypsophila* are grown in gardens.

bacalao (bä-kä-lä′ō), *n.* [Also *baccalao*, *bacallao*, *baccalio*, *bacalow*, etc., < Sp. *bacalao*, *bacallao*, Pg. *bacalhao*, LG. *bakkeljau*, *bakeljauw*, also inverted LG. *kabeljau*, D. *kabeljaauw*, G. *kabeljau*, F. *cabéliau*, *cabliau*, *câbliau*, *cabillaud*, a word originating in the Newfoundland fisheries, in which Dutch, French, and Basque fishermen were engaged, < Basque *baccallaóa*, a codfish.] 1†. A codfish. 2. A Cuban name of the green grouper, especially the scamp, *Mycteroperca falcata*.

bacao (bä-kou′), *n.* [Pampanga.] Same as *bacauan*.

bacauan (bä-kou′än), *n.* [Also *bakauan*; < Philippine Sp. *bacauan*, < Tagalog **bacauan* = Pampanga *bacao*.] A name in the Philippine Islands of mangroves and their allies, especially *Rhizophora mucronata*, *Bruguiera gymnorhiza*, and *Bruguiera eriopetala*. See *mangrove* and ★*mangrove*. Also called *bacao*.

bacca (bak′ä), *n.* [L., a berry.] A berry, especially a succulent berry, like the gooseberry, in which seeds are distributed throughout a pulpy mass.—**Bacca corticata,** a berry with a rind; also an ovary.

baccarine (bak′a-rin), *n.* [For **baccharine*, < *Baccharis* + *-ine*[2].] Same as *baccarinine*.

baccetum (bak-sē′tum), *n.* [< L. *bacca*, a berry, + *-etum* (see ★*-etum*).] Same as *syncarp* (*a*). *Dumortier*.

bacchanalism (bak′a-nal-izm), *n.* Bacchanalianism.

bacchanalize (bak′a-nal-īz), *v.*; pret. and pp. *bacchanalized*, ppr. *bacchanalizing*. I. *trans.* To convert into a drunken orgy.

II. *intrans.* To indulge in drunken revelry or orgies.

Baccheion (ba-kī′on), *n.* [Gr. Βακχεῖον, prop. neut. of Βακχεῖος, adj., < Βάκχος, Bacchus.] A temple or shrine of Bacchus, or Dionysus. The Baccheion at Athens has been discovered between the Pnyx and Areopagus, and excavated by Dr. Dörpfeld.

bacciocolo (bä-chō′kō-lō), *n.* A Tuscan variety of guitar.

B. Acct. An abbreviation of *Bachelor of Accounts*.

bachelor, *n.* 7. One of the young male fur-seals which are forced, through fear of the adult bulls, to herd by themselves at a distance from the breeding-grounds.—**Bachelor girl,** a young unmarried woman (especially one who earns her own living) who lives more or less independently, often keeping house by herself or in the company of another or others similarly situated.

bachelorly (bach′e-lor-li), *a.* Bachelor-like.

bachi (bäk′hē), *n.* [Native name on Batanes islands.] A distilled liquor used by the natives of the Batanes.

bacillicidal (ba-sil-i-sī′dal), *a.* [*bacillicide* + *-al*.] Destructive of bacilli; bacillicidic.

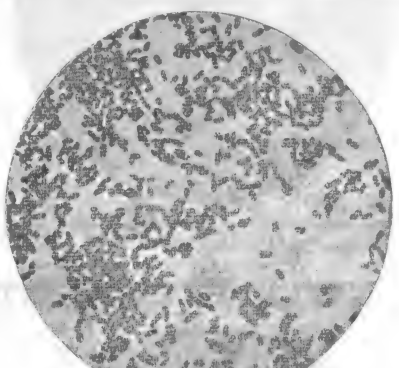
bacilligenic (ba-sil-i-jen′ik), *a.* Of bacillary origin; caused by the presence of a bacillus.

bacillite (ba-sil′īt), *n.* [L. *bacillus*, a little rod, + *-ite*[2].] One of those embryonic crystals or crystallites, in the glassy eruptive rocks, which are composed of parallel longulites or little cylindric rods: a term suggested by F. Rutley. *Mineralogical Mag.*, IX. 263.

bacillophobia (ba-sil-ō-fō′bi-ä), *n.* [NL. *bacillus* + Gr. *-φοβία*, < *φοβεῖν*, fear.] A morbid fear of infection by bacilli.

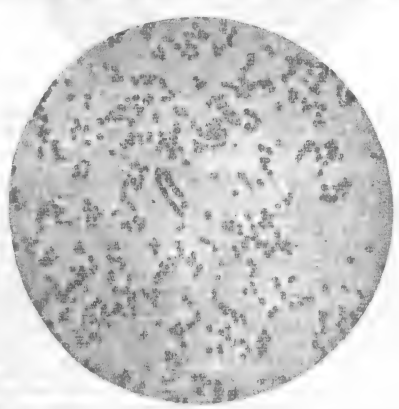
bacilluria (bas-i-lū′ri-ä), *n.* [NL., < *bacillus* + Gr. *οὖρον*, urine.] The presence of bacilli in the urine when voided.

bacillus, *n.* 6. In sponges, a microstrongyle; a form of spicule.—**Acid-resisting bacillus,** any one of a small group of bacteria, including *Bacterium* (*Bacillus*) *tuberculosis*, *B. lepræ*, etc., which stain with difficulty, but are very resistant to the mineral acids when these are used as decolorizing agents.—**Bacillus botulinus** ['sausage bacillus'], a bacterium discovered by Van Ermengen and shown to be the cause of meat-poisoning.—**Bacillus bovis morbificans** ['disease-producing beef bacillus'], an organism described by Basenau as a possible cause of certain cases of meat-poisoning: perhaps a variety of the colon bacillus.—**Bacillus coli communis,** a bacterium, having the form of single or paired rods, present in the human intestine in health, and also found associated with other micro-organisms in the blood and other fluids of the body in the course of various diseases. It is found also in water, milk, and food-stuffs, and is one of the most widely disseminated of saprophytic bacteria.—**Bacillus mallei** ['bacillus of the hammer'], a pathogenic micro-organism,



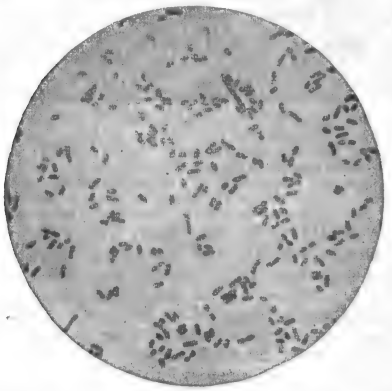
Bacillus mallei, magnified 1,000 times. (From Buck's "Reference Handbook of the Medical Sciences.")

the bacillus of glanders. Morphologically it resembles the bacillus of tuberculosis. It occurs in the form of rods from 2 to 5 microns long and actively motile.—**Bacillus pyocyaneus,** a bacillus found in certain cases of suppuration where the pus has a bluish coloration.—**Boas-Oppler bacillus,** a long bacillus which is found in the stomach contents almost exclusively in cases of cancer of the stomach. It is a marked lactic acid producer.—**Bubonic-plague bacillus,** *Bacillus pestis*, invariably associated with the bubonic plague, and generally accepted as the specific cause of the disease.—**Butter bacillus,** the *Bacillus* 41 of Conn, used to improve the flavor of butter.—**Diphtheria bacillus.** Same as *Klebs-Loeffler* ★*bacillus*.—**Eberth's bacillus,** *Bacillus typhosus*,

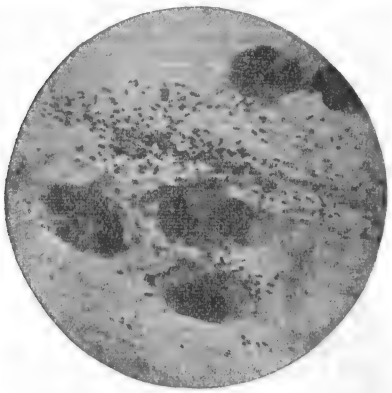


Bubonic-plague bacillus (*Bacillus pestis*), from Agar culture. Magnified 1,000 times. (From Buck's "Reference Handbook of the Medical Sciences.")

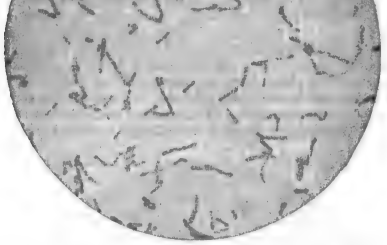
the probable causal agent of typhoid fever. See *typhoid* and *bacillus*.—**Friedländer's bacillus**, the organism *Bacterium* (*Bacillus*) *pneumonicum*, discovered by Friedländer and believed by him to be the cause of fibrinous pneumonia. Later investigations have not confirmed this belief.—**Glanders bacillus**, *Bacterium* (*Bacillus*) *mallei*, the bacillus of glanders. See ★*Bacillus mallei*.—**Icteroid bacillus**, the *Bacillus icteroides* of Sanarelli, who declared it to be the specific cause of yellow fever. This opinion has not been generally accepted by investigators of the disease.—**Influenza bacillus**, *Bacterium* (*Bacillus*) *influenzæ*, considered by Pfeiffer to be the specific cause of epidemic influenza.—**Klebs-Loeffler bacillus**, *Bacterium* (*Bacillus*) *diphtheriæ*, the organism invariably found associated with true diphtheria. Its causal relation to this disease is regarded as demonstrated.—**Koch's bacillus**, the tubercle bacillus. See ★*tuberculosis*.—**Koch's comma bacillus**, *Microspira* (*Bacillus*) *comma*. It is found associated with Asiatic cholera, and there is much evidence to support the general belief that it is the cause of this disease. See ★*Microspira*.—**Koch-Weeks bacillus**, a micro-organism which causes one form of acute conjunctivitis.—**Leprosy bacillus**, *Bacterium* (*Bacillus*) *lepræ*. It is usually found in leprous tissue, but its causal relation to the disease has not yet been demonstrated.—**Neumann's bacillus**, a microbe (*Bacillus meningitidis purulentæ* (found associated with cases of purulent meningitis.—**Nicolaier's bacillus**, a bacillus found by Nicolaier in a post-mortem examination of an abscess of the kidney.—**Paracolon bacillus**, a micro-organism found in the blood in certain cases of fever resembling in general typhoid fever, but not responding to Widal's test.—**Pfeiffer bacillus**. Same as *influenza* ★*bacillus*.—**Pseudodiphtheria bacilli**, a name applied to certain bacteria resembling the diphtheria bacillus. They are found in the throat, but are not virulent.—**Pseudo-tubercle bacilli**, certain bacteria, as *Bacterium* (*Bacillus*) *pseudotuberculosis*, which resemble and produce effects similar to the tubercle bacillus.—**Shiga's bacillus**, *Bacillus Shigæ*, which is found quite generally in cases of diarrhea, dysentery, and cholera infantum, and is believed to be their cause.—**Smegma bacillus**, the *Bacterium smegmatis* of Migula, found on the genital organs of man. It is not generally regarded as pathogenic.—**Tubercle bacillus**, *Bacterium* (*Bacillus*) *tuberculosis*, the organism demonstrated by Koch to be the cause of tuberculosis. Also called *Koch's tubercle bacillus*. See ★*tuberculosis*.—**Typhoid bacillus**. See *Eberth's* ★*bacillus* and *typhoid*.



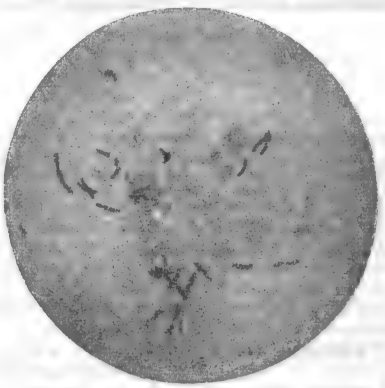
Eberth's bacillus (*Bacillus typhosus*). Magnified 1,000 times. (From Buck's "Reference Handbook of the Medical Sciences.")



Influenza bacillus (*Bacterium* (*Bacillus*) *influenzæ*). Magnified 1,000 times. (From Buck's "Reference Handbook of the Medical Sciences.")



Klebs-Loeffler bacillus (*Bacterium* (*Bacillus*) *diphtheriæ*). Magnified 1,000 times. (From Buck's "Reference Handbook of the Medical Sciences.")



Tubercle bacillus (*Bacterium* (*Bacillus*) *tuberculosis*) in sputum. Magnified 1,000 times. (From Buck's "Reference Handbook of the Medical Sciences.")

back[1], *n.*, **12.** *Half-back* and *full-back* are also applied to similar positions in field-hockey, roller-polo, and other games. In American foot-ball there are two half-backs, who play at varying distances behind the rush-line. They render assistance to the tackles and ends as a secondary line of defense, and on the attack are the men most used for running with the ball. In field-hockey there are usually three half-backs, the center, the right, and the left, who stand about 15 yards behind the forwards.

13. A change in the direction of the wind in the order east, north, west, and south—that is, against the sun or against the hands of a watch.—**14.** In *mining*, a cleavage-plane: one of the main joints, vertical or nearly so, by which strata are intersected. [Scotch.]—**Back of a lode or vein**, in *mining*, the outcrop.—**Paneled back**. Same as ★*panel-back*.—**Repeating back**, in *photog.*, a form of single plate-holder by means of which two separate negatives may be made on one plate.—**Reversing back**, an arrangement of that portion of a camera which holds the focusing-screen and dark-slide by which oblong plates may be exposed either horizontally or vertically.

back[1], *a.* **5.** In *phonol.*, formed at the back of the mouth by raising or lowering the posterior part, or back, of the tongue.—**Back number**. See ★*number*.—**To take the back track**. See ★*track*[2].

back[1], *adv.*—**From 'way back**. (*a*) From a locality which is 'away back,' or far behind or remote, from the place where the speaker is, or from civilization; from some indefinitely distant, out-of-the-way, little-known, or rural region. (*b*) From the beginning, or from early times; hence, with systematic thoroughness: as, he explained the whole thing *from 'way back*. [Colloq.]—**To send back**, in *cricket*, to get (a batsman) out; to cause him to return to the pavilion. [Colloq.]—**To whip back**. See ★*whip*.

back[1], *v. t.* **13.** In *building*: (*a*) To complete at the back or rear by building or by covering or finishing something: often used with *up*. (*b*) To finish at the back by cutting off, trimming, or smoothing: sometimes used with *off*. (*c*) To give a new back to (as a wall), by cutting away some part of the material: generally used with *off*.—**14.** To move (coal) along the working-face to the haulage road.—**15.** To provide (a bow) with a back made of a separate piece or of different material from that of the belly.

back-action, *a.* **II.** *n.* A small wagon attached to and drawn by a larger one, for the transportation of freight. [Pacific States.]

back-airing (bak′ār″ing), *n.* The providing of ventilation, by means of pipes, to the lower or outer side of a trap, to prevent the accumulation of foul gases below it. Also called *back-venting*.

back-angle (bak′ang″gl), *n.* **1.** The angle formed by extending backward the two straight lines which form a given angle. The angular value of the back-angle equals that of the forward or direct angle, but the bearings or azimuths of its sides are reversed.—**2.** The third angle of a triangle which has been found by calculation from the observed values of the other two angles.

back-bag (bak′bag), *n.* A bag carried on the back, especially the *rücksack* of the Tyrolese.

back-balance (bak′bal-ans), *n.* A self-acting incline in the mine, where a balance-car and a carriage in which the mine-car is placed are used. The loaded car upon the carriage will hoist the balance-car, and the balance-car will hoist the carriage and empty car. *Coal and Metal Miners' Pocket-book.*

back-bar, *n.* **2.** In a carriage, a curved bar of ornamental character used to connect the tops of the rear springs and to act as a support for the pump-handles or body-loops.

back-block[2] (bak′blok), *a.* From the interior or back country: as, *back-block* youngsters. [Australia.]

back-blocker (bak′blok-ėr), *n.* A settler or resident in the back-blocks of Australia; a bushman from the back-blocks. [Australia.]

back-blocks (bak′bloks), *n. pl.* **1.** A collective name in Australia for those sections which lie back of or away from the settled regions; the back country; the far interior: so called from the fact that on the survey-maps the country is divided into "blocks," or sections.

In the *back-blocks* of New South Wales, he had known both hunger and thirst, and had suffered from sunstroke.
Haddon Chambers, Thumbnail Sketches of Australian [Life, p. 33.

2. Those parts of a station which are distant from the river-front. See ★*frontage*. [Australia.]

backboard (bak′bōrd), *v. t.* In *leather-manuf.*, to board on the flesh side instead of on the grain side as in regular boarding

back-box (bak′boks), *v. t.* In *turpentine-making*, to cut new boxes in the unused spaces of (a boxed tree).

back-center, *n.* **2.** The position of the link-block of a Stephenson-link reversing-gear when the engine is running backward; the position of the link-block when it is controlled by the backward eccentric.

back-choir (bak′kwīr), *n.* A secondary choir behind (that is, to the eastward of) the great choir, as in a large church. In the large Spanish churches it is often called the *greater chapel* (★*capilla mayor*, which see, with cut).

back-coal (bak′kōl), *n.* Coal which miners are allowed to carry home with them. [Scotch.]

back-coming (bak′kum″ing), *n.* The mining of coal in the pillars back toward the shaft. See *back-splinting*. [Scotch.]

back-cross (bak′krôs), *v. i.* To cross or interbreed between a Mendelian hybrid and one of the pure parental forms.

The correctness of Mendel's hypothesis of the purity of the germ-cells and of their production in equal numbers, is shown by *back-crossing* of a hybrid with one of the parental forms. For example, in a case of simple dominance the first generation will all be D (R). Any one of them *back-crossed* with the recessive parent will produce 50 p.c. pure recessives and 50 p.c. hybrids.
Jour. Roy. Micros. Soc., Feb. 1904, p. 52.

back-cutting (bak′kut″ing), *n.* **1.** In *civil engin.*, earth or other material brought from a place where there is an excess to fill up a cutting or place where there is a deficiency. —**2.** The place whence this extra earth is brought; the excavation made in procuring it.

back-deed (bak′dēd), *n.* In *Scots law*, same as *back-bond* (which see). It corresponds to the declaration of trust in English conveyancing.

back-down (bak′doun), *n.* The act of backing down. See *back*[1], *v.*

back-draft (bak′drâft), *n.* A reverse current; in a furnace, a draft of air or gas going in a direction contrary to the normal direction and often causing a burst of flame out into the fire-room or through the firing-door or ash-pit.

backed, *p. a.* **2.** In *archery*, having the back made of a separate piece from the belly: said of a bow. See *bow*.

backfill (bak-fil′), *v. i.* and *t.* In *engin.*, to fill (a depression) with material taken from a cutting.

back-filling (bak′fil″ing), *n.* **1.** Rough masonry forming the back of a wall.—**2.** The filling in again of a place from which earth has been removed; the earth so filled in.

backfire (bak′fīr), *v. i.*; pret. and pp. *backfired*, ppr. *backfiring*. **1.** To stop an advancing fire by setting in front of it, or around threatened buildings, woods, etc., another fire, which is then beaten out, thus producing a protective burnt area.

In dry times we patrol especially exposed parts. In spring and autumn, during dry weather, our woodsmen all have orders, no matter what they are doing, whenever they see smoke arise to go to it and put out the fire. It

is usually done by *back-firing* entirely around and watching it until we are sure the fire is out. By this means we have kept serious fires from our timber when we are working. *Yearbook U. S. Dept. Agr.*, 1899, p. 424.

2. To light before the proper time: said specifically of a gas-engine when the charge explodes before the admission-valve closes, thus making an explosion in the admission-passage, or before the working-piston reaches its dead-center, which it must do before beginning its working stroke. See ★*back-firing*.

back-fire (bak′fīr), *n.* A fire started purposely some distance ahead of a fire which is to be fought. The back-fire is often so set as to burn against the wind, so that when the two fires meet, both must go out for lack of fuel. Also called *counter-fire*.

back-firing (bak′fīr″ing), *n.* **1.** The action of the burner of an explosive mixture, usually of gas and air, by which the flame runs back through the mixing- or combining-tube to the jet which delivers the fuel: due to the fact that the flow in the mixing-tube is slower than the rate at which the flame travels in such a mixture.—**2.** The pre-ignition of a mixture of gas and air, in the cylinder of an internal-combustion motor, by which the piston is strongly driven backward and a partial rotation of the shaft in reverse direction results: due to a very combustible mixture with high compression in relation to its composition, or to advanced spark-adjustment. See ★*ignition*, 5, and *internal-combustion* ★*motor*.

backflash (bak′flash), *v. i.* Of a flame which is consuming a combustible gas, to move back through the current of gas and burn at a point farther back than is desired. This happens when the rate of flow of the mixture in the current is less than the rate at which flame propagates itself through such a mixture.

back-flow (bak′flō), *n.* Back-draft; also, the flowing back of a flame in gas-engines.

back-flue (bak′flū), *n.* The reverse of a return-flue; a flue for conducting hot gases from the front to the rear end of a boiler.

back-fold (bak′fōld), *n.* A backward fold or folding; the English equivalent of the German *rückfaltung*, suggested by E. Suess for the following condition: A mountain-range which has been upheaved by folding later experiences a strike-fault whose inner side, away from the bounding plains, sinks. Later a cross-folding is developed at right angles to this break, and to the axis of the older folds, which causes great upheaval and tilting. This last-formed fold is called a *back-fold*. *Amer. Geol.*, Aug., 1904, p. 16.

back-furrow (bak′fur″ō), *v. i.* To lay a second furrow-slice against the face of a first by plowing in the reverse direction.

backgammon, *n.*—**Russian backgammon,** a variety of backgammon in which the men, instead of being set up on various points at the beginning of the game, are entered by throws of the dice, both players entering upon the same table and going round the board in the same direction.

back-gear, *n.* **2.** *pl.* Gears for changing the speed of a shaft by transferring the power to a secondary shaft and then back to the first shaft, or one concentric or parallel with it. Such a set of gears is commonly used on lathes for driving the live spindle when cutting metal.

back-geared (bak′gērd), *p. a.* So geared that the power is brought back to a shaft concentric with the driving-shaft, or parallel to it, but turning at a different speed.

back-gray (bak′grā), *n.* A piece of unbleached cotton cloth placed on a calico-printing machine between the cloth which is being printed and the back-blanket, to keep the latter clean as long as possible.

Back-hand stroke, in *tennis* and similar games played with a racket or bat, a stroke in executing which the player turns the back of his hand toward the direction in which he is sending the ball—for a right-handed player the ball on the left side, and for a left-handed player the ball on the right side.

backing, *n.* **3.** (*i*) In *archery:* (1) A reinforcement of wood sinew, or other elastic material forming the back of a composite bow. (See *bow*[2].) Backing of sinew is *free* (simply bound or laced upon the bow) or *close* (molded or glued upon the bow). (2) The art or process of affixing such a reinforcement. (*j*) In *masonry*, the rough stonework, brickwork, or concrete of a wall whose face is of finer material or workmanship; in *arch. construction*, the masonry which rests immediately upon an arch, sometimes necessary to keep it from deformation. (*k*) In *mining*, planks or poles placed behind the main timbers.

backing-cloth (bak′ing-klôth), *n.* In *calico-printing*, an endless cloth, consisting of several layers of stout cotton cloth fastened together with caoutchouc, run immediately back of the fabric to be printed, to increase the elasticity of pressure of the engraved rollers.

backing-cylinder (bak′ing-sil″in-dėr), *n.* In *calico-printing*, the pressure-cylinder, on a cylinder printing-machine, which serves as a solid abutment for the engraved printing-rollers.

backlashing (bak′lash″ing), *n.* Same as *backlash*, 1.

back-line (bak′līn), *v. t.*; pret. and pp. *backlined*, ppr. *back-lining*. See *to* ★*haul back*.

back-mine (bak′mīn), *n.* A cross-cut passage toward the dip of the strata. Also *back-set mine*. [Scotch.]

back-observation (bak′ob-zėr-vā″shọn), *n.* An observation made, as in surveying, in a direction contrary to the direction of progress, or contrary to the usual direction.

back-palming (bak′pä″ming), *n.* In *conjuring*, the art of passing cards or coins to the back of the hand through the fingers, and then back again to the palm, as the hand is turned in full view of the spectators.

Recently some new sleights were introduced from America. These consist in an amplification of the method of concealing coins and cards at the back of the fingers. The principle has received the incongruous title of "*back-palming*." By means of this method both back and front of the hand alternately can be shown empty, while, notwithstanding its apparent emptiness, the hand nevertheless conceals a coin or card. *Encyc. Brit.*, XXX. 428.

backpedal (bak′ped″ạl), *v. i.* In *bicycling*, to press down upon the pedal as it rises, in order to check the movement of the wheel.

backplate, *n.* **2.** A plate of cast-iron bolted against the back or outer edge of molding-boxes, for the purpose of preventing the liquid metal from forcing the sand outward and escaping from the mold: also applied to the plate used on the back of the wind-box of the Bessemer converter.

back-poppet (bak′pop″et), *n.* The tail-stock in a lathe. [Eng.]

back-positive (bak′poz″i-tiv), *n.* In German organ-building, that division of the instrument which is placed behind the player's seat and between him and the church. It is usually played from the lower bank of keys. Compare *chair-organ* and *choir-organ*.

Back-pressure line, that line of an indicator-card which is traced by the pencil of the indicator while the end of the cylinder to which the indicator is attached is exhausting.

back-quarter (bak′kwâr″tėr), *n.* A strip of leather at a rear corner of a bow-top carriage.

backset, *n.* **3.** In *lock-making*, the horizontal distance between the front of the lock and the center of the keyhole: an essential measurement in lock-fitting.

back-shot (bak′shot), *n.* A back-firing; the firing of the charge in the cylinder of an internal-combustion engine before the admission-valve has closed, thus causing an explosion in the admission-passage.

back-shutter (bak′shut″ėr), *n.* That part of a shutter which is hinged to the stile.

back-slanging (bak′slang-ing), *n.* The custom of travelers in the back-blocks of Australia, where hotels are scarce, of seeking accommodations at the settlers' stations on their route. [Australia.]

back-slippage (bak′slip″ạj), *n.* Of pumps, same as *slip*[1], *n.*, 6.

back-spin (bak′spin), *n.* A backward rotation, as of a golf-ball. It checks the forward motion of the ball.

back-stamp (bak′stamp), *n.* An imprint upon the reverse side of mailed matter indicating the time and place of its receipt at a post-office.

backstay, *n.* **8.** In *mining*, an inclined strut or brace of a shaft-head frame, designed to resist the pull of the hoisting-engine.—**Backstays to the sun,** radiating beams of light proceeding from behind a cloud near the horizon; the sunbeams shining between distant clouds and illuminating the lower hazy, dusty atmosphere. When these beams descend to the earth or ocean in front of the observer it is said that the sun is "drawing water."—**Shifting backstay,** a stay used on a fore-and-aft vessel only as necessity requires. Such stays are shifted when the vessel goes about, so that the weather ones will be taut and the lee ones slack. Shifting backstays are set up with their own permanent tackle and act as preventer stays for the topmast when the vessel is under a press of sail. When not in use they are secured in the after part of the channels or standing rigging of the mast to which they belong.

back-stop, *n.* **2.** In *base-ball*, the catcher. See def. 1.—**3.** A stop or pawl designed to check the backward movement of a wheel; a detent.—**Back-stop net,** coarse netting used on athletic grounds to prevent the balls used in tennis or base-ball from passing beyond certain limits.

back-stope (bak′stōp), *n.* In *mining*, a working-place over a drift or level in which the ore is attacked from below.

backstope (bak′stōp), *v. i.*; pret. and pp. *backstoped*, ppr. *backstoping*. To mine a stope by working from below.

back-stretch (bak-strech′), *n.* That part of a circular or oval race-course which is at the side opposite to the finish; the part opposite the home-stretch.

back-stroke, *n.* **3.** In *teleg.*, the return-stroke of the lever in a telegraph-sounder. *Standard Elect. Dict.*—**4.** Diastolic impulse of the heart, a faint beat occurring as the blood enters the ventricles.

back-swordman (bak′sōrd-mạn), *n.* Same as *back-swordsman*. *Shak.*, 2 Hen. IV., iii. 2.

back-swordsman (bak′sōrdz-mạn), *n.* A fencer with the single-stick or back-sword.

back-turn (bak′tėrn), *n.* In *music*, same as *turn*, 6.

back-up (bak′up), *n.* Mechanism or levers by which the forward motion of a motor-car or -vehicle is reversed.

The single lever which, by a forward and backward movement, through the space of about 12 inches, starts the engine, and controls the forward speeds and the *back-up*, doing away with the confusion arising from a multiplication of levers. *Hiscox*, Horseless Vehicles, p. 262.

back-valve (bak′valv), *n.* A check-valve; a valve which automatically prevents a fluid from flowing in the wrong direction.

back-vent (bak′vent), *n.* In *mining*, in wide rooms with center pack-walls, the air-course alongside the pillar. *Barrowman*, Gloss. [Scotch.]

back-wash (bak′wosh), *v. t.* **1.** To cleanse from oil, as wool after combing.—**2.** To subject to the back-wash of a boat which is ahead or is passing.

back-wash (bak′wosh), *n.* **1.** In *worsted manuf.*, a process of cleaning the carded sliver of wool by passing it through hot suds. *C. Vickerman*, Woolen Spinning, p. 225.—**2.** The disturbed water thrown aft by the action of the oars, paddle-wheels, or propeller of a boat.

backwasher (bak′wosh-ėr), *n.* In *worsted manuf.*, a machine for cleansing the carded sliver by passing it through hot soap-suds and water, over hot copper drums, and through a screw gill-box.

back-working (bak′wėr-king), *n.* In *mining*, working a coal-bed back or working toward the shaft. [Scotch.]

bacological (bak-ọ-loj′i-kạl), *a.* [It. **bacologico* (< NL. **bacologicus*), < **bacologia*, the art of silkworm culture, < *baco*, reduced from *bombaco*, var. of *bombace*, < ML. *bombax*, var. of L. *bombyx*, silkworm (see *bombast*, *bombyx*) + Gr. *-λογία* < *λέγειν*, speak.] Of or pertaining to the culture of silkworms; sericultural.

Baconian theory, the theory that Bacon wrote the plays usually attributed to Shakspere. This theory, first distinctly put forth by Delia Bacon in 1857, has had many fervent advocates, who have sought to establish it by various arguments and ingenious "discoveries" of cryptograms and the like. Its chief incentives have been the paucity of our knowledge of Shakspere's life and an exaggerated estimate of Bacon's genius.

Baconianism (bā-kō′ni-ạn-izm), *n.* Baconism.

Baconist (bā′kọn-ist), *n.* **1.** An adherent of the Baconian philosophy.—**2.** One who holds to or favors the Baconian authorship of the plays usually recognized as Shakspere's.

Bacony degeneration. Same as *lardaceous disease*.

Bacopa (ba-kō′pä), *n.* [NL. (Aublet, 1775), prob. after a native Guiana name of the type species.] A genus of dicotyledonous plants of the family *Scrophulariaceæ*. The type species, *B. aquatica*, is a native of Guiana and Brazil and in those countries is used medicinally. See *Herpestis*.

bacteræmia, *n.* An improper form of ★*bacteriemia*.

bacteria-bed (bak-tē′ri-ä-bed″), *n.* In sewage disposal, same as ★*cultivation-bed* (which see).

Bacterial blight, a name given to certain bacterial diseases of plants: as, the *bacterial blight* of the walnut, which has been reported from California, and the *bacterial blight* of potatoes (*Bacillus solanacearum*), which causes the death of the leaves and stems, and also the rotting of the tubers.—**Bacterial lamp,** a glass flask of 1-2 liters capacity, containing a culture of phosphorescent bacteria.—**Bacterial proteins.** See ★*protein*.—**Bacterial spot,** a disease of carnations, of bacterial origin, which produces spots on the leaves and finally kills them. It is regarded as distinct from bacteriosis of the carnation, attributed to *Bacillus Dianthi*.

bacteria-tank (bak-tē′ri-ä-tangk″), *n.* In sewage disposal, same as ★*septic tank* (which see).

bacteric (bak-ter′ik), *a.* Same as *bacterial*.

Bactericidal immunity. See ★*immunity*.

bactericide, *n.*—**Specific bactericide,** a term introduced by Pfeiffer to designate the active substance of a bacteriolytic immune serum: same as ★*bacteriolysin*.

bacteriemia (bak-tē-ri-ē′mi-ạ), *n.* [NL. *bacteriæmia*, < Gr. *βακτήριον*, a rod (see *bacterium*), + *αἷμα*, blood.] Presence of bacteria in the blood.

bacteriofluorescin (bak-tē″ri-ō-flū-ō-res′in), *n.* A green fluorescent pigment produced by *Bacillus pyocyaneus*.

bacterioid, *a.* **II.** *n.* An organism shaped like a bacterium; specifically, the branched form of bacteria found in the root-nodules of leguminous plants.

bacterioidal (bak-tē-ri-oi′dạl), *a.* Having the shape of a bacterium; bacterioid.

bacteriologic (bak-tē″ri-ō-loj′ik), *a.* Same as *bacteriological*.

Bacteriological ★incubator, ★sterilizer. See the nouns.

bacteriologically (bak-tē″ri-ō-loj′i-kạl-i), *adv.* In a bacteriological sense or relation.

bacteriolysin (bak″tē-ri-ol′i-sin), *n.* [*bacteriolys(is)* + *-in*[2].] A substance of the character of an amboceptor, which will cause the destruction of bacteria in the presence of a corresponding complement. (See ★*complement*, 8.) Its action is, generally speaking, specific, that is, a certain bacteriolysin will destroy only a certain definite species of bacteria.

In his Croonian lecture (1900) Ehrlich says: "From this it appears that in the therapeutic application of anti-bacterial sera to man therapeutical success is only to be attained if we use either a *bacteriolysin* with a complement which is stable in man, or at least a *bacteriolysin* the amboceptor of which finds in human serum an appropriate complement. The latter condition will be the more readily fulfilled the nearer the species employed in the immunisation process is to man."
Lancet, April 4, 1903, p. 943.

bacteriolysis (bak″tē-ri-ol′i-sis), *n.* [NL., < *bacterium* + Gr. *λύσις*, dissolution.] Destruction of bacteria by some specific lysin.

But inasmuch as the results of the studies form an integral part of the work on hæmolysis and *bacteriolysis*, which is now attracting so much attention among bacteriologists and pathologists, and as they contain certain facts of fundamental importance bearing on the theory of these phenomena, it seems best not to delay publication until the entire series of researches shall have been completed. *Jour. Exper. Med.*, March 17, 1902, p. 278.

bacteriolytic (bak-tē″ri-ō-lit′ik), *a.* [*bacteriolysis* (*-lyt-*) + *-ic.*] Pertaining to or of the nature of bacteriolysis; destructive to bacteria through the action of specific lysins.

The colon and typhoid bacillus were employed to check one another. It was found that in nearly every case the *bacteriolytic* power of the blood was sufficient to destroy the typhoid bacillus, even if alcohol was not employed.
Therapeutic Gazette, May 15, 1903, p. 292.

bacterioprotein (bak-tē″ri-ō-prō′tē-in), *n.* An albuminous substance derived from bacteria. Same as *bacterial* ★*protein*.

bacteriopurpurin (bak-tē″ri-ō-pėr′pū-rin), *n.* [L. *bacterium* + *purpureus*, purple, + *-in*[2].] The reddish-purple coloring matter contained in certain bacteria.

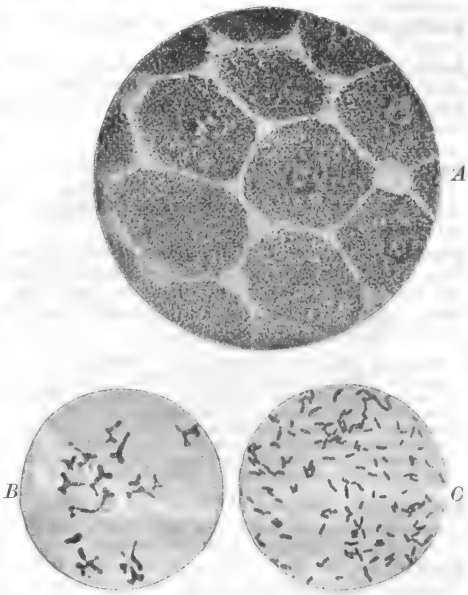
bacterioscopically (bak-tē″ri-ō-skop′i-kạl-i), *adv.* By bacterioscopic methods; by means of a search for bacteria with the microscope or by culture methods. *Nature*, LXVII. 370.

bacterioscopist (bak-tē-ri-os′kō-pist), *n.* One engaged or skilled in the microscopical investigation of bacteria.

bacteriosis (bak-tē-ri-ō′sis), *n.* Any plant-disease caused by bacteria.—**Bacteriosis of the carnation**, a disease of carnations attributed by Arthur and Bolley to *Bacillus Dianthi*.—**Bacteriosis of the cucumber**, a disease of cucumbers caused by *Bacillus tracheiphilus*.—**Bacteriosis of the hyacinth**, a disease of hyacinths caused (according to Wakker) by *Pseudomonas Hyacinthi*.—**Bacteriosis of the melon**, a disease which destroys the leaves and vines of melons: caused by *Bacillus tracheiphilus*.—**Bacteriosis of the mulberry**, a disease of the mulberry attributed to *Bacillus Cubonianus*.—**Bacteriosis of the potato**, a disease which attacks the leaves, stems, and tubers of potatoes: said to be caused by *Bacillus solanacearum*.—**Pink bacteriosis of wheat**, a disease of wheat attributed to *Micrococcus Tritici*.

bacteriotoxin (bak-tē″ri-ō-tok′sin), *n.* **1.** A toxin of bacterial origin.—**2.** Same as ★*bacteriolysin*.

bacterium, *n.*—**Hog-cholera bacteria**, a group of varieties or species, including *Bacillus Salmoni*, found associated with hog-cholera.—**Involution forms of bacteria**, irregular forms due to constrictions or swelling of the cells. They occur especially in old cultures, where the organisms have little vitality or are dead.—**Iron-bacteria**, certain of the higher bacteria, as species of *Crenothrix*, which make use of the iron compounds, especially iron carbonate. See ★*Crenothrix*.—**Luminous bacteria**, species which possess luminous properties. The luminosity appears to be due to the vital processes of the cell acting in the presence of free oxygen.—**Mesophilic bacteria**, a class of bacteria so called on account of the temperature at which they grow. The minimum is 10°–15° C., optimum 37° C., and maximum about 45° C. The forms which produce pathogenic action in man belong to this class.—**Nodule-bacteria**, the bacteria which produce nodules upon leguminous plants, enabling them to use atmospheric nitrogen.—**Pigment-bacteria**, bacteria which exhibit color.—**Psychrophilic bacteria**, bacteria which develop at a minimum temperature of 0° C., optimum 15°–20° C., and maximum about 30° C. The water-inhabiting bacteria generally belong to this class.—**Pus-producing bacteria**, the group of forms which are active in suppurative processes, of which *Streptococcus pyogenes* is a frequently found example.—**Sulphur bacteria**, a name applied to certain bacteria frequently found in sulphur-springs. The most common forms belong to ★*Beggiatoa* (see cut), and ★*Thiothrix*.—**Thermophilic bacteria**, a group of bacteria which require a high temperature for successful growth. The minimum is 40° – 49° C., optimum 50° – 55° C., and maximum 60° – 70° C. Many of the soil-bacteria belong to this group.



Nodule-bacteria.

A, a few cells highly magnified to show the bacteria; four cells with nuclei; *B*, branching forms from clover tubercle; *C*, rod-forms from fenugreek tubercle.

bacteriuria (bak-tē-ri-ū′ri-ạ), *n.* [NL., < Gr. *βακτήριον*, a rod (see *bacterium*), + *οὖρον*, urine.] Presence of bacteria in the urine when voided.

Bactrian. I. *a.*—**Bactrian sage**, Zoroaster.

II. *n.* The language of Bactria.—**Old Bactrian**, the old language of Bactria: usually called *Avestan* or *Zend*.

Bactrites (bak-trī′tēz), *n.* [NL., < Gr. *βάκτρον*, a cudgel, + *-ites.*] An early genus of fossil cephalopods in which the shell is straight, the protoconch round and calcified, and the septa regularly saucer-shaped, with a lateral siphonal lobe. Some writers regard this genus, which occurs only in the Devonian, as a derived form of the nautiloids because of its shape, the variability of its siphonal lobe, and the fact that some nautiloids, like *Orthoceras*, possess a calcified protoconch. Others regard the genus as a primitive form of the ammonoids; but this view is not now well supported.

bactriticone (bak-trit′i-kōn), *n.* [NL., <*Bactrites*, + Gr. *κῶνος*, cone.] The elongate-conic shell of the cephalopod genus *Bactrites*. The word was employed by Hyatt to distinguish this shell from the similar but stouter cones of nautiloids like *Orthoceras* (orthoceracones), on the assumption that *Bactrites* is an ammonoid genus and the only representative of that group with a straight and smooth shell. This view is not generally accepted, and the term *bactriticone* is held to be essentially equivalent to *orthoceracone*.

bacuba (bä-kö′bạ), *n.* [A native W. Ind. name: cf. Oyambi *bacowe*, Galibi *baccoúcou*, *baloulaca*, banana.] A name, in the Danish West Indies, of the cultivated dwarf banana, *Musa Cavendishii*.

bacule (bak′ūl), *n.* [MF. *bacule.*] Same as *bascule*, 2.

baculiferous (bak-ū-lif′ẹ-rus), *a.* Bearing reeds or canes.

baculiform (ba-kū′li-fôrm), *a.* [L. *baculum*, rod, + *forma*, form.] Rod-shaped; straight.

baculiticone (bak-ū-lit′i-kōn), *n.* [NL., <*Baculites* + Gr. *κῶνος*, cone.] A shell like that of the ammonoid cephalopod genus *Baculites*; a shell close-coiled in early stages but in later growth becoming uncoiled and finally straight.

baddeckite (ba-dek′īt), *n.* [*Baddeck* (see def.) + *-ite*[2].] A highly ferriferous mica occurring in small isolated scales embedded in a plastic clay: found near Baddeck, Nova Scotia.

baddeleyite (bad′li-īt), *n.* [Named after Joseph *Baddeley*, who brought the first specimen from Ceylon.] Zirconium dioxid (ZrO_2), occurring in tabular monoclinic crystals from yellow to brown or black in color: first found in the gem-sands of Rakwana, Ceylon, and later in Brazil (there called *brazilite*) and in Sweden.

badenite (bad′e-nīt), *n.* [Rumanian *Badeni* (see def.) + *-ite*[2].] An arsenide of cobalt, nickel, and iron, containing also a small amount of bismuth. It occurs in steel-gray granular to fibrous masses at Badeni-Ungureni, Rumania.

badge[1], *n.* **5.** A breed of domesticated pigeons, so named because of the sprinkling of white about the head and 10 white flight-feathers.—**Badge of fraud**, in *law*, an act or omission innocent in itself, but so out of the usual course that a presumption of fraudulent dealing arises, which must be overcome by positive evidence.

badger[2], *n.* **5.** An erroneous translation, in the English version of the Bible, of the Hebrew *tahash*, an animal whose skins are mentioned 13 times in the Old Testament as coverings for the ark of the covenant, the table of showbread, and the tabernacle itself, and once (in Ezek. xvi. 10) as a material for the shoes or sandals worn by women. Badgers are not known to occur in Asia as far south as Palestine and Arabia. The particular animal which furnished these skins has not yet been identified.

6. In Australia, (*a*) the bandicoot, *Perameles*, and, rarely, (*b*) the rock-kangaroo, *Petrogale*.—**7.** A soldier who wears short whiskers. [Colloq., U. S.]—**8.** In *angling*, an artificial fly having a hackle of badger cock with a dark-brown, nearly black center and cream-colored points.—**Badger game**, a blackmailing scheme in which a man of means is enticed by a woman into a compromising relation, and is then pounced upon by her alleged husband and compelled to pay smart-money.

badger-box (baj′ėr-boks), *n.* A roughly constructed dwelling, shaped like an inverted V and covered with bark, much used by Tasmanian pioneers. [Australia.]

badhan (bäd′ḥạn), *n.* [Yiddish, from Talmudic (Syr.) *beduh*, cheer up, amuse.] A professional jester; one who entertains the guests at a Jewish marriage by reciting Hebrew and Yiddish popular songs, anecdotes, etc., and who also addresses the bride and bridegroom. Although his chief occupation (as his name signifies) is merrymaking, his addresses to the couple before the marriage ceremony assume a solemn character. Also called *marshalok* or *marshaltik*, from the German *marschalk*, a sort of leader in festivities.

badia (bä-dē′ạ), *n.* [It., shortened form of *abbadia.*] Same as ★*abbadia* (which see).

Badiotites (bad-i-ō-tī′tēz), *n.* [NL.; formation not obvious.] A genus of ammonoid cephalopods with closely coiled discoidal shells, relatively simple septal sutures, and strongly ribbed and keeled whorls. It occurs in the Triassic rocks of the Mediterranean province.

badjong (bad′jông), *n.* [Aboriginal name.] The name, in western Australia, of a tall shrub, *Acacia microbotrya*. It produces a large quantity of good gum, similar to gum arabic, which has a pleasant sweetish taste; the aboriginals gather and store it in hollow trees for use as food in winter.

bad-wing (bad′wing), *n.* A geometrid moth, *Dyspteris abortivaria*, inhabiting the Atlantic United States, the hind wings of which are greatly reduced in size. It is pea-green in color, with two white bands on each of the fore wings and one on each of the hind wings. Its larvæ roll the leaves of grape.

Baelz's disease of the lip. See ★*lip*.

Bæna (bē′nạ), *n.* [NL.; formation not obvious.] A genus of fossil turtles from the Cretaceous and Eocene of North America.

bænomere (bē′nō-mēr), *n.* [Irreg. < Gr. *βαίνειν*, go (see *base*[2], *basis*), + *μέρος*, part.] One of the thoracic segments of an arthropod.

bænopod (bē′nō-pod), *n.* [Irreg. < Gr. *βαίνειν*, go, + *πούς* (*ποδ-*), foot.] One of the thoracic legs of an arthropod.

bænosome (bē′nō-sōm), *n.* [Gr. *βαίνειν*, go, + *σῶμα*, body.] The thoracic region of an arthropod. *Packard.*

baer, *n.* Same as ★*ber*.

Bætyl coin, an ancient coin representing a sacred meteorite, like those of Eleuthera, Myrina, and other Greek cities.

bætylic (bē-til′ik), *a.* Of or pertaining to a bætylus or sacred meteoric stone.

In the later palace a series of finds illustrated the '*bætylic*' cult of the Double Axe and its associated divinities. A gem showed a female figure—apparently a goddess—bearing this sacred emblem.
Rep. Brit. Ass'n Advancement of Sci. 1902, p. 468.

baetzner (betz′nėr), *n.* A small billon coin of Strassburg in Alsace, worth 8 deniers.

baff[3] (baf), *a.* [Prob. a form of *bauch.*] Worthless; useless. [Prov. Eng.]—**Baff week**, the week

in which no pay is received, fortnightly payment of wages being customary in some parts of Great Britain.—**Baff Saturday**, the Saturday of baff week.

baffle, *n.* **4.** An artificial obstruction (in the form of a board, plate, or cleat placed in the channel) to the continuous smooth flow of a liquid or gas. It is used for the purpose of producing a thorough mixture of the flowing medium, or of checking its velocity, or of detaining solid matters transported or propelled by the flowing medium.

baffle-block (baf'l-blok), *n.* A thick piece of metal, sometimes hollow, used to baffle, or deflect, gases in a furnace.

baffle-ring (baf'l-ring), *n.* A ring placed in a bearing to prevent leakage.

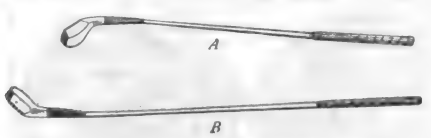
baffle-tank (baf'l-tangk), *n.* A tank in which baffles, or cross-partitions, are placed to check the flow of a liquid or vapor through the tank.

baffle-tube (baf'l-tūb), *n.* A tube placed in the path of the hot gases from a furnace, to deflect them and make them take a more circuitous path, so as to retard their passage out of the tubes until all heat has been given off.

baffling (baf'ling), *n.* An arrangement or system of partitions, plates, or rings whereby a tendency to motion in an undesired direction is prevented. See *baffle-plate*, ★*baffle-ring*.

baffy (baf'i), *n.* [*baff*[2] + *-y*[2].] Same as ★*baffy-spoon*.

baffy-spoon (baf'i-spön), *n.* A wooden club

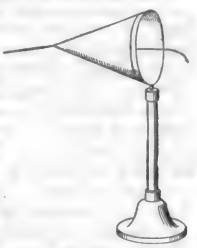


A, baffy-spoon; *B*, long spoon.

with a short shaft and very much lofted in the face, used in golf for playing approaches.

bag[1], *n.* **13.** In *base-ball*, a base-bag.—**14.** A swelling on a boiler-plate. It is frequently found in wrought-iron boiler-plates, and is due to the presence of cinder inside the plate, which causes that part of the plate which is exposed to the heat to expand more than the side next to the water and to separate from it.

15. In *leather-manuf.*, fullness in the middle of a skin, which prevents it from lying out flat and smooth. It is more marked in large skins.—**Barnes's bag**, an hourglass-shaped rubber bag employed in dilating the os uteri.—**Faraday's electric bag**, an instrument devised by Faraday to show that a charge of static electricity is distributed on the exterior surface of bodies. A metal ring on an insulated support has a gauze bag fitted to it. After electrification by use of a proof-plane, it may be shown that the charge is on the exterior, for when the bag is drawn inside out by pulling the silk strings the charge will still be found on the exterior.—**Politzer bag**, a rubber bulb with a tube attached, used to force open the Eustachian tube in cases of catarrhal closure. See *politzerize*.



Faraday's Electric Bag.

bag[1], *v. t.*—**To bag a brace**, in *cricket*, said (humorously) of a batsman when he fails to score a run in either of his two innings. [Colloq.] *Hutchinson*, Cricket, p. 322.

bagatel, *n.* A simplified spelling of *bagatelle*.

bagatelle, *n.* **3.** Specifically, in *music*, a short and light piece, usually for the piano.

bag-filler, *n.* **2.** In *milling*, a machine for filling paper bags or cloth sacks with flour, bran, meal, etc. One form consists of a short conveyer, operated by hand, for drawing a fixed quantity of flour from a hopper and loading it in the bag. In other forms the empty bag is placed in a machine, where it is firmly held and raised to a filling-cylinder by which a fixed quantity of flour is placed in it, the filled bag or sack being released and removed by hand.

baggage-room (bag'āj-röm), *n.* **1.** A room at a railway-station, steamship-pier, or the like, where baggage is received, registered, dated, checked, etc.—**2.** A room where baggage may be left until called for, a receipt or number being given. [U. S. in both senses.]

baggatiway (ba-gat'i-wā), *n.* [Ojibwa *pagaadowe*, to play ball.] The game of lacrosse. *J. M. Cooley*, Michigan, p. 61.

bagging[1], *n.*—**Cotton bagging**, a jute fabric of very coarse texture for baling cotton: same as *gunny bagging*.

Baggy group. See ★*group*[1].

bagio, baguio (bä'gi-ō, bä-gē'ō), *n.* [Sp. *baguio*, < Tagalog, Bisaya, Pampanga, etc., *bagio*, Ilocan *bagguio*, a tempest.] In the Philippine Islands, a native name for a whirlwind storm, hurricane, typhoon, or cyclone.

Baguios, as hurricanes are called here, seem to be of frequent occurrence. They often blow down all the huts of a village, destroying the bread-fruit and coconut crops, uprooting the trees or stripping them of their leaves, so that it takes them a long time to recover.

Plant World, May, 1903, p. 100.

bago (bä'gō), *n.* [Tagalog.] A name in the Philippine Islands of *Gnetum Gnemon*, an evergreen shrub or small tree with jointed, knotty branches, opposite leaves, and catkin-like inflorescence. The bark yields cordage; the seeds are roasted and eaten by the natives, and the young leaves are cooked and eaten like spinach. Also called *nabo*.

bag-rack (bag'rak), *n.* A rack attached to the side or bulkheads of a ship to support the bags in which the crew keep their clothing.

bagrada-bug (ba-grā'dä-bug), *n.* [NL. *bagrada* (Stål, 1862), from a native name?] A pentatomid bug, *Bagrada hilaris*, common in South Africa, where it damages cabbage and cauliflower just as does the allied harlequin cabbage-bug (*Murgantia histrionica*) in the United States.

bagre (bä'grā), *n.* [Sp., Pg.] A sea-catfish, a species of *Tachysurus* or of a related genus. [Spanish America.]

bagsang (bäg'säng), *n.* [Bisaya *bágsang*.] A name in the Philippine Islands of the starchy pith of several palms, especially that of *Caryota Rumphiana*. The pith yields a kind of sago which is highly nutritious, and which is eaten by the natives either in the form of gruel or as a substitute for rice.

baguet, *n.* **2.** In *cytol.*, a rod-shaped mass of chromatin in the nuclear division of some *Infusoria*.

baguilumban (bä-gē-löm'bän), *n.* Same as ★*balokanag*.

baguio, *n.* See ★*bagio*.

bag-worm, *n.*—**Abbot's bag-worm**, the case-bearing larva of a psychid moth, *Oiketicus abbotii* (Grote), occurring in the southern United States. See *Psychidæ*.—**Quince bag-worm**, the larva of *Thyridopteryx ephemeræformis*. See *bag-worm*.

bahag (bä'hag), *n.* [Tagalog and Bisaya.] A loin-cloth worn by the natives of the Philippine Islands.

Bahama lancelet. See ★*lancelet*.

bahawdry (ba-hâ'dri), *n.* [Also *bahaudry*, *bahadry*, < Hind. *bahāduri*, adj., < *bahādur*, bahadur.] The star pagoda in Mysore. See *pagoda*, 3.

bahawdur (ba-hâ'dör), *n.* Same as *bahadur*.

Bahian group. See ★*group*[1].

baho (bä'hō), *n.* [Hopi *baho*, *paho*.] Same as ★*paho*.

bahur (bä'ċhör), *n.*; pl. *bahurim* (bä-ċhö'rēm). [Yiddish *bocher*, Heb. *baḥūr*, pl. *baḥūrīm*, < *baḥar*, choose, select.] **1.** In biblical Hebrew, a young man. *Gesenius.*—**2.** In modern use (since the fourteenth century), a student of the Talmud in a rabbinical college (yeshiba), especially now in Russia and Poland.

baia (bī'ä), *n.* [Said to be Siamese.] A money-shell, as a cowry.

baidarki, *n.* See *bidarkee*.

Baiera (bī'e-rä), *n.* [NL. (Friedrich Braun, 1843), named in honor of Johann Jacob *Baier* (1677–1735), an eminent man of science.] See *Jeanpaulia*.

bail[2], *n.* **7.** In *Canadian law*, a demise of realty.—**Bail court.** See ★*court*.—**Bail emphyteotique**, a lease for a long term, with right to renew indefinitely, practically amounting to an absolute conveyance.—**Common bail.** (*a*) See *bail*[2], 3. (*b*) In practice, the formal entering of fictitious bail when special bail is not required. It is intended merely to express the appearance of a defendant.

bail[3], *v.* **II.** *intrans.* To halt or surrender when "bailed up" or "held up" by a highwayman. [Australia.]

Bailable process, an attachment requiring the arrest of a defendant, and his release upon giving to the officer of the court to whom the attachment is directed suitable bail for his appearance.

bail-drive (bāl'drīv), *n.* A universal-joint drive; a Hooke's gearing.

bailer[3] (bā'lėr), *n.* [*bail*[3], *n.*, + *-er*[1].] In *cricket*, a ball that strikes the bails: usually applied to a ball that strikes the bails after pitching.

bail-former (bāl'fôr″mėr), *n.* A wire-cutting and -shaping machine for making bails.

bailiff, *n.*—**Water-bailiff.** (*b*) In English port towns, an officer appointed to search ships. (*c*) In London, an officer who supervises the inspection of fish brought into the city.

bailiff-errant (bā'lif-er″ant), *n.* An under-bailiff; a deputy to a bailiff.

bailing-net (bā'ling-net), *n.* A scoop- or gathering-net used in lifting live fish out of a trap or seine.

Baillarger's layer-line. See ★*linc*[2].

baiochetto (bä-yō-ket'ō), *n.* [It., dim. of *baiocco*: see *baiocco*.] A small silver coin of the Farnesi, dukes of Castro, in the sixteenth century.

Bairdiella (bār-di-el'ä), *n.* [NL., named for Spencer F. *Baird*, an American naturalist.] A genus of American sciænoid fishes, including the mademoiselle, or silver-croaker, *B. chrysura*. *Gill*.

bait-bug (bāt'bug), *n.* A small burrowing crustacean, *Hippa talpoidea*, found on the Atlantic coast of North America.

baiz, *n.* A simplified spelling of *baize*.

bajara (ba-yä'rä), *n.* A form of pump or water-lift used for irrigation purposes. It comprises a large vertical wheel carrying on its circumference a chain of water-buckets and driven by rough gearing from a whim operated by a horse or mule.

Bajocian group. See ★*group*[1].

Bajuvarian series. See ★*series*.

bakam (bä'kăm), *n.* [E. Indian.] A name applied in the East Indies to *Biancæa Sappan*, the sapan-wood of commerce. See *sapan-wood*. Also called *bookum* and *bukkum-wood*.

bakauan, *n.* See ★*bacauan*.

bakelite (bā'kel-īt), *n.* The trade-name of a liquid compound of phenol and formaldehyde used in the production of an insulating material.

Baker's leg or **knee**, knock-knee.—**Bakers' sponge test.** See ★*test*[1].

bakerite (bā'kėr-īt), *n.* [Named after R. C. *Baker*, a director of the mining company.] A hydrated calcium borosilicate occurring in massive white forms at the borax-mines in San Bernardino county, California.

Bakewellia (bāk-wel'i-ä), *n.* [*Bakewell*, a market-town in Derbyshire.] A genus of Permian pelecypod mollusks belonging to the family *Pernidæ*. Also written *Bakevellia*.

baking-paper (bā'king-pā″pėr), *n.* In *cooking*, a thin sheet of asbestos fabric or felt, used to control the baking of bread or cake. When the bread or cake is sufficiently browned in the oven, the paper is laid over it, effectually shutting off excess of heat and preventing scorching or burning.

baking-powder, *n.* The baking-powders in use in the United States belong virtually to the following classes: (*a*) bicarbonate of soda with cream of tartar; (*b*) acid calcium phosphate; (*c*) dry soda-alum; (*d*) both acid calcium phosphate and dry soda-alum; and in all starch to absorb hygroscopic moisture from the air and prevent premature loss of carbon-dioxid gas.

baking-soda (bā'king-sō″dä), *n.* Sodium acid carbonate or bicarbonate of soda, $NaHCO_3$.

Baktrian, *a.* and *n.* See *Bactrian*.

bakuin (bak'ö-in), *n.* [Russ. **bakuinŭ*, < *Baku* in Transcaucasia, a great petroleum center.] A Russian mineral lubricating-oil having a high viscosity and low cold test. Compare **bakurin*. *Thorpe*, Dict. Applied Chem., I. 263.

bakuol (ba-kö'ol), *n.* [Russ. **bakuolŭ*, appar. < *Baku* (see ★*bakuin*) + L. *ol(eum)*, oil.] A name given by Mendeléeff to an illuminating-oil made by mixing oils of different specific gravities and of different flashing-points.

bakurin (bak'ö-rin), *n.* [*Baku* (see ★*bakuin*) + *-r-* + *-in*[2].] A lubricating-oil made by mixing 100 parts crude Baku oil, 25 parts castor-oil, and 60–70 parts sulphuric acid of 66° Bé., followed by washing with water and sodium hydroxid. *Thorpe*, Dict. Applied Chem., I. 264.

Bala group. See ★*group*[1].

balaad (ba-läd'), *n.* [Given as Somali, but perhaps representing Ar. *bilâd*, country.] A native name in Somaliland for a small tabanid fly resembling *Hæmatopota*, which bites camels, sometimes causing their death. *Proc. Zool. Soc. London*, 1900, I. 9.

balænoid (ba-lē'noid), *a.* [L. *balæna*, a whale, + *-oid*.] **1.** Resembling or pertaining to a whale; whale-like.—**2.** Pertaining to the genus *Balæna*.

balafong, *n.* Same as *balafo*. See also ★*marimba*.

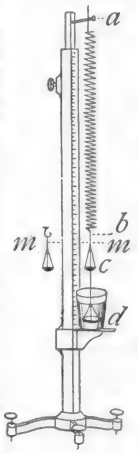
balagan (bal-a-gan'), *n.* [Siberian.] A thatched pyramidal wooden hut of eastern Siberia, raised on piles to a height of about 10 feet, and reached by a ladder consisting of a notched tree-stem.

The little village of Karaga consists of seventeen straggling *balagans*, six yurts and one small tent.

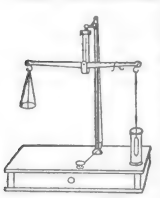
Geog. Jour. (R. G. S.), XII. 285.

balance, *n.* **14.** In engines, a condition in which the forces at play due to the masses of the moving mechanism are balanced by others which operate in a contrary sense, so that the engine has no tendency to lift or slide upon its foundation, but would run without jar even if not secured to such foundation. Balance is of great importance in locomotive and motor-car engines, since, from the nature of their service, the bed-plates

or frames of these machines cannot be fastened to the ground.—**Automatic balance,** a weighing-machine which automatically cuts off the material being placed upon it when a fixed amount is in the weighing-pan.—**Inertia balance,** an instrument which, by means of oscillations controlled by adjustable weights, enables moments of inertia to be determined without the use of stop-watches.—**Jolly's balance,** a delicate spiral spring of elastic brass wire, intended chiefly for determining the specific gravity of small fragments of minerals.—**Kelvin's ampere-balance,** an apparatus for measuring the strength of an electric current in absolute terms by balancing its attracting force against a weight.—**Mohr's specific-gravity balance,** a convenient form of balance suited to the determination of the specific gravity of both solids and liquids. A rider on the graduated arm is used instead of the smaller weights.—**Plattner's balance,** a small assay-balance so constructed as to be easily taken apart and packed in a small box for safe transportation: used in rough mining regions.—**Quartz-thread gravity-balance,** an instrument, devised by Threlfall and Pollock, for statically measuring variations in gravity. It consists of a quartz thread 30.5 cm. long and .0038 cm. in diameter, held rigidly at one end and capable of torsion at the other. A gilded brass wire 5.3 cm. long and weighing .018 gram is soldered to the thread in such a way that its center of gravity is a little on one side of the quartz thread. Twisting the thread brings the wire into a horizontal position and on the cross-wire of an observing microscope. In use the twist put on the quartz thread to bring it into the horizontal position is determined. If gravity increases, the movement of the weight of the wire increases and a greater twist is required.—**Specific-gravity balance,** a balance used for determining the specific gravity of a substance. See above.—**Tangent balance.** See ★*tangent*.—**Torsion-balance.** (*b*) Besides the Coulomb torsion-balance, used principally for electric and magnetic measurements, an instrument so named has been made for ordinary weighings, in which the beam turns upon a horizontal wire subject to torsion instead of upon a knife-edge.—**Troemner's balance,** a form of dispensing-scale.—**Wheatstone's balance.** Same as *Wheatstone's bridge*. See *resistance*, 3.



Jolly's Balance.
a, *b*, spiral spring; *c*, *d*, pans; *m*, graduated mirror.



Mohr's Specific-gravity Balance.

balance, *v. t.*—**Balanced ration.** See ★*ration*.

balance-box (bal′ans-boks), *n.* A box which counterbalances the load lifted by a balance-crane. It is usually a cast-iron box loaded with small weights or kentledge. *Lockwood*, Dict. Mech. Eng. Terms.

balance-cylinder (bal′ans-sil″in-dėr), *n.* A small steam-cylinder sometimes placed on top of the valve-chest of large vertical engines, so that steam acting on the under side of the piston will relieve the valve-gear of the weight of the valve and valve-rod. A similar cylinder is sometimes used, though rarely, to balance the weight of the engine-piston and piston-rod. Also *balancing-cylinder*.

balance-lever (bal′ans-lev″ėr), *n.* In *textile-manuf.*, a device for controlling the counter-faller of a spinning-mule.

balance-lug (bal′ans-lug), *n.* *Naut.*, a lug-sail contracted into a narrower compass by rolling up a portion of the canvas on its yard.

balance-rail (bal′ans-rāl), *n.* In the keyboard of the organ or piano, the rail or raised strip which carries the pins on which the keys are balanced and operated. See cut under *pianoforte*.

balance-reef (bal′ans-rēf), *v. t.* To close-reef; take in all the reefs.

balance-rope (bal′ans-rōp), *n.* In *mining*, a rope hung under the cage in a shaft to counterbalance the weight of the winding-rope. *Barrowman*, Gloss.

balance-rudder, *n.*—**Compound balance-rudder,** a type of balance-rudder, formerly used in some warships, in which the forward part could be locked in a fore-and-aft line when under sail, but the whole used as an ordinary balance-rudder when steaming.—**Twin balance-rudders,** a special arrangement of rudders for torpedo-boats, devised by Thorneycroft. There is a balance-rudder on each side of the screw, hollowed out toward the screw, thus forming a sort of tunnel in which the screw revolves.

balancing-cylinder (bal′an-sing-sil″in-dėr), *n.* Same as ★*balance-cylinder*.

balancing-lever (bal′an-sing-lev″ėr), *n.* Same as *equalizing-bar* (which see, under *bar*[1]).

balancing-machine (bal′an-sing-ma-shēn″), *n.* A machine for finding and correcting any variation in the weight of different parts of a pulley-machine knife or cutter and causing it to run true at high speed.—**Knife-balancing machine,** a scale-balance for testing the distribution of weight in machine-knives and rotary cutters. Unevenness in the distribution of weight in a knife is found by weighing it in different positions in the scale, and is corrected by filing the heavy portions until, after repeated tests, it is exactly uniform in weight in all positions. Knives used in pairs are tested until they balance in all the positions in which they will be placed in the cutter-head of a wood-working machine.—**Rotary balancing-machine,** a machine for testing pulleys by causing them to revolve in a horizontal plane, any variations in the rotation caused by unequal distribution of weight being indicated by the machine. Weights may then be added to the pulley in such positions as to cause it to run true in the balancing-machine.

balancing-organ (bal′an-sing-ôr″gan), *n.* Same as *balancer*, 5. *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 695.

balancing-way (bal′an-sing-wā″), *n.* A device for finding any want of balance in a wheel or arbor by suspending it upon carefully adjusted supports, or ways, and causing it to revolve. When it comes to rest the heavy side is downward, showing a want of balance at that place, and this is corrected by filing that point or adding weight at opposite points.

balaneutics (bal-a-nū′tiks), *n.* [Gr. *βαλανευτική*, fem. of *βαλανευτικός*, ‹ *βαλανεύειν*, attend at the bath, ‹ *βαλανεῖον*, a bath: see *balneum*.] The science of administering baths; balneology.

balangay (bä-läng-gī′), *n.* See ★*barangay*.

balanophoraceous (bal″a-nō-fō-rā′shius), *a.* [NL., ‹ *Balanophoraceæ* + *-ous*.] Having the characters of or belonging to the *Balanophoraceæ*.

balanoposthitis (bal″a-nō-pos-thī′tis), *n.* [NL., ‹ Gr. *βάλανος*, acorn (glans), + *πόσθη*, penis, + *-itis*.] Inflammation of the prepuce and glans penis.

Balantidium (bal-an-tid′i-um), *n.* [NL. (Claparède and Lachmann, 1858), ‹ Gr. *βαλαντίδιον*, dim. of *βαλλάντιον*, *βαλάντιον*, a bag, pouch.] A genus of heterotrichous ciliate *Infusoria*, of the family *Bursarina*, having a large peristome and well-marked anal aperture. Its species are found in the rectum of batrachians, the large intestine of man, and the cœloma of annelids.

balao[1] (bä-lä-ō′), *n.* [Cuban Sp. *balao*; cf. Sp. *balaou*, a kind of sprat.] The halfbeak, *Hemiramphus brasiliensis*. [Cuba.]

balao[2] (bä′lä-ō), *n.* [Tagalog.] A name in the Philippine Islands of *Dipterocarpus vernicifluus*, a forest-tree which yields a fragrant resin called *balao balsam* or *malapaho balsam*, highly prized by artists as a varnish for pictures. See ★*panao*.

balarao (bä-lä-rä′ō), *n.* [Tagalog (whence Pampanga *balarao*), a dagger, prob. orig. referring to an attached thong; cf. Bisaya *balalao*, a coil of string or rope, a skein of thread or silk.] In the Philippine Islands, a dagger with a rather broad blade.

balastre, *n.* See *balustre*.

balata-gum, *n.* Almost the entire output of balata-gum is produced in Guiana and Venezuela, and comes into commerce in the form of sheets and blocks. It is usually considered a kind of gutta-percha, but differs from the latter in that it is softer at the ordinary temperature, more elastic, cools more slowly after being heated, and is much more durable when exposed to light and air. Though sometimes used in mixtures with gutta-percha, pure balata-gum has certain uses for which it seems especially adapted, as molds for galvanic purposes, shoe-soles, dress-shields, and belts for transmitting power.

balate (bä-lä′te), *n.* [Philippine Sp. *balate*, ‹ Tagalog *balat*, skin, hide.] A sea-cucumber, dried and smoked, eaten as a relish; trepang.

balatong (bä-lä-tong′), *n.* [Tagalog and Bisaya *balatong*.] A name applied in the Philippines to *Phaseolus Mungo*, one of the most important food-staples of the natives. See *green gram*, under *gram*[3].

Balatonian group. See ★*group*[1].

balaustre (bä-lä-ös′tre), *n.* [Sp. *balaustra*, flower of the wild pomegranate.] The name in Venezuela of the valuable timber-tree *Centrolobium robustum*. See ★*ararība*.

Balbach process. See ★*process*.

balboa (bal-bō′ä), *n.* [Panama Sp. *balboa*, named for *Balboa*, who discovered the Pacific Ocean.] A new gold coin of the republic of Panama, worth $1 in United States gold: 1-, 2½-, 5-, 10-, and 20-dollar balboas are coined.

balbus (bal′bus), *n.* [L., stammering.] A stammerer.

baldface (bâld′fās), *n.* The widgeon, *Anas americana*. See ★*baldhead*, 4.

baldhead, *n.* 4. The widgeon, *Anas americana:* so called from its white head.

baldio (bäl-dē′ō), *n.* [Sp. *baldío*, *a.*, untilled, waste.] Waste or common land.

Baldwin's phosphorus. See ★*phosphorus*.

bale[3], *n.*—**Commercial bale,** a bale of certain form and weight, recognized in commercial usage as a legal tender in trade, for example, a cotton-bale rectangular in form and weighing about 500 pounds.—**Running bale,** any bale just as it is, for example, a cotton-bale as it comes from the press.—**Sea-island bale,** a marketable package of sea-island cotton, weighing about 390 pounds.

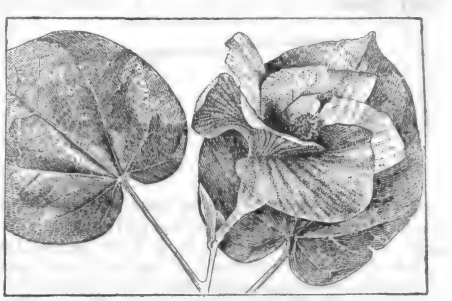
bale-band (bāl′band), *n.* *Naut.*, a big shackle-shaped iron at the masthead, secured to the cap-band, to which the standing part of the flying-jib stay is made fast.

bale-breaker (bāl′brā-kėr), *n.* A machine for opening or loosening the hard-packed layers of a cotton-bale.—**Porcupine bale-breaker,** a bale-breaker equipped with a rapidly revolving cylinder or beater, consisting of a number of teeth, spikes, or blades.

bale-sling (bāl′sling), *n.* *Naut.*, a simple strap (circle of rope) passed around a bale or bag, the two ends meeting on top, one dipping (passing) through the other. The hook of the hoisting-tackle is slipped into the loop formed by the rope, and when a strain is brought upon the tackle the rope strap tightens about the article hoisted and holds it securely.

Balfouria (bal-fō′ri-ä), *n.* [NL. (Robert Brown, 1810), named in memory of Sir Andrew *Balfour* (1630–1694), founder of the Royal Botanical Garden at Edinburgh.] A genus of dicotyledonous plants belonging to the family *Apocynaceæ*. See *Wrightia*.

balibago (bä-lē-bä′gō), *n.* [Tagalog and Bisaya. Cf. Guam *pago*, Fijian *vau*, Samoan *fau*, Hawaiian *hau*.] In the Philippines, a tree, *Pariti tiliaceum*, widely distributed in the tropics. Its bark yields a valuable bast-fiber from which the natives of Guam and other Pacific islands make cordage. Its wood is very light, and is used for outriggers for canoes, floats for fishing-nets, and for kindling fire by friction. See *corkwood* and *mahoe*, 1.



Balibago (*Pariti tiliaceum*).

balif, *n.* A simplified spelling of *bailiff*.

balimbing, *n.* See ★*balingbing*.

balingbing (bä-ling-bing′), *n.* [Tagalog and Bisaya *balingbing*, ‹ Malay *bilimbing* (*belimbing, balimbing*): see *bilimbi*.] A Philippine name of the tree and fruit bilimbi or bilimbing (which see).

balisier (bä-lē-zē-ā′), *n.* [F. *balisier*, the canna or Indian shot.] A name in some of the West Indies of several species of banana-like plants of the genus *Bihai*, the flowers of which are protected by large red or yellow bracts which give them a very showy appearance. Also called *wild banana*. See *Heliconia*.

baliti (bä-lē′tē), *n.* [Philippine Sp. *baliti, balete*, ‹ Pampanga *baliti*.] A name in the Philippine Islands of *Ficus Indica* and several allied species having aërial roots and the habit of growth of the banians of India. From the inner bark of some of the species the Negritos prepare bark-cloth similar to the tapa of the Polynesians, which they use for clothing. See *banian*[2].

balk[1], *n.* **9.** (*c*) (2) In England, a beam of a certain size received from the Baltic. The size is stated at 4–8 inches in width, 5–12 inches in thickness, and of any considerable length. The word generally denotes a whole trunk roughly squared and therefore tapering from end to end. (*d*) Any heavy mass of timber, such as the string-piece of a wooden pier or bridge.

15. In *wool-manuf.*, a fullness and suppleness of texture.—**16.** The failure of a jumper or vaulter to jump after taking his run. Three balks usually count as a trial-jump.—**Double balk,** in *billiards* (now almost exclusively in the English game), a term used when the incoming striker's ball is in hand and the other two within the string.—**To make a balk,** in *billiards*, to force one's own ball and the red (or both reds, in the American game) within the string-line when one's opponent is at hand.

balk[1], *v. t.*—**To balk the crib,** in *cribbage*, to lay out cards for the dealer's crib which are unlikely to match any that he will lay out. Such would be a king and a 9.

balk-lining (bâk′lī″ning), *n.* A system of balk-lines in carom-billiards introduced in 1874 and later modified. It now consists of eight short lines, two in each corner, intersecting the original continuous line running parallel to and either 14 or 18 inches from each section of the cushion. Thus there are nine panels representing four different areas. Eight of the panels are balks. The central panel, having an area nearly as great as that of all the others combined, is free, and yet

is neglected by the best players. Starting at 8 inches, the continuous line has been changed, in public games, to 10, 12, 12½, 14, and 18 inches. The only ones now in force are briefly expressed as 14:2, 18:2, and 18:1, the final figures indicating the number of shots allowed on two object-balls in any one balk. Shots are not necessarily counts, and at 18:1 there can be no count at all unless a balk-ball is sent out, while at 18:2 or 14:2 there cannot be two in succession. Return of the ball to the same balk imposes no penalty.

balk-pocket (bâk′ pok″et), *n.* One of two corner pockets at the foot of an English and the head of an American billiard-table.

ball[1], *n.* **25.** In the manufacture of soda by the Leblanc process, the batch of pasty material produced by heating together sodium sulphate or salt-cake, calcium carbonate (limestone or chalk), and coal as discharged from the furnace.—**26.** In *arch.*, a spherical ornament. Specifically—(*a*) A sphere cut out of stone and serving as the crowning feature of a gate-post or the like. (*b*) A hollow sphere of thin metal, made as light as possible and braced with iron bars, set above a cupola or dome. The ball of St. Peter's at Rome is 8 feet in diameter.

27. *pl.* Iron ore occurring in balls or nodules. Also *ball-ironstone*. [Scotch.]—**Ball-and-socket joint.** (*b*) In *geol.*, a cup-shaped joint produced by the longitudinal contractions of basaltic columns during cooling.—**Ball thrust-bearing.** Same as ★*ball-thrust*.—**Best ball.** In games like golf or croquet, where there are three players, the best player matches his score against the best ball of the other two.—**Four-ball match,** in *golf*, a match in which four players engage, two on each side, each playing his own ball, only the best ball on either side counting.—**Guilty ball** or **danger ball,** in *croquet*, the ball to be played against on an opponent's side.—**Hanging ball,** in *golf*, a ball which lies on ground that slopes downward in the direction in which the ball is to be driven.—**Illegal ball,** in *base-ball*, a ball delivered to the batsman by the pitcher when the latter is not in his prescribed position.—**Innocent ball,** in *croquet* and similar games, the ball last played.—**Leg ball,** in *cricket*, a ball bowled so that if its course is not altered by the batsman it will pass behind his legs.—**Length ball,** in *cricket*, a ball bowled with the proper length or pitch; a ball so pitched as to cause the batsman difficulty in playing it.—**Liberia balls and flakes,** a trade-name for crude india-rubber of good quality brought in large balls from Liberia.—**Lined balls,** in *billiards*, balls so much in alinement that the first object cannot be hit for a count without hitting the second also, such a situation being commonly, though not always, a tie-up.—**Lopori balls,** a trade-name for a kind of crude india-rubber brought in small balls, black on the outside and white within, from the Kongo region in Africa.—**New Guinea balls,** a trade-name for a kind of crude india-rubber in strings of small balls, black on the outside and white or pink within, the product of *Ficus rigo*, imported from New Caledonia.—**No ball,** in *cricket*, a ball delivered or bowled unfairly as regards either action or position.—**Passed ball,** in *base-ball*, a ball which is delivered by the pitcher within the catcher's reach, but which the catcher fails to hold, so that it goes beyond him and the runner succeeds in gaining a base.—**Plain ball,** in *billiards*, the clear white as distinguished from the spotted white ball. In France (for no good reason) both are clear, with the result that the wrong one is often played with as a cue-ball.—**Running ball,** in *base-ball*, *foot-ball*, *golf*, *lawn-bowls*, and other games, a rolling ball.—**Short ball,** in *cricket*, a ball which pitches too far in front of the batsman to cause him difficulty in playing it; a ball bowled short of a length. See *length* ★*ball*.—**Three-ball match,** in *golf*, a match in which three players play against one another, each with his own ball; or a match in which one plays his ball against the best ball of two others. The latter is usually referred to as a *best-ball match*.—**To break the balls.** See ★*break*.—**To smother the ball,** in *cricket*, to play forward with the bat upon the ground, so as to stop the ball soon after it pitches.—**Wide ball,** in *cricket*, a ball bowled out of the batsman's reach.

ball[3], *n.* **3.** A belt of sand a short distance offshore on which waves break in rough weather. [Local, Eng.]

The sands exposed at low tide were mostly smooth; only in the low between the beach and the "*ball*" were there well-preserved tidal sand-ridges.
Geog. Jour. (R. G. S.), XVIII. 183.

ballade, *n.* **3.** In *music*, a term variously applied to melodies for ballads, to extended narrative or dramatic works for a solo voice, occasionally to concerted choral cantatas, and to instrumental pieces of a melodic character—in the last case often without obvious reason.

ballahoo (bal-a-hö′), *n.* [Also *ballahou*, *bullahoo*; appar. another use of *ballahou*, W. Ind. name of a schooner: see *ballahou*.] A garfish. [Australia.]

ballast, *n.* **5.** The rough masonry of the interior of a wall, or that laid upon the vault; masonry used where weight and solidity are needed. Compare ★*filling*, 7, and ★*back-filling*.—**Ballast fever,** formerly, any epidemic disease occurring on board a ship from a tropical port, supposed to be due to a contagium present in the ballast.—**To freshen ballast.** See ★*freshen*.

ballast-car (bal′ast-kär), *n.* In *railroading*, a gondola- or hopper-car used in conveying, dumping, and distributing gravel, broken stone, or other ballast along a roadway.

ballast-fin (bal′ast-fin), *n.* A heavy metal extension bolted to the keel of a yacht, designed to give her great stability by carrying the ballast low down. It is on the principle of the fin-keel.

ballast-line (bal′ast-līn), *n.* The water-line of a vessel when she is in ballast.

ballast-loaded (bal′ast-lōd″ed), *p. a.* Said of a vessel when she has nothing but ballast in her hold.

ballast-shovel (bal′ast-shuv″l), *n.* A shovel employed in handling earth ballast.

ballast-tank (bal′ast-tank), *n.* In *shipbuilding*, one of a series of compartments built in a ship, made water-tight, and provided with pipes by means of which it may be filled with water from the sea or pumped out by the ship's pumps. When the tank is filled the water acts as ballast. Such tanks are usually formed in the space between the inner and outer bottoms, though additional ballast-tanks are frequently placed elsewhere for special reasons.

In other words, the volume of the *ballast-tank* is not included in the under-deck tonnage; and shipbuilders are left free to choose their methods of constructing the hulls for water-ballast purposes.
White, Manual of Naval Architecture, p. 55.

Ball-bearing axle, an axle with steel balls (held by a box or sheave) which bear upon the axle-arm to reduce friction.

ball-clay (bâl′klā), *n.* A plastic clay used in making pottery. Also known as *pipe-clay*.

ball-dance (bâl′dans), *n.* A ceremonial dance connected with the ball-games of some Indian tribes.

baller (bâ′lėr), *n.* A workman who charges puddled bars into a balling- or reheating-furnace.

ballet[2], *n.* **4.** The music to which a ballet is danced.—**5.** In the sixteenth and seventeenth centuries, especially in England, a light glee-like madrigal or part-song, often with a fa-la burden. See *fa-la*.—**6.** In the eighteenth century, a series of instrumental dances properly in the same key and usually for stringed instruments; a suite (which see). The dramatic ballet (see def. 2) was the national form of drama in France; it originated in the sixteenth century, and in the seventeenth coalesced with the Italian musical drama, giving rise to the early type of French opera.—**Ballet of Ballets,** the name in the Bishops' Bible (1568) of the Song of Songs.

ballet-dancer (bal′ā-dan″sėr), *n.* One who dances in a theatrical or operatic ballet. See *ballet*[2], 1.

ballet-girl (bal′ā-gėrl), *n.* A female ballet-dancer.

ballet-master (bal′ā-mȧs″tėr), *n.* The trainer or director of a ballet. See *ballet*[2], 1.

ballet-music (bal′ā-mū″zik), *n.* Same as ★*ballet*[2], 4.

ball-float (bâl′flōt), *n.* A float in the form of a sphere, used either as a valve or for operating a valve. See *ball-cock*.

ball-furnace (bâl′fėr″nās), *n.* The reverberatory furnace used in the Leblanc process of soda-manufacture. See ★*ball*[1], 25. Also called *black-ash furnace*.

ball-furnaceman (bâl′fėr″nās-man), *n.* A workman whose duty it is to turn over and ultimately to discharge the material from a ball-furnace.

ballhooter (bâl′hö-tėr), *n.* In *lumbering*, one who rolls logs down a hillside. [U. S.]

ballhornize (bâl′hôrn-īz), *v. t.*; pret. and pp. *ballhornized*, ppr. *ballhornizing*. [G. *ballhornisiren*, spoil while trying to mend, < *Ballhorn*, a man's name. "John Ballhorn was a printer at Lubeck, who flourished between the years 1531 and 1599, and who printed, amongst other things, a primer or A B C book, on the last page of which he substituted for the embellishment which was usual at that time, of a cock with spurs, a cock without spurs, but with a couple of eggs beside him; and on the strength of this substitution announced on the title-page 'Amended by John Ballhorn.' The expression has since become proverbial [in Germany]; and *ballhornisiren* or *ver-ballhornen* signifies 'to make unmeaning or useless alterations in anything—to make anything worse, instead of making it better.'" *Gwilt*, Review of Designs for Rebuilding the Royal Exchange.] To spoil while professing to mend; make unmeaning or useless alterations in. See the etymology.

balling[1], *n.* **2.** In the manufacture of soda, the firing, working back and forth, and discharging of the black-ash mixture. See ★*ball*[1], 25.—**3.** In *textile-bleaching* and *-coloring*, the collecting of the material into balls, to the detriment of the process. It occurs most frequently in loose cotton or wool.—**4.** In the process of nuclear development, the fusing of two or more nuclei into one.

ball-iron (bâl′ī″ėrn), *n.* Concretionary clay ironstone.

Ballistic board (*milit.*), a tablet containing ballistic data so arranged that the allowances and corrections required to insure accurate firing with sea-coast cannon may be quickly determined.—**Ballistic fruit,** one which projects its seed (or containing-segments) or spores by elasticity; a catapult fruit. Compare ★*bolochore*.—**Ballistic instrument,** an instrument measuring an electric impulse by the throw or momentary deflection of the instrument-needle. It differs from an ordinary electric measuring-instrument in having the moving part heavier and not damped.—**Ballistic test,** a trial of ordnance or armor by firing with projectiles. A test of a gun is made by firing it with proof charges; that of an armor-plate by firing at it with armor-piercing projectiles.

ballistics, *n. pl.*—**Exterior ballistics,** that department of ballistics which treats of the motion of a projectile in the air.—**Interior ballistics,** that department of ballistics which treats of the motion of a projectile in the bore of a gun.

ballistite (ba-lis′tīt), *n.* A smokeless powder containing a large percentage of nitroglycerin: similar to cordite. It was originally introduced by Nobel, and was one of the earliest forms of smokeless powder. It has been modified as to exact composition and mode of manufacture, but at present consists of equal parts of nitroglycerin and soluble guncotton, with about one per cent. of diphenylamine. As made for military purposes by the Italian government it is pressed into small threads known as *filite*.

ball-lightning (bâl″līt′ning), *n.* An electric discharge which appears as a ball of fire descending from the atmosphere to the earth, rolling slowly along the ground or the rigging of a vessel, and eventually exploding violently, leaving a strong sulphurous or ozone odor: a form of natural atmospheric lightning. Although rare, the reality of this phenomenon is supported by several well-authenticated cases.

ball-machine (bâl′ma-shēn″), *n.* In *candy-making*, a machine for cutting and forming a great variety of small candies, such as gooseberries, butter-cups, balls, bonbons, etc. It consists essentially of rolls of a special form adapted to the various shapes of candies, and in large machines is used with a blower for chilling and hardening the candies as fast as they are formed between the rolls and delivered to a traveling-apron which conveys them through the air-blast from the blower.

ball-mill (bâl′mil), *n.* Same as *ball-grinder*.

ballonnet (bä-lo-nā′), *n.* [F., dim. of *ballon*, balloon.] A small balloon containing air, placed inside a larger balloon containing a gas lighter than air. Also *ballonet*.

They pump air as needed into the *ballonet*, which makes the entire bag tight and snug.
P. Lyle, Jr., Smithsonian Rep., 1901, p. 583.

ballon-sonde (ba-lôn′sond′), *n.*; pl. *ballons-sondes*. [F.] See ★*sounding-balloon*.

balloon[1], *n.* **8.** In *cricket* and *base-ball*, a lofty hit which gives a fielder the chance to catch a batsman out. [Slang.]—**9.** In *spinning*, the convex curve assumed by yarn on a ring-frame.—**Registration balloon, exploring balloon,** a small balloon to which recording instruments are attached for registering conditions in the upper air.

balloon[1] (ba-lön′), *v.* [*balloon*[1], *n.*] **I.** *trans.* **1.** To carry up or transport in, or as in, a balloon.

Thy pinions next *ballooned* me from the schools to town. *Colman the Younger*, Broad Grins, vi.

2. To distend with air, gas, or water, as the abdomen in tympanites, or the rectum or vagina with specially constructed apparatus.

II. *intrans.* **1.** To make ascents in a balloon.

When Wise the father tracked the son, *ballooning* through the skies,
He taught a lesson to the old,—go thou and do like Wise. *O. W. Holmes*, Meeting of Harvard Alumni.

2. To swell out like a balloon; in *ring-spinning*, to fly outward centrifugally from the spindle: said of yarn.

balloon-cloud (ba-lön′kloud), *n.* A small cumulus or alto-cumulus cloud upon which the sun is shining so that the top warms and rises rapidly, while the cooler bottom follows slowly, the whole cloud assuming the form of a rising balloon, until it reaches some upper level where it overflows and forms a thin stratum of false cirrus, alto-stratus, or analogous cloud.

balloon-foresail (ba-lön″fōr′sāl), *n.* See ★*foresail*.

balloon-gun (ba-lön′gun″), *n.* A gun (as a field-gun or a part of a ship's armament) specially designed as a defense against military airships and aëroplanes.

balloonine (ba-lön′in), *n.* [After F. **ballonine*, < *balloon* + *-ine*[2].] A varnish intended to render the silk of balloons impervious to gas. It is made by dissolving india-rubber in a mixture of benzin and carbon disulphid. *Sci. Amer. Sup.*, Oct. 10, 1903, p. 23221.

ballooning, *n.* **3.** In a steam-boiler, the lifting of scum on the surface of the water by the liberation of steam from it. *Newnes,* Tech. and Sci. Dict.

balloon-kite (ba-lön′kīt), *n.* A combination of the balloon and the kite, first designed for meteorological research, but subsequently modified in an entirely novel way for military purposes and used in the German army. In this construction the balloon, consisting of a cylindrical gas-bag about 80 feet long and 20 feet wide, and provided with interior and exterior air-sacks, is held captive by a cable so that it is inclined to the ground and the wind like a kite. The buoyancy is sufficient to carry an observer up to a height of 200 or 300 feet, so that he may overlook the surrounding country. See ★*kite-balloon.*

balloon-rail (ba-lön′rāl), *n.* The support for the balloon-guards on a ring-spinning frame.

ball-ore (bâl′ōr), *n.* Iron ore (limonite or siderite) occurring in layers of more or less closely united nodules. [Local, U. S.]

Ballostoma (bal-os′tō-mä), *n. pl.* [NL.] A suborder of minute fossil thysanuran insects found in the Florissant shales of Colorado.

ballot[1], *n.*—**Australian ballot,** a system of balloting of which the principal features are the placing of the names of all the candidates on each ballot, the printing of the ballots by the government, the arrangement and control of the polling-places, and devices for securing secrecy in marking and casting the ballots. The system, with numerous variations, has been extensively adopted in the United States.—**Ballot Act.** Same as *Reform Bill* (which see, in the Cyclopedia of Names).—**Blanket-ballot,** a ballot containing the names of all candidates for public office to be voted for at a specified election. It is voted by each elector, whose choice is indicated by certain precise methods prescribed by law. In the United States it has been adopted in various States to prevent fraud by insuring secrecy as to the candidate chosen by the elector.—**Letter-ballot,** a ballot sent by mail to be voted for a candidate for office. Trustees of institutions and officers of private corporations may often be voted for by letter-ballot.

ballotage (bä-lo-täzh′), *n.* [F.] The French custom of casting a second ballot to elect one of two candidates who have come nearest to a legal majority.

balloting-machine (bal′ot-ing-ma-shēn″), *n.* Same as ★*voting-machine.*

ballottement, *n.* It consists of palpation, to determine the presence of a movable body in the abdomen, such as a child in the womb, a floating kidney, etc., by a sudden tap with the finger from below; this forces the body upward, and it can be felt again as it settles down upon the tip of the finger. Also called *repercussion.*

ball-planting (bâl′plan″ting), *n.* A method of transplanting trees with balls or lumps of earth around the roots.

ball-point (bâl′point), *n.* An attachment to a compass or pair of dividers, fitted to one leg to form a seat over a hole when a circle is to be described about the hole.

ball-race (bâl′rās), *n.* The cup, track, or groove in which the balls of a ball-bearing run. *Elect. World and Engin.*, Dec. 5, 1903, p. 931.

ball-rubber (bâl′rub″ėr), *n.* The trade-name of crude india-rubber in the form of large balls from Peru, the product of species of *Hevea.* It is superior in quality to the best Para rubber.

ball-thrombus (bâl′throm″bus), *n.* A blood-clot of spherical shape which forms in the heart before death.

ball-thrust (bâl′thrust), *n.* A ball-bearing arranged to take the end-thrust of a shaft. *Jour. Brit. Inst. of Electr. Engineers,* 1902–1903, p. 937.

Ball-turning lathe. See ★*lathe*[1].

ball-warping (bâl′wâr″ping), *n.* A method, formerly practised in textile-mills, of winding from a reel into a round package a series of warp-threads for the subsequent forming of the web for weaving: introduced about 1760.

ballyrag (bal′i-rag), *v. t.* Same as *bullyrag.*

balm, *n.*—**Copalm balm.** Same as *copal* or *copalm balsam.* See *Liquidambar* and *balsam.*

Balmain's paint. See ★*paint.*

Balmer's law. See ★*law*[1].

balmoral, *n.* **2.** A Scotch cap, originally of wool. [Not in use in U. S.]

balnearium (bal-nē-ā′ri-um), *n.*; pl. *balnearia* (-ä). [L.: see *balneary.*] In *Rom. archæol.*: (*a*) A small or private bath-room; a room with a small bath. (*b*) That part of a great bathing establishment which was devoted to the smaller rooms.

balokanag (bä′lō-kä-näg′), *n.* [Pampanga *balucanag.*] A name in the Philippine Islands of *Aleurites saponaria,* a tree allied to the candleberry and the tung-tree. The nuts yield oil which is utilized in making the soap commonly found in the markets of Manila and other towns. Also called *balokanad* and *baguilumban.*

Baloskion (ba-los′ki-on), *n.* [NL. (Rafinesque, 1836), with the ascribed meaning '*ball rush,*' in allusion to the spherical flowers, probably < Gr. *βάλλειν,* throw, + *σχοῖνος,* rush.] A genus of monocotyledonous plants, type of the family *Baloskionaceæ.* See *Restio.*

Baloskionaceæ (ba-los″ki-ō-nā′sē-ē), *n. pl.* [NL. (Wight, 1905), < *Baloskion* + *-aceæ.*] A family of monocotyledonous plants of the order *Xyridales,* the cord-leaf family, typified by the genus *Baloskion.* See *Restiaceæ.*

balsa, *n.* **3.** On Lake Titicaca, an aboriginal flat-bottomed boat or canoe, sometimes capable of conveying as many as 30 persons or a dozen donkeys. It is made of bundles of the totora reed tied together. While the balsa is a very rude and clumsy craft, incapable of speed, it has the advantage of keeping afloat in any circumstances. When small it is propelled by a sail made of the same material; for coasting and as a ferry, poles, an occasional oar, and paddles are used. The Aymará call it *yampu.*

balsam, *n.*—**Balao balsam.** See ★*balao.*—**Balsam of fir.** Same as *Canada balsam.*—**Balsam of Gilead.** Same as *balm of Gilead.*—**Black balsam.** Same as *balsam of Peru.*—**Carpathian balsam,** a colorless oleoresin with a pleasant odor and an acrid flavor, derived from the European *Pinus Cembra.* See *stone-pine* (*b*), under *pine*[1].—**Friars' balsam.** See *friar.*—**He-balsam,** the black spruce, *Picea Mariana:* opposed to *Abies Fraseri,* the she-balsam.—**Hungarian balsam.** See *Hungarian.*—**Lagam balsam.** See lagam-balsam.—**Malapaho balsam.** See ★*balao.*—**Sonsonate balsam.** Same as *balsam of Peru:* so called from the region in Salvador from which it is sent to market.—**Sweet balsam.** Same as *balsam-weed.*—**Tamacoari balsam,** a balsam, derived from the heart-wood of *Caraipa fasciculata,* used as a remedy for parasitic skin diseases. See ★*tamacoari.*—**Turlington's balsam.** See *benzoin.*—**Umiri balsam,** the fragrant yellow balsam yielded by the umiri. See ★*Humiri.*—**West-Indian balsam,** the gum-resin obtained from any one of several species of the genus *Clusia,* especially *C. multiflora.*—**White balsam.** Same as *sweet* ★*balsam.*

Balsamea (bal-sam′ē-ä), *n.* [NL. (Gleditsch, 1782), < L. *balsameus,* of balsam, < Gr. *βάλσαμον,* balsam-tree.] A genus of dicotyledonous plants, type of the family *Balsameaceæ.* See *Commiphora.*

Balsameaceæ (bal-sam-ē-ā′sē-ē), *n. pl.* [NL. (Dumortier, 1829), < *Balsamea* + *-aceæ.*] A family of dicotyledonous choripetalous plants of the order *Geraniales,* typified by the genus *Balsamea,* and characterized mainly by regular 5-merous unisexual flowers and 2–5-seeded drupes. They are woody plants of the tropics, yielding important commercial products. The family contains 19 genera and about 320 species. See *Boswellia, Burseraceæ, Canarium, Commiphora* and *Protium.*

balsamina, *n.* **2.** A name in Guam and the Philippine Islands of *Momordica Charantia* and *Momordica Balsamina.* See ★*amargosa* and ★*balsam-pear.*

balsam-pear (bâl′sam-pār), *n.* The orange-colored warty fruit of *Momordica Charantia,* of the gourd family. See *Momordica* and compare *balsam-apple.*

Baltimore heater, shilling. See ★*heater,* ★*shilling.*—**Baltimore penny.** See *Lord Baltimore penny* under *penny.*

baltimore (bâl′ti-mōr), *n.* [Prob. with reference to the coloring of the Baltimore oriole]. In *entom.*, an American nymphalid butterfly, *Euphydryas phæton.* It has black wings margined with rows of reddish and pale-yellow spots. It occurs in the eastern United States, and its larvæ feed on the snakehead (*Chelone*) and other plants. *Comstock,* How to Know the Butterflies, Index, p. 125.

balu[2] (bä′lö), *n.* See ★*bhalu.*

baluster-column (bal′us-tėr-kol″um), *n.* A small column, especially one not of the recognized orders and in a subordinate position, as in the thickness of a wall or when used to divide windows or the like: a common feature of early medieval architecture.

Baly's pump. See ★*pump*[1].

bamban (bäm-bän′), *n.* [Tagalog.] A name in the Philippine Islands of *Donax Arundastrum,* a plant belonging to the *Marantaceæ.* In the Philippines this plant is of little economic importance, but in Bengal its split stems are used for making awnings and mats of the finest quality.

Bamberger's pulse. See ★*pulse*[1].

Bamboo fiber, spliced stems of the bamboo about ¼ inch in width and 6–7 inches in length.—**Blowpipe bamboo,** a tall bamboo-like grass, *Arthrostylidium Schomburgki,* of northern South America. It attains a height of 50–60 feet and a diameter of 1½ inches. The lower part of the stem for 15 or 16 feet has no joints and forms a continuous smooth hollow tube. It is used by the Indians of the Orinoco and the Amazon as a blowpipe or blow-gun called by them *sarbacane.* See *blow-gun* and *sarbacane.*—**Female bamboo,** the large bamboo of Bengal and Assam, *Bambos Balcooa,* with stems 50–70 feet high. It is used chiefly for building purposes.—**Male bamboo,** the name in India of *Dendrocalamus strictus,* which is widely distributed throughout India, attaining a height of 100 feet or more. Its stems are strong, elastic, and nearly solid, and on account of their size it is one of the most useful bamboos. It is used like the ordinary bamboo, especially for walking-sticks, spear- and lance-shafts, and for fencing.—**Spiny bamboo,** a name in India and the Philippine Islands of *Bambos Bambos* (*Arundo Bambos* of Linnæus, *Bambos arundinacea* of Persoon), a large bamboo armed with recurved spines. It is much used in construction, and sections of its hollow stems serve as water-vessels. The seeds are eaten by the Cingalese.—**Thorny bamboo of India.** Same as *spiny* ★*bamboo.*

bamboo-brier, *n.* **2.** In the southern United States, *Smilax Bona-nox* and other prickly species of *Smilax.* See ★*stretchberry.*

bamboo-grass (bam-bö′gràs), *n.* A cane-like Australian grass, *Panicularia ramigera,* largely used for thatching purposes. Cattle eat the young shoots freely. Another grass, *Stipa micrantha,* is also called by this name. See *bamboo,* 1 (*c*).

bamboo-pheasant (bam-bö′fez″ant), *n.* A general name for pheasants of the genus *Bambusicola,* found in India and China.

Bambos (bam′bos), *n.* [NL. (Retzius, 1789), from the East-Indian name: see *bamboo.*] A genus of monocotyledonous plants of the family *Poaceæ.* See *Bambusa.*

bamburo (bam-bö′rō), *n.* [Cingalese?] A wild bee of Ceylon, either *Apis indica* or *A. dorsata,* whose honey is collected in large quantities by the natives. *Kirby and Spence,* Entomology, p. 187.

ban[1] (bän), *n.*; pl. *bani* (bä′ni). [Rumanian.] A Rumanian coin and money of account: its value is that of the French centime.

banaba (bä-nä-bä′), *n.* [Tagalog.] A name in the Philippine Islands of a valuable timber-tree, *Lagerstræmia speciosa,* with large showy rose-purple or red flowers and strong, tough, durable wood. Two varieties are recognized, one (*banaba colorada*), of a deep-red color, used in boat-building on account of its durability under water, and the other (*banaba blanca*), of lighter color and coarser grain, used in ordinary construction. See *Lagerstræmia.*

banago (bä-nä′gō), *n.* [Bisaya *banago.*] A name in the Philippine Islands of two timber-trees: (*a*) *Thespesia populnea,* belonging to the mallow family, called *Polynesian rosewood* and *milo* in Polynesia; and (*b*) *Cordia subcordata,* belonging to the borage family, called *tou* or *kou* in Polynesia. Though of not much economic importance in the Philippine Islands, these woods are highly valued by the Hawaiians, who make polished bowls of them for holding their food. See ★*milo,* ★*kou, Thespesia,* and *Cordia.*

banaibanai (bä-nī″bä-nī′), *n.* [Tagalog? Bisaya *banay banay.*] A name in the Philippine Islands of several species of *Radermachera* belonging to the trumpet-creeper family, having opposite pinnate or bipinnate leaves, bell-shaped flowers, and membranous-winged seeds inclosed in long slender capsules. *Radermachera Banaibanai* yields heavy, durable timber of a grayish-brown color. It does not readily decay underground and is used in constructing posts.

banalo (bä-nä′lō), *n.* [Philippine Sp.] Same as ★*banago.*

banana, *n.* **2.** The papaw, *Asimina triloba.* [Arkansas.] Also called *false banana.* [Illinois.]—**Abyssinian banana.** See *Musa.*—**Banana liquid** or **varnish,** a solution of celluloid in a mixture of amyl acetate and acetone, used as a vehicle for the application of bronze-powders, so called because of the strong banana-like odor of the amyl acetate.—**Bruce's banana.** Same as *Abyssinian* ★*banana.*—**Chinese banana,** the dwarf banana, *Musa Cavendishii.* It produces edible fruit of good quality and endures more cold than most bananas. It is extensively cultivated in Florida and the West Indies.—**Dwarf banana.** Same as *Chinese* ★*banana.*—**False banana.** Same as ★*banana,* 2.—**Japanese banana,** *Musa Basjoo,* a native of the Liu-Kiu Islands, cultivated as an ornamental plant, and grown commercially in southern Japan for its fiber, which resembles abaca.—**Wild banana.** Same as ★*balisier.*

banana-disease (ba-nan′ä-di-zēz″), *n.* See ★*disease.*

banana-fish (ba-nan′ä-fish), *n.* **1.** A species of goby, *Awaous taiasica,* found in West Indian rivers.—**2.** Same as *ten-pounder,* 3.

bananaland (ba-nan′ä-land), *n.* Queensland, where bananas are abundant. [Local, Australia.]

bananalander (ba-nan′ä-land″ėr), *n.* An inhabitant of Queensland; a Queenslander. [Local, Australia.]

banana-wine (ba-nan′ä-wīn), *n.* A drink made of sliced bananas which are covered with water and allowed to ferment.

banatite, *n.* In *petrog.*, a name originally proposed by Von Cotta (1865) for certain dioritic rocks of the Banat in Austria. The term is now more commonly used in the sense proposed by Brögger, to describe monzonite moderately rich in silica. See ★*monzonite* and ★*adamellite.*

banca (bän'kä), *n.* [Philippine Spanish *banca*, Tagalog *bangca.*] A dugout covered with a roof of bamboo. [Philippine Is.]

banco, *n.* **2.** In *baccara*, a proposal to play against the banker for his entire capital at one coup. See *baccara.*—**Skilling banco.** See *skilling*[3].

banco-daler (bän'kō-dä″lėr), *n.* A Swedish bank-note issued by the national bank, equal to about 35 United States cents.

bancoul (ban-köl'), *n.* [A French form of the native name.] The candleberry, *Aleurites Moluccana.*

band[2], *n.* **6.** In *bot.*, the band-like space between the two mericarps of a cremocarp.—**Amniotic band.** See ★*amniotic.*—**Anogenital band.** See ★*anogenital.*—**Band of proliferation.** See ★*proliferation.*—**Geneva bands,** two white linen bands worn at the neck as part of the clerical garb: originally worn by the Swiss clergy in Geneva. See def. 4.—**Germinal band** or **germ-band,** in *cytol.*, a band- or ribbon-shaped portion of the blastoderm from which the body of the embryo arises, especially in insects.—**Landolt band,** a dark band in the field of view of polarization instruments in which crossed Nicol prisms are employed. It is due to the unequal polarization of different parts of the field. It is used as a sensitive criterion in making polariscopic measurements.—**Moderator band,** an exaggerated columna carnea which sometimes stretches across the right ventricle in man: it is normal in certain of the lower animals.—**Primitive band,** in *entomological embryol.*, the first indication of the embryo as a whitish band or streak on the ventral side of the egg. *Packard*, Text-book of Entom., p. 531.—**Vocal bands.** Same as *vocal cords* (which see, under *cord*[1]).—**Zodiacal band.** See ★*zodiacal.*

band[3], *n.*—**Chamber band,** a group of players who play chamber music, either with stringed instruments only or with these and a few other instruments, such as flutes.—**Marine band,** a band attached to a naval establishment.—**Regimental band.** Same as *military band.*—**Street band,** an itinerant group of players who play in city streets for such gifts as they can collect from chance listeners.—**Town band,** in the seventeenth and eighteenth centuries, especially in Germany, a group of instrumentalists organized and supported by the municipality for service on civic and religious occasions.—**String band, wood band** or **wood-wind band, reed band, wind band,** various sections of a concert orchestra, which is often called collectively a *band.*

banda[1] (ban'dä), *n.* [? Sp. *banda*, a band.] A mother-of-pearl shell found about the Philippine Islands and in adjacent waters.

banda[2] (bän'dä), *n.* [Native name.] In Kamerun, the fruit of *Buchholzia coriacea*, a shrub of the caper family. It is green in color, about the size of a walnut, and is used as a medicine for colds.

bandage, *n.*—**Barton's bandage,** a bandage so applied as to support the lower jaw in fracture of that part.—**Borsch's bandage,** a bandage for the eyes which covers the sound as well as the diseased eye.—**Capeline bandage,** a recurrent bandage applied to the head, or to the stump of a limb after amputation, to retain the dressings.—**Circular bandage,** a bandage applied by repeated turns round a limb or the head.—**Crucial bandage.** Same as *T-bandage.*—**Elastic bandage,** a bandage of india-rubber or other elastic material.—**Esmarch bandage,** a rubber bandage applied tightly to a limb to expel the blood, the return of the circulation being prevented by a rubber cord which constricts the part close to the trunk. After this is applied the rubber bandage is removed and an operation can be performed with little loss of blood.—**Figure-of-eight bandage,** a roller-bandage passed back and forth round two projecting points, crossing midway so as to resemble the figure 8.—**Galen's bandage,** a square of cloth cut at the sides and folded in such a way as to make a cap enveloping the head.—**Many-tailed bandage,** a bandage made of a number of strips fastened at one end to a cross-strip and applied so as to overlap.—**Plaster bandage, plaster-of-Paris bandage,** a bandage of cheese-cloth into which gypsum has been rubbed. It is applied wet, and soon hardens so as to form a splint to the part.—**Recurrent bandage,** a bandage covering the head, or the stump of an amputated limb, made by passing strips forward and back over the convexity, the folds being held in place by repeated turns of a circular bandage.—**Reversed bandage,** a bandage in which the strip is made to describe a half-turn backward at each revolution round the limb in order to make it lie smoothly when encircling the swelling portion of the member.—**Silicate bandage,** a bandage impregnated with silicate of sodium and potassium, used like the plaster-of-Paris bandage.—**Suspensory bandage.** See ★*suspensory.*—**Velpeau's bandage,** a system of bandaging used to support and immobilize the arm in cases of fracture of the clavicle.

bandaka (bän-dä-kä'), *n.* [Cingalese name.] The gumbo-plant or okra (*Abelmoschus esculentus*), the mucilaginous pods of which are eaten green as a vegetable and are used as a thickening for soup. It is called by the Hindus *bhindi.* Also written *bandikai.* See *okra.*

bandaree (bän-da-rē'), *n.* [Also *bhundaree*; Marathi *bhaṇḍārī.*] One of the low-caste native Indians about Bombay who tend cocoa-nut-palms, gather the nuts, and draw the toddy. [Anglo-Indian.]

bander[2] (ban'dėr), *n.* An apparatus for making or applying material in the form of bands.

bandicoy (ban'di-koi), *n.* [Tamil *vendai-khāi, vendai*, Hind. *bhendī*, the tree.] Same as ★*bandaka.*

band-music (band'mū″zik), *n.* Music intended for or made by a brass or military band.

bandoline, *n.* **2.** A mucilage prepared from carrageen moss (*Chondrus crispus*) mixed with scented spirit: used to stiffen silk goods.

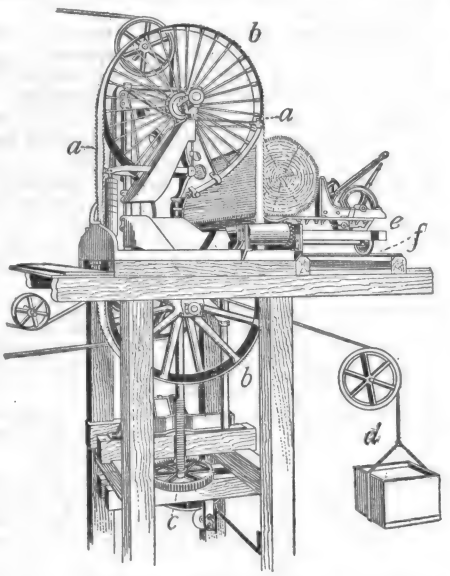
bandoline-wood (ban'dō-lin-wůd), *n.* The wood of a lauraceous tree, *Machilus Thunbergii*, native to China, Formosa, Japan, and Korea. There is a considerable trade in China in chips and shavings of the wood. When soaked in water these yield a mucilage which is used by Chinese ladies for stiffening the hair.

bandonion (ban-dō'ni-ọn), *n.* [*band*[2] + (*harm*)*onium* + *-on.*] A large and elaborate variety of concertina.

band-plant (band'plant), *n.* See *Vinca.*

band-room (band'röm), *n.* A store-room on a flag-ship in which the bandsmen keep their instruments and music.

band-saw, *n.* This power-tool has in recent years become one of the most important used in woodworking. Band-saws range from small machines, employing fine, slender saws in cabinet-work, up to large machines used in sawing logs. They are used in scroll-sawing, as cut-off



Double-cutting Telescopic Band-saw.

a, band-saw with teeth on each edge; *b*, upper and lower wheels supporting saw and supported by frame having a vertical traverse, shown in the highest position to bring the cutting edge of the saw to the large log; *c*, gearing controlling sliding saw frame; *d*, counter balance; log carriage traversing track *(f)* in two working directions; *f*, track for carriage. Capacity 50,000 feet of hemlock boards a day.

saws, rip-saws, and resaws, and in the largest sawmills. The smaller saws are fitted with tilting work-tables, and the resaws have feed-rolls to guide the material to the saw. Band-sawmills are supplied with log-carriages and are fitted with all the log-handling machines and tools used in first-class sawmills. In all types appliances are provided to secure the proper tension of the saw on the wheels. In sawmills the aim is to bring the log close up to the point where the band leaves the upper wheel, this being the most effective sawing-point. The chief advantage of the band-saw over the circular saw is in economy of material because of the narrow band-saw kerf.

band-wagon (band'wag″ọn), *n.* A wagon arranged to accommodate a band of musicians. It is generally large and ornate, with the seats along the sides.

band-wheel, *n.* **3.** The large wooden pulley of a well-boring rig: it is driven by a belt from the engine, and in turn drives the bull-wheel, the sand-pump reel, and the working-beam. See *oil-derrick.*

Banff series. See ★*series.*

bang[4] (bang), *n.* The Cuban sardine, *Sardinella pseudohispanica.* [Bahama Is.]

banga (bäng-gä'), *n.* [Tagalog.] A large spherical water-jar made of baked clay. [Philippine Is.]

bangalay (bang-al'i), *n.* [Native Australian.] The hard, tough, durable timber of the swamp or bastard mahogany, *Eucalyptus botryoides.* [Southeastern Australia.]

bangalow (bang'gą-lō), *n.* [Native Australian.] An ornamental pinnately leaved palm, *Ptychosperma elegans*, of northeastern Australia. The tender young terminal bud is eaten either raw or boiled by the natives and sometimes by the colonists. The small stems are called *Moreton Bay canes.* See *Ptychosperma.*

bangca, *n.* See ★*banca.*

banger (bang'ėr), *n.* One who or that which bangs. Specifically—(*a*) Something very large; especially, a lie. [Slang.] (*b*) A large, heavy cane. [Slang, U. S.]

banger-rush (bang″ėr-rush'), *n.* A cane-rush, common in colleges, in which two sides struggle for the possession of a cane or banger.

banging-iron (bang'ing-ī″ėrn), *n.* See ★*crimping-brake.*

bangkal (bang-käl'), *n.* [Bisaya *bangcal.*] A tree, *Sarcocephalus cordatus*, belonging to the madder family, with globose heads of flowers fused together by their fleshy calyx-tubes, followed by solid fleshy, succulent fruit. The wood, which is yellow, light, and rather soft, is used in the construction of houses and for furniture, tubs, barrels, and small canoes. It is said to stand exposure to the weather. The roots yield a yellow dye. [Philippine Is.]

bang-tail (bang'tāl), *n.* A tail which has been banged, or cut horizontally across; also, an animal with a banged or docked tail.—**Bang-tail muster,** a periodical muster or round-up of all the cattle on an Australian station, theoretically for the purpose of having the long hairs at the ends of the tails cut off square. The practical object is to find out the actual number of cattle on the run. [Australian.]

bang-tailed (bang'tāld), *a.* Having a docked or banged tail: as, a *bang-tailed* horse.

banig (bä'nig), *n.* [Tagalog and Bisaya *banig.*] A mat; especially, a sleeping-mat. Also *petate.* [Philippine Is.]

banilad (bä-nē-läd'), *n.* [Bisaya.] A tree, *Sterculia urens*, with large 5-lobed leaves, which yields a mucilaginous gum resembling tragacanth. In India a bast-fiber is obtained from the bark and is used for rope-making, and the seeds are sometimes roasted and eaten, though they possess cathartic properties. See *Sterculia*, and *Indian tragacanth*, under *tragacanth.* [Philippine Is.]

banister, *n.* **2.** A handle-brush used in spinning- and weaving-mills for cleaning the gearing of machinery.

banjeaurine, *n.* Same as ★*banjorine.*

banjo, *n.* **3.** A form of automatic railway signaling-apparatus in which a flat circular disk, with an arm projecting from one side, is alternately exhibited in front of a glass opening in the signal-box and withdrawn from sight by the make and break of an electric circuit. The shape of the disk and its arm has suggested the name.

The enclosed disc signal, commonly called a "*banjo,*" is a circular box about 4 feet in diameter, with a glass-covered opening, behind which a red disc is shown to indicate stop. *Encyc. Brit.*, XXXII. 147.

4. In *mining*, an iron frame for carrying a false clack. *Barrowman*, Gloss. [Scotch.]

banjore, banjor (ban'jōr), *n.* An obsolete or dialectal form of *banjo.* *Thomas Nelson Page*, The Old South.

banjorine (ban-jō-rēn'), *n.* A variety of banjo, smaller than the usual form and properly higher in pitch. Also written *banjeaurine.*

banjula (bän-jö'lä), *n.* Same as ★*vanjula.*

bank[1], *n.* **14.** In *lumbering.* Same as *landing*, 9.—**15.** A small pottery. [Eng.]—**Bank fisheries,** fisheries on submarine banks, especially the Newfoundland Banks.—**Bank to bank,** in *mining*, a shift or working-day.

bank[1], *v. i.* **4.** To fish on submarine banks, especially the Newfoundland Banks.

bank[2], *n.* In *lumbering*, the logs cut or skidded above the amount required in a day and held over by the saw-crew or skidders, to be reported when the daily quota is not reached.

bank-barn (bangk'bärn), *n.* A barn built on a hillside or sloping ground, so that three sides of the lower story are surrounded by earth, the fourth being unbanked. *Forest and Stream*, Feb. 21, 1903 (advt.). [U. S.]

bank-claim (bangk'klām), *n.* A mining right on the bank of a stream. *Coal and Metal Miners' Pocket-book.*

bank-engine (bangk'en″jin), *n.* **1.** The engine at the mouth of a mine-shaft. [Eng.]—**2.** A locomotive employed to assist trains up inclines. [Eng.]

banker[1], *n.* **9.** One who makes a business of picking up wreckage on the coast. [California.]

banket[3] (bang'ket), *n.* [Cape D., appar. a particular use of D. *banket*, sweetmeat, confectionery, a feast, banquet, also banquette: see *banquet, banquette.*] A formation of ore found on the Witwatersrand in the Transvaal, South Africa. It is a conglomerate of water-worn pebbles of translucent quartz set in a matrix composed mainly of oxids of iron and silica. Near the surface the gold occurs almost entirely free in the cement, while at a moderate

depth the oxids of iron are gradually replaced by sulphids; but the gold can still be extracted largely by amalgamation.

The oxidized *banket* ore, however, was not easily amenable to concentration and the percentage of concentrates caught was small. These concentrates were worked in various kinds of amalgamation pans or stored for future treatment. The total gold recovered in those days probably did not amount to more than 60 per cent of the original value of an ore, then going about an ounce to the ton or over. *Electrochemical Industry*, June, 1904, p. 215.

bank-fishing (bangk'fish/ing), *n.* Fishing on submarine banks, especially the Newfoundland Banks.

banking-game (bang'king-gām), *n.* Any game in which one player pays and takes the bets made by all the other players.

banking-ground (bang'king-ground), *n.* Same as *landing*, 9.

banking-room (bang'king-röm), *n.* **1.** That room of a bank or private banking-house in which the greater number of the clerks work, and to which the public has access to deposit or to draw money. Hence—**2.** In any large financial business, as an insurance company, the principal, more public business-room. [U. S.]

bank-lock (bangk'lok), *n.* Any form of lock adapted for use on a safe or vault of a bank or safe-deposit company.

bankman (bangk'man), *n.* In printing-offices (generally newspaper offices), one who attends to the bank or rack on which standing matter is kept.

Banko pottery. Same as *banko-ware*.

bank-right (bangk'rīt), *n.* The right to divert water to a bank-claim. *Coal and Metal Miners' Pocket-book.*

bankside (bangk'sīd), *n.* The shelving or sloping bank of a river, brook, or the like.

bankul-nut (bangk-u̇l-nut'), *n.* [Malay *bangkal*, the tree, + E *nut*.] Same as *candleberry*, 1.—**Bankul-nut oil.** Same as *kekune-oil*: used in the East for lighting and cooking, and exported to Europe for soap-making. See *Aleurites*, and *kekune-oil*, under *oil*.

banner-cloud (ban'ėr-kloud), *n.* A cloud which streams horizontally from the summit of a mountain. Sometimes it is produced by snow carried from the surface of the mountain by the wind; at other times it is due to the expansion of the moist air which flows into the discontinuous space in the wind to the leeward of the mountain. It may also be a thin layer of haze caused by the mixture of warm air with the surface of a stream of cold air.

banner-fish (ban'ėr-fish), *n.* A scombroid fish, of the genus *Istiophorus*, found in all warm seas.

banner-net (ban'ėr-net), *n.* Netting made of strong twine and with a large mesh, used as a support or backing for street banners and theatrical scenery.

Bannisdale flags. See ★*flag*[4].

banquet-ring (bang'kwet-ring), *n.* A quaint or exceedingly large, rich, or highly decorated ring, too ornamental for general use, but worn on state occasions. Such rings often extend as far back on the hand as they project on the finger. Also called *dinner-ring*.

Banquet-ring.

banquette, *n.* **5.** An elevated platform made of stones, running along the walls of cliff-dwellings and kivas. [Rare.]

Broad lateral *banquettes* are prominent features in the most complicated caves, and there are many recesses and small closets or cists.

17*th An. Rep. Bur. Amer. Ethnol.*, II. 541.

Banqui rubber. See ★*rubber*.

bantam-weight (ban'tam-wāt), *n.* A lightweight boxer.

bantay (bän-tī'), *n.* [Tagalog and Pampangan *bantay*, a sentinel.] A person appointed to keep watch in a bantayan. [Philippine Is.]

bantayan (bän-tä'yän), *n.* [Tagalog and Pampangan *bantayan*, < *bantay*: see ★*bantay*.] An outlook or station near a village which serves as an armory and as a signal-station. Two bantays keep watch in the bantayan and give the alarm in case of danger. The bantays are inhabitants of the village. [Philippine Is.]

Banti's disease. See ★*disease*.

banty (ban'ti), *n.* and *a.* [*bant*(*am*) + -*y*[2].] **I.** *n.*; pl. *banties* (-tiz). A bantam chicken; hence, a very diminutive, cocky person. [Slang.]

II. *a.* Saucy; impudent. [Thieves' slang.]

banzai (ban-zī'), *interj.* [Jap. *ban-zai*, for **ban-sai*, 'ten thousand years': *ban*, Chinese *wan*, ten thousand, a myriad; *sai*, *sei*, Chinese *sui*, etc., year.] In Japan, a shout of patriotic joy or encouragement: somewhat like the English *hurrah*. Often used, in English books, as a noun.

A large crowd had assembled on the shore to see the prize, and she was greeted with loud and oft-repeated *banzais*. *N. Y. Evening Sun*, June 2, 1905.

baphiin (baf'i-in), *n.* [*Baphia* (see def.) + -*in*[2].] A neutral substance, $C_{12}H_{10}O_4$, extracted by ether from barwood, *Baphia nitida*. It crystallizes in leaflets.

B. Ap. Sc. An abbreviation of *Bachelor of Applied Science*, a degree conferred by some institutions. Also *B. A. S.*

Baptanodon (bap-tan'ō-don), *n.* [NL., < Gr. *βάπτειν*, dip, + *ἀνόδους*, without teeth: see *Anodon*.] A genus of large Jurassic enaliosaurs from the Baptanodon beds of the Rocky Mountain region. These animals attained a length of 8 or 9 feet, and had toothless jaws, orbits of great size, and a conic sclerotic ring of 8 plates. The genus is closely allied to *Ichthyosaurus*. The species is *B. discus*.—**Baptanodon beds,** the name given by Marsh to a series of beds of Upper Jurassic age in Colorado, Wyoming, and Montana which contain marine with some lacustrine remains and are characterized by the presence of the sea-saurian *Baptanodon discus*, from which the formation takes its name. These strata lie on red beds referred to the Triassic and are overlain by the ★*Atlantosaurus* beds (which see).

baptigenin (bap-tij'e-nin), *n.* [*bapti*(*sin*) + -*gen* + -*in*[2].] A crystalline compound, $C_{14}H_{12}O_6$, formed by the hydrolysis of baptisin. It turns brown at 250° C., without melting.

baptin (bap'tin), *n.* A crystalline glucoside of undetermined composition contained in the root of wild indigo, *Baptisia tinctoria*.

baptisin (bap'ti-sin), *n.* [*Baptisia* (see def.) + -*in*[2].] A crystalline non-poisonous glucoside, $C_{26}H_{32}O_{14} + 9H_2O$, found in the North American plant *Baptisia tinctoria*. It melts at 240° C. and gives rhamnose and baptigenin by hydrolysis.

baptist, *n.*—**Landmark Baptists,** a Baptist party, strong in the southwestern United States, which advocates a revival of the old landmark of non-ministerial intercourse between Baptists and pedo-baptists. They refuse to recognize the churches and ministers of the latter and hold their baptism to be invalid.

baptitoxine (bap-ti-tok'sin), *n.* A colorless crystalline alkaloid, $C_{11}H_{14}ON_2$, contained in the root of wild indigo, *Baptisia tinctoria*.

Baptosaurus (bap-tō-sâ'rus), *n.* [NL., < Gr. *βάπτειν*, dip, + *σαῦρος*, a lizard.] A genus of mosasaurs described by Marsh from the Cretaceous (Upper Greensand) formation of New Jersey.

baquid (bä'kid), *n.* [Tagalog *baquid*, a basket for fruit, etc., = Bisaya *baquid*, a measure for grain, = Ilocan *baquí*, a basket used as a hen's nest.] In the Philippine Islands, a basket, usually of cane, somewhat oval in shape.

bar[1], *n.* **8.** (*b*) In England, the space behind the bar, often large enough to form a small office. Also called *bar-parlor*.—**18.** In *anat.*: (*a*) A general term for any of the cranial arches, such as Meckel's cartilage, or the hyoid and branchial arches, which have the form of more or less continuous rods or bars. (*b*) Less often used for portions of the cranium which have a rod-like shape, as the jugal or postorbital bars. In this sense synonymous with ★*arcade* or *arch*.—**19.** In *meteor.*, a long cigar-shaped cloud, generally nearly stationary, but sometimes moving broadside on across the sky; specifically, the stationary cloud to the leeward of the helm-cloud over the Cross-fell range in England during easterly winds.—**20.** The division between the two tables of a backgammon-board on which captured pieces are placed.—**21.** Specifically, in *violin-making*, the same as *bass-bar*.—**22.** Same as ★*pennant-bar*.—**Bar calculator.** See ★*calculator*.—**Bar diggings.** See ★*digging*.—**Bar money.** See ★*money*.—**Bar of Michelangelo,** in *sculp.*, the projection of the frontal bone at the base of the forehead, called in anatomy the *superciliary ridge*. It is especially prominent in the heads of Michelangelo's statues and in certain Greek works.

Below this starts the lower forehead swelling above the brow in the '*bar of Michel Angelo*.' Certainly this bar is one of the most characteristic features of Scopaic male heads.

E. F. Benson, Jour. Hellenic Studies, XV. 199.

Bulb-angle bar. Same as ★*angle-bulb*.—**Cape bar,** a long yoke used with the Cape cart in South Africa.—**Dotted bar,** in *musical notation*, a double bar with two or four dots before or after it, indicating that a strain or section is to be repeated, the position of the dots showing whether it is the preceding or the following section that is intended.—**Galton bar,** in *psychophys.*, a flat rod of ebonite or blackened wood, plain upon the face and scaled upon the back, along which slides a light brass clip, carrying in front a tightly stretched white thread. The problem is to set the thread, by moving the clip to and fro, so that it bisects the length of the bar. The error made can be read off from the scale at the back. *E. C. Sanford*, Exper. Psychol., p. 402.—★**Hyoid bar,** ★**visceral bar.** See the adjectives.—**Jugal bar.** Same as ★*jugal arch* or *zygoma*.—**Meckelian bar.** Same as *Meckelian rod* (which see, under *rod*[1]).—**Pentathlon bars.** See ★*pentathlon*.

bar[1], *v. t.*—**To bar a bet.** (*a*) In *faro*, to notify the dealer that a bet does not go for that turn. (*b*) In any betting transaction, to exclude one of the possibilities: as, to bet 4 to 1, *bar* one, in a horse-race, meaning that a certain horse is not included.

B. Ar. An abbreviation of *Bachelor of Architecture*, a degree conferred by some institutions.

bar. An abbreviation of *barometer*.

barabara (bä-ra-bä'rä), *n.* [Russ. *barabora*.] A hut of the Aleuts, half underground and covered with soil. Also *barrabarra*. *Jour. Amer. Folk-lore*, Jan.–March, 1903, p. 16.

barad (ba-rad'), *n.* [Gr. *βαρίς*, heavy + -*ad* as in *farad*.] The unit of pressure in the centimeter-gram-second system, equal to one dyne per square centimeter.

baræsthesiometric, *a.* Same as ★*baresthesiometric*.

barangay (bä-rän-gī'), *n.* [Philippine Sp. *barangay*, < Tagalog and Bisaya *balanggay*, Pampangan *baranggay*, Ilocan *baranggay*.] **1.** A kind of boat used by the natives of the Philippine Islands at the time of the conquest. The modern boat of this kind is called *barangayan*.—**2.** In the Philippine Islands, the community which, under the Spanish government, formed the constituent element of the pueblo. The chief of such a group is called *cabeza de barangay*. Originally it was the name of the independent village communities (which were so called as being expected to equip each one barangay or boat).

barangayan (bä-rän-gī-yän'), *n.* [Philippine Sp.: see barangay.] A light vessel, low in the water, having a deck and a mast: used in the Philippine Islands, particularly in the Bisayan Archipelago and in Mindanao.

barasingha (bä-rä-sing'gä), *n.* [Hind. *bārah singhā*, twelve horn.] A name applied to two or three species of East Indian deer, such as *Cervus wallichi* and *C.* (*Rucervus*) *duvauceli*. *Proc. Zool. Soc. London*, 1903, II. 3.

Barathrodemus (bar-a-throd'e-mus), *n.* [NL., < Gr. *βάραθρον*, pit, + *δῆμος*, people.] A genus of deep-sea brotulid fishes.

barauna (bä-rä-ö'nä), *n.* Same as *brauna*. The wood and bark are used by the natives in the preparation of a beautiful red dye.

barb[1], *v. i.* **2.** To bend or hook the points of wire teeth in the card-clothing used in carding textile fibers. *Nasmith*, Cotton Spinning, p. 141.

barbacot (bär'ba-kot), *n.* [A F. spelling of a native form (Arawak) of (Haitian) *barbacoa*: see *barbecue*, *n.*] A frame over a fire for drying or cooking meat.

barbacot (bär'ba-kot), *v. t.*; pret. and pp. *barbacoted, barbacotted*, ppr. *barbacoting, barbacotting*. To dry (meat) on a barbacot or frame over a fire.

Barbados earth. See ★*earth*[1].

Barbados lily. See ★*lily*.

barbari, *n.* **2.** Also improperly used for *baralipton*, 1.

barbarian, *n.* and *a.* **I.** *n.* **7.** A member of a barbarian people. See II., 5.

Some of the tribes of America are organized on a somewhat different plan which may be set forth. When they are organized on this new plan we call them *barbarians*, and thus distinguish them from tribes that are organized on the clanship system.

17*th An. Rep. Bur. Amer. Ethnol.*, I. xxxiii.

II. *a.* **5.** In *anthrop.*, pertaining to a state of society in which descent is reckoned in the paternal line, and in which the members of the paternal family of all generations form an exogamous social unit called a *gens*.

barbarism, *n.* **5.** In *anthrop.*, the conditions of barbarian society. See ★*barbarian*, *a.*, 5.

Second, for the group which is called the clan in savagery there is substituted the gens in *barbarism*; this group embraces all of those persons who reckon kinship through fathers, so that the father and his brothers and sisters, together with the grandfather and his brothers and sisters, and all other consanguineal kindred back in past generations and forward in future generations are called a gens.

17*th An. Rep. Bur. Amer. Ethnol.*, I. xxxiii.

barbarocracy (bär-ba-rok′-ra-si), *n.*; pl. *barbarocracies* (-siz). [Gr. *βάρβαρος*, foreign, barbarous, + *-κρατία*, ‹ *κρατεῖν*, rule.] Government by barbarians; barbarian rule. *Felton.*

Barbarothea (bär-ba-rō′thē-ä), *n.* [NL., ‹ Gr. *βάρβαρος*, barbarian, heathen, + *θεά*, goddess.] A genus of fossil butterflies from the fresh-water Oligocene Tertiary strata of Florissant, Colorado.

barbasco (bär-bäs′kō), *n.* [American Sp., ‹ native name.] A name in Porto Rico, Cuba, and other Spanish-speaking countries of a number of shrubs and trees bearing poisonous seeds. It is applied especially to *Jacquinia armillaris*, the joewood or bracelet-wood of the West Indies, and to species of several genera belonging to the soapberry family, such as *Serjania*, *Paullinia*, *Magonia*, and *Harpullia*. The seeds, stem-bark, and root-bark of many of these plants are used to poison fish.

barbatimao (bär-bä-tē-mä′ō), *n.* [Tupi *barbatimão*, corrupted from *parova tuúm tamune*. (Martius).] A small tree of the mimosa family, *Stryphnodendron adstringens* (*Acacia adstringens* of Martius), yielding an astringent bark rich in tannin: used in medicine. [Southern Brazil.]

barbatin (bär′ba-tin), *n.* [NL. *barbata* (see def.) + *-in*[2].] A crystalline neutral compound, $C_9H_{14}O$, found in the lichen *Usnea barbata ceratina*. It melts at 209° C.

barbeau (bär-bō′), *n.* [F. *bleu barbeau*, 'bluebottle blue.'] A decorative pattern, consisting of small blue flowerets, often seen on French porcelain. See *corn-flower*.

barbe du capucin (bärb′ dü kap-ü-saṅ′). [F., 'Capuchin's beard.'] A winter salad and vegetable consisting of the young blanched leaves of the common chicory. The roots, with the tops trimmed short, are placed horizontally in a sloping heap between layers of sand or earth in a dark warm place, and the projecting crowns emit tufts of white attenuated leaves. Compare *witloof*.

barbeiro (bär-bā′rō), *n.* [Pg.: see *barber*.] The surgeon-fish or tang, *Teuthis hepatus*, and other species. [Portugal.]

bar-bell (bär′bel), *n.* A bar of steel with a ball of iron at each end, used as a dumb-bell.

barber[1], *n.* **3.** A fish, *Cæsioperca rasor*, of the family *Serranidæ*. Also called *red perch*. [Tasmania.]—**Barber's itch.** See ★*itch*.

barber[2] (bär′bėr), *n.* [Said to be identical with *barber*[1], as if alluding to the lathering of the face, but the alleged variant *berber* points to a different origin.] A gale of wind with damp snow or sleet and spray that freezes upon every object, especially the beard and hair. Said to be called *berber* by wharfmen in New York. [Canada and N. S.]

barbering (bär′bėr-ing), *n.* In *ceram.*, the process of shaving or grinding the jagged edges of a fracture or the chipped tops of vessels to render them smooth and even. Chinese porcelain is cut in this manner on the jade-cutter's lathe.

barbero (bär-bā′rō), *n.* [Sp.] Same as ★*barbeiro*.—**Barbero negro**, a surgeon-fish of western Mexico, *Teuthis crestonis*.

barberry, *n.*—**Indian barberry**, a name applied to *Berberis aristata*, a shrub resembling the common barberry (*B. vulgaris*), but with foliage evergreen or nearly so, long-peduncled compound racemes of flowers, and usually coarsely spinous-dentate leaves. The fruit is purple, with a white bloom. The root-bark of this and of one or two other closely allied species is used in India as a bitter tonic in fevers, and an extract from the wood, known as *rasaut*, is used as a local application in chronic ophthalmia. Several varieties of this plant are cultivated in Europe under different names.

barbette, *n.* **2.** A cylindrical armored structure built up in the interior of a war-ship and projecting above the deck. The barbette contains a rotary platform and its supports, with part of the machinery by means of which the platform is turned. On the rotary platform one or more heavy guns are mounted so that they can be fired over the top of the barbette. The top of the barbette and the guns are protected to a greater or less extent by a shield carried on the gun-platform. The covering shield may become so extensive and so heavily armored as completely to cover the rear part of the guns, the loading and sighting mechanism, etc. The rotary part is then called a turret and the combination is called a *barbette-turret*. The heavy guns of almost all modern battle-ships are mounted in barbette-turrets.

barbette-turret (bär-bet′tur″et), *n.* See ★*barbette*, 2.

barbicanage (bär′bi-kan-āj), *n.* In old *European law*, money for the support and maintenance of a barbican or watch-tower.

barbier (bär-byā′), *n.* [F., barber.] A name of certain serranoid fishes of the genus *Anthias*.

barbiton, *n.* A term loosely applied, in the middle ages, to one or more varieties of viol.

barbituric (bär-bi-tū′rik), *a.* [*barbata* (see def.) + *uric*.] Pertaining to the lichen *Usnea barbata* and to uric acid.—**Barbituric acid**, malonyl urea, $CO{<}^{NH—CO}_{NH—CO}{>}CH_2 + 2H_2O$, a crystalline compound formed by heating alloxantin with concentrated sulphuric acid.

Barbizet pottery. See ★*pottery*.

Barbizon school. See ★*school*[1].

barbone (bär-bō′ne), *n.* [It., appar. same as *barbone*, a long thick beard, aug. of *barba*, beard.] **1.** A fatal contagious disease of the buffalo, identical with hemorrhagic septicemia of cattle and deer: caused by a minute polar-stained organism of the swine-plague group. See also ★*buffalo-cholera*.—**2.** A silver coin of Lucca weighing 44.25 grains.

Barbotine ware. See ★*ware*[2].

barbu, *n.* **3.** The thread-fin, *Polydactylus virginicus*. [Florida and West Indies.]

barbudo (bär-bō′dō), *n.* [Sp.: see *barbu*.] Same as ★*barbu*, 3.

barbule, *n.* **4.** In *bot.*, the inner row of teeth in the peristome of certain mosses.

Barbulifer (bär-bū′li-fėr), *n.* [NL., ‹ L. *barbula*, barbule, + *ferre*, bear.] A genus of small gobies found at Key West.

barb-wire (bärb′wīr), *n.* Barbed wire (which see, under *barbed*[1]).

barchan (bär-kän′), *n.* A crescentic sand-dune occurring commonly in the deserts of Turkestan. Also *barkhan*, *barkan*. See ★*medano*.

If very little more sand were supplied, the floor of the fulj might be left as a bare space half enclosed by the horns of a *barchan*, the windward side of the fulj being the lee cliff of the *barchan*.

Geog. Jour. (R. G. S.), XV. 24.

Barclayan (bär′klā-an), *n.* Same as *Berean*, 2.

Barcoo disease or **rot.** See ★*disease*.

bar-diggings (bär′dig″ingz), *n. pl.* **1.** River placers subject to overflow.—**2.** Auriferous claims on shallow streams. *Coal and Metal Miners' Pocket-book.*

bare[1], *a.* **II.** *n.* That part of a clapboard, roof-slate, or the like, which is exposed to the weather when the roof is complete, as distinguished from the *lap*.

barefoot, *a.* **2.** In *carp.*, set up on end without having its foot held in a tenon or socket, as, in balloon-framing, a post which is held merely by nailing it into place.

barem (ba-rem′), *n.* In *organ-building*, a stop, usually of the stopped diapason class, with a quiet, sweet tone.

baresthesiometric (bar-es-thē-si-ō-met′rik), *a.* Of, pertaining to, or determined by means of the baresthesiometer. Also spelled *baræsthesiometric*.

Barffed (bärft), *p. a.* Subjected to Barff's process, as ironwork: thus the iron plugs of plug cocks so treated are termed "Barffed plugs." See *Bower-Barff* ★*process*.

bar-folder (bär′fōl″dėr), *n.* A folding-machine adapted to forming square joints or angles, turning round edges, and forming locks of all kinds in sheet metals.

bar-frame, *n.* **2.** The typical American construction for the frame or skeleton of the locomotive, in which the elements of the frame are of rectangular section, nearly as wide as they are deep, instead of being made up of thin and deep plates, as in English and European designs.

bargain-counter (bär′gān-koun″tėr), *n.* A counter on which goods that are supposed to be remnants, or goods that have been "marked down" in price, are displayed for sale "at a bargain" or a price professed to be much lower than that at which the same or like goods are usually sold. [U. S.]

bargain-day (bär′gān-dā), *n.* The particular day in each week on which "bargains" are offered at the bargain-counters. [U. S.]

barge[1], *n.* **8.** *pl.* In *mining*, sheets of iron, zinc, or wood used for shedding water in wet shafts or workings. *Barrowman*, Glossary. [Scotch.]—**College barge**, an elaborate house-boat designed for students' use: it is peculiar to English colleges; Keble at Oxford possessing some notably beautiful ones.—**Crane-barge**, a beamy, flat-bottomed vessel which bears a crane for lifting and placing heavy weights.—**Dumb-barge**, a lighter which has no means of propulsion in the way of sail- or engine-power, but which must be towed or allowed to drift under the influence of tide-currents. This class of barge is very common in England, especially on the Thames, where these vessels carry cargo from one part of the river to another by means of tide-streams.—**Hopper-barge.** See *hopper*[1], 5.—**Tide-barge.** Same as *dumb-*★*barge*.

barge-bed (bärj′bed), *n.* The bed or interior of a barge.

bargello (bär-jel′lō), *n.* [It.] The building which serves as the headquarters of the armed force in an Italian town. The bargello at Florence is now the national museum.

barge-stone (bärj′stōn), *n.* In a gable-wall of masonry, one of the stones which form the sloping edge.

Baric wind-rose. See ★*wind-rose*.

baricyanide (bar-i-sī′a-nid or -nīd), *n.* A compound cyanide of which barium cyanide is a part.—**Platinum baricyanide.** See ★*barium platinocyanide*.

barie (bä-rē′), *n.* [F. *barie*, ‹ NL. **baria*, heaviness, pressure, ‹ Gr. *βαρύς*, fem. *βαρεῖα*, heavy.] An absolute unit of gaseous pressure; a pressure such that the force on each square centimeter of surface is one dyne. Also *barye*.

barilla, *n.* **2.** Grains of native copper disseminated in sandstone. Also called *copper barilla* (Sp. *barilla de cobre*).—**3.** *pl.* In a gold-mill, wooden divisions of blanket-strakes, copper plates, etc. *E. Halse*, Dict. of Span. Mining Terms.

bariolage (bä-rē-ō-läzh′), *n.* [F.] In *music*, a cadenza or series of cadenzas in an instrumental piece; sometimes, more specifically, in music for stringed instruments, a rapid passage to be played chiefly on the open strings, without the aid of stopping.

Barisal gun. See ★*gun*[1].

baritenor, *n.* See ★*barytenor*.

baritic (ba-rit′ik), *a.* In *chem.*, containing barium as a constituent.

Barium dioxid or **peroxid**, a compound, BaO_2, prepared in considerable quantity by passing atmospheric oxygen over heated barium monoxid or baryta, BaO, to be used in the preparation of hydrogen dioxid or peroxid, H_2O_2.—**Barium platinocyanide**, a substance, $BaPt(CN)_4.4H_2O$, largely used for the surface of the screen on which the Röntgen rays or X-rays are allowed to fall, serving by its fluorescence to render the pictures formed by these rays visible. The salt is dichroic, appearing in one direction yellow and in another green when seen by the light reflected from the crystals.

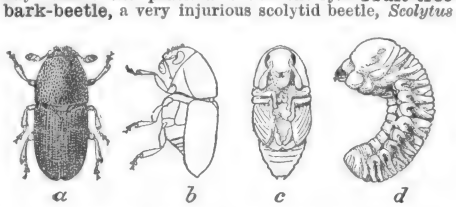
bark[2], *n.*—**Agoniada bark**, the bark of a Brazilian plant, *Plumeria lancifolia*, used in intermittent fever.—**Anchieta bark**, the root-bark of *Anchieta salutaris*, a shrub native to Brazil. It is used in syphilis and skin diseases.—**Cabbage-bark**, the bark of the cabbage-tree: same as *worm-bark*. See *cabbage-tree*, 2.—**Carony bark.** Same as *Angostura bark* (which see, under *bark*[2]).—**Cotton-root bark**, the root-bark of the common cotton, *Gossypium hirsutum*, and other species, constituting an officinal drug with the action of ergot. The active principle appears to reside in a red resin.—**Cuenca bark**, one of the many varieties of pale cinchona bark (*Cinchona officinalis*, etc.).—**Gray bark.** See *Cinchona*.—**Huanuco bark.** See *Cinchona*.—**Ledger bark**, the bark of *Cinchona Ledgeriana*, sometimes considered a variety of *C. Calisaya*, the richest of the cinchona barks.—**Loja bark.** Same as *loxa bark* (which see, under *bark*[2]).—**Magellanic bark**, a kind of Peruvian bark.

An equal quantity of the Peruvian and *Magellanic bark*. *Sir E. Barry*, Observ. Wines, p. 221.

Monesia bark, the bark of *Pradosia lactescens* of Brazil. See ★*buranhem*.—**Panococo bark.** See *Swartzia*.—**Paracoto bark**, a bark resembling Coto bark in its medicinal properties.—**Porto Rico bark**, the bark of *Colubrina rectinata*. See *nakedwood* and ★*mabi*.—**Snouba bark**, the inner bark of the Aleppo pine, *Pinus hierosolymitana*. It contains about 25 per cent. of tannin and is imported from Tunis and Algeria for tanning leather.—**Tengah bark**, the bark of *Ceriops Candeolleana*, of the mangrove family, used for tanning leather.

barkan, *n.* See ★*barchan*.

bark-beetle (bärk′bē-tl), *n.* A member of the coleopterous family *Scolytidæ*, nearly all of which make burrows between the bark and the wood of woody plants.—**Apple-bark beetle**, a name given by Saunders to (*a*) *Monarthrum mali*, which, however, is not a bark-beetle but an ambrosia-beetle. Better called *apple pin-borer*. (*b*) *Xyleborus pyri*, a scolytid beetle which perforates the bark of the apple and pear. Also called *apple shot-borer*.—**Coarse-writing bark-beetle.** See *pine* ★*bark-beetle*.—**Douglas spruce bark-beetle**, a scolytid beetle, *Asemum nitidum*, which bores into the trunks and branches of the Douglas spruce.—**Elm bark-beetle**, a scolytid beetle, *Phlæophthorus liminaris*, which bores the bark of elm-trees and also occasionally attacks the peach and the cherry.—**Fruit-tree bark-beetle**, a very injurious scolytid beetle, *Scolytus*



Fruit-tree Bark-beetle (*Scolytus rugulosus*).
a, *b*, beetle; *c*, pupa; *d*, larva; all enlarged.
(Chittenden, U. S. D. A.)

rugulosus, which bores into the trunks and branches of peach-, pear-, apple-, and plum-trees, rarely, however, attacking perfectly healthy trees.—**Hickory bark-beetle**, one of the largest of the North American *Scolytidæ*, *Scolytus quadrispinosus*, which bores into the trunk, branches,

and twigs of hickory in many parts of the United States. **Little bark-beetle.** See *pine* ★*bark-beetle.*—**Native peach bark-beetle.** Same as *elm bark-beetle.*—**Pine bark-beetle,** any one of numerous species of scolytid beetles which bore into and work in or under pine-bark, as the coarse-writing bark-beetle, *Tomicus calligraphus;* the little bark-beetle, *Pityophthorus annectens;* and many others.—**Wood-engraver bark-beetle.** See ★*wood-engraver.*

bark-blazer (bärk′blā-zėr), *n.* See ★*scratcher.*—**Cruiser's bark-blazer.** See ★*scratcher.*

bark-borer (bärk′bōr-ėr), *n.* Same as ★*bark-beetle.*—**Western hemlock bark-borer,** a buprestid beetle, *Melanophila drummondi* (Kirby), which bores into the trunks and branches of pine and hemlock in western North America, from Alaska south to New Mexico.

bark-bug (bärk′bug), *n.* An insect that lives in or under bark.—**Flat bark-bug,** any member of the heteropterous family *Aradidæ.* See *Aradus, Aradinæ,* and *Aradidæ.*

bark-conveyer (bärk′kọn-vā″ėr), *n.* In *tanning,* an endless-chain device for carrying bark from one place or room to another. *Davis,* Manuf. of Leather, p. 68.

bark-cutter (bärk′kut″ėr), *n.* A machine for cutting or grinding bark for use in tanning: used principally for oak and hemlock bark. *Davis,* Manuf. of Leather, p. 65.

bar-keel (bär′kēl), *n.* In *shipbuilding,* a keel composed of a line of heavy rectangular iron or steel bars, with the greater dimension vertical and projecting below the bottom of the ship, to which the keel is attached by the garboard-plates. The inner edges of the garboard-plates are flanged down and riveted to the bar-keel.

barkevikite (bär′ke-vik-īt), *n.* [*Barkevik,* a locality in southern Norway, + *-ite*2.] A member of the amphibole group, near arfvedsonite in composition.

bark-gouge (bärk′gouj), *n.* See ★*scratcher.*

bark-grafting (bärk′gräf″ting), *n.* Same as *rind-grafting,* which see, under *grafting.*

Barking sands. See *singing* ★*sands.*

barking-deer (bär′king-dēr″), *n.* The East-Indian muntjac, *Cervulus aureus.*

The small *barking deer,* called "pause" by the natives. *Geog. Jour.* (R. G. S.), XI. 502.

bark-louse, *n.*—**Armored bark-louse,** any member of the coccid subfamily *Diaspinæ,* all of which are protected by a shield-like covering. *Yearbook U. S. Dept. Agr.* 1894, p. 251.—**Blackberry bark-louse.** (*a*) A diaspine scale, *Aulacaspis rosæ.* (*b*) An undetermined lecanine, *Lecanium* sp.—**Currant bark-louse.** (*a*) A coccine scale, *Eulecanium ribis.* (*b*) A diaspine scale, *Aspidiotus ancylus.*—**Grape-vine bark-louse.** (*a*) A coccine scale, *Pulvinaria innumerabilis* or *P. vitis.* (*b*) A diaspine scale, *Aspidiotus uvæ.*—**Harris's bark-louse,** a diaspine scale, *Chionaspis furfurus.* Also called the *scurfy bark-louse* (of the apple).—**Oyster-shell bark-louse.** See *oyster-shell.*—**Peach-tree bark-louse.** (*a*) A coccine scale, *Eulecanium pyri.* (*b*) A diaspine scale, *Aspidiotus pyri.* (*c*) A diaspine scale, *Diaspis pyri.* (*d*) The San José scale, *Aspidiotus perniciosus.*—**Scurfy bark-louse,** a diaspine scale, *Chionaspis furfureus,* found commonly on the apple and pear in the United States.

barklyite (bär′kli-īt), *n.* [For Sir Henry *Barkly* (1815–98) + *-ite*2.] A more or less opaque magenta-colored ruby from Victoria, Australia.

bark-mark (bärk′märk), *n.* A symbol chopped into the side of a log to indicate ownership. It serves as a means of identification. [U. S.]

bark-marker (bärk′mär″kėr), *n.* One who cuts the bark-mark on logs.

barkslipper (bärk′slip″ėr), *n.* A beetle of the cerambycid genus *Phymatodes,* as *P. amœnus* or *P. variabilis,* whose larvæ loosen the bark of oak cord-wood, causing it to slip off. [Woodsmen's term.]

bark-worm (bärk′wėrm), *n.* A fishermen's term for the larva of any one of the wood-boring beetles of the families *Buprestidæ* or *Cerambycidæ.*

barley1, *n.*—**Naked barley.** (*b*) A variety, *Hordeum distichon nudum,* of the two-rowed barley in which the chaff is not adherent to the grain, as in other barleys.—**Barley straw-worm.** See ★*straw-worm.*

barley-candy (bär′li-kan″di), *n.* Same as *barley-sugar.*

barley-grass (bär′li-gras″), *n.* Any grass of the genus *Hordeum* other than the cultivated barley.

barling-spar (bär′ling-spär), *n.* A small light spar or pole.

Barlow's disease, plate. See ★*disease,* ★*plate.*

bar-machine (bär′mą-shēn″), *n.* A form of coal-cutting machine.

In this machine [the *bar-machine*], a bar carrying cutting tools, of rather a different pattern to those used with the disc machine, revolves horizontally, under or in the coal, cutting a parallel groove, similar to that cut by the disc. The bar has a reciprocating motion given to it, and behind the bar is an iron plate which is also carried by the machine, and which with the spirally arranged cutting tools forms an archimedean screw, and acts as a conveyor to bring out the dirt made by the machine. The frame of the machine is very similar to that of the disc machine.

Elec. Review, Feb. 7, 1903, p. 187.

bar-mitsvah (bär-mits′vä), *n.* [Heb., lit. 'son of commandment.'] 1. A youth of an age to obey the commandments: applied to a Jewish boy on his thirteenth birthday, when, according to rabbinical law, he has reached the age of responsibility. Before this the father is responsible for his son's actions. The occasion is solemnized in the synagogue on the following Saturday, and is followed by a festive gathering.

2. The celebration of a Jewish boy's thirteenth birthday.

barmy, *a.* Hence—2. Barmy-brained; empty-headed.

Y're dull if yer can't take the 'int;
Indeed I yer must be *barmy.*
War's Brighter Side, p. 278.

Barnacle scale. See ★*scale*1, *n.*

barnacle-eater (bär′na-kl-ē″tėr), *n.* A name applied to different species of file-fish of the family *Monacanthidæ.*

barn-dance (bärn′dans), *n.* A dance or dancing-party given in a barn.

The Washington Post, Pas de Quatre, and several varieties of *Barn Dance* are of American origin, and have recently become fashionable. *Encyc. Brit.* XXVII. 376.

Barnegat limestone. See ★*limestone.*

barn-yard, *n.*—**Noah's barn-yard,** a mass of buried vegetal debris of interglacial origin. [Colloq., Illinois and Indiana.]

baro (bä′rō), *n.* [Tagalog.] A sort of blouse or loose shirt, usually brightly colored, worn by natives of the Philippine Islands.

barocyclonoscope (bar″ō-sī-klon′ō-skōp), *n.* [Gr. *βάρος,* weight, + *cyclone* + Gr. *σκοπεῖν,* view.] An aneroid barometer modified by the addition of three indexes showing respectively the direction of the wind, the direction of the storm-center, and the direction which the navigator must take in order to avoid that center. It was constructed especially for use in the Philippine Islands, and needs appropriate modifications for use in other regions. See *storm-card.*

barogyroscope (bar-ō-jī′rō-skōp), *n.* [Gr. *βάρος,* weight, + *γῦρος,* circle, + *σκοπεῖν,* view.] An instrument which consists of a rapidly rotated gyrostat mounted on knife-edges by an axis perpendicular to its axis of rotation and pointing east and west. It demonstrates experimentally the rotation of the earth. It was devised by Gilbert. *Encyc. Brit.,* XXIX. 195.

barolite, *n.* 2. In *petrog.,* a term proposed by Wadsworth (1892) for rocks, formed by chemical precipitation, composed mainly of barite and celestite: it refers to the high specific gravity of these substances.

barometer, *n.*—**Blakesley portable barometer,** a tube of small bore, closed at one end, partly filled with air, and carrying a thread of quicksilver. The position of the mercury when the closed end of the tube is uppermost, and again when the open end is uppermost, gives the data for determining the pressure in terms of the weight or length of the thread of quicksilver.—**Capillary depression of the barometer,** the amount by which the mercurial column in the barometric tube is depressed by the repulsion between the glass and the mercury. This repulsion varies with the purity of the mercury, the cleanness and diameter of the tube, the temperature, the overlying gas, and other factors. It differs within the vacuum-chamber from that in the open leg of the siphon or the open cistern. The difference of the depressions at these two mercurial surfaces is the total effect upon the measured atmospheric pressure, and is an important source of error liable to large variations.—**Dines's minimum barometer,** an arrangement of two empty tubes which become filled with two different liquids on descending from any great height attained by a balloon: analogous to Sir William Thomson's tubular sounding apparatus.—**Glycerin barometer,** a barometer in which a column of glycerin replaces the mercury of the ordinary Torricellian barometer. These instruments are large and not portable, and are used principally for public display and storm-warning.—**Howson's barometer,** a mercurial barometer in which the tube is fixed, but whose cistern is free to move, being supported by the pressure of the atmosphere which corresponds to the area of the ring-section of the glass tube. The rise and fall of the cistern indicate the variations of this pressure on a large scale.—**Mascart's gravity barometer,** a barometer designed to determine the variations in the force or acceleration of gravity by measuring the elastic pressure of a mass of carbonic-acid gas whose temperature is accurately known, and which is confined under the pressure of a column of mercury about one meter in height. The same result is also attempted by Mohn by the comparison of pressures determined by both the mercurial barometer and the boiling-point thermometer.—**Moreland's barometer,** a mercurial barometer in which the cistern is fixed, but in which the tube is free to move and is attached to the lever-arm of a balance. The motion of the lever-arm indicates the variations of the atmospheric pressure on any desired scale.—**Mountain barometer,** a mercurial barometer in which the tube and cistern are adapted to a very large range of pressures and are especially constructed to avoid breakage in mountaineering work.—**Sub-standard barometer,** a barometer used for intercomparison of ordinary barometers and serving as an intermediary between normal barometers and ordinary instruments.

barometer-tube (ba-rom′e-tėr-tūb), *n.* The glass tube, hermetically sealed at the top, within which the mercurial column of a barometer is contained. The tube is filled with mercury when inverted, and many methods have been devised to accomplish this satisfactorily. By Fortin's method, the mercury is introduced little by little, and boiled within the tube by gently heating it so as to expel all gas or vapor. In George's method the mercury is not boiled but is stirred, and the air-bubbles are removed with a feather. In Bogen's method the mercury is made to flow from end to end until all bubbles escape: the open end is then attached to an air-pump and the last traces of air are pumped out. In Sprung's automatic method the tube is placed open end up and warmed; the mercury is placed in a separate vessel over a lamp and is continuously distilled over, through an intermediate tube, into the tube, where it collects under a perfect vacuum until the tube is full: a clean tube, a perfect vacuum, and distilled mercury are thus obtained by one operation.

Barometric elevation, an area of high pressure at sea-level; a rise of atmospheric pressure above the normal value; the center of an area of high pressure or a barometric maximum.—**Barometric fog.** See ★*fog.*—**Barometric gradient.** See ★*gradient.*—**Barometric hypsometry.** See ★*hypsometry.*—**Barometric maximum.** (*a*) An area on the weather-map within which the barometric pressure at any time is decidedly above that which prevails over adjacent portions of the map; an area of high pressure. (*b*) An area in which the current barometric pressure is decidedly above the normal value for that place and date.—**Barometric minimum.** (*a*) An area on the weather-map within which the barometric pressure at any time is decidedly below that which prevails over adjacent portions of the map; an area of low pressure. (*b*) An area in which the current barometric pressure is decidedly below the normal value for that place and date.—**Barometric rate,** the rapidity with which atmospheric pressure rises or falls within a standard unit of time, usually one hour.—**Barometric surface,** a surface for which the barometric pressure is uniform. Owing to the influence of the temperature and of the wind, the barometric surfaces in the free air are continually changing. During gentle winds and in the midst of a large area of high pressure the barometric surfaces are horizontal; but in strong winds they are inclined to the level surface, and in revolving storms they become funnel-shaped. A *critical barometric surface* is one theoretically appropriate to steady winds, or a steady system of winds, and calls for a corresponding *critical barometric gradient.*—**Barometric surge,** an oscillation of the atmospheric pressure occurring simultaneously over large areas, such as the whole of India, and usually traveling from the west eastward in the north temperate zone: nearly equivalent to *barometric wave.*—**Barometric wind-rose.** See *baric* ★*wind-rose.*

barong (bä′rong), *n.* [Sulu.] A large, broad-bladed knife or cleaver used by the Moros of the southern Philippine Islands.

baronomy (ba-ron′ō-mi), *n.* [Gr. *βάρος,* weight, + *νόμος,* law.] The science of the laws of the gravitant forces (gravitation, weight): a proposed substitute for *barology* when used in that sense.

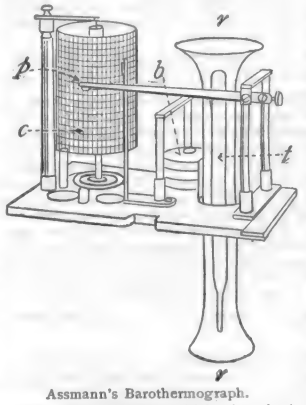
baroque, *n.* 3. Specifically, in *music,* a style of composition which abounds in extreme, irregular, or unpleasant harmonies or metrical patterns.

Barosma camphor. Same as ★*diosphenol.*

barosmin (ba-ros′min), *n.* [*Barosm*(*a*) + *-in*3.] A finely crystalline glucoside, perhaps identical with hesperidin, contained in buchu, the leaves of *Barosma crenulata, B. serratifolia,* and *B. betulina.* Also known as *diosmin.*

barotaxis (bar-ō-tak′sis), *n.* [NL., < Gr. *βάρος,* weight, + *τάξις,* disposition.] Stimulation brought about by change of pressure.

barothermograph (bar-ō-thėr′mō-gräf), *n.* [Gr. *βάρος,* weight, + *θέρμη,* heat, + *γράφειν,* write.] An apparatus for recording simultaneously the atmospheric pressure and temperature; a combination of barograph and thermograph, especially such as are made portable and very light to be sent up with kites and sounding-balloons. Assmann's barothermograph, used with sounding-balloons, records a pressure-temperature curve without any time coördinate and by means of one pen only.]



Assmann's Barothermograph.

b, aneroid barometer which gives horizontal motion to the cylinder, *c*; *t,* thermometer inside a protecting tube, *r, r,* which gives vertical motion to the pen, *p.*

The cylinder or sheet of paper is pushed in one direction by the action of the barometer while the pen is pushed

in the perpendicular direction by the action of the thermometer. In all other forms of apparatus each instrument makes its own record by its own pen and has its own independent time-scale. Sometimes called *meteorograph*. *Monthly Weather Rev.*, Sept., 1896, p. 323.

barothermohygrograph (bar-ō-thėr″mō-hī′grō-gráf), *n.* [Gr. *βάρος*, weight, + *θέρμη*, heat, + *ὑγρός*, moist, + *γράφειν*, write.] A barothermograph to which a self-registering hygrometer is added: made of the lightest material for use with kites and balloons, but more solidly for station-work.

barothermometer (bar-ō-thėr-mom′e-tėr), *n.* [Gr. *βάρος*, weight, + E. *thermometer*.] An instrument for indicating the pressure and the temperature of the air.

baroto (bä-rō′tō), *n.* [Philippine Sp. *baroto*, < Bisaya *baloto*.] A small sea-going vessel. [Philippine Is.]

bar-parlor (bär′pär″lọr), *n.* Same as ★*bar*[1], 8 (*b*). The bar-parlor in old English houses is sometimes a room of considerable size where favored guests are received.

barrack[1] (bar′ak), *v.* [*barrack, n.*] **I.** *trans.* To house in barracks; lodge in barracks, as troops.

II. *intrans.* To lodge or reside in barracks. *Hugh Miller*, Scenes and Legends, p. 478.

barrack[2] (bar′ak), *v. i.* [An alteration, conformed to *barrack*[1], of earlier *borack*, *borak*, banter, chaff, from a New South Wales native term meaning something like 'what is not.' Cf. ★*barrikin*.] To jeer at or deride opponents; specifically, with *for* (like the equivalent United States slang *root*), to support, as a partizan, by cheers, shouts, and other demonstrations of approval, or by jeering at and noisily disturbing and interrupting the opposite side or party: as, to *barrack for* the school team. [Australia.]

To use a football phrase, they all to a man *barrack for* the British Lion. *Melbourne Punch*, Aug. 14, 1890.

barracker (bar′ak-ėr), *n.* One who barracks; a noisy partizan in a contest, originally in football; a rooter. [Australia.]

The 'most unkindest cut of all' was that the Premier, who was Mr. Rogers's principal *barracker* during the elections, turned his back upon the prophet and did not deign to discuss his plan. *The Argus*, Nov. 29, 1894, p. 4.

barracoota (bar-a-kö′tä), *n.* Same as *barracuda*.

barracuda, *n.* **2.** *Thyrsites atun*, a gempyloid fish of Australia and New Zealand: not the barracuda of American waters.—**California barracuda,** *Sphyræna argentea*, of southern California.—**European barracuda,** *Sphyræna sphyræna* of the Mediterranean.—**Great barracuda,** *Sphyræna barracuda*, a West Indian species.—**Northern barracuda,** *Sphyræna borealis*, a small fish of the coasts about New York.

barragan[2] (bar′a-gan), *n.* [Native Australian.] A variety of the Australian boomerang.

barrage, *n.* **3.** In playing instruments like the guitar, the application of the finger of the left hand across all or some of the strings near the nut, so as to shorten them uniformly and thus raise their pitch; a temporary nut. (See *nut*, **3.** (*f*) (1) and *capo tasto*.) When the finger stops part of the strings the barrage is *little;* if all, *great* or *grand*.—**Drum-barrage,** a species of movable dam used in the canalization of rivers. A sector of a hollow circular drum or cylinder rotates on a horizontal axis fixed in masonry. In one form the drum itself comprises the dam or water-barrier. In others the dam proper is formed of plane wickets. In either form the admission of water from the upper pool to or from the different compartments of the drum furnishes the power to raise or lower the barrier and thus raise or lower the water-surface up-stream from the dam.

Barrandeocrinus (ba-ran″dē-ō-krī′nus), *n.* [NL., < *Barrande*, a Bohemian geologist, + Gr. *κρίνον*, lily (see *crinoid*).] A genus of fossil crinoids, the only representative of the family *Barrandeocrinidæ*. It is characterized by the monocyclic base, 3 basals, and heavy biserial arms which are recumbent and completely inclose the calyx: found in the Upper Silurian beds of Gotland.

barrandite (ba-ran′dit), *n.* [Named after J. *Barrande*, a Bohemian geologist (1799–1883).] A hydrated phosphate of ferric iron and aluminium occurring in gray spheroidal concretions: found in Bohemia.

Barred C, barred semicircle, in *musical notation*, the sign for duple rhythm.—**Barred teeth,** molar teeth with spreading, irregular roots.

barrel, *n.* **6.** In *mining*, a vessel by which water is lifted by engine or windlass from a sinking-shaft.—**Barrel amalgamation.** See ★*amalgamation*.

barrelage (bar′el-āj), *n.* The total quantity of any commodity, as measured by barrels, produced during a specified period or used for a particular purpose.

barrel-cactus (bar′el-kak″tus), *n.* The bisnaga, *Echinocactus:* so named from its form and size. See *Echinocactus* and ★*visnaga*.

barrel-car (bar′el-kär), *n.* In *car-building*, a long flat-car fitted with open framework and used for carrying empty barrels.

barrel-cart (bar′el-kärt), *n.* A cart or truck carrying a barrel, swung so that it can be tipped, used chiefly in gardens as a receptacle for leaves and other rubbish.

barrel-chest (bar′el-chest), *n.* Permanent rounded expansion of the chest occurring in chronic pulmonary emphysema.

barrel-chime (bar′el-chīm), *n.* A chime of bells rung by means of a barrel-mechanism instead of by hand.

barreled, *p. a.* **4.** In *archery*, gradually reduced in diameter from the center to each end: said of an arrow.

barrel-header (bar′el-hed″ėr), *n.* A simple form of screw- or lever-press for pressing the head of a barrel into place and holding it in position until it is secured by the hoops or by nailing.

barrel-heater (bar′el-hē″tėr), *n.* A cylindric stove or heating-drum for heating and drying barrel-staves when formed into a barrel ready for putting on the hoops and closing the ends. The green barrel is placed over the stove, and a hood is lowered over it to keep in the heat. When the barrel is heated the hood is raised, automatically lifting the barrel and discharging it outside of the heater.

barrel-motion (bar′el-mō″shọn), *n.* A tappet-mechanism attached to a loom for operating the harnesses. Also called *barrel-tappet*. *Fox*, Mechanism of Weaving, p. 25.

Barrel-sanding machine. See ★*sanding-machine*.

barrel-scald (bar′el-skâld), *n.* A discoloration of apples and pears when packed in barrels. It is probably associated with harmful conditions of temperature and moisture.

barrel-tappet (bar-el-tap′et), *n.* Same as ★*barrel-motion*.

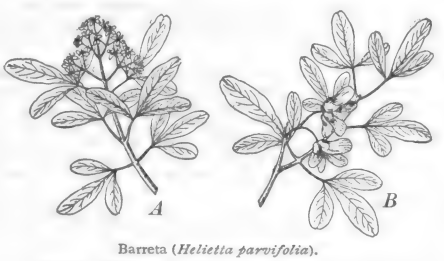
barrel-tree (bar′el-trē), *n.* See ★*bottle-tree*, 2.

barrel-wheel (bar′el-hwēl), *n.* The large wheel which is keyed upon the same shaft as the lifting-barrel of a crane, and by which the barrel is directly revolved. It is the last one in the train of gearing. *Lockwood*, Dict. Mech. Eng. Terms (App.).

barrel-work (bar′el-wėrk), *n.* Barrel amalgamation. See ★*amalgamation*. *Coal and Metal Miners' Pocket-book*.

Barremian (ba-rā′mi-an), *a.* and *n.* [F. *Barrême*, a canton in the department of Basses-Alpes.] In *geol.*, a name sometimes used by French geologists, in place of Urgonian, to designate a stage of the Lower Cretaceous deposits immediately overlying the Neocomian.

barreta (bär-rā′tä), *n.* [Mex. Sp.] A shrub, *Helietta parvifolia*, belonging to the rue family,



Barreta (*Helietta parvifolia*).

A, flowering branch; *B*, fruiting branch. (From Sargent's "Manual of Trees of North America.")

with opposite 3-foliate leaves and panicles of small purplish-white flowers. The oboonic fruit separates at maturity into 3 or 4 samaras. It is common on the bluffs of the Rio Grande. [Northern Mexico and Texas.]

barreto (bä-rā′tō), *n.* [Cuban Sp.] A goby of the genus *Gobioides*. [Cuba.]

barrette (ba-ret′), *n.* [F.: see *barret*[1].] The crossbar in the hilt of old rapiers over which the forefinger was placed.

barretter (bar′et-ėr), *n.* A receiving device used in wireless telegraphy, in which the electric wave is caused to vary the current in a local electric circuit.

barrier, *n.* **9.** The starting apparatus used in races: designed to keep the horses behind a certain line until the word is given, and thus prevent unfair advantage in starting.—**10.** In *phytogeog.*, any obstacle which prevents or restricts the migration of plants. Clements distinguishes *physical* barriers, such as large bodies of water, mountain-ranges, and deserts, and *biological* barriers, including vegetation, man and animals, and plant parasites.—**Surf barrier,** in *phytogeog.*, an aggregation of plants (cumaphytes) serving to resist the action of waves. *C. MacMillan*.

barriguda (bä-rē-gö′dä), *n.* [Pg., orig. fem. of *barrigudo*, big-bellied, < *barriga*, belly.] A majestic palm, *Iriartea ventricosa*, which reaches a height of 80–100 feet. The trunk is generally cylindrical to a height of 40 or 50 feet, where it swells out to double, or more than double, its former diameter for 10 or 15 feet, diminishing again, and becoming cylindrical for the remaining distance to the summit. The wood is black, hard, and very heavy, and is used by the Indians for making harpoons and spears. The swollen part of the stem is sometimes made into a canoe. [Brazil.]

barrikin (bar′i-kin), *n.* [Cf. *baragouin* and ★*barrack*[2].] Unintelligible talk; jargon.

barrimba (bä-rim′bä), *n.* A gold colonial coin of Portugal of low standard, struck for Mozambique, 1847–53.

barring[1], *n.* **2.** In *machine-sewing*, the sewing of a decorative bar or tack upon a fabric or upon leather, the bar being composed of a series of long stitches crossed by short stitches. Sometimes called *tacking*. See ★*buttonhole-machine*.

barring-engine (bär′ing-en″jin), *n.* See ★*turning-engine*.

barring-machine (bär′ing-ma-shēn″), *n.* A machine for forming a bar or turned edge in tinware. Allied to *edging-machine* (which see).

Barringtonia (bar-ing-tō′ni-ä), *n.* [NL. (Forster, 1776), named in honor of Daines *Barrington* (1727–1800), a British lawyer and naturalist.] A genus of dicotyledonous trees of the family *Lecythidaceæ*. It is characterized by the alternate entire or slightly crenate leaves crowded toward the ends of the branches, and flowers in elongated terminal or lateral racemes or interrupted spikes. About 60 species are recognized, distributed from Mozambique to the East Indies, Australia, and the Samoan Islands.—**Barringtonia formation,** a dense belt of shrubs and trees, including several arborescent species of *Barringtonia*, growing next the tidal sand on East Indian shores. *A. F. W. Schimper*.

barrio (bä′ri-ō), *n.* [Sp. *barrio* = Pg. *bairro* = Cat. *barri*, a village, prob. < Ar. *barr*, land.] **1.** A village or small town which has no independent administration, but which is subordinated to a larger town. See *pueblo*. [Philippine Is.]—**2.** A ward; a division of a termino or municipal district in Cuba.

These [terminos], in turn, are subdivided into *barrios*, or wards, of which there were between 1100 and 1200. *Encyc. Brit.*, XXVII. 303.

barrister, *n.*—**Junior barrister,** in *Eng. law*, a barrister who has not been admitted to the rank of king's counsel; also, the assistant of the chief counsel on one side of a case.—**Vacation barrister,** in *Eng. law*, a newly qualified barrister who is to attend the exercises of the House for several long vacations.

barristerial (bar-is-tē′ri-al), *a.* Of or pertaining to a barrister.

Barroussia (ba-rö′si-ä), *n.* [NL. (A. Schneider, 1885).] A genus of *Coccidia*, of the family *Polysporocystidæ*, in which the monozoic spores are spherical, with a smooth bivalve shell or sporocyst. The species are parasitic in myriapods and insects.

barrow-hole (bar′ō-hōl), *n.* In a building in course of construction, a hole, about 6 feet high and 3 feet wide, left in the wall for the workmen to pass through carrying hand-barrows with stones or bricks, or pushing wheelbarrows.

Barrowist (bar′ō-ist), *n.* A follower of Henry Barrowe, one of the leaders in the Independent movement in England in the latter part of the sixteenth century. He objected to the whole system of ecclesiastical government, and condemned the use of all set prayers. He is regarded as one of the founders of Congregationalism.

barrow-pulley (bar′ō-pụl-i), *n.* A pulley, gear, or wheel compounded on the same shaft with another of a larger size. *Taggart*, Cotton Spinning, I. 182.

barrow-wheel (bar′ō-hwēl), *n.* A pinion-gear that drives the doffer-cylinder on a cotton-carding machine. *Nasmith*, Cotton Spinning, p. 145.

bar-screen (bär′skrēn), *n.* In *mining*, a screen or grating made of bars.

bar-stays (bär′stāz), *n. pl.* Boiler-stays which are solid rods screwed at their ends, as distinguished from ★*tube-stays* or ★*stay-tubes*. *Lockwood*, Dict. Mech. Eng. Terms.

bar-stop (bär′stop), *n.* In *mech.*: (*a*) A stop which limits the movement of a bar, as of a number-bearing bar in a computing-machine. (*b*) A bar which stops or limits the movement of other mechanism.

bartholinitis (bär″tō-li-nī′tis), *n.* [Irreg. < *Bartholin('s gland)* + *-itis.*] Inflammation of the vulvovaginal (Bartholin's) gland.

Bartlett's fume paint. See ★*paint.*

Barton clay. See *Bartonian* ★*group.*

Bartonia (bär-tō′ni-ạ), *n.* [NL.: for B. S. *Barton.*] A genus of plants of the family *Loasaceæ*, now referred to *Mentzelia.*

Bartonian group. See ★*group*[1].

Barton's bandage, fracture. See ★*bandage*, ★*fracture.*

Barus camphor. Same as *Borneo camphor* (which see, under *camphor*).

Barybrotes (bar-i-brō′tēz), *n.* [NL. (Schiödte and Meinert, 1879), < Gr. *βαρύς*, heavy, + *βρωτός*, eating]. The typical and only genus of the family *Barybrotidæ.*

Barybrotidæ (bar-i-brot′i-dē), *n. pl.* [NL., < *Barybrotes* + *-idæ.*] A small family of cymothoid isopod crustaceans found in the open sea: typified by the genus *Barybrotes.*

Barycrinus (ba-rik′ri-nus), *n.* [NL., = < Gr. *βαρύς*, heavy, + *κρίνον*, lily (see *crinoid*).] A genus of extinct crinoids of the family *Cyathocrinidæ*, having stout plates and heavy massive arms: from the Lower Carboniferous of the Mississippi valley.

barymorphosis (bar-i-môr′fō-sis), *n.* [Gr. *βαρύς*, heavy, + *μόρφωσις*, shape.] The effect of gravitation in producing changes in the organs or parts of plants. *Sachs.*

baryphonous (bar-if′ō-nus), *a.* Deep-sounding; low in pitch.

barysilite (bar-i-sil′īt), *n.* [Gr. *βαρύς*, heavy, + *sil(ica)* + *-ite*[2].] A rare lead silicate occurring in white lamellar masses: found in Sweden.

barysphere (bar′i-sfēr), *n.* [Gr. *βαρύς*, heavy, + *σφαῖρα*, sphere.] The earth's interior, an inner core known to be of greater density than the crust: so named from this property.

Even as late as 1893, at the World's Fair Congress, at Chicago, it was argued by Posepny that the ores came from the *barysphere*, or heavy-sphere, from well down within the earth; though even Posepny conceded that the agent which transported and deposited the metals at the places where they are now found was underground water. *Science*, Nov. 15, 1901, p. 747.

Baryta paper. See ★*paper.*—**Baryta white,** barium sulphate used as a pigment.

barytenor (bar′i-ten-ọr), *n.* A low tenor or barytone. Also *baritenor.*

Barytic white. See ★*white*[1].

barytonesis (bar-i-tō-nē′sis), *n.* [NL., < Gr. *βαρύτονος*, barytone, + *-esis*, as in *phonesis*, etc.] The prevalence of a barytone quality or accent. *J. Clark*, Manual of Linguistics, p. 155.

bas (bä), *n.* [F., low: see *base*[1].] In *roulette*, a bet placed at the bottom of a vertical column of numbers, taking in 12 of them.—**Bas à cheval** ['low astride'], a bet placed between two vertical columns, taking in 24 numbers.

B. A. S. An abbreviation of (*a*) *Bachelor of Agricultural Science;* (*b*) *Bachelor of Applied Science*: degrees conferred by some institutions.

basal. **I.** *a.*—**Basal area.** (*b*) In *forestry*, the area of a cross-section of a tree, or the sum of such areas.—**Basal growth,** in *bot.*, growth or increase near the base, as distinguished from apical growth. See ★*apical.*—**Basal length.** See ★*length.*—**Basal placenta,** a placenta at the base of the ovary, as in *Dionæa.*—**Basal plate.** (*a*) In *embryol.*, the dorsal portion of the closed medullary tube. (*b*) In a typical solitary coral, as *Caryophyllia*, that part of the skeleton which is between the zoöid and the surface of attachment.

II. *n.* Same as *genital plate* (which see, under *genital*).

basale, *n.* **4.** *pl.* In the nomenclature of the skeletal parts of sponges, recent and fossil, the root-tuft at the base of a silicious hexactinellid sponge, by means of which it attaches itself to the sediment. This tuft is composed of silicious fibers or rods, each of which may terminate in a hook or anchor to facilitate attachment.—**Basale inferius.** Same as *hypocoracoid. Starks*, Synonymy of the Fish Skeleton, p. 522.—**Basale medium.** Same as *hypercoracoid. Starks*, Synonymy of the Fish Skeleton, p. 521.—**Basale superius.** Same as *postclavicle:* a bone joined to the inner posterior surface of the clavicle of fishes. It is usually in two parts; *basale superius* refers to the upper part only. *Starks*, Synonymy of the Fish Skeleton, p. 521.

basalium (bā-sā′li-um), *n.*; pl. *basalia* (-ạ). [NL.] Same as ★*basale*, 4.

basally (bā′sạl-i), *adv.* In *entom.*, at or near the base; proximally. *Buck*, Med. Handbook, V. 868.

basalt, *n.* **2.** Proposed as a field term, in *petrog.*, for all dark-colored aphanitic, nonporphyritic (aphyric), igneous rocks. The basalts, thus defined, include many dense andesites, diabases, and numerous lavas commonly grouped as basalt before their varying composition was revealed by microscopical study. Basalt in this sense is opposed to *felsite*, which includes light-colored rocks. See *felsite.*—**Analcite-basalt,** in *petrog.*, a term applied to a basalt containing analcite as a notable primary constituent in place of the usual feldspar.—**Deccan basalt,** in India, great flows of cretaceous basalt covering 200,000 square miles.—**Ellipsoidal, spheroidal basalt.** See *pillow* ★*basalt.*—**Melilite-basalt,** a very basic variety of basalt characterized by the mineral melilite. Nephelite and perovskite are usually abundant in the *melilite-basalts*, but feldspars are absent or subordinate.—**Pillow basalt,** a term sometimes applied to basaltic masses composed of spheroidal, ellipsoidal, or pillow-shaped bodies formed when the rock consolidated and generally of variolitic nature. The terms *ellipsoidal basalt, spheroidal basalt,* and *concretionary dolerite* have also been applied to rocks exhibiting this structure. See *variolite.*

basaltine (ba-sâl′tin), *a.* [*basalt* + *-ine*[1].] Same as *basaltic.*

basaree (bä-sạ-rē′), *n.* [Better **basuri*, < Hind. *basurī, basrī, bāsrī, bansī*, poetic forms of *bāñsrī, bāñslī*, < Skt. *vaṁçi*, a flute.] A Hindu direct flute or flageolet with 7 holes. It may be blown either by the mouth or by the nose.

base[2], *n.* **5.** In *chem.*, this term is properly applied to the hydroxid of a distinctly electropositive metal or compound radical, which easily exchanges hydroxyl for an acid radical, producing a salt; but the same term is often applied in a looser and more general way to other substances of more or less electropositive character, although not containing hydroxyl, as, for example, to ammonia and compounds of analogous structure.

22. In the gasteropod *Mollusca*, the flattened lower surface of the final whorl.—**Alloxuric, nucleinic base,** purin base.—**Base hit.** See ★*hit*[1].—**Brieger's bases,** several ptomaïnes which bear Brieger's name. One ($C_2H_8N_2$), supposedly ethylidene diamine, is obtained from putrefying fish; another ($C_6H_{13}NO_2$), probably a betain, is formed on the decomposition of tetanin. Three ptomaïnes of the formula $C_7H_{17}NO_2$ have also been described by Brieger, of which one, *gadinin*, is obtained from putrid fish, another, *typhotoxin*, from cultures of the typhoid bacillus, and a third from horse-flesh.—**De Coninck's base,** a ptomaïne ($C_8H_{11}N$) obtained from putrid jellyfish.—**Delézinier's base,** a ptomaïne ($C_{32}H_{31}N$) described by Delézinier, which in its general reactions resembles veratrine. Its origin is not stated.—**Guareschi and Mosso's base,** a ptomaïne ($C_{10}H_{15}N$) obtained from putrefying fibrin.—**Gautier and Etard's base,** a ptomaïne ($C_8H_{13}N$) obtained from the products of putrefaction of fish.—**Gautier and Mourgues's base,** a ptomaïne ($C_7H_{11}N$) obtained from brown cod-liver oil.—**Lepierre's base,** a ptomaïne ($C_{16}H_{23}N_2O_4$) obtained from poisonous cheese.—**Morin's base,** a nitrogenous base formed during alcoholic fermentation: found in fusel-oil.—**Nencki's base,** a ptomaïne ($C_8H_{11}N$) obtained from a mixture of putrefying pancreas and gelatin.—**Newtonian base,** a hypothetical fixed point in space to which absolute motion, in the sense in which Newton used that term, may be referred.

Foucault's pendulum is another example of motion relative to the earth which exhibits the fact that the earth is not a *Newtonian base.* *Encyc. Brit.*, XXXI. 10.

Oser's base, a nitrogenous base ($C_{13}H_{20}N_4$) formed during the fermentation of saccharose by yeast.—**Pouchet's bases,** $C_5H_{12}N_2O_4$ and $C_7H_{18}N_2O_6$; they are probably not products of putrefaction, but are formed during the treatment of animal refuse with sulphuric acid.—**Purin, xanthin base.** See ★*purin.*—**Salkowski's base,** a ptomaïne ($C_5H_{11}NO_2$) obtained from decomposing fibrin and meat.—**Thenius's base.** Same as ★*coridine.*—**Triacid base,** in *chem.*, a base containing three combining units of the radical hydroxyl which can be exchanged for three units of a monad acid-radical to produce a normal salt, as bismuth hydroxid, $Bi(HO)_3$, which gives rise to such salts as bismuth chlorid, $BiCl_3$, and bismuth nitrate, $Bi(NO_3)_3$. A tri-acid base is the correlative of a tribasic acid.

base-ball, *n.*—**Indoor base-ball,** a game developed from the outdoor game and played in rinks or halls. The base-lines are shortened from 90 to 27 feet, although in some large halls they are 45 feet in length. The rest of the field is in proportion, and the ball is a larger and softer one than that used out of doors. The number of players may be smaller, although 8 or 9 are usually considered a side.

base-bed (bās′bed), *n.* A name given on the Island of Portland to a limestone of Jurassic age largely used as a building-stone. [Local, Eng.]

base-board, *n.* **2.** In *photog.*, the foundation of the camera, which carries the lens, front, bellows, and back. *Woodbury*, Encyc. Dict. of Photog., p. 58.

basecphysis (bā-sek′fi-sis), *n.*; pl. *basecphyses* (-sēz). [NL., < Gr. *βάσις*, base, + *ἐκφυσις*, outgrowth.] In crustaceans, an appendage growing from the basis or second joint of a limb; an exopodite.

In this species [*Pontophilus australis*] . . . the basal joint bears a short appendage (*basecphysis*) not reaching to the extremity of the meros.
Trans. Linnean. Soc. London, Feb., 1903, p. 435.

base-level (bās′lev-el), *n.* **1.** In *geol.*, the ideal level surface with reference to which the erosive action of a stream is carried on; also, but less generally, the slope at which the erosive action of a stream practically ceases. The general base-level is the level of the ocean. A local base-level may be determined by a rock-sill in a river, or by a lake: in the latter case it may be below sea-level, as in the basin of the Dead Sea.

2. The level of the bottom plane of an engine or machinery; the level at which the bottom of the base is set.—**Base-level plain,** the nearly level surface to which a land-form would be reduced if acted on by the agencies of subaërial erosion for a sufficiently long time.

baselevel (bās′lev-el), *v.t.* and *i.*; pret. and pp. *baseleveled* or *baselevelled;* ppr. *baseleveling* or *baselevelling.* In *geol.*, to wear down or degrade (a surface) nearly to base-level.

Some of the salient problems of the outer lithosphere are the origin and maintenance of the continental platforms—with their superposed mountains and plateaus—and the abysmal basins, involving questions of rigidity, isostasy, etc.; the agencies and conditions that make possible the prolonged periods of crustal quiescence shown in *baseleveling*, and the antithetical epochs of crustal disturbance. *Carnegie Inst. Report*, 1902, p. 31.

base-line, *n.*—**Reid's base-line,** a line running from the infraorbital ridge to the back of the head, cutting the center of the external auditory meatus.

Basella (bā-sel′ạ), *n.* A genus of plants, type of the family *Basellaceæ.* It contains only one species, *B. rubra*, a very variable annual or biennial climbing herb, which is cultivated in the tropics as a pot-herb. It is a native of tropical Asia and Africa, and is commonly known as Malabar nightshade (which see).

Basellaceæ (bā-se-lā′sē-ē), *n. pl.* [NL. (Moquin-Tandon, 1840), < *Basella* + *-aceæ.*] A family of dicotyledonous archichlamydeous plants of the order *Chenopodiales*, typified by the genus *Basella*, and characterized by flowers with 2 sepals, 5 petals, 5 stamens opposite the petals, a 3-merous gynœcium, and utricular fruit. There are 5 genera and 14 species, mostly tropical American, but the monotypic type genus is a native of tropical Asia, and *Anredera* extends northward into Texas. *Boussingaultia baselloides*, the Madeira-vine, has become established in southern Texas and Florida. See *Malabar nightshade*, under *nightshade.*

basellaceous (bā-se-lā′shius) *a.* [NL., < *Basellaceæ* + *-ous.*] In *bot.*, having the characters of or belonging to the family *Basellaceæ.*

Basement complex, a series of much metamorphosed and masked rocks (gneisses and schists), intricately folded, of unknown thickness and obscure origin, lying at the base of the geologic column. They have been mostly derived from original igneous rocks, but some appear to have been sediments. They are the oldest known rocks. *Dana.*—**Basement rocks,** in a series of rocks, the belt which offers least resistance to the wear of streams; the weaker strata. *Dana.*—**Basement substance,** in *histol.*, a substance formed at the basal ends of epithelial cells.

baseost (bā′sē-ost), *n.* [Gr. *βάσις*, foundation, + *ὀστέον*, bone.] In the fishes, especially those of the extinct family *Holoptychiidæ*, one of the series of small bones which support the dermal rays of the dorsal and anal fins and are subservient to the axonost which is the principal support of these fins.

base-rocker (bās′rok-ėr), *n.* A rocking-chair with a curved-topped base, to which it is attached and on which it rocks.

base-runner (bās′run″ėr), *n.* In *base-ball*, a player who is running the bases. The batsman becomes a base-runner immediately after he has made a fair hit, or after four balls have been called by the umpire, or after three strikes, or after the umpire calls a foul balk on the pitcher.

bas-fond (bä-foṅ′), *n.* [F.: *bas*, low, *fond*, bottom.] The fundus of a hollow organ; especially, the base of the urinary bladder.

Basham's mixture. See ★*mixture.*

bashaw, *n.* **3.** The mud-cat, *Leptops olivaris.* [Louisiana.]—**Bashaw cat.** See ★*cat.*

bashofu (bä-shō′fū), *n.* [Jap., < Chin. *pa-chiao pu*, banana cloth, *pa-chiao* (Jap. *basho*), plantain (banana); pu, cloth.] A kind of cloth woven from the fiber of the Japanese banana, *Musa Basjoo.* It is lighter in weight than that woven from hemp or flax, and is used in Japan for summer underwear. A coarser kind is used for wall decoration.

basi (bä-sē′), *n.* [Bisaya *basi.*] **1.** A native drink in the Philippine Islands, containing a large proportion of the poisonous principle of wood-alcohol. Insanity, crime, and frequently death in a few days result from its use. American soldiers and civilian employees of the government have been forbidden to drink it. *Army and Navy Jour.*, Dec. 7, 1901.

2. A native wine from northern Luzon.

basiale (bā-si-ā′lē), *n.*; pl. *basialia* (-li-ạ). [NL., neut. of *basialis*, < L. *basis*, base: see *base*[2].] In *ichth.*, same as ★*hypohyal;* one of a pair of small bones anterior to the ceratohyal.

basibranchiostegal (bā″si-brang-ki-os′tē-gal), *n.* [L. *basis*, base, + *branchiæ*, gills, + Gr. *στέγος*, cover.] Same as ★*urohyal*, 2.

basibregmatic (bā-si-breg-mat′ik), *a.* [Gr. *βάσις*, base, + *βρέγμα*(τ-), sinciput, + *-ic.*] In *anthrop.*, relating to basion and bregma.—**Basibregmatic height,** the distance between basion and bregma.

Basic border, in *geol.*, the outer portion or shell of an intruded mass of igneous rock often found, as a matter of experience, to be lower in silica or more basic than the interior.

Secondary and less important causes may explain the existence of complementary dikes, *basic borders* and segregations.

R. A. Daly, Amer. Jour. Sci., April, 1903, p. 292.

Basic color. See ★*color*.—**Basic dye.** (*a*) In *histol.*, same as ★*basic stain*. (*b*) See *basic color* under ★*color*. —**Basic lines.** These lines apparently common to the spectra of two or more substances, and formerly supposed by Lockyer to indicate a common substance, have since been shown to be merely double or multiple lines with components very close together, and resolvable only by spectroscopes of higher power than he then possessed. —**Basic oxid,** in *chem.*, an oxid of a distinctly electropositive metal or compound radical, which may by union with the elements of water produce a hydroxid or base, or by union with the elements of an acid oxid produce a salt.—**Basic reagent.** Same as ★*basic stain*.—**Basic salt,** in *chem.*, a compound in which an electropositive metal or compound radical is partly united to an acid radical and partly to hydroxyl or to oxygen, as in basic bismuth nitrate, $Bi(HO)_2(NO_3)$, or in Monsell's salt, $Fe_2O(SO_4)_2$.—**Basic slag.** See ★*slag*[1].—**Basic stain,** in *histol.*, a non-acid dye, such as the methyl and phenyl derivatives of rosaniline, fuchsin, etc., employed to color elements for microscopical examination.—**Basic steel.** See ★*steel*[1].

basichromatin (bā-si-krō′ma-tin), *n.* [Gr. *βάσις*, base, + *χρῶμα*, color.] In *cytol.*, chromatin which takes on a deep stain with basic dyes only. Same as *chromatin* in the usual sense.

basicity, *n.* **2.** In *foundry-work*, the proportion of metallic oxid present in, and the absence of silica from, a furnace-lining, a cinder, flux, or slag. The fettling of a puddling-furnace depends for its efficacy on its basic character, as does also the magnesia limestone of a Bessemer converter. *Lockwood*, Dict. Mech. Eng. Terms.

Basicranial flexure. See ★*flexure*.

basid (bā′sid), *n.* [*basid(ium)*.] Same as *basidium*.

basidiogenetic (bā-sid″i-ō-jē-net′ik), *a.* Produced by or upon a basidium.

basidiogonidium (bā-sid″i-ō-gō-nid′i-um), *n.*; pl. *basidiogonidia* (-ä). Same as *basidiospore*.

Basidiolichenes (bā-sid″i-ō-lī-kē′nēz), *n. pl.* [NL., ‹ *basidium* + *lichen*, lichen.] A group of lichens including those in which the fungous portion is a basidiomycete. They are divided into 2 smaller groups, *Hymenolichenes* and *Gasterolichenes*. Only a few genera are known, most of which are tropical.

basidiophore (bā-sid′i-ō-fōr), *n.* [NL., ‹ *basidium* + Gr. *-φορος*, ‹ *φέρειν*, bear.] A portion of the fructification of certain fungi which bears basidia.

basidorsal (bā-si-dôr′sal), *n.* [NL. *basidorsalis*, ‹ Gr. *βάσις*, base, + L. *dorsum*, back: see *dorsal*.] One of the basidorsalia.

basidorsale (bā-si-dôr-sā′lē), *n.*; pl. *basidorsalia* (-li-ä). [NL.] One of a pair of ossifications on the superior side of the notochord from which the neural arch with its zygapophyses is developed. See ★*arcuale*.

basiemphytic (bā-si-em-fit′ik), *a.* [Gr. *βάσις*, base, + *ἔμφυτος*, implanted: see *imp*.] Attached or fixed by the base, as certain sponges.

basig (bä′sig), *n.* [Philippine Sp., appar. from an Igorrote form corresponding to Tagalog *basag*, rice, Bisaya, *básac*, a crop of rice, etc., under water.] An alcoholic drink made by the Igorrotes, principally of rice and buri (*Corypha umbraculifera*), but also of sugar-cane. [Philippine Is.]

basigamous (bā-sig′a-mus), *a.* In *bot.*, having the egg-apparatus at the lower end of the mother-cell of the endosperm, the reverse of the normal condition. *Van Tieghem*.

basigamy (bā-sig′a-mi), *n.* The condition of being basigamous.

basigenous (bā-sij′e-nus), *a.* In *chem.*, capable of forming a base, as, for example, potassium, the hydroxid of which is the base potash.

basignathite (bā-sig′na-thīt), *n.* [Gr. *βάσις*, basis, + *γνάθος*, jaw, + *-ite*[2].] In crustaceans, the second joint of a gnathite.

basilad, *adv.* **2.** Downward; toward the inferior face of the cranium. *Sir J. Richardson*, Zoology of the Herald. [Rare.]

basilar, *a.* **2.** Lying or situated at the base; fundamental.—**Basilar apophysis,** the basilar process.—**Basilar length of Hensel,** in *anat.*, the distance in a straight line from the posterior margin of the alveoli of the median incisors to the anterior edge of the foramen magnum: used in noting the size of mammalian skulls.—**Basilar membrane of the eye,** in *entom.*, a thin membrane in the eye which separates the optic tract from the cones and rods.—**Basilar meningitis,** inflammation of the membranes which cover the base of the brain.—**Basilar vertebra,** the last lumbar vertebra.

basileiolatry (bas-i-lī-ol′a-tri), *n.* [Gr. *βασιλεύς*, king, + *λατρεία*, worship.] The worship of kings. *N. E. D.* [Nonce-word.]

basilinna (bas-i-lin′ä), *n.* [Gr. *βασίλιννα*, a form parallel to *βασίλισσα*, fem. of *βασιλεύς*, king: see *basilica*.] In *Gr. antiq.*, the wife of the archon basileus at Athens. She enjoyed special privileges and performed special functions in the state.

Dörpfeld points out that, according to Demosthenes, the oath which the Geraiai had to swear at the sacred marriage of the *basilinna* in the Anthesteria was inscribed on a stele.

Cecil Smith, Jour. Hellenic Studies, XVI. 335.

basiliscan (bas-i-lis′kan), *a.* Of or pertaining to a basilisk: as, *basiliscan* eyes.

basilissa (bas-i-lis′ä), *n.* Same as ★*basilinna*.

basilovomeric (bas″i-lō-vō-mer′ik), *a.* Relating to the base of the skull and the vomer.—**Basilovomeric angle,** in *craniom.*, the angle between the lower surface of the basioccipital and basisphenoid and the lower edge of the vomer. *An. Rep. Bur. Amer. Ethnol.*, XVII. pt. 1, p. 143.

basilysis (ba-sil′i-sis), *n.* [NL., ‹ Gr. *βάσις*, base, + *λύσις*, dissolution.] In *obstet.*, the operation of crushing the base of the skull of the fetus to make its extraction possible.

basilyst (bas′i-list), *n.* [Irreg. ‹ *basilysis* + *-t*.] An instrument for performing basilysis.

basin, *n.* **12.** In *hort.*, the depression at the apex of pomaceous fruits, as apples and pears. The calyx or eye sits in the basin. The depression at the opposite end is known as the *cavity*.—**Closed basin,** a depression on the land-surface from which water does not escape to the sea. That of Great Salt Lake is to-day a closed basin, but under the moister climate of the glacial period it was filled to overflowing and then belonged to the Columbia River system. —**Half-tide basin.** (*a*) A dock or basin whose gates are closed at half ebb-tide to retain a navigable depth of water within the basin. (*b*) An intermediate basin between a wet dock and the sea or tidal portion of a river or harbor. This intermediate basin is operated in the same manner as an ordinary lock, and differs from it only in being larger and thus in locking in or out several vessels at a time.—**Knob-and-basin topography,** the undulatory topography characteristic of a moraine.

Speaking in general terms, the terminal moraine is a rough, irregular, complex ridge of drift, deposited in part directly by the ice, and in part by the waters which were active at its margin during the time of its accumulation. The time of its accumulation was a time during which the edge of the ice remained stationary, or nearly so, for a considerable period of time. The most distinctive single characteristic of the terminal moraine is its undulatory topography, which is often designated a "*knob-and-basin*" *topography*.

R. D. Salisbury, Geol. Surv. of New Jersey, 1892, p. 40.

Torsion basin, a basin formed by torsional deformation of the earth's crust.

basin-heel (bās′n-hēl), *n.* The talon, or posterior cusp of a tooth, when slightly hollowed out like a basin.

Trigonid and especially the protoconid lower than in Amphicyon, and marked *basin heel*.

Bull. Amer. Mus. Nat. Hist., XVI. 285.

basining (bās′n-ing), *n.* The formation of basins or depressed areas by local subsidence of the strata: produced sometimes by removal of soluble constituents from underlying beds, sometimes by gentle infolding.

basin-range (bās′n-rānj), *n.* The type of mountain-range found in the Great Basin of Utah and Nevada. It consists of greatly faulted and tilted strata.

Recently attention has been called to the geologic structure of the mountain ranges of Nevada and southeastern California. An attempt has been made to show that they are generally anticlinal in structure, and that the tilted-block type which Gilbert has described, and which is generally known as *basin-range* structure, is of rare occurrence. *Science*, Feb. 20, 1903, p. 302.

basiobregmatic (bā″si-ō-breg-mat′ik), *a.* Same as ★*basibregmatic*.

basioccipital, *n.* **2.** In *ichth.*, the lowest of the occipital bones. It is in the posterior part of the cranium, directly under the foramen magnum, and forms, usually with the assistance of the exoccipitals, the occipital condyle. The parasphenoid underlaps it anteriorly, while it articulates above with the exoccipitals and prootics.

basioceratochondroglossus (bas″i-ō-ser″a-tō-kon″drō-glos′us), *n.* [NL., ‹ Gr. *βάσις*, base, + *κέρας* (*κερατ-*), horn, + *χόνδρος*, cartilage, + *γλῶσσα*, tongue.] The hyoglossus muscle.

basioöpticon (bā-si-ō-op′ti-kon), *n.* Same as *foraminoöptic* ★*line*. *Harrison Allen*, Jour. Acad. Nat. Sci., X. 410.

basiophthalmous (bā″si-of-thal′mus), *a.* Of the nature of or resembling the basiophthalmite of the eye of a stalk-eyed crustacean.

basiotribe (bā′si-ō-trīb), *n.* [Gr. *βάσις*, base, + *τρίβειν*, rub, crush.] An instrument for performing basiotripsy.

basiotripsy (bā″si-ō-trip′si), *n.* [Gr. *βάσις*, base, + *τρῖψις*, rubbing, crushing.] In *obstet.*, the operation of crushing the base of the skull of the fetus to render its extraction possible.

basipodium (bā-si-pō′di-um), *n.*; pl. *basipodia* (-ä). [NL., ‹ Gr. *βάσις*, base, + *πούς* (*ποδ-*), foot.] In *Polychæta*, the basal portion of a parapodium, or foot.

basipterygium (ba-sip-te-rij′i-um) *n.*; pl. *basipterygia* (-ä). [NL., ‹ Gr. *βάσις*, base, + *πτερύγιον*, a fin.] In *ichth.*, the basal bone of a fin. *Zittel* (trans.), Textbook of Paleon., II. 23.

basis, *n.* **10.** Same as *basipodite*.—**Basis sphenoidalis,** in *ichth.*, same as *parasphenoid*, 2. Not the *basisphenoid* of Huxley.

basisphenoid, *n.* **2.** In *ichth.*, a bone attached to the anterior end of the inner wings of the proötics, which roof the myodome. It is probably not homologous with the bone so named in mammals. Gill has given it the special name of *dichost*. It is not synonymous with the bone in fishes called *basisphenoid* by Owen.

Starks, Synonymy of the Fish Skeleton, p. 512.

basite (bā′sīt), *n.* [*bas(ic)* + *-ite*[2].] In *petrog.*, a term proposed by Von Cotta (1864) as a collective name for igneous rocks of low content in silica, as opposed to those rich in silica (*acidites*).

basiventral (bā-si-ven′tral), *n.* [NL. *basiventralis*, ‹ Gr. *βάσις*, base, + L. *venter*, belly.] One of the basiventralia.

basiventrale (bā-si-ven-trā′lē), *n. pl.* [NL.] One of a pair of ossifications on the inferior face of the notochord from which the centrum is developed. See ★*arcuale*.

basket-ball (bàs′ket-bâl), *n.* A game played with a ball resembling a foot-ball, in which the object is to throw the ball into one of two baskets (the goals) placed at opposite ends of the field. It is played by any number of persons (five or nine are preferred for championship games) upon a field (out of doors or within) of any convenient size. The rules are designed especially to eliminate the roughness of foot-ball. A well-defined line is marked around the floor or field, with the side-boundaries at least 3 feet from the wall or fence and the end-boundaries directly below the surface against which the goal is placed. The goals consist of baskets or hammock-nets of cords suspended from metal rings of 18 inches' inside diameter. These rings are placed 10 feet above the ground in the middle of the end-lines. The inside rim is 6 inches from the surface of a flat perpendicular screen, or very rigid surface, measuring at least 6 feet horizontally by 4 feet vertically. If a screen is used, it should not extend more than one foot below the upper edge of the goal. Teams should consist of 5 persons, and the officials are the referee, 2 umpires, a scorer, and a timekeeper. The ball is round, and consists of a rubber bladder covered with leather not less than 30 nor more than 32 inches in circumference and weighing not less than 18 nor more than 20 ounces. It should be tightly inflated. The referee's duties are to decide when the ball is in play, to whom it belongs, and when a goal has been made; to approve of the timekeeper and scorer before the game begins; and, when the ball is put in play, to toss it up in a plane at right angles to the side-lines, so that it will drop near the center of the field, which is indicated by a conspicuous mark. This is done at the opening of the game, at the beginning of the second half, and after each goal. After the referee puts the ball in play in the center, it must be first touched by one of the center players who shall have been previously indicated to the umpire. The game then continues for 20 minutes, when there is an intermission of 10 minutes and the teams change goals. The umpires call all fouls, and a foul called by one shall not be questioned by the other. A goal is made by throwing the ball fairly, so that it lands in the basket. A goal made from the field counts 2 points and a goal from a foul counts 1 point. The game is decided by the winning of the most points in 40 minutes' play consisting of two 20-minute halves with an intermission of 10 minutes. In case of a tie the game continues until either side has made two additional points. When a foul has been made the opposite side has a free throw for the goal at a distance of 15 feet from a point on the floor directly beneath the center of the goal. No player shall stand nearer than 6 feet to the thrower, nor in a lane 6 feet wide from the thrower to the goal, nor interfere with the ball until after it reaches the goal. A player is not allowed to carry the ball in his hands, but must play it from the spot on which he catches it. He can bat the ball with one hand. There should be no taking hold of nor pushing of an opponent, and the arms may not be used in any way to interfere with the player who has not the ball. There may be no shouldering, tripping, striking, kicking, hacking, or roughness of any kind. When the ball has gone out of bounds the player first touching it returns it to the field of play. He may throw the ball in any direction into the field of play from any spot, outside of bounds, on a line drawn at right angles to the boundary-line at a point where the ball crossed it. The game was invented by James Naismith.

basket-boat (bàs′ket-bōt), *n.* A skin-covered frame of basketry used as a boat in India.

basket-cloth (bàs′ket-klôth), *n.* Any fabric woven in imitation of the plaiting of a basket.

basket-elm (bàs′ket-elm), *n.* See ★*elm*.

basket-fence (bàs′ket-fens), *n.* A wattled stake-fence. [Australia.]

basket-fired (bàs′ket-fīrd), *a.* Cured or prepared by roasting in baskets over a charcoal fire: as, *basket-fired* tea.

basket-meeting (bàs′ket-mē″ting), *n.* A gathering, usually in connection with religious

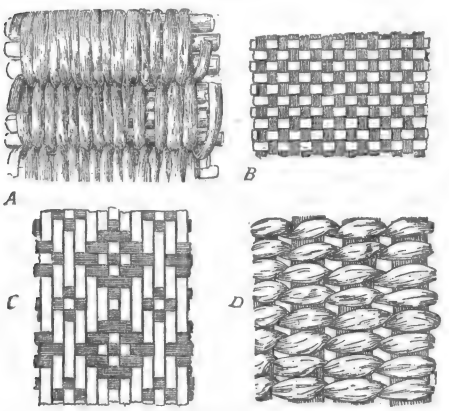
matters and lasting all day, at which no regular luncheon is served, those in attendance bringing their luncheon with them in baskets.

basket-phaëton (bȧs′ket-fā″e-ton), *n.* A phaëton having a body-frame of light iron secured to wooden rockers and covered with willow or ratan basketwork: of English origin.

basket-pot (bȧs′ket-pot), *n.* A water-tight basket which serves as a pot.

basket-rack (bȧs′ket-rak), *n.* In *car-building*, an openwork shelf of wire or the like supported by brackets placed on the side of a car over the seats; a bundle-rack.

basketry, *n.*—**Coiled basketry,** basketry made by sewing coils of fibers together. These coils may consist of one or more rods or of a bundle of vegetable fibers. Generally they are wrapped with a tough strip of root, bark, or wood, which serves at the same time for sewing the coils together.—**Plicated basketry,** basketry made by weaving, as by checker-weaving, twilling, or twining.—**Twilled basketry,** basketry woven like twill.—**Twined basketry,** basketry woven by twining a double or triple soft weft around a rigid warp.



A, coiled basketry; *B*, plicated basketry, checker ornament in two colors; *C*, twilled basketry in two colors; *D*, twined basketry. (From Report of Nat'l Museum, 1902.)

basket-shell (bȧs′ket-shel), *n.* Any corbuloid bivalve.

basket-stitch (bȧs′ket-stich), *n.* In *embroidery*, a stitch that interlaces with another, like basket-plaiting.

basket-stone (bȧs′ket-stōn), *n.* In the fossil *Crinoidea*, one of the joints of the columns.

basket-weave (bȧs′ket-wēv), *n.* The interlocking of the warp and weft in imitation of the plaiting of a basket.

basket-worm, *n.*—**Orange basket-worm,** the larva of an American psychid moth, *Platæceticus gloveri*, which forms a small oblong-oval case of silk interwoven with bits of leaf or twigs in which it lives and which it carries about with itself as a protection against birds and other natural enemies.

Baskish (bȧsk′ish), *n.* [*Bask* + *-ish*[1].] Same as *Bask, Basque.*

Baskonize (bȧs′kon-īz), *v. t.*; pret. and pp. *Baskonized*, ppr. *Baskonizing*. [*Bask* + *-on* (as in original *Vascones*) + *-ize.*] To turn into Basque.

Baskish *z* had, and still sometimes has, the sound of *tz* as in German. Salaberry in his Dictionary notes "botz" as meaning "voiz, suffrage." Castilian "voz = voice" would be *baskonized* as "boz."
N. and Q., 10th ser., I. 18.

basogenous (bā-soj′e-nus), *a.* Same as ★*basigenous.*

basophil, basophile (bā′sō-fil), *a.* and *n.* [NL., < Gr. *βάσις*, base, + *φιλεῖν*, love.] In *cytol.*, staining deeply with basic dyes only: said of a cell or part of a cell: opposed to *acidophil.* Also used substantively.

basophilia (bā-sō-fil′i-ȧ), *n.* [NL., < Gr. *βάσις*, base, + *φίλος*, loving.] A condition in which many leucocytes taking only basic stains are present.

basophilic (bā-sō-fil′ik), *a.* Same as ★*basophil.*

basophilous (bā-sof′i-lus), *a.* Same as ★*basophil.*

basophobia (bā-sō-fō′bi-ȧ), *n.* [NL., < Gr. *βάσις*, walking, + *-φοβία*, < *φοβεῖν*, fear.] Morbid fear of walking.

basote (bä-sō′tā), *n.* A Porto-Rican form of ★*apasotes.*

basrook (bas′rök), *n.* See ★*budgrook.*

bass[1], *n.*—**Banklick bass.** Same as *calico-bass.* [Local, Indiana.]—**Bayou bass,** the large-mouthed black-bass, *Micropterus salmoides.*—**Gray bass.** Same as *gray snapper.*—**Oswego bass,** the large-mouthed black-bass, *Micropterus salmoides.* [Local, New York.]—**Otsego bass,** the whitefish, *Coregonus clupeiformis*, of Otsego Lake at the head of the Susquehanna river.—**Round bass,** a kind of sunfish, *Centrarchus macropterus*, commonly called *flier.*

bass[2], *n.* **4.** The commercial name of a fiber, resembling horsehair or wire, obtained from the sheathing leaf-bases or the leaf-stalks of certain palms. It is dark brown or black in color, and is used for brooms, brushes, ropes, and cables. Also called *piassava.* See *bast-palm, piassava,* and ★*bassine.* *Hannan*, Textile Fibers of Commerce, pp. 145–149.—**Cape bass.** Same as *West African* ★*bass.*—**Madagascar bass,** the round, tapering deep-brown fibers obtained from the leaf-stalks of *Dictyosperma fibrosum*, a palm native to Madagascar. Called by the natives ★*vonitra.*—**Monkey bass,** the dark-brown wiry fiber obtained from the sheathing leaf-bases of *Leopoldinia Piassaba.*—**Para bass.** Same as *monkey* ★*bass.*—**West African bass,** the brown, stiff, wire-like fiber obtained from the leaf-stalks of the bamboo palm, *Raphia vinifera*, after soaking them in water.

bass[3], *a.*—**Bass flute, trumpet.** See ★*flute,* ★*trumpet.*—**Bass horn,** in the early nineteenth century, a wooden trumpet with an S-shaped tube and a brass bell, allied to the *serpent* (which see), with a compass of about two octaves both above and below middle C.—**Bass lute.** See ★*chitarrone* and *theorbo.*—**Bass tuba.** See *bombardon.*—**First bass, second bass,** in *part-music*, especially for male voices, the upper and lower bass voices or parts respectively.—**General bass.** Same as *figured bass* or *thorough-bass.*—**Spectacle bass,** a popular term in drum-music for certain passages consisting of two tones struck alternately, the name coming from the fact that, as commonly abbreviated, the notes suggest a pair of spectacles.

bassanello (bȧs-a-nell′ō), *n.* [It.] A musical instrument sounded by a double-reed in a cup-shaped mouthpiece, which was joined by a metal tube curved like an S to a long, straight wooden body in which were 7 finger-holes. Compare *shawm* and *bassoon.* It was invented by Giovanni Bassani of Venice early in the seventeenth century, deriving from him its name, and was enough used for a time to be made in three sizes or pitches—bass, tenor, and alto.

bassarid (bas′a-rid), *n.* [Gr. *βασσαρίς*, < *βασσάρα*, a Thracian bacchanal, lit. a fox.] In *classical myth.*, a votary of Bacchus; a bacchante.

bass-beam (bās′bēm), *n.* Same as *bass-bar.*

bass-bridge (bās′brij), *n.* Same as *bass-bar.*

basset[3] (bas′et), *n.* [F. *basset*, a breed of dogs so called, < OF. *basset* = It. *bassetto*, low: see *basset*[1], *basset*[2].] Same as ★*basset-hound.*

basset-hound (bas′et-hound), *n.* [*basset*[3] + *hound.*] A long-bodied, short-legged breed of dogs, similar in build to the dachshund, but larger and heavier. The color varies, but it is frequently white with liver-colored or black blotches.

bassine (bas-ēn′), *n.* [*bass*[2], 4, + *-ine*[2].] A commercial name for the stiff, wiry fiber obtained from the sheathing leaf-bases of the palmyra, *Borassus flabellifer.* It is used in making brushes and for ropes. See ★*bass*[2], 4, and *palmyra.* *Hannan*, Textile Fibers of Commerce, p. 149.

Bassini's operation. See ★*operation.*

bassist (bās′ist), *n.* One who sings bass or plays a bass instrument.

basso[1], *n.*—**Basso buffo** or **comico,** a singer in comic opera and similar works.—**Basso cantante,** a high bass, suited for solo-singing: opposed to *basso profondo.*—**Basso concertante.** See *basso continuo,* and *figured bass,* under *bass*[3].—**Basso ripieno,** a supplementary singer in a chorus or player in an orchestra: used only in full, or *tutti* passages.

Bassogigas (bas-ō-jī′gas), *n.* [NL., < L. *bassus*, low (deep), + Gr. *γίγας*, giant.] A genus of deep-sea brotulid fishes.

Bassozetus (bas-ō-zē′tus), *n.* [NL., < L. *bassus*, low (deep), + Gr. *ζητεῖν*, seek.] A genus of deep-sea brotulid fishes.

bass-player (bās′plā″ėr), *n.* One who plays a bass instrument, especially the bass viol.

bass-singer (bās′sing″ėr), *n.* One who sings bass; a bass or basso.

Basswood cheese. Same as *sapsago* ★*cheese* (*b*).

Basswood leaf-roller. See ★*leaf-roller.*

basswood-oil. See ★*oil.*

bast[1], *n.* **4.** A name sometimes given to the portion of raw-silk fiber which envelops the fibroin: virtually the same as the *sericin.*—**5.** A trade-name of the piassava-fiber. See *bast-palm, piassava,* and ★*bass*[2], 4.—**Bast-cells.** See def. 2.—**Bast-collenchyma,** tissue in which the walls are thickened on all sides. See *collenchyma.*—**Bast-fibers.** See def. 2.—**Bast sheath,** the sheath surrounding the fibrovascular bundle next within the cortex. Also called *periphloëm.*—**Bast soap.** See ★*soap.*—**Bast-tissue.** Same as *phloëm.*—**Bast-vessel.** Same as *sieve-cell.*—**Cuba bast,** a commercial name for guana. See def. 1, and ★*guana*[3].—**Hard bast.** Same as *liber*[1], 1.—**Russian bast,** the inner fibrous bark of the common European linden, *Tilia Europæa.* Much of it was formerly exported and used by nurserymen and gardeners for tying plants, but its place has almost entirely been taken by raffia. See *bast*[1], 1, and *Tilia.*—**Soft bast.** See def. 2.

Bastard box, ★**dory,** ★**halibut,** ★**measles,** etc. See the nouns.

bastardization (bas-tär-dī-zā′shon), *n.* The act of declaring or of rendering bastard or illegitimate. *N. E. D.*

Baste the bear. See ★*bear*[2].

Bastion series. See ★*series.*—**Full bastion.** See *hollow* ★*bastion.*—**Hollow bastion** a bastion in which the parade is at a lower level than the terre-plein, in contradistinction to a *full* bastion, in which the parade and terre-plein are practically at the same level.

bastose (bas′tōs), *n.* [*bast* + *-ose.*] Same as ★*lignocellulose.*

The blending of the *bastose* and plumose fibers to make one complete yarn is not feasible to begin with. Cotton fibers are unicellular, and flax fibers are multicellular, while the structure of the two is antagonistic to their union in a combined thread.
Hannan, Textile Fibers of Commerce, p. 17.

bastringue (bäs-traṅg′), *n.* The French name for a form of furnace used in the first stage of the Leblanc process for making carbonate of soda from common salt. It serves for the treatment of the salt with sulphuric acid.

bat[1], *n.* **15.** A paddle or blade in a coal-pulverizer. These bats are carried on rapidly rotating arms, and break the coal into very fine particles.—**16.** *pl.* (*a*) Heavy laced boots with hobnails. [Prov. Eng.] (*b*) Low-cut laced shoes formerly worn by women. (*c*) Boots in bad repair. [Colloq.]—**To ground the bat,** in *cricket*, to bring the bat in contact with the ground, either before playing the ball, in the act of playing it, or while running between the wickets.

bat[6], *n.* **2.** [Siamese *bāt*, < Hind. *bāt.*] A Siamese silver coin, the same as the tical.

batad (bä′tȧd), *n.* [Philippine Islands.] A name in the Philippine Islands of Indian millet, introduced and cultivated for forage, and in some places growing spontaneously. The natives sometimes make an intoxicating drink of the seed which they also eat in place of rice in times of scarcity; the stem yields sugar. See *sorghum*, 1, and *Indian millet*, under *millet.*

batala, *n.* See ★*bathala.*

batan (bä-tän′), *n.* [Sp., a fulling-mill, < *batir*, beat, pound: see *bate*[1], *bat*[1].] A stone hand-mill in general use in western South America. It is a heavy slab without legs or carvings of any kind, and is much ruder than the metate of Mexico. See ★*metate.*

batanga (bä-täng′gȧ), *n.* [Sp. *batanga*, < Bisaya *batangan* (*batanggan*), a beam, an outrigger; = Tagalog *batang*, a floating log.] In the Philippine Islands, an outrigger of a canoe, made of bamboo.

Batavia weave. See ★*weave*[1].

batching-tackle (bach′ing-tak″l), *n.* A mechanical appliance attached to a calico-printing machine for massing the cloth after it leaves the machine.

bate[5], *n.*—**Coal-tar bate,** a bate made from chemicals instead of from manures.

bateau-board (ba-tō′bōrd), *n.* Same as *batoule-board.*

batelo (bä-tā′lō), *n.* [Also *botella*; < Pg. *batell*: see *bateau.*] A boat with a square stern like a dhow's: used in western India. [Anglo-Indian.] *Yule and Burnell*, Anglo-Indian Gloss.

bate-prick (bāt′prik), *n.* In *tanning*, a small hole on the grain side of a skin, caused by the putrefying of the bate while the skin is in the liquor. *Flemming*, Practical Tanning, p. 98.

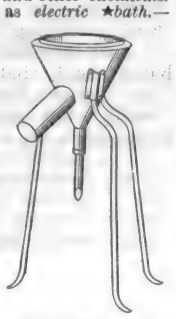
Batesian (bāts′i-an), *a.* Pertaining to H. W. Bates, an English naturalist and explorer, and, in particular, to his theory, that certain animals exhibit protective resemblance to others (mimicry) that have effective means of protection or defense, such as the resemblance of some harmless snakes to venomous ones. According to this theory, individuals of certain species accidentally resembling certain other species especially protected from their natural enemies, as by a nauseous odor or taste, are supposed by natural selection to perpetuate and intensify this resemblance in their descendants, thus ultimately bringing protection to the species by mimicry alone, non-mimicking strains of the race lapsing.

In South Africa entomologists have found several excellent examples of those forms of mimicry which are known as "*Batesian*" and "Müllerian" mimicry respectively. It was clearly important to test experimentally the value of the colors of these insects as a protection from their enemies. This Mr. Marshall has done with results which are as interesting as they are remarkable. The fact that Mantidæ and spiders exhibit unmistakable signs that certain species of Lepidoptera are distasteful to them, but are unaffected by colors, whether warning or cryptic in character, suggests that birds and other vertebrates are the principal enemies which have caused the evolution of the color patterns of these insects.
Nature, Apr. 16, 1903, p. 572.

bat-fish, *n.* 3. *Monodactylus argenteus*, of the family *Scorpididæ*, a silvery fish with the body deeper than long. The name alludes to the high fins. [New South Wales.]—**Short-nosed bat-fish,** a species of *Ogcocephalus* (*O. radiatus*) found in Florida.

bat-gage (bat'gāj), *n.* An instrument for measuring the breadth of the blade of a cricket-bat.

bath[1], *n.* 9. In *elect.*, the solution in which electrochemical action takes place, as in electroplating, electrotyping, electrometallurgy, etc.—**Brand bath,** a cool or cold bath employed to reduce the temperature and calm the nervous symptoms in typhoid fever.—**Copper bath,** the solution of copper sulphate, or other salt of copper, in which articles are immersed to be coated with copper by electrolysis, or from which electrotype casts are to be made.—**Cutting bath,** a solution of chemicals for discharging, or cutting, certain pigments printed on fabric. Thus a solution of sulphuric and oxalic acids, of proper strength and temperature, may be used as an indigo-cutting bath.—**Electric bath,** a bath in water through which a current of electricity is passing.—**Green bath,** a bath used in dyeing the hair on rabbit-skins black: so called on account of its color, which is due to green vitriol and other chemicals.—**Hydro-electric bath.** Same as *electric* ★*bath*.—**Koch's filtering-bath,** a device for hot filtration. The mass in a funnel is kept warm by an outer double-walled vessel which is filled with water. The water is heated by a flame applied to an offset.—**Long bath,** in *dyeing*, a dilute dye-bath: a term used in contradistinction to *short* ★*bath* (which see).—**Nauheim bath,** a bath in water charged with carbonic-acid gas, employed in the treatment of heart-disease.—**Needle bath,** a form of douche in which water is projected with considerable force, through a number of fine openings, against the surface of the bather.—**Sheet bath,** a form of hydropathic treatment in which the patient is enveloped in a cool wet sheet.—**Short bath,** in *dyeing*, a concentrated dye-bath; a dye-bath in which the amount of water used is reduced to a minimum.—**Single bath,** in *dyeing*, a dye-bath in which the complete operation of dyeing is carried on.—**Standing bath,** in *dyeing*, a dye-bath which is used continuously by adding, after each dyeing operation, sufficient quantities of dyestuffs and other necessary chemicals to replace those which have been extracted by the material previously colored.



Koch's Filtering-bath.

bath[3] (bȧth), *n.* Same as ★*bath-flower*.

Bath coup. See ★*coup*[4].

bathala (bät-hä'lä), *n.* [Also *batala*, Philippine Sp. *batala*, < Tagalog *bathala*, Bisaya *bathála* or *bahála*, a deity; Pampanga *batala*, a bird supposed to be controlled by a sorcerer or a deity, and called in Tagalog *tigmamanoquin*.] 1. In the Philippine Islands, a god (in the heathen sense); a deity; in later use, the infant Jesus.

bath-flower (bȧth'flou″ėr), *n.* [*bath* (a corruption of *birth*-in *birthroot*) + *flower*.] The birthroot, *Trillium*, especially *T. grandiflorum*. Also *bath*[3] and *beth*.

Bathgate mineral, naphtha. See ★*mineral*, ★*naphtha*.

bathic (bath'ik), *a.* [Gr. *βάθος*, depth: see *bathos*.] Of or concerning depth, as of the sea.

bathism (bath'izm), *n.* Same as *bathmism*. *Natural Science*, June, 1897, p. 380.

bathmic, *a.* 2. Illustrative of or brought about by bathmism, or growth-force, considered as a cause or agent in the origin of species: as, *bathmic* evolution. *Buck*, Med. Handbook, IV. 34.

bathmotropic (bath-mō-trō'pik), *a.* [Gr. *βαθμός*, threshold, + *τροπικός*, turning.] Influencing the response of the nerves and muscular tissue to stimuli. *Sci. Amer. Sup.*, July 4, 1903, p. 22992.

bathmotropism (bath-mot'rō-pizm), *n.* [*bathmotrop-ic* + *-ism*.] Interference with the excitability of a muscle.

batholite (bath'ō-līt), *n.* Same as ★*batholith*.

batholith (bath'ō-lith), *n.* [Gr. *βάθος*, depth, + *λίθος*, stone.] A large mass of deep-seated igneous rock which may be exposed by erosion. The texture is granitoid and the shape indefinite. Batholiths of granite may cover hundreds of square miles. Contrasted with *laccolith*, ★*bysmalith*, ★*intruded sheet*, etc. Also *batholite*, *bathylite*, and *bathylith*.

Yet it is clear from a survey of geological literature, that the field evidence for such a view is but negative in the great majority of stocks and so-called "*batholiths*." Most of them are not true laccoliths, as they characteristically occur in regions of great structural complexity, where igneous contacts have none but the most remote sympathy with the structural planes of any one bedded series. *R. A. Daly*, Amer. Jour. Sci., April, 1903, p. 270.

batholithic (bath-ō-lith'ik), *a.* [*batholith* + *-ic*.] Relating to, originating in, or derived from a batholith.

batholitic (bath-ō-lit'ik), *a.* Same as ★*batholithic*.

Bathonian group. See ★*group*[1].

Batho's furnace. See ★*furnace*.

bath-sponge, *n.*—**Egyptian bath-sponge.** Same as *sponge-gourd* or *Luffa Ægyptiaca*.

Bathurst bur. See ★*bur*[1].

bathybic (ba-thib'ik), *a.* [*bathyb*(*ius*) + *-ic*.] Living in the depths of the water, or near the bottom under the deep water.

The deepest part of this zonary fauna forms the *bathybic* plankton. . . . One might also call them 'abyssal plankton' if it were not more practicable to limit the term 'abyssal' to the vagrant and sessile benthos of the deep sea. *Haeckel* (trans.), Planktonic Studies.

Bathybic plankton. See ★*plankton*.

Bathyclupea (bath-i-klō'pē-ä), *n.* [NL., < Gr. *βαθύς*, deep, + L. *clupea*, herring.] A genus of deep-sea fishes of peculiar structure, allied to *Beryx*.

bathyclupeid (bath-i-klō'pē-id), *a.* and *n.* I. *a.* Of or pertaining to the family *Bathyclupeidæ*.

II. *n.* A fish of the family *Bathyclupeidæ*.

Bathyclupeidæ (bath-i-klō-pē'i-dē), *n. pl.* [NL., < *Bathyclupea* + *-idæ*.] A family of deep-sea fishes typified by the genus *Bathyclupea*, with compressed body, long anal fin, and the spinous dorsal little developed.

bathycurrent (bath-i-kur'ent), *n.* [Gr. *βαθύς*, deep, + L. *currens*, current.] A submarine stream or current which does not involve or affect the water at the surface.

The epicurrents, or the surface streams, furnish no evidence relative to the understreams to be found below, which we name *bathycurrents*. *Haeckel* (trans.), Planktonic Studies, p. 625.

Bathyergidæ (bath-i-ėr'ji-dē), *n. pl.* [NL., < *Bathyergus* + *-idæ*.] The *Bathyerginæ* considered as a family. See cut under *Bathyergus*.

Bathygadinæ (ba-thig'a-dī'nē), *n. pl.* [NL., < *Bathygadus* + *-inæ*.] A section of the family *Macruridæ*, typified by the genus *Bathygadus*, lacking the peculiar gill-structures of *Macrurus*.

Bathygadus (ba-thig'a-dus), *n.* [NL., < Gr. *βαθύς*, deep, + *γάδος*, > L. *gadus*, cod.] A genus of deep-sea grenadiers, or *Macruridæ*.

bathygraphic (bath-i-graf'ik), *a.* Showing graphically the depth of a body of water: as, a *bathygraphic* chart.—**Bathygraphic net.** See ★*net*[1].

bathygraphical (bath-i-graf'i-kal), *a.* Same as *bathygraphic*.

Bathylaginæ (bath″i-la-jī'nē), *n. pl.* [NL., < *Bathylagus* + *-inæ*.] A group of deep-sea fishes of the family *Microstomidæ*, typified by the genus *Bathylagus*.

Bathylagus (ba-thil'a-gus), *n.* [NL., < Gr. *βαθύς*, deep, + *λαγός*, a hare, also a kind of fish.] A genus of deep-sea fishes, with small mouth and of fragile structure, of the family *Microstomidæ*.

bathylimnitic (bath″i-lim-nit'ik), *a.* [Gr. *βαθύς*, deep, + *λίμνη*, lake, + *-it-ic*.] Floating or swimming in the depths of fresh water. See also ★*limnitic*, ★*autolimnitic*, ★*zonolimnitic*. Also spelled *bathylimnetic*.

bathylite, bathylith (bath'i-līt, -lith), *n.* Same as ★*batholith*.

bathylithic, bathylitic (bath-i-lith'ik, -lit'ik), *a.* Same as ★*batholithic*.

bathymeter, *n.* 2. A simple apparatus for gaging the depth of liquids in wells and tanks. It consists of an air-tube dipping into the liquid to be measured, and an air-compressor connected both with this tube and with a reservoir of liquid into which there dips a gage-glass. When the air-compressor is worked the liquid rises in the gage until the pressure is sufficient to force air out of the bottom of the air-tube.

Bathymyzon (bath-i-mī'zon), *n.* [NL., < Gr. *βαθύς*, deep, + *μύζων*, ppr. of *μύζειν*, suck in.] A genus of deep-sea lampreys reputed to be without teeth. *Gill*.

Bathyopsis beds. See *bed*[1].

bathypelagic (bath″i-pē-laj'ik), *a.* [Gr. *βαθύς*, deep, + *πέλαγος*, sea.] Swimming or floating both at the surface of the sea and in its depths; pelagic. Most pelagic organisms are *bathypelagic*, some coming to the surface only at night, some only in winter, and some wandering up and down irregularly. See also ★*nyctipelagic*, ★*chimopelagic*, ★*allopelagic*.

I call *bathypelagic* all those organisms which occur not merely at the surface, but also extend down into the depths. *Haeckel* (trans.), Planktonic Studies.

Bathypelagic net. See ★*net*[1].

Bathypteroidæ (bath-ip-te-rō'i-dē) *n. pl.* [NL., < *Bathypterois* + *-idæ*.] A family of deep-sea fishes with the pectoral fins provided with long feelers, typified by the genus *Bathypterois*.

Bathypterois (bath-ip-ter'ō-is), *n.* [NL., < Gr. *βαθύς*, deep, + *Pterois*.] A genus of deep-sea fishes allied to the lizard-fishes.

Bathysaurus (bath-i-sâ'rus), *n.* [NL., < Gr. *βαθύς*, deep, + *σαῦρος*, lizard.] A genus of deep-sea lizard-fishes.

bathyssal (ba-this'al), *a.* [An ignorant or capricious mixture of *bathos* (the deep sea) and *abyssal*.] Pertaining to or inhabiting the deep sea.

There are many vividly colored *bathyssal* animals belonging to all the classes of the animal kingdom and possessing nearly all the hues found in living types in littoral waters.

Quoted in *Science*, May 31, 1901, p. 847.

Bathystoma (ba-this'tō-mä), *n.* [NL., < Gr. *βαθύς*, deep, + *στόμα*, mouth.] A genus of grunts, or hæmulid fishes, found in the West Indies.

batiator-root, *n.* 2. The root of a plant growing in tropical Africa, said to be *Vernonia nigritiana*: used as a febrifuge.

Batidaceæ (bā-ti-dā'sē-ē), *n. pl.* [NL. (Alphonse de Candolle, 1873), < *Batis* (*Batid-*) + *-aceæ*.] A family of dicotyledonous apetalous plants of the order *Chenopodiales*, containing only the monotypic genus ★*Batis* (which see).

batik (bä-tik'), *n.* [Malay *bātik*, Jav. *batik*, designing in color upon cloth.] 1. A process employed by the natives of the Dutch East Indies in executing designs on a material, as a cotton fabric in one or more colors. By covering the design with hot wax the remaining portions of the material may be dyed any color desired, after which the wax is removed in boiling water, leaving the design-color intact. The liquid and process are now used, in the manufactures of Europe, upon velvets, velours, plushes, etc.

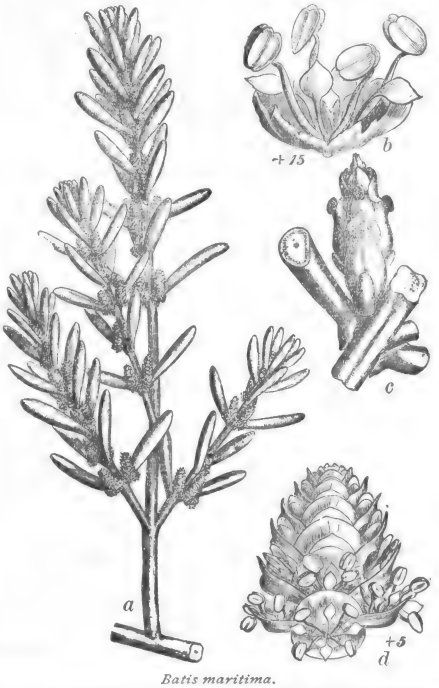
2. The fabric so decorated.

batikuling (bä″tē-kō-ling'), *n.* [Philippine Sp. *baticulin*, *baticuling*; from a native name.] A large tree, *Litsea Perottetii*, of the laurel family, the wood of which is soft, fragrant when fresh, easy to work, and not subject to the attacks of termites, or white ants. It is one of the most useful woods of the Philippine Islands, and is used for making writing-desks and other articles, taking the place of pine. [Philippine Is.]

batillus (ba-til'us), *n.* A rude contrivance, consisting of a board struck by a mallet, once used in the Armenian church service when bells were prohibited. *Stainer and Barrett*.

batino (bä-tē'nō), *n.* [Philippine Sp.; from an unidentified Tagalog name.] *Pala macrophylla* (*Alstonia macrophylla* of Wallich), an apocynaceous tree with milky latex, allied to the dita, or devil-tree. It has horizontal whorls of branches, and whorls of obovate-lanceolate leaves narrowing at the base. The wood, which is white and durable if protected from the weather, is used in construction by the natives. See *devil-tree*. [Philippine Is.]

Batis[1] (bā'tis), *n.* [NL., < Gr. *βατίς*, a flatfish, perhaps the skate or ray.] A generic name



Batis maritima.

a, a flowering branch, somewhat reduced; *b*, an open staminate flower; *c*, section of a stem showing a spike of female flowers in the axil of a leaf, enlarged; *d*, a staminate spike, enlarged. (From Engler and Prantl's "Pflanzenfamilien.")

applied to the rays or skates: equivalent to *Raia*.

Batis[2] (bā′tis), *n.* [NL. (proposed by Linnæus in 1759, established in 1763): said to be in allusion to the resemblance of the fruit to a blackberry, < Gr. *βατίς*, *βάτος*, bramble, blackberry.] A genus of dicotyledonous shrubs, the type and only genus of the family *Batidaceæ*. The single species, *B. maritima*, is a pale-green, strong scented shrub with opposite fleshy, linear or clavate, entire leaves, and small dœcious flowers in axillary cones. It occurs in sand along the coast and in salt-marshes from North Carolina to Florida, Texas, the West Indies, and northern South America.

batitinan (bä-tē-tē′nän), *n.* [Also *batitinang;* Philippine Sp., < Tagalog *batitinang* (Blumentritt).] A large forest-tree, *Lagerstræmia Batitinan*, with straight trunk, exfoliating bark, alternate simple leaves, and the young branches more or less square in cross-section. It yields logs the largest of which are about 40 feet long by 18 inches square. The wood is highly prized for building purposes, and is suitable for making furniture, as a substitute for teak. However, it is subject to the attacks of ship-worms, and in shipbuilding is used only for planking above the water-line. When properly seasoned it stands exposure to the weather, but in house-building and other construction it cannot be used for posts or sleepers, as it decays in contact with the ground. See *Lagerstræmia*. [Philippine Is.]

batlan (bät-län′), *n.*; pl. *batlanim* (bät-lä-nēm′). [Heb. *batlan*, 'unemployed man.'] In Hebrew usage, one of ten men of leisure (batlanim) who are expected to devote their whole time to the affairs of a congregation, and especially to attend divine service in the synagogue. Many synagogues which adhere to the orthodox ritual hire men to attend service, so as to be sure of the requisite ten.

bat-louse (bat′lous), *n.* Any member of the heteropterous family *Polyctenidæ*, which, although true bugs, resemble lice and are parasitic on bats of the genus *Molossus*. Four or five species are known.

Batocrinus (bat-ō-krī′nus), *n.* [Gr. *βάτος*, a bramble, + *κρίνον*, a lily (see *crinoid*).] A genus of extinct crinoids having a pyriform calyx with numerous biserial simple arms and a highly developed and projecting proboscis. It occurs in the Lower Carboniferous of the Mississippi valley.

Baton River series. See ★*series*.

bat-parrakeet (bat′par″a-kēt), *n.* Any one of some 20 species of small parrots of the genus *Loriculus*, or *Coryllis*, which have the habit of hanging suspended by their feet, especially when sleeping. They inhabit the Indo-Malay region. Also known as *hanging-parrots*, *hanging-parrakeets*, and *bat-parrots*.

batrachiate (ba-trā′ki-āt), *n.* An erroneous form for *batrachian*. *Encyc. Brit.*, XXVIII. 139. [Rare.]

Batrachoides (bat″ra-kō-ī′dēz), *n.* [NL., < Gr. **βατραχοειδής*, *βατραχώδης*, frog-like, < *βάτραχος*, a frog + *εἶδος*, form.] A genus of toad-fishes found in tropical America, distinguished by the scaly skin.

Batrachoididæ (bat″ra-kō-id′i-dē), *n. pl.* [NL., < *Batrachoides* + *-idæ*.] The family of toad-fishes typified by the genus *Batrachoides*. Also *Batrachidæ*.

bats (bats), *n. pl.* Colic. See *bot*[1], etym. [Scotch.]—**The bats**, ill humor or condition; the blues: as, to be troubled with *the bats*. [Colloq.]

Batsman's box, on a base-ball field, the space in which the batsman must stand when endeavoring to strike the ball delivered by the pitcher.

battement, *n.* 2. Opposed to the *cadence* (see *cadence*, 4 (*c*)) in that in the latter the trill begins with the principal note.

batten[2], *n.* 2. (*b*) A log less than 11 inches in diameter at the small end. [Maine.] —**Batten observations**, a method of determining a vessel's angle of rolling by observing the rise and fall of the horizon-line on the edge of a suitably marked vertical batten or strip of wood several feet distant from a sight-hole at which the eye of the observer is placed.

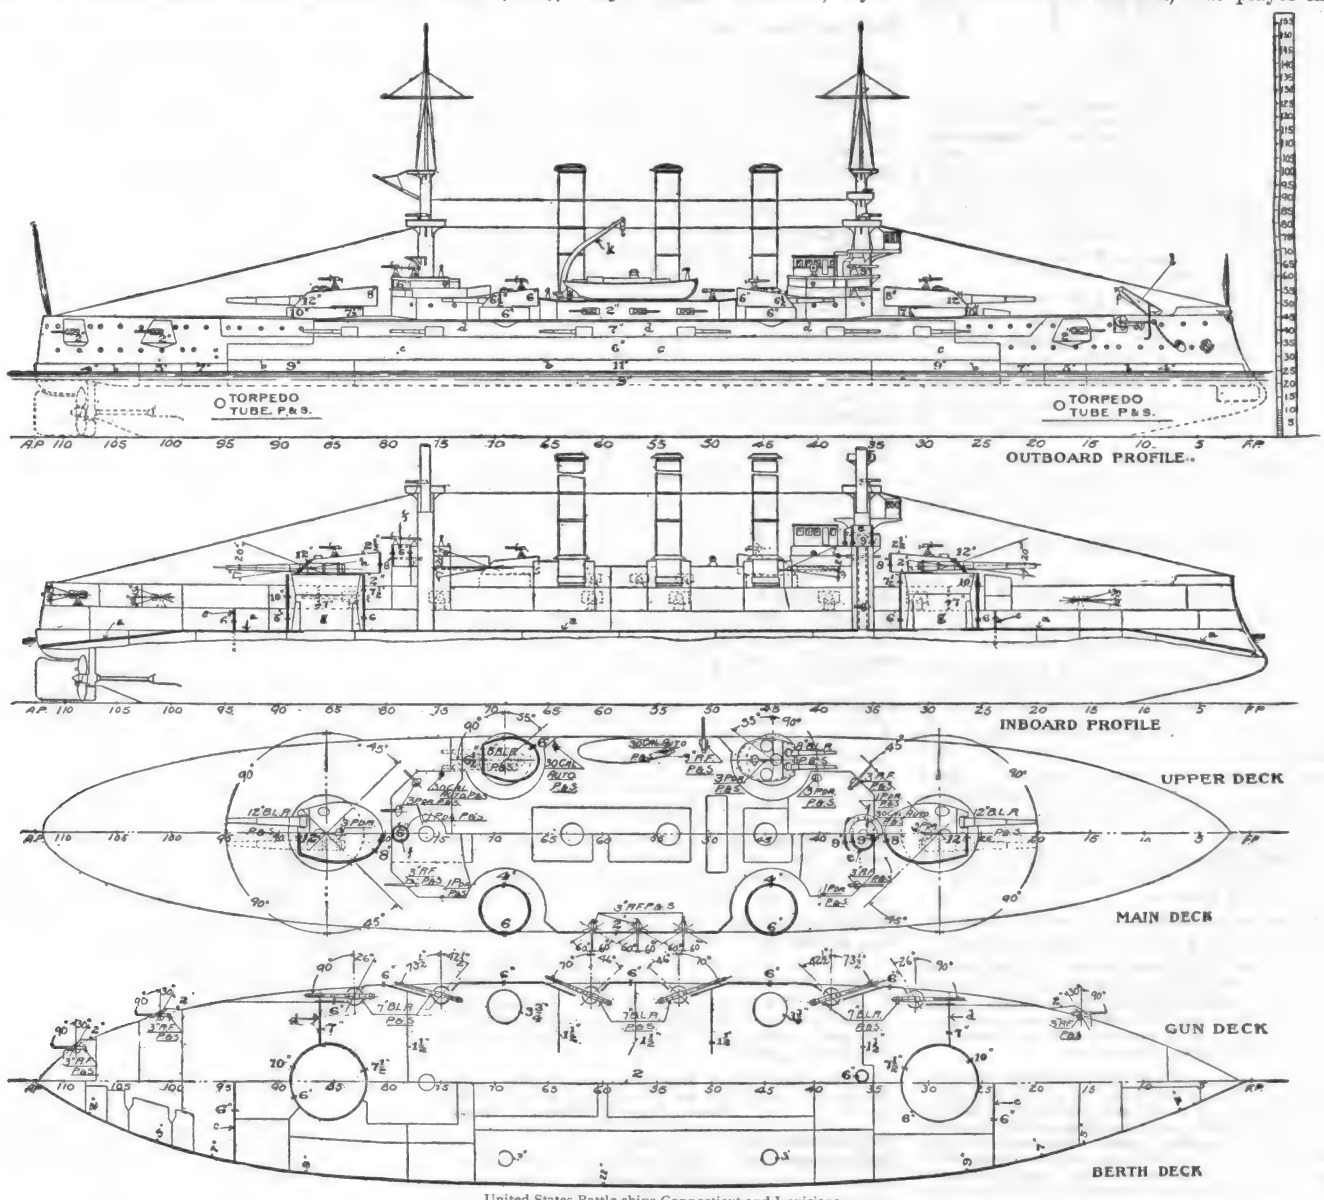
Battenberg lace. See ★*lace*.

batten-floor (bat′n-flōr), *n.* A floor of narrow strips. [Eng.]

batter-board (bat′ėr-bōrd), *n.* 1. One of two or more adjustable boards or straight-edges used in connection with plumb-lines to lay off the batter of a masonry wall.—2. One of two or more horizontal boards, fastened to posts near the corners of an excavation for a wall or building, to which strings are stretched to mark the outlines of the wall or building.

batter-dock (bat′ėr-dok), *n.* 1. The butterbur, *Petasites Petasites*.—2. The floating pondweed, *Potamogeton natans*.

battering-ram, *n.* 3. A child's game in which all the players except two form a circle, one of the latter being inside and the other outside. The one inside the circle endeavors to break through, the player outside assisting him. Should he succeed, that player in the



United States Battle-ships Connecticut and Louisiana.

Length on waterline, 450 ft., beam, 76 ft., 10 in., mean draft, 24 ft., 6 in. Displacement, 16,000 tons. Indicated horsepower of propelling machinery, 16,500. Speed, 18 knots. Armament, 4 12-inch guns in pairs in turrets; 8 8-inch guns in pairs in turrets; 12 7-inch guns in casemates; 20 3-inch guns on decks, and miscellaneous smaller guns, 4 submerged torpedo tubes. Complement, 41 officers, 815 men. B L R = breech-loading rifle, R F = rapid-fire gun, 3 P D R = 3-pounder gun, 1 P D R = 1-pounder gun, 30 cal. auto. = .30 caliber automatic gun. P = port side, S = starboard side. The figures indicate the thicknesses of armor on the different parts: a, protective deck; b, belt armor; c, lower casemate armor; d, upper casemate armor; e, conning tower; f, signal tower; g, 12-inch barbette; h, 12-inch turret; k, boat crane; l, anchor crane.

circle who is responsible for his escape takes his place.

battery, *n.* **16.** In *lumbering*, two or more donkey-engines for dragging logs, set at intervals on a long skid-road.—**17.** In *indigo-manuf.*, a series of vats which are conducted as a unit. They may be either steeping-vats or beating-vats. See ★*vat*.—**18.** A set of stamps in a stamp-mill, comprising the number which fall in one mortar.—**19.** In cœlenterates, a group of stinging-cells.—**20.** A shield or shelter designed to hide the shooters in a grouse-drive; a butt used on English and Scotch moors. They are usually formed of blocks of peat or turf, cut with a spade and built up in the form of a wall, circular, horseshoe, or semicircular in shape.—**21.** In *harpsichord music*, an effect produced by striking a chord in quick repetition for greater sonority. It was indicated by prefixing a vertical curve to the notes of the chord.—**Coal battery**, a form of galvanic battery in which it is proposed to utilize the oxidation of carbon as the means of generating an electric current.—**Dry battery**, a battery of dry cells. See ★*cell*.—**In battery**, in the position for firing; said of a gun.—**Lamp battery**, an arrangement of electric incandescent lamps whereby a current of the required amount and tension may be drawn from the common source of supply. The lamp battery was devised as a means for the distribution of the electric current in psychological laboratories. *Scripture*, New Psychol., p. 483.—**Main battery, secondary battery, tertiary battery.** Same as *main, secondary*, and *tertiary* ★*armament*.

battery-room (bat'ėr-i-röm), *n.* A room in which electric batteries are located.

batting-board (bat'ing-bōrd), *n.* In *weaving*, a device in a Jacquard loom for forcing the needles forward.

batting-flake (bat'ing-flāk), *n.* A kind of stout frame, about 3 feet square, standing 3 feet high, strung with cords about half an inch apart, upon which seed-cotton is batted with sticks for the purpose of preparing it for carding and spinning: a contrivance for use in the home, now seldom employed.

battle-gaff (bat'l-gaf), *n.* In a man-of-war, a gaff placed on a military mast from which to display the national flag when the flagstaff is removed to clear the guns in action.

battle-quoit (bat'l-kwoit), *n.* See ★*chakra*.

Battlesden cart. See ★*cart*.

battle-ship, *n.* Upon the integrity of the raft-body depends the stability of the ship, for if a sufficient part of it is open to the sea, the ship will "turn turtle." It is protected from the enemy's projectiles by a heavy armor-belt. In modern battle-ships the armor-belt extends over the whole or the greater part of the length, but it is usually thicker in the middle portions over the engines, boilers, and magazines. The raft-body is further protected by subdivision into a large number of water-tight compartments in which coal and stores are carried and in some of which are quarters for officers and crew. The compartments just inside the armor-belt are called *coffer-dams* and are frequently packed with obturating material, such as cork or the compressed pith of corn-stalks, which, when wet by the water entering a shot-hole, swells up and closes the hole. In the upper part of the ship is carried the principal offensive power, its battery of guns. This consists of heavy guns, medium guns, and small guns. See ★*armament*. The heaviest guns on the modern battle-ship are from 12- to 14-inch caliber, firing projectiles weighing from 850 to 1,400 pounds, and are mounted in turrets. The very large modern battle-ships (built and building) of the "dreadnought" (see below) and "super-dreadnought" types carry, in the main armament, from ten to twelve such guns. Two have been designed (to be completed 1913) for the United States to carry ten 14-inch guns. Besides the 12-inch many of the United States battle-ships have also from four to eight 8-inch guns, also in turrets. In some cases an 8-inch turret is placed on top of a 12-inch turret, forming what is called a *superposed turret*. This plan has been adopted only on United States battle-ships. The guns of medium caliber, such as the 6-inch and 7-inch, are usually carried in casemates or in an armored citadel subdivided by splinter-bulkheads. When in 1906 the British navy brought out the *Dreadnought* a new standard was set for the battle-ships of the world. The *Dreadnought* differs from older vessels principally in its main battery, which consists entirely of big guns. It also differs from most other vessels previously built in having greater speed, more complete armor protection, greater height of guns above the water-line, and greater size. The United States battle-ships *Delaware* and *North Dakota*, completed in 1909, are of about the same size, speed, and battery as the *Dreadnought*. The following table gives the principal dimensions, etc., of the *Dreadnought* and *Delaware*:

	Dreadnought	*Delaware*
Length	490 feet	518 feet
Beam	82 feet	85.25 feet
Draft	26.5 feet	27 feet
Displacement	17,900 tons	20,000 tons
Horse-power	24,700	25,000
Speed	21.25 knots	21 knots
Main battery	10 12-inch	10 12-inch
Secondary battery	27 12-pdr.	14 5-inch 12 1- to 3-pdrs.

All the principal naval countries of the world now have built or are building vessels of the dreadnought type. See table and also ★*navy*. The side of the ship in the vicinity of the guns is usually covered by armor. The tendency is to put more and more guns into turrets, and in battle-ships of French design the greater part of these medium-caliber guns are in small turrets. In the upper part of the ship, usually well forward, is the conning-tower, from which the captain directs the ship in battle. It contains a steering-wheel, speaking-tubes, battle-order transmitters, engine-telegraphs, and other instruments by means of which orders are given to the engineers below, the officers commanding the guns, etc. On the military masts above are small guns for repelling the attack of torpedo-boats, instruments for finding the range, and yards for displaying signals, and on them are frequently placed the search-lights. The most vulnerable part of a battle-ship being that subject to torpedo attack, the modern tendency is to fight at long range, beyond the effective limit of the automobile torpedo. At long range the heavy guns are much more effective and accurate than those of medium caliber. Hence the tendency is to build battle-ships carrying a greater number of heavy guns, reducing in number or abolishing the medium guns, but retaining a large number of small guns, such as the 3-inch, to repel the attacks of torpedo-boats and other unarmored vessels. As so much weight is required for guns and armor in a battle-ship, comparatively little can be devoted to the propelling machinery; hence battle-ships are of moderate speed as compared with cruisers and torpedo-boats. The modern battle-ship usually has a maximum speed of between 18 and 21 knots. The desire for a type of vessel having much higher speed combined with considerable offensive and defensive power has led to the building in recent years of a class of vessel called *armored* ★*cruisers* (which see). These vessels may be regarded as a special class of battle-ships in which offensive and defensive power have been sacrificed to speed (20 to 28 knots) and coal-endurance.

TYPES OF THE NEWEST BATTLE-SHIPS, BUILT AND BUILDING

COMPLETED	NAME	DISPLACEMENT—TONS	MAIN ARMAMENT	SPEED—KNOTS
GREAT BRITAIN				
1906	Dreadnought	17,900	Ten 12-in.	21.25
1909	Superb	18,600	Ten 12-in.	21.0
1910	St. Vincent	19,250	Ten 12-in.	21.0
1910	Neptune	19,900	Ten 12-in.	21.0
1912	Monarch	22,500	Ten 13.5-in.	21.0
1913	K. George V	22,500	Ten 13.5-in.	21.0
UNITED STATES				
1908	Idaho	13,000	Four 12-in.; eight 8-in.; eight 7-in.	17.0
1909	Michigan	16,000	Eight 12-in.	18.5
1909	Delaware	20,000	Ten 12-in.	21.0
1911	Florida	21,825	Ten 12-in.	20.75
1912	Arkansas	26,000	Twelve 12-in.	20.5
1913	No. 34	27,000	Ten 14-in.	21.0
GERMANY				
1910	Posen	18,200	Twelve 11-in.; twelve 5.9-in.	20.0
	Oldenburg	22,000	Ten 12-in.	20.0
FRANCE				
1910	Voltaire	18,320	Four 12-in.; twelve 9.4-in.	19.0
	Courbet	23,600	Twelve 12-in.; twenty-two 5.5-in.	20.0
JAPAN				
1909	Satsuma	19,250	Four 12-in.; twelve 10-in.	20.0
	Kawachi	20,800	Twelve 12-in.; ten 6-in.	20.5
RUSSIA				
	Gangut	23,000	Twelve 12-in.; sixteen 4.7-in.	23.0
BRAZIL				
1910	Sao Paulo	18,000	Twelve 12-in.; twenty-two 4-in.	21.0
1911	Rio de Janeiro	18,000	Twelve 12-in.; twenty-two 4-in.	21.0

Battley's solution. See ★*solution*.

batule-board, *n.* See *battoule-board*.

Bauera (bou'ē-rä), *n.* [NL. (Banks, 1801), named in honor of the brothers Francis *Bauer* (1758–1840) and Ferdinand *Bauer* (1760–1826), botanic artists of Austrian birth.] **1.** A genus of dicotyledonous shrubs of the family *Saxifragaceæ*, including 3 species, natives of Australasia. It is characterized by its opposite three-lobed sessile leaves, which have the appearance of a six-leaved whorl, and by its axillary solitary flowers.—**2.** [*l. c.*] The Tasmanian name for *Bauera rubioides*, a handsome shrub with pink or white flowers and thin wiry branches which become so entangled as to form almost impenetrable thickets. Also called *native rose, tanglefoot*, and *leg-ropes*.

Bauhinia retusa gum, Bauhinia variegata gum. See ★*gum*².

Baumé (bō-mā'). An abbreviation of "according to the Baumé scale of a hydrometer." See *hydrometer*, and *Baumé* ★*degree*. Abbreviated *Bé*.

Baumes-Chaudes race. See ★*Cro-Magnon*.

baumhauerite (boum'hour-īt), *n.* [Named after Prof. H. *Baumhauer* of Freiburg, Baden.] A sulpharsenite of lead ($Pb_4As_6S_{13}$) from the dolomite of the Binnenthal, Switzerland.

bauta-stone (bou'tä-stōn), *n.* [Icel. *bautasteinn, bautarsteinn*, pl. *bautarsteinar*, orig. ★*brautasteinar*, 'road-stones,' < *braut*, road (< *bijōta* = AS. *brēotan*, break: see *brit, brittle*, and cf. *route*, 'a way broken'), + *steinn* = E. *stone*.] One of the stone monuments set up in Sweden and Denmark, along the highways, in the eleventh and twelfth centuries and earlier, in memory of the dead (or, sometimes, of the absent living).

Bauxite bricks. See ★*brick*².

bava (bä'vä), *n.* [Sp. *bava, baba*, slaver, spittle: see *bavette*.] In the West Indies, particularly in Trinidad, the slimy pulp which adheres to the seeds of the cacao, *Theobroma Cacao*. *Trinidad Mirror*, April 2, 1903.

bave (bäv), *n.* [F.] The double fiber as it issues from the silkworm. It is devoid of cellular structure and is nearly homogeneous in appearance. The single fiber is known as the *brin*.

The reelable cocoon thread or *bave* is composed of two cylindrical fibers or *brins*, consisting of homogeneous matter (fibroin Schorlemmer) surrounded and cemented together by a substance resembling gelatine (sericin or silk-gelatine, Schorlemmer).

Hannan, Textile Fibers of Commerce, p. 166.

bay[1], *n.*—**Swamp bay**, or **swamp red bay**, *Persea pubescens*, formerly considered a variety of *P. Borbonia*. Both belong to the coast of the southeastern United States.

bay[2], *n.*—**Juniper bay**, a swamp of white cedar or "juniper," *Chamæcyparis thyoides*, with or without white bay, *Magnolia Virginiana*. [Dismal Swamp region.]

bay[3], *n.* **10.** In *hydraul. engin.*, an opening through a dam or bulkhead for the passage of water, generally capable of regulation by gates or sluices: as, a *head-bay*, an opening in a dam at the head of a flume or canal.

baya (bä'yä), *n.* [Mex.] The Mexican name of a species of fish, *Mycteroperca jordani*, a form of grouper found in the Gulf of California.

bayabas (bä-yä'bäs), *n.* [Sp. *guayaba*, guava.] A name applied in the Philippines to the guava (*Psidium Guajava*). See *guava*.

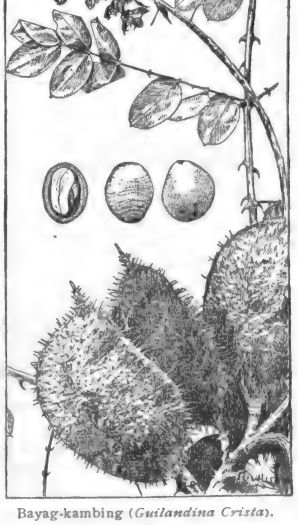
bayacuru (bä"yä-kŏ-rŏ'), *n.* [Tupi.] The highly astringent root of *Statice Braziliensis*. Also *baycuru* and *biacuru*.

bayad (bä-yäd'), *n.* [Ar. *bayáḍ*, whiteness, white of eggs, plaster.] *Bagrus bayad*, a large siluroid fish found in the Nile.

bayadere, *n.* **2.** A weave of fabrics in which stripes run transversely instead of longitudinally.

II. *a.* Applied as a distinctive epithet to textile fabrics horizontally striped, of which various kinds were used for curtains, skirts, etc.: as, a *bayadere* grenadine, a *bayadere* skirt. The word is also applied to the stripes themselves. Balmoral petticoats when first introduced were ornamented with many-colored horizontal stripes around the bottom, and were said to be "*bayadere*-striped" or "skirts *à la bayadère*."

bayag-kambing (bä-yäg-käm'bing), *n.* [Tagalog *bayag cambing*, < *bayag*, testicles, + *cambing*, a goat.] A name applied in the Philippines to the hard, smooth, stony seeds of *Guilandina Crista*, a prickly shrub of the *Cæsalpinia* family, with loosely spreading or climbing branches and bipinnate, prickly leaves. The seeds are inclosed in short broadly ovate prickly pods. They are used medicinally. Their chief interest lies in the fact that an air-space is inclosed between the kernel and the shell, which gives them remarkable buoyancy and makes it possible for them to be transported all over the earth by ocean currents. They are sometimes called *fevernuts, nicker-nuts*, or *Molucca beans*, and in Samoa *anaoso*. In Spanish countries the plant is often called *uñas de gato* ('cat's-claws'), from the sharp recurved prickles with which it is armed.



Bayag-kambing (*Guilandina Crista*).

bayan (bä′yän), *n.* [Tagalog ?] A political division comparable to a township; also, a district of the country. [Philippine Is.]

bayate (bä-yä′te), *n.* [Local Cuban; origin not ascertained.] A silicious rock, consisting of dense amorphous jasper, associated with the manganese deposits of the province of Santiago de Cuba. *Bulletin* 213, *U. S. Geol. Survey*, 1902, p. 252.

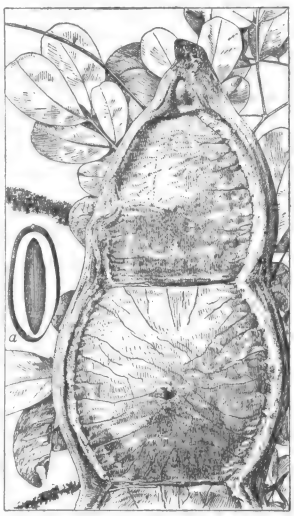
Bayberry fat. Same as *bay-oil*.

bay-head (bā′hed), *n.* The head or upper part of a bay.

bayldonite (bāl′don-īt), *n.* [Named after Dr. John *Bayldon*.] An arseniate of copper and lead occurring in small green concretions: found in Cornwall.

bayocks (bā′oks), *n. pl.* [Appar. due to the otherwise obsolete **bayock, baiock*, an Italian coin: see *baiocco*.] Inferior ostrich-feathers.

bayogo (bä-yō′gō), *n.* [A Philippine name.] In the Philippine Islands, the match-box sea-bean, or similar-pod (*Lens phaseoloides*), a giant climber of the mimosa family. Its stem, which is saponaceous, is pounded between stones and is used by the natives of those islands for washing. See *sea-bean, similar pod*, and *cacoon*. Also called *gogo* (Bisaya) in the Philippine Islands and *gaye* in Guam.



Bayogo (*Lens phaseoloides*.)

bay-oil, *n.* 2. A volatile oil or essence obtained by distilling the leaves of the West Indian bay-tree (*Pimenta acris*).

bayok (bä-yōk′), *n.* [A Philippine name, said to be Tagalog. Cf. Bisaya *bayóg*, name of a tree.] In the Philippine Islands, *Pentapetes acerifolia*, a tree with winged seeds belonging to the family *Sterculiaceæ*. The wood is used in the Philippines for making oars and paddles, and in India for furniture. See *Pterospermum*.

bayon (bä-yōn′), *n.*; Sp. pl. *bayones*. [Philippine Sp., < Tagalog *bayong*.] In the Philippine Islands, a basket or bag made of palm-leaves or rushes. Such bags are used for shipping coffee or rice. Also *bayong*.

bayonet-engine (bā′ọ-net-en″jin), *n.* An engine in which the bed-plate is curved to one side at the end of the guide, so as not to interfere with the crank. Such an engine-bed has, in plan, somewhat the form of a bayonet for which the cylinder is the end of the gun-barrel; hence the term.

bayong (bä-yông′), *n.* [Tagalog.] Same as **bayon*.

bayou, *n.* 2. An abandoned portion of a river-channel forming a lake or swamp following the general course of the main stream: a special case of "ox-bow lake." The bayous of the lower Mississippi river are typical. *Chamberlin and Salisbury*, Geol., I. 181.

bay-plum (bā′plum), *n.* A name in the West Indies for the guava, *Psidium Guajava*.

bay-shark (bā′shärk), *n.* See **shark*[1].

bay-sore (bā′sōr), *n.* An ulcer which affects many of the natives of Honduras (as observed on the coast of the Bay or Gulf of Honduras, or of the Bay Islands).

bazarucco (bä-zä-rō′kō), *n.* [Also *basarucco, basaruco*, E. *budgerook, budgrook*, etc., apparently from a native Indian name at Goa, given as Canarese *bajāra-rokkha*, 'market-money': see *bazaar*, and cf. Canarese *rūka*, a copper coin, Marathi *rukā* or *rukkā*, one twelfth of an anna. (*Yule*).] A coin of copper, tin, or lead, of small and varying value, formerly current at Goa and elsewhere on the western coast of India.

B. B. An abbreviation (*b*) of *best best*, which see under **best*, *a.*, 5; (*c*) of *bail-bond*.

B. B. B. An abbreviation of *best best best*, which see under **best*, *a.*, 5.

B. C. An abbreviation (*b*) of *Bachelor of Chemistry*; (*c*) of *Bachelor of Commerce*; (*d*) same as **C. B.* (*d*); (*e*) of *bail court*.

B. Chem. Same as **B. C.* (*b*).

B. Chir. Same as **C. B.* (*d*).

B. C. L. An abbreviation of *Bachelor of Civil Law*.

B. C. S. An abbreviation (*a*) of *Bachelor of Chemical Science*; (*b*) of *Bachelor of Commercial Science*; (*c*) of *Bengal Civil Service*.

Bd. An abbreviation of *board*.

bdellid (del′id), *a.* and *n.* **I.** *a.* Having the characteristics of or belonging to the lepidopterous family *Bdellidæ*.

II. A mite of the family *Bdellidæ*.

bdelloid (del′oid), *a.* [NL. **bdelloidēs*, < Gr. *βδέλλα*, leech, + *εἶδος*, form. Cf. *Bdelloida*.] Of or pertaining to a leech or to the group *Bdelloida*.

Bdellura (de-lö′rä), *n.* [NL., < Gr. *βδέλλα*, a leech, + *οὐρά*, tail.] The typical genus of *Bdelluridæ*. *Leidy*, 1848. Also *Bdelloura*.

Bdelluridæ (de-lö′ri-dē), *n. pl.* [NL., < *Bdellura* + *-idæ*.] A family of triclad turbellarians having a caudal appendage for fixation. It contains the genera *Bdellura* and *Syncœlidium*, both of which are parasitic on the king-crab (*Limulus*). Also *Bdellouridæ*.

B. D. M., B. D., In *astron.*, abbreviations of Argelander's *Bonn Durchmusterung* of the northern heavens. See **durchmusterung*.

Bé. An abbreviation of **Baumé*.

B. E. An abbreviation (*a*) of *Bachelor of Engineering*; (*b*) of *Bachelor of Elements*; (*c*) of *Bachelor of Elocution*.

beach, *n.*—**Barrier beach,** an off-shore sand-reef inclosing a lagoon or arm of the sea. Strictly speaking, the beach is only the outer slope of the barrier.—**Rolling beach,** a beach on which stones and pebbles are rolled back and forth by the waves.

In times of storm the stones of a *rolling beach*, sometimes to the depth of two or three feet, are carried to and fro with the advance and retreat of the waves. In this movement the bits roll over one another much in the manner of millstones.

Shaler, Nat. Geog. Monographs, v. 143.

Storm-beach, a beach formed by a storm.

beach-chicken (bēch′chik″n), *n.* One of many names for the turnstone, *Arenaria interpres*: used particularly in North Carolina.

beach-combing (bēch′kōm-ing), *n.* In *mining*, working the sands on a beach for gold, tin, or platinum. *Coal and Metal Miners' Pocket-book*.

beach-crab (bēch′krab), *n.* A name applied to any crab living on the sea-beaches, but especially to *Ocypoda arenaria* of the southern coast of the United States.

beach-cusp (bēch′kusp), *n.* One of a number of small points of gravel or sand 20 or 30 feet apart on a beach.

The author comes to the conclusion that *beach cusps* are produced by the interference of two sets of waves of translation on the beach.

Geog. Jour., (R. G. S.), XVI. 704.

beachless (bēch′les), *a.* Without a beach: as, "black rocks, and *beachless*," *William Morris*, Love is Enough, p. 64.

beach-ranger (bēch′rān-jėr), *n.* Same as *beach-comber*, 2.

beach-robin (bēch′rob-in), *n.* The robin-snipe or red-breasted sandpiper; the turnstone.

beach-sap (bēch′sap), *n.* A species of sea-rocket, *Cakile Chapmani*, found along the shores of the Gulf States.

beach-tramper (bēch′tram-pėr), *n.* A member of the British coast-guard service. [Slang.]

beacon-mark (bē′kọn-märk), *n.* The rude figure of a beacon painted in blue on pieces of stanniferous faience made at Genoa, Italy, in the seventeenth and eighteenth centuries.

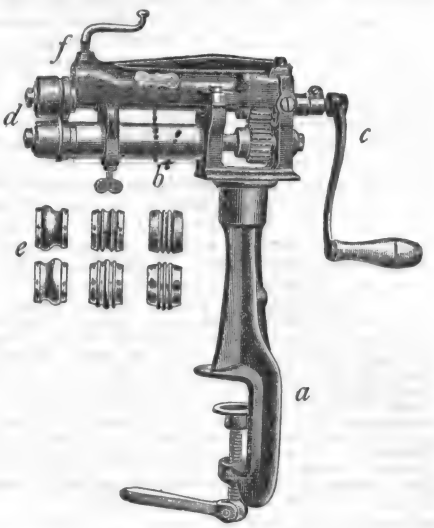
bead, *n.* **11.** In *weaving*, a roughness of yarn due to fraying by friction or rubbing.—**Parting-bead,** a separating bead or rounded strip.

Beaded hair, diseased hair having a series of alternate constrictions and beady swellings.—**Beaded ribs,** ribs the ends of which are enlarged at their junction with the costal cartilages, occurring in rickets and constituting the so-called **rachitic rosary*.

beader, *n.* 2. A wood-working tool resembling a spoke-shave, having a number of interchangeable cutting-irons or -bits: used in reeding, fluting, beading, and routing straight or irregular surfaces; a reeder or molding-tool. See *combination *plane*.—**3.** A *beading-machine (which see).—**Single-handed beader,** a form of beader for reeding or fluting diagonal lines upon wood. It has but one handle.

bead-frame (bēd′frām), *n.* A frame holding beads strung on wires, used in calculating; an abacus.

beading-machine (bē′ding-ma-shēn″), *n.* In *sheet-metal work*, a hand- or power-machine for impressing a bead upon tinware, boxes, cans, covers, collars, gutters, and other objects or parts of objects. The essential features of the many forms of beading-machines are the beading-rolls, placed in pairs, one each on two parallel shafts, and turning together, the face of each roll being of some concave or



Bench Beading-machine.

a, standard, and clamp for securing it to bench; *b*, spindles; *c*, handle for turning spindles; *d*, beading rolls; *e*, sample rolls showing different styles of beading; *f*, pressure control.

corresponding convex form. The sheet-metal to be beaded is passed between the moving rolls and is impressed with the bead or form of the roll-face. Power-machines, by the use of supplementary parts, may also be used as flanging-, forming-, trimming-, and crimping-machines. See *crimper, flanging-machine*, and *forming-machine*.

beading-oil (bē′ding-oil), *n.* See *beading*, 3.

beading-roll (bē′ding-rōl), *n.* See **beading-machine*.

beadlehood (bē′dl-hụd), *n.* The office or dignity of a beadle. *Dickens*.

beadleism, *n.* 2. Same as **beadlehood*.

beadlet (bēd′let), *n.* [*bead* + *-let*.] **1.** A small bead or bead-like drop.—**2.** A small sea-anemone, *Actinia mesembryanthemum*.

bead-lightning (bēd-līt′ning), *n.* A rare form of lightning having the appearance of a string of brilliant beads stretching through a cloud or from cloud to cloud.

According to the testimony of an intelligent eye-witness, who described the rare phenomenon of *bead-lightning* within an hour after it had been seen, it is a very beautiful luminous appearance, like a string of beads hung in a cloud, the beads being somewhat elliptical and the ends of their axes in the line of their discharge being colored red and purple respectively.

Smithsonian Rep. 1899, p. 129.

bead-tree, *n.*—**Coral bead-tree,** *Adenanthera pavonina*, a tree belonging to the mimosa family, bearing scarlet, orbicular, hard, glossy seeds. See *Adenanthera*.—**Mexican bead-tree,** *Erythrina coralloides*. See **colorin* and **chilicote*.—**Texas bead-tree,** *Sophora secundiflora*, a stout shrub or small tree bearing hard red beans in wooden pods constricted at each division between the beans. Also called *frigolito*. See *Sophora*, and *coral bean*, under *bean*[1].

beagling (bēg′ling), *n.* Hunting with beagles.

beak[1], *n.* **1.** (*g*) (3) In the shells of the *Brachiopoda* (*Molluscoidea*) and *Pelecypoda* (*Mollusca*), the projecting, usually arched, part of the valves; the initial part of the shell about which accretions by growth have been added unequally. Beaks in the two valves of the *Brachiopoda* are usually of unequal size and prominence, but in the *Pelecypoda*, they are generally alike. Often termed *umbo*.

2. (*j*) Specifically, the mouthpiece of instruments like the clarinet and some varieties of flageolets or direct flutes.

beak[1], *v. t.* **2.** To ram (a ship) with the beak or prow so as to penetrate the hull in an endeavor to sink it.

beak-sedge (bēk′sej), *n.* Same as *beak-rush*.

beak-wattle (bēk′wot″l), *n.* The large caruncular wattle found at the base of the beak in various breeds of domesticated pigeons, notably in the carrier.

beal[3] (bēl), *n.* [Native name.] A sweet Australian drink made by steeping honey-bearing flowers in water. Also called *bool* and *bull*.

beala, *n.* Same as **belah*.

beam, *n.* **2.** (*j*) In *lace-manuf.*, a tin drum of small diameter, varying in length with the width of the machine, upon which the yarn is wound.—**8.** In *currying*, an inclined table or stand on which the skin is placed while it is

beamed or scraped. *C. T. Davis*, Manuf. of Leather, p. 250.—**Bent beam**, a beam which has a camber, natural or artificial. In English wooden roofs such pieces were chosen for the horizontal chord of the truss, replacing the tie-beam and supporting a king-post. —**Compression beam**, in *bridge-building* and *constructive work*, a beam in a truss, bridge, car, or other structure designed to resist pressure or compression; a compression member: the opposite member of a truss to the *tension member*, usually called the *tension rod*. See *bridge* and *truss*.—**Paper-board beam**, a weighing-beam for ascertaining the number of sheets of board in fifty pounds by weighing one board.—**To tip the beam**, to prove heavier than the weight at the other end of the beam of a balance; weigh or have a weight of (so much): as, *to tip the beam* at 300 pounds. Same as *to tip the scales*. —**Yarn-numbering beam**, a small and very delicate weighing-beam for ascertaining the trade number of any particular lot of yarn. A bunch of fifty yards of yarn is tied by a single thread and hung by the thread on the beam at a point where it balances the beam; the mark on the beam under the thread then indicates the yarn number.

beam, *v. t.* 6. To burnish, as morocco leather, with a beaming-machine; also, in *currying*, to flesh or shave on the flesh side.

beamage (bē′māj), *n.* [*beam* + *-age*.] An allowance in the weight of the dressed carcass of an animal as shown at the beam, to compensate for loss of weight by evaporation in cooling.

beam-arm (bēm′ärm), *n.* In *ship-building*, the outer end of a beam where it joins the framing at the ship's side.

> In wood ships, working at the *beam-arms* was very common during heavy rolling at sea.
> *White*, Manual of Naval Arch., p. 326.

beam-element (bēm′el″ē-ment), *n.* An infinitesimal longitudinal element of any beam; an elementary fiber. In a beam of uniform cross-section, the beam-element is parallel to any element in the surface of the beam.

beam-face (bēm′fās), *n.* In *currying*, the surface of the beam on which a skin is placed for shaving. *C. T. Davis*, Manuf. of Leather, p. 301.

beam-hanger (bēm′hang″ėr), *n.* Same as ★*stirrup-iron*, 2.

beam-house (bēm′hous), *n.* The room or portion of a curriery in which the unhairing of the skins is done. *Flemming*, Practical Tanning, p. 1.—**Beam-house machine**. Same as *beaming-machine*, 2.

beaminess (bēm′i-nes), *n.* 1. Breadth of beam: as, a ship of great *beaminess*.—2. Radiance. *Richardson*, Pamela, IV. 384.

beamit (bē′mit), *n.* [Appar. an arbitrary formation from *beam*, *v. t.*, + *-it*.] The commercial name of a compound made for unhairing hides and pelts. *Flemming*, Practical Tanning, p. 431.

beam-knee (bēm′nē), *n.* In *ship-building*, a reinforcement of the end of a deck-beam where it is attached to the side of a vessel to strengthen the whole against the racking effects of rolling at sea. In a wooden ship with wood beams the knees are separate knee-shaped pieces of timber. See *knee*, 3, (*a*). In steel ships they are sometimes triangular pieces of plate riveted to the beam and to the frame, and sometimes are formed by bending down the lower part of the beam itself and welding in a piece of plate forming a triangular prolongation which is riveted to the frame and called a *welded beam-knee*.

beam-motion (bēm′mō″shon), *n.* A motion involving the use of a reciprocating lever or walking-beam.

beam-scale (bēm′skāl), *n.* A weigh-beam (which see).

beam-shaft (bēm′shaft), *n.* The shaft which carries the walking-beam of an engine.

beamsman (bēmz′man), *n.*; pl. *beamsmen* (-men). A man who works in a beam-house: same as *beamster*. *Modern Amer. Tanning*, p. 54.

beam-supports (bēm′su-pōrts″), *n. pl.* The brackets or standards which carry the bearings for the shaft of a walking-beam.

beam-trawling (bēm′trâl″ing), *n.* A method of fishing with a trawl attached to a beam and dragged on the bottom. *Science*, March 29, 1901, p. 510.

beam-wheel (bēm′hwēl), *n.* In *weaving*, a gear attached to the cloth beam or roller of a loom.

beam-work (bēm′wėrk), *n.* Work done in a beam-house. *Modern Amer. Tanning*, p. 41.

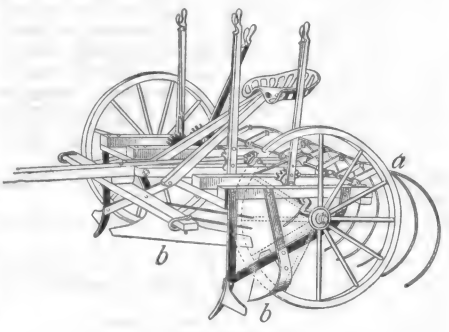
bean[1], *n.*—**Adzuki bean**, a variety of the gram, *Phaseolus Mungo*, much cultivated in Japan for making bean-flour and confectionery.—**Banana bean**. Same as *velvet-★bean*.—**Bean cutworm**. See ★*cutworm*.—**Bean ladybird**. Same as ★*bean-beetle*.—**Bean leaf-beetle**. See ★*leaf-beetle*.—**Bean vine-borer**. See ★*vine-borer*.—**Black bean**. (*a*) See *Egyptian beans*, under *bean*[1]. (*b*) The seed of the bean-tree or Moreton Bay chestnut, *Castanospermum australe*, which, though poisonous when green, is rendered harmless by cooking and forms part of the diet of the aborigines.—**Bonavist bean**, a West Indian name for the lablab or hyacinth bean, *Dolichos Lablab*.—**Coral bean**, a name applied to various leguminous plants of the genus *Erythrina*, as *E. arborea*, bearing bright scarlet beans in pods which burst after maturing. See *Erythrina*.—**Espinoza bean**. See *Mexican* ★*coffee*.—**Florida bean**, a name applied to both the seabean and the oxeye bean, which are often washed up on the coast of Florida.—**Jack bean**, the sword-bean, *Canavali ensiforme*, growing well in the southern United States, but not much eaten by animals.—**Jumby beans**, a name in the West Indies for the seeds of the lead-tree, *Leucæna glauca*.—**Leichhardt's bean**. Same as *Queensland* ★*bean*.—**Lima-bean stem-borer**. See ★*stem-borer*.—**Lima-bean vine-borer**. See ★*vine-borer*.—**Madagascar bean**. Same as *Egyptian bean*. See *Dolichos* and *bean*[1]. **Match-box bean**, the simitar-pod, *Lens phaseoloides*, the large, flat seeds of which are sometimes made into snuff-boxes, match-boxes, and other small articles. See *Entada*.—**Metcalfe bean**, *Phaseolus retusus* of the table-lands of New Mexico, etc., a promising forage-plant.—**Mexican coral bean**, the seeds of *Erythrina coralloides* and of *Dolicholus phaseoloides*. See ★*colorin*, ★*chilicote*, and *Mexican rosary* ★*pea*. —**Navy bean**, the common white variety of the kidney- or garden-bean.—**Negro bean**, a woody climber of eastern India and Ceylon, *Stizolobium monospermum*. The roundish, hairy pods each contain a single flat seed, about an inch in diameter, which is used as food and medicine.—**Pichurim-bean fat**, a fixed oil from Pichurim bean, *Acrodiclidium Puchury-major*, said to contain the glyceride of lauric acid.—**Queensland bean**, the Australian name for the simitar-pod, *Lens phaseoloides*. Also called *Leichhardt's bean*.—**Rattle-snake bean**, the cedron, *Simaba Cedron*, so called from its use in the treatment of snake-bites.—**Seewee bean**, the small lima, or butter-bean, preferred in the southern United States to the large lima.—**Snap-bean**, a string-bean: so called because the pods thus used break with a snap: often simply *snap*, and used mostly in the plural.—**Turkish bean**. Same as ★*fire-bean*.—**Velvet-bean**, *Stizolobium utilis* (*Mucuna utilis* of Wallich), widely grown in the tropics and much cultivated in the southern United States as a forage and green-manure crop. See *Mucuna* and *ox-eye bean*, under *bean*[1].—**Wild bean**. (*b*) Any native species of *Phaseolus*.

bean-bag (bēn′bag), *n.* A bag containing, or designed to contain, beans; specifically, a child's game played with bags full of beans. Various games are played with bags of beans, oats, sand, or other material.

bean-beetle (bēn′bē″tl), *n.* A coccinellid beetle, *Epilachna corrupta*, which damages growing beans in the western United States, differing in this phytophagous habit (together with other members of the same genus) from the usually carnivorous members of the family *Coccinellidæ*.

bean-blight (bēn′blīt), *n.* A disease of beans caused by *Bacillus Phaseoli*.

bean-harvester (bēn′här″ves-tėr), *n.* A horse-power machine for cutting, gathering, and depositing in windrows field bean-plants preparatory to threshing. It resembles in general design a hay-rake, having in addition inclined knives placed in advance of the rake.



Bean-harvester.
a, rake; *b*, *b*, knives for cutting off plants.

bean-louse (bēn′lous), *n.* An aphis which attacks the bean, as *Aphis rumicis*.

bean-mildew (bēn′mil″dū), *n.* A disease of beans attacking particularly the pods, although occasionally the leaves and stems. It is caused by *Phytophthora Phaseoli*.

bean-stick (bēn′stik), *n.* A form of coagulated legumin or vegetable casein.

bean-thresher (bēn′thresh″ėr), *n.* A large power threshing-machine adapted to threshing bean-plants and resembling in general plan the wheat-threshing machine. It is fitted with a self-feeder or feed appliance, a bolting appliance, a dirt-conveyer for removing the dirt or waste to a distance, a dust-collector-and-conveyer for removing the dust from the machine, a wind-stacker, and a recleaner for cleaning the threshed beans. See *threshing-machine* and ★*wind-stacker*.

bean-vine (bēn′vīn), *n.* 1. The plant of any climbing bean.—2. The wild kidney-bean, *Phaseolus perennis*; also *Strophostyles helvola*. See *Strophostyles*.

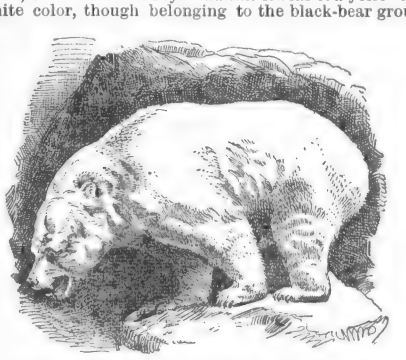
bean-weevil, *n.*—**Common European bean-weevil**, a cosmopolitan bruchid beetle, *Bruchus rufimanus*, of probable European origin, infesting beans.—**Four-spotted bean-weevil**, a bruchid beetle, *Bruchus quadrimaculatus*, probably from the tropical Orient originally, but now of wide distribution. It infests beans and cow-peas.—**Mexican bean-weevil**, an American bruchid beetle, *Spermophagus pectoralis*, which infests beans in Central America and the West Indies.

bear[1], *v. i.*—**To bear back**, to fall back. *Shak.*, J. C., III. ii.—**To bear down**, specifically in *obstet.*, to make a straining effort to supplement the contraction of the uterus during childbirth.

bear[2], *n.* 10. The panda, *Ælurus fulgens*, otherwise called *bear-cat*.—**Baste the bear**, a child's game in which one of the players acts the part of the bear and another that of the bear's master. The others endeavor to hit the bear with knotted handkerchiefs. The bear's master, still holding the bear by a rope, endeavors to touch one who is doing this. If he succeeds in touching a player who is trying to strike the bear, without pulling the bear out of a marked ring in which he is placed, the one struck becomes the bear.—**Glacier bear**, *Ursus emmonsi*, a small species, allied to the black bear, but of a general bluish-gray color. The outer side of the limbs and a stripe down the back are black; the muzzle and front of the cheeks are tan-color. It is rare and is apparently confined to the vicinity of Mount St. Elias, Alaska.—**Kadiak bear**, *U. middendorffi*, a huge species, perhaps the largest of all bears, related to the brown bears of Europe and Asia. It is of a dark reddish-brown color in summer, lighter in winter; but the color appears to be variable. A number of related species have been described from Alaska, as the *Sitka bear*, *U. sitkensis*, the *Yakutat bear*, *U. dalli*, etc., but they are of doubtful validity. Several species of black bear are now recognized, among them the Louisiana and Florida bears, *U. luteolus* and *U. floridanus*. A bear of a yellowish-white color, though belonging to the black-bear group, has been described from British Columbia under the name of *Ursus kermodei*.—**The Bear**, a familiar name for Russia.

The Glacier Bear (*Ursus emmonsi*—Dall).

The Great Kadiak Bear (*Ursus middendorffi*—Merriam).



The Inland White Bear (*Ursus kermodei*—Hornaday).

bear-brush (bâr′brush), *n.* A shrub, *Garrya Fremontii*, of the Californian mountains. Also called ★*quinine-bush* (which see).

bear-cat (bâr′kat), *n.* The panda, *Ælurus fulgens*.

bear-clover (bār-klō″vėr), *n.* See ★*clover*.

beard, *n.* **6.** (*b*) Also, a projecting flap of metal soldered to a pipe close to its mouth to improve its "speech." Beards are common on either side of the mouth, and in some kinds of pipe are carried across below the mouth as well. The former are *side-beards*, the latter *cross-beards*.—**11.** *pl.* A breed of pigeons of which the most distinctive character is a crescent-shaped patch of white on the throat just below the beak.

bearded, *a.* **4.** In *bot.*: (*a*) Awned; especially, having long stout awns, as bearded wheat. (*b*) Having a special growth of hairs on certain organs, as on the inside of the corolla in many flowers, for example, those of *Pentstemon*.

beardlet (bērd'let), *n.* [*beard* + *-let*.] A small beard or awn.

beardom (bār'dum), *n.* **1.** The domain of bears; bears collectively.—**2.** Bearish personality or character. *Mrs. Browning*, Greek Christian Poets, p. 191.

beard-token (bērd'tō″ken), *n.* A copper coin struck by Peter the Great of Russia in 1724, to be given to those who had paid the tax of 50 rubles every year for the privilege of wearing their beards.

beardy, *n.* **3.** A fish, *Lotella marginata*, of the family *Gadidæ*, resembling the loach: so named from the barbel under its chin. Also called *ling*. [New South Wales.]

bearer, *n.* **13.** In *shipbuilding*, a support or foundation in the interior of a vessel for engines or boilers: usually in the plural: as, *engine-bearers*, *boiler-bearers*.—**14.** A person, usually a woman or girl, who formerly carried coal in baskets from the workings to the shaft, and in many cases up the ladders to the surface. The bearer was usually the miner's wife or daughter. *Barrowman*, Glossary. [Scotch.] —**15.** In *geom.*, a system of costraight points is called a *range*, of which the straight is the *bearer*. A system of copunctal straights is called a *pencil*, of which the intersection point is the *bearer*.—**16.** *pl.* In *mining*, pieces of timber 3 or 4 feet longer than the breadth of a shaft, which are fixed into the solid rock at the sides at certain intervals: used as foundations for sets of timber. *Coal and Metal Miners' Pocket-book*.—**Bearer's way,** in *mining*, an underground road or passage along which the bearers carried their burdens. See ★*bearer*, 14. *Barrowman*, Glossary. [Scotch.]

bearer-plate (bār'ėr-plāt), *n.* A metal plate placed under a beam or girder where it rests on a wall or foundation.

bear-grass, *n.* **2.** A bunch-grass, *Stipa setigera*, ranging from the mountains of California, where it is considered valuable, to Oregon and Texas.

bearing, *n.* **7.** (*b*) That part of a construction which receives a superincumbent weight. (*c*) The act or condition of taking or supporting that weight: thus, the upper bed of a block or pier affords a *bearing* of so many square inches; or may be said not to give a good *bearing*, or to need an iron plate to provide a better *bearing*. (*d*) That part of a superincumbent mass which rests directly upon the supporting member: thus, a lintel has 6 inches' (or 48 square inches') *bearing* at either end.—**Absolute bearing** (*naut.*), the direction of an object as determined by the compass, that is, with reference to the north point of the heavens.—**Combination bearing,** a form of bearing for shafts or axles in which the contact and load-carrying surfaces are made up of combinations of rollers and balls (making a combination of ball-bearing and roller-bearing) to diminish friction and loss of power.—**Compass bearing.** Same as *absolute bearing*.—**False bearing,** the resting of a weight, as a piece of wall or a pier, upon a support which is not continued straight down to the foundation, as when the windows in a front are not placed exactly one over another, so that the piers between the upper windows come partly over the openings below. Parts of a building supported on corbels or brackets or girders may be said to have false bearing.—**Liquid bearing,** a form of bearing in which some liquid, such as oil or water, is forced under pressure between the two metallic surfaces which mutually restrain each other's motion, so as to keep them apart. Liquid friction replaces the sliding friction of the metals, and is less than the mediate friction between lubricated surfaces. See *water-bearing*.—**Plain bearing,** a common cylindrical bearing, as distinguished from a *roller-*, *ball-*, or *combination bearing*.—**Relative bearing,** direction observed or stated in relation to the ship's head.

bearing-bar (bār'ing-bär), *n.* A bar at the back end of a boiler-furnace which carries the ends of the grate-bars.

bearing-doors (bār'ing-dōrz), *n. pl.* In *mining*, double air-doors on a main airway. *Barrowman*, Glossary. [Scotch.]

bearing-pit (bār'ing-pit), *n.* In *mining*, a shaft up which coal was formerly carried by bearers. *Barrowman*, Glossary. [Scotch.]

bearing-plate (bār'ing-plāt), *n.* A carrying or supporting plate; a plate used to furnish a proper bearing-surface for a heavy load.

bearing-road (bār'ing-rōd), *n.* A road on the line of bearing; a road used by bearers. See ★*bearer*, 14. *Barrowman*, Glossary. [Scotch.]

bearishly (bār″ish-li), *adv.* In a bearish manner (in either sense of the adjective).

bear-jug (bār-jug), *n.* A stoneware vessel at one time popular in certain localities in England. It was made in the form of a bear, was usually dark brown in color, had a rough surface produced by the application of small shavings of clay, and was used either as a tobacco-jar or a beer-jug, the detachable head or cover serving the purpose of a drinking-cup. Also called *bear*.

Bearnaise sauce. See ★*sauce*.

bear-oak (bār'ōk), *n.* Same as *scrub-oak* (*c*).

bear-pipe (bār'pīp), *n.* An obsolete organ-stop with pipes so covered or inclosed that they gave a hoarse, muffled sound.

bear's-foot, *n.* **2.** A stout composite plant, *Polymnia Uvedalia*; or, especially, its root, vaguely claimed to be an alterative.

Bear-trap dam, weir. See ★*dam*[1].

bearwood, *n.* **2.** Also *Rhamnus crocea*, the evergreen bearwood.

beastdom (bēst'dum), *n.* **1.** The domain of beasts; beasts collectively.—**2.** The condition of beasts; beasthood.

beast-gate (bēst'gāt), *n.* In Suffolk, England, land and common for one beast. *Black*, Law Dict.

> The right [a right of common in gross] is then generally known as a cattle-gate or *beast-gate*.
> *Encyc. Brit.*, XXVII. 168.

beast-god (bēst'god), *n.* A deity conceived in animal form.

beastling (bēst'ling), *n.* A little beast; a little animal. *Miss Braddon*, Bitter End, p. 51.

beat[1], *v. t.* **20.** In *cricket*, to break through (a batsman's defense): said of the bowler or the ball.—**To beat a retreat,** to give the signal by drum-beat to retreat; hence, simply, to retreat.—**To beat out** of (something), to secure the surrender or relinquishment of (something) by persistent effort.—**To beat the Dutch.**—See *Dutch*.—**To beat the hoof,** to go on foot.

beat[1], *n.* **12.** In *fencing*, a smart tap on the adversary's blade to disconcert him or drive the blade aside for the thrust.—**13.** The act of overcoming or surpassing; specifically (in newspaper cant), the securing and publishing of some news item by a newspaper in advance of its competitors.—**14.** The news item itself. —**15.** The act of beating or ranging over a cover for game; the company, collectively, of those engaged in beating for game.—**Primary beat,** in *acoustics*, a beat produced by the interference of two musical tones which are nearly in unison.—**Secondary beat,** in *acoustics*, a beat produced by the interference or combination of two primary beats.

beatable (bēt'ạ-bl), *a.* Capable of being beaten. *Cotgrave*.

beat-borough (bēt'bur″ō), *n.* Same as ★*beat-hill*.

beat-earth (bēt'ėrth), *n.* An earth of black color containing iron ore, found in some of the western islands of Scotland.

beatee (bē-tē'), *n.* One who is beaten.

beater, *n.*—**Porcupine beater,** a cylinder or beater consisting of a number of spikes or blades for opening and mixing the matted layers of cotton from the bale; part of a machine known in the cotton-factory as an *opener*. Also called *porcupine cylinder*.

beat-hill (bēt'hil), *n.* [*beat*[3], *n.*, + *hill*.] A heap of beat or land-parings ready for burning. Also called *beat-borough*.

beating-vat (bē'ting-vat), *n.* A vat in which the liquor extracted from the fermenting indigo-plant is agitated to expose it to the air, in order that the indigo white it contains may be oxidized to indigo blue. The operation was formerly done by natives who beat the liquor with paddles, but it is now done mechanically.

Beatson's operation. See ★*operation*.

beat-tone (bēt'tōn), *n.* In *acoustics*, a musical tone produced by a beat too rapid to enable the separate pulses to be distinguished, and having a frequency falling with the range of audibility. Combination-tones, which are described by Koenig as *beat-tones*, are held by some authorities, notably by von Helmholtz, to have a different explanation.

> What becomes of the beats when they occur too rapidly to produce on the ear a discontinuous sensation? On this matter there have been several conflicting opinions, some holding, with Lagrange and Young, that they blend into a separate tone; others, with von Helmholtz, maintaining that the combinational tones can not be so explained and arise from a different cause. Let it be observed that, even if *beat-tones* exist, it is quite possible for beats and *beat-tones* to be simultaneously heard.
> *Smithsonian Rep.* 1890, p. 342.

beau-catcher (bō'kach-ėr), *n.* A small flat curl worn by women on the temples. [Humorous.]

Beaufort beds, scale. See ★*bed*[1], ★*scale*[3], *n.*

Beau gregory. See ★*gregory*.

beau-idealize (bō″ī-dē'a-līz), *v. t.* To invest with ideal qualities. [Nonce-word.]

Beaujard process. See ★*process*.

beaumontage (bō-mon-täzh'), *n.* [*Beaumont*, a surname, + *-age*.] A name of various compounds used for filling up holes which it is desired should be concealed. For this purpose pattern-makers use a mixture of chalk and varnish, and iron-founders a mixture of borings and sal ammoniac.

beaupleader (bō'plē″dėr), *n.* In *old Eng. law*, a writ directed to the sheriff, bailiff, or other officer, forbidding him to take the fine formerly imposed for not pleading aptly and to the purpose.

beauregarde (bō'rē-gärd), *n.* A corruption of ★*budgerigar*.

beauty, *n.*—**Painted beauty,** a nymphalid butterfly, *Vanessa huntera*, common to the United States and the Mexican table-land. Its larva feeds on the everlasting (*Gnaphalium*) and allied plants. The wings above are dark brown, with large irregular spots of golden orange and several white spots at the apex of the front pair. The hind wings each have two submarginal eye-spots on the under side.

beautyship (bū'ti-ship), *n.* The personality of a beauty: as, your *beautyship*: formed on the analogy of *ladyship*. *Bailey*, Festus. *N. E. D.*

Beauvais tapestry. See ★*tapestry*.

Beaver parasite, a peculiar coleopterous insect, *Platypsyllus castoris*, type and sole species of the family *Platypsyllidæ*, occurring upon European and American beavers, where it may feed on the hair or epithelial scales, or upon a parasitic mite, *Schizocarpus mingaudi*.

beaverish (bē'vėr-ish), *a.* Like a beaver. *Carlyle*. [Rare.]

beaverism (bē'vėr-izm), *n.* The condition of a beaver; a beaverish trait. *Carlyle*.

beavery (bē'vėr-i), *n.*; pl. *beaveries* (-iz). A place where beavers live or are kept. *Buckland*. *N. E. D.*

beblast (bē-blast'), *v. t.* To blast completely; dry or wither up: as, "*beblasted* with lightning," *Phaer*, Æneid.

beblood (bē-blud'), *v. t.* To smear or cover with blood. *North*, Plutarch, p. 16.

bebog (bē-bog'), *v. t.*; pret. and pp. *bebogged*, ppr. *bebogging*. To entangle in a bog. [Rare.]

bebung, *n.* **2.** Specifically—(*a*) An effect produced upon the obsolete clavichord by balancing the finger on the key so as slightly to rub the tangent against the string and thus prolong the tone with a gentle pulsation. (*b*) An effect, common in violin-playing, produced by rocking the finger of the left hand in stopping a string so as to produce a slight waver or tremolo in the pitch. (*c*) An effect in singing produced by a slight unsteadiness in the breath so as to cause a waver both in pitch and in resonance. See *tremolo* and *vibrato*.

Bec-Carcel (bek-kär-sel'), *n.* The Carcel lamp, used as a standard of light in France. See *light* ★*standard*.

Becchi test. See ★*test*[1].

bêche (bāsh), *n.* [F.] A hollow cone-shaped grip for drawing a broken rod from a bore-hole. *Barrowman*, Glossary.

bechilite (bek'i-līt), *n.* [Named after E. *Bechi*, an Italian mineralogist.] A hydrous calcium borate occurring as an incrustation at the boric-acid lagoons in Tuscany.

beckelite (bek'el-īt), *n.* [After Professor Friedrich Becke, of Vienna.] A silicate of the cerium metals and calcium (perhaps essentially $Ca_3(Ce, La, Di)_4Si_3O_{15}$), occurring in octahedrons and dodecahedrons, also in coarse yellow grains, in the rock of the eleolite-syenite type called mariupolite: found on the shore of the sea of Azov.

Becker's sodium process. See ★*process*.

becket[2], *n.* (*f*) A large hook used in loading logs on cars by means of tackle. (*g*) In *marine hardware*, a brass or iron ring forming a part of a metal block, the block and becket being cast in one piece.

Iron Block. *a*, eye; *b*, becket.

becket-block (bek'et-blok), *n.* A pulley-block having a rope-eye or becket.

becket-hitch (bek'et-hich), *n.* See *hitch*.

Beckwith's clover. See ★*clover*.

beclaw (bē-klâ′), *v. t.* To scratch and claw all over. *Holland*, Plutarch.

beclog (bē-klog′), *v. t.*; pret. and pp. *beclogged*, ppr. *beclogging*. To clog thoroughly, as with something sticky.

beclothe (bē-klōᵺ′), *v. t.* To cover fully with clothes; clothe.

Becquerel ray. See ★*ray*[1], *n.* **Becquerel's electrochemical photometer.** See ★*photometer*.—**Becquerel's volumenometer.** See ★*volumenometer*.

becross (bē-krôs′), *v. t.* To mark with the sign of the cross; decorate with a cross or crosses.

becrown (bē-kroun′), *v. t.* To crown: as, "the forest which *becrowns* the isle," *Monthly Mag.*, VIII. 806.

becudgel (bē-kuj′el), *v. t.*; pret. and pp. *becudgeled* or *becudgelled*, ppr. *becudgeling* or *becudgelling*. To belabor with a cudgel; cudgel soundly.

becuiba fat. Same as *becuiba-tallow* (which see, under *tallow*).

becum, *v.* A simplified spelling of *become*.

bed[1], *n.*, **7.** (*n*) The curved piece of wood which forms the main section of the platform carriage-part of a vehicle.—**Arzzarola beds,** in *geol.*, a member of the *Rhætic* or Upper Triassic strata in the Lombardy Alps.—**Ashley beds,** in *geol.*, a name introduced by Tuomey for beds in South Carolina, along the Ashley river, consisting of calcareous marls of Eocene age and lying above the Santee beds. They abound in fossils, among which remains of the extinct whale, *Zeuglodon*, are notable.—**Back-set bed,** an inclined layer deposited at the head of a glacial sand-plain as the ice-mass retreats.—**Bathyopsis beds,** the organic or paleontologic name given to the Wind River group of the Lower Eocene in the Rocky Mountain region. See *Wind River* ★*group*.—**Beaufort beds,** in *geol.*, a division of the Karoo formation in South Africa, regarded as of Permian age, consisting of nearly horizontal sand and shale beds with intercalated volcanic rocks, and constituting the middle division of that group. They contain a considerable flora, in which the genus *Glossopteris* is conspicuous, and a remarkable reptilian fauna.—**Bed of state,** a richly decorated and finely appointed bed for show, or for use on state occasions, as when the dead body of some great personage is lying in state. See ★*state-bed*.—**Belgrano beds,** in *geol.*, a division of the Cretaceous rocks in Patagonia.—**Blackheath beds,** in *geol.*, a division of the Lower Eocene of the London basin lying below the London clay and above the Woolwich beds. These strata, though of slight thickness (20–40 feet) and almost wholly composed of rolled flints, have afforded numerous fossils, mostly marine, but partly estuarine.—**Bognor beds,** in *geol.*, the representative in Hampshire of the London clay or the upper division of the Lower Eocene. They consist of clays and sands, and contain many fossils. See *London clay*.—**Bononian beds** [LL. *Bononia*, later *Bolonia*, F. *Boulogne*], a division or substage of the Upper Jurassic, equivalent in part to the Kimmeridge clay of Britain and typically exposed along the coast at Boulogne-sur-Mer. The rocks are clays, sands, and sandstones; the fossils in them are abundant and indicate a littoral deposit.—**Borkholm beds,** in *geol.*, a division of the Baltic Silurian formations lying at the top of the Lower Silurian and consisting chiefly of limestones which are composed of calcareous algæ and carry an abundant fauna.—**Bottom-set bed,** in *geol.*, fine sediments carried by a stream some distance beyond its debouchment, and settling into essentially horizontal beds in advance of the delta-front. In time the inclined *fore-set* beds of coarser material encroach upon them, causing continuous migration seaward.—**Boulder-bed,** in *geol.*, a formation made up of rounded boulders, of glacial origin. The term is used especially in reference to the boulder accumulations supposed to indicate glacial periods in early geologic time. *J. Geikie*, The Great Ice Age, p. 820.—**Bracklesham beds,** in *geol.*, the Middle Eocene deposits as developed in the basin of Hampshire, England. They are composed of clays, sands, marls, and lignites, with a thickness of 1,000 feet at Bracklesham, on the coast of Sussex. The beds are extremely rich in remains of sharks, seasnakes, mollusks of various classes, and *Foraminifera* — a strictly marine deposit.—**Browgill beds,** in *geol.*, a division of the Upper Silurian formation in Westmoreland and Cumberland, England.—**Buchenstein beds,** in *geol.*, a division of the Noric stage of the Triassic rocks in the southern Alps.—**Campil beds,** in *geol.*, the lowest beds of the Triassic bunter-sandstein formation in the southern Alps.—**Cape Fairweather beds,** in *geol.*, the Upper or Pliocene Tertiary beds in Patagonia and adjacent parts of South America.—**Cassian beds.** See *St. Cassian beds*.—**Cattaraugus beds,** in the geology of New York, the lowest division of the Carboniferous system.—**Chattahoochee beds,** in *geol.*, a division of the Lower Miocene Tertiary, of marine origin and extensively developed in southern Georgia and northern Florida.—**Cheltenham beds,** in *Eng. geol.*, the uppermost member of the Inferior Oölite or Bajocian group in Yorkshire.—**Chesapeake beds.** See *Yorktown* ★*beds*.—**Concealed bed,** a bed permanently built into a recess and concealed with folding-doors when not in use: much used in Scotland.—**Cosina beds,** in *geol.*, a subdivision of the Lower Eocene Tertiary deposits of the southern Alps, carrying a peculiar fresh-water fauna.—**Cuboides beds,** in *geol.*, a zone or division at the base of the Upper Devonian recognized in England, Germany, and New York, and characterized by the brachiopod *Hypothyris cuboides*.—**Denison beds** [*Denison*, a town in Texas], in *geol.*, a division of the Lower Cretaceous formation of Texas.—**Des Moines beds,** in *geol.*, a division of the Carboniferous of Iowa, Missouri, Kansas, and Indian Territory, underlain by the Kaskaskia formation and overlain by the Missouri formation. It is regarded by Iowan geologists as equivalent to a part of the Pennsylvania series. Its fossils (plants in sandstone and coal, marine forms in limestone) are those of the Lower Coal-measures.—**Dingle beds** [*Dingle*, a town in County Kerry, Ireland], strata lying at the base of the Old Red Sandstone in Ireland.—**Dossena beds** [It. *Dossena*, a locality in Bergamo, Italy], in *geol.*, a division of the Middle Triassic or Keuper formation in the southern Alps.—**Egeln beds** [G. *Egeln*, a town in Prussia], in *geol.*, a subdivision of the Tertiary series in Germany. It is regarded by German geologists as equivalent to the top of the Lower Oligocene. It is preceded by the Lower Brown-coal series and overlain by Middle Oligocene beds. Its characteristic fauna consists of marine lamellibranchs (*Ostrea ventrilabrum*), gasteropods, and corals.—**Equus beds,** in *geol.*, a subdivision of the Pleistocene series in the non-glaciated regions of the great plains between South Dakota and Texas. It has been correlated with a part of the glacial series and has furnished remains of fossil horses, camels, mammoths, sloths, together with remains of existing prairie animals. See *Sheridan* ★*stage*.—**Folding-bed,** a movable bed so contrived that it may be folded up when not in use, assuming the appearance of a wardrobe, a bureau, a sideboard, or other article of furniture.—**Foreset bed,** an inclined layer of sediment that is deposited on the front of a delta, as it is built forward in a body of standing water.—**Gosau beds** [*Gosau* in Austria], in the geology of the Alps, a facies of the Flysch in the northeastern part of these mountains, consisting of limestones and marls with intercalated coal-bearing freshwater beds, all lying unconformably on the early Cretaceous rocks beneath. They are regarded, from their fauna, which is profuse, as being of Upper Cretaceous age.—**Hampstead beds,** in *geol.*, a stage of the Oligocene Tertiary lying at the top of the series in Hampshire and the Isle of Wight. The uppermost beds are of marine origin, and the lower represent a fresh-water or estuarine stage. Below them lie the Bembridge beds, which are largely fresh-water deposits.—**Häring beds,** in *geol.*, a division of the Flysch or Upper Eocene deposits in the northern Alps. See *Flysch*.—**Hawthorn beds,** in *geol.*, a division of the older Miocene Tertiary of central Florida equivalent to the Chattahoochee group of Georgia.—**Headon beds,** in *geol.*, the lowest member of the Oligocene Tertiary in the Hampshire basin and the Isle of Wight. The deposits are estuarine, and the fossils are partly of fluviatile and partly of marine origin.—**Horsetown beds,** in *geol.*, the middle division of the Cretaceous formation or Shasta-Chico series in California, lying above the Knoxville and below the Chico beds. It is regarded as representing the Lower Cretaceous beds of Europe above the Neocomian, and contains many fossils, some of them identical with European species.—**Hospital bed,** a bed in a hospital, especially one provided and maintained by an endowment fund.—**Hythe beds** [*Hythe* in Kent], in *geol.*, a division of the Lower Greensand of the Cretaceous formation as developed on the Isle of Wight. It lies on the Atherfield clay and below the Sandgate beds, and contains many fossils, of which the cephalopods are similar to those of the Aptian stage of the Continent.—**Indian bed,** a pile of clams placed close together on the ground with the hinges uppermost, and covered with brush which is set afire to roast the clams. [Local, U. S.]—**Insect-beds,** rock strata in which the remains of insects abound. Such deposits are known in the Lias and Tertiary rocks of Europe and America.—**Intumescens beds** [named from the prevalence of the cephalopod species *Manticoceras intumescens*], in *geol.*, a name applied to a certain facies or life-zone in the lower Upper Devonian. It is developed in Devonshire, Germany, Poland, the Urals, Siberia, and New York.—**Itfer beds** [*Itfer* in Baltic Russia], in *geol.*, a division of the Lower Silurian beds in the Baltic basin, lying between the Jeve zone and above the Kuckers shale, and consisting of limestones with abundant fossils.—**Jackson beds,** in *geol.*, a subdivision of the Eocene Tertiary in the State of Mississippi and adjoining territory, lying beneath the Vicksburg beds and above the Claiborne beds.—**John Day beds,** in *geol.*, a formation of Middle Miocene age in eastern Oregon, Nevada, and Washington, taking its name from the John Day Patch. Though in large part composed of volcanic tuffs, the interbedded layers carry a very rich vertebrate fauna— horses, rhinoceroses, pigs, carnivores, oreodonts, rodents of various genera, etc.—**Jörden beds,** in *geol.*, a division of the Upper Silurian beds of the Baltic provinces lying near the base of the series.—**Karoo beds.** Same as *Karoo series*.—**Khussak beds,** in *geol.*, a subdivision of the Cambrian system in the Salt Range of India which is about 100 feet thick. It is underlain by the Salt Marl and correlated by Indian geologists with the paradoxidian group.—**Kiltorcan beds,** in *geol.*, an upper division of the Old Red Sandstone in the south of Ireland (Cork). It is underlain by the red sandstones of Kerry and overlain by the Carboniferous slate. The beds contain fishes (*Bothriolepis, Coccosteus, Glyptolepis*), *Merostomata* (*Belinurus, Pterygotus*), the clam *Amnigenia jukesii*, and some forms of brackish-water habit.—**Knox beds,** in *geol.*, a group of shales, limestone, and sandstone forming a thick terrain in Tennessee, which is barren of fossils, but by its stratigraphic position is referred to the Lower Cambrian.—**Knoxville beds,** in *geol.*, a subdivision of the Lower Cretaceous system in the Pacific border region of the United States. It is the upper part of the Shasta group, overlying the Horsetown group, and is correlated with the Neocomian of Europe. Like the Horsetown beds, it has an enormous distribution, extending from California to Alaska, and attains a thickness of not less than 20,000 feet.—**Kome beds,** in *geol.*, a series of beds in western Greenland, in the vicinity of Disko Island, which have afforded a Cretaceous plant fauna (Heer), including ferns, cycads, conifers, a few endogens, and but one angiosperm (*Populus primæva*). They are correlated with the Kootenay and Potomac beds of North America.—**Kössen beds,** in *geol.*, the uppermost subdivision of the Triassic system in the Alps. It is underlain by the Main Dolomite (*Hauptdolomit*) and correlated with the Rhætic stage.—**Kressenberg beds,** in *geol.*, a subdivision of the Eocene series in the northern Alps which is preceded by the Burberg beds, followed by the Flysch or Vienna sandstone, and correlated with the calcaire grossier of the Paris basin. Its most characteristic fossils are nummulites, and the division is sometimes termed the Lower Nummulitic group.—**Lagrange beds.** See

Lafayette ★*group*.—**Lenham beds,** in *geol.*, a division of the Pliocene Tertiary in Britain lying near the base of the series, below the coralline crag. In Kent it overlaps the Chalk, and yet its fossils show that it is not Early but Middle Tertiary. It is the equivalent of the Diestian stage of the Continent.—**Lenticular bed.** See ★*lenticular*.—**Loup Fork beds,** in *geol.*, a division of the Miocene Tertiary in the interior of the United States constituting the uppermost part of the series above the Deep River beds. Its strata are partly of lacustrine and partly of fluviatile origin.—**Magellanian beds,** a series of Oligocene or Upper Eocene beds in Patagonia, named from the Strait of Magellan.—**Nanaimo beds,** in *geol.*, a series of coal-bearing strata of Cretaceous age on Vancouver Island.—**Naples beds,** in *geol.*, a series of Upper Devonian strata in western New York characterized by the presence of a pelagic fauna abounding in goniatites.—**Narrabeen beds,** in *geol.*, a subdivision of the Triassic Hawkesbury series in New South Wales lying at the base of the formation and overlain by the Hawkesbury sandstone. These beds are sandstones and shale, rising to a thickness of about 2,000 feet.—**Nodule beds,** in *geol.*, a local term applied to conglomeritic deposits which lie at the base of the red and coralline crags, belonging to the Pliocene Tertiary of England. Also known as *boxstones*.—**Osborne beds.** See *Osborne series*, under *series*.—**Palo Duro beds,** in *geol.*, the lower member of the lacustrine Pliocene series of Texas and Kansas, identical with the Goodnight beds, and containing a fossil fauna of horses, rhinoceroses, and camels.—**Pantolambda beds,** in *geol.*, the biotic designation of the Torrejon group of the basal Eocene Tertiary in New Mexico, named from the characteristic genus of its mammalian fauna.—**Paradoxides beds,** in *geol.*, those beds of the Middle Cambrian series which contain the fauna characterized by the trilobite genus *Paradoxides* (which see).—**Partnach beds,** in *geol.*, a series of sandy clays and limestones forming the upper member of the lowest division of the Alpine Middle Trias of central Europe. It is a local facies of the German Muschelkalk.—**Penarth beds,** in *geol.*, the uppermost member of the British Triassic, representing the Rhætic and uppermost Keuper of central Europe. It consists of limestones, black paper-shales, and basal green and gray marls, aggregating 50 to 150 feet in thickness, which contain an abundant fauna of mollusks, fish, saurians, and some insect remains.—**Pen-y-glog beds,** in *geol.*, a series of shales and grits forming a local phase or facies of the Wenlock shales of Upper Silurian age in Denbighshire, North Wales.—**Pikermi beds,** in *geol.*, a series of red clays and gravels deposited during the Plaisancian stage of Pliocene time at Pikermi and elsewhere in Greece, and noted for its profusion of vertebrate fossil remains, which include various types of carnivores, rodents, proboscideans, perissodactyls, artiodactyls, birds, tortoises, and lizards, many of which are of colossal size.—**Preston beds,** in *geol.*, the basal member of the Washita division of the Upper Cretaceous of Texas.—**Punfield beds,** in *geol.*, a local basal member of the Lower Greensand of the Cretaceous system developed in the vicinity of Punfield Cove, Swanage Bay, England.—**Raibl beds,** in *geol.*, a division of the Triassic rocks of the Alps, regarded as equivalent to the Keuper of Germany and pertaining to the Carinthian stage. It marks the close of the separation of the two great marine Triassic provinces of the northern and southern Alps as they extend through both regions, lying above the Wetterstein limestone in the former and above the Esino limestone in the latter.—**Raikül beds,** in *geol.*, a division of the Upper Silurian rocks in the Baltic provinces of Russia, lying near the middle of the series and comprising about 100 feet of coral reefs and flagstones.—**Ranikot beds,** in *geol.*, the lowest division of the Eocene Tertiary in the Sind district of India, containing an abundant marine fauna with some species of Cretaceous affinities.—**Reading beds,** in *geol.*, the lowest division of the Eocene Tertiary in the Hampshire basin in England, and lying above the Thanet sand in the London basin.—**Rhætic beds.** See *Rhætic*. **Rhenan beds,** in *geol.*, the lower division of the Devonian system in the Rhineland, subdivided in ascending order into the Gedinnian, Taunusian, and Coblentzian.—**Saarbrücken beds,** in *geol.*, the lower or main coal-bearing beds of the Carboniferous system in North Germany. These are from 5,000 to 9,000 feet thick, with 82 workable and 142 unworkable coal-seams, or in all between 350 and 400 feet of coal.—**St. Erth beds,** in *geol.*, the uppermost division of the older Pliocene Tertiary in Britain, limited to a patch of clay in Cornwall which has produced a considerable number of organic remains.—**Salina beds,** in *geol.*, the saliferous deposits of New York, forming the final stage of the Silurian: formerly termed the *Onondaga salt-group* (which see). It is subdivided as follows, in ascending order: Pittsford shale, Vernon shale, Syracuse salt, Camillus shale, Bertie water-lime.—**Sandgate beds,** in *geol.*, a subdivision of the Lower Greensand strata on the Isle of Wight, lying under the Folkestone beds and over the Hythe beds.—**Sandling beds,** in *geol.*, a subdivision of the Triassic rocks in the Mediterranean basin pertaining to the Carinthian stage and lying over the Raibl beds.—**San Pedro beds,** in *geol.*, a Pleistocene series of sediments named from San Pedro, Cal., their typical locality.—**Santee beds.** See *Santee*.—**Seis beds,** in *geol.*, the lowest subdivision of the Triassic rocks in the southern Alps.—**Skelgil beds,** in *geol.*, a series of strata in Westmoreland and Cumberland, of Upper Silurian age, essentially equivalent to the Llandovery group and characterized by their graptolite zones.—**Stormberg beds,** in *geol.*, the upper division of the so-called Karoo series of South Africa, regarded as probably of the age of the Rhætic Trias of Europe, while the lower division of this series is recognized as of Carboniferous age. The Stormberg beds carry a flora very similar to that of the Hawkesbury series of New South Wales. See *Karoo series*, under *karoo*.—**Tealby beds,** in *geol.*, a local development of the Lower Greensand of the Jurassic system in the vicinity of Tealby, Lincolnshire, England. They comprise about 20 feet of unfossiliferous ferruginous sands lying beneath 80–90 feet of sands and limestones containing an abundant Middle Neocomian fauna of cephalopods, pelecypods, and brachiopods.—**Telmatotherium beds,** in *geol.*, the biotic name for the lower Uinta beds of the Upper Eocene of Utah, characterized by the presence of several species of

the titanothere *Telmatotherium*.—**Timber-belt beds,** in *geol.*, a division of the Eocene system of Texas: same as the *Sabine River beds*.—**To lie or sleep on the bed one has made,** to reap the fruits or suffer the natural results of one's own conduct or acts.—**Top-set bed,** a nearly level layer of sediment that is deposited on the upper surface of a delta as it is built forward.—**Uintatherium beds.** See *Bridger* ★*group*.—**Vicksburg beds.** See *Vicksburg group*.—**Warminster beds,** in *geol.*, the uppermost beds of the galt of the Upper Greensand as developed in Wiltshire, England.—**Warp bed,** in *geol.*, a bed of estuarine silt. *J. Geikie*, The Great Ice Age, p. 406.—**Wengen beds,** in the subdivision of the pelagic Trias of the Mediterranean province, a member lying above the Marmolada limestone and below the St. Cassian beds: regarded as the upper division of the Noric stage, which is the lowermost of the stages of the Upper Trias.—**Werfen beds,** in *geol.*, the lowest division of the pelagic Trias in the eastern and southern Alps.—**Willow Creek beds,** in *geol.*, a division of the Lower Laramie beds of the Upper Cretaceous in the Canadian Northwest Territory.—**Woolwich and Reading beds,** in *Eng. geol.*, the lowest beds of the Eocene in the Hampshire Tertiary basin, which consist of lenticular sheets of plastic clay loam and sand and are very variable in local composition. The Woolwich type consists of sands crowded with estuarine fossils, while the Reading type is composed of unfossiliferous gravels.—**Yorktown beds,** in *geol.*, the upper division of the Eocene Tertiary, forming a belt through the Atlantic border States and well developed at Yorktown, Va. Also named *Chesapeake beds* from their development on Chesapeake Bay.

bed[1], *v. t.*—**To bed a tree,** to level up the place in which a tree is to fall, so that it may not be shattered. [U. S.]

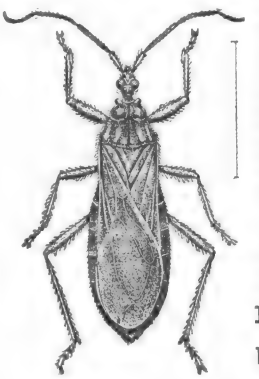
bedamn (bē-dam′), *v. t.* To damn or curse roundly or with iteration and emphasis.

bed-and-platen (bed-and-plat′en), *a.* Of or pertaining to the bed and the platen of a printing-press.—**Bed-and-platen movement,** a printing-press movement by which the types on the bed and the platen above are at once brought together to print the sheet between: in contradistinction to a *cylinder movement*, which impresses the types that pass under it upon an oscillating bed-plate.—**Bed-and-platen press.** Same as *platen press* (which see, under *platen*[1]).

bedangled (bē-dang′gld), *p. a.* Beset with dangling things. *Swift.*

bedbug, *n.*—**Gigantic bedbug,** a reduviid bug, *Conorhinus sanguisuga*, of North and Central America. It was probably at first an inhabitant of the nests of field-mice and gophers, but it now often infests houses, especially in the southwestern United States.

bedbug-hunter (bed′bug-hun″tėr), *n.* A reduviid bug, *Reduvius personatus*, of cosmopolitan distribution, which inhabits houses, where it preys upon bedbugs, flies, and other household pests. When young it disguises its appearance by covering itself with dust and fibers, which adhere to a sticky secretion of the body. Called the *masked bedbug-hunter*.



Bedbug-hunter or Kissing-bug (*Reduvius personatus*). Twice natural size.

(Howard, U. S. D. A.)

bed-claim (bed′-klām), *n.* In *mining*, a claim which includes the bed of a river or creek. Australia.]

Bedded volcano. See ★*volcano*.

bedding-fault (bed′ing-fâlt), *n.* See ★*fault*.

bedding-plane (bed′ing-plān), *n.* The plane of stratification or bedding in a sedimentary

Bedding-plane.

series of rocks. It marks the surface upon which each succeeding layer of sediment was deposited, and, unless subsequently disturbed, is usually almost level.

bedeckt, *pp.* A simplified spelling of *bedecked*.

bedewment† (bē-dū′ment), *n.* Dew-like moistening.

Bedford cord, shale. See ★*cord*[1], ★*shale*[2].

bedgery (bed′jėr-i), *n.* [Australian, corrupted from *pituri*, the native name.] Same as ★*pituri*, 2.

bedidlik (be-did′lik), *n.* [Egypt. Ar.] A gold coin of Egypt, equal to 100 piasters or about $4.97.

bedikah (bā-di-kä′), *n.* [Heb. *bedīḳah*, examination, < *badaḳ*, examine.] In Jewish ritual, the examination of a ceremonial act or of its accompaniments: as of the manner of slaughtering an animal or of its parts; or of a house, to remove any portion of leaven before the Passover, in order to assure the proper observance of the prescribed rules.

bed-lathe (bed′lāᵺᴛʜ), *n.* A lathe having a bed which is so massive that no feet or legs are used to lift the center-line of the spindle to a convenient height.

Bedlington (bed′ling-tọn), *n.* [From *Bedlington*, a parish in Northumberland.] A breed of moderate-sized short-haired terriers with narrow head, short body, and rather long legs. The ears and tail are slightly fringed, and the color is bluish, liver-colored, or sandy.

bedog (bē-dog′), *v. t.* 1. To assail with the epithet 'dog.'—2. To follow like a dog; dog: as, "hatred *bedogged* his steps," *Trelawney*, Records of Shelley, etc.

bed-plane (bed′plān), *n.* In *geol.*, the junction between two layers or strata. *Dana*, Manual of Geol., p. 111.

bed-plank (bed′plangk), *n.* In *mining*, a plank in the lining or floor on the foot-wall side of an inclined shaft on which the hoisting-bucket slides.

bed-plate, *n.* 2. An iron plate on the bed of a carriage, serving as a support to the king-bolt socket.

bedpost, *n.*—**Devil's bedposts,** a nickname for the four of clubs.

bedropt, *pp.* A simplified spelling of *bedropped*.

bedrug (bē-drug′), *v. t.* To drug thoroughly; saturate with drugs. [Rare.]

bedsted, *n.* A simplified spelling of *bedstead*.

bee[1], *n.* 4. [*cap.*] In *astron.*, the constellation generally called *Apis* or *Musca*.—**Blunt-tongued burrowing bee,** any aculeate hymenopterous insect of the family *Colletidæ*.—**Dammar bee,** a wild East Indian bee, *Melipona vidua*.—**Horned bee,** a European megachilid bee, *Osmia rufa* (formerly *O. bicornis*), which has a two-horned head.—**Leaf-cutting bee,** any aculeate hymenopterous insect of the genus *Megachile*, which cuts fragments of leaves with which to construct its cells.—**Mosquito bee,** any one of the stingless tropical bees of the genera *Melipona* and *Trigona*.—**Pioneer bee,** the European solitary bee, *Odynerus murarius*.—**Potter-bee,** any one of certain bees of the aculeate hymenopterous family *Megachilidæ*, which construct small globular cells of earth and attach them to the stem of a plant.—**Sharp-tongued burrowing bee,** any aculeate hymenopterous insect of the family *Andrenidæ*.—**Solitary long-tongued bee,** any long-tongued bee except those belonging to the social families *Apidæ* and *Bombidæ*.

B. E. E. An abbreviation of *Bachelor of Electrical Engineering*.

bee-apron (bē′ā-prun), *n.* An apron worn by bee-keepers as a protection against stings.

bee-balm (bē′bäm), *n.* See *balm*, 7.

bee-beetle (bē′bē-tl), *n.* A European beetle, *Trichodes apiarius*, of the family *Cleridæ*, red and blue in color, which destroys the larvæ of the honey-bee. Other species of the same genus live in the nests of wild bees.

bee-brush (bē′brush), *n.* In *beekeeping*, a soft brush used in handling live bees.

beech[1], *n.* 2. Any one of several trees of different genera having a real or fancied resemblance to the true beeches; especially, *Cryptocarya glaucescens*, of the laurel family. Also called *she-beech* and *black beech*. [Australia.]—**Beech pottery.** See *American* ★*pottery*.—**Beech seedling mildew.** See ★*mildew*.—**Beech tar.** See ★*tar*[1].—**Black beech.** Same as ★*beech*[1], 2.—**Copper beech,** a highly ornamental variety of the common beech, *Fagus sylvatica*, with red sap in the cells of the epidermis of the leaves which gives them a copper color and somewhat metallic luster. Also called *purple beech*.—**Evergreen beech,** the name in Australia of *Nothofagus Cunninghami*, the only tree there properly called *beech*.—**Native beech,** the name in Australia of *Callicoma serratifolia*, a tree of the saxifrage family.—**Queensland beech.** Same as *Australian beech* (which see, under *beech*[1]).—**Water-beech.** See *water-beech*.—**White beech.** See *white*.

beech-blight (bēch′blīt), *n.* An American plant-louse, *Pemphigus fagi*.

beech-drops, *n.*—**Carolina beech-drops,** the sweet pine-sap, *Monotropsis odorata*. See *Schweinitzia*.

beech-fern, *n.*—**Broad beech-fern,** *Phegopteris hexagonoptera*, of eastern North America.

beech-moth (bēch′môth), *n.* A European moth, *Stauropus fagi*, whose larva feeds on the beech. *Kirby* and *Spence*.

bee-escape (bē′es-kāp″), *n.* An attachment to a hive designed to control the movements of the bees while the honeycomb is being removed from the hive.

beef, *n.*—**Albany beef,** the cured flesh of the sturgeon, which was formerly caught and prepared near Albany, N. Y.—**Beef ham.** Same as *collared beef*.—**Dried beef,** beef which has been salted, dried and (frequently) smoked, being then eatable in thin slices without cooking.

beef-dodger (bēf′doj″ėr), *n.* A meat biscuit. [U. S.]

beef-fat (bēf′fat), *a.* In *stock-raising*, fat and in high condition, or ready for market. [U. S.]

Twenty-five or more years ago, while ranges were unrestricted and grass was free, it was no uncommon sight to see five- and six-year-old Texas steers coming into market *beef-fat* off the range.

Rep. Kan. State Board Agr., 1901–1902, p. 60.

beef-headed (bēf′hed-ed), *p. a.* Stupid; thick-headed.

beefing[1], *n.* **II.** *a.* Beef-forming; beef-producing: as, good *beefing* as well as good milking qualities. *Yearbook U. S. Dept. Agr.* 1901, p. 230.

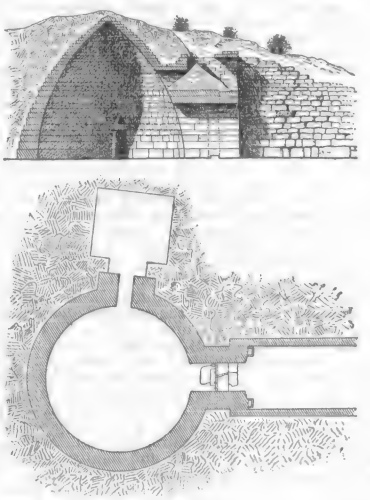
beefishness (bēf′ish-nes), *n.* Ox-like stupidity.

bee-fly, *n.* 2. Any dipterous insect of the family *Bombyliidæ*: so called on account of its resemblance to a bee.

beef-measles (bēf′mē″zlz), *n.* Infection of cattle with *Cysticercus bovis*, the larval stage of *Tænia saginata* (the most common of the larger tapeworms of man). In cattle the parasites are found especially in the tongue and the muscles of the jaws. When the infection is very severe this condition is sometimes called *acute cestode tuberculosis*.

bee-glove (bē′gluv), *n.* A cotton glove soaked in linseed-oil and dried in the sun, worn by bee-keepers to protect the hand.

beehive, *n.* 3. A covered cup or jug for holding honey, sugar, etc.—4. [*cap.*] In *astron.*, a name for Præsepe, the cluster of stars in Cancer.—**Beehive kiln.** See ★*kiln*.—**Beehive tomb,** an artificial subterranean sepulcher of the Mycenæan age in Greece. It is composed of two parts, a horizontal trench, called the *dromos*, cut into the sloping side of a hill, and a circular chamber, called the *tholos*, in which it terminates. The tholos is excavated vertically from



Beehive Tomb.

Section and plan of the Treasury of Atreus at Mycenæ, Greece.

the face of the rock to the level of the dromos, and has the form of an old-fashioned beehive. There is sometimes a rectangular chamber connected with it. The entire interior was faced with masonry and decorated. A fine example is the so-called Treasury of Atreus at Mycenæ.

bee-hunter (bē′hun-tėr), *n.* One who hunts or searches for swarms of wild bees.

bee-keeper (bē′kē-pėr), *n.* One who keeps honey-bees; an apiarist.

beekite (bēk′it), *n.* [Named after Dr. Henry *Beeke* (1751–1837), dean of Bristol.] A kind of chalcedony replacing shells, corals, etc., in the New Red conglomerate of South Devon, England.

bee-kite (bē′kīt), *n.* The honey-buzzard, *Pernis mellivora*, which feeds on bees and honey.

Beekmantown limestone. See ★*limestone*.

been[4], *n.* See *vina*.

beena, beenah (bē′nä), *n.* In Ceylon a form of marriage in which the husband joins the wife's tribe and lives in it on sufferance. *McLennan*, The Patriarchal Theory, p. 42.

bee-plant (bē′plant), *n.* Any plant which is specially useful in furnishing nectar to bees; a honey-plant. Among well-known bee-plants are the

lindens (see *bee-tree*), the common red and white clovers, the sweet clover, and the common buckwheat. The name has been applied specifically to *Scrophularia Marylandica* and to *S. Californica*. The *Rocky Mountain bee-plant* (also called *bee-weed*) is one of the spider-flowers, *Cleome serrulata*.

beer[1], *n.*—**Braga beer**, a kind of beer brewed in Russia.—**Lager-beer**. The name is often loosely applied to any German beer, or any beer made by German methods.—**Milk beer**, a name sometimes given to kumiss.—**Weiss-beer**, the German name for beer made chiefly from wheat malt and sold for consumption while the secondary fermentation is still in progress.

beerbachite (bēr'bak-īt), *n.* [G. *Beerbach* ('Berry brook'?), a stream in the Odenwald, Baden, + *-ite*[2].] In *petrog.*, the name of an igneous rock of panautomorphic granular texture, consisting of labradorite, diallage, and magnetite, with other subordinate minerals. It was first named by Chelius (1894), and considered to be a haplitic differentiation-product of the gabbroic magma.

beer-wort (bēr'wėrt), *n.* Wort prepared by the infusion of malt with water, intended to be converted into beer.

bee-smoker (bē'smō″kėr), *n.* In *bee-keeping*, a small portable furnace fitted with a bellows: used to produce a cloud of smoke and to blow it into a hive to stupefy the bees and keep them quiet when the hive is opened to remove the honeycomb.

Beeswax cement. See ★*cement*.

Beet army-worm, carrion-beetle. See ★*army-worm*, ★*carrion-beetle*.—**Chytridiose of beet.** See ★*chytridiose*.

bee-tent (bē'tent), *n.* A cover or tent placed over a hive to protect it from the bees of other hives.

beetle[2], *n.*—**Aberrant long-horned beetle**, any member of the cerambycid series belonging to the small and somewhat discrepant family *Spondylidæ*. Four species are known in North America, and all live under the bark of pine-trees.—**Brazilian beetle**. See *Brazilian* ★*bug*.—**Checkered beetle**, any member of the coleopterous family *Cleridæ*, the species of which are usually beautifully marked with strongly contrasting colors.—**Elm leaf-beetle**. See ★*leaf-beetle*.—**Feather-wing beetle**, any member of the coleopterous family *Trichopterygidæ*, an assemblage of very small species having long narrow wings so fringed with long hairs as to appear feather-like.—**Hornets'-nest beetle**, a large and powerful European Staphylinid or rove-beetle, *Velleius dilatatus*, which lives only in the nests of wasps and hornets, feeding on the wasp larvæ and pupæ which fall from their cells, and on the other organic refuse of the nest.—**Oak-pruner beetle**, a cerambycid beetle of the genus *Elaphidion* (which see).—**Pear ambrosia-beetle**, a scolytid beetle, *Xyleborus pyri*, which also affects the peach and plum.—**Pear-blight beetle**. Same as *apple-tree* ★*shot-borer*.—**Pine-destroying beetle**, any beetle which destroys pine-trees; specifically, *Dendroctonus ponderosæ*, one of the most destructive enemies of western United States pine forests.—**Ship-timber beetle**, a coleopterous insect, *Lymexylon navale*, of the family *Lymexylonidæ*, formerly noted in Europe as very injurious to timber used for ship-building, from its habit of drilling cylindrical holes in the hard wood.—**Tan-bark beetle**, a small black bostrychid beetle, *Dinoderus substriatus*, which attacks hemlock bark which has been stripped and piled for tanning purposes.

Pine-destroying Beetle of the Black Hills (*Dendroctonus ponderosæ* Hopk.). Five times natural size. (Hopkins, U. S. D. A.)

beet-leaf maggot, miner, Pegomya. See ★*maggot*, ★*leaf-miner*, ★*Pegomya*.

beetle-crusher (bē'tl-krush″ėr), *n.* A large foot. [Slang.]

beetle-sticker (bē'tl-stik″ėr), *n.* A jocular name for an entomologist.

beetle-weed (bē'tl-wēd), *n.* See ★*Galax*.

Beet-root gum. See ★*gum*[2].—**Beet-root sugar.** The manufacture of sugar from beets has attained an enormous development, a larger product from this source than from sugar-cane being made, in ordinary years, for the general commerce of the world. Sugar from these two plants is, when purified, absolutely the same substance.

beet-scab (bēt'skab), *n.* A disease of beet-roots caused by the fungus *Oöspora scabies*. See ★*scab*.

beet-sugar (bēt'shůg″ăr), *n.* Same as *beet-root sugar*, under *beet-root*.—**Beet-sugar industry**, the commercial production of sugar from the beet. In the United States this business after many failures became successful from 1888 onward. In 1903 there were 55 factories in operation with a total annual capacity of 328,104 tons of sugar. The State of Michigan led, followed at rather long intervals by California, Colorado, Utah, Nebraska, and New York, five other States having one factory each. See ★*sugar-beet*. The annual period of working up the crop, called the campaign, occupies about 100 days. In the factory the beets, after being washed and weighed, are sliced into cossettes (see ★*cossette*) and the sugar is extracted in a "diffusion battery," consisting of 14 air-tight cylindrical steel vats, each holding several tons, in which, under some pressure, the cossettes are subjected to 14 applications of hot water, the liquid passing from one vat to another. The sugary water is defecated by being mixed with lime, "carbonated" (see *carbonation*), and filtered, the process being once repeated, then, after being treated with sulphur fumes, evaporated to "thick juice," and through several further stages brought to the state of granulated sugar. The local requisites for a factory are, besides a supply of beets with high sugar content, a sufficiency of pure water, of fuel (coal most often used), and of limestone, together with transportation facilities.

bee-van (bē'van), *n.* A wagon used in instruction in bee-culture.

> County councils have already done good work in providing lectures and demonstrations by means of travelling *bee-vans*. *Natural Science*, Oct., 1896, p. 273.

bee-veil (bē'vāl), *n.* A veil or netting worn over the head to protect the face from the attacks of bees while removing honey from a hive or working about it. It is worn over the hat and tucked under the coat, or drawn over a light metal frame which covers the head and rests on the shoulders.

bee-weed (bē'wēd), *n.* See ★*bee-plant*.

beewise (bē'wīz), *adv.* In the manner of the bee. [Rare.]

> On every side occurred suggestive germs
> Of that—the tree, the flower—or take the fruit,—
> Some rosy shape, continuing the peach,
> Curved *beewise* o'er its bough.
> *Browning*, Pippa Passes, II. 90.

befeast (bē-fēst'), *v. t.* To treat to a feast; feast.

befel, *pret.* A simplified spelling of *befell*.

befreeze (bē-frēz'), *v. t.*; pret. *befroze*, pp. *befrozen*, ppr. *befreezing*. To freeze up or over; freeze thoroughly or completely.

befrend, *v. t.* A simplified spelling of *befriend*.

befriender (bē-frend'ėr), *n.* One who befriends another.

> Love and serve Man, angelical *Befrienders*.
> *Edwin Arnold*, Light of the World, p. 24.

beg, *v. i.*—**To go a-begging**, to go about begging; figuratively, to have difficulty in finding a purchaser (for something offered for sale) or an incumbent (for an office to be filled), etc.; hence, to be in little demand; have little or no value or acceptance.

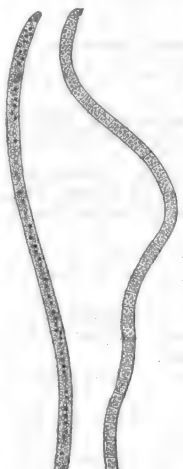
begar (be-gär'), *n.* [Hind. *begār*, forced labor (*begārī*, a forced laborer), < Pers. *bīkār*, without work, unemployed (*bīkārī*, idleness), < *bī*, without, + *kār*, work.] Forced labor in some parts of India, as in the construction of roads, irrigating-banks, etc. [Anglo-Indian.]

begarry (be-gä'ri), *n.*; pl. *begarries* (-riz). [Hind. *begārī*: see ★*begar*.] One who is engaged in forced labor. See ★*begar*. [Anglo-Indian.]

beggar, *n.*—**Beggar's ultramarine black**. Same as *Spanish black* (which see, under *black*).—**Beggar's velvet**, the loose, fuzzy, wool-like particles which collect in the seams of clothing and under furniture, carpets, etc.

beggar's-lice, *n.* **3.** A name of the European stickseed, *Lappula Lappula*; of the hound's-tongue, *Cynoglossum officinale*; of the species of *Meibomia* (see ★*beggar-weed*, 2); and probably of other plants with adhesive seeds or pods.

beggar-weed, *n.* **2.** A plant of any species of *Meibomia*, the tick-trefoil, particularly of *M. tortuosa*, the Florida beggarweed. This is a tall species, native in the West Indies and probably in southern Florida, now found very valuable for forage and soiling purposes on light sandy soils in the warmest parts of the southern United States.



Beggiatoa alba.

a, living filament, showing sulphur granules; *b*, filament after treatment with sulphur carbonate. Magnified.

Beggiatoa (bej-i-at'ō-ä), *n.* [NL. (Trevisan, 1842), named after *Beggiato*, an Italian botanist.] A genus of filamentous bacteria consisting of non-septate, mostly colorless filaments containing sulphur granules and possessing an undulatory motion. They occur chiefly in sulphur springs and seawater. *B. alba* is the most common species; it occurs on decaying plants in sulphur springs and produces slimy flakes.

Beggiatoaceæ (bej″i-a-tō-ā'sē-ē), *n. pl.* [NL., < *Beggiatoa* + *-aceæ*.] A family of filamentous bacteria, typified by the genus *Beggiatoa*.

beggingly (beg'ing-li), *adv.* In the manner of a beggar; as a beggar. *Florio*.

> Even my bonnet . . . how *beggingly* she looks at that.
> *Miss Mitford*, Our Village, I. 51.

begift (bē-gift'), *v. t.* To thrust gifts upon. *Carlyle*.

begigged (bē-gigd'), *p. a.* Infatuated; crazy: as, *begigged* about bridge whist. [Colloq., southern U. S.]

begon, *v.* A simplified spelling of *begone*.

begoniad (bē-gō'ni-ad), *n.* [NL., < *Begonia* + *-ad*[1].] A plant of the family *Begoniaceæ*.

beharad (bā-hä-räd'), *n.* A mnemonic word representing the four letters B H R D, which indicate, according to Hebrew chronology, the first molad of creation. See ★*molad*. The numerical value of the four Hebrew letters is 2, 5, 200, and 4. The 2 stands for Monday (the day when the "great lights" were created), the 5 for the fifth hour (11 A. M.), and the 204 for the parts of an hour. Since an hour contains 1,080 parts, and the lunar month contains 29 days, 12 hours, and 793 parts of an hour, the first molad would fall on Monday at $5\frac{204}{1080}$ or about 11.12 A. M.

behead, *v. t.* **3.** To tap (a stream) and divert its upper waters through new channels: said of the encroachment of one stream upon another in such a way as to 'capture' its head and upper tributaries.—**Beheaded river**, in *phys. geog.*, the remaining lower course of a river after its former upper waters have been captured or diverted to another stream.

beheadal (bē-hed'al), *n.* [*behead* + *-al*.] Beheading; decapitation.

behed, *v. t.* A simplified spelling of *behead*.

behen, *n.* Also, same as *ben*[5].—**Oil of behen**. Same as *ben-oil*.

behenic (bē-hen'ik), *a.* Same as *benic*.—**Behenic acid**, a crystalline acid, $C_{22}H_{44}O_2$, found in behen-oil from the seeds of *Moringa Moringa*. It melts at 73° C.

behen-oil (bē'hen-oil), *n.* Same as *ben-oil*.

behenolic (bē-he-nō'lik), *a.* [*behen* + *-ol* + *-ic*.] Derived from behenic acid.—**Behenolic acid**, a crystalline acid, $C_{22}H_{40}O_2$, obtained by treating dibrom-behenic acid with alcoholic potash. It melts at 57.5° C.

Behmenism, *n.* Same as ★*Boehmenism*.

Behmenist, *n.* Same as ★*Boehmenist*.

behold, *v. t.* **4.** In *astrol.*, to cast (an aspect).

behram (bā'räm), *n.* A copper coin of Mysore, equal to half a pice.

beige, *a.* **II.** *n.* A thin, wiry dress-fabric of worsted, originally unbleached, but now made in all colors and many designs.

beignet (bān-yā'), *n.* [F.] A fritter composed of various ingredients.

beiju (bā-ē-zhō'), *n.* [Pg., from Braz.] The name in Brazil for cassava-bread. See *cassava*.

being, *n.* **7.** A living; livelihood; means of subsistence; home. *Spectator*, No. 544. [Obsolete or prov. Eng.]

> "I shall have enough to do to keep a *beein* for you" (Mrs. Gummidge meant a home) "again you come back—to keep a *beein* here for any that may hap to come back, Dan'l." *Dickens*, David Copperfield, xxxii.

Truth of being, the totality of that which is such as it is independently of any assertion about it; truth in the objective sense.

beingless (bē'ing-les), *a.* Without being; nonexistent. *Galt*.

beingness (bē'ing-nes), *n.* Actual existence; entity. *J. Chandler*.

be-inked (bē-inkt'), *p. a.* Smeared or daubed with ink. *Charlotte Brontë*, Villette, xxxv.

beisa (bī'sä), *n.* [Northeast African.] A large antelope, *Oryx beisa*, of northeastern Africa, of a light-gray color with black markings. The horns are long, almost straight, and directed backward. It is a near relative of the South African oryx, *O. gazella*. See *oryx*.

Beisa (*Oryx beisa*).

bejant (bē'jant), *n.* Same as *bejan*.

bejuco, *n.* **2.** A name applied especially to climbing palms, species of *Calamus* and *Dæmonorops*, known commercially as ratans. The

stems are remarkable for their tenacity, flexibility, and length, and are used in the construction of bridges, houses, and fish-corrals. They also furnish material for cordage, for the cane bottoms of beds and chairs, and for hats, mats, and fine cigar-cases. See *ratan*, 2, and *calamus*, 3. [Philippine Is.]

beknown (bē-nōn′), *a.* Known: as, "the seaman was *beknown* to me," *Dickens*, Mutual Friend, I. ii. 12.

bel, *n.* A simplified spelling of *bell.*

B. E. L. An abbreviation of *Bachelor of English Literature*: same as ★*B. Lit.*

belah (bē′lä), *n.* [Native Australian.] The desert she-oak, *Casuarina glauca*, widely distributed throughout Australia, yielding a hard, durable wood. Also *beala*, *belar*, *billa*, and *beal;* known among the colonists as *bull-oak*. See *she-oak*.

belamarine (bel-am′a-rin), *n.* [Appar. *bel(ladonna)*, + *Amar(yllis)* + *-ine*2.] An alkaloid formed in the tubers of *Amaryllis belladonna*, which grows in the islands of the Caribbean Sea. It crystallizes in colorless needles.

belay, *v. t.*—**Belay, there!** hold on! stop! enough!—an order to sailors preparatory to making fast the rope on which they are hauling.

bel canto (bel kän′tō). [It.] The art of singing in an artistic and finished manner, especially after the best Italian operatic traditions, often with emphasis upon a smooth and expressive delivery of cantabile passages.

belduque (bel-dö′kā), *n.* [Mex. Sp.; said to be a corruption of Sp. *verdugo*, a sword.] A large, heavy sheath-knife, used in Mexico and some parts of the western United States.

belemnitoid (be-lem′ni-toid), *a.* [*Belemnites* + *-oid.*] Allied to *Belemnites*.

Belemnocrinus (be-lem-nok′ri-nus), *n.* [NL., ⟨ Gr. *βέλεμνον*, a dart, + *κρίνον*, a lily.] The only genus of an extinct family of the *Crinoidea*, or fossil encrinites, termed *Belemnocrinidæ*. It occurs in the Lower Carboniferous rocks of the Mississippi valley.

belemnoid, *a.* **II.** *n.* One of the *Belemnoidea;* a belemnite or fossil dibranchiate cephalopod, or a related form.

Belemnoidea (be-lem-noi′dē-ä), *n. pl.* [NL., ⟨ Gr. *βέλεμνον*, a dart, + *εἶδος*, form.] An order or suborder of the dibranchiate cephalopods, now almost extinct, but very abundant in the Mesozoic age. They have internal chambered shells with septa traversed by a siphuncle, the posterior part of the shell bearing a calcareous guard or sheath. The arms, 10 in number, are provided with hooklets. Some authors include in this suborder the coiled living *Spirula*. In several of the fossil species the head, arms, and ink-bag of the animal have not infrequently been preserved.

Belemnoteuthidæ (be-lem-nō-tū′thi-dē), *n. pl.* [NL., ⟨ *Belemnoteuthis* + *-idæ.*] A family of *Belemnoidea*, or dibranchiate cephalopods, with a shell composed of a conic phragmacone and proöstracum, and the rostrum or guard greatly reduced. The species are found in the Triassic and Jurassic rocks.

Belemnoteuthis (be-lem-nō-tū′this), *n.* [NL., ⟨ Gr. *βέλεμνον*, a dart, + *τευθίς*, a squid.] The typical genus of the family *Belemnoteuthidæ*.

beletter (bē-let′ėr), *v. t.* **1.** To write letters to; invite or inform by letter.

> The University-orator . . . *belettered* all the lords of the privy-council. *Fuller*, Hist. Camb., p. 179. *N. E. D.*

2. To decorate with letters or with appended abbreviations of office or title, such as *F. R. G. S.*, *M. R. A. S.*, *LL.D.*, etc. [Rare in both uses.]

> The mania prevalent among people of more ambition than performance for *belettering* themselves.
> *Athenæum*, May 19, 1899, p. 638. *N. E. D.*

beleve, *v.* An obsolete form of *believe*.

Belgian blocks, nearly cubical blocks of granite, trap or other suitable stone used for pavements.—**Belgian canary.** See ★*canary.*—**Belgian-Silesian furnace.** See ★*furnace.*

belief, *n.*—**Primary belief,** in the philosophy of common sense, one of the irresistible beliefs which no man sane enough for the business of life can really doubt, and which, not in the least doubting, we really regard as infallible truths, whether we set down a doubt of them on paper or otherwise make believe to doubt them, or not.

beliefless (bē-lēf′les), *a.* Having no belief; indisposed to believe.

> And most *beliefless*, that had most believed.
> *Clough*, Easter Day, i. 10.

believ, *v.* A simplified spelling of *believe*.

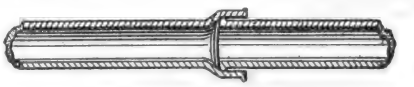
Belinuridæ (bel-i-nū′ri-dē), *n. pl.* [NL., ⟨ *Belinurus* + *-idæ.*] A family of merostome crustaceans closely allied to the living limulus and resembling a larval phase of that crab. The cephalothorax is broad, abdomen with distinct segments, and the telson a long spine. They occur in the Devonian and Carboniferous rocks.

Belinurus (bel-i-nū′rus), *n.* [NL., appar. an error for ★*Belonurus*, ⟨ Gr. *βελόνη*, a needle, + *οὐρά*, tail.] The typical genus of the family *Belinuridæ*.

Belis (bē′lis), *n.* [NL. (Salisbury, 1807), in allusion to the form of the leaves, ⟨ Gr. *βέλος*, a dart.] A genus of trees of the family *Pinaceæ*. See *Cunninghamia*.

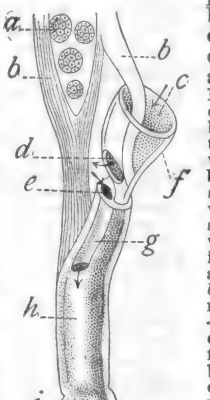
bell1, *n.* **2.** (*g*) The movable cap of a blast-furnace. It is lowered to put in the charge of ore, and rises after the charging to keep the top gas-tight. (*h*) An enlarged section at the end of a cast-iron pipe, the purpose of which is to furnish a means of making a joint with the next pipe.

5. A bell-shaped rock-mass of somewhat doubtful origin occurring occasionally in sedimentary rocks. The inverted position of of these masses leads to the theory that they were the result of some local disturbance of sedimentation. Some may be due to contemporaneous erosion.—**Bell and spigot,** a form of cast-iron pipe commonly used for underground pipelines. Each length of pipe has one straight end, the other end forming a bell large enough to receive the straight end of the next length.



Cross-section of Bell-and-spigot.

—**Belldollar,** the silver glockenthaler of Brunswick, which has on it the representation of a bell.—**Bow bells,** the celebrated peal of bells of Bow Church (properly the Church of St. Mary le Bow), situated in Cheapside, near the center of the City of London.—**Cap and bells.** See ★*cap*1.—**Liberty bell,** the bell which was in the tower of the statehouse (since called *Independence Hall*) in Philadelphia, and which was rung on the occasion of the proclamation of Independence made July 4, 1776. It happened to bear a biblical inscription ("Proclaim liberty throughout the land unto all the inhabitants thereof") which made its use on that occasion especially appropriate, and established its popular name.—**Savart's bell and resonator,** an apparatus used to show the influence of boxes in strengthening sound. A hemispherical brass vessel is set in vibration by means of a violin bow. A cardboard cylinder, closed at one end, is then placed at varying distances and inclinations, to show its effect as a resonator.—**Uterine bell,** one of the peculiar bell-shaped or funnel-like structures, with muscular walls, found in the nemathelminth *Echinorhynchus*, whose contractions serve to draw into the bell the impregnated eggs which float freely in the body-cavity, and to force them along into the uterus and vagina and thence to the exterior.—**Within the sound of Bow bells,** within the limits of the City of London.



Uterine Bell.

Female Genital Apparatus of *Echinorhynchus*. Diagrammatic. *a*, ovaries; *b*, ligament; *c*, anterior aperture of uterine bell; *d*, posterior ditto; *e*, anterior aperture of one of the two oviducts (*g*); *f*, uterine bell; *h*, uterus; *i*, female aperture; *j*, vagina. The arrows indicate the course taken by the eggs in passing from the body cavity to the exterior. (From "Lang's Comparative Anatomy.")

> Having been born *within the sound of Bow-bells* he cannot help being a son of Cockaigne.
> *Punch*, Dec. 30, 1894, p. 294.

Bell process. See ★*process.*

belladonna, *n.*—**Japanese belladonna,** *Scopolina Japonica*, the rhizome of which appears in trade as a substitute for belladonna.

belladonnine (bel-a-don′in), *n.* [*belladonna* + *-ine*2.] An amorphous alkaloid, $C_{17}H_{21}NO_2$, associated with atropine or hyoscyamine in *Atropa Belladonna*.

Bellani lucimeter. See ★*lucimeter.*

belle-moth (bel′a-môth″), *n.* A moth, *Utetheisa bella* (which see with cut).

belland (bel′and), *n.* A form of lead-poisoning to which lead-miners are subject. *Coal and Metal Miners' Pocket-book.*

bell-bearer (bel′bār-ėr), *n.* A leaf-hopper, *Bocydium tintinnabuliferum*.

bell-binder (bel′bīn-dėr), *n.* Same as *bell-bind.*

bell-bird, *n.* **4.** In New Zealand, one of the *Meliphagidæ*, *Anthornis melanura*.—**5.** In Australia, *Oreoica gutturalis*, one of the shrikes.

bell-bottomed (bel′bot″umd), *a.* Having flaring bottoms: as, *bell-bottomed* trousers.

bell-cord *n.*—**Bell-cord hanger,** a swinging strap or rod suspended from the roof of a passenger-car and carrying a guide-ring for a bell-cord.

Belleek ware. See ★*ware.*—**Carved Belleek.** See *American* ★*porcelain.*

Belleville boiler. See ★*boiler.*

bell-faced (bel′fāst), *a.* Having the striking face convex or rounded: said of a hammer.

bell-horse (bel′hôrs), *n.* **1.** A horse wearing a bell; especially, a horse adorned with bells, ribbons, etc., used in celebrating May-day, which, in consequence, is called *bell-horse day*. [Eng.]—**2.** A workman who finds it to his advantage to exert himself more than his fellow employees, in order to give grounds for the discharge of those who cannot keep up with the pace set by him. [Slang, Eng.]

bellicosity (bel-i-kos′i-ti), *n.*; pl. *bellicosities* (-tiz). Bellicose tendency or disposition; warlike intention or desire. *Manchester Examiner*, July 9, 1884.

bellite (bel′īt), *n.* [*Bell*, a proper name, + *-ite*2.] An explosive, of Swedish invention, consisting of a mixture of 5 parts of ammonium nitrate with 1 part of meta-dinitrobenzene, melted together, pressed while warm, and granulated.

bell-joint (bel′joint), *n.* An abbreviation of *bell-and-spigot joint.*

bell-moth (bel′môth), *n.* The oblique-banded leaf-roller, *Archips rosaceana*, an American tortricid moth which when at rest holds its wings in the shape of a bell; also, any other tortricid moth of similar shape.

Bellocq's cannula. See *cannula.*

bellows, *n. sing.* and *pl.* **2.** In *photog.*, that part of a camera which connects the front and back portions and is capable of being extended or closed as desired.—**3.** In *organ-building*, the extensive apparatus by which air is supplied and compressed for the sounding of the pipes. It usually includes two distinct parts, an oblique bellows, or *feeder* (resembling the ordinary household bellows, but on a large scale), by which the air is pumped into the reservoir, and a reservoir, called the *storage-bellows*, which is a horizontal bellows (having its top and bottom boards parallel and connected by creased folds of leather) so loaded by blocks of lead or other weights that the air within is maintained at a constant compression or tension. From the reservoir lead off the wind-trunks by which the compressed air is supplied to all parts of the instrument. Furthermore, on the wind-trunks are usually placed small bellows with springs, called *concussion-bellows*, *panting-bellows*, or *winkers*, by which sudden irregularities in pressure are taken up and counteracted.—**Facings bellows,** in *foundry-work*, a hand-blower for distributing fine dust or facings over a mold, to give a finished surface to it, preparatory to casting.—**Hessian bellows,** a blower invented in Thuringia about 1621. It consists of a flat vane having an inlet-valve for air, which reciprocates in a sector-shaped box. The air-outlet is close to the hinge.

bellows-leather (bel′ōz-leтн″ėr), *n.* Leather used in the manufacture of bellows: usually made from side leather.

bellows-tongue (bel′ōz-tung), *n.* A large tongue stitched in each side of a shoe (usually high-laced) to the top, for protection against snow and water.

bell-pipe (bel′pīp), *n.* A pipe with a bell or socket at one end to make the joint with the next length.

bell-pit (bel′pit), *n.* In mining salt and other minerals, a pit which is gradually widened to 100 or 200 feet in diameter, becoming cylindrical below.

bell-scale (bel′skāl), *n.* In *bell-founding*, a scale or standard of reference of any sort by which the dimensions, proportions, or pitch of a bell are measured.

bell-strap (bel′strap), *n.* A strap running lengthwise through a railway or other car and attached to a signal-gong.

belltopper (bel′top-ėr), *n.* A colloquial name in Australia and to some extent in Great Britain for a tall silk hat.

bell-tree (bel′trē), *n.* **1.** The silverbell, *Mohrodendron Carolinum*.—**2.** A tall branching frame bearing several small bells which can thus be shaken at once: usually a mere toy, but occasionally used in popular band-music.

Bellvale flags. See ★*flag*4.

bell-wheel (bel′hwēl), *n.* A form of toothed wheel in which the pitch-surface is a frustum of a hyperboloid of revolution. This gives to the wheel a shape which, in projection, suggests the usual profile of a church bell. It was used in textile practice in former times to give a special and varying velocity-ratio of the driving and the driven shaft.

belly-ache, *n.*—**Dry belly-ache,** girdle-pain in the abdomen, due to disease of the spine.

belly-bar (bel′i-bär), *n.* A bar used in pianoforte-making. See the extract.

> Beneath the strings from where the hammers rise, to the bent side, back, and end of the case, is the soundboard of spruce fir, barred beneath with batons, usually of the same wood, technically "*belly-bars*," which strengthen the belly, and by increasing its elasticity, extend its power to form nodes or centers of vibration, and

thus respond more promptly and effectively to the vibrations which are passed to it from the strings, when set in movement, through the hardwood belly bridge.
Sci. Amer. Sup., May 6, 1905, p. 24536.

belly-bump (bel'i-bump), *adv.* Prone on a sled, as a child in sliding down hill. *Dialect Notes*, III. iii, 181. [New England.]

belly-bumper (bel'i-bum″pėr), *n.* The act of sliding down hill prone on the sled. In New York, etc., *belly-whopper*. Also used adverbially. [New England.]

bellyman (bel'i-man), *n.*; pl. *bellymen* (-men). In *pianoforte-making*, one who makes or fits the soundboards.

Belly River series. See ★*series*.

belly-stay, *n.* 2. A plate on a locomotive which goes under the belly of the boiler, acting as a support for the latter and binding the frame-plates together. When the locomotive has inside cylinders the belly-stay also carries the cross-head guides.

belodont (bel'ō-dont), *n.* [*Belodon.*] A member of the reptilian family *Belodontidæ*.

Beloidea (bel-ō-ī'dē-ą), *n. pl.* [NL., ‹ Gr. *βέλος*, a dart, + *εἶδος*, form.] A family of solitary or colonial peripylæan radiolarians having a skeleton of loose silicious needles. It contains the genera *Thalassosphæra*, *Thalassoplancta*, *Physematium*, *Belonozoum*, and *Sphærozoum*.

belonesite (be-lon'ē-sīt), *n.* [Said to be ‹ Gr. *βελόνη*, a needle (referring to the form of the crystals), + *-ite*2. The proper form *belonite* is used in another application.] A magnesium molybdate occurring in white acicular tetragonal crystals: found on Vesuvius in the lava of 1872.

Belonesox (be-lon'ē-soks), *n.* [NL., ‹ Gr. *βελόνη*, a needle, + L. *esox*, a kind of pike (see *Esox*).] A genus of pœcilioid fishes found in Honduras: characterized by the elongate jaws. *B. belizanus* is the known species.

belonophobia (bel-ō-nō-fō'bi-ą), *n.* [NL., ‹ Gr. *βελόνη*, a needle, + *-φοβια*, ‹ *φοβεῖν*, fear.] A morbid fear of needles and pins.

belonosphérite (bel″ō-nō-sfē'rīt), *n.* [Gr. *βελόνη*, a needle, + *σφαῖρα*, sphere, + *-ite*2.] A term devised by Vogelsang (1872) for minute spherulites with radiate crystalline texture, often found in partly glassy lavas, especially the more silicious ones, such as rhyolite, and in artificial glasses. Compare *globospherite* and ★*granospherite*.

Belosepia (bel-ō-sē'pi-ą), *n.* [NL., ‹ Gr. *βέλος*, a dart, + *σηπία*, a cuttlefish.] A genus of dibranchiate cephalopods or cuttlefishes from the Eocene Tertiary rocks.

Belou (bel'ö), *n.* [NL. (Adanson, 1763, adopted from Rheede, 1682), from one of the forms of (Bengali?) *bel*, a Hindu name of the Bengal quince, *Belou Marmelos*.] A genus of dicotyledonous plants belonging to the family *Rutaceæ*. See *Ægle*.

Belpaire fire-box. See ★*fire-box*.

belt, *n.* 6. In a war-ship, the side of the vessel, in the vicinity of the water-line, protected by external armor-plating. A *complete belt* is one in which the armor extends from stem to stern: a *partial belt* extends over only part of the length.—7. In *archery*, a strap for suspending the quiver: usually worn round the waist of the archer.—**Belt of high pressure, belt of low pressure.** See ★*pressure*.—**Belt of rains.** See ★*rain*1.—**Cotton belt,** the portion of the southern United States adjoining the Gulf of Mexico and the Atlantic (including North Carolina), where cotton is best and most extensively cultivated. See *Cotton States*, under *cotton*1.—**Thermal belt.** See ★*thermal*.

belt-armor, *n.* It extends from 4 to 6 feet below the surface of the water and to varying heights above it. In vessels with a partial belt the armor-protection is completed at the ends by a diagonal or athwartships belt in the interior from side to side. In modern vessels the armoring of the side is continued above the belt by the casemate armor.

belt-concentrator (belt'kon″sen-trā-tor), *n.* See ★*concentrator*.

belt-conveyer (belt'kọn-vā'èr), *n.* See ★*conveyer*, 4.

belt-coupled (belt'kup″ld), *a.* Connected by a belt: applied specifically to a machine which is driven by an engine through a belt instead of directly or by gears.

belt-course (belt'kōrs), *n.* Same as *string-course*.

belt-driven (belt'driv″n), *a.* In *mach.*, driven by means of a flexible belt. It is used of pumps, air-compressors, electric generators, etc., somewhat in opposition to *direct-connected*, which indicates that no transmission element intervenes; and specifically of a form of motor-cycle or motor-car in which a flat or angular belt is used to transmit power to the driving-wheels instead of a chain or a shaft and gears.

Belted cruiser. See ★*cruiser*.—**Belted plains.** See ★*plain*.—**Belted ship,** an early type of armored war-ship in which the hull protection was concentrated in the water-line armor-belt. *White*, Manual of Naval Arch., p. 33.

belt-fork (belt'fôrk), *n.* A two-pronged device for shifting the operating belt of a machine from one pulley to another.

belt-frame (belt'frām), *n.* In *shipbuilding*, a frame to which a belt of protective armor is to be attached, and hence built up of plates and angles much deeper and stronger than those of the ordinary frames: same as ★*web-frame*.

belting, *n.*—**Gut belting,** machine belting made of catgut. It is usually round and quite small.

belt-knife (belt'nīf), *n.* A knife which revolves over wheels, as a band-saw or circular saw: used in splitting hides or skins. *Modern Amer. Tanning*, p. 110.

belt-perch (belt'pėrch), *n.* A wooden or metal bar placed beside a belt-pulley to support the belt when it is thrown off the pulley for repairs. This prevents the belt from being caught on the revolving shaft.

belt-pump (belt'pump), *n.* A belt-driven pump.

belt-punch (belt'punch), *n.* A punch made up in the form of pliers for piercing holes in belting through which the lacing or rivets are passed when the ends are coupled together.

Beltrami's equation. See ★*equation*.

belt-stretcher (belt'strech″èr), *n.* A piece of mechanism for stretching new leather belts, especially when they are to be laced or cemented, so as to make them grip the pulleys tightly.

belt-table (belt'tā″bl), *n.* Same as ★*belt-concentrator*.

belt-tightener, *n.* 2. A device used for pulling the ends of a belt together when they are to be laced or cemented. Clamps are attached to the ends of the belt, and are then drawn together by screws.

belugite (be-lū'gīt), *n.* [*beluga* + *-ite*2.] In *petrog.*, the name proposed by Spurr (1900) for granular igneous rocks intermediate in composition between diorite and diabase, especially as to the lime-soda feldspar, which is andesine or labradorite.

belying (bē-lī'ing), *n.* The telling of lies about one; calumniation: as, "backbiting and *belying*," *Swinburne*, Essays and Studies, Pref. x.

bemaim (bē-mām'), *v. t.* To maim seriously; wound.

Spoiled of their goods, *bemaimed* and slaine.
Stow, Annals, p. 673.

bemaster (bē-mās'tėr), *v. t.* To master completely. *B. Taylor*, Trans. of Goethe's Faust.

Bembecides (bem-bes'i-dēz), *n. pl.* [NL., ‹ *Bembex* (*-bec-*) + *-ides*.] The *Bembecidæ* considered as a group of less than family rank: virtually synonymous with *Bembecinæ*.

bembil (bem'bil), *n.* [Australian.] In Australia, *Eucalyptus populnea*, a tree yielding a hard, heavy timber used for building purposes, posts, and mauls. From the leaves is obtained an oil resembling cajeput. Also called *poplar-box* and *red box*.

bementite (bē'ment-īt), *n.* [Named after C. S. *Bement* of Philadelphia.] A hydrated manganese silicate occurring in grayish-yellow stellate forms with micaceous structure: found at Franklin Furnace, New Jersey.

ben1, *adv.* 2. In *mining*, inward; toward the workings. [Scotch.]

ben1, *n.* 2. In *mining:* (*a*) The right to enter the mine and work. A workman may claim his *ben*, have his right to cars acknowledged, and delegate it to his boys. Hence—(*b*) A day's work. The terms *quarter-ben*, *half-ben*, *three-quarters-ben* are used to denote the proportion of a man's darg, or day's output of mineral, which a youth is able or allowed to put out. *Barrowman*, Glossary. [Scotch.]

benab (bā-näb'), *n.* [Also *benaboo;* from a native name (Carib?) in Guiana.] A temporary shelter made of leaves and branches and supported on a framework of poles. Also *benaboo*. [Guiana.]

Bence-Jones albumin, albuminuria, albumose. See ★*albumin*.

bench, *n.* 8. (*b*) (2) A horizontal subdivision of a bed of coal or other mineral.—11. A glass tray in which microscopical slides can be placed, in a vertical position, for staining or

other purposes.—**Anxious bench.** See ★*anxious seat*.—**Mourners' bench.** See ★*mourner*1.—**Optical bench,** an apparatus suitable for experiments in optics, particularly on the interference of light. It consists of a properly supported horizontal brass bar, accurately graduated, along which vertical uprights can slide freely. A vernier is attached to each upright. An adjustable slit, a metal plate for holding special instruments, and a micrometer eyepiece with cross-wire form the usual outfit.—**Sloid bench.** See ★*sloid*.

bench-board (bench'bōrd), *n.* A board used by molders, on which the pattern is laid when starting to fill the flask with sand. This board is removed after the flask is turned over, so that the cope can be put on.

bench-diggings (bench'dig″ingz), *n. pl.* In *mining*, river placers not subject to overflow.

bench-grinder (bench'grīn″dėr), *n.* A small machine for grinding which, having short legs, is set on a bench to bring it to a convenient height.

benchlet (bench'let), *n.* [*bench* + *-let*.] A small bench; a stool. *Carlyle*.

bench-level, *n.* 2. The elevation of a surveyor's bench-mark above a given or datum-plane.

benchucha (ben-chö'chą), *n.* [From some S. Amer. source?] A large South American reduviid bug, probably of the genus *Conorhinus*, which sucks the blood of warm-blooded animals, including man.

benchy (bench'i), *a.* In *mining*, characterized by benches, as a lode or bed.

bend1, *n.* 13. Power; ability: as, that is above my *bend*. [Colloq., western U. S.]—14. A segmental plate or ring on which the movable carding-surfaces of a revolving flat cotton-carding machine run and are adjusted in their relation to the main cylinder or drum. *Nasmith*, Cotton Spinning, p. 101.—15. *pl.* Same as *caisson-disease*. *The Century*, Nov., 1903, p. 45. [Colloq.]

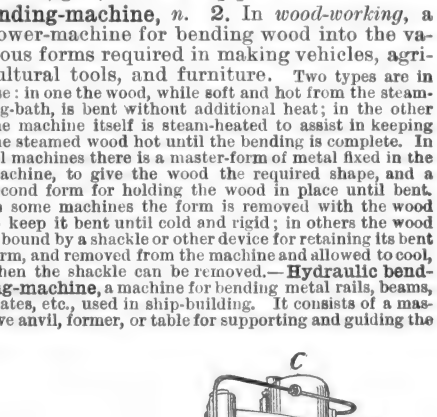
benda (ben'dą), *n.* An Ashanti gold coin.

bender, *n.* 6. A mechanical device for bending or drawing a crossbow.

bendigo (ben'di-gō), *n.* A rough fur cap named from a noted English pugilist. *Stand. Dict.*

bending-form (ben'ding-fôrm), *n.* In *hardware*, a form of bench-anvil used in bending steam-, gas-, and water-pipes.

bending-machine, *n.* 2. In *wood-working*, a power-machine for bending wood into the various forms required in making vehicles, agricultural tools, and furniture. Two types are in use: in one the wood, while soft and hot from the steaming-bath, is bent without additional heat; in the other the machine itself is steam-heated to assist in keeping the steamed wood hot until the bending is complete. In all machines there is a master-form of metal fixed in the machine, to give the wood the required shape, and a second form for holding the wood in place until bent. In some machines the form is removed with the wood to keep it bent until cold and rigid; in others the wood is bound by a shackle or other device for retaining its bent form, and removed from the machine and allowed to cool, when the shackle can be removed.—**Hydraulic bending-machine,** a machine for bending metal rails, beams, plates, etc., used in ship-building. It consists of a massive anvil, former, or table for supporting and guiding the



Ship's-plate Bending-machine.

a, table supporting anvil or lower die; *b*, *b*, *b*, guideways and supporting posts; *c*, *c*, hydraulic cylinders; *d*, *d*, rams; *e*, *e*, cross-heads carrying former or upper die; *f*, former.

beam, rail, or plate while it is subjected to the pressure of one or two hydraulic rams. The large machines are essentially double hydraulic presses, employing two vertical rams that carry a long former which bends the metal laid on the table under it into the required shape.

bending-rolls (ben'ding-rōlz), *n. pl.* A machine having a set of rolls, either horizontal or vertical, so arranged that a plate passed between them while they revolve will be curved to any desired radius. If it is desired to curve the plate until its two edges meet, the bending-rolls must be so made that the bearing at one end can be removed to provide for taking out the plate.

benduqi (ben-dö'kē), *n.* [Also *benduky, bendiky;* < Ar. *bunduqí*, a Venetian sequin or ducat, lit. 'Venetian,' < *Bunduq*, Turk. *Vendik*, G. *Venedig*, Venice, < L. *Veneticus*, adj., < *Venetia*, Venice.] A gold coin of Morocco.

benedicence (bē-ned'i-sens), *n.* [NL. as if **benedicentia*, < L. *benedicere*, bless: see *benedict.*] Kindly speech. *M. Williams.*

Benedictinism (ben-ē-dik'tin-izm), *n.* The system and method of religious life and thought exemplified in the Benedictine order.

benedictional, *n.* **II.** *a.* Pertaining to or of the nature of a benediction; pertaining to blessings given according to the prescribed rite; also, relating to objects so blessed.

Small *benedictional* crosses belong to each altar, and processional crosses are common.
Encyc. Brit., XXVII. 238.

benedictive, *a.* **2.** Expressing desire or wish; precative: a form of the optative mood in Sanskrit verbs.

The aorist has also an optative, of somewhat peculiar inflection, usually called the precative (or *benedictive*).
Whitney, Sansk. Gram., § 533.

benedictively (ben-ē-dik'tiv-li), *adv.* With the force of the *benedictive* mood. See ★*benedictive*, 2.

benedite (ben'e-dīt), *n.* An explosive containing 92–95 parts of ammonium nitrate and 5–7 parts of colophony.

benefactorship (ben-ē-fak'tor-ship), *n.* The position or relation of benefactor: as, "his *benefactorship* to his country," *Hales.*

benefactory (ben-ē-fak'to-ri), *a.* Benefit-conferring; beneficial: as, *benefactory* results.

benefice (ben'ē-fis), *v. t.*; pret. and pp. *beneficed*, ppr. *beneficing.* [*benefice, n.*] To endow or invest with a benefice. *Wyclif.*

beneficial, II. *n.* **2.** In *zoöl.*, an animal which benefits man by destroying or checking the increase of animals injurious to him.

Group G.—Animals which are known as "*beneficials*," on account of their being destructive to or checking the increase of the injurious animals classed under Groups D, E, and F. Examples:—Certain carnivorous and insectivorous birds, reptiles, and Amphibia; parasitic and predacious insects, acari, myriopods, etc.
Jour. Roy. Micros. Soc., April, 1904, p. 172.

Benefit of cession, in *civil law*, immunity from future imprisonment of a debtor for his present debts upon surrender of his property for the benefit of his creditors.

Bengal blue, isinglass. See ★*blue*, ★*isinglass.*

bengalin (ben'ga-lin), *n.* [*Bengal* + *-in*[2].] One of the Janus coal-tar colors. Same as *indoin* ★*blue.* Also *bengaline.*

bengaline (ben'ga-lin), *n.* [*Bengal* + *-ine*[2].] A fine, corded dress-fabric for women's wear. It has a silk warp and a worsted weft. The latter is so introduced as to form a cord, though entirely concealed on both surfaces by the silk warp.

bengaza (ben-gä'zä), *n.* A sponge of somewhat coarse texture found in deep water and used by the Turks as a bath-sponge.

beni (bā'nē), *n.* The name ('Japanese beni') of *Caryopteris* (*Mastacanthus*) *incana*, a hardy shrub native to China and Japan, cultivated for its late summer bloom. The leaves are petiolate, ovate, or oblong, the flowers small, violet-blue, or lavender-blue. It is known in the trade as the *blue spiræa.*

benighted (bē-nīt'ed), *p. a.* Overtaken with night; hence, involved in moral darkness or ignorance: as, *benighted* Hottentots.

benjamin[1], *n.* **2.** In Australian Pidgin-English, a married man; a husband.

Benjamite (ben'ja-mīt), *n.* A descendant of the patriarch Benjamin, son of Jacob.

Bennet's fracture. See ★*fracture.*

Bennettitaceæ (ben″e-ti-tā'sē-ē), *n. pl.* [NL. (Salms-Laubach, 1887), < *Bennettites* + *-aceæ.*] A family of gymnospermous fossil plants of the order *Bennettitales.* It is distinguished from the *Cycadaceæ* by having the reproductive organs, which consist of spadices surrounded by involucral bracts, embedded in a thick jacket or armor (see ★*armor*), and projecting only slightly or not at all beyond it. It contains the genera ★*Bennettites* and ★*Cycadeoidea* (which see). The numerous trunks of this family have all been found in Mesozoic strata, chiefly Jurassic and Lower Cretaceous, especially in England, France, Italy, Maryland, and South Dakota.

Bennettitales (ben-e-ti-tā'lēz), *n. pl.* [NL. (Engler, 1892), < *Bennettites* + *-ales.*] An order of fossil plants, of the class *Gymnospermæ*, containing the family *Bennettitaceæ* only, though further research may show that this should be divided into several families.

Bennettites (ben-e-tī'tēz), *n.* [NL. (Carruthers, 1871), named in honor of John Joseph *Bennett*, an English botanist.] A genus of gymnospermous fossil plants, type of the family *Bennettitaceæ* and order *Bennettitales.* It is characterized by the presence of seeds borne on long stalks and deeply embedded in the silicified armor. These seeds have been discovered in only a few specimens, and those in which they do not occur are referred to the genus *Cycadeoidea*, a name which has priority. It is probable that all the fertile plants actually bore them, and therefore the distinction is purely artificial. See ★*Cycadeoidea.*

Bennington pottery. See *American* ★*pottery.*

beno (bē'nō), *n.* An English spelling of Spanish *vino*, wine, applied in the Philippine Islands to aguardiente.

In view of the vile whiskey and "*beno*" selling dens which have sprung up around the army posts since the canteen was abolished, the military authorities here have asked the Commission to prohibit the sale of liquors within two miles of a military post, except in the case of a few stations located in large towns.
Med. Record, April 4, 1903, p. 547.

bent[1], *a.* **3.** In *mining*, said of a coal-seam which is difficult to work on account of the unequal distribution of the weight of the overlying strata. [Scotch.]—**4.** Bound in some direction or toward an aim; set; pointing toward something.

bent[1], *n.* **8.** (*b*) The articulated group of members forming a plane frame of a framed structure, such as a bridge-truss, a braced pier, or a building-frame. A bent of trestle would comprise all the members in one transverse plane, including the sill, cap, vertical and inclined posts, and transverse bracing-members.—**11.** A cleavage-plate of slate whose sides are slightly curved, cut from gently folded beds.

The rock surface may be but a few inches below the turf or may be buried beneath 30 to 40 feet of glacial deposits. There is frequently a flexure of the cleavage ("curl") for a few inches near the ribbon; more rarely there is a curvature of the cleavage across the entire bed. Slates cut from such beds are called "*bents*," and are used for covering curved or conical roofs.
Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 362.

bent[2], *n.*—**Black bent.** (*b*) The switch-grass, *Panicum virgatum.*—**English bent,** the redtop, *Agrostis alba.*—**Long-leafed bent,** the sand-grass, *Calamovilfa longifolia.*—**Panic bent,** the Munro-grass, *Panicum agrostoides.*—**Rhode Island bent,** the dog-bent, *Agrostis canina*, one of the best lawn grasses. Less properly, *A. alba.*—**Rough bent,** *Agrostis hyemalis.*—**Rough-leafed bent,** *Agrostis asperifolia.*—**Sea-coast bent,** *Agrostis coarctata.*

benthic (ben'thik), *a.* [*benthos* + *-ic.*] Living upon the bottom as distinguished from living in the water above; submarine; benthonic.

Benthocometes (ben″thō-kō-mē'tēz), *n.* [NL., < Gr. *βένθος*, depth, + *κωμήτης*, countryman.] A genus of deep-sea fishes of the family *Brotulidæ.*

Benthodesmus (ben-thō-des'mus), *n.* [NL., < Gr. *βένθος*, depth, + *δεσμός*, band.] A genus of deep-sea fishes allied to the mackerel, belonging to the family *Lepidopodidæ.*

benthonic (ben-thon'ik), *a.* [Irreg. < *benthos* + *-on-ic.*] Living upon or in the bottom of the sea as distinguished from the water; submarine. Benthonic organisms are contrasted with those that are water-dwelling or planktonic. Many animals are benthonic during part of their lives and planktonic during another part. Most hydroids are fixed to the bottom, or benthonic, while the medusæ which they produce and set free swim in the water and are planktonic. See *benthal* and ★*planktonic.*

The *Challenger* observations have shown that the bottom in this neighbourhood is covered by an exceedingly rich *benthonic* fauna. *Geog. Jour.* (R. G. S.), XIII. 58.

benthos (ben'thos), *n.* [Gr. *βένθος*, depth, akin to *βάθος*, depth: see *bathos.*] The plants and animals that live in the sea-bottom, and those that are attached to its surface, and those that creep or run over it: a collective noun introduced by Haeckel. The benthos is contrasted with the *plankton*, or floating and swimming fauna and flora of the sea. It includes all the marine macrophytic algæ, also some phanerogams, the sea-grasses (see *sea-grass*, 1), as well as an abundance of microphytic algæ (diatoms, etc.). It is divided into the *sedentary* and the *vagile* or vagrant benthos, the former including organisms attached to the bottom, the latter those moving over it. See *plankton*, ★*nekton.*

Others again have no natatory organs, and are either permanently fixed, like Zoophytes and Stalked Crinoids, or move by creeping over the sea-bottom, like Starfishes, Holothurians, Chætopods, etc.; such forms constitute the *benthos*, or "bottom fauna."
Parker and Haswell, Zoology, II. 600.

Abyssal benthos, the animals that live upon or in the bottom of the deep sea.—**Littoral benthos,** the animals and plants that live upon or in the bottom of the waters in the vicinity of the coast.

Benthosauridæ (ben-thō-sâ'ri-dē), *n. pl.* [NL., < *Benthosaurus* + *-idæ.*] A small family of deep-sea fishes with well-developed maxillary and very long ventrals, allied to the *Synodontidæ.*

Benthosaurus (ben-thō-sâ'rus), *n.* [NL., < Gr. *βένθος*, depth, + *σαῦρος*, lizard.] A genus of fishes, typical of the family *Benthosauridæ.* The species *B. grallator* is found in the Gulf Stream.

Benthosema (ben-thō-sē'mä), *n.* [NL., < Gr. *βένθος*, depth, + *σῆμα*, a sign, mark, token.] A genus of lantern-fishes of the family *Myctophidæ*, found in the waters about Greenland.

Benton shale. See ★*shale*[2].

bentonite (ben'ton-īt), *n.* [*Benton* + *-ite*[2].] A variety of clay occurring extensively in the Fort Benton strata of the Cretaceous of Wyoming. While containing chiefly silica, alumina, and water, with about 60 per cent. or more of the first-named, it nevertheless has so many other bases as not to be refractory, but rather to resemble fullers' earth. *Engin. and Min. Jour.*, Oct. 22, 1898, p. 491.

bent-wood (bent'wůd), *n.* Wood in rods, bars, and narrow boards and moldings softened in steam and fastened while hot into a curved clamp to give it a bent form. When cold and removed from the clamp it retains its form. Used in boat-building and in furniture-making.—**Bent-wood furniture,** chairs and other furniture made of round rods of wood bent into various artistic forms and usually having cane seats.

benum, *v. t.* A simplified spelling of *benumb.*

benylene (ben'i-lēn), *n.* [*ben(zene)* + *-yl* + *-ene.*] A hydrocarbon, $C_{15}H_{28}$, of the acetylene series, formed by the action of alcoholic potash on triamylene bromide.

benzal (ben'zal), *n.* [*benz(ene)* + ★*-al*[3].] **1.** An organic radical having the formula C_6H_5CH and a valence of two.—**2.** A prefix sometimes used to indicate that a compound is derived from benzaldehyde.—**Benzal green.** Same as *benzaldehyde green* (which see, under *green*[1]).

benzaldoxime (ben-zal-dok'sim), *n.* [*benzald(ehyde)* + *oxime.*] The oxime, $C_6H_5CH{:}NOH$, of benzaldehyde. It exists in two forms—antibenzaldoxim, which melts at 35° C., and synbenzaldoxim, which melts at 128°–130° C.

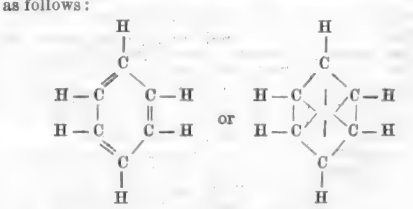
benzamarone (ben-zam'a-rōn), *n.* [*benz(aldehyde)* + L. *amar(us)*, bitter, + *-one.*] A crystalline compound formed by allowing an alcoholic solution of desoxybenzoin, benzaldehyde, and potassium hydroxid to stand. It melts at 218° C.

benzanilide (ben-zan'i-lid), *n.* [*benz(oyl)* + *anil(ine)* + *-ide*[2].] The benzoyl derivative of aniline, $C_6H_5NHCOC_6H_5$. It crystallizes in leaflets which melt at 161° C.

benzein (ben'zē-in), *n.* [*benz(oin)* + *-e-in*[2].] A triphenyl carbinol or one of its derivatives in which two of the benzene nuclei are hydroxylated: as, phenol *benzein*, $C_6H_5C\diagup\!\!\diagdown^{C_6H_4OH}_{C_6H_4{=}O}$.

The benzeins are formed by the condensation of benzotrichlorid with phenols, and are dyes.

Benzene nucleus. See ★*nucleus.*—**Benzene ring,** the graphical or structural representation of a molecule of benzene by the closed chain or ring, proposed by Kekulé in 1865. It is usually written in the form of a hexagon, as follows:



Kekulé's Formula. Centric Formula.

benzenoid (ben'zē-noid), *a.* [*benzene* + *-oid.*] Derived from or related to benzene. *Rep. Brit. Ass'n Advancement of Sci.*, 1900, p. 166.

benzerythrene (ben-zer'i-thrēn), *n.* [*benz(ene)* + Gr. *ἐρυθρός*, red, + *-ene.*] A colorless hydrocarbon, $C_{24}H_{18}$, contained in anthracene oil and formed by passing benzene through a red-hot tube. It crystallizes in leaflets and melts at 307°–308° C.

benzhydrol (benz-hī'drōl), *n.* [*benz(ene)* + *hydr(ogen)* + *-ol.*] Diphenylmethanol or diphenylcarbinol, $(C_6H_5)_2CHOH$, a compound formed by the reduction of benzophenone. It crystallizes in needles which melt at 68° C.

benzidam (ben'zi-dam), *n.* [*benz(ene)* + *-id*[1] + *am(monium).*] The name given to aniline

by Zinin in 1840, when he prepared it by reducing nitrobenzene with ammonium sulphid. [Now obsolete.]

benzidine (ben'zi-dīn), *n.* [*benz(ene)* + *-id*[1] + *-ine*[2].] The common name for para-diaminodiphenyl, one of the aromatic bases having the formula $NH_2.C_6H_4-C_6H_4.NH_2$. It is an important raw material in the preparation of many of the direct cotton colors.—**Benzidine blue, colors.** See ★*blue*, ★*color*.—**Benzidine rearrangement,** a molecular rearrangement by which benzidine is formed from hydrazobenzene, $C_6H_5NHNHC_6H_5$, or by which other hydrazo compounds undergo a similar transformation. The rearrangement takes place under the influence of dilute acids and is important as a step in the preparation of many dyes, especially those of the "Kongo" series.—**Benzidine red.** See ★*red*[1].

benzilam (ben'zi-lam), *n.* [*benzil* + *am(monia)* (?).] The compound triphenyloxazole, $C_6H_5-C-O\diagdown\!\!\diagup CC_6H_5$ (with C_6H_5-C-N and a double bond), which crystallizes in prisms which melt at 115° C.

Benzilic acid, diphenylglycolic or diphenylhydroxyacetic acid, $(C_6H_5)_2C(OH)CO_2H$. It is formed by warming benzil with alcoholic potash. It crystallizes in needles which melt at 150° C.

benzimino (ben-zim'in-ō), *n.* Noting an ester of the general formula $C_6H_5NH-O-R$, salts of which are formed by the action of hydrochloric acid and an alcohol on benzonitrile. The *ethyl ester* is an oil which forms a crystalline hydrochlorid. Also called, less correctly, *benzimino ether*.

benzo-. A combining form of *benzene*, sometimes used to indicate that a compound is related to benzene or one of its homologues. Its significance is not definite, as is the case with such prefixes as *methyl-*, *phenyl-*, etc. In color-chemistry its use commonly indicates a direct cotton color, as in *benzo-blue, benzo-purpurin*, etc. The direct cotton coal-tar colors are sometimes spoken of as the *benzo colors*.—**Benzo-black, blue,** etc. See the ★nouns.—**Benzo sky-blue.** Same as *diamine* ★*sky-blue*.

benzo-azurine (ben-zō-azh'ū-rin), *n.* Either of two direct cotton coal-tar colors (*benzo-azurine G* and *3G*) of the diazo type, derived from dianisidine. They dye unmordanted cotton blue in an alkaline salt bath.

benzo-black (ben-zō-blak'), *n.* A direct cotton coal-tar color of unpublished composition.

benzo-blue (ben-zō-blö'), *n.* A name applied to three distinct cotton coal-tar colors (*benzo-blue BB, BX*, and *3G*), of the diazo type, derived from benzidine or tolidine. They dye unmordanted cotton various hues of blue in a neutral salt bath. They are similar to some of the diamine blues.

benzo-brown (ben-zō-broun'), *n.* Same as *alkali* ★*brown*.—**Benzo-brown B** and **G,** two direct cotton coal-tar colors of the tetrakisazo type. The former is produced by combining diazotized sulphanilic acid, and the latter diazotized naphthionic acid, with Bismarck brown. They dye unmordanted cotton various shades of brown from a neutral salt bath.

benzo-cyanine (ben-zō-sī'a-nin), *n.* A direct cotton coal-tar color of unpublished composition. It dyes unmordanted cotton a bright blue from a salt bath.

benzo-flavin (ben-zō-flav'in), *n.* A basic coal-tar color of the acridine type. It dyes unmordanted wool and silk and tannin-mordanted cotton a bright yellow.

benzo-gray (ben-zō-grā'), *n.* A direct cotton coal-tar color of the trisazo type, derived from benzidine. It dyes unmordanted cotton gray from a neutral salt bath.

Benzoic sulphimide. Same as *saccharin*, 2.—**German benzoic acid,** a term formerly applied to benzoic acid made from horse-urine.

benzoin, *n.* **2.** [*cap.*] A genus of aromatic dicotyledonous trees or shrubs of the family *Lauraceæ*. See *Lindera*.—**3.** A compound, $C_6H_5CHOHCOC_6H_5$, formed when benzaldehyde is boiled with alcohol containing a little potassium cyanide. It melts at 130° C. and boils at 344° C. Also *diphenylethanolone*.

benzol, *n.*—**Ninety-per-cent. benzol,** the mixture of hydrocarbons obtained from coal-tar which distils over at temperatures not exceeding 110° C.: so called because 90 per cent. of it distils below or at 100°. It usually contains about 70 per cent. benzene and 25 per cent. toluene, and is used in the manufacture of nitrobenzene (oil of mirbane) and of aniline oil, from which aniline dyes are made.

benzoleic (ben-zō-lē'ik), *a.* Of or pertaining to benzol.—**Benzoleic acid.** Same as ★*tetrahydrobenzoic acid*.

benzometadiazine (ben″zō-met-a-dī-az'in), *n.* [*benz(ene)* + *metadiazine* (?).] Same as ★*quinazoline*.

benzonitrile (ben-zō-nī'tril), *n.* [*benzo(ic)* + *nitrile*.] Phenyl cyanide or the nitrile of benzoic acid, C_6H_5CN. It is an oil with an odor like that of bitter almonds. It boils at 190.6° C.

benzo-olive (ben-zō-ol'iv), *n.* A direct cotton coal-tar color of the trisazo type, derived from benzidine. It dyes unmordanted cotton a greenish olive in a neutral salt bath.

benzo-orange (ben-zō-or'ānj), *n.* A direct cotton coal-tar color of the diazo type, derived from benzidine and containing a salicylic-acid group. It dyes unmordanted cotton orange from an alkaline salt bath.

benzophenone (ben-zō-fē'nōn), *n.* [*benzo(ic)* + *phen(yl)* + *-one*.] Diphenylketone, $(C_6H_5)_2CO$, a compound formed by the dry distillation of calcium benzoate. It melts at 48° C. and boils at 306.1° C.

benzoquinone (ben-zō-kwin'ōn), *n.* [*benzo(ic)* + *quinone*.] Same as *quinone*.

benzosol (ben'zō-sōl), *n.* [*benz(oyl)* + *-ose* + *-ol*.] A colorless, tasteless, crystalline compound, $C_6H_4OCH_3OCOC_6H_5$, obtained by the action of benzoyl chlorid upon guaiacol; guaiacol benzoate; benzoyl guaiacol. It is sometimes taken internally for intestinal tuberculosis and diarrhea.

benzotrichlorid (ben″zō-trī-klō'rid), *n.* [*benzo(ic)* + *trichlorid*.] Phenyltrichlormethane or 1′, 1′, 1′-trichlortoluene, $C_6H_5CCl_3$, a colorless liquid formed by the action of chlorin on boiling toluene. It has a penetrative, irritating odor, and boils at 214° C. It is used in the preparation of a number of dyes.

Benzoyl chlorid, the chlorid of benzoic acid, C_6H_5COCl. It is a colorless oil with a pungent odor. Its vapor is very irritating to the eyes. It boils at 195° C.

benzoylacetylperoxid (ben″zō-il-as″e-til-pėr-ok'sid), *n.* [*benzo(ic)* + *acetyl* + *peroxid*.] A compound having the formula $C_6H_5CO.O.O.COCH_3$, a solid which melts at 40° C. It is a powerful germicide and has been used in medicine. A trade-name, *acetozone*, is sometimes used for this compound.

Benzyl acetate, an important constituent of the natural essential oils of jasmine and ylang-ylang, used in perfumery.—**Benzyl blue, violet.** See ★*blue*, ★*violet*[1].

benzylidene (ben-zil'i-dēn), *n.* [*benzyl* + *-id-* + *-ene*.] Same as ★*benzal*.

bepatched (bē-pacht'), *p. a.* *Much or frequently patched; wearing patched clothes.

> You ragged vagabond . . . you *bepatched* and bespattered knave. *Addison*, Sir Roger de Coverley.

ber (bār), *n.* [Hindi *ber*.] The name in India of the jujube or Chinese date, *Zizyphus Jujuba*. Also called *badari*. See *jujube*, 1, and *Chinese date*, under ★*date*[3].

berakah (be-rä'kä), *n.*; pl. *berakoth* (-kôt). [Heb., ⟨ *barak*, Ar. *baraka*, bend the knee, bless, praise.] A blessing; a benediction. The blessings and thanksgivings generally begin with the words *Baruk atah Adonai* ("Blessed art thou, O Lord"). The pious Hebrew eats or drinks nothing without a benediction before and after.

berakoth, *n.* Plural of ★*berakah*.

berascal (bē-ras'kal), *v. t.*; pret. and pp. *berascaled* or *berascalled*, ppr. *berascaling* or *berascalling*. To brand as a rascal; rate as a rascal. *Fielding*, Jon. Wild, II. iii.

berbamine (bėr'ba-min), *n.* [*Berb(eris)* + *amine*.] A crystalline alkaloid, $C_{18}H_{19}NO_3 + 2H_2O$, found in *Berberis vulgaris*, the common barberry. The anhydrous alkaloid melts at 156° C.

berber[2] (bėr'bėr), *n.* [Origin uncertain. See ★*barber*[2].] A cold fog, analogous to fine sleet, which freezes to one's face and hair or beard. See ★*barber*[2]. [New York City.]

berberic (bėr'be-rik), *a.* [*Berber(is)* + *-ic*.] Derived from berberine.—**Berberic acid,** a crystalline acid, $C_8H_8O_4 + H_2O$, obtained by melting berberine with potassium hydroxid. It melts with decomposition at about 165° C., giving homopyrocatechinol.

berberid (bėr'bė-rid), *n.* [*Berber(is)* (see *barberry*) + *-id*[2].] A plant of the family *Berberidaceæ*.

berberilic (bėr-be-ril'ik), *a.* [*Berber(is)* + *-il* + *-ic*.] Derived from berberine.—**Berberilic acid,** an acid, $C_{20}H_{19}NO_9$, formed by oxidizing berberine with potassium permanganate. It melts with the formation of an anhydrid at 177°–182° C.

berberonic (bėr-be-ron'ik), *a.* [*Berber(is)* + *-one* + *-ic*.] Derived from berberine.—**Berberonic acid,** 2, 4, 5-pyridine tricarboxylic acid, $C_5H_2N(CO_2H)_3$. It is formed by the oxidation of berberine with nitric acid. It crystallizes in prisms which melt at 235° C.

Berchemia (bėr-kē'mi-ä), *n.* [NL. (proposed by Necker, 1790, established by De Candolle, 1825), of unknown significance.] An untenable name for *Œnoplia* a genus of usually climbing shrubs belonging to the family *Rhamnaceæ*. See ★*Œnoplia*.

Berdan pan. See ★*pan*[1].

berduque, *n.* Same as ★*belduque*.

Berea grit. Same as *Berea sandstone*.

Berecynthian (ber-i-sin'thi-an), *a.* [Gr. *Βερεκύνθιος, Βερεκύντιος*, adj., from *Βερέκυντος*, a place in Phrygia.] Of or pertaining to Berecynthos, a place in ancient Phrygia.—**Berecynthian mother,** Cybele, who was called 'the mother of the gods,' and whose worship was common in Phrygia, in the Berecynthian forest or Berecynthian mountains.

berengelite (be-ren'ge-līt), *n.* [*Berengela* (see def.) + *-ite*[2].] A substance resembling bitumen or asphalt, found in the province of San Juan de Berengela, Peru, locally used for calking and paying ships.

Berenicea (ber-ē-nis'ē-ä), *n.* [NL., ⟨ L. *Berenice*, Gr. *Βερενίκη*, a feminine proper name.] A genus of cyclostomatous bryozoans growing as thin discoid crusts on foreign bodies, the zoœcia being arranged in irregularly alternating lines. These organisms are found in rocks as old as the Silurian, became very abundant in Mesozoic time, and are present in existing seas.

beresovite (be-res'ō-vīt), *n.* [*Berezof*, a mining district and place in Russia, in the government of Perm, + *-ite*[2].] A chromate and carbonate of lead occurring in deep-red crystalline lamellæ: found at Berezof in the Ural.

bergamiol (bėr-gam'i-ōl), *n.* [*bergam(ot)* + *-i-ol*.] Linaloyl acetate, the principal constituent of the essence or essential oil of bergamot, now prepared in separate form and used in perfumery.

bergaptene (bėr-gap'tēn), *n.* A lactone, $C_{12}H_8O_4$, corresponding to ethenylol-phentriol-propenylic acid, $HO.CH:CHC_6H(OH)_3CH:CHCO_2H$: found in oil of bergamot. It crystallizes in needles which melt at 188° C.

Bergen game. See ★*game*[1].

bergenin (bėr'je-nin), *n.* An indifferent, crystalline, bitter substance, $C_8H_{10}O_5 + H_2O$. It melts at 130° C.

bergschrund (berg'shrönt), *n.* [G., ⟨ *berg*, mountain, + *schrund*, a gap, crevice.] A crevice between a glacier and the rocky wall of its valley. The bergschrund is the scene of thawing under the sun's rays during the day and of freezing at night, and along it frost is very destructive, furnishing the loose rocks for moraines. *Jour. of Geol.*, Nov.–Dec., 1902, p. 846.

bergstock (berg'stok), *n.* [G., 'mountain stick': see *berg* and *stock*.] An alpenstock; a long stick with a spike at the end, used in mountain-climbing.

berg-till (berg'til), *n.* Glacial debris carried and deposited by icebergs.

> When icebergs bearing till or bowlders floated out into lakes which bordered the ice-sheet, deposits were made in the water which bear resemblances both to till and to lacustrine clays. If the icebergs bore till, this might be deposited intact if the icebergs grounded. If the bergs bore only bowlders and stones, these were dropped into the lacustrine clay. The stones and the clay or mud might be in the relative proportions appropriate to till. Such deposits would be, in some respects, unlike ground moraine, both in physical constitution and in topography, but the two classes of deposits may so closely resemble each other that their local differentiation is no simple matter. Deposits of *berg till* are quite certainly existent in New Jersey.
> *R. D. Salisbury*, in Geol. Surv. of New Jersey, 1892, p. 44.

berilic (be-ril'ik), *a.* [*ber(berine)* + *-il* + *-ic*.] Noting a crystalline, monobasic acid, $C_{20}H_{15}NO_8$, obtained by the oxidation of berberine with potassium permanganate. It melts at 198°–200° C.

berith milah (be-rēt'mē'lä), *n.* [Heb. *berīth*, covenant, + *mīlah*, circumcision.] The covenant of circumcision. The rite of circumcision is performed on every Jewish male infant on the eighth day after his birth.

Berkefeld filter. See ★*filter*[1].

Berkeleyite (bėrk'lē-īt), *n.* Same as *Berkeleian*.

Berkshire (bėrk'shir or bärk'shir), *n.* [A shire of England.] A breed of pigs which had its origin in Berkshire, England. These pigs are of moderate size, with short legs and straight backs, and the color is mainly black.

berley (bėr'li), *n.* [Origin unknown. Morris suggests that it is aboriginal Australian.] Among Australian fishermen, ground-bait.

berlin[1], *n.* **3.** A dance similar to a polka (which see).—**4.** A fine kind of dyed wool used for knitting fancy articles, tapestry, etc.—**5.** A variety of boxed sleigh, used for passengers or goods.—**Berlin black.** See ★*black*.—**Berlin coach,** the name given to a berlin when made up with a paneled boot instead of a hammer-cloth seat.—**Berlin defense.** See ★*defense*.—**Berlin rockaway,** a carriage in which the characteristic features of the berlin and the rockaway are combined.—**Berlin warehouse,** a shop where Berlin wool and fancy articles are sold.

berlinet (bèr-lin-et′), *n.* [*berlin* + *-et*[1].] A small berlin with interior seats for two persons.

berlingot (ber-laṅ-gō′), *n.* [F. *berlingot*, formerly *brelingot*, < *berlingue*, *brelingue*, variations of *berlinde*, *berlien*, a berlin.] A carriage of the berlin type, with the front quarter removed and cut longitudinally to half its original width: fitted for only one passenger.

Berlinism (bèr′lin-izm), *n.* A manner of of speech or method of doing things peculiar to Berlin, or to some persons there.

He [Prof. Steindorff] contrives also — more Germanorum — to introduce into his memoir some extraordinary spellings, such as "Gîze" for Ghizeh, "Othoes" for Teta, "Phiops" for Pepi, "Psemtek" for Psammetichus, and "Echenaten" for Khuenaten, with the apparent intention of showing that, even when deprived of the commas and crotchets of "*Berlinism*," German scholars can yet render unrecognizable to the unlearned reader the most familiar names in Egyptian history.
Athenæum, Sept. 19, 1903, p. 387.

berlinite (bèr′lin-īt), *n.* [Named after Prof. N. H. *Berlin* of Lund,] A hydrated aluminium phosphate occurring in from gray to rose-red massive forms: found in Sweden.

berm, *n.* **3.** In *railroad engin.*, the narrow horizontal plane between the foot of the embankment or excavation slope and the top of the slope of the side-ditch.

Bermuda ★bluefish, ★catfish, ★lily, ★shilling. See the nouns.

Bernardston series. See ★*series*.

Bernician group. See ★*group*[1].

Bernissartian (bèr-ni-sär′ti-an), *a.* and *n.* [*Bernissartia* (see def.) + *-an*.] In *geol.*, noting a group of clays and sands in Belgium lying at the base of the Cretaceous system. They lie beneath beds of Upper Neocomian age and represent in part Neocomian time. The name is derived from Bernissart, Belgium, "where in a buried system of Cretaceous ravines remains of the terrestrial and fluviatile life of the time have been well preserved" (*Geikie*). Formerly termed ★*Aachenian* (which see).

Beroida (bē-roi′dä), *n. pl.* [NL., < *Beroë*, a genus, + *-oida*.] An order of *Ctenophora*. They have an elongate, somewhat compressed body, no tentacles, wide mouth and spacious stomodæum, and the meridional vessels produced into a complex system of anastomosing branches. The order contains the family *Beroidæ*. Also *Beroidea*.

berri-berri, *n.* See *beriberi*.

berro (ber′rō), *n.* [Sp. *berro*, water-cress.] The name in Porto Rico for the common watercress, *Roripa Nasturtium*.

berrugate (be-rö-gā′te), *n.* [Sp. (Dominguez), appar. equiv. to **berrugado*, *verrugato*, warty, < *berruga*, *verruga*, < L. *verruca*, a wart.] A serranoid fish, *Lobotes pacificus*, found on the Pacific coast of Central America.

berry[1], *n.* — **Baked-apple berry.** Same as *baked-apple*. — **China berry.** Same as *china-tree*. — **Gall berry.** See ★*gall-berry*. — **Holm berry,** a berry of the butcher's-broom, *Ruscus aculeatus* (so called from its resemblance to a holly berry), or the plant itself. Sometimes called *kneeholm*. — **Miraculous berry,** a shrub belonging to the family *Sapotaceæ*, *Synsepalum dulcificum*, native to Upper Guinea, West Africa: so named by the English colonists from the exceedingly sweet fruits and from the long duration of the sweet flavor upon the palate. The natives use the fruits for sweetening stale and sour food and palm-wine. — **Molkaberry,** the cloudberry, *Rubus Chamæmorus*. [Alaska.] — **Purple berry,** a Tasmanian evergreen twining shrub, *Billardiera longiflora*, of the family *Pittosporaceæ*, bearing showy greenish-yellow flowers and purple berries.

berseem (bèr-sēm′), *n.* [Egypt. Ar. *barsīm* (Spiro).] The Alexandrian or Egyptian clover, *Trifolium Alexandrinum*, the principal forage-plant and soil-plant of Egypt. It is an annual and of great value as a winter crop in warm countries where irrigation is practised. It has been introduced into America for trial, especially along the Rio Grande.

berth[2], *v.* **I.** *trans.* **2.** To find a berth for; provide with a "job" or "situation."

Comfortably *berthed* in the City Chamberlainship.
Leslie and Taylor, Sir Joshua Reynolds, II. 365.

II. *intrans.* To occupy as living-quarters on shipboard: used with *in*.

A part of the crew *berth in* the forward part of the 'tween deck. *Buck*, Med. Handbook, I. 519.

Berthelot calorimeter. See ★*calorimeter*.

Bertie dolomite, water-lime. See ★*dolomite*, *Salina* ★*beds*.

Bertillon system. See ★*system*.

bertillonage (ber-tē-yo-näzh′), *n.* [F., < *Bertillon*, a personal name.] The identification of criminals by the Bertillon system. See ★*system*.

Bertin's ligament. See ★*ligament*.

Bertolonia (bèr-tō-lō′ni-ä), *n.* [NL. (Raddi, 1820), named in honor of Antonio *Bertoloni* (1775–1869), an Italian botanist.] An untenable name for *Triblemma*, a genus of plants of the family *Melastomaceæ*. See ★*Triblemma*.

Berycinæ (ber-i-sī′nē), *n. pl.* [NL., < *Beryx* (*Beryc-*) + *-inæ*.] A subfamily of fishes typified by the genus *Beryx*.

beryl, *n.* — **Golden beryl,** a golden-yellow transparent variety of beryl found in Connecticut and elsewhere: used as a semiprecious stone.

beryllium, *n.* Some evidence has lately been brought forward which indicates that another element may perhaps be present in beryllium, which has heretofore been supposed to be simple.

beryllonite (be-ril′ǫn-īt), *n.* [*beryll(ium)* + *-on-* (?) + *-ite*[2].] A phosphate of sodium and beryllium (glucinum), $NaBePO_4$, occurring in colorless orthorhombic crystals: found in Maine.

berzelium (bèr-zē′li-um), *n.* [NL. (Ch. Baskerville), < *Berzelius*, a Swedish chemist (1779–1848).] A supposed new chemical element of which the chlorid was obtained by fractional sublimation of thorium chlorid. The oxid of berzelium, it is said, has a greenish color and does not phosphoresce with ultra-violet light.

Berzelius's lamp. See ★*lamp*.

besa[2] (bā′sä), *n.* [E. African coast.] A current coin of Benadir, equivalent to one fourth of an anna, or about half a cent.

besan (bā-sän′), *n.* A Creole name of the Moorish idol, *Zanclus canescens*, a fish of the tropical Pacific.

bescoundrel (bē-skoun′drel), *v. t.*; pret. and pp. *bescoundreled* or *bescoundrelled*, ppr. *bescoundreling* or *bescoundrelling*. To call 'scoundrel'; apply the epithet 'scoundrel' to.

Where surly Sam . . . Nassau *bescoundrels*.
Wolcott, *To Boswell*, Works, I. 313.

beshade (bē-shād′), *v. t.* To put in the shade; envelop in shade; shade.

The highe tre the ground *beshadeth*. *Gower*.

beshadow (bē-shad′ō), *v. t.* To cast a shadow upon; overshadow: as, *beshadowed* by huge trees.

beshame (bē-shām′), *v. t.* To put to shame. *Abp. Parker*.

beshear (bē-shēr′), *v. t.* To shear or shave all round: used chiefly in the past participle.

besil, *n.* Same as *bezel*.

besonnet (bē-son′et), *v. t.* To address or celebrate in sonnets.

Belles, who had been *besonneted* . . . for ten years before. *J. P. Kennedy*, Swallow Barn, p. 60.

besoot (bē-sůt′), *v. t.* To soil with soot; blacken with soot; besmut.

Was it fit that hee should *besoot* his face with the same paintings?
Mabbe, Aleman's Guzman d'Alf., I. 12. *N. E. D.*

besouled (bē-sōld′), *p. a.* Ensouled; endowed with a soul.

Besouled with earnest human nobleness.
Carlyle, Past and Present.

bespectacled (bē-spek′ta-kld), *p. a.* Wearing spectacles; having spectacles on: as, a prim, *bespectacled* schoolmaster.

bespeed (bē-spēd′), *v. t.* To speed; cause to prosper.

Men set to woo . . . for others take often opportunity to *bespeed* themselves. *Jackson*, Creed. *N. E. D.*

bespined (bē-spīnd′), *a.* Covered with spines, or furnished with many spines.

bespirit (bē-spir′it), *v. t.* **1.** To fill or endow with spirit. — **2.** To possess with a familiar spirit.

The letter had no spirit in it; . . . but he adviséd me, that he which wrote it should be *bespirited*.
Hellowes, Gueuara's Epistles, p. 55.

besplash (bē-splash′), *v. t.* To splash all over; wet with splashing.

He *besplashes* and bemires the ladies who are walking.
W. Taylor, in Annual Review, II. 288.

bespout (bē-spout′), *v. t.* **1.** To recite in a pompous or affected manner. — **2.** To pester with too much "spouting" or oratory.

Woe for the age, woe for the man, quack-ridden, bespeeched, *bespouted*. Carlyle, Miscellanies, IV. 138.

bespred, *v. t.* A simplified spelling of *bespread*.

bess-bug (bes′bug), *n.* [Origin not obvious.] A large American beetle, *Passalus cornutus*.

bessemerize (bes′ę-mėr-īz), *v. t.*; pret. and pp. *bessemerized*, ppr. *bessemerizing*. To subject (metal) to the Bessemer process; remove carbon, sulphur, or other combustible elements from (iron or steel) by forcing air through the material to be treated in a melted condition, as in the process, invented by Bessemer, for the production of mild steel or fused wrought-iron from cast-iron. See *Bessemer process*, under *process*, and *Bessemer copper* ★*process*.

bessroot (bes′röt), *n.* A provincial corruption of *birthroot*. *Small*, Flora Southeastern U. S.

bessy-cerka (bes-i-sėr′kä), *n.* [Origin not ascertained.] Same as *oldwife*, 2 (*e*).

best, *a.* **5.** Specifically, noting a certain grade of wrought-iron, which is generally divided into four grades: crown, best, best best, and best best best or treble best. This classification is largely arbitrary, and there is considerable difference between the same grades of different manufacturers.

bestar (bē-stär′), *v. t.* To sprinkle with stars; adorn with stars. *Sylvester*, Trophies.

bestialism (bes′tiąl-izm), *n.* Bestial condition or state; irrationality. *Rossetti*.

bestialist (bes′tiąl-ist), *n.* One who makes a study of beasts. *Swinburne*.

bestiarianism (bes-ti-ā′ri-an-izm), *n.* Bestiarian principles; the principles of the bestiarians or friends of the beasts.

bestrewment (bē-strö′ment), *n.* The act of strewing about: as, the *bestrewment* of flowers. *Blackwood's Mag.*, LVII. 526.

besugo (bā-sö′gō), *n.* [Sp. *besugo*, the sea-bream, *Sparus pagrus* L.] The Cuban name of the red porgy, *Pagrus pagrus*.

bet[2], *n.* **3.** In *faro*, a card which is a case, that is, the only one of that denomination remaining in the box: so called because the player cannot be split. *Amer. Hoyle*, p. 348. — **Heeled bet,** in *faro* and some other games, a bet which plays two different events, the lowest chip being on one card and the remainder of the chips tilted toward the other. — **Mouth bet,** a bet, especially in poker, made without putting up any money or counters. [Slang.] — **Open bet,** in *faro*, a bet which is not coppered. — **To bar a bet.** See ★*bar*[1]. — **To press a bet,** to increase the amount of a bet after losing one, in order to regain what has been lost. — **To raise a bet,** in *poker*, to increase the bet of the preceding player. — **To string a bet,** in *faro*, to lay the chips composing a bet so that they are spread out instead of being stacked up, to indicate either that the bet takes in a remote card or that it is on odd or on even cards only.

Beta[1] (bē′tä), *n.* [NL. (Linnæus, 1753, adopted from Tournefort, 1700), < L. *beta*, the beet.] A genus of dicotyledonous plants belonging to the family *Chenopodiaceæ*. They are annual or biennial herbs with fleshy roots, distinguished from *Chenopodium* by the three small bracts at the base of each flower and by the fact that the ovary is embedded in the succulent base of the perianth, which thickens and hardens as the fruit ripens, becoming angular and sometimes toothed or prickly. The genus includes 5 or 6 species, natives of Europe, the Orient, and northern Africa. Some of the species are ornamental. For *B. vulgaris*, see *beet*, 1, and see *beet-chards*, under *chard*[2].

beta[3] (bā′tä), *n.* [Fijian name.] In the Fiji Islands, a plant of the ginger family, *Zinziber Zerumbet*. See ★*awapuhi*.

beta-galactan (bē′tä-ga-lak′tan), *n.* Same as ★*lupeose*.

beta-naphthol (bē-tä-naf′thōl), *n.* A naphthol having the hydroxyl (OH) group in the beta position; β-naphthol. See *naphthol*. — **Beta-naphthol orange.** See ★*orange*[1].

betanglement (bē-tang′gl-ment), *n.* A tangled condition. *J. Hawthorne*, Fort, Fool, I. ii.

beta-rays (bē′tä-rāz), *n. pl.* See ★*ray*[1].

Betelgeuze (bet-el-gėz′), *n.* [F., explained as < Ar. *ibt-al-jauza*, 'the giant's shoulder.'] A reddish star of the first magnitude, situated in the right shoulder of the constellation Orion, and known to astronomers as *α* Orionis.

bête-rouge (bāt-rözh′), *n.* [F., 'red beast.'] A larval mite of the spurious genus *Leptus*, probably a larval *Trombidium*, which in the West Indies corresponds to the so-called 'red bug' or 'jigger' of the southern United States. It infests low-growing shrubbery and readily transfers itself to the legs of pedestrians, penetrating the outer skin and causing much inflammation.

beth[2] (beth; Heb. bāt), *n.* [Heb. *bēth* (*bēt*), construct form of *bayith* (*bayit*), a house.] The second letter (ב) of the Hebrew alphabet, corresponding to the English B. Its numerical value is II.

bethabara (beth-ab′a-rä), *n.* A trade-name of the wood of the wasahba-tree, a native of British Guiana. It resembles black walnut in color, is hard and of close grain, and because of its strength, toughness, and resiliency is used for making bows and fishing-rods. Also called *bow-wood*.

beth-din (bāt′-dēn′), *n.* [Heb. *bēth* (*bēt*) *dīn*, lit. 'house of judgment.'] Among Jewish orthodox communities, a tribunal which is composed of the rabbi and two or more dayanim (judges). Cases in dispute, whether ritual or secular, are brought before this tribunal for decision. After careful deliberation and research in Talmudic and other standard rabbinical authorities, judgment is given, from which there is no appeal.

betheral (beth′ėr-al), *n.* A variant of Scotch *bedral*[1]. *Galt*, Annals of the Parish.

bethphany (beth′fa-ni), *n.* [ML. *bethphania*, an artificial term, < Heb. *beth*, house, + Gr. (*ἐπι*)*φάνια*, epiphany.] In the artificial lan-

guage of the schoolmen, the 'third divine manifestation' of Christ, namely in the miracle of the wine at the house in Cana, commemorated on the feast of the Epiphany.

bethumb (bē-thum′), *v. t.* To soil or mark with frequent thumbing, as in turning the leaves of a much-read or much-studied book.

Bethylidæ (be-thil′i-dē), *n. pl.* [NL., ‹ *Bethylus* + *-idæ*.] A curious family of proctotrypoid hymenopterous parasites, containing about twenty wide-spread genera and many species parasitic upon insects of several different orders.

betimbered (bē-tim′bėrd), *p. a.* Timbered; furnished with timbers; built.

> Venerable buildings *betimbered* with dark oak.
> *Hugh Miller*, First Impressions, p. 172.

betis (bā′tēs), *n.* [Philippine Sp., said to be from a Tagalog name.] A name applied in the Philippines to a large forest tree, *Madhuca Betis* (*Azaola Betis* of Blanco), belonging to the sapodilla family. It has simple oblanceolate leaves which are clustered near the ends of the branches, and clusters of greenish, many-stamened flowers with long peduncles. The wood is brownish or red with lighter markings. It resists the attacks of the ship-worm and is highly prized for piles for wharves and piers, and for keels and other timbers in ship-building. It yields logs from 40 to 65 feet long and from 16 to 20 inches square.

betol (bē′tōl), *n.* [*beta* + *-ol*.] A trade-name of the β-naphthyl ester of salicylic acid, $HO.C_6H_4CO_2C_{10}H_7$. It is crystalline and melts at 95° C. It is an antiseptic and febrifuge.

betone (bē-tōn′), *v. t.* To give a special tone to; lay stress upon; accentuate; emphasize.

betrail (bē-trāl′), *v. t.* To trail over or about.

> *Fuller*, Joseph's Coat, p. 221.

betrample (bē-tram′pl), *v. t.* To trample over; affect by much trampling: as, "a field . . . *betrampled* every day with horse," *Golding*.

betrodden (bē-trod′en), *p. a.* Trodden again and again.

> *Carlyle*.

betrumpet (bē-trum′pet), *v. t.* To trumpet the praises of.

> *Carlyle*.

betrunk (bē-trungk′), *v. t.* To deprive (a river) of its lower course or trunk by submergence or by the erosion of the land by the sea.

> The former rivers have been *betrunked* by subsidence.
> *I. C. Russell*, Rivers of North America, p. 218.

better[1], *adv.*—**To think better of,** to reconsider and change one's mind or one's plans.

Betterment tax. See ★*tax*.

Betts's process. See ★*process*.

betty, *n.*—**Brown betty** a baked pudding made of sliced apples, bread-crumbs, and molasses or brown sugar.

Betula resin. See ★*resin*.

betulaceous (bet.ū-lā′shius), *a.* Belonging to the family of plants known as *Betulaceæ;* resembling or allied to the birches.

between-brain (bē-twēn′brān), *n.* Same as *'tween-brain*.

betweenness (bē-twēn′nes), *n.* **1.** The quality or fact of being between.—**2.** In *math.*, the ordinal quality possessed by one of every three points on a straight line, in virtue of which it may be said to lie between the other two points.

> Of Hilbert's *betweenness* assumptions, axioms of order, one of the five is redundant.
> *Science*, March 11, 1904, p. 410.

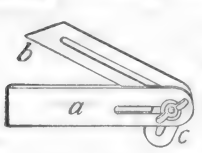
betyl, *n.* See *bætylus*.

beuteous, *a.* A simplified spelling of *beauteous*.

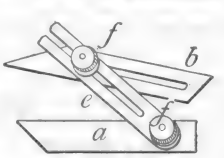
beutiful, *a.* A simplified spelling of *beautiful*.

beuty, *n.* A simplified spelling of *beauty*.

bevel, *n.*—**Combination bevel,** a bevel having a straight stock to which is pivoted a split blade which, by means of a set-screw, may be set at any angle with the stock, in combination with a slotted auxiliary blade that may be set at any angle with the first blade, thus making the instrument useful in measuring any angle.—



Universal Bevel.



Combination Bevel.

a, straight-edge; *b*, slotted auxiliary blade; *c*, offset blade; *e*, split blade; *f*, stud and set screws.

Universal bevel, a bevel having a bent blade that increases its usefulness in measuring minute angles. Another type of universal bevel has a large slot in the stock which increases its range of work.

bevel-disk (bev′el-disk), *n.* A disk having a beveled edge. Such disks are used for transmitting power by friction-drives from one shaft to another which makes an angle with it.

Bevel-gear drive, a mechanism which comprises a pair of bevel-gears with the necessary shafts, etc., for driving a machine or motor-car.

bevel-pinion (bev′el-pin″yọn), *n.* The smaller of two toothed wheels in gear, the axes of whose shafts intersect one another. The teeth are formed on the surfaces of two cones, whose elements all intersect at the common point of the axes. The shafts are most frequently at right angles; when both wheels are of the same diameter they are called *miter-gears*, because the angle of the equal cones is 45°. See *bevel-gear* and *gearing*, 2.—**Skew bevel-pinion,** a toothed wheel or gear-wheel which drives another on a shaft whose axis is neither parallel to the first nor intersects it. The teeth of the larger gear or the smaller pinion are formed on surfaces which are hyperboloids of revolution. If the two gears are formed upon cylinders developed on the circles at the gorge of the two hyperboloids, skew bevel-gears become the same as helical gears. See *skew gearing*.

bevel-tool (bev′el-tōl), *n.* A tool with a bevel edge: used by wood-turners for forming grooves and tapers.

bevel-wheel, *n.*—**Skew bevel-wheel,** in a skew-bevel transmission, the larger of two such wheels in gear. The other is the pinion. See *skew*, ★*bevel-pinion*.

bewig (bē-wig′), *v. t.* To provide or cover with a wig.

Beyrichia (bī-rik′i-ạ), *n.* [NL., named after E. *Beyrich*, a German geologist.] A genus of ostracode crustaceans, or ancient water-fleas, in which each of the two valves bears three lobes or nodes. The shells of these creatures often occur in great quantities in the Paleozoic rocks.

beyrichite (bī′rik-īt), *n.* [Named after E. *Beyrich*, a German mineralogist.] A nickel sulphid, Ni_3S_4, of lead-gray color and metallic luster.

bezoar, *n.*—**German bezoar,** bezoar obtained from the chamois, made up for the most part of vegetable fibers or animal hairs in an entangled mass.—**Occidental bezoar,** bezoar obtained from the llama and vicugna of South America, consisting chiefly of calcium phosphate.—**Oriental bezoar** (the original bezoar), concretions found in the bodies of certain species of goat and gazel in Persia and India, and containing either ellagic acid or lithofellic acid with a coloring substance apparently bile-pigment.

bezzo (bet′sō), *n.* [It., ‹ MHG. *betz*, G. *bätz*, etc.: see *batz*.] A small Venetian coin, of the value of a farthing.

B. F. An abbreviation of *Bachelor of Finance*.

B. F. A. An abbreviation of *Bachelor of Fine Arts*.

b. g. An abbreviation of *bay gelding*.

b. h. An abbreviation of *bay horse* (that is, *stallion*).

bhabar (bä′bär), *n.* [Hind. *bhābar*.] In India. —**1.** A grass, *Spodiopogon angustifolius*, extensively used for making string, mats, and paper.—**2.** A sedge, *Eriophorum comosum*, frequently associated and mixed with the preceding and used for the same purposes; also used in the construction of rope bridges. Also called *bhabar grass*.

bhalu (bä-lö′), *n.* [Also *balu*, *baloo;* ‹ Hind. *bhālū*, also *bhāl*, a bear, ‹ Skt. *bhallūka*, a bear (Macdonell).] A general name for any species of bear; in particular, the sloth-bear, *Melursus ursinus*.

bharal (bur′ạl), *n.* The blue sheep of northern India, *Ovis nahura* or *O. burhel*.

bherwa (bār′wä), *n.* [E. Ind.] An extraordinary locustid, *Schizodactylus monstrosus*, inhabiting India. It lives in burrows on the sandy banks of rivers, and sometimes damages the roots of tobacco and other crops on high ground. The extremities of the tegmina and wings are much prolonged and curled.

bhikku (bik′ö), *n.* [Pali *bhikku*, ‹ Skt. *bhikshu*, a beggar, esp. a religious beggar (a Brahman in the fourth stage), ‹ *bhiksh*, beg, ask alms.] In *mod. theos.*, a disciple (at a specified stage of his 'progress').

> Amongst the notes is an invitation to western students to join the great brotherhood of the Yellow Robe, with a very explicit statement of the conditions under which candidates will be accepted. "*Bhikkus* of occidental nationalities" are first invited, "who in due time would be able to return to their own countries, there to spread the knowledge of Buddhism"—in short, missionaries. Amongst these *Bhikkus* there may be some who may be willing to take the Robe, but they are candidly warned that the conditions of life in the order are "somewhat severe for occidentals." *Nature*, Dec. 17, 1903, p. 163.

bhindi (bin′dē), *n.* [Hind. name.] A name in India of the okra or gumbo. See ★*bandaka* and *okra*.

bhousa, *n.* See ★*bhusa*.

B H R D See ★*beharad*.

bhusa (bö′sä), *n.* [Also *bhousa;* ‹ Hind. *bhūsā*, *bhus*, husk, straw.] Chopped straw. *R. Kipling*.

> A few donkey loads of *bhusa* and a little corn brought from Polu enabled me to keep the few animals requisite for carrying the tents, instruments, etc., till the work was finished. *Geog. Jour.* (R. G. S.), XIII. 158.

B. Hy. An abbreviation of *Bachelor of Hygiene*.

bia (bē′ạ), *n.* [Siamese *bīa*, a shell used as a coin.] A round, thick copper coin of Siam, of the value of 200 cowries.

biacromial (bī-a-krō′mi-ạl), *a.* [*bi-*[2] + *acromial*.] Relating to both acromial processes.

biacuru, *n.* Same as ★*bayacuru*.

biajaïba (bē″ä-hī′bä), *n.* [Cuban Spanish, from a native name.] The Cuban name of the lane-snapper, *Lutjanus synagris*, a fish found about the West Indies.

bialveolar (bī-al-vē′ọ-lär), *n.* [*bi-*[2] + *alveolar*.] Relating to the two sides of the alveolar processes.—**Bialveolar breadth,** the distance between the outer sides of the alveolar processes.

bianchetto (bē-an-ket′ọ), *n.*; pl. *bianchetti*(-i). [It., white, white lead, dim. of *bianco*, white.] A billon coin of the marquisate of Montferrato, under the Palæologi.

biannulation (bī-an-ū-lā′shọn), *n.* [*bi-*[2] + *annulation*.] A circular or ring-like formation consisting of two rings. *Annals and Mag. Nat. Hist.*, Jan., 1903, p. 75.

biasterial (bī-as-tē′ri-ạl), *a.* [*bi-*[2] + *asteria* + *-al*.] Same as ★*biasteric*.

biasteric (bī-as-ter′ik), *a.* [*bi-*[2] + *asteria* + *-ic*.] In *craniom.*, relating to the asteria, the points where the occipital, temporal, and parietal bones meet.—**Biasteric diameter,** the distance between the asteria.

biasterionic (bī-as-tē-ri-on′ik), *a.* [Irreg. ‹ *bi-*[2] + *asterion* + *-ic*.] Relating to the two asteria; noting a diameter of the skull, the distance between the two asteria.

biatomic (bī-ạ-tom′ik), *a.* In *chem.*, same as *diatomic*.

biauricular (bī-â-rik′ū-lär), *a.* [*bi-*[2] + *auricular*.] In *craniom.*, relating to the auricular points.—**Biauricular diameter,** the transversal diameter of the skull, measured between the centers of the outer ears by French anthropologists, and between the central points of the upper rims of the outer ears by German anthropologists.

biaurite (bī-â′rīt), *a.* [L. *bi-*, two-, + *auritus*, eared.] See *biauriculate*.

bib[2], *n.*—**Best bib and tucker,** best clothes: originally used with regard to children, and now, humorously, applied to grown persons.

bibinca (bē-bēng-kä′), *n.* [Philippine Sp., ‹ Tagalog *bibingcá* (not verified), perhaps same as *bibingga*, a potsherd.] A kind of pastry made of boiled rice and cocoanut-milk. [Philippine Is.]

Bible, *n.*—**Cranmer's Bible.** Same as *Great* ★*Bible*.—**Great Bible,** a large folio Bible (called 'great' because of its size) published in April, 1539, in England, under the supervision of Coverdale. It is a revision of the versions of Tyndale, Matthew, and Coverdale. From it we have the Psalter of the Book of Common Prayer. Also called *Cranmer's Bible*.—**Hebrew Bible.** See ★*Tanak*.—**Printers' Bible,** an early edition of the Bible in which Ps. cxix. 161 was made to read, "*Printers* have persecuted me without a cause," *princes* being intended. *Stand. Dict.*—**Treacle Bible,** a black-letter Bible of the time of Queen Elizabeth, in which Jer. viii. 22 reads, "Is there no *treacle* in Gilead?" (*treacle* meaning an antidote for poison).

biblioclast (bib′li-ọ-klast), *n.* [Gr. *βιβλίον*, a book, + *-κλαστης*, ‹ *κλᾶν*, break: cf. *iconoclast*.] A mutilator or destroyer of books.

> Made bonfires of the Maya and Aztec manuscripts. . . . May these bishops expiate their crimes in the purgatory of *biblioclasts*. *Athenæum*, June 7, 1884.

bibliogenesis (bib″li-ō-jen′e-sis), *n.*; pl. *bibliogeneses* (-sēz). [Gr. *βιβλίον*, a book, + *γένεσις*, generation.] The act or process of creating books or literature.

bibliognostical (bib″li-og-nos′ti-kạl), *a.* Same as *bibliognostic*.

bibliografer, *n.* A simplified spelling of *bibliographer*.

bibliografy, *n.* A simplified spelling of *bibliography*.

bibliographist (bib-li-og′ra-fist), *n.* One who is interested in bibliography.

bibliographize (bib-li-og′ra-fīz), *v. t.*; pret. and pp. *bibliographized*, ppr. *bibliographizing*. [*bibliograph*(*y*) + *-ize*.] To write a bibliography of.

bibliomanism (bib″li-om′ạ-nizm), *n.* Bibliomania.

bibliopegistical (bib″li-ọ-pē-jis′ti-kạl), *a.* Same as *bibliopegistic*.

bibliophagic (bib-li-of′a-jik), *n.* [*bibliophag*(*y*) + *-ic*.] Book-devouring: as, a *bibliophagic* appetite.

bibliophagist (bib-li-of′ạ-jist), *n.* One who reads books omnivorously.

bibliophilistic (bib″li-of-ī-lis′tik), *a.* Of or pertaining to a bibliophilist.

bibliophilous (bib-li-of'i-lus), *a.* [Gr. *βιβλίον*, a book, + *φιλεῖν*, love.] Book-loving; addicted to bibliophily.

bibliopoly (bib-li-op'ō-li), *n.* [Gr. **βιβλιοπωλεία*, < *βιβλιοπώλης*, a bookseller.] Bookselling.

bibliotaphic (bib-li-ō-taf'ik), *a.* [*bibliotaph* + *-ic.*] Of, pertaining to, or characteristic of a bibliotaph.

bibliotics (bib-li-ot'iks), *n.* [Irreg. < Gr. *βιβλίον*, book, + E. *-otic*, adj. ending.] The study of the essential character of documents, and the determination of the individual character of handwriting.

These contributions are contained in a published treatise of Dr. Frazer on this subject termed "*Bibliotics*, or the Study of Documents."
Jour. Franklin Inst., April, 1905, p. 323.

biborate (bī-bō'rāt), *n.* A salt of boric acid: as, *biborate* of sodium or borax.

Bibra alloy. See ★*alloy*.

bicalcic (bī-kal'sik), *a.*—**Bicalcic phosphate**, in *chem.*, calcium phosphate ($CaHPO_4$), in which one third of the hydrogen of phosphoric acid is present, the remaining two thirds being replaced by calcium. This substance is found in some urinary calculi, and occurs in the "reverted" phosphate of fertilizers, as also occasionally in the superphosphate of lime as originally manufactured for agricultural use. Also known as *bicalcium phosphate*.

bicapsular, *a.* 2. Having a bilocular capsule.

bicarpellate (bī-kär'pel-āt), *a.* [*bi-*[2] + NL. *carpellum* + *-ate*[1].] Same as *bicarpellary*.

bicefalous, *a.* A simplified spelling of *bicephalous*.

Bicheroux's furnace. See ★*furnace*.

bichlorid, *n.* 2. An abbreviation of *bichlorid of mercury*, mercuric chlorid or corrosive sublimate: often carelessly used in reference to this substance as an antiseptic and disinfectant.—**Bichlorid-of-gold cure.** Same as *chlorid-of-gold* ★*cure*.

bicho (bē'chō), *n.* [Sp. *bicho*, a worm, a small insect; Pg. *bicho*, a worm, *biche*, a small insect.] Another name in Spanish America for the chigoe, *Sarcopsylla penetrans*.

Bichromate cell, in *photog.*, a glass cell designed to hold a solution of potassium bichromate which is placed before the objective: used with orthochromatic plates and in securing fine cloud-effects.—**Bichromate ray-filter.** See ★*filter*[1].

bichrome (bī-krōm'), *n.* [*bichrom(ate of potassium)*.] Bichromate of potassium or sodium: a workman's term. *G. Duerr*, Bleaching and Calico-printing, p. 56.

bichrone (bī'krōn), *a.* [L. *bi-*, two-, + Gr. *χρόνος*, time.] Noting a type of internal-combustion motor having two cylinders set at an angle of less than 90° with one another and communicating motion to a common crank-shaft. Such cylinders give more frequent working impulses and more equable turning effort than one cylinder does, and can be used in places where the opposed or double-opposed motors cannot be used for lack of room, as on motor-bicycles, or where the side-by-side arrangement would be inconvenient on account of bulk.

bicinium (bī-sin'i-um), *n.*; pl. *bicinia* (-ä). [LL., < L. *bi-*, two-, + *canere*, sing.] A musical composition or performance for two voices; a duet.

bicircuition (bī-sėr-kū-ish'ọn), *n.* [*bi-*[2] + *circuition*.] The result of two successive circuitions of the same characters. See ★*circuition*.

bicollateral (bī″kọ-lat-ẹ-ral'i-ti), *n.* In *bot.*, the state of being bicollateral.

biconcavity (bī-kon-kav'i-ti), *n.* [*biconcave* + *-ity*.] The condition of being biconcave or of having two opposed concave surfaces, like a biconcave lens or the red blood-corpuscles of man.

bicondylar (bī-kon'di-lär), *a.* [*bi-*[2] + *condyle* + *-ar*[3].] In *anthrop.*, relating to two corresponding condyles, particularly to the condyles of the lower jaw.—**Bicondylar breadth**, the distance between the two condyles of the lower jaw at the middle of the transverse axis.

bicordal (bī-kôr'dal), *a.* [L. *bi-*, two-, + *chorda*, cord, + *-al*.] Relating to two cords; specifically, noting the vocal cords.

bicornate (bī-kôr'nāt), *a.* [As *bicorn* + *-ate*[2].] Two-horned: said of the uterus when the cornua are abnormally large and projecting.

bicycle, *n.* 2. A traveling block used on a cable in steam-skidding. [U. S.]—**Convertible bicycle**, a safety-bicycle which may be made either into a diamond-frame wheel for men's use or into a drop-frame for women by the adjustment of a removable bar in the frame.

bicyclette (bī-si-klet'), *n.* [F.] A chain-driven bicycle: so first named in France, to distinguish such bicycles from the high-wheel type which preceded them. There were transition forms, such as Lawson's, in which the large-diameter front wheel was retained, but the smaller back wheel was geared and chain-driven. The name is still used in France for all types of bicycles which are chain-driven, have wheels of equal size, and are geared for road use, as distinguished from racing-machines.

bicyclical (bī-sik'li-kal), *a.* [*bicycle* + *-ic-al*, after *cyclical*.] Same as *bicyclic*[2].

bicylindrical (bī-si-lin'dri-kal), *a.* [*bi-*[2] + *cylindrical*.] Having two cylindrical surfaces or axes of curvature: noting a form of lens.

bid, *v. i.*—**To bid to the board,** in *card-playing*, to bid for the privilege of naming the trump if the points are not to be credited to any player.

bidacryc (bī-dak'rik), *a.* [*bi-*[2] + *dacry(on)* + *-(i)c.*] In *anthrop.*, relating to the two dacrya. See *dacryon*.

bidaily (bī-dā'li), *a.* [*bi-*[2] + *daily*.] Appearing or occurring twice a day.

Each of the *bidaily* forecasts.
Yearbook U. S. Dept. Agr., 1894, p. 118.

bidarra (bī-dä'rä), *n.* [Russ. *baĭdára* (Alexandrow), *baĭdará* (Reiff), a skin canoe; perhaps of Alaskan origin: cf. *bidarka*, *bidarkee*.] Same as *baidar*.

Bidder, ganglia of. See ★*ganglion*.

biddy-bid (bid'i-bid″), *n.* [A colonial English corruption of the Maori name *piri-piri*.] The name in New Zealand of either of two troublesome weeds belonging to the rose family, *Acæna Sanguisorbæ* and *A. ovina*, or of their fruits, which cling to the clothing of passers-by and to animals. See *sheep-pest*, 2.

bidentate, *a.* 2. In *bot.*, doubly dentate, the principal teeth, as of a dentate leaf, being less deeply dentate.

bidimensional (bī-di-men'shọn-al), *a.* [*bi-*[2] + *dimension* + *-al*.] Having two dimensions; of or relating to space so characterized.

The mechanical symbol is complicated, and eventually modified, through the difficulty of depicting tridimensional relations on the *bidimensional* surface.
Am. Rep. Bur. Amer. Ethnol., 1897–98, p. 841.

bidri, *n.* 2. An alloy, called also *bidery* (or *Bidery*) *metal*, used by Indian metal workers. The alloy, as it is produced in India, is composed of 123.6 parts of zinc, 4.6 parts of copper, and 4.14 parts of lead, which are melted together with some resin and wax to prevent oxidation. In other countries the proportions differ considerably. The alloy is very resistive to corrosion and does not oxidize in air or moisture. In India it is used for the manufacture of various utensils.

biduotertian (bid″ū-ō-tėr'shan), *a.* [L. *biduus*, lasting two days, + *tertianus*, tertian.] Tertian, but with the recurrences almost continuous (lasting, as it were, over two days).—**Biduotertian fever,** a tertian malarial fever in which the paroxysms are of such long duration that the fever is nearly continuous.

Bidyan ruff. See ★*ruff*[3].

Biebrich acid-blue, black, scarlet. See ★*acid-blue*, ★*black*, ★*scarlet*.

Biela's comet. See ★*comet*.

bielectrolysis (bī-ē-lek-trol'i-sis), *n.* [*bi-*[2] + *electrolysis*.] In *phys. chem.*, simultaneous deposition of two metals by the electrolysis of a mixture of their salts.

bielid (bi-ā'lid), *n.* and *a.* Same as *andromed*: so named because these meteors are supposed to be connected with Biela's comet and move in its orbit. See *Biela's* ★*comet*.

A well-marked shower of *Bielid* meteors was observed at Princeton on the evening of November 24. At ten o'clock the meteors averaged two or three per minute at times. *Sci. Amer.*, Dec. 9, 1899.

biennium (bī-en'i-um), *n.*; pl. *biennia* (-ä). [L.: see *biennial*.] A period of two years.

bier, *n.*—**Half-bier,** twenty warp-threads, or half of the bier measure used in weaving in English textile-mills.

bieremus (bī-er'ē-mus), *n.*; pl. *bieremi* (-mī). [L. *bi-*, two-, + *eremus*, a hermit.] In *bot.*, a two-celled fruit in which the loculi are widely separated.

Bier's operation. See ★*operation*.

bifacial, *a.* 4. In *geom.*, having two distinguishable sides or faces.—**Bifacial surface.** See ★*surface*.

bifanged (bī'fangd), *a.* [*bi-*[2] + *fanged*.] In *anat.*, having two roots or fangs, as is the case with some of the premolars of many carnivores.

The molars are sharply distinguished from the premolars, which are *bifanged* teeth with simple, laterally compressed crowns.
Amer. Jour. Sci., April, 1904, p. 322.

biff (bif), *n.* [An imitative var. of *buff*[3] and *baff*[2].] A brief, sharp sound, as of a blow with the fist.

biff (bif), *v. t.* To strike with a sharp blow, as of the fist.

"Ef we all *biffed* you now, these same men you've been as dead anxious to kill 'u'd call us off. Guess we'll wait till they go back to the haouse, an' you'll have time to think cool an' quiet," said Rod.
R. Kipling, A Walking Delegate.

bifilar, *n.* 2. An electric circuit doubled back upon itself so that the conductor is closely adjacent to the return-conductor and the inductance of the circuit is thereby reduced to a minimum.

biflex (bī'fleks), *a.* [L. *bi-*, two-, + *flexus*, a bending: see *flex*.] Having two opposite flexures or bends.

Bifocal ★**lens,** ★**spectacles.** See the nouns.

bifoveate (bī-fō'vē-āt), *a.* [NL. **bifoveatus*, < L. *bi-*, two-, + *fovea*, a pit.] Having two foveæ.

Mesonotum closely punctured, the apex in the middle broadly longitudinally striated, almost reticulated; middle lobe raised at the base. Scutellum roundly raised, smooth, covered with long pale hair. Postscutellum *bifoveate* at the base.
Annals and Mag. Nat. Hist., March, 1904, p. 222.

bifurcation, *n.* 3. Specifically, in *geog.*, the division of a stream into two parts, each of which connects with a different river system: as, the *bifurcation* of the upper Orinoco.

big[1], *a.*—**Tropical big leg.** Same as *pachydermia*.

bigamously (big'a-mus-li), *adv.* In a bigamous manner; so as to commit, or be chargeable with, bigamy.

bigarreau (bē-gä-rō'), *n.* [F. See *bigaroon*.] Same as *bigaroon*.

bigas (bē-gäs'), *n.* [Tagalog.] In the Philippines, a name for uncooked rice.

bigatus (bī-gā'tus), *n.*; *pl. bigati* (*i*) [L., < *bigæ*, a two-horse chariot.] A Roman silver denarius, bearing the figure of a two-horse chariot.

bigeminal (bī-jem'i-nal), *a.* [L. *bigeminus*, twin (see ★*bigeminous*), + *-al*[1].] 1. In the echinoids or sea-urchins, noting an arrangement of the pairs of ambulacral pores such that there are two vertical rows extending from peristome to apex. Also *biserial*.—2. Of or relating to the corpora bigemina.—**Bigeminal bodies,** the corpora bigemina. See *bigeminum*.

bigeminous (bī-jem'i-nus), *a.* [L. *bigeminus*, < *bi-*, two-, + *geminus*, twin.] Double, as a tooth apparently formed by the union of two teeth; bigeminal. *W. Bateson*, Study of Variation, p. 238.—**Bigeminous pulse,** one which intermits every third beat.

bigenous (bij'ē-nus), *a.* [L. *bi-*, two-, + *-genus*, -born.] Inherited from both parents: distinguished from *monogenous*, referring to one parent. *Philos. Trans. Roy. Soc.* (London), 1895, Ser. B, 186. 784.

bigging, *n.* 2. In *mining*, a pack-wall. *Barrowman*, Glossary. [Scotch.]

bighead, *n.* 2. A fish, *Eleotris nudiceps*, of the family *Gobiidæ*. [Australia.]—3. A non-contagious disease of sheep, of unknown origin, occurring with sudden onset in certain sections of the intermountain regions of western North America. Its chief characteristic is a much swollen condition of the head, accompanied by intense itching of the parts, difficult breathing, staggering gait, and elevated temperature.

biglenoid (bī-glē'noid), *a.* [*bi-*[2] + *glenoid*.] Relating to both glenoid cavities, as of the temporal bones.

bigmouth, *n.* 2. The squaw-fish, *Ptychocheilus oregonensis*. [California.]

bignai (bēg-nī'), *n.* [Tagalog *bignai*, *bignay*.] A name in the Philippine Islands of *Antidesma Bunius*, a small tree of the spurge family, with loose spikes of very small unisexual flowers and a small juicy acidulous fruit.

bignoniad (big-nō'ni-ad), *n.* [*Bignonia* + *-ad*[1].] A plant of the family *Bignoniaceæ*.

bignonial (big-nō'ni-al), *a.* Related to, resembling, or having the characters of *Bignonia*.

bigoniac (bī-gō'ni-ak), *a.* [*bi-*[2] + *gonia* + *-ac.*] In *craniom.*, relating to the two gonia.—**Bigoniac diameter,** the distance between the two gonia, or angles of the lower jaw. 17*th An. Rep. Bur. Amer. Ethnol.*, I. 144.

bigonial (bī-gō'ni-al), *a.* [*bi-*[2] + *gonia* + *-al.*] Same as ★*bigoniac*.—**Bigonial arc.** See ★*arc*.

bigquis (bēg-kēs'), *n.* [Tagalog.] A belt made of fabrics, worn by the natives of the Philippine Islands.

bigwiggery (big-wig'ėr-i), *n.* Same as ★*bigwigism*.

bigwigism (big'wig-izm), *n.* Official display of importance; pomposity: as, "empty *bigwiggism*," *George Eliot*, Middlemarch.

bi-iliac (bī-il'i-ak), *a.* [*bi-*[2] + *iliac*.] Relating to the two iliac bones. *Russell*.

bi-impressed (bī'im-prest), *p. a.* [*bi-*[2] + *impressed*.] Impressed twice.

The propygidium is *biimpressed* and, like the pygidium, is clearly not closely punctured.
Annals and Mag. Nat. Hist., Aug., 1904, p. 144.

bijugal (bī-jō′gal), *a.* [*bi-*[2] + *jugal.*] In *craniom.*, of or pertaining to the two jugal points. —**Bijugal breadth**, the distance between the two jugal points.

bijugular (bī-jō′gū-lär), *a.* [*bi-*[2] + *jugular.*] Relating to the point of meeting of the jugular process and the masto-occipital suture on each side of the skull.

bike[2] (bīk), *n.* and *v.* A corruption of *bicycle.*

bike-sulky (bīk′sul″ki), *n.* [*bike*[2] + *sulky, n.*] A sulky having a high-arched axle, short shafts, and low wooden or wire-spoked wheels with rubber tires. [Colloq.]

bike-wagon (bīk′wag″on), *n.* [*bike*[2] + *wagon.*] A light buggy having high-arched axles and low wheels with rubber tires. [Colloq.]

Bikukulla (bī-kū-kul′ä), *n.* [NL. (Adanson, 1763) for **bicuculla.* Named in reference to the form of the corolla, < L. *bi-*, two-, + *cucullus*, hood.] A genus of dicotyledonous plants belonging to the family *Papaveraceæ.* See *Dicentra.*

bil, *n.* and *v.* A simplified spelling of *bill.*

bilabial (bī-lā′bi-al), *a.* [L. *bi-*, two-, + *labium*, lip: see *labial.*] Involving the two lips.

Thus F came to be the representative of the unvoiced labiodental spirant instead of that for the *bilabial* voiced spirant. *Encyc. Brit.*, XXXIII. 897.

bilango (bi-läng′gō), *n.* [Tagalog *bilango*, a constable; cf. *bilango*, Bisaya *bilanggo*, take, arrest.] A peace officer or constable. [Philippine Is.]

bilangoan (bi-läng-gō′än), *n.* [Tagalog *bilangoan*, Bisaya *bilanggoan*, a prison: see **bilango.*] In the Philippine Islands, a prison.

bilati-pani (bi-lä′ti-pä′ni), *n.* [Hind. *bilyātī pānī; bilyāti*, foreign, European, *pānī*, water.] Literally, 'European water'; an Anglo-Indian name for soda-water. Also *bilateepanee.*

Bile salt, the salt of a bile acid, for example, sodium glycocholate.—**Cystic bile**, that portion of the bile which is stored for a time in the gall-bladder before passing into the intestine. See extract under *hepatic.*—**Pettenkofer's test for bile acids**, a careful admixture of sulphuric acid and sugar with a fluid thought to contain bile. If bile is present, the mixture will show a play of colors, resulting finally in a bright purple.—**Platner's bile**, the bile-acid salts, in crystalline form, obtained from the bile by precipitating its alcoholic extract with ether. This forms the starting-point for the isolation of the individual members of the group.

bile-papilla (bīl′pā-pil′ä), *n.* An elevation at the point where the common bile-duct enters the duodenum.

bile-vessel (bīl′ves″el), *n.* One of the channels in the liver which conduct bile.

Bilge-and-cantline. See **cantline.*

bilge-block (bilj′blok), *n.* In *ship-building*, one of a series of blocks of timber used to support the bilges of a ship when it is building or is in a dry-dock. The bilge-blocks in a dry-dock are supported on transverse sliding ways, and provided with ropes or chains leading up to the top of the dock, by means of which the blocks can be pulled under the ship to help support it while they are still under water.

The reduction of transverse bending strains by these special supports is easily explained; for instead of an upward pressure W at the middle line and the downward force W forming a couple, the resultant of the pressure on the keel-blocks and *bilge-blocks* will necessarily lie some distance out from the middle and closer to the line of action of the downward force W.
White, Manual of Naval Arch. p. 325.

bilge-saw (bilj′sâ), *n.* A saw resembling the barrel-saw (which see), having a convex or barrel-shaped cylinder.

bilge-shore (bilj′shōr), *n.* In *ship-building*, a prop, or shore, which supports a ship at the turn of the bilge when it is on a building-slip or in a dry-dock.

bilge-strake (bilj′strāk), *n.* In *ship-building*, a strake of planking or plating at the turn of the bilge.

bilge-stringer (bilj′string″ėr), *n.* In *iron shipbuilding*, a stringer in the vicinity of the turn of the bilge.

bilharzial (bil-här′zi-al), *a.* Same as **bilharzic. Jour. Trop. Med.*, Jan. 1, 1903, p. 1.

bilharzic (bil-här′zik), *a.* Relating to or caused by infection with *Bilharzia. Phil. Med. Jour.*, Jan. 31, 1903, p. 208.

bilharziosis (bil-här-zi-ō′sis), *n.* [NL., < *Bilharzia* + *-osis.*] The state of being infected with *Bilharzia.*

Water serves as the vehicle and medium of existence of the bilharzia. Water taken as a beverage is very rarely the source of the parasite in man. Cultures of bilharzia have been negative so far. All kinds of molluscа have been examined for the intermediate host in vain. Dr. Ruffer, of Alexandria, does not believe that the parasites enter through the skin. In the Transvaal, where *bilharziosis* is very frequent, baths are rare. There may be fibrous lesions in which there are no eggs, and rough superficial lesions in which eggs are to be found.
Phil. Med. Jour., Jan. 31, 1903, p. 208.

bilianic (bil-i-an′ik), *a.* [L. *bilis*, bile, + *-an* + *-ic.*] Pertaining to or derived from bile. —**Bilianic acid**, an oxidation-product, $C_{24}H_{34}O_3$, of cholalic acid.

Biliary acid, any bile acid.—**Biliary apparatus**, the secreting cells of the liver, bile-ducts, and gall-bladder which are concerned in the elaboration, conduction, and storage of the bile.—**Biliary canal.** Same as *hepatic duct* (which see, under *duct*).—**Biliary cirrhosis**, a form of cirrhosis of the liver in which the organ is enlarged, accompanied by jaundice.—**Biliary concretions**, biliary calculi.—**Biliary fistula**, a fistula communicating with the gall-bladder.

bilic (bil′ik), *a.* [L. *bilis*, bile, + *-ic.*] Derived from bile.—**Bilic acid**, a crystalline bibasic acid, $C_{16}H_{22}O_6$, obtained by oxidizing cholic acid with chromic acid. It melts, when heated quickly, at 190° C.

biliferous (bī-lif′e-rus), *a.* [L. *bilis*, bile, + *ferre*, bear.] Conveying bile.

bilinear, *a.* **2.** Linear in two ways. Thus the form $\Sigma_i \Sigma_j a_{ij} x_i y_j$ is a bilinear form, that is, lineolinear.—**Bilinear transformation.** See **transformation.*

bilineurine (bil-i-nū′rin), *n.* [L. *bilis*, bile, + Gr. *νεῦρον*, nerve (sinew), + *-ine*[2].] Same as *choline.*

bilingualism (bī-ling′gwal-izm), *n.* [*bilingual* + *-ism.*] The habitual colloquial use of two languages by the same person in different relations. *Ratzel*, Hist. of Mankind, II. 20.

bilingually (bī-ling′gwal-i), *adv.* In two languages: as, "a certain fact *bilingually* repeated," *J. Earle*, Philol. Eng. Tongue, ¶ 77.

biliprasinate (bil-i-prā′sin-āt), *n.* [*biliprasin* + *-ate*[1].] A salt of biliprasin.

bilipurpurin (bil-i-pėr′pū-rin), *n.* [L. *bilis*, bile, + *purpura*, purple.] A dark-violet coloring matter, $C_{32}H_{34}O_5N_4$, obtained from the bile of oxen and apparently formed by oxidation from another substance originally present in the bile.

bilirubinate (bil-i-rō′bin-āt), *n.* [*bilirubin* + *-ate*[1].] A salt of bilirubin.

bilirubinic (bil-i-rō-bin′ik), *a.* Of or pertaining to bilirubin.

bilirubinuria (bil″i-rō-bi-nū′ri-ä), *n.* [NL., *bilirubin* + Gr. *οὖρον*, urine.] Excretion of bilirubin in the urine.

bilithon (bī′lith-on), *n.*; pl. *bilitha* (-ä). [L. *bi-*, two-, + Gr. *λίθος*, stone.] A name invented by James Fergusson to describe a table-like megalithic monument formed by a flat horizontal stone resting on a vertical one.

biliverdinate (bil-i-vėr′din-āt), *n.* [*biliverdin* + *-ate*[1].] A salt of biliverdin.

biliverdinic (bil-i-vėr-din′ik), *a.* Of or pertaining to biliverdin.—**Biliverdinic acid.** Same as *biliverdin.*

bilixanthin (bil-i-zan′thin), *n.* [L. *bilis*, bile, + Gr. *ξανθός*, yellow, + *-in*[2].] The final oxidation-product of the common bile-pigments; a brownish amorphous substance having the formula $C_{16}H_{18}N_2O_6$: same as **choletelin.*

bill[1], *n.* **3.** A headland: as, the *Bill* of Portland (England).

The contrast between the three headlands of Selsey *Bill*, Beachy Head, and Dungeness . . . is remarkable.
Geog. Jour. (R. G. S.), XV. 215.

Bill at sight, a negotiable instrument payable by the drawer upon presentment.—**Bill obligatory**, in *old Eng. law*, a promissory note under seal; a single bill under seal. —**Bill of costs**, an itemized statement of the amounts of the costs and disbursements allowed by law to the prevailing party in an action.—**Bill of discovery**, a bill in equity filed to obtain information of facts within the knowledge of a defendant, or of deeds or other instruments or things in his custody or power.—**Bill of gross adventure**, in *French maritime law*, an instrument in the nature of a bond given to secure a maritime loan.—**Bill of imprest.** See **imprest.*—**Bill penal**, in contracts, a bond by which a debtor confessed to his debt in a certain sum and bound himself for payment in a larger sum. It is now superseded by a bond with conditions.—**Bill quia timet**, in *law*, a bill in equity filed by a plaintiff because he apprehends injury to his property or rights on account of the fault or neglect of another. It is employed to guard against possible or future injuries, and to preserve the means by which present rights may be protected against possible or future violations.—**Engrossed bill**, a proposed act of a legislature that has been engrossed before being called for final passage.—**Enrolled bill**, a proposed act of the United States Congress engrossed after passage by both houses and made ready for the approval or disapproval of the Executive.—**Single bill**, in contracts, a written instrument, without conditions, and which does not depend upon any future event to give it validity, for the absolute payment of a certain sum of money at a certain time.

bill[3], *v. t.* **3.** To furnish or cover with bills or advertisements; placard: as, to *bill* the town.

billa, *n.* Same as **belah.*

billabong (bil′a-bong), *n.* [Australian; Wiradhuri (New South Wales) *billa*, river, + *bong*, dead: see **bung.*] In Australia, a stream which flows away from the main stream (in some cases returning to it at a farther point); an effluent. Also *billibong, billybong.*

Billabong is often regarded as a synonym for Anabranch: but there is a distinction. From the original idea, the Anabranch implies rejoining the river; whilst the *Billabong* implies continued separation from it: though what are called *Billabongs* often do rejoin. *Austral English.*

bill-beetle (bil′bē″tl), *n.* Any beetle with a long rostrum, as a member of the family *Curculionidæ*; specifically, a **bill-bug* (which see).

bill-board[2], *n.* **2.** A ticket of admission to a theatrical performance, circus, or the like, given to shopkeepers, etc., in return for bill-board privileges accorded. [Theater cant.]

bill-bug (bil′bug), *n.* Any calandrid beetle of the genus *Sphenophorus*, as the *corn bill-bug*, *Sphenophorus sculptilis.* See *Sphenophorus*, with cut. They breed in the roots and stems of grains and grasses.

One of the most serious outbreaks of the corn *billbug*, Sphenophorus sculptilis, occurred in a field of timothy of three years' standing, containing 35 acres, which was broken during March of the present year, and on the 13th of May was planted with corn.
F. M. Webster, in Proc. Assoc. Econ. Ent., 1900, p. 86.

Blue-grass bill-bug, an American calandrid beetle, *Sphenophorus parvulus.*—**Calloused bill-bug**, *Sphenophorus callosus.*—**Clay-colored bill-bug**, *Sphenophorus æqualis.*—**Sculptured corn bill-bug**, an American calandrid beetle, *Sphenophorus sculptilis*, which damages growing corn. See cut under *Sphenophorus.*—**Tenacious bill-bug**, *Sphenophorus pertinax.*

billete (bil-yā′tā), *n.* [Sp.: see *billet.*] In Spanish-speaking countries, a ticket of any kind; especially, a lottery ticket.

billiard-green (bil-yärd-grēn′), *n.* A bright yellowish-green color: so named because billiard-tables are covered with cloth of this color.

billionism (bil′yon-izm), *n.* The financial position of a billionaire. *O. W. Holmes*, Elsie Venner, vii.

billionth (bil′yonth), *a.* and *n.* **I.** *a.* **1.** Coming last in a set of a billion terms: an ordinal numeral.—**2.** Being one of a billion equal parts.

II. *n.* One of a billion equal parts; the quotient of unity divided by a billion.

billow, *n.*—**Atmospheric billow.** See **air-billow.*

billy[3] (bil′i), *n.*; pl. *billies* (-iz). [Prob. from the familiar name *Billy.*] A tin can or pail with an arched handle and a detachable lid, used by bushmen in Australia as a kettle.—**Billy tea**, tea made in a billy. [Australia.]

billybong, *n.* See **billabong.*

billy-can (bil′i-kan), *n.* The tin can used by Australian bushmen as a kettle. See **billy*[3].

Billy Playfair. A mechanical contrivance for weighing coal, consisting of an iron trough with a sort of hopper bottom, into which all the small coal passing through the screen is conducted and weighed off and emptied from time to time. *Coal and Metal Miners' Pocket-book.*

bilobal (bī-lō′bal), *a.* [*bi-*[2] + *lobe* + *-al*[1].] Having two lobes: used specifically in mechanism: as, a *bilobal* cam; a *bilobal* eccentric gear.

bilobe (bī′lōb), *v. i.*; pret. and pp. *bilobed*, ppr. *bilobing.* [*bi-*[2] + *lobe.*] To produce two lobes.

The *bilobing* of the anterior wall is adventitious, but the *bilobed* condition of the ventral wall is a constant character of the development.
Trans. Amer. Micros. Soc., Nov., 1903, p. 64.

bilobiate (bī-lō′bi-āt), *a.* [NL. **bilobiatus*, < **bilobium*, < L. *bi-*, two-, + *lobus*, lobe.] Having two lobes, or forming a double lobe; bilobate.

bilobite (bī-lō′bīt), *n.* [NL. *Bilobites.*] A fossil of the genus *Bilobites.* See **Bilobites*, 2.

Bilobites (bī-lō-bī′tēz), *n.* [NL., < L. *bi-*, two-, + *lobus*, lobe, + *-ites.*] **1.** A name given by Linnæus, in 1775, to a genus of fossil brachiopods, of small size, in which both valves are strongly bilobed by a median sinus. These were subsequently recognized to have the essential structure of *Orthis*, and were so designated, although King, in 1850, proposed for them the name *Dicælosia.* The name *Bilobites* is now generally recognized. They are found in Silurian and Devonian rocks.

2. A name given by post-Linnean authors to certain lobed (usually bilobed) markings, in the older Paleozoic rocks, which have been variously regarded as fossil fucoids, the casts of impressions produced by worms, crustaceans, and jellyfishes, and also as of purely mechanical origin.

Biloculina (bī-lok-ū-lī′nä), *n.* [NL., < L. *bi-*, two-, + *loculus*, dim. of *locus*, a place, + *-ina*[1].] A genus of *Foraminifera* in which each succes-

sive segment completely envelops the others. Shells of this genus enter largely into the composition of calcareous deposits now being formed in the North Sea, and have abounded throughout Tertiary times.

biloculine (bī-lok′ū-lin), *a.* [NL. *biloculinus*, < L. *bi-*, two-, + *loculus*, a compartment.] Having two chambers or compartments; specifically, having the structure or the mode of growth of *Biloculina*.

It is not until many chambers have been formed that the *biloculine* plan, characteristic of the genus, is assumed. *Sedgwick*, Text-book of Zoöl., I. 9.

Biloxi pottery. See *American* ★*pottery*.

Bilston enamel. See ★*enamel*.

bimalar (bī-mā′lär), *a.* [*bi-*[2] + *malar*.] Of or pertaining to the two malar points or to the two malar bones.—**Bimalar breadth**, in *craniom.*, the breadth between the two malar points.

bimanually (bī-man′ū-al-i), *adv.* By means of both hands. *Buck*, Med. Handbook, V. 357.

bimarian (bī-mar′i-an), *a.* [L. *bimaris*, lying between two seas, < *bi-*, two-, + *mare*, sea.] Of or pertaining to two seas. *Bailey*.

bimastoid (bī-mas′toid), *a.* [*bi-*[2] + *mastoid*.] Relating to both mastoid processes.

bimaxillary (bī-mak′si-lā-ri), *a.* [*bi-*[2] + *maxilla* + *-ary*.] In *anthrop.*, relating to the two maxillæ.—**Bimaxillary breadth**, the maximum breadth of the maxillæ.

bimetameric (bī-met-a-mer′ik), *a.* [*bi-*[2] + *metamere* + *-ic*.] In *morphol.*, consisting of two metameres or segments.

bimodal (bī-mō′dal), *a.* [L. *bi-*, two, + *modus*, mode, + *-al*[1].] Having two modes. In a table of frequencies the mode is the most frequent measure. If the curve of frequencies has two maxima it is called *bimodal*.

Field studies showed that the stamens vary from 0 to 13, forming a *bimodal* curve with principal maximum on 3 and secondary maximum on 5. The relative prominence of the maxima, the value of the mean, and the coefficient of variability depend upon habitat and time at which collections are made.

Bot. Gazette, Dec., 1903, p. 477.

bimodality (bī-mō-dal′i-ti), *n.* The fact or quality of being bimodal.

In the case of the curve for the prosternal teeth, which is strongly bimodal, the *bimodality* is due to the tendency towards bilateral symmetry.

Amer. Nat., May, 1903, p. 308.

bimolecular (bī-mō-lek′ū-lär), *a.* Concerning or consisting of two molecules.—**Bimolecular reaction**, in *phys. chem.*, a reaction in which one molecule of one substance and one molecule of a second substance disappear, so that the active mass of two substances changes.

bin[4] (bin), *n.* A heap or pile. [Scotch.]

binaguan (bē-nä-gō-än′), *n.* [Native name, not traced.] A valuable timber-tree, *Dipterocarpus affinis*. See *Dipterocarpus*. [Philippine Is.]

Binah (bē′nä), *n.* [Heb. *bīnah*, understanding.] The third Sephira, attribute, or intelligence forming the Adam Kadmon, according to the teaching of the Cabala. See ★*Sephiroth* and ★*Adam Kadmon*.

binary. I. *a.*—**Binary numeration**, a system of numerals in which 2 is the higher unit, so that the numerals express the ideas 1, 2, 2 + 1, 2 × 2, 2 × 2 + 1, 2 × 2 + 2. —**Binary star**, a double star whose components revolve in oval orbits, presumably about their common center of gravity. About 70 of these orbits have been computed with more or less precision, the periods ranging from 5 to 800 years. At least 200 other pairs show distinct evidence of physical connection, but have not yet been sufficiently observed to permit a determination of the orbit. It is likely that the great majority of double stars will ultimately be found to belong to this class, since the theory of probabilities indicates that optical doubles should be comparatively few.—**Binary system.** (*a*) See *binary classification*. (*b*) In *astron.*, a pair of stars which revolve around their common center of gravity; a binary star.

II. *n.*—**Spectroscopic binary**, a binary star of which the components are too near each other to be separated by the telescope, but of which the binary character is shown by spectroscopic observations, being indicated by the periodic doubling and undoubling of the lines in the spectrum, or by the periodic shift of its lines relative to the lines of some element in a comparison-spectrum. About 60 such pairs are now known. Their periods range from about a day and a half to nearly a year, and their relative orbital velocity from 4 or 5 miles a second up to 400. The discovery of such objects (by Vogel and Pickering) dates from 1889. At present the list is rapidly growing.—**Twin binary**, a star which in the telescope is seen to consist of two pairs of stars, each pair binary: for example, ϵ Lyræ.

binauricular (bin-â-rik′ū-lär), *a.* [L. *bini*, both, + *auricula*, auricula.] Same as ★*biauricular*.

binbashi, bimbashi (bin-, bim-bash′i), *n.* [Turk. *bing bāshī* (pron. *bin-* or *bim-*), head of a thousand (a chiliarch), < *bing*, a thousand, + *bāsh*, head.] In the Turkish and Egyptian armies, an officer of the rank of major.

Binche lace. See ★*lace*.

bind, *v. t.*—**Binding note** or **tone**, in *music*, a note or tone common to two successive chords, by which in passing from one to the other the harmony is bound together.

binder, *n.* **10.** In *lumbering*, a springy pole used to tighten a binding-chain. Also called a *jim-binder*.—**11.** In *mach.*, a crank-shaft journal-box or bearing on an engine.—**12.** In *obstet.*, a broad cloth band applied snugly to the abdomen after the termination of labor. —**13.** A firm leaf inclosing the filler in a cigar and itself surrounded by the wrapper. It grades, in market value, below the wrapper and above the filler.—**14.** Indurated argillaceous shales or clay very commonly forming the roof of a coal-seam and frequently containing clay ironstone. *Coal and Metal Miners' Pocket-book*.—**Binder's title**, the name of a book (usually abbreviated) placed on the narrow back of its cover.

binder-twine (bīn′dėr-twīn), *n.* A special kind of twine for use in the binding appliance attached to a harvester; twine for a binder. See *harvester*.

binding, *n.*—**Grolier binding**. Same as *Grolier design*. —**Loose-leaf binding**, a system of bookbinding which admits of the removal of any one or of all the pages of the book at will. The loose leaves can be reinserted in the book and practically rebound within the covers. Loose-leaf books are bound in many ways, all admitting of the ready removal of the pages, and yet holding all the leaves in place when locked to the covers.

binding-bar (bīn′ding-bär), *n.* Any bar used for binding the parts of a structure together.

binding-beam (bīn′ding-bēm), *n.* A girder upon which rest the smaller beams of a floor.

binding-bolt (bīn′ding-bōlt), *n.* A bolt used in binding machinery to a foundation. *Barrowman*, Glossary.

binding-chain (bīn′ding-chān), *n.* A chain used to bind together a load of logs. Also called *wrapper-chain*.

binding-log (bīn′ding-log), *n.* One of the logs placed on the top of the chain which binds a load in order to take up the slack.

Bindschedler's green. See *green*★[1].

bindweed, *n.*—**Bracted, great,** or **hedge bindweed**, *Convolvulus sepium*.—**English** or **small bindweed**, *Convolvulus arvensis*.—**Ivy bindweed.** See *ivy-bindweed*.

bingle-bangle (bin′gl-ban″gl), *a.* [Imitative derivate of *bang*[1].] Vacillating; fickle. [Dialectal.]

bingo (bing′gō), *n.* [Origin obscure; 'Bingo' and 'the Bingo farm' figure in the refrain of a college song.] A game of dominoes essentially identical with the card game of sixty-six. See *sixty-six*.

bingoi (bing-gō-ē′), *n.* [Jap.] The common rush, *Juncus effusus*, from which Japanese matting is made.

biniodide (bin-ī′ō-did), *n.* [L. *bini*, two by two, + E. *iodide*.] In *chem.*, an iodide containing two atoms of iodine in the molecule: as, *biniodide* of mercury or mercuric iodide (HgI_2).

bink[2] (bingk), *v. i.* To play the part of 'Binks the bagman'; act in the manner of a binkser. See quotation under ★*binkser*.

binkser (bingk′sėr), *n.* [Also *binxer*. See the extract below.] A vulgar, loud-talking, blustering person; especially, a commercial traveler of this kind.

Among commercial travellers a "*binxer*" or "*binkser*" is a slang term for that type of bagman, "the gushing personage, with shiny hat and loud voice, who scours the country, establishing a character for being the nuisance of the calling."—*Globe*, 21 December, 1897. The word probably had its origin in a one-act farce by Stirling Coyne, entitled 'Binks the Bagman.' Binks is there depicted as a bragging, blustering upstart, a "bounder," although his deportment during commercial transactions is not alluded to, his vulgar behaviour being there confined to the inn at which he puts up.

N. and Q., March 9, 1901, p. 182.

binnacle-lamp (bin′a-kl-lamp), *n.* On a vessel, the small lamp which fits into the binnacle-hood and lights up the compass-card.

binnacle-light (bin′a-kl-līt), *n.* Same as ★*binnacle-lamp*.

binocular. I. *a.*—**Binocular camera.** See ★*camera*[3].—**Binocular loop.** See ★*loop*[1].

II. *n.* An optical instrument, such as a field-glass, with two objectives and two eyepieces, adjusted so as to permit the simultaneous use of both eyes. The word *binocular* has almost entirely supplanted the older and grammatically preferable form *binocle*.—**Porroprism binocular**, a binocular field- or opera-glass, having a special combination of prisms, for the purpose of erecting the image, of increasing the interobjective distance, of materially shortening the length of the tubes, and of reducing the weight of the instrument: an adaptation of the work of the Italian engineer Porro.—**Prismatic binocular**, a field-glass or other binocular telescope in which

compactness of form with great focal length is obtained by the use of a system of reflecting-prisms. Ordinary opera- and field-glasses are telescopes of the Galilean type, consisting of a positive objective and a negative eye-lens. This is a compact construction, since the focal length of the instrument is equal to the difference of the focal lengths of the two lenses, and because it is unnecessary to use an erecting-lens. It is practicable, however, only for magnifying powers of less than 3 diameters. To obtain the advantages of a telescope with positive eyepiece, a form which has a larger field and admits of much higher magnifying power without increasing the actual

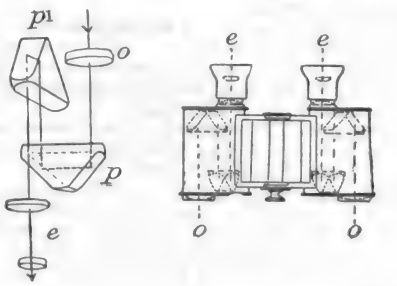


Figure 1.

Figure 2.

length of the instrument, the optical system shown in Fig. 1 is employed. It consists of an objective, o, two reflecting-prisms, p and p^1, and an eyepiece, e, for the right eye of the observer, and of a similar system symmetrically placed for the left eye. The series of reflections within the prisms gives an erect image without the introduction of the erecting-lens used in ordinary terrestrial telescopes. In field-glasses of this type a magnifying power of from 4 to 8 diameters is easily obtained. In the prismatic binocular the interobjective distance oo (Fig. 2) is greater than the interocular distance ee: an arrangement which affords greater stereoscopic power than is obtained in ordinary binocular vision or with field-glasses in which the interobjective and interocular distances are equal.

Binodal area, a region of the ocean where, according to H. A. Harris, it becomes possible for the water to oscillate as a mass about two nodal lines, giving rise to a binodal tide.

binograph (bī′nō-graf), *n.* [L. *bini*, two by two, + *γράφειν*, write.] A picture in which the two elements of a stereogram are united in one: also applied to pictures in which all possible intermediate views are united. *Wall*, Dict. of Photog., p. 81.

binographic (bī-nō-graf′ik), *a.* Of or pertaining to binography.—**Binographic work**, in *photog.*, the production of pictures by the blending of the two elements of a stereogram. *Wall*, Dict. of Photog., p. 81.

binography (bī-nog′ra-fi), *n.* [As *binograph* + *-y*.] In *photog.*, the art of producing binographs. *Wall*, Dict. of Photog., p. 81.

binomenclature (bī-nō′men-klā-tūr), *n.* A binominal system of names or naming.

Binomial curve. See ★*curve*.—**Binomial law**, the law of chance according to which the probability that an event, whose probability on each one of n occasions is p, should occur r times among these n occasions is equal to the term containing p^r in the development of $(p+q)^r$, where $q = 1-p$. See *probability*.

To those acquainted with the so-called *binomial* or serial *law*, according to which no phenomenon occurs singly—each one being, on the contrary, the expression of a series of less well-defined but analogous facts—such frequent occurrence of epilepsy among the most distinguished of distinguished men can but indicate a greater prevalence of this disease among men of genius than was previously thought possible, and suggests the hypothesis of the epileptoid nature of genius itself.

C. Lombroso (trans.), Man of Genius, p. 338.

binukao (bē-nō-kou′), *n.* [A Philippine name.] A tree, *Garcinia Cambogia*, belonging to the family *Clusiaceæ*. It yields a gum resin which is inferior to gamboge on account of its insolubility in water. However, it is soluble in turpentine and may be used as a varnish. The acid rind of the fruit is dried by the natives of India and Ceylon and is used in curries. See *Garcinia*. [Philippine Is.]

bioblast, *n.*—**Altman's bioblasts**, minute granules, of which (embedded in a homogeneous substance) protoplasm is composed, according to the theory of Altman.

bioblastology (bī″ō-blas-tol′ō-ji), *n.* [Gr. *βίος*, life, + *βλαστός*, germ, + *-λογια*, < *-λογος*, < *λέγειν*, speak.] The study or discussion of the properties or characteristics of germs or embryos in their relation to the adult properties or characteristics of ancestors. *Hyatt*, Biol. Lect., 1899, p. 141. [Rare.]

biochemical (bī-ō-kem′i-kal), *a.* [Gr. *βίος*, life, + E. *chemical*.] Of or pertaining to biochemistry; biochemic; also, chemicophysiological.

A constant constructive and destructive *bio-chemical* process occurs in the neurones of a healthy nervous system. *Encyc. Brit.*, XXXI. 539.

biochemistry (bī-ō-kem′is-tri), *n.* [Gr. *βίος*, life, + E. *chemistry*.] The chemical study of living matter; also, physiological chemistry.

The chair of *biochemistry* recently founded in University College. *Nature*, Aug. 14, 1902, p. 381.

biocrystal (bī-ō-kris′tal), *n.* A term used by Haeckel to designate a skeleton or shell that admits of mathematical description.

Midway between the organic plasma-products and inorganic crystals we have the *bio-crystals*, . . . for instance, the crystalline flint or chalk skeletons of many of the sponges, corals, etc.
Haeckel (trans.), Wonders of Life, p. 41.

biocular (bī-ok′ū-lăr), *a.* [L. *bi-*, two-, + *oculus*, eye: see *ocular*.] In *anthrop.*, relating to the two eyes: as, external *biocular* breadth, the distance between the outer corners of the eyes.

biodendry (bī′ō-den-dri), *n.* [Improp. formed from Gr. *βίος*, life, + *δένδρον*, tree, + *-y*[3]. The formation means 'life-treeness,' 'the quality of being a life-tree'—a notion not really existent. The proper form would be **dendrobia* or **dendroby*, 'tree-life.'] The economy of tree life; tree physiology.

Because a tree may take up only one millionth part of the carbon dioxid which comes to it in the air during its period of growth, is no reason for saying that this constituent of the air is of little consequence in *biodendry*.
H. W. Wiley, Science, May 15, 1903, p. 794.

biogen, *n.* 2. In *biol.*, one of the smallest theoretical units of living substance: same as ★*plasome*, ★*biophore*, etc. *Verworn*, 1895.

Biogenetic law. See ★*law*[1].

biogenetical (bī″ō-jē-net′i-kal), *a.* Same as *biogenetic*.

biogeographic (bī″ō-jē-ō-graf′ik), *a.* Of or pertaining to biogeography or the geographical distribution of life.

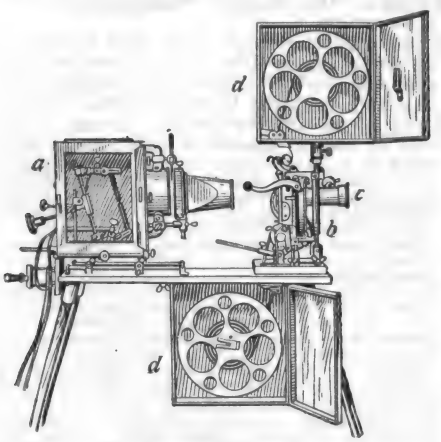
biogeographical (bī″ō-jē-ō-graf′i-kal), *a.* [*biogeography* + *-ic-al*.] Of or pertaining to biogeography, the geography of living things or geographical biology.

It has been thought expedient to employ "Association" for the more restricted assemblages, which are peculiar to each *biogeographical* area.
Kearney, Contrib. Nat. Herb., V. 269.

biogeography (bī″ō-jē-og′ra-fi), *n.* [Gr. *βίος*, life, + *γεωγραφία*, geography.] That branch of biology which treats of the geographical distribution of living things; geographical biology.

Bio-geography, the geographical distribution of life, arises directly from physical geography, which dominates it, but it is full of complex questions which involve the biological nature of the organism and the influence of physical environment, in which geographical elements, although predominant, do not act alone.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 705.

biograph (bī′ō-graf), *n.* [Gr. *βίος*, life, + *γράφειν*, write.] 1. A mechanical device, invented by



Biograph Mechanism.
a, electric arc-lamp; *b*, mechanism for moving film; *c*, objective for projection; *d*, fire-proof magazines for film.

Herman Casler, for projecting upon a screen pictures of moving objects.—2. A biographical sketch or notice; a brief biography. *E. Burritt.*

biograph (bī-ō-graf), *v. t.* To write a biograph of; prepare a brief biographical sketch of.

biographee (bī-ō-graf-ē′), *n.* [*biograph(er)* + *-ee*[1].] One of whom a biography is written.

biolith (bī′ō-lith), *n.* [Gr. *βίος*, life, + *λίθος*, stone.] In *petrog.*, a term proposed by Ehrenberg as a general name for a rock composed exclusively of organic debris. Also *organolith*.

biologia (bī-ō-lō′ji-ă), *n.* [NL.] Biology: used in the quotation for the flora and fauna of a region considered as a whole.

We shall be enabled to work out a *Biologia* of the country now under investigation.
Proc. Zool. Soc. London, 1897, p. 238.

Biologic form, a number of organisms with some common characteristic that is due to some constant external influence.

Within the last two years the existence of '*biologic forms*' in the Erysiphaceæ has been definitely proved.
Rep. Brit. Ass'n Advancement of Sci., 1903, p. 850.

Biologic geology. See ★*geology*.—**Biologic hemolysis,** hemolysis caused by lysins, the products of cellular activity, on the part of animals and plants: for example, the hemolysin produced by the tetanus bacillus, that found in snake-venom, the crotin of *Croton tiglius*, etc.

biological, *a.* 3. Regarded from the point of view of biology and natural selection exclusively, as opposed to *sociological*, which implies that other considerations are taken into account.

If we call *biological* processes natural, we must call social processes artificial. The fundamental principle of biology is natural selection, that of sociology is artificial selection. And so it is throughout. The terms are all reversed.
L. F. Ward, Psychic Factors of Civilization, p. 135.

Biological aggregation. See ★*aggregation*.—**Biological survey,** a systematic examination of the organisms of any given region, involving their collection and identification and the determination of their distribution, life-histories, interrelations, and economic importance.

The *Biological Survey* proper carries on field explorations in all parts of the country, but does most of its detailed work in the west. It collects data and prepares maps showing the actual distribution of various species of mammals, birds, reptiles, trees and shrubs, and determines the boundaries between the several life-zones and areas. By a study of the associations of species distinctive of the several zones in connection with the crops found to thrive best in parts of these zones, it prepares lists of the particular varieties of fruits and other agricultural products adapted to each belt.
Science, XVII. 929.

Biological zones. See ★*zone*.

biology, *n.*—**Geographical biology.** Same as ★*biogeography*. — **Philosophical biology, transcendental biology,** that study which carries speculations concerning biology, and especially organic evolution, further than strict empirical science can, as yet, go.

We find the phrase transcendental biology employed by French writers, and elsewhere we meet with the significant title *philosophical biology*. Still more significantly Mr. Spencer, whose treatise on biology is occupied with researches of this high order, speaks of them as constituting a domain of "special philosophy."
J. Fiske, *Cosmic Philos.*, I. 61.

Structural biology, vegetable and animal morphology, or structural botany and zoölogy, considered collectively as the branch of science which treats of the structure or form of living beings.

—**Systematic biology,** systematic botany and systematic zoölogy, considered collectively as the branch of science which treats of the taxonomy of living beings, or their arrangement in groups according to their degree of likeness or genetic affinity.

biolysis, *n.* 2. The chemical decomposition, or breaking up into simpler compounds, of organic matter, brought about by living bacterial or other minute organisms, as in the case of sewage.

biometric (bī-ō-met′rik), *a.* Of or pertaining to biometry; biometrical.

The analysis of composite characters into their individual units and statistical inquiry into the behavior of the units would seem to be a necessary part of *biometric* investigation. *Encyc. Brit.*, XXVIII. 344.

biometrical (bī-ō-met′ri-kal), *a.* Same as ★*biometric*.

biometrician (bī″ō-me-trish′an), *n.* One who devotes himself to biometry; a biometricist.

To the *biometrician* . . . variation is a quantity determined by the class or group without reference to its ancestry. *Pop. Sci. Mo.*, Jan., 1903, p. 252.

biometricist (bī-ō-met′ri-sist), *n.* A biometrician. *Encyc. Brit.*, XXVIII. 344.

biometrics (bī-ō-met′riks), *n.* Same as ★*biometry*, 2.

Biometrics.—Within quite recent years, however, a special school has arisen with the main object of treating the processes of evolution quantitatively.
Encyc. Brit., XXVIII. 344.

biometry, *n.* 2. That branch of statistical science which treats of the measurable or quantitative properties of living beings (as weight or stature), or of their parts (as the stamens and petals of flowers), or of their activities (as speed). More specifically, it is the branch of science which treats the measurable or quantitative properties of living beings, or of their parts, or of their activities, as logically or intellectually separable from these beings and as common or general to many of them, for the purpose of establishing laws of inheritance or other general laws. Since it is only as individual and particular living beings that organisms exist in the natural world, and since they are organized and coördinated wholes and not bundles of qualities, many biologists, who admit that the study of biometry is valuable and important, hold that it is not biology but logic, since it deals with human intellectual conceptions or ideas rather than with the actual living world.

The phenomena of heredity and variation are specific, and give loose and deceptive answers to any but specific

questions. That is where our exact science must begin. Otherwise we may one day see those huge foundations of *biometry* in ruins.
Bateson, Mendel's Prin. of Heredity, p. xi.

biomolecular (bī″ō-mō-lek′ū-lăr), *a.* Of or pertaining to the biomolecules.

biomolecule (bī-ō-mol′e-kūl), *n.* [Gr. *βίος*, life, + E. *molecule*.] The smallest quantity of living matter that can exhibit some of the chemical phenomena of life; a molecule of living substance, in contradistinction to a molecule of lifeless or inorganic substance.

This view of the subject has led some thinkers, and notably Ermano Giglio-Tos of Turin, in a remarkable book entitled 'Les Problèmes de la Vie,' to form the conception of a *biomolecule*, or living molecule, that is to say the smallest quantity of living matter that can exhibit some of the chemical phenomena of life, such as respiratory exchange, the function of chlorophyll, the starch-forming function, and functions of disassimilation and secretion.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 810.

biomonad (bī-ō-mon′ad), *n.* [Gr. *βίος*, life, + E. *monad*.] One of the granules in protoplasm.

Living matter, when examined by the highest powers, presents some of the characters of an emulsion; that is to say, it is composed of minute particles with fluid matter between them. These minute particles, built up of biomolecules, have been termed by Tos biomones. Biomones, in their turn, form *biomonads* or bioplasm, or molecular or granular protoplasm, and this again forms the cell.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 810.

biomone (bī′ō-mōn), *n.* [Gr. *βίος*, life, + *μόνος*, single.] One of the minute particles of living matter, visible with the microscope and built up of biomolecules. See the extract under ★*biomonad*.

biomore (bī′ō-mōr), *n.* [Gr. *βίος*, life, + *μόριον*, piece.] In *biol.*, a mass of biomolecules constituting one of the organs of the cell, like a chromosome, centrosome, etc.

biomorph (bī′ō-môrf), *n.* [Gr. *βίος*, life, + *μορφή*, form.] A decorative form representing a living being or a part of a living being: opposed to ★*skeuomorph*. *Haddon*, Evolution in Art, p. 126.

biomorphic (bī-ō-môr′fik), *a.* [*biomorph* + *-ic*.] Having the form of or relating to a biomorph. *Haddon*, Evolution in Art, p. 188.

bion (bī′on), *n.* [NL., neuter form based on Gr. *βίος*, life.] A term introduced by Haeckel to designate a physiological individual as contrasted with a morphon or morphological individual.

The physiological individual (or *bion*), characterized by definiteness and independence of function.
Encyc. Brit., XVI. 842.

bionic (bī-on′ik), *a.* [Gr. *βίος*, life, + *-on-ic*.] In *biol.*, having the properties peculiar to living organisms; especially, being able to repeat the same morphological characters in successive generations.

bionomic (bī-ō-nom′ik), *a.* and *n.* [*bionomy* + *-ic*.] I. *a.* Same as ★*bionomical*.

II. *n.* Same as ★*bionomics*.

bionomical (bī-ō-nom′i-kal), *a.* [*bionomy* + *-ical*.] Of or pertaining to the conditions under which an organism lives in its natural home; œcological. See ★*bionomics*.

A large number of the continually increasing body of investigators have turned again to *bionomical* work.
Encyc. Brit., XXVIII. 344.

bionomically (bī-ō-nom′i-kal-i), *adv.* In relation to the conditions under which an organism passes its life in its natural home; œcologically. See ★*bionomics*.

bionomics (bī-ō-nom′iks), *n.* [Pl. of ★*bionomic*: see *-ics*.] That branch of biologic science which treats of the conditions under which organisms live in their natural homes; the economics of biology; œcology (which see). *Lankester*.

bionomist (bī-on′ō-mist), *n.* [*bionomy* + *-ist*.] One who studies bionomics or œcology.

biontology (bī-on-tol′ō-ji), *n.* [Gr. *βίος*, life (see ★*bion*), + *ontology*.] That branch of science which treats of the activities of the bion, or physiologic individual.

bionuclein (bī-ō-nū′klē-in), *n.* [Gr. *βίος*, life, + *nuclein*.] A hypothetic iron containing nuclein with both oxidizing and reducing properties.

biophilous (bī-of′i-lus), *a.* [Gr. *βίος*, life, + *φιλεῖν*, love.] In *phytogeog.*, parasitic in or on the leaves and stems of the higher plants, or upon animal organisms: said of a class of fungi.

biophore (bī′ō-fōr), *n.* [Gr. *βίος*, life, + *-φορος*, ⟨ *φέρειν*, bear.] 1. A cell, as the vital unit. *G. C. Bourne.*—2. The hypothetical bearer, in the germ-plasm or substance of inheritance, of one

of the hereditary qualities of an organism. Also *biophor*. See ★*germ-plasm*.

Weismann's estimates as to the dimensions of the vital unit to which he gives the name of *biophor* may be shortly stated. He takes the diameter of a molecule at $\frac{1}{2000000}$ of a millimetre (instead of the one millionth) and he assumes that the *biophor* contains 1,000 molecules. Suppose the *biophor* to be cubical, it would contain ten in a row, or $10 \times 10 \times 10 = 1{,}000$. Then the diameter of the *biophor* would be the sum of ten molecules, or $\frac{1}{200000} \times 10 = \frac{1}{20000}$ or $\frac{5}{100000}$ of a millimetre. Two hundred *biophors* would therefore measure $\frac{200}{20000}$ or $\frac{1}{100}$ mm. or 1 μ (micron = $\frac{1}{1000}$ mm.). Thus a cube one side of which was 1 μ would contain $200 \times 200 \times 200 = 8{,}000{,}000$ *biophors*. A human red blood corpuscle measures about 7·7 μ; suppose it to be cubed, it would contain as many as 3,652,264,000 *biophors*. If the *biophor* had a diameter of $\frac{1}{10000000}$ mm. the number would be much smaller.

Rep. Brit. Ass'n Advancement of Sci., 1901, p. 814.

biophorid (bī-of'ō-rid), *n.* [G. *biophorid* (Weismann); as *biophore* + *-id*[2].] A hypothetical living being consisting of biophores. In Weismann's notion, the lowest and most primitive organisms that we know are descended from biophorids. In the earliest biophorids all the biophores were alike (*homobiophorids*), but these were followed by those in which the biophores were of several kinds (*heterobiophorids*), from which all known organisms are descended.

These two kinds of hypothetical beings might be respectively distinguished as *homobiophorids* and *heterobiophorids*. *Weismann* (trans.), Germ-plasm, p. 450.

biophysics (bī-ō-fiz'iks), *n.* [Gr. *βίος*, life, + *φυσικά*, physics.] A science (not yet existent) which applies the principles of physics to explain the phenomena not merely of physiology but also of embryology and biological morphology. The term was introduced by K. Pearson in 1892.

Applied mathematics and *biophysics* are thus the two links between the three great divisions of science, and only when their work has been fully accomplished, shall we be able to realize von Helmholtz's prediction and conceive all scientific formulæ, all natural laws, as laws of motion. *K. Pearson*, Gram. of Sci., 1st ed., p. 470.

bioplasson (bī'ō-plas-on), *n.* [Gr. *βίος*, life, + *πλάσσων*, ppr. of *πλάσσειν*, form: see *plasm*.] Same as *bioplasm*.

biopsy (bī-op'si), *n.* [Gr. *βίος*, life, + *ὄψις*, sight.] Examination, for diagnostic purposes, of a piece of tissue severed from the living body.

biopsychic (bī-ō-sī'kik), *a.* [Gr. *βίος*, life, + *ψυχή*, mind: see *psychic*.] Pertaining to life and mind; psychophysiological.

But with more precision one can also aver, even outside the conditions profoundly pathologic, that there are a great number of cases in which the *bio-psychic* anomalies of the criminals may be the effect of an environment which is physically and morally mephitic.

Smithsonian Rep., 1890, p. 639.

biopsychological (bī″ō-sī-kō-loj'i-kal), *a.* Of or pertaining to biopsychology.

biopsychologist (bī″ō-sī-kol'ō-jist), *n.* A student of mind in its relations to life; one who approaches psychology by way of biology (this taken in its widest sense to include evolutionary theory, anthropology, sociology, etc.).

Some *biopsychologists* almost wish to take the pulpit to bring out aright the old anthems of Pauline conviction of sin and Socratic conviction of human ignorance.

G. S. Hall, Amer. Jour. Relig. Psychol., I. 3.

biopsychology (bī″ō-sī-kol'ō-ji), *n.* The investigation of mind in its relations to life; psychology as based upon or approached by way of biology.

bioral (bī-ō'ral), *a.* [L. *bi-*, two-, + *os* (*or-*), mouth: see *oral*.] Having two mouths, as certain polyps during fission.

biorbital (bī-ôr'bi-tal), *a.* In *craniom.*, of or pertaining to the two orbits.—**External biorbital breadth**, the distance between the external orbital points.

biorgan (bī'ôr-gan), *n.* [Gr. *βίος*, life, + *ὄργανον*, organ.] An organ in the functional or physiological sense, as contrasted with an organ in the structural or morphological sense.

bios (bī'os), *n.* [NL., < Gr. *βίος*, life, state of life, course of life, the world we live in.] Living things considered collectively and in contrast with things that are not alive. *Haeckel* (trans.), Planktonic Studies, p. 578.

bioscope (bī'ō-skōp), *n.* [Gr. *βίος*, life, + *σκοπεῖν*, view.] 1†. A view of life, or anything which gives such a view: as, "Bagman's *Bioscope*: Various Views of Men and Manners" (a book-title).—2. A cinematograph or vitascope. *Science*, Feb. 7, 1902, p. 235.

bioscopic (bī″ō-skop'ik), *a.* Pertaining to or connected with a bioscope: as, a *bioscopic* camera. *Athenæum*, Dec. 12, 1903, p. 799.

biose (bī'ōs), *n.* [*bi-*[2] + *-ose*.] A carbohydrate which on decomposition yields two molecules of a simpler sugar, as cane-sugar, which gives rise to equal molecules of dextrose and fructose.

biosphere (bī'ō-sfēr), *n.* [Gr. *βίος*, life, + *σφαῖρα*, sphere.] The sum of the living things on the earth considered as a stratum in contrast with the atmosphere and the lithosphere. *Encyc. Brit.*, XXVIII. 625.

biota[1] (bī'ō-tä), *n.* [NL., < Gr. *βιοτή*, beside *βίοτος*, life, way of life, < *βίος*, life.] 1. The sum total of animal and plant life of a given region or period: the equivalent of fauna and flora combined.—2. A treatise upon the animals and plants of any geographic area or geologic period. *Stejneger*, Amer. Nat., 1901, p. 89.

Biota[2] (bī-ō'tä), *n.* [NL. (proposed by Don, 1828), < Gr. *βιοτή*, life: see *biota*[1]. The name alludes to the common name of these trees, *arbor-vitæ*.] A group of conifers, now commonly referred to *Thuja*, the arbor-vitæ. The name, however, is frequent in nurserymen's catalogues.

biotic, *a.* 2. Pertaining to or treating of a biota, or the combined fauna and flora of a region or period: as, a *biotic* publication; a *biotic* region. *Stejneger*, Amer. Nat., 1901, p. 89.—**Biotic geology.** See ★*geology*.

biotomy (bī-ot'ō-mi), *n.* [Gr. *βίος*, life, + *-τομια*, < *ταμεῖν*, cut.] The study of the structure of animals and plants by dissection: a comprehensive term for zoötomy and phytotomy.

biotonic (bī-ō-ton'ik), *a.* Of or pertaining to biotonus. *G. S. Hall*, Adolescence, II. 112.

biotonus (bī-ot'ō-nus), *n.* [Gr. *βίος*, life, + *τόνος*, tone, intensity.] In *physiol.*, the relative amount of assimilation and dissimilation exhibited by any mass of living protoplasm in a given unit of time.

Biot's ★hemispheres, ★polariscope. See these words.

Bipaliidæ (bī-pa-lī'i-dē), *n. pl.* [NL., < *Bipalium* + *-idæ*.] A family of terrestrial *Tricladida*, having marginal eyes and the body broadened out to form a semicircular cephalic plate. It includes the genera *Bipalium*, *Perocephalus*, and *Placocephalus*, the members of some of which are very large, reaching a length of from 6 to 18 inches.

Bipalium (bī-pā'li-um), *n.* [NL., < L. *bi-*, two-, + (?) *pala*, a spade.] The typical genus of the family *Bipaliidæ*. *Stimpson*, 1857.

biparasitic (bī-par-a-sit'ik), *a.* [*bi-*[2] + *parasitic*.] Parasitic in or on another parasite.

biparental (bī-pā-ren'tal), *a.* [L. *bi-*, two-, + *parens*, parent, + -al.] Amphigonic; pertaining to or derived from two parents.

Be the source what it may, the existence of this assortative mating most substantially modifies the form of *biparental* inheritance. *Biometrika*, Nov., 1903, p. 396.

bipartite, *a.* 3. In *math.*, containing two separate sets of variable values; made up of two continuous, but non-intersecting, curves.

bipectinate, *a.* 2. In *Mollusca*, having 2 rows of plates on the ctenidium, or gill, arranged, typically, perpendicularly to the axis, as in *Aspidobranchiata* and *Tectibranchiata*. Also *bipennate*.

bipectinated (bī-pek'ti-nā-ted), *a.* Same as *bipectinate*.

biped, *n.*—**Diagonal biped,** a term applied by some veterinary writers to the off fore and near hind leg, or the near fore and off hind leg, of the horse, referred to as a pair.—**Lateral biped,** a term applied by some veterinary writers to the off fore and hind leg or the near fore and hind leg, referred to as a pair.—**Posterior biped,** the two hind legs of the horse, referred to as a pair.

bipedally (bī-ped'al-i), *adv.* On two feet: as, the Mexican iguanoid lizard also runs *bipedally*.

bipennate, *a.* 3. In *Mollusca*, same as ★*bipectinate*, 2.

bipenniform (bī-pen'i-fôrm), *a.* [*bi-*[2] + *penniform*.] Having the parts arranged along both sides of a median axis or rachis, like the barbs of a feather.

biphase (bī'fāz), *a.* [*bi-*[2] + *phase*.] In *elect.*, same as ★*quarterphase*.

biphasic (bī-fā'zik), *a.* Of two phases.

biplane, *n.* 2. A flying- or a gliding-machine in which two principal superposed aëroplane surfaces are depended upon to sustain the machine in the air.

biplate (bī'plāt), *n.* [L. *bi-*, two-, + E. *plate*.] An optical device, invented by Auguste Bravais, for the study of polarization phenomena in crystals. It consists of a quartz plate, cut parallel to the axis, and of such thickness as to show color when placed between crossed Nicol prisms. The plate is cut through in the direction which bisects its planes of vibration, and one of the halves is reversed so that the color-changes caused by variations in the difference of phase between the two rays traversing the biplate thus formed will be complementary. Such an arrangement is very sensitive to traces of double refraction, to changes of phase, etc.; hence its importance in polariscopic experiments.

bipocillate (bī-pos'i-lāt), *a.* [L. *bi-*, two-, + *pocillum*, a little cup, dim. of *poculum*, a cup.] Having a cup-shaped process at each end, as certain monactinellid sponge-spicules.

bipocillum (bī-po-sil'um), *n.*; pl. *bipocilla* (-lä). [NL.: see ★*bipocillate*.] A bipocillate sponge-spicule.

bipolar, *a.* 3. In *elect.*, pertaining to an electric machine having two poles.—4. In *zoöl.*, occurring in the north and south polar regions, but not in the intervening tropical ocean. See extract under ★*bipolarity*, 2.—**Bipolar staining,** in *cytol.*, taking the stain only at the two poles, or staining differently at the two poles: said of cells or cell-structures.—**Bipolar theory of distribution of species,** a view advocated by Dr. John Murray, that many identical or closely allied species of marine organisms, both plant and animal, occur around both poles, but are absent from the intervening ocean.

bipolarity, *n.* 2. In *biol.*, the occurrence of organisms, mostly marine, in both polar areas, but not in the tropics. See *discontinuous* ★*distribution*.

Bipolarity in the distribution of marine organisms is a fact, however much naturalists may differ as to its extent and the way in which it has originated.

Geog. Jour. (R. G. S.), XI. 419.

biprism, *n.*—**Fresnel's biprism,** a prism with two refractive edges, each of small angle, its cross-section being an obtuse-angled isosceles triangle. The whole prism is as if made up of two prisms, hence the name. Used in experiments on the interference of light.

biprotovertebral (bī″ prō-tō-vėr'tē-bral), *a.* [*bi-*[2] + *protovertebra* + *-al*[1].] In *embryol.*, comprising or consisting of two protovertebræ or mesoblastic somites. *Philos. Trans. Roy. Soc.* (London), 1895, p. 214.

bipyramid (bī-pir'a-mid), *n.* [*bi-*[2] + *pyramid*.] See ★*pyramid*.

biquadrantal (bī-kwod-ran'tal), *a.* [*bi-*[2] + *quadrantal*.] In *spherical trigon.*, said of a triangle if each of two of its sides is a great-circle quadrant.

biradial (bī-rā'di-al), *a.* and *n.* [L. *bi-*, two-, + *radius*, spoke (ray), + *-al*[1].] I. *a.* Having the radii arranged bilaterally, as in sea-anemones and corals.

II. *n.* In *geom.*, the figure formed by two rays which go out from the same point; an angle.

Birago trestle. See ★*trestle*[1].

Biram's ★air-meter, ★anemometer. See these words.

birational (bi-rash'on-al), *a.* [*bi-*[2] + *rational*.] In *math.*, characteristic of a transformation such that each of two sets of variables is expressible rationally by means of the other set.

birch, *n.* 4. In New Zealand, a name of any one of several species of *Nothofagus*.—**Black birch** (*c*), *Nothofagus fusca*, a tree 60 to 90 feet high: so called from the color of the bark.—**Bog birch,** the Carolina buckthorn, *Rhamnus Caroliniana*. [Minnesota.]—**Cañon-birch,** *Betula occidentalis*, a species inhabiting mountain cañons in the central and northwestern parts of the North American Continent—**Fragrant birch,** a subspecies (*odorata*) of the European *Betula alba*.—**Gray birch.** (*a*) See *birch*, 1. (*b*) Same as *white* ★*birch* (*b*).—**Indian paper-birch,** *Betula utilis*, a medium-sized tree of Nepal and the higher ranges of the Himalayas. Its bark is the material upon which the ancient Sanskrit manuscripts of northern India are written. It peels off in large sheets and is used like paper for wrapping parcels, lining the roofs of houses, for umbrellas, and for many other purposes.—**Moor-birch,** *Betula pubescens*.—**Old field-birch.** Same as *white* ★*birch* (*b*).—**Red birch.** Same as *black* ★*birch* (*c*): so called from the color of the wood.—**Water-birch.** (*a*) The river-birch, *Betula nigra*. (*b*) Same as *cañon*-★*birch*.—**White birch.** (*a*) The European *Betula alba*. See *birch*, 1. (*b*) The Atlantic coast birch, *B. populifolia*. (*c*) The paper or canoe-birch, *B. papyrifera*. (*d*) *Nothofagus Solandri*, a beautiful evergreen tree 100 feet high: so called from the color of the bark.

bird[1], *n.*—**Speckled bird,** a person of blemished character or reputation. [Slang, U. S.]

bird-cage, *n.* 2. In *textile-manuf.*, a small skeleton creel for holding yarn on a hank-winding machine.—**Bird-cage twine.** See ★*twine*.

bird-cherry (bėrd'cher-i), *n.* See *cherry*[1], 1.

birdeen (bėr-dēn'), *n.* [Appar. < *bird*[2] + Ir. Gael. dim. *-een* (*-in*), as in *colleen*, etc.] 'Birdie': a pet name. *Fiona Macleod*, Mountain Lovers.

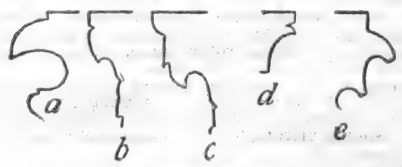
bird-grasshopper (bėrd'gras″hop-ėr), *n.* Any grasshopper of the genus *Schistocerca*, which contains large migratory forms, as *S. americana*, *S. peruviana*, etc. *Science*, July 29, 1904, p. 156.

birdlet (bėrd'let), *n.* [*bird*[1] + *-let*.] A little bird; a nestling.

bird-pepper (bėrd'pep-ėr) *n.* See *Capsicum*.

bird-pox (bėrd′poks), *n.* A disease of chickens, pigeons, turkeys, etc., characterized by the eruption about the head of yellow nodules varying in size from that of a pinhead to that of a pea. Also called *hen-pox* and *sorehead*.

bird's-beak (bėrdz′bēk), *n.* In *arch.*, a profile, as of a molding, supposed to resemble the sharp beak of a bird: used especially for dripmoldings, whether to shed water or to give a sharp-edged dark shadow.



Bird's-beak Moldings.

a, From the Thesëion, Athens; *b*, Temple, Agrigentum (Akragas); *c*, Farnese Palace, Rome; *d*, Ely Cathedral; *e*, Netley Abbey.

Bird's-dung spider. See ★*spider*.

bird's-eye. **I.** *n.* 1. (*d*) *pl.* A Californian wild flower, *Gilia tricolor*, sometimes carpeting whole slopes. The funnel-shaped corollas are azure or whitish, with purple spots in the throat bounded by bright gold.

II. *a.*—**Bird's-eye grain,** a slight roughness or grainy appearance on the grain side of rough leather: contrasted with a smooth grain. *Modern Amer. Tanning*, p. 171.—**Bird's-eye** ★**marble,** ★**porphyry.** See the nouns.

Bird's-foot fern. See ★*fern*[1].—**Bird's-foot star,** a starfish of the asterinoid type; a sea-star.

Bird's-nest moss. See *resurrection-plant* (*b*).—**Bird's-nest pudding.** See ★*pudding*.

birds'-nest (bėrdz′nest), *v. i.* To search for birds' nests or their eggs: as to go *birds'-nesting*.

bird-vine (bėrd′vīn), *n.* See the extract.

These plants, called *bird-vines* (*Loranthaceæ*), are, like the stranglers, distributed by birds. The seeds are covered with glutinous pulp, which, when they are dropped by birds, enables them to adhere to the branches of the trees. Here they sprout, and with their young leaves, produce aërial roots, covered with suckers, which run along and insinuate themselves into the cracks of the bark, continually nourishing themselves on the life-blood of their victims. *Smithsonian Rep.*, 1891, p. 339.

bird-wave (bėrd′wāv), *n.* In *ornith.*, the sudden arrival of birds during the spring or fall migration in such numbers as to make their coming noticeable.

birefringence (bī-rē-frin′jens), *n.* [*bi-*[2] + *refringence* (see *refringency*).] 1. Double refraction.—**2.** The strength of the double refraction, that is, the difference between the two indices of refraction for a uniaxial crystal and that between the maximum and minimum indices for a biaxial crystal. See *refraction*, 1.

biremal (bī-rē′mal), *a.* [L. *bi-*, two-, + *remus*, oar.] Having a dorsal and a ventral parapodium on each segment, as certain polychætous annelids.

Birkhill shales. See ★*shale*[2].

birl[2], *v. t.* 2. In *lumbering*, to cause a floating log to rotate rapidly by treading upon it.

Birmingham gage, platinum. See ★*gage*[2], ★*platinum*.

birmite, *n.* See ★*burmite*.

Birth palsy. See ★*palsy*.

Birthday card. See ★*card*[1].

birth-opening (bėrth′ōp′ning), *n.* In the liver-fluke, an opening in the wall of the redia through which the cercariæ escape. See *cercaria*. *Parker and Haswell*, Zoology, I. 231.

birth-stone (bėrth′stōn), *n.* A name applied to any precious or semi-precious stone which is imagined, according to a long-cherished superstition, to protect the wearer from harm, ill luck, and the evil eye. Lists of "appropriate" birth-stones for different persons to wear are often printed.—**Birth-stone jewelry,** birth-stones set in a jewel which is made up of the signs of the zodiac, the flower of the month, the jewel of the day, the gem of the guardian angel, and other emblematic devices.

biscalar (bī-skā′lär), *n.* [*bi-*[2] + *scalar*.] A complex number, $x + iy$; the sum of a real number, x, and a neomonic number, $y\sqrt{-1}$. See the extract.

In like manner, an expression of the form (3), or $x' = s + t\sqrt{-1}$, where s and t are two real scalars, but $\sqrt{-1}$ is still the ordinary imaginary of algebra, may be said by analogy to be a *biscalar*. Imaginary roots of algebraic equations are thus, in general, *biscalars*.

Sir W. Rowan Hamilton, Elem. of Quaternions, p. 219.

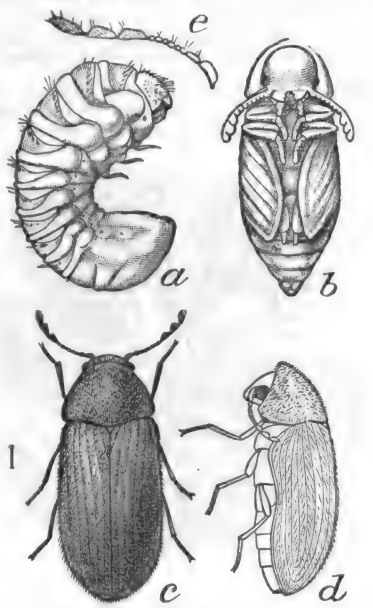
Bischoff sauce. See ★*sauce*.

bischofite (bish′of-īt), *n.* [Named after Dr. K. G. *Bischof* (1792–1870).] A hydrated magnesium chlorid found in the salt-mines of Leopoldshall, in northern Germany.

biscoyol (bis-kō-yōl′), *n.* See ★*huiscoyol*.

biscuit, *n.*—**Biscuit Tortoni.** Same as ★*bisque*[2].—**Naples biscuit,** lady's-fingers.—**Parian biscuit,** a fine, unglazed, soft-paste porcelain resembling Carrara marble: used for objects of art and ornament, and made by the casting process.

biscuit-beetle (bis′kit-bē″tl), *n.* A coleopterous insect, *Sitodrepa panicea*, of the family



Biscuit-beetle (*Sitodrepa panicea*).

a, larva; *b*, pupa; *c*, adult; *d*, adult from side; *e*, antenna. *a*, *b*, *c*, and *d*, all greatly enlarged; *e*, still more enlarged. (Chittenden, U. S. D. A.)

Ptinidæ, which feeds on hard biscuits, giving rise to the expression 'weevily biscuit.' It also feeds on stored fruit and drugs, and is frequently so abundant in apothecary-shops as to be called the ★*drug-beetle*.

biscuit-weevil (bis′kit-wē″vl), *n.* Same as ★*biscuit-beetle*.

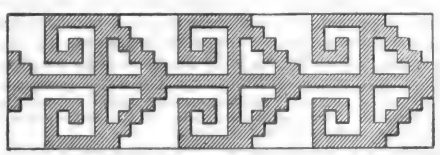
biscuit-worm (bis′kit-wėrm), *n.* The larva of the biscuit-beetle or biscuit-weevil.

biseauté (bē-sō-tā′), *n.* [F., 'cut obliquely,' pp. of *biseauter*, to cut obliquely, < *biseau*, oblique: see *bezel*.] A playing-card so trimmed that it can be distinguished by the fingers, and so can be withdrawn from the pack at will: used in conjuring and in cheating.

Bisection of a star, the accurate setting of a reticule wire in a telescope upon the center of a star-image, or the observation of the instant when that center crosses a wire.

biserial, *a.* 2. In the *Crinoidea*, or encrinites, noting a double arrangement, in the arms, of interlocking plates beveled toward each other and thickened on the margins of the arms. Contrasted with *uniserial*.

II. *n.* In *decorative art*, a double series in which the elements face toward each other,



Biserial Motive, Mexican.

look away from each other, or alternately look toward or away from each other.

bisexual, *a.* 2. In *ethnol.*, characterized by an equal social development of both sexes. *O. T. Mason*, in Pop. Sci. Mo., LX. 341.

Bishop's circle. Same as *Bishop's* ★*ring*.—**Bishop's gambit,** in *chess*, playing 3 B–QB 4. See *gambit*.—**Bishop's purple.** See ★*violet d'évêque*.—**Bishop's ring.** See ★*ring*[1].—**Two bishops' opening.** See ★*opening*.

bishop's-head (bish′ups-hed), *n.* An iron casting at the top of the king-post of a balance-bob, to which the iron straps are attached.

bisiliac (bis-il′i-ak), *a.* [*bis-* + E. *iliac*.] Relating to both iliac bones, especially to their crests.

bisilicic (bī-si-lis′ik), *a.* In *chem.*, noting metasilicic acid, H_2SiO_3, viewed as derived from silicon dioxid (SiO_2) and water (H_2O), with two atoms of oxygen in the former for one in the latter.

bisischiatic (bis-is-ki-at′ik), *a.* [*bis-* + *ischiatic*.] Relating to both ischia.

bisk[2], **bisque**[3], *n.* 2. In *golf*, a stroke allowed a player, which may be taken after a hole is played out and before the next tee-shot is made.

Biskra, or **Biskara, boil.** Same as *Aleppo ulcer*.

bismal (biz′mal), *n.* [*bism(uth)* + ★*-al*′.] A bluish-gray voluminous powder, consisting of the bismuth salt of methylene-digallic acid, the latter being a condensation-product of formaldehyde and gallic acid ($4C_{15}H_{12}O_{10} + 3Bi(OH)_3$). It is an internal astringent.

Bismarckian (biz-mär′ki-an), *a.* Of or pertaining to Prince Bismarck (1815–98), a famous Prussian statesman, the unifier of the German people and the first chancellor of the German empire.

bismuth, *n.*—**Basic gallate of bismuth.** Same as ★*bismuthum subgallicum*.—**Bismuth chrysophanate.** See ★*chrysophanate*.—**Bismuth spiral,** in *elect.*, a spiral of bismuth wire, which increases in resistance by a magnetic field and is therefore used to measure magnetic fields.—**Bismuth subnitrate,** a compound of bismuth, largely used in medicine, and to some extent as a cosmetic. It varies somewhat in composition, but usually consists of bismuth hydroxy-nitrate, $Bi(HO)_2NO_3$.—**Joachimsthal process for the extraction of bismuth.** The crushed ore, mixed with 28 per cent. of iron turnings, 15 to 20 per cent. of carbonate of sodium, 5 per cent. of lime, and 5 per cent. of fluor-spar, is charged into earthen crucibles and fused in a wind-furnace. The fused mass is then ladled into inverted conical iron molds, on the bottom of which the bismuth collects. The metal obtained sometimes contains a certain amount of silver, which may be reduced by cupellation.—**Matthey's method of refining bismuth,** a method consisting in removing the arsenic by heating impure bismuth to a temperature of 395° C. for a considerable time in the air, so that the arsenic volatilizes without loss of bismuth. The antimony is removed by poling the bismuth, raised to the oxidization-point of antimony, with a piece of wood, and removing the scum which forms on the surface of the bath.—**Naphthol bismuth,** a basic or normal bismuth salt of β-naphthol, $[(C_{10}H_7O)_3Bi] + Bi_2O_3$ or $(C_{10}H_7O)_3Bi.3H_2O$. It is a neutral, non-irritant, light-brown powder of very slight odor. It acts as an intestinal sedative and antiseptic in diarrhea and dysentery.—**Radioactive bismuth,** the first substance, separated from the residues of the working of pitchblende for uranium, in which the phenomena of radio-activity were observed and studied by Mme. Curie. The substance, associated with and chemically similar to bismuth, which gives rise to these phenomena, was afterward named *polonium*, in honor of Mme. Curie's native country, and is probably identical with the *radio-tellurium* of Marckwald.—**Subgallate of bismuth.** Same as ★*bismuthum subgallicum*.

bismuthate (biz′muth-āt), *n.* In *chem.*, a salt derived from bismuthic acid.

bismuthose (biz′muth-ōs), *n.* [*bismuth* + *-ose*.] An albuminous compound containing 21–22 per cent. of bismuth, prepared by coagulating egg-albumin with a solution of bismuth subnitrate in saline solution.

bismuthum (bis-mū′thum), *n.* [NL.: see *bismuth*.]—**Bismuthum subgallicum,** subgallic bismuth; an amorphous, bright yellow, inodorous and tasteless powder, somewhat variable in composition, obtained by precipitating a solution of bismuth trinitrate with a solution of gallic acid. It is used as a dry antiseptic in surgery. Also called *dermatol*, *basic gallate of bismuth*, and *subgallate of bismuth*.

bismuthyl (biz′muth-il), *n.* [*bismuth* + *-yl*.] In *chem.*, bismuth of which one atom is united to one atom of oxygen. This compound (incapable of separate existence) occurs as a compound radical.

bismutosmaltite (biz″mu-tō-smâl′tīt), *n.* [*bismuth* + *smaltite*.] A skutterudite containing bismuth.

bisnada (bis-nä′dä), *n.* See ★*visnaga*.

bisnaga (bis-nä′gä), *n.* See ★*visnaga*.

bison, *n.* 4. A name applied by Indian sportsmen to the gaur, *Bibos* (or *Gavæus*) *gaurus*, in distinction to 'buffalo,' which is used for *Bos buffelus*.

bisonance (bī-sō′nans), *n.* [L. *bi-*, two-, + *sonans*, sonant: see *sonancy*.] In *psychol. acoustics*, pure dissonance; the intrinsic inability of certain tonal qualities to blend or fuse.

Ordinary dissonance is made up of a mixture of beats, or harshness, and pure dissonance. . . . This lack of accord in tones, due to the relation of their pure qualities, may be designated *bisonance*.

W. Wundt (trans.), Outlines of Psychol., p. 100.

bispatulate [bī-spat′ū-lāt), *a.* [L. *bi-*, two-, + *spatula*, a broad piece (see *spatula*).] Doubly spatulate; having the form of a spatula at both ends, as a sponge-spicule.

bisphenoid (bī-sfē′noid), *n.* See ★*sphenoid*.

bispore, *n.* 2. An ascus which has only 2 instead of the usual 8 spores.

bisque[2], *n.* 2. An ice-cream with which powdered macaroons are mixed before freezing.

Called also *biscuit Tortoni*.—**Tomato bisque,** strained tomatoes into which milk thickened with a little corn-starch is poured after cooking.

bisque[3], *n.* See ★*bisk*[2].

bistelic (bī-stel′ik), *a.* In *bot.*, having two steles or axial cylinders.

bister, *n.*—**Manganese bister.** Same as *manganese brown.*

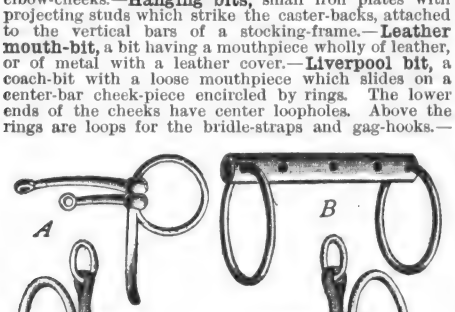
bisti (bē′stē), *n.* [Pers. *bist*, twenty.] A Persian copper and silver coin, also current in Georgia, equal to 4 cos.

bistratose (bī-strā′tōs), *a.* Having the cells disposed in two layers or strata.

bisulcated (bī-sul′kā-ted), *p. a.* Bisulcate.

bisulphite, *n.*—**Bisulphite of lime,** the commercial name for calcium sulphite dissolved in water with the aid of sulphurous acid. The solution probably contains calcium acid sulphite, $CaH_2(SO_3)_2$, and is used on a very large scale in the manufacture of paper-pulp from wood, as also in sugar-making and brewing.

bit[1], *n.* 10. In *mining:* (*a*) The cutting edge of a drill for boring rock by hand or by machine drilling. (*b*) A sharpened steel bar used for drilling rock by hand or by machine. A *chisel-bit* has a simple cutting edge, a *cross-bit* has two cutting edges crossing each other at right angles; similarly the *X-bit*, the *L-bit*, the *horseshoe-bit*, and the *crown-bit* have cutting edges disposed as indicated by the several names.—**Barrel-head bit,** a bit having oblong heads on the mouthpiece for the rein-rings.—**Baucher bit,** a curb-bit with long, straight cheeks and a high port: used in connection with a jointed bridoon. The curb-reins are attached to the lower ends of the curb-cheeks and the riding-reins to the rings of the bridoon.—**Bentinck bit,** a bit having a long movable port in the mouth, standing above where the port is usually placed.—**Buxton bit,** a coach-bit with long, curved cheeks and a sliding mouthpiece which plays up and down upon a short section of the cheek; the lower ends are connected by a bar.—**Cambridge bit,** a stiff cheek-bit with a port. The tops of the cheeks have rings for the bridle-straps and loose hooks for the gag-chain; the lower arms have loose rings at the ends, and on each there is a small loop for a strap.—**Crescendo bit,** a bit with a double or triple mouthpiece, jointed or stiff; the rein-rings are attached to the long heads on the mouthpiece by branches having pins that enter the heads.—**D'Orsay bit,** a bit with a Buxton mouth- and cheek-piece, a ring around the center bar, and solid rings at the ends of the upper and lower cheek-pieces.—**Double mouth-bit,** a bit having two mouthpieces which connect with the cheek-pieces, generally with a long and a short section on each, so placed that a short section is near each cheek.—**Duke bit,** a bit in which the ends of the cheek-pieces are shaped like a flattened S.—**Greenwood bit,** a coach-bit with a segundo mouthpiece and elbow-cheeks.—**Hanging bits,** small iron plates with projecting studs which strike the caster-backs, attached to the vertical bars of a stocking-frame.—**Leather mouth-bit,** a bit having a mouthpiece wholly of leather, or of metal with a leather cover.—**Liverpool bit,** a coach-bit with a loose mouthpiece which slides on a center-bar cheek-piece encircled by rings. The lower ends of the cheeks have center loopholes. Above the rings are loops for the bridle-straps and gag-hooks.—



A, double mouth-bit; *B*, wind-sucking bit; *C*, humane round leather mouth-bit.

Mameluke bit, an Oriental bit; it has a large ring jointed on the top of a high-port hunting-bit.—**Melton bit,** a bit with long, straight cheeks, having loops for the bridle-straps at the top, loose rings at the lower ends, and small side-loops below the mouth. The mouthpiece is a port. The cheeks pass through the ends of the mouthpiece and are loose, but do not slide.—**Mexican bit,** a bit with solid mouth- and cheek-pieces. The mouthpiece is provided with players, and the cheeks are of the gag variety and ornamental in character. This class of bits includes the California, Texas, and ranch bit, all of which embody the same general principle.—**Mullin bit,** a double-ring bit with a bow mouthpiece.—**Pelham bit,** a bit with a jointed or stiff mouthpiece. The cheek-pieces are long, and have bridle-loops at the tops, rein-rings at the mouth, gag-rein rings at the lower ends, and chin-strap loops above between the rein-rings.—**Piercel bit,** a small bit commonly used for boring a vent in a barrel or keg. Often called a *piercel*.—**Rolling Buxton bit,** a Buxton bit so constructed that the mouthpiece both rolls and slides.—**Rubber bit,** a bit with a solid metal, chain, or linked mouthpiece, covered with hard or soft india-rubber.—**Segundo bit,** a bit with a horned port and long cheeks which are solid on the mouthpiece. The rein-rings are at the lower ends of the cheeks.—**Spiral bit,** a form of auger for boring holes in wood in which the steel of the shaft is twisted into a helical ribbon, so as to form a channel or groove between the helices up which the chips may pass as the tool penetrates.—**Weymouth bit,** a riding-bit with a sliding mouthpiece and one rein-ring.—**Whitman bit,** a bit invented by Colonel R. E. Whitman, U. S. A., characterized by a snap-hook which revolves on the outside of the head of the cheek-piece. The hook is used to attach the bit to the bridle. It can be attached or released quickly.—**Wimble-bit,** a bit which has a screw at the point for making it feed. Frequently called a *wimble*.—**Wind-sucking bit,** a bit with a perforated tubular mouthpiece, designed for cribbing horses.

bit[2], *n.* 8. In *ceram.*, a small piece of stone for separating the pieces of pottery in the kiln: used before the invention of stilts, cock-spurs, and triangles. Ware so made was called *bit-stone ware*.—**Crimbal bits,** French coins made for the Windward Islands: said to be so called after the person who introduced them into Barbados.

bitanhol (bē-tän-hōl′), *n.* [Philippine Sp., < Bisaya *bitanghol*.] *Calophyllum Inophyllum*, a tree widely spread on tropical shores. It has

Bitanhol (*Calophyllum Inophyllum*). Branch with Flower-stalk. *a*, lengthwise section of ripe fruit. (After Greshoff.)
(From Sadebeck's "Die Kulturgewächse der deutschen Kolonien.")

beautiful feather-veined leaves and tough, durable wood. It yields an aromatic resin and from its seeds a bitter oil is obtained. Also called *palo Maria*, or *St. Mary's wood*, and in Guam *daog*. See *tamanu*, *tacamahac*, 1, *poonay-oil*, and *Calophyllum*. [Philippine Is.]

bitch, *n.* 3. *pl.* A set of three chains for slinging pipes.

bitch-chain (bich′chān), *n.* A short, heavy chain with hook and ring, used to fasten the lower end of a gin-pole to a sled or car when loading logs. [U. S.]

bitemporal (bī-tem′pō-ral), *a.* [*bi-*[2] + *temporal*.] In *craniom.*, of or pertaining to the two temporal bones.—**Bitemporal breadth,** the maximum distance between the temporal bones.

Bithynis (bi-thī′nis), *n.* [NL. (Philippi, 1860), < Gr. *Βιθυνίς*, Bithynian, < *Βιθυνοί*, the inhabitants of Bithynia, a district in Asia Minor.] A genus of crustaceans. Same as *Palæmon*.

bitogo (bē-tō′gō), *n.* [Philippine name.] A name applied in the Philippines to *Cycas circinalis*. See ★*fadang* and *Cycas*, 1.

bitrochanteric (bī″trō-kan-ter′ik), *a.* [*bi-*[2] + *trochanter* + *-ic*.] In *anthropometry*, of or pertaining to the two trochanters.—**Bitrochanteric breadth,** the distance between the two trochanters.

Bit-stone ware. See ★*bit*[2], 8.

Bittacomorpha (bit″a-kō-môr′fä), *n.* [NL. (Westwood, 1835), < Gr. *βίττακος*, var. of *ψίττακος*, a parrot, + *μορφή*, form.] A remarkable American genus of dipterous insects of the family *Tipulidæ*, having short wings, banded legs, and swollen feet. The larvæ are subaquatic and bear a long anal respiratory tube with two spiracles at the end. The respiratory tube of the pupa projects from the opposite end of the body.

Bittacus (bit′a-kus), *n.* [NL. (Latreille, 1804), < Gr. *βίττακος*, var. of *ψίττακος*, a parrot.] A genus of curious mecopterous insects, of very wide distribution and predatory habits, resembling crane-flies in general appearance. They use the hind instead of the front legs for grasping their prey, and their larvæ live near the surface of the ground and feed upon dead animal matter.

Bitter salts. Same as *epsom salts*.

bitter-apple (bit-ėr-ap′l), *n.* See *colocynth*.

bitter-bark (bit′ėr-bärk), *n.* 1. An Australian euphorbiaceous tree, *Petalostigma quadriloculare*, the bark of which contains a powerful bitter principle which is used medicinally. Also called *emu-apple*, *crab-tree*, and *native quince*.—**2.** Either one of two trees of the dogbane family, *Tabernæmontana orientalis* and *Pala constricta* (*Alstonia constricta* of F. von Müller), the barks of which are also used in medicine. The latter is better known as *fever-bark*. See also *Alstonia bark*, under *bark*[2].

bitter-buttons (bit-ėr-but′nz), *n.* The tansy, *Tanacetum vulgare*.

bitter-cup (bit′ėr-kup), *n.* A cup turned from quassia or bitter-wood. Water allowed to stand in such a cup soon acquires a bitter taste and is by many considered a beneficial tonic. See *Quassia*, 2.

bitter-leaf (bit′ėr-lēf), *n.* The Tasmanian native or wild hop, *Daviesia latifolia*, of the bean family. [Australia.]

bitter-root, *n.*—**Natal bitter-root,** a climbing vine of the gourd family, *Gerrardanthus macrorhiza*, having tuberous roots, from 2 to 3 feet in diameter, which are intensely bitter and are used by the natives in medicine.

bitter-rot (bit′ėr-rot), *n.* A fungous disease of fruits which gives them a bitter taste.—**Bitter-rot of apple.** See *anthracnose of apple*, under ★*anthracnose*.—**Bitter-rot of grape,** a disease of grapes caused by *Melanconium fuligineum*.

bitters, *n. pl.*—**Aromatic bitters,** bitters containing aromatic oil, but little tannin.—**Astringent bitters,** bitters containing considerable tannin, but little aromatic oil.—**Simple bitters,** bitters containing but little tannin or aromatic oils.

bitting (bit′ing), *n.* 1. The act of putting the bit into a horse's mouth, one of the steps in horse-breaking; bridling.—**2.** In *weaving*, the piecing of warp-threads in the loom with short bits of yarn, to aid in drawing in through the harnesses and reed of wider warps than are commonly used, and for other purposes.

Bittium (bit′i-um), *n.* [NL., appar. < Gr. *Βίττιον*, a woman's name.] A genus of gastropod mollusks belonging to the family *Cerithiidæ*, having high-turreted spiral shells with granulated spiral ribs. It is common in Jurassic, Cretaceous, and Tertiary rocks, and also exists in the present seas.

bitty (bit′i), *n.* Refuse left after the starch has been removed from such plants as arrow-root, cassava, etc. [West Indies.]

bitubercular (bī-tū-bėr′kū-lär), *a.* Having two tubercles, as a tooth. *W. Bateson*, Study of Variation, p. 217.

bituminoid (bi-tū′mi-noid), *a.* [*bitumen* (*-min-*) + *-oid*.] Bitumen-like; having the general character of bitumen.

bitypic (bī-tip′ik), *a.* [*bi-*[2] + *type* + *-ic*.] Consisting of two types only: said of a genus containing but two species. Compare *monotypic*.

He found that many of the characteristic genera of eastern America, and a number of the monotypic and *bitypic* genera, occur also in the Japanese region.
L. H. Bailey, Survival of the Unlike, p. 270.

biuncinate (bī-un′si-nāt), *a.* [*bi-*[2] + *uncinate*.] Having two hooks.

biunial (bī-ū′ni-al), *a.* [Irreg. < L. *bi-*, two-, + *-unus*, one, + *-i-al*.] Having or consisting of two combined in one: as, the *biunial* magic lantern. *N. E. D.*

biuniform (bī-ū′ni-fôrm), *a.* [*bi-*[2] + *uniform*.] In *math.*, one-to-one.

This results from the definition which Hilbert gives of movement. To be a movement, a transformation must satisfy many conditions; first it must be continuous and transform two points infinitely near into two points infinitely near; then it must be *biuniform*, that is to say, that every point of the plane must have one transformé and only one, and be the transformé of one point and of only one. *Science*, Sept. 16, 1904, p. 360.

Biuniform transformation. See ★*transformation*.

Biur (bē′ūr), *n.*; pl. *Biurim* (-ēm). [Heb. *biur*, a commentary.] A comprehensive commentary on the Old Testament prepared by Moses Mendelssohn and others.

biurate (bī-ū′rāt), *n.* [*bi-*[2] + *urate*.] A neutral salt of uric acid. Gouty tophi are composed of sodium biurate.

Biuret reaction, a color reaction which is produced by all true albumins with a dilute solution of copper sulphate in the presence of strong caustic alkali. It is referable to the production of potassium cupric oxid biuret.—**Biuret test,** the red or reddish-violet color which is produced when sodium hydroxid and a dilute solution of copper sulphate are added to a solution of a protein.

Bivalence of the chromosomes, in *cytol.*, the double as distinguished from the single (univalent) condition of the chromosomes, for example, in the oöcytes and spermatocytes of one of the forms of *Ascaris megalocephala*.

bivalent, *a.* 2. In *cytol.*, having double as distinguished from single (univalent) chromosomes in the oöcytes and spermatocytes, as in one of the varieties of the roundworm of the horse (*Ascaris megalocephala*).

bivariant (bī-vā′ri-ant), *a.* [*bi-*[2] + *variant*.] In *phys. chem.*, having two degrees of freedom. See *degree of freedom*.—**Bivariant system,** a thermodynamic system in which two of the magnitudes which determine it may be made to vary independently without destroying the system by altering the number of phases of which it consists. If we place one pound of pure water and one pound of dry carbon dioxid in a cylinder provided with an air-tight piston, we shall have two phases present, one a solution of carbon dioxid in liquid water, and the other a mixture of gaseous carbon dioxid with water vapor. The composition of these two phases will be determined by the temperature and the pressure, and we can within limits vary each without regard to the

other and yet have the two phases still existing. The system is *bivariant*. If, however, we raise the temperature till all the water evaporates, or increase the pressure till all the carbon dioxid is dissolved, one phase disappears, and the system becomes *monovariant*.

bivocal (bī-vō′kal), *n.* [L. *bi-*, two-, + *vocalis*, a vowel.] A coalition or union of two vowels pronounced in one syllable; a diphthong: as *ai* in 'rain,' *oi* in 'noise,' etc.

bivoltin (bī-vol′tin), *n.* [F. ★*bivoltin*, ‹ L. *bi-*, two, + *volte*, a turn, revolution (see *volt*[1], *volta*), + E. *-in*[1].] A race of domestic silkworms that have two generations each year.

biweekly, *a.* and *adv.* **III.** *n.* A periodical issued once every two weeks; a fortnightly publication.

Bixa (bik′sä), *n.* [NL. (Linnæus, 1753, first used by him in his 'Genera plantarum,' 1737), ‹ *bixa*, a Spanish spelling of *bicha*, *bischa*, the name of the plant among the Arawak Indians of Guiana.] A genus of dicotyledonous trees constituting the family *Bixaceæ*. It is characterized by its large cordate-ovate entire leaves, showy pinkish flowers in terminal panicles, and prickly capsules. The only species, *B. Orellana*, is a native of tropical America, but has been introduced in the tropics of the Old World. See *achiote* and *arnotto*.

bixaceous (bik-sā′shius), *a.* Belonging to the plant family *Bixaceæ*.

bixbyite (biks′bi-īt), *n.* [Named after Maynard *Bixby* of Salt Lake City.] A rare manganate of iron (essentially $FeMnO_3$), occurring in black cubic crystals with brilliant metallic luster. It is related to perovskite, and occurs in rhyolite in southern Utah.

bixein (bik′sē-in), *n.* Same as *bixin*.

bizet (bi-zet′), *n.* [Thought to be an arbitrary or mistaken form of *bizel*, *bezel*: see *bezel*.] The upper part of a brilliant between the table and the girdle in a full brilliant having 32 facets, and supposed to occupy one third of the depth of the gem.

biznaga (bēth-nä′gä), *n.* [Sp. *biznaga*.] See ★*visnaga*.

bizug (bi-zög′), *n.* A Syrian lute.

> The smallest distance observed between frets is the above-cited 14 mm., except that the Syrian lute, *bizug* (No. 95,144, U. S. N. M.), has two spaces of 12 and 13 mm.
> *Smithsonian Rep.*, 1900, p. 434.

bizz (biz), *n.* A dialectal (Scotch) variant of *buzz*[1].

bkr. An abbreviation of *barkometer*.

B. L. An abbreviation (*c*) of *Bachelor of Letters* or of *Literature*; (*d*) *milit.*, of *breech-loading*.

B. L. A. An abbreviation of *Bachelor of Liberal Arts*. Same as B. A. (*a*).

blaazop (bläz′op), *n.* [Cape Dutch, ‹ *blaaz* . . . *op* (inf. *opblazen*), *blazen*, blow (see *blaze*[1], *bleeze*[1]), + *op*, up: see *up*.] A South African insect of the genus *Pneumora*, family *Acrididæ*, which is said to inflate its abdomen and to make a tremulous noise at night. *Kirby and Spence*, Entomology, p. 495.

Blabera (blab′e-rä), *n.* [NL. (Serville, 1831), ‹ Gr. *βλαβερός*, hurtful, pernicious, ‹ *βλάβη*, hurt, harm, injury, ‹ *βλάπτειν*, hurt, injure.] A genus of very large tropical and subtropical cockroaches of the orthopterous family *Blattidæ*. They are known in the West Indies as *drummers* and are supposed to make a noise at night.

Blaberides (bla-bēr′i-dēz), *n. pl.* [NL., ‹ *Blabera* + *-ides*, taken as a plural suffix.] A tribe of cockroaches of which *Blabera* is the type. They have the thighs unarmed beneath, no pad between the claws, the pronotum smooth, and the wings with a fan-like folded anal field.

black. **I.** *a.* **10.** Dark-complexioned.

> How if she be *Blacke* and *Witty*?
> *Shak.*, Othello, ii. 1.

> Took up Mr. Hater and his wife. . . . I found her to be a very pretty, modest, *black* woman.
> *Pepys*, Diary, April 30, 1661.

Black ★angel, ★ant, ★beech. See these words. **Black belt.** (*b*) Same as ★*cane-brake region*. — **Black body**, in *phys.*, a body which completely absorbs the radiation falling upon it, reflecting none and transmitting none. No actual known substance rigorously fulfils this definition, and the black body thus specified is therefore commonly termed the *ideal black body*. See ★*radiation*. — **Black ★Caucasian, ★drop, ★fern.** See the nouns. — **Black-figured style.** See ★*style*[1]. — **Black hand.** (*b*) A criminal conspiracy among certain Italian immigrants in the United States for the purpose of blackmail and deeds of violence. — **Black house.** See ★*house*[1]. — **Black line**, in *Australian hist.*, the line of about 5,000 armed men which in 1830, by order of the governor, swept across Tasmania from north to southeast in the attempt to drive the aboriginal tribes into that part of the island known as Tasman Peninsula. See ★*black war*. — **Black lung.** See ★*lung*. — **Black mark**, a mark indicating failure, offense, or demerit. — **Black money.** See ★*money*. — **Black pod.** See ★*pod*. — **Black pool.** See ★*pool*[2]. — **Black rot.** (*b*) A black appearance on hides, caused by the application of hot liquor to green stock. *C. T. Davis*, Manuf. of Leather, p. 183. — **Black salt.** See ★*salt*. — **Black Thursday**, in *Australian hist.*, Thursday, February 6, 1851, remarkable for a great heat-wave (112° F. in the shade) and a disastrous bush-fire which affected the whole colony of Victoria. Strutt's celebrated painting, 'Black Thursday,' commemorates the event. — **Black-tracker**, a member of a special force of aboriginal Australian police, skilled in following trails and employed in running down criminals. — **Black War**, in *Australian hist.*, a bloodless military expedition undertaken in 1830 by the governor of Tasmania for the purpose of driving the troublesome aboriginal tribes into Tasman Peninsula. Only two natives were captured. See ★*black line*. — **Black Will.** See ★*Will*.

II. *n.* **13.** In *archery*: (*a*) The fourth and next to the outermost circle of the target, which is colored black. See *target*. (*b*) An arrow which hits this circle; a hit in the black. According to the present method of scoring such a hit counts 3. — **14.** *pl.* Black or coaly shale. *Barrowman*, Glossary. [Scotch.] — **15.** *pl.* The larvæ of the black ★caterpillar (which see). — **Alizarin black**, a mordant dyestuff, derived from anthracene, which dyes chromium-mordanted wool a very fast black. It is a trihydroxyanthraquinone quinoline. — **Alizarin-cyanine black**, a mordant coal-tar color similar in character to alizarin cyanine. It produces blue-black shades with a chromium mordant. — **Almond black**, a black pigment prepared by carbonizing almond- and cocoanut-shells. — **Aniline black.** It is an insoluble substance produced by the oxidation of aniline, usually in the form of aniline salt. Its chemical composition is unknown. There are three stages in the oxidation of aniline: (1) the formation of emeraldine or azurine, (2) the oxidation of emeraldine to nigraniline, and (3) the oxidation of the nigraniline to the so-called 'ungreenable black' which is the color desired. The color is always made as used, the formation of the black taking place within and upon the fiber during the dyeing process. It is largely used in calico-printing and in hosiery-dyeing, and whenever an extra-fast black is desired. It is commonly applied to cotton, but processes have been devised by which it may be applied to cotton-and-wool union goods. — **Anthracite black**, an acid coal-tar color of the sulphonated azo type, derived from α-naphthylamine. It dyes wool black in an acid bath. Also called *phenylene black*. — **Anthraquinone black**, a sulphid coal-tar color made by fusing dinitro-anthraquinone with sodium polysulphid. It dyes unmordanted cotton black, and possesses the common properties of the sulphid colors. — **Auronal black**, a sulphid coal-tar color prepared by the fusion of dinitro-paramido-diphenylamine with sodium polysulphid. It dyes unmordanted cotton black, and possesses the common properties of the sulphid colors. — **Autogene black**, a sulphid color prepared by the fusion of sodium polysulphid with the product formed by the condensation of amido-hydroxy-diphenylamine with the product of the action of sulphur chlorid upon phenol, cresol, or amines. It dyes cotton black, and possesses the common properties of the sulphid colors. — **Beggar's ultramarine black.** See ★*beggar*. — **Berlin black**, a black varnish used in coating ironwork. It gives a dull finish. — **Biebrich black AN, 4AN, 6AN, AO, 4BN, 3BO**, and **RO**, acid coal-tar colors of unpublished composition which dye various shades of black on wool in an acid bath. — **Black-white series**, in *psychophys.*, the series of colorless visual sensations, passing from black through gray to white. *E. B. Titchener*, Exper. Psychol., I. ii. 5. — **Bonsor's black**, a mixture of logwood, ferrous sulphate, copper sulphate, and oxalic acid in proper proportions to produce a one-dip logwood black. — **Brilliant black.** Same as *naphthol* ★*black* 6B. — **Carbide black**, a direct cotton coal-tar color of unpublished composition which dyes unmordanted cotton black in a salt bath. — **Chromanil black**, one of several direct cotton coal-tar colors of unpublished composition which dye unmordanted cotton in a salt bath, but which are rendered faster by an after-chroming. — **Chromatrope black**, a color developed from one of the chromatropes. See ★*chromatrope*[2]. — **Coffee black**, a black pigment made by carbonizing coffee-berries. — **Columbia black**, the name applied to a number of direct cotton coal-tar colors of the triazo type. They dye unmordanted cotton black in a neutral salt bath. — **Cross-dye black**, a coal-tar color of the sulphid type, used in dyeing cotton warps. It gives a deep blue-black. Also called *cross-dye navy*. — **Cuba black.** Same as *dianil* ★*black*. — **Dead black**, a preparation of lampblack for painting brass and white metals. — **Diamine beta-black**, a direct cotton coal-tar color of the triazo type derived from benzidine. It dyes unmordanted cotton in a salt bath a black which, upon being diazotized and developed with β-naphthol, becomes much faster. — **Diamine black**, the name of several direct cotton coal-tar colors, related to benzidine, which dye unmordanted cotton black in a salt bath. — **Diamineral black B, 3B, 6B**, and **R**, direct cotton coal-tar colors. They dye unmordanted cotton black in a salt bath, but for the best results they should be after-treated with potassium bichromate or copper sulphate. — **Dianil black**, a direct cotton coal-tar color of the tetrakisazo type derived from benzidine. It dyes unmordanted cotton in an alkaline salt bath. Also called *Cuba black*. — **Diazin black**, a basic coal-tar color of the monoazo type derived from safranine. It dyes tannin-mordanted yarn black of a good degree of fastness. — **Diazo black**, a direct cotton coal-tar color of the diazo type derived from benzidine. It dyes unmordanted cotton in a salt bath, but for the best results requires subsequent diazotizing and developing. — **Diazo brilliant black**, a direct cotton coal-tar color of the diazo type derived from tolidine. It dyes unmordanted cotton in a salt bath, but for the best results it requires a subsequent diazotizing and developing. — **Direct black.** (*a*) Same as *one-dip* ★*black*. (*b*) Any direct cotton black. — **Fast black**, a basic coal-tar color of the oxazin type, but of uncertain composition. It dyes cotton mordanted with tannin and iron a very fast black. — **Fast black B** and **BS**, two sulphid coal-tar colors prepared by the action of sodium sulphid upon dinitronaphthalene. They dye unmordanted cotton from an alkaline bath. — **Galena black**, a black pigment made from native lead sulphid. — **Graphite black**, a black pigment consisting of powdered graphite. — **Immedial black**, a coal-tar color of the sulphid type, similar to Vidal black. Its composition is unknown. It dyes unmordanted cotton a very fast black in a sodium-sulphid bath. — **Kumassi black**, an acid coal-tar color of the diazo type derived from diamido-naphthalene-sulphonic acid. It dyes wool a deep black in an acid bath. — **Kumassi union black**, a coal-tar color of the triazo type derived from diamido-naphthalene-sulphonic acid. It is particularly well suited for the dyeing of cotton-and-wool union material. — **Kumassi wool black R** and **S**, acid coal-tar colors of the diazo type derived from diamido-naphthalene. They dye wool black in an acid bath. — **Liège black**, a black pigment obtained by carbonizing vine-twigs. It consists of a pure form of charcoal. Also called *blue-black*. — **Naphthol black**, an acid dyestuff of the sulphonated azo type, derived from naphthalene. There are several naphthol blacks which vary slightly in composition, although they are all of the same general character. — **Naphthol black B, 3B**, and **6B**, acid coal-tar colors of the diazo type containing three naphthalene nuclei. They dye wool black in an acid bath. — **Naphthol black 12B.** Same as *naphthol* ★*blue-black*. — **Naphthylamine black**, an acid coal-tar color of the diazo type derived from α-naphthylamine. It dyes wool a blue-black in an acid bath. — **Nyanza black**, a direct cotton coal-tar color of the diazo type. It dyes unmordanted cotton in a salt bath, and is also well suited for wool-dyeing. — **One-dip black**, a logwood black dyed in a single bath, the mordant and dyestuff being applied simultaneously. The mordant first unites with the logwood to form a color-lake which dissolves and is held in solution by some acid, usually oxalic. From such a solution the color-lake gradually deposits upon the fiber. — **Oxamine black**, a name applied to several direct cotton coal-tar colors which dye unmordanted cotton black in a salt bath. — **Oxidation black**, a name by which aniline black is sometimes designated, from the fact that it is produced by the oxidation of aniline. — **Oxydiamine black**, a name applied to several direct cotton coal-tar colors which dye unmordanted cotton black in a salt bath. — **Palatine black**, one of the wool blacks. — **Phenylene black.** Same as *anthracite* ★*black*. — **Prudhomme's black**, a name sometimes given to aniline black when produced by using potassium ferrocyanide. — **Reduced black**, a prepared mixture for the production of a one-dip logwood black which has been subjected to a reducing action. — **Salzburg black**, a logwood black, so called because Salzburg vitriol is used in its production. — **Single-bath black.** Same as *one-dip* ★*black*. — **Spear-marked black**, a geometrid moth, *Rheumaptera hastata*, common in Europe and the northern United States, black in color and striped and spotted with white. One white spot and band somewhat resemble a spear-head, hence the name. Its larvæ are gregarious and feed upon birch and sweet-gale. — **Sulphone black**, a mordant acid coal-tar color similar to diamond black. — **Tabora black**, a direct cotton coal-tar color of unpublished constitution, which dyes unmordanted cotton from a salt bath. — **Union black**, a name given to several direct cotton coal-tar colors which are particularly well suited for dyeing cotton-and-wool union goods black. — **Victoria black**, an acid coal-tar color of the diazo type. It dyes wool black in an acid bath. — **Vidal black**, a sulphid coal-tar color, prepared by the fusion of amido-phenol and other compounds with sodium polysulphid: one of the earliest sulphid colors. It was discovered in 1893 and named after its discoverer. It dyes unmordanted cotton a very fast black. — **White-striped black**, an American geometrid moth, *Euchæca albovittata*, black in color, with a broad white band extending across the fore-wing. — **Wool black**, a name assigned to several acid colors of the diazo type which dye wool black in an acid bath. — **Zambesi black**, a direct cotton coal-tar color, which dyes unmordanted cotton in a salt bath, but is rendered faster by subsequent diazotizing and developing.

black-and-tan (blak-and-tan′), *n.* A cab of the coupé type, introduced in New York in 1883: so named from its colors. [Colloq.]

Black-ash furnace. See ★*furnace*.

blackback, *n.* **3.** The Menomonee whitefish, *Coregonus quadrilateralis*. [Lake Michigan.]

blackball, *n.* **4.** Same as *black ash*.

blackberry, *n.*, **1.** In North America the term *blackberry* is applied to those edible-fruited members of the genus *Rubus* in which the drupelets and torus ('core') adhere into one mass and in this form separate from the plant. The blackberry is now more extensively cultivated in the United States than elsewhere in the world. These fruits are the ameliorated products of native species, and the evolution has taken place within about half a century. The species of blackberry are much confused, but as now understood the forms cultivated for their fruit have been derived chiefly from *Rubus nigrobaccus*, the common wild blackberry. Some have come from *R. argutus*, and a very few from *R. cuneifolius*. The dewberries (trailing blackberries) are derived from *R. procumbens* (*R. villosus* of Aiton) and *R. invisus*. A few blackberries are hybrids between blackberries and dewberries. The blackberries are of very easy culture. If the ground is fertile and the plants free from disease, the crop is very heavy; and as this crop matures in midsummer, it is important that the soil be retentive of moisture. As in related plants, the fruit arises from canes that grew the previous year, and these canes usually bear but once and never more than one good crop; therefore the old canes are wholly removed after they have borne, and the growing canes take their places. This removal of the old canes not only conserves the energy of the plant and removes objectionable brush, but also serves to keep disease in check. The chief diseases are the anthracnose and the red rust. The former causes discolorations and spots on the canes. It can be kept in check to some extent by thorough and repeated spraying with Bordeaux mixture; but the best procedure is to keep it out by timely removal of affected canes and by changing the patch to a new area every few years. The red rust, yellow rust, or yellows is due to a fungus that affects the entire plant, but fruits on the under side of the leaves and is therefore often mistaken for a foliage

disease. The only remedy is to uproot the plant and burn it. The varieties of blackberry are many, and new kinds are constantly taking the place of the old. Probably the Snyder is now the most wide-spread, although not the best in quality.—**Blackberry bark-louse,** ★**cane-borer,** ★**crown-borer,** ★**root-borer.** See these words. —**Blackberry blight,** a disease of blackberry canes and leaves, thought to be due to bacteria.—**Blackberry gall-maker.** See ★*gall-maker.*—**Pithy blackberry-gall,** a large woody growth on the stems of the blackberry, polythalamous in character and produced by the cynipid *Diastrophus nebulosus.*

blackbird, *n.* **5.** A native of the islands of Torres Strait. [Australia.]—**Brewer's blackbird,** *Scolecophagus cyanocephalus,* a member of the oriole family common in the western United States.

blackbirder (blak'bėr-dėr), *n.* A slaver; a slave-ship. [Cant.]

blackbirding (blak'bėr-ding), *n.* and *a.* **I.** *n.* The kidnapping of negroes or Polynesians to be sold into slavery.

In the early days of sugar-planting [in Queensland] there may have been *blackbirding,* but it was confined to a very few, and it is done away with altogether now.
Gilbert Parker, Round the Compass in Australia, p. 78.

II. *a.* Engaged in the kidnapping of negroes or Polynesians to be sold as slaves: as, a *blackbirding* crew.

black-blue (blak'blö″), *n.* A blue so dark that it is nearly black. Similar to *blue-black.* —**Azo black-blue,** a direct cotton coal-tar color of the diazo-sulphonic-acid type, prepared by combining diazotized toluidine with a mixture of hydroxy-diphenylamine and amido-naphthol-disulphonic acid: also called *azo navy-blue.* It dyes unmordanted cotton from a boiling salt bath.—**Benzo black-blue,** a name given to several similar direct cotton coal-tar colors of the trisazo type, derived from benzidine or tolidine. They dye unmordanted cotton black-blue shades from a salt bath.—**Diamine black-blue,** a direct cotton coal-tar color derived from benzidine, which dyes unmordanted cotton a black-blue shade from an alkaline salt bath.

black-brown (blak'broun″), *n.* A brown so dark that it is nearly black.—**Benzo black-brown,** a direct cotton coal-tar color of unpublished constitution, which dyes a black-brown from a salt bath.—**Katigen black-brown,** a sulphid color similar to ★*cachou de Laval.*

black-buck (blak'buk), *n.* A sportsman's name for the Indian antelope, *Antilope cervicapra.* See cut under *sasin.*

Black-bulb thermometer. See *solar-radiation thermometer,* under *thermometer.*

blackbutt (blak'but), *n.* A valuable timber-tree, *Eucalyptus pilularis,* of southeastern Australia. It is straight in the grain, moderately heavy, light reddish brown in color (though the lower part of the trunk is black), and is adapted for bent work. It is found to thrive in California near the coast. Its wood is of general excellence for house- and ship-building, etc., and on account of branching high is specially available for telegraph-poles. Also called *flintwood, willow, white-top,* and *mountain-ash.*

black-chaser (blak'chā″sėr), *n.* The black-snake, *Bascanion constrictor.*

black-dog, *n.* **3.** A general name for the debased and counterfeit subsidiary coinage current in the British West Indies.

blacken, *v. t.* **3.** In *founding,* to coat (the face of a mold) with graphite, or any mixture used for the purpose, in order to create a surface which will gasify under the heat of the molten metal. The thin film of gas so produced prevents any impression of the grain of the mold-surface being made and gives a smooth finish.

black-ends (blak'endz), *n. pl.* Refuse coke from cooking-ovens.

blackeyed Susan (blak-īd sū'zn). One of several plants having flowers or heads with a dark center. One of these is *Flemingia alata* (see *Thunbergia*); another the flower-of-an-hour, *Hibiscus Trionum*; a third, *Rudbeckia hirta* (see *Rudbeckia*).

blackfellow (blak'fel″ō), *n.* An aboriginal Australian. [Colloq. E. among the colonists.]

Black-fin snapper. See ★*snapper*[1].

blackfish, *n.,* **1.** (*g*) In Australia: (1) A sea-fish, *Incisidens simplex.* (2) A sea-fish, *Girella tricuspidata.* (3) A fresh-water fish, *Gadopsis marmoratus.*—**Blackfish oil.** See ★*oil.* **Grunt blackfish,** the black grunt (*Ronco Prieto*), *Hæmulon bonariense,* a fish of the West Indies and southward.

black-fly, *n.*—**Innoxious black-fly,** a dipterous insect, *Simulium pictipes,* of the family *Simuliidæ,* which in central New York does not appear to bite.

blackgard, *n., a.,* and *v.* A simplified spelling of *blackguard.*

black-grouse (blak'grous), *n.* The European blackcock (which see).

black-gum, *n.* **2.** The water-tupelo, *Nyssa biflora,* a tree inhabiting wet ground along the Atlantic and Gulf coasts. In the Dismal Swamp (southeast Virginia) it dominates areas of deciduous forest called *black-gum* or (on account of density) *dark swamp.* See ★*gum swamp.* These areas when cleared form *black-gum land,* a type highly adapted to the cultivation of Indian corn. Compare *juniper swamp,* under ★*juniper.*
3. *Eucalyptus stellulata.*

black-haw (blak'hâ″), *n.* **1.** Either of two species of arrow-wood, *Viburnum prunifolium* or *V. rufotomentosum.*—**2.** One of two shrubs or small trees, *Bumelia lanuginosa* and *B. tenax,* of the southern United States.

blackhead, *n.* **3.** In *entom.,* the larva of an American tortricid moth, *Eudemis vacciniana,* which feeds on the leaves of the cranberry. Also called *fire-worm.*—**4.** A common name for comedo.—**5.** A highly infectious and fatal disease of turkeys, peacocks, etc., characterized by lesions in the cæca, intestines, and liver, probably due to a coccidium.

black-hot (blak'hot), *a.* Hot but not glowing; less hot than red-hot.

Blackiston's trout. See ★*trout.*

black-jack, *n.* **10.** Candy made of dark molasses.

Black-knot of the filbert, a disease which attacks the branches of the filbert, *Corylus Avellana,* and also those of *C. Americana.* It is caused by the pyrenomycetous fungus, *Cryptosporella anomala,* which produces enlarged black stromata.—**Black-knot of the gooseberry,** a disease of the gooseberry caused by *Plowrightia Ribesia.*—**Black-knot of the hazel.** Same as ★*black-knot of the filbert.*

blackleg, *n.* **5.** A laborer who is not a member of a trade-gild or trade-union; a 'scab.'

The saddlers threw the blame [of bad saddles] on the joiners; and the joiners seem to have in their turn pushed it back on an illegal or "*blackleg*" labour encouraged by the saddlers for their own advantage. . . . As to the introduction of "*blackleg*" labour by the Masters, it was decreed that no stranger was to be brought into the trades till he had been received at the husting by the assent of eight respectable men of the craft.
Mrs. J. R. Green, Town Life in 15th Century, II. 163–165.

blackmailer (blak'māl-ėr), *n.* One who levies, or attempts to levy, blackmail.

The Herald Building cannot be in the least degree affected by the Quixotic enterprise of the lobbyists and *blackmailers* of the Arcade Railroad.
New York Herald, April 24, 1868, p. 6.

blackmark (blak'märk), *v. t.* To put a black mark against the name of (some one).

Ostracise and *black mark* all who do not come into their confederacy.
D. Masson, Drummond of Hawthornden, xiii.

black-meat (blak'mēt), *n.* Mollusks of the genus *Rissoa* in the larval, or veliger, stage, occurring in masses on the surface of the sea, and furnishing food for mackerel, herring, and other fishes.

blackneck (blak'nek), *n.* Either one of the scaup-ducks, *Aythya marila nearctica* and *A. affinis,* which have the head and upper part of the neck black. More commonly called *broad-bill* or *bluebill.*

blackpoll (blak'pōl), *n.* The black-poll warbler, *Dendroica striata,* which has the top of the head black.

black-print (blak'print), *n.* A photographic print, resembling the blue-print, giving black lines on a white ground.

black-printing (blak'prin″ting), *n.* In *ceram.,* the process of printing on pottery in black over the glaze; it antedates blue-printing.

Black-process paper. See ★*paper.*

Black River limestone. See ★*limestone.*

black-rust (blak'rust), *n.* See *rust*[1].

black-saddler (blak'sad″lėr), *n.* A maker of gig-saddles. [Eng.]

black-shank (blak'shangk), *n.* Same as *black* ★*rot* of the sweet potato.

blacksmith (blak'smith), *v. i.* To follow the trade of a blacksmith; work as a blacksmith.

You have made me work very hard at this wild-goose chase, digging, and tramping, and *blacksmithing,* and you got me into a scrape that might have cost me my life.
M. N. Murfree, Despot of Broomsedge Cove, xx.

Blacksmiths' chisel. See ★*chisel*[2].

black-stick (blak'stik), *n.* A blackish, resinous mass, sometimes molded into sticks, which consists of a mixture of impure alkaloids separated from the mother-liquors in the manufacture of quinine. It is used as a substitute for quinine. Also known as *chinoidine* and *quinoidine.*

black-stone (blak'stōn), *n.* A carbonaceous shale.

black-stripe, *n.* **2.** A disease of the tomato-plant caused by the fungus *Alternaria Solani.*

Blacksville limestone. See ★*limestone.*

black-tooth (blak'töth), *n.* A condition of hogs in which the teeth are black from accumulation of tartar. The condition produces no ill effect upon the health of the animal, and is not, as is commonly supposed, a disease.

blacktree (blak'trē), *n.* Same as *blackwood,* **3.**

black-walnut (blak-wâl'nut), *n.* See *walnut.* —**California black-walnut,** *Juglans Californica,* a smaller and less valuable tree than the black-walnut of the eastern United States, found on the Pacific slope and ranging into Arizona, New Mexico, and Sonora.

Black-water fever. See ★*fever*[1].

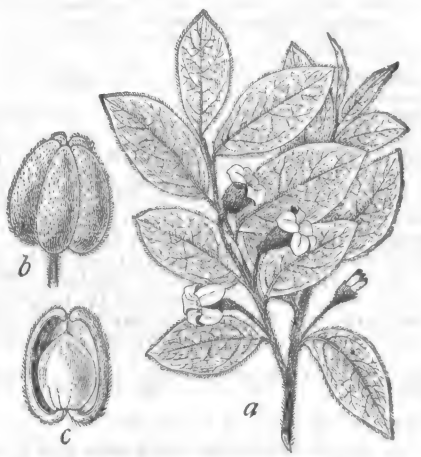
Blackwood series. See ★*series.*

bladder, *n.,* **4.** (*c*) A membranous inflated fruit, as that of *Kœlreuteria* or the pericarp of *Physalis.*—**Bladder fever,** acute cystitis; also pemphigus.—**Fasciculated bladder,** a condition associated with obstruction to the flow of urine, in which the hypertrophied muscular coat of the bladder forms ridges or columns on the inner surface of the organ.—**Stammering bladder.** See *stammer, v.*

bladder-fish (blad'ėr-fish), *n.* Same as *globe-fish* and *puffer,* 3.

bladder-lard (blad'ėr-lärd), *n.* **1.** Lard put up for sale in bladders.—**2.** A trade-name for lard of the best quality from the kidney fat of the animal.

bladder-nut, *n.*—**African bladder-nut,** a small



Bladder-nut (*Royena lucida*).
a, flowering branch; *b,* fruit; *c,* longitudinal section of a fruit. (Drawn from Engler and Prantl's "Pflanzenfamilien.")

South African tree of the ebony family, *Royena lucida,* or its fruit. Its wood is much used. Also called *African snowdrop.* See *Royena.*

bladder-plum (blad'ėr-plum), *n.* Same as ★*plum-pocket.*

bladder-sedge (blad'ėr-sej), *n.* A species of sedge, *Carex vesicaria* of the temperate Old World, having the perigynia (seed-cases) much inflated. In its dried state this sedge was worn, on Nansen's polar expedition, inside boots and shoes, to keep the feet warm and dry.

bladder-seed (blad'ėr-sēd), *n.* See *Physospermum.*

bladder-worm, *n.*—**Gid bladder-worm,** a cestode worm *Cœnurus cerebralis,* whose larval stage is passed in the brain of the sheep, ox, and other grazing animals, in which it causes gid, turnsick, or staggers. If eaten by a dog the larva develops into a tapeworm, *Tænia cœnurus,* which produces numerous eggs. These, if scattered about a farm or along roadsides, may in turn infect grazing animals. See *gid*[1].—**Thin-necked bladder-worm,** a cestode worm whose larval stage, *Cysticercus tenuicollis,* occurs in the omentum of grazing animals and sometimes causes their death. In the alimentary canal of the dog the larva develops into a tapeworm, *Tænia marginata,* whose eggs, if swallowed, may infect such animals as naturally harbor the larval stage.

blade, *n.,* **3.** (*k*) That part of an iron head of a golf-club which forms the face or striking-surface. (*l*) The broad part of a cricket-bat. **4.** A swords-man.

The short man I felt quite confident Hugh could handle, and was surprised, seeing his build, that Pike should have declared him a good *blade.*
S. Weir Mitchell, Hugh Wynne, I. 214.

blady-grass (blā'di-gras), *n.* The alang-alang grass, *Imperata arundinacea*: so named apparently from the abundance of leaf-blades. It is common throughout the warmer parts of the globe and is recommended as a binder of soil and sand. See ★*alang-alang* and ★*cogon.*

Blaes and balls, in *mining,* shale with embedded nodules of iron ore. *Barrowman,* Glossary.

Blair process. See ★*process.*

Blake crusher. See ★*crusher.*

Blakiston's line. See ★*line*[1].

blanch[1], *n.,* **3.** (*b*) Lead ore mixed with other minerals.

blanch[1], *v. t.*—*To blanch silver,* to oxidize copper superficially, when present in an alloy with silver, by heating to redness in the air, and then dissolving out the oxid of copper by dilute sulphuric acid, thus leaving the surface of the object with the white appearance of pure silver.

blanching-machine (blän'ching-ma-shēn″), *n.* A machine for removing the dark skins of almonds and peanuts. It breaks the skin, brushes it away, and leaves the nut clean, white, or blanched.

Blanco group. See ★*group*[1].

Blanjulidæ (blan-jö'li-dē), *n. pl.* [NL., < *Blanjulus* + *-idæ*.] A family of chilognath myriapods having a thin cylindrical body with more than 30 rings, and either with no eyes or with a simple row of eyes beneath the edge of the forehead.

Blanjulus (blan'jö-lus), *n.* [NL. (Gervais, 1837).] A genus of blind chilognath myriapods, typical of the family *Blanjulidæ*.

blank. **I.** *a.*—**Blank wall,** a flat wall without openings; a dead wall.

II. *n.* **12.** An opening in a forest where from any cause very few or no trees are growing. —**In blank,** with parts left blank, to be filled in later by another hand: as, to sign a check *in blank*.

blank, *v. t.* **5.** To leave (a card) so that it must be played when the suit is led.—**To blank out,** in *printing,* to extend the length of (a short page) by the insertion of leads, lines of quadrats, or low furniture.

blanket. **I.** *n.*—**Army blanket,** a coarse, extra strong wool blanket of a gray-brown color, napped on both sides, 60 by 90 inches in size, and weighing 9 pounds a pair.—**Mattress blanket,** a blanket of a cottony character, with a nap on both sides, though the face shows a distinct wave, produced in the finishing process. The size varies from 60 by 70 to 60 by 74 inches, and the weight from 5 to 10 pounds a pair.—**Navy blanket,** a heavy white blanket of wool, napped on both sides, 60 by 72 inches in size, and weighing 10 pounds a pair.—**Spanish blanket,** a showy wool blanket, with a white body and stripes of strong, contrasting colors, from 7 to 10 inches in width, running from list to list through the entire blanket.

II. *a.* That covers, or is intended (like a blanket) to cover, many different but more or less closely related things, conditions, contingencies, requirements, or the like; as a *blanket*-mortgage; a *blanket*-clause in a deed or resolution.

No such objection can be urged against such use of the word "art," as its significance in this connection has long . . . become conventional. . . . Therefore I have long been in favor of what has been called a *blanket* degree. *Science,* May 27, 1904, p. 818.

blanket, *v. t.*—**To blanket the fire** (of a ship), to interpose between the firing vessel and the vessel aimed at so as to screen the latter.

blanket-ballot (blang'ket-bal'ot), *n.* See ★*ballot*[1].

blanket-cattle (blang'ket-kat″l), *n.* The Dutch belted cattle (which see, under ★*cattle*).

blanket-flower (blang'ket-flour), *n.* A plant of the genus *Gaillardia*.

blanket-moss (blang'ket-môs), *n.* A local name for the felted mat of dead algæ, generally some species of *Spirogyra, Zygnema,* or *Cladophora,* which forms along the border of receding waters.

blanket-patent (blang'ket-pat″ent), *n.* Letters patent covering a variety of matters, each of which may be the subject of a single patent.

blanket-policy (blang'ket-pol″i-si), *n.* In *insurance law,* a contract of insurance applied to a class of property rather than to any particular property, in which the risk assumed is shifting and varying according as different articles or things in the class are brought within the terms of the contract.

blanket-scum (blang'ket-skum), *n.* In the manufacture of sugar from the cane, the first-formed thick layer of coagulated material which appears on the surface of the cane-juice which has been treated with milk of lime and heated in open kettles. It consists chiefly of calcium salts, coagulated proteid matter, and mechanically entangled particles of vegetable fiber. *Sadtler,* Handbook of Indust. Chem., p. 129.

blanket-strake (blang'ket-strāk), *n.* In *mining* and *metal.*, a sloping table or sluice containing coarse cloth, used for catching gold. See *blanket-sluice*. [Australia.]

blanket-table (blang'ket-tā″bl), *n.* In *mining,* an inclined plane covered with blankets or other coarse cloth, to catch the heavier minerals which pass over it. See *blanket-sluice*.

blanket-twill (blang'ket-twil), *n.* Same as ★*cassimere-twill*.

blanket-vote (blang'ket-vōt), *n.* Same as *blanket-*★*ballot*.

blanking-die (blang'king-dī), *n.* Same as ★*cutting-die*.

blare[1], *n.* **4.** In *painting,* a broad and brilliant effect of color, as in the representation of flowers.

This is a thing unique in painting, unique in the sense of freshness and ambiance in which the "*blare*" of the flowers is rendered.

C. Ricketts, Velasquez, in Burlington Mag., v. 339.

blasfeme, blasfemous, blasfemy. Simplified spellings of *blaspheme, blasphemous, blasphemy*.

blast[1], *n.* **13.** In *mining,* a fall of water down a mine-shaft designed to produce or quicken ventilation. *Barrowman.* [Scotch.]—**14.** In the West Indies, a disease of the sugar-cane, probably caused by an acarid now known as the sugar-cane mite. The species is still undescribed.—**Cranberry blast,** a disease caused by the pycnidial form of a species of *Guignardia,* which attacks the very young fruit and prevents its further development.—**White blast,** a disease of rice along the South Atlantic coast of the United States. The forming head of the rice-plant attacked by it turns snow-white. The cause of the disease is not known.

blast[2] (blȧst), *n.* [Gr. *βλαστός,* a sprout, shoot, germ, < *βλαστάνειν,* sprout, bud, grow.] In *zoöl.*, one of the spindle-shaped, spore-like bodies in the life-cycle of certain *Sporozoa,* such as the malarial parasite.

blast-area (blȧst'ā″rē-ä), *n.* The area over which a blast of air or steam is distributed; the cross-section of the blast.

blastesis (blas-tē'sis), *n.* [NL., < Gr. *βλάστησις,* a budding.] The reproduction of a lichen thallus by means of gonidia. *Minks.*

Blast-furnace gas, the mixture of gases discharged from the top of a blast-furnace used in smelting iron. It consists essentially of carbon monoxid, carbon dioxid, and nitrogen, and in view of the combustibility of the first of these is becoming a very important source of power hitherto wasted, being used as fuel in internal-combustion engines.—**Blast-furnace oil,** a tar-like mixture of hydrocarbons, phenols, etc., recovered from coal used in blast-furnaces.—**Buttgenbach's blast-furnace,** a blast-furnace in which the furnace-top is supported by pillars of cast- or wrought-iron, thereby relieving the stack of its weight.—**Styrian charcoal blast-furnace,** a blast-furnace for the production of white iron. The ores treated are chiefly spathic carbonates, poor in manganese and containing from 35 to 55 per cent. of iron. The use of charcoal as a fuel is confined to the production of fine grades of iron.

blastidium (blas-tid'i-um), *n.*; pl. *blastidia* (-ä). [NL., < Gr. *βλαστός,* germ, cell, + dim. *-ιδιον*.] A secondary cell generated within another; a daughter-cell. *Schleiden.*

blasting-powder (blȧs'ting-pou″dėr), *n.* An explosive agent, commonly gunpowder, used in blasting rock. Gunpowder for this purpose is often made with nitrate of soda instead of nitrate of potash, although the former salt, which is the cheaper, tends to take up hygroscopic moisture, and the powder is thereby reduced in strength.—**Borlinetto's blasting-powder,** an explosive, made by mixing intimately 10 parts of picric acid, 10 parts of sodium nitrate, and 8.5 parts of potassium chromate.—**Brain's blasting-powder,** an explosive, 40 per cent. nitroglycerin and 60 per cent. a mixture of charcoal, wood-pulp, and nitrate and chlorate of potassium. The last-named ingredient renders it a very dangerous material.

blastocele, *n.* Same as *blastocœle*.

blastochore (blas'tō-kōr), *n.* [Irreg. < Gr. *βλαστός,* a germ, sprout, + *χωρεῖν,* spread.] In *phytogeog.*, a plant disseminated by offshoots. *F. E. Clements.*

blastochyle (blas'tō-kīl), *n.* [Gr. *βλαστός,* a germ, + *χυλός,* juice, liquid.] In *embryol.*, the liquid which fills the blastocœle, or cavity of the blastula.

blastogenetic (blas″tō-jē-net'ik), *a.* [Gr. *βλαστός,* a germ, + *γένεσις,* production: see *genetic*.] In *biol.*, of or pertaining to characters which have their origin in the reproductive cells, or germ-cells, as distinguished from the acquired or *somatogenetic* characters, which make their appearance in the soma, or body, of the animal or plant.

blastogenic (blas″tō-jen'ik), *a.* **1.** Pertaining to or produced by means of budding or blastogenesis.

The same is true as regards the formation of a new polyp from a *blastogenic* cell and from an ovum. In both cases the final result is the same, or very similar, though the method by which it is attained is different. *Weismann* (trans.), Germ-plasm, p. 174.

2. Concerning or pertaining to origin from germ-plasm, or the substance of germ-cells, as contrasted with origin from the soma or body.

[I] contrast them [somatogenic characters] with the *blastogenic* characters of an individual, or those which originate solely in the primary constituent of the germ. *Weismann* (trans.), Germ-plasm, p. 392.

Blastogenic germ-plasm, idioplasm. See ★*germ-plasm,* ★*idioplasm*.—**Blastogenic variation,** diversity among germ-cells considered as variation, and, according to Weismann's doctrine of germ-plasm, the only variation, which can be inherited or transmitted to descendants. *Weismann* (trans.), Germ-plasm, p. 411.

blastoidean (blas-toi'dē-an), *a.* and *n.* **I.** *a.* Having the characters of or pertaining to the *Blastoidea*.

II. *n.* One of the *Blastoidea*.

blastokinesis (blas″tō-ki-nē'sis), *n.* [Gr. *βλαστός,* a germ, + *κίνησις,* movement.] In *embryol.*, the movements of the whole insect embryo within the egg. *Wheeler,* 1893.

blastokinetic (blas″tō-ki-net'ik), *a.* Of or pertaining to blastokinesis.

Blastomyces (blas-tō-mī'sēz), *n.* [NL. (Costantin and Rolland, 1888), < Gr. *βλαστός,* a germ, + *μύκης,* a fungus.] A genus of hyphomycetous fungi having a scantily branched mycelium with somewhat polyhedral simple conidia produced on short lateral conidiophores. The single species, *B. luteus,* was found on bear-dung. Recently various writers on animal pathology have incorrectly referred to this genus certain fungi of obscure relationship which have been isolated from tumors, ulcers, and cancerous growths.

blastomycete (blas-tō-mī'sēt), *n.* One of the *Blastomycetes*.

Blastomycetes (blas″tō-mī-sē'tēz), *n. pl.* [NL., < *βλαστός,* a germ, + *μύκης* (pl. *μύκητες*), a fungus, a mushroom.] A name applied chiefly by animal pathologists to a heterogeneous group of fungi occurring as parasites on man and some of the lower animals. Some of the species included appear closely related to such genera as *Oospora* and *Oidium*. They are of simple structure, consisting chiefly of simple cells arranged in chains or small groups.

blastomycetic (blas″tō-mī-sē'tik), *a.* Pertaining to or due to *Blastomycetes*.—**Blastomycetic dermatitis,** a form of inflammation of the skin caused by the presence of a fungus of the yeast-plant family.

blastomycetous (blas-tō-mī-sē'tus), *a.* Pertaining to or caused by any of the so-called *Blastomycetes;* blastomycetic.

blastomycosis (blas″tō-mī-kō'sis), *n.* [NL., < Gr. *βλαστός,* a germ, + *μύκης,* a fungus, + *-osis*.] Inflammation due to the presence in the tissues, especially on the skin, of a vegetable parasite belonging to the family of budding fungi.

Blastophaga (blas-tof'a-gä), *n.* [NL. (Gravenhorst, 1829), < Gr. *βλαστός,* a germ, sprout, + *φαγεῖν,* eat.] A remarkable genus of chalcidoid insects of the family *Agaonidæ,* having winged females and wingless males of peculiar structure. They inhabit the flower receptacles of the fig, and act as fertilizers, bringing about the production of the so-called fruit in the pistillate varieties. *B. grossorum* fertilizes the Smyrna fig of commerce, which is absolutely dependent upon this insect for the production of seed. Both plant and insect have been introduced by the United States Department of Agriculture into California, where large crops of Smyrna figs are now grown.

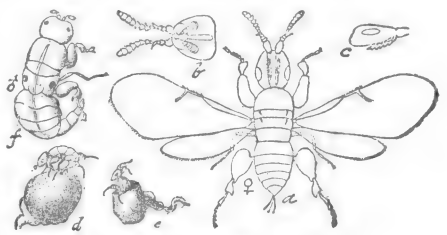


Fig-insect (*Blastophaga grossorum*).

a, adult female; *b*, head from below; *c*, head from side; *d*, male impregnating female; *e*, female issuing from gall; *f*, male—enlarged. (After Westwood.)

blastophor, *n.* Same as *blastophore*.

blastophoral (blas-tof'ō-ral), *a.* [*blastophore* + *-al*[1].] Relating to a blastophore.

blastophore, *n.* **2.** One of the nucleated portions of protoplasm formed in an oöcyst of *Sporozoa*, comparable to a sporoblast.

Blastoporic seam, in *embryol.*, the suture or seam formed by the closing of the lips of the blastopore.

blastostroma (blas-tō-strō'mä), *n.*; pl. *blastostromata* (-ma-tä). [Gr. *βλαστός,* a germ, + *στρῶμα,* a bed, mattress.] In *embryol.*, that portion of the egg which participates actively in forming the blastoderm.

blastous (blas'tus), *a.* Of or pertaining to a germ.

Blastozoa (blas-tō-zō'ä), *n. pl.* [Gr. *βλαστός,* a germ, + *ζῷον,* animal.] Animals with germ-layers; *Metazoa*.

blast-stove (blȧst'stōv), *n.* See *hot-blast* ★*stove*.

blastular (blas'tū-lär), *a.* Of or pertaining to the blastula.

blastule (blas'tūl), *n.* Same as *blastula*.

blast-wheel (blȧst'hwēl), *n.* The wheel in a centrifugal disk- or pressure-blower; an impeller.

blat (blat), *v.*; pret. and pp. *blatted,* ppr. *blatting.* [Imitative: cf. *blatter, blather, bleat.*] **I.** *trans.* To utter heedlessly; blurt out: as, he *blatted* the news.

II. *intrans.* **1.** To talk inconsiderately or nonsensically; blather.—**2.** To bleat.

blatjang (blä'chäng), *n.* In South Africa, chutney; a condiment.

Blatti (blat'i), *n.* [NL. (Adanson, 1763, adopted from Rheede, 1682), from a Malabar name of one of the species of the genus, *B. caseolaris.*] A genus of dicotyledonous plants, type of the family *Blattiaceæ*. See *Sonneratia.*

Blattiaceæ (blat-i-ā'sē-ē), *n. pl.* [NL. (Niedenzu, 1892), ‹ *Blatti* + *-aceæ.*] A family of dicotyledonous archichlamydeous plants of the order *Myrtales*, typified by the genus *Blatti*, and mostly with the characters of that genus. It contains only one other genus. They are trees or shrubs of tropical Asia, the Malay Archipelago, and the Himalayas. See *Sonneratia* and *kambala.*

Blattidium (bla-tid'i-um), *n.* [NL., ‹ L. *blatta*, a cockroach, + Gr. dim. *-ίδιον.*] A genus of extinct cockroaches from the Jurassic rocks.

blaze[1], *n.* **6.** In *physiol.*, an electric current traversing normal living tissue in a positive direction when a mechanical stimulus is applied; the electric response of living tissue to stimulation. See ★*blaze-current.*

This "*blaze*" response is the algebraic sum of post-anodic and post-kathodic currents; the resultant is commonly homodrome, but an antidrome *blaze*, distinguished from polarisation by its much greater order of magnitude, is also seen. *Nature*, July 9, 1903, p. 238.

blaze-current (blāz'kur″ent), *n.* An electric current aroused in living tissue by stimulation.

In another paper, A. Durig describes observations which make it impossible, he says, to regard the appearance of *blaze-currents* as a specific property of living tissue. It is much more probable that they are to be considered as special manifestations of certain epithelial tissues. *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 599.

blazed (blāzd), *p. a.* Having a white mark, properly a streak, on the forehead: said of horses and cattle.

blaze-reaction (blāz-rē-ak'shon), *n.* A reaction obtained when living tissue is stimulated by a mechanical or an electrical stimulant. It consists of an electric current traversing the living tissue in a positive direction, and it is thought to be an electrical criterion of vitality. See ★*blaze*, *n.*, 6, and ★*blaze-current.* *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 599.

blazing-star, *n.*, **2.** (*d*) In California, *Mentzelia lævicaulis*, a white-stemmed plant with cream-colored or light-yellow flowers 3 or 4 inches broad; also *M. Lindleyi*, with smaller golden flowers.

bleach[1], *n.* **3.** An abbreviation of 'bleaching-powder,' or chlorid of lime.—**Madder bleach,** the most thorough calico-bleaching process: so named because it was first applied to goods to be printed or dyed with madder colors. Its object is the complete removal of every impurity which can attract coloring matter other than that desired.—**Market bleach,** a bleaching process for cotton goods suitable to meet the ordinary requirements of the trade. It differs from that for printed goods essentially in the absence of the boiling with resin soap and in the introduction of tinting with a blue coloring matter.

bleach-croft (blēch'kroft), *n.* A field of growing grass upon which linen or cotton cloth is spread for bleaching.

bleacher, *n.* **4.** Same as ★*bleachery*, 2.

bleacherite (blē'chēr-īt), *n.* One who must be content to stand or occupy a bench in the open air while witnessing a base-ball or other game. [Slang, U. S.]

bleachery, *n.* **2.** An outdoor stand from which spectators may view something, especially a game of foot-ball or base-ball. [Slang, U. S.]

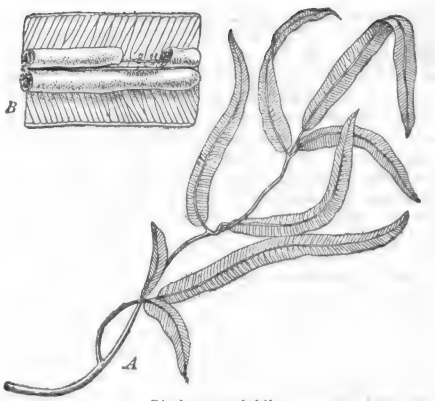
bleaching-engine (blē'ching-en″jin), *n.* In *paper-manuf.*, a machine for bleaching, cleaning, and preparing wood-pulp for use in a paper-making machine. It is essentially a form of beating-engine (which see).

bleaching-liquor (blē'ching-lik ȯr), *n.* Bleaching-liquid; as usually understood, the solution obtained by the action of water on bleaching-powder or chlorid of lime, but also applied to solutions of the alkaline hypochlorites, bleaching-liquor being now made directly by the electrolysis of an aqueous solution of common salt.

bleach-liquor (blēch'lik-ȯr), *n.* Same as ★*bleaching-liquor.*

bleach-works (blēch'wėrks), *n. pl.* Same as *bleachery.*

Blechnum (blek'num), *n.* [NL. (Linnæus, 1753), ‹ Gr. *βλῆχνον*, a kind of fern. (*Blechnon* was used by Pliny.)] A genus of hardy polypodiaceous ferns. The fronds are nearly or quite uniform and mostly pinnatifid or pinnate; the sterile veinlets are free, those of the fertile pinnæ being connected near their base by a transverse continuous receptacle which bears a linear sorus parallel to the midvein and provided with an elongate superior indusium free and at length reflexed from the inner margin. The species in cultivation are rather coarse greenhouse ferns which are very useful to florists for jardinières and for specimen ferns. The following are most commonly cultivated: *B. Brasiliense*, *B. nitidum*, and *B. Corcovadense*, of Brazil; *B. occidentale*, found in Mexico, the West Indies, and Brazil; and *B. serrulatum*, found in the regions between Florida and Brazil. *B. cartilagineum*, *B. Lanceola*, and others are also under cultivation.



Blechnum volubile.

A, a sterile frond; *B*, portion of a fertile pinna showing the sori and spores. (Drawn from Engler and Prantl's "Pflanzenfamilien.")

bleed, *v. t.* **6.** To allow an escape of (liquid or gas) through a cock or valve from a higher pressure to a lower. Specifically—(*a*) To let (steam) escape by a by-pass from a high-pressure cylinder of a compound engine to one of the low-pressure cylinders. (*b*) To let (air or condensed water) escape into the atmosphere from the train-pipe or reservoirs of an air-brake system. (*c*) To remove (condensation) from a gas-main or a steam-pipe by opening a drip-valve.

7. In making turpentine, to obtain resin from (living trees) by cutting into them.—**To bleed a sack,** to make a slit in it, as in loading sacked wheat for export. See the extract.

In loading sacked wheat for export a number of *sacks* in each row are "*bled.*" In other words, a slit is made in the sack, which allows a small quantity of the wheat to escape and fill in the spaces around the corners and sides of the sack, thus making a more compact cargo, which is less liable to shift than would be the case if the sacks were loaded without "*bleeding.*" *Yearbook U. S. Dept. Agr.*, 1901, p. 576.

bleeder, *n.* **3.** In *mech.*, a pipe which leads steam from the pressure-line to the intermediate or low-pressure cylinder of the engine or to the condenser.

bleeding-heart, *n.* **4.** Same as ★*coral-creeper.*—**California bleeding-heart,** *Bikukulla formosa*, a beautiful species of the Sierras and Coast Range.—**Wild bleeding-heart,** *Bikukulla eximia* of the Alleghany region.

bleeding-valve (blē'ding-valv), *n.* A valve used to bleed or drain a mechanical system. See ★*bleed*, *v. t.*, 6, and ★*bleeder*, 3.

Bleiberg process. See ★*process.*

blend[1], *v. i.* **3.** In *biol.*, to exhibit or transmit to descendants the resultant or combination of resemblances to the two parents in inheritance.

In the former case where A and a are characters which can be denoted by reference to a common scale, the law assumes of course that the inheritance will be, to use Galton's term, *blended*, namely, that the zygote resulting from the union of A with a will on the average be more like a than if A had been united with A; and conversely that an Aa zygote will on the average be more like A than an aa zygote would be. *W. Bateson*, Mendel's Prin. of Heredity, p. 20.

4. In *psychol.*, to combine in such a way that the combining qualities are thrust more or less into the background by the total impression which results from their combination; fuse.

blend[1], *n.* **3.** In *psychol.*, a fusion; a connection of mental processes in which the constituents are forced into the background by the total impression.

There is no trace of fusing, of being fused, when the tones sound: they form a *blend;* and this *blend*, the sound-whole, is the fusion. *E. B. Titchener*, Exper. Psychol., I. ii. 330.

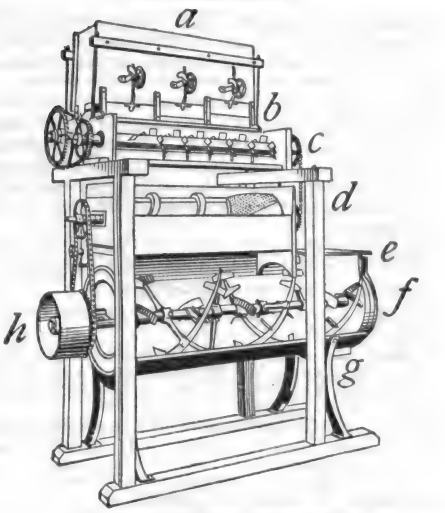
blend[2], *n.* A simplified spelling of *blende.*

blende, *n.*—**Sidot blende,** an artificially prepared zinc sulphid, in finely crystalline powder, exhibiting phosphorescence on exposure to sunlight, by friction, and by the impact of the radiation from salts of radium. *Science*, Oct. 28, 1904, p. 569.

blender, *n.* **2.** A machine for mixing or blending together different kinds of flour, dry paints, or other powders. It consists of a cylinder of wood or iron in the axis of which is a shaft, called an *agitator*, fitted with spiral fans which when revolved stir and mix together the various powders or flours placed in the machine. It is usually combined with some form of sifting-machine, and is then called a *sifter and blender.* Large machines have also a feeder.

blending, *n.* **2.** The combination of the characteristics of both parents as a resultant in cross-breeding.

In some cases there was obvious *blending*, as for example when white crossed with red or claret gave pink. *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, [L 45.



Combined Feeder, Sifter, and Blender.

a, feed-box with three compartments; *b*, feed-gates regulating proportions of mixtures; *c*, distributing-shaft; *d*, mixer with spiral brushes for spreading material over sieve (not shown) through which it falls to blender; *e*, blender; *f*, agitator; *g*, point of discharge; *h*, pulley for belt delivering power. Front of *c*, *d*, and *e* open to show construction. Machine 15 to 20 feet high.

blendure (blen'dūr), *n.* [*blend*[1] + *-ure* (cf. *mixture*).] A blend or mixture.

blend-word (blend'wėrd), *n.* An invented word, made up of two or more known words taken and combined without regard to etymological usage or rule, the object (which may not be consciously present in the inventor's mind) being to produce an absolutely new word, which shall not appear to be a compound or derivate of known words. Examples are frequent in humorous formations, as in the works of "Lewis Carroll"; as *snark* from *sn(ake)* and *(sh)ark*, *chortle* from *ch(uck)le* + *(sn)ort*, etc. So *brunch*, in Oxford University slang, from *br(eakfast)* + *(l)unch.* See ★*brunch-word.* Blend-words of this nature differ only in spirit from a class of chemical and other technical compounds in which two or more words are arbitrarily reduced for mere convenience, as *aldehyde* from *al(cohol) dehyd(rogenatus)*, *chloroform* from *chlor(in)* + *form(yl)*, etc.

blendy (blend'i), *a.* Containing the mineral blende.

blennemesis (ble-nem'ē-sis), *n.* [NL., ‹ Gr. *βλέννα*, mucus, + *ἔμεσις*, vomiting.] The vomiting of mucus.

Blennicottus (blen-i-kot'us), *n.* [NL., ‹ L. *blennius*, Gr. *βλέννος*, blenny, + Gr. *κόττος*, a fish (see *Cottus*).] A genus of cottoid fishes of the North Pacific: the typical species is *B. globiceps.*

blennostasis (blen-ō-sta'sis), *n.* [NL., ‹ Gr. *βλέννος*, slime (mucus), + *στάσις*, standing.] Suppression of a discharge of mucus.

blennuria (blen-ū'ri-ą), *n.* [NL., ‹ *βλέννος*, slime (mucus), + *οὖρον*, urine.] Discharge of mucus in the urine.

bleo (blā'ō), *n.* [Native name.] *Pereskia Bleo*, of the cactus family, a thorny shrub found in Colombia and Brazil. It bears flesh-colored flowers and smooth, pear-shaped edible fruit the size of a large plum. The plant serves as a good stock on which to graft the more ornamental species of cacti and is planted for hedges. See *Pereskia.* [Colombia.]

blephara (blef'ą-rą), *n.*; pl. *blepharæ* (-rē). [NL., ‹ Gr. *βλέφαρον*, eyelid.] One of the teeth of the peristome in mosses. [Rare.]

blepharic (ble-far'ik), *a.* [Gr. *βλέφαρον*, eyelid, + *-ic.*] Same as *palpebral.*

blepharis (blef'a-ris), *n.* [NL., ‹ Gr. *βλεφαρίς*, eyelash, eyelid, ‹ *βλέφαρον*, eyelid, appar. ‹ *βλέπειν*, look at.] In certain crustaceans, the fringe of hair on the edge of the pit in which the eye is situated.

Blepharocera (blef-a-ros'e-rą), *n.* [NL. (Macquart, 1843) (also *Blepharicera*), ‹ Gr. *βλέφαρον*, eyelid (*βλεφαρίς*, eyelash), + *κέρας*, horn.] **1.** A genus of dipterous insects typical of the family *Blephariceridæ.*—**2.** A genus of tineid moths. *Chambers*, 1877.

Blepharoceridæ (blef″a-rō-ser'i-dē), *n. pl.* [NL., ‹ *Blepharocera* + *-idæ.*] A family of small bibionoid dipterous insects which have the wings furnished with a network of creased lines, from which they have been called the *net-veined midges.* The adults are mosquito-like in form, and the larvæ, which are aquatic, resemble *crustacea* more than insects. They attach themselves to rocks in swift-running streams, and have apparently but 7 segments.

blepharoclisis (blef″a-rō-klī'sis), *n.* [NL., ‹ Gr. *βλέφαρον*, eyelid, + *κλεῖσις*, *κλῖσις*, shut-

ting up.] Union, to a varying extent, of the opposing eyelids, of congenital origin.

blepharoconjunctivitis (blef″a-rō-kon-jungk″ti-vī′tis), *n.* [NL., < Gr. *βλέφαρον*, eyelid, + NL. *conjunctivitis*.] Inflammation of the conjunctiva of the eyelid.

blepharoplast (blef′a-rō-plast), *n.* [Gr. *βλεφαρίς*, eyelash, + *πλαστός*, formed.] **1.** A specialized cilia-forming protoplasmic organ of the sperm-cells of certain plants. It first appears in the spermatozoid mother-cells in the form of a round body with radiating rays of kinoplasm, and through its growth and development gives rise to the motile cilia of the spermatozoids. The organ resembles a centrosome or centrosphere, and may be a modified homologue of that organ of the cell. In *Zamia, Cycas, Ginkgo*, and certain ferns, two of these organs appear in each spermatozoid mother-cell, one going to each of the two spermatozoids formed therefrom. *H. J. Webber*, Development of the Antherozoids of Zamia, in Bot. Gazette, July 16, 1897, p. 24.

2. In protozoans, a minute granule, of unknown function, at the base of each flagellum, as in *Multicilia*.

blepharoplastoid (blef″a-rō-plas′toid), *n.* [Gr. *βλεφαρίς*, eyelash, + *πλαστός*, formed, + *εἶδος*, form.] In *bot.*, a structure resembling the blepharoplast in the spermatids of certain plants, such as *Marsilia*.

blepharostat (blef′a-rō-stat), *n.* [Gr. *βλέφαρον*, eyelid, + *στατός*, fixed, < *ἱστάναι*, cause to stand.] An instrument for keeping the eyelids apart; an eye-speculum. *Jour. Trop. Med.*, Mar. 2, 1903, p. 71.

blepharosymphysis (blef″a-rō-sim′fi-sis), *n.* [NL., < Gr. *βλέφαρον*, eyelid, + *σύμφυσις*, a growing together.] Union, to a varying extent, of the opposing eyelids, occurring as a result of disease.

blepharosynechia (blef″a-rō-sin-e-kī′ä), *n.* [NL., < Gr. *βλέφαρον*, eyelid, + *συνέχεια*, continuity, < *συνεχής*, continuous, < *συνέχειν*, continue, hold together, < *σύν*, with, + *ἔχειν*, hold.] Adhesion between the margins of the opposing eyelids.

blepharotomy (blef-a-rot′ō-mi), *n.* [Gr. *βλέφαρον*, eyelid, + *τομή*, a cutting.] In *surg.*, incision of the eyelid.

Blessed bread. Same as *eulogia*.

blet (blet), *n.* [*blet*, *v.*] A soft spot in a fruit; an early stage of decay.

Bletia (blē′ti-ä), *n.* [NL. (Ruiz and Pavon, 1794), named in honor of Luis *Blet*, a Spanish pharmacist and botanist.] A widely distributed genus of terrestrial or epiphytal herbs of the family *Orchidaceæ*. The leaves are plicate, membranaceous, erect, and have a sheathing base. The terrestrial species are most commonly grown by gardeners. There are about 20 species of *Bletia* found in the American tropics, and one species is found in China and Japan. *B. hyacinthina, B. verecunda, B. Sherratiana, B. patula*, and *B. campanulata* are most commonly grown.

bleu (blè). *n.* [F.] Blue.—**Bleu céleste,** in *ceram.*, same as ★*bleu turquoise*.—**Bleu de ciel,** a shade of blue found in Chinese porcelain; sky-blue. Also called *bleu d'azur*.—**Bleu de Nanking,** a dark-blue color found on Nanking or 'East India' stoneware and porcelain.—**Bleu de Sèvres,** a deep, rich cobalt blue color used at the Sèvres factory near Paris. Same as *bleu de roi* (which see).—**Bleu fouetté,** a blue color used on Chinese ceramic ware: so called from its whipped aspect. It is less deep in shade than the *lapis lazuli*, and has a mottled appearance. See *powder* ★*blue*.—**Bleu lapis,** a veined dark-blue color, or *gros bleu*, used on French porcelain, particularly that of Sèvres.—**Bleu turc,** a pale grayish or 'Turkish' blue, used as a ground-color on Sèvres porcelain.—**Bleu turquoise,** in *ceram.*, a highly prized turquoise-blue color invented in the reign of Louis XV.

blibe (blīb), *n.* [Appar. a dial. variant of *bleb*.] In *glass-making*, a defect in the glass, caused by the retention of gas-bubbles formed during the melting. Also called *blister*.

blicksilber (blik′sil bėr), *n.* [G.] Silver as it appears after the removal of the impure litharge or abstrich in a cupeling-furnace. Blicksilber still contains some lead and has to be further refined. *Phillips and Bauerman*, Elements of Metallurgy, p. 707.

blight, *n.*, 3. (*c*) Purulent conjunctivitis.—**4.** An insect, usually inconspicuous or hidden, which causes trees or plants to become diseased or to die, as the American blight.—**American blight,** a name given in England and the English colonies to the woolly root-louse of the apple (*Schizoneura lanigera*) on account of its supposed American origin. Its native home, however, is not satisfactorily determined, and it may quite possibly have been Europe or Asia.—**Apple-blight.** Same as *pear-blight*.—**Bacterial blight.** See ★*bacterial*.—**Black blight.** (*a*) A disease of the mango, *Mangifera Indica*, caused by the fungus *Dimerosporium mangiferum*, which produces velvety black patches on the leaves, especially where insects that produce honeydew are present. (*b*) Same as *mosquito* ★*blight*. See also *tea-bug*.—**Cane-blight,** a disease of raspberries doubtfully ascribed to a species of *Phoma*.—**Corn-blight.** Same as ★*leaf-blight of corn*.—**Douglas fir blight,** a disease of seedlings and young trees of *Pseudotsuga mucronata* and *Sequoia Washingtoniana*, caused by the fungus *Sclerotinia Douglassii*. *Botrytis Douglassii* is regarded as the conidial condition of the fungus.—**Egg-plant blight,** a disease of the egg-plant attributed to *Bacillus solanacearum*.—**Grape-leaf blight.** See ★*leaf-blight of grape*.—**Gray blight,** a disease of the tea-plant in India caused by *Pestalotia Guepini*, which produces brownish-gray spots on the leaves.—**Green blight,** the greenfly; any green plant-louse, especially one of those forms which damage hot-house plants.—**Maple-blight,** a disease of young shoots of the maple, *Acer campestre*, in Europe, caused by the fungus *Septoglœum Hartigianum*.—**Mosquito blight,** a blight of the tea-plant produced by the punctures of several species of plant-bugs of the genus *Helopeltis*. See *tea-bug*.—**Pineapple-blight,** a serious disease of the pineapple, causing the death of the plant. It has been attributed to a species of *Fusarium*. Pineapple-blight has been injurious in Florida, causing large losses.—**Potato early blight,** a disease affecting the leaves of the potato, caused by the fungus *Alternaria* [*Macrosporium*] *Solani*. Same as *potato leaf-curl*.—**Potato late blight,** a disease of potato-leaves and tubers caused by *Phytophthora infestans*. See *potato-rot*.—**Rice-blight,** a very destructive disease of rice, attacking the stem near the top and preventing the development of the grain. It is supposed to be due to a fungus.—**Sorghum-blight,** a disease of the leaves of sorghum ascribed to *Bacillus Sorghi*.—**Thread blight,** a disease which attacks the twigs and leaves of the tea-plant in India. It is said to be caused by the fungus *Stilbum inanum*, whose mycelium forms thread-like strands on the twigs and leaves.—**Strawberry-blight,** a disease of strawberries supposed to be of bacterial origin.—**Tomato-blight,** a disease of tomato-plants caused by *Bacillus solanacearum*; also, in the southern United States, a disease caused by a *Sclerotium*.—**Wheat-blight,** a disease of wheat attributed to *Mystrosporium abrodens*.

blight-powder (blīt′pou-dėr), *n.* A mixture of sulphur with a small proportion of anhydrous copper sulphate in fine powder, for dusting as a fungicide over cultivated plants.

Blikoor (blik′ōr), *n.* [Cape D., < *blik*, bare, galled, sore, + *oor*, ear.] A South African nickname for a person from the Transvaal.

blind[1], *a.* **14.** In *hort.*, said of a shoot that does not bloom. It is most frequently applied to roses, chrysanthemums, and other twiggy growers. Such shoots are often spoken of as *blind wood*. Shoots which do not fulfil their promise, or fulfil the expectations of the gardener in producing flowers, are said to "come blind."—**Blind alphabet.** See ★*braille*.—**Blind cat,** a siluroid fish, *Amiurus nigrolabris*, found in caves and having the eyes functionless.—**Blind coal.** (*b*) Coal, containing little volatile matter, which burns without smoke; anthracite. [Scotch.]—**Blind door.** (*b*) A door made of slats like a window-blind, and intended to allow of the passage of air while sight is prevented.—**Blind gut,** the cæcum.—**Blind hole.** (*b*) In *golf*, a hole so situated that a given player cannot see the flag which marks its position.—**Blind hookey.** See ★*hookey*[3].—**Blind insects,** any insects in which the eyes are absent or are functionless, as in a number of the forms of different orders which inhabit caves, in the curious orthopterous insects of the family *Hemimeridæ*, in certain cockroaches, in the full-grown females of many *Coccidæ*, in certain species of fig-insects of the chalcidoid family *Agaonidæ*, and in others.—**Blind pit,** in *mining*, a shaft which does not reach the surface, as a shaft from an upper to a lower seam.—**Blind pocket.** See ★*pocket*.—**Blind shearing,** in *coal-mining*, a side-cutting without undercutting. *Barrowman*, Glossary.—**Blind spot.** (*b*) In *cricket*, that spot of ground in front of the batsman where, if the ball pitches, he is in doubt as to whether to play back or forward.—**Blind tiger,** a place where intoxicating liquors are sold surreptitiously. [Local U. S.]—**Blind wall,** a wall without openings.

blinded, *a.* **3.** In *mining*, not opposite, but nearly so, as two level drifts on either side of a slope. *Barrowman*, Glossary. [Scotch.]

blind-fish, *n.* **3.** Any of the several species of fishes which inhabit caves and have more or less rudimentary eyes.—**Cuban blind-fish,** either of two species of blind-fishes found in the caves of Cuba, *Lucifuga subterranea* and *Stygicola dentatum*. They belong to the family *Brotulidæ*, a group otherwise strictly marine.

blindfold chess. See ★*chess*[1].

blindfoldedness (blīnd′fōl″ded-nes), *n.* The state of being blindfolded. *N. E. D.*

blinding-tree (blīn′ding-trē), *n.* [Ppr. of *blind*[1] + *tree*.] A littoral tree, *Excœcaria Agallocha*, belonging to the spurge family, the acrid milky juice of which is said to cause blindness. See *Excæcaria* and *tiger's-milk*. [East Indies.]

blindling† (blīnd′ling), *n.* [*blind* + *-ling*[1].] A blind person. *N. E. D.*

blind-lobster (blīnd″lob′stėr), *n.* *Phoberus cæcus*, found in the Gulf of Mexico and the Indian seas.

blindness, *n.*—**Blue-yellow blindness,** a form of partial color-blindness in which the short-wave end of the spectrum is very dark and but little colored, and yellow is confused with white, while red and blue-green are still distinguished.—**Cortical blindness,** loss of sight due to a lesion in the cortical portion of the brain.—**Mental blindness, psychical blindness,** a pathological state in which the patient, though able to see objects before him, cannot recognize them by their visual properties.

blind-tooling (blīnd′töl″ing), *n.* In *bookbinding*, an effect produced by various instruments upon the leather without the assistance of gold-leaf.

Blind-tooling is the impression of the tools upon the leather without gold or color. It is produced by the tools, slightly warmed, being impressed upon the leather when damped, and by the same impression being often repeated to brighten its effect.

W. Matthews, Bookbinding, p. 55.

blind-work (blīnd′wėrk), *n.* Same as ★*blind-tooling*.

blind-your-eyes (blīnd′yör-īz), *n.* [Australian.] Same as ★*blinding-tree*.

blinker, *n.* **3.** *pl.* Goggles; spectacles used for protecting the eyes from the light, dust, glare of the snow, etc.—**4.** A small mackerel: a name used by fishermen.

blinking, *n.* **II.** *a.* **1.** Winking with half-opened eyelids, as when the eyes cannot bear full light.—**2.** Having twinkling eyes. *Scott*, Nigel, xvii.

blippo (blip′pō), *n.* [African.] A shrub or small tree, *Randia melleifera*, belonging to the madder family, with the inky sap of which the natives of North Central Africa dye their bodies.

blister, *n.* **6.** A swelling on a metal plate; a bag.—**7.** A young oyster. [U. S.]—**8.** In *photog.*, a defect in a plate or on a paper in the process of coating with gelatin, albumin, or collodion.—**9.** In *glass-making*, a defect in the glass caused by the retention of gas-bubbles formed during the melting.—**Larch-blister,** a disease of the branches of the European larch caused by a discomycetous fungus, *Dasyscypha Willkommii*.—**Pear-leaf blister.** (*a*) A disease of pear- and quince-leaves in Europe, causing swollen blister-like patches, due to the fungus *Taphria bullata*. (*b*) A common disease of pear-leaves produced by a mite, *Phytoptus pyri*, commonly called the *pear-leaf blister mite*. Each blister is a swelling of the leaf, producing a cavity in which the mites are found.—**Pine blister,** a disease of pines caused by species of *Peridermium* which form blisters on the leaves.—**Plum-leaf blister,** a disease of the plum caused by *Polystigma rubrum* which produces reddish patches on the leaves.
